On steamboats, cars and stage-coaches, Hostetter's Stomach Bitters is carried as the most important item in the materia medica of the traveling public. It deprives vitiated, brackish water of its hurtful properties and execrable flavor, counteracts the pernicious effects upon the stomach of bad or indigestible food, relieves cramps, heartburn and wind upon the stomach. It is a fine defense against malarial disorders, nullifies the effects of excessive heat, cold and damp, relieves sick-headache, and is an incomparable cure for costiveness and biliousness. The fatigue of travel often tells most disastrously upon invalids and convalescents, occasionally to such an extent as to jeopardise life. Persons in feeble health, apprehensive of bad effects from travel, will, if provided with the Bitters, be far less likely to have their fears realized.

The diplomate who said that tale-bearers could not occupy high places never saw a monkey go for a cocoanut tree.

Use Enameline Stove Polish; no dust, no smell.

Dr. Price's Cream Baking Powder.

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—

Cuticura Soap
FOR BAD COMPLEXIONS RED ROUGH HANDS AND BABY HUMORS.

BAD COMPLEXIONS, WITH PIMPLY, blotchy, oily skin, Red, Rough Hands, with chaps, painful finger ends and shapeless nails, and simple Baby Humors prevented and cured by CUTICURA SOAP. A marvelous beautifier of world-wide celebrity, it is simply incomparable as a Skin Purifying Soap, unequalled for the Toilet and without a rival for the Nursery. Absolutely pure, delicately medicated, exquisitely perfumed, CUTICURA SOAP produces the whitest, clearest skin, and softest hands and prevents inflammation and clogging of the pores, the cause of pimples, blackheads, and most complexional disfigurations, while it admits of no comparison with the best of other skin soaps, and rivals in delicacy the most noted and expensive of toilet and nursery soaps. Sale greater than the combined sales of all other skin soaps.

Sold throughout the world. Price, 25c. Send for "How to Cure Skin and Blood Diseases." Address POTTER DRUG AND CHEMICAL CORPORATION, Proprietors, Boston, Mass.

Aching sides and back, weak kidneys, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER, 25c.

DON'T.

Don't cheat yourself out of a good smoke by taking a poor imitation for the genuine Seal of North Carolina Plug Cut Tobacco.

SMUGGLED GOODS.

Travelers Who Evade the Custom House Duties.

AN INSPECTOR THROWN OFF HIS GUARD.

A Woman's Inconsistency Made Manifest.—Two English Dudes.

An inspector of customs who has grown round shouldered in the business of reconnoitering for smuggled goods was asked the other day to relate a few of his experiences during his long term of service in the government's employ. After allowing his memory to drift backward a few years he rallied, and first instanced the case of a lady who resides on Beacon street.

"She is," said he, "as rich as Crœsus, and is a shining mark in her philanthropic work. No one gives more liberally to the cause of charity. No one dispenses with a freer hand means for spreading the Gospel in heathen lands. She bears the reputation of being a large hearted, full souled Christian lady. Yet she swore falsely, as I believe, to the boarding officer. She declared she had nothing in her possession of a dutiable nature. There was something about the woman's actions, however, that awakened suspicion. A careful examination of her trunks apparently verified her statement. There remained, however, a lingering doubt that she was trying to deceive. Acting upon this misgiving she was asked to step into a small room near by, which is used for the purpose of examining female passengers whose truthfulness has been challenged. Under her garments were found forty-four yards of fine black Lyons silk. The fabric had been basted to her petticoat. She seemed overcome with embarrassment when the discovery was made. Her only excuse was the very 'thin' one that she was not aware the silk was dutiable. She was not asked why she concealed it.

About two years ago, while an inspector was making his rounds among the passengers, a tall, good looking, finely dressed lady nudged him in the ribs and softly whispered, "Can I see you privately a few moments?" She motioned the inspector to one side, at the same time keeping her eyes fixed upon two plainly dressed women who were standing together near the companionway. "I want to tell you," began the pretty siren, "that the two women you see over there have made a false declaration. Their stateroom was next to mine, and I overheard them on several occasions during the trip planning a scheme to conceal from the customs officers a quantity of valuable goods they have in their possession. You will do well to make a careful examination of their baggage and the clothes they have on. I dislike deception in any form, and make this disclosure in the interest of honesty."

The inspector thanked his fair informant, and promised that he would make a thorough investigation of the case.

When the two suspected females had received their baggage upon the wharf the inspector proceeded to make a most careful search of their contents, but found no trace of valuables. The inspector thought this was only a blind to throw him off the scent, and he asked an inspectress to search the persons of the two women. This was done, but not a shadow of anything dutiable was found. It now began to dawn upon the mind of the inspector that he had been tricked by the gay eavesdropper, and that she was probably the one who was trying to defraud the government, and not the two ordinary looking females who had been under suspicion. It was a neat little game to throw off suspicion, but will never be worked again on the same inspector. It was afterward learned that the two women were Chicago school teachers, who had been abroad spending their summer vacation. They felt very much embarrassed at the attention they received at the hands of the officers, and were at a loss to fathom its meaning. The poor old pedagogues probably never had a dishonest thought enter their heads.

An amusing incident occurred four or five weeks ago on board a Cunarder, when two finely dressed ladies declared that they had nothing in their possession upon which an impost duty should be levied. A few moments after taking the oath they were seen in close consultation, and their actions indicated that they had under consideration a matter of momentous importance. Finally, one of them accosted the customs officer, and said: "I guess I've made a mistake in declaring as I did, as we have several articles in our trunks which should pay duty." It is no unusual occurrence to find these conscience stricken people.

A little dumpy kind of a man attempted to run in three new ulsters a short time ago as part of his own wearing apparel. When his trunk was opened and the garments taken out, he was asked if he intended to wear the "toppers" himself.

"Certainly I do," he replied.

"I don't think the tailor gave you a very good fit; will you try one of them on?"

"They were all made from the pattern of this one I have on," and the little man turned around twice. "I don't see the necessity of going to the trouble of finding out whether the others fit me."

"I am sure the tailor must have made a mistake," persisted the inspector, "and I shall insist upon you giving me some evidence that he did not."

The little man tried every way to satisfy the inspector that the coats were for his own use, but failing, drew forth one of the heavy garments and crawled into it. It was like drawing a salt bag over a crochet needle. The little man had disappeared. The top of his hat and the toes of his shoes were all that could be seen of him.

"What's the lightest you'll let me off for?" softly asked the little man.

The account was made out and he paid without a whimper.

Two howling dudes were found one day standing over their traps looking about in a sneering, contemptuous manner at the scenes the new world presented at the landing of an ocean steamship. They were the cream of swelldom. When the inspector approached them and asked to have their trunks unlocked they seemed beset with astonishment.

"I beg pahdon, but what did you say, sir?" queried one of them.

"Open your trunks, I want to inspect your baggage."

At this the spokesman of the two threw a bunch of keys upon the wharf and said:

"Hopen the trunks yourself, fellow."

"Lift the lids of those trunks in half a minute or they go to the appraiser's store," quietly remarked the inspector.

"Gentlemen at 'ome don't do this kind of work. What blawsted customs you 'ave 'ere, to be sure, that requiah a gentleman to do a valet's labah."

He opened his trunks, however, taking this first lesson in democracy in the land of freedom.—Boston Herald.

But Little Trouble.

Rev. Mr. Hirsute—The very hairs of your head are numbered, Mr. Scantilocks.

Mr. Scantilocks—Well, it comforts me to think how little trouble I give the recording angel latterly.—Judge.

A Remarkable Cave in Indiana.

H. H. Sturm, of Indianapolis, and Richard Penckert, of Spencer, have discovered a cave near Spencer. Last night they explored it. The entrance is a hole 20 feet deep and about 3 feet in diameter. At the bottom begins a narrow and steep passage, running northeast about 35 feet. At the end of this passage was a step off of about 5 feet, and immediately to the left was a chamber about 8 feet in diameter, the walls rising gradually in the form of a cone, meeting at a point overhead 30 feet from the floor.

The walls were hung with numerous stone pendants, water at the time dripping down. A passageway, 18 inches wide and 10 feet long, led from this opening toward the northwest to another chamber similar to the first, but about 60 feet high.

A passageway then brought the party into still another room, it being a little smaller than the first. From this a narrow isle, 60 feet long and 7 feet high, led northwest to a very small opening or manhole, through which the reporter crawled with a lamp, and found that the passage was blocked by a large quantity of sand and debris, brought by the rains that pour at times down the whole cave.

At the end of this last passage there led off two openings, about as large as a stovepipe. Stamping on the ground brought out the fact that a chamber was at some place under this last passage. This week a hole will be drilled to find if such a cavity exists, and also the entrance will be enlarged, making it easier of access. The fact that the water disappears downward, the upper current of air, and the hollow sound above mentioned, go to prove that there is another cavity, probably larger than any of the rest. The estimated depth of the cave from the general surface is 150 feet. The party spent an hour and fifteen minutes under ground.—Martinsville (Ind.) Cor. St. Louis Globe-Democrat.

Eloped on a Locomotive.

Alpheus did not have more trouble in reaching Arethuse than Conductor Bell, of the Louisville and Wadley road, had in getting to his bride. The groom had long loved a young lady of Louisville. Her parents objected very strenuously to their marriage, and used all the means possible to thwart their desires. Like lovers the world over, opposition but strengthened their affection and determination to marry any way. Tuesday night was set as the time for an elopement. In some way the old folks got an inkling of what was contemplated. When the expectant groom arrived he found the house well guarded. The parents had the trump card for the time being.

Wednesday came, and the turn of the wheel threw good fortune into the lap of the young folks. Disappointment sharpened their wits. A new plan was conceived. That afternoon, as his train passed her home, the conductor caught a glimpse of his affianced. That was sufficient. Running the train to a siding, a mile or so away, the coaches were dropped, and while the few passengers wondered what was delaying them, the engine, with the exultant lover, sped down the track to the spot where she was waiting, heart in mouth, and, as the old expression goes, "twixt love and duty swayed." Love was victorious. When the engine reached the train again, after a very few minutes' delay, it had a new and fair passenger to place aboard. Reaching Wadley, a minister was summoned, the ceremony performed and the trip then continued to Savannah.—Savannah Cor. Atlanta Constitution.

The Village Blacksmith's Rival.

To see lightning assume the role of a blacksmith is a sight which no man expected to witness a few years ago. The utter subjugation of the element that gives the thunderstorm its majesty and that cleaves the granite of the mountain peak, was manifested all last week, in the working of a bit of mechanism in Mechanical hall. A rapid adjustment of two bits of cold steel, a touch upon a lever, and, lo! about the junction of the pieces of metal there flashed a circlet of cherry red that soon became snow white with intensity of heat. While one's watch ticked a score the fierce heat made the two bits of hard steel one, and the work was ended. No human hands, or fire kindled by man, could perform the same work in so perfect a way, or so swiftly. It was a wedding in which a busy dynamo a mile away was the officiating power, and it was a sight full of interest and beauty. In the hands of all-potent man, the thunderbolt of Jupiter becomes the rival of the village blacksmith. The possibilities of the process of electric welding are wellnigh limitless.—Pittsburg Bulletin.

Living Without a Head.

Mr. Caldwell, of Godmanchester, Huntington, tells of a rooster that was persisting in living out in his country under peculiar circumstances. On the evening of Oct. 31 Mr. John Leahy chopped off the heads of two roosters and left the bodies lying in the woodshed. On going out in the morning to pluck them he found one standing and apparently alive. Although minus the greater portion of the head it is living still, and when Mr. Caldwell saw the fowl on Saturday last it was apparently doing well and promises to become somewhat celebrated, as a young man named Brian O'Connor has purchased it, afterwards selling a half interest to a friend for $25, it is said, and they intend putting it on exhibition. The head is off a short distance from the ear, leaving one of these and a portion of the comb intact. A portion of the brain must also be uninjured, since when the food is brought to the neck the gullet projects and the food placed in it quickly swallowed. The owners are taking the best of care of their bird.—Montreal Star.

George Jennings, of New Portage, O., was fishing in Wolf creek and had set a line and went further up the stream. When he returned he found a duck had swallowed the minnow and swam away with the pole and line. He followed it up and captured it. This is a new way to get ducks.

A TWO FOOT GUAGE.

Unique Features of a Maine Railroad.

INTEREST TO RAILWAY PROJECTORS.

The Cost of Construction.—Its Perfect Safety.

As our narrow gauge road, the Bridgton and Saco River, which taps the Portland and Ogdensburg (standard gauge) at Hiram, sixteen miles west of Bridgton and forty miles west of Portland, is a representative, and one of the best representatives, of its kind, I will take it for illustration. The general reader, as well as railroad men, will readily note its unique, curious and interesting features.

The road was built in the summer of 1882 and the winter of 1882-83. That winter was notable as one of the most severe on record, the mercury for weeks at a time registering from 5 degs. to 25 degs. below zero, and the snow being deep, which, with the then high price of materials, made the expense much more than it would cost to build the same road at the present time. The exact length of the road is 15.9 miles, independent of sidings. The cost of construction was $169,395; of equipment, $26,473; total cost, $195,868. The same kind of steel rails can now be bought from 30 to 35 per cent. less, and other materials are cheaper; so that what then cost about $1,000 per mile to construct could now be done for $700. The rails are of steel, Cawbridge pattern, are 30 feet long, and weigh 30 pounds to the yard. Number of ties used per mile, 2,640.

There are two engines—built at the Hinkley Locomotive works, Boston—each weighing 26,000 pounds, with driving wheels 30 inches in diameter; and their power, considering their small size and weight, is simply surprising, as is shown by the way they conquer steep grades with heavy loads, and force their way with plows through deep snows and huge drifts, by which they are seldom long detained. The two passenger cars (built at the Laconia Car works, New Hampshire) are each 45 by 6 1-2 feet. Each seats thirty passengers—one person to a seat, there being two rows of seats—is finished in solid mahagony, and nicely upholstered. Between the floorings of each car mineral wool three inches deep renders them fire proof, prevents any cold air from passing, and deadens the noise. These cars are run with little jar or noise on 18 inch wheels, are equipped with the Miller platform and vacuum brakes, are elegant, cozy, pleasant, comfortable, in short, are every way satisfactory, and compare favorably with their more pretentious brethren. The freight cars, some twenty in number, are 26 by 6 1-2 feet, and carry ordinarily a burden of eight tons, although having a capacity of twelve tons. There are also a baggage mail express car, a combination car, three hand and three push cars, and a snow plow. All the trains are mixed. They ordinarily take one hour to accomplish the sixteen miles of road, but have been run that distance in thirty-six minutes. The amount of coal required for the round trip—thirty-two miles—is 500 pounds. The heaviest grade (200 feet to the mile) is near the Hiram terminus, and is on a half mile 20 deg. curve. There is another curve of 18 degs. one of 16, one of 12, one of 11, four of 10 each, and a considerable number of less degree.

The Central and South American inspection parties learned some, to them, surprising facts in their forty minutes' ride from Hiram to Bridgton. They learned that the little 26,000 pound locomotive could draw a well loaded trian up a grade of 200 feet to the mile; that it could easily round a 20 deg. curve; that the seeming recklessness of attempting to run a train on rails only two feet apart proved a thoroughly safe performance, so far as any danger of a tip over was concerned, on account of the nearness of the cars to the ground and consequent lowering of the center of gravity; and that three essentials of safety, speed and comfort were abundantly secured. Our road was built five years ago, and in all this time not a passenger has been injured, not an engine nor car overturned nor derailed, not a smash up of any kind. What better record could be had?

There are four other two foot gauge roads in Maine, the Sandy River, the Monson, the Franklin and Megantic, and another whose name I cannot now recall, varying from fifteen to eighteen miles in length.

A few words, in conclusion, in regard to the two roads to be built in the southern part of this continent, the possible adoption by which of the plan of the little two foot road away down east drew these emissaries from the south hither. The Central American road is to be built by the Honduras North Coast Railway and Improvement company, whose president, S. B. McCarnico, lately inspected our road, and will connect the port of Truxillo with Puerto Cortez, in the republic of Honduras, 115 miles long, for the development of the trade in tropical fruits and vegetables, native woods, medicinal plants, minerals, etc., in which that region abounds. The route of the South American road is 110 miles long, and extends from San Lorenzo bay to Isbarra, about forty miles from the city of Quito, in Ecuador, the city being the capital of the republic, with a population of 90,000, and located at an elevation of nearly 8,000 feet above sea level among the Andes mountains. It is the intention to complete the road to Quito, in time, the name of the road being the Pacific and Quito railway. There is not a railway in the country, most of the traffic being done on the backs of mules, and it is proposed to build this line to help the trade of that country with America.—Charles O. Stickney in Boston Transcript.

Protection Against Cold.

A well known physician, whose experience enables him to speak with authority on the subject, gives the following advice for protection against cold when driving: "Provide yourself with a good kerosene oil lantern, well filled and trimmed, and with sufficient oil if necessary for refilling, and you have the most efficient means for enduring the cold that can be got. This lantern, being lighted, and kept beneath any covering that is used to protect the limbs, will add materially to one's comfort who must make winter trips. I will add, in connection with the lantern, that a rubber coat, gossamer or rubber blanket is a most desirable garment for a long, cold ride. If any one will try these suggestions he or she will never start out again for a cold drive without the lantern and oil; also, a good, strong umbrella is a good protection against a cold wind."—Chicago News.

The Leaders of Men.

Professor Herrbach, a famous teacher in one of the Prussian gymnasia, once said: "In every class in the schools there are brilliant boys who carry off the prizes for scholarship and oratory. They are to be flagmen, trumpeters in the army of life. But in each class there is always a downright fellow, loyal to his work, honest to the marrow of his bones. Him I call Dux to myself, whatever his rank in class may be. He will be a leader of men."—Youth's Companion.

Old Egyptian Encaustic Process.

In the older Egyptian mummies the face of the outer casing is usually modeled in relief, in a purely conventional way, but in this latest form of burial under the Roman empire a portrait of the deceased was painted on a very thin piece of wood and then fixed over the dead face. It is very remarkable to find such fine coloring and skillful drawing in work of this late date, which must have been turned out of an ordinary undertaker's workshop. The portraits, both male and female, are most vivid and lifelike; the ladies are mostly dressed in a purple garment, and the men in white, with a red orphrey. The modeling of the flesh is very skillful, and in some cases the coloring reminds one of the Venetian school from its rich depth of tone.

A special point of interest about these paintings is their technical execution in the hot wax, or encaustic process, as it was called. The pigments were mixed with melted wax, and then fixed in their place by holding a charcoal brazier near the surface of the painting, as is described by Vitruvius. The somewhat lumpy impasto of the surface is due to the hardening of the melted wax when the brush touched the cold surface of the panel, and, owing to the non-absorbent nature of the wood, the subsequent application of heat was not able to drive the wax below the surface, as was the case with encaustic painting upon stucco. One of these portraits is noticeable from its ornamental framing with a flowing pattern, formed by pressing wooden stamps upon soft stucco, which was afterward gilt, a process exactly like that which was so often used to decorate mediæval pictures on panel, especially retables, or ancone, as the Venetians called them.—Saturday Review.

The Charm of a Sweet Voice.

I met the other day one of the most fashionable women in the city, and the thing about her that charmed me most was her perfectly trained voice. It was low and melodious, never raised above a certain pitch, but her enunciation was perfectly clear. A sweet, low voice is one of the most seductive charms in a woman, and yet how seldom one is found. The majority of women do not seem to realize this, and one's ears are constantly being tortured by the sound of loud, shrill voices. At a restaurant where I frequently dine comes very often a pretty young woman with her mother, and when I see her coming I want to go. She has a high pitched, cracked, old woman's voice, that takes away my appetite and sets my nerves on edge. At a recent afternoon reception a handsome lady entered and began to talk. As soon as she began every one else stopped and listened, for her voice was so loud and harsh that it drowned every other. She was clever, and what she said was worth listening to, but it was torture to the sensitive ear. The spell of a beautiful face is often broken by a harsh, uncultivated voice, while a sweet voice almost makes a plain face pretty. I would turn round in a crowd to discover the owner of an attractive voice, but I would not turn round in the street to catch a second glimpse of a pretty face. Pretty faces are common enough, one sees them everywhere, but a thoroughly refined, cultivated and sweetly modulated voice is indeed rare.—New York Star.

To Make Wood Fireproof.

If this could be cheaply and effectually done there are few improvements which would be more largely conducive to the welfare of mankind. The following paragraph, therefore, which has been lately in circulation, may be fairly pronounced "important if true, and interesting at any rate." It is stated that a New Englander has recently discovered a cheap method of dissolving zinc by combining it with hydrogen and producing a solution called zinc water. This liquid, if applied to certain woods, notably white wood, makes it absolutely fireproof, and at a low cost. Mr. Edward Atkinson, the Boston economist, in speaking of it at Cornell university, says he regards this discovery as one of the most important of the age, and one that will surely revolutionize fire insurance, as well as immensely decrease the losses by fire. The invention is kept secret for the present. Only one foreigner, Sir Lyon Playfair, the English scientist, knows of it. He corroborates all that is claimed for the invention, and says that the inventor is a bungling chemist, but that he has a faculty of blundering into the choicest secrets of nature's laboratory. As soon as patents are perfected and capital interested, zinc water will become an article of commerce.—Safety Valve.

A Telegraph Man Outwitted.

A few days ago several men from the electric light station dug a hole for an electric light pole opposite one of the finest residences in Malden, Mass. The owner of the residence in the meantime secured a man and told him to go up into the woods and dig the first tree he could find, and hurry back and place it where the hole for the electric light pole was. Before the men commenced to raise the electric light pole the owner of the residence invited them to come into his cellar and take a drink, which they all did. There the owner detained them long enough to allow the man sent for the tree to come back and plant it. The others did not dare to remove tree, so they put the pole into their wagon and drove off.—Scientific American.

Embraced and Then Stabbed Her.

I have sat by the hour in El Pravo, the fashionable thoroughfare of Madrid, Spain, and watched the dark eyed beauties of that celebrated city in all their loveliness, but they were always associated in my mind with treachery and deceit. While thus sitting one beautiful evening, the thoroughfare thronged with its usual gayety, I saw two splendidly dressed ladies meet and embrace with great enthusiasm, when, with a chill of horror, I saw one of them stealthily draw a stiletto and plunge it deep into the back of the other. A shriek, a fall, a sudden rustling of dresses as the murderess quickly mingled with the crowd, and all was over.—Forest and Stream.

THE MEXICAN MULE.

The Most Interesting Specimen of his Race.

SOME OF HIS PECULIARITIES.

He May be Indolent, but he Industriously Pays Old Scores.

The Mexican mule is a sort of cross between a mountain goat and a flying squirrel, with the distinct difference that its surplus electricity flows off from the negative pole instead of the positive, as with the goat. It is in its meanderings on the mountain trails that it shines resplendent, but with a luster wholly its own, that can no more be compared with any other than can the flash of the diamond be compared with the fire of the opal.

A BLOOD CURDLING WAY.

On the mountain trail this distinct species of mule was never known to fall, although he has an exasperating and blood curdling way of stumbling along over it that would raise the hair on end of a bald headed man. Many a time I have watched the mule I was compelled to ride with a view of discovering his methods of trying to scare me to death, as payment for past injuries. Oftentimes the trail would lead past dizzy heights or cliffs, where one could look sheer down far enough to be dead before he reached the bottom should he fall, and every few feet along the trail, of a foot to a foot and a half in width, it would have tumbled in a foot or so and again taken up the original inclination of the mountain, or about that of the leaning tower of Pisa. Here the mule would always be sure to stick one foot and stumble a little bit, but always regain its equilibrium at the next step, having clearly done it intentionally, and for no other purpose than pure cussedness. One can imagine the cool Alpine zephyr that is wafted up the dorsal vertebræ with sufficient force to blow the hair straight up on end.

If you have touched the beast during the last three or four days with the whip or dug into its sides with the spurs when it was absorbed in melancholy reflections, it will be sure to remember it when you are climbing over the comb of a cliff 3,000 feet high, and at the least movement of your feet or twitching of your fingers it will throw its head high in the air like a hound on the scent and go stumbling over every pebble and blade of grass on the dangerous way, evidently trying to make you regret that you had tried to punish so delicate a creature. At any other time you can turn double somersaults on its back, or act like a raving maniac, and it will not increase its funereal march a foot a day as a result of your actions. Whenever a trail leads exceptionally near a cliff, before it turns on the reverse grade down or up hill, the Mexican mule never fails to go within an inch of the crest and let a hind leg over with a slight quiver as it turns around. All these mountain trails are full of little, round, hard stones about the size of marbles and larger, hidden underneath a carpeting of pine needles. These are liable to make a mule stumble if two feet are on stones at once; but this is very rare, although they always go sliding over them on the steeper trails.

It is wonderful how these rotund rocks, hidden under the pine needles on the trail or off of it, will throw a human being prostrate if he dismounts a few minutes to take a walk on a slope and stretch his stiffened limbs. Of course the mule, under headway, walks over them before it can stop. Hobnails in shoes, nor anything of man's make, help to avoid them.

A PLEASANT PASTIME.

There is another pastime in which the Mexican mule delights, and in which you won't. It likes to deviate enough to go under every low branched tree on the trail, and so universal is this trait of character that the trail seems to lead from one low tree or vine to another, just as the mules seem a mind to make it. The dodging of limbs and branches among the pines, cypresses and oaks in the highlands was not so bad, but down in the tierras calientes, or hot lands, where brambly mosquito and thorny vines were tearing crescents out of your clothes until you looked like a group of Turkish ensigns, it was much more monotonous.

The beast I was compelled to ride had one ear cut off near the head and looked topheavy in the extreme. As a mule's ears make up a goodly portion of it, as seen in elevation from the saddle on its back, I was always frightened when he approached a cliff on the unabridged side and instinctively leaned in to counterpoise the heavy weight that I thought might drag us over the precipice. He was familiarly known by the party as "Old Steamboat," "Old Lumber Yard," and other names indicating his characteristics, but he was large and so was I, and he fell to my lot. When I first saw his abbreviated auricular appendage, as a member of the society for the prevention of cruelty to mules, I felt incensed when I heard that it had been lost by the cut of a whip in the hands of a previous driver; but before we had been acquainted a week I had transferred all my sympathy from the mule to the man, whoever he may have been. On the level ground he was slower than the cook, who took fifteen minutes to wash a spoon, but on a perilous path of a half a foot in width on a dizzy precipice the way he could box the compass with the lone ear, so as to catch some faint sound at which he could get frightened at this inopportune time, made me wish I could cut off the other ear at the third cervical vertebræ.—Frederick Schwatka's Mexican Letter.

A Veracious Man.

Wife—What time did you get in last night, John?

Husband—Two o'clock, my dear.

Wife—Where were you, John?

Husband—At work at the office, my dear.

Wife—That's right, John, never tell a lie. (To the servant)—Mary, take Mr. Brown's shoes off the mantelpiece and get his night key out of the clock and put it in his pocket.

A Summer Resort in Berkshire.

Several citizens of New York city, Poughkeepsie, Mount Washington and Great Barrington have organized the South Berkshire club for the purpose of establishing a summer resort for themselves and families at Sky farm, Mount Washington, the birthplace of Elaine and Dora Goodale. Those best known in the vicinity as active in the enterprise are H. F. Keith, of Mount Washington; S. B. Goodale, F. L. Pope, of New York; and Lawyer A. C. Collins, of Great Barrington. The farm of 600 acres is to be called Taconic Woodland, and be laid out as a park of sixty-five shares, and it is expected that a shareholder will build a cottage upon each lot and have a sixty-fifth interest in the property of the association.

The club house for the entire company will be the historic Sky Farm cottage, from which a magnificent view is obtained in every direction. The house will contain dining rooms, parlor and library, with accommodations for transient guests. Thirty shares are already subscribed for, and the lots are sold only to approved parties under proper restrictions. The town of Mount Washington is in the southwestern part of Berkshire county, and was organized June 21, 1779. Previous to its incorporation it was known as Tauconnuck Mountain, meaning the great wooded mountain, and here were made, about 1693, the earliest settlements in Berkshire.—Springfield Republican.

A Prompt Answer to Prayer.

A United Brethren preacher, the Rev. John R. Eberly, of Lewiston, has been conducting meetings at the Brush Ridge school house, in this county, for three weeks. The countryside for miles around is represented nightly, and intense interest is shown. The other night an amusing climax occurred during the delivery of Brother Eberly's opening prayer. The venerable minister has shown a partiality for the phrase, "O Lord, shower thy blessing down upon us," which is incorporated in all his prayers.

When this period of his invocation was reached the audience was thrown into a condition of extreme excitement by the copious fall of water from the trap door directly over the minister, drenching him through and through. A temporary check was given to the services by this sudden fulfillment of the preacher's prayer and the tranquility of the meeting was not re-established until an investigation revealed the cause of the unexpected downpour. John L. Smith, a fifteen-year-old boy, had secreted himself in the attic of the school house in advance of the meeting and given practical effect to Mr. Eberly's invocation with two buckets of water.—Lewiston (Pa.) Gazette.

A Window Decoration.

What is more beautiful for a low screen around the kitchen windows than sweet peas. If the kitchen is on the sunny side of the house they will luxuriate with no other fertilizer than the soap suds of the weekly washing. The seed should be planted very early in the season, in a rich, sunny place, as deep as six or eight inches. Some floriculturists plant them in the fall, putting them down the depth of ten inches and covering the ground with rich fertilizer. They must be given something for support as soon as they are out of the ground. Bushes may be used for this purpose, but a wire gauze of large mesh, painted a medium shade of green, is prettier than anything else. The new varieties of sweet peas are considerably larger than the old varieties and will cover a trellis from four to six feet in height. A mixture of black-purple sweet peas with the old fashioned rose and white "painted lady" looks very pretty on such a trellis.—New York Tribune.

Caged in the Top of a Building.

For some mysterious reason the elevator in Fuller's block did not stop at the desired floor the other day, and kept on to the top of the building in spite of the small boy who was running it. The sole passenger was an elderly lady. It was nearly noon when the ascent was made, and it was after dinner that a gentleman discovered that the elevator boy did not respond to the bells and went to the roof to see what was the matter. He discovered, caged up in the elevator, a very much frightened old lady and a boy, who also showed signs of anxiety. With a step ladder and some outside help the prisoners were rescued through a very small opening above the door on the top floor and the elevator was set in motion again. It will be some time before that lady trusts herself to an elevator again.—Springfield (Mass.) Homestead.

A Curiosity of Red Tape.

A curious case of red tape has just come to my attention. The Brazilian Indians have a trick of compressing the skulls of the dead. They take out all the bones and reduce the size of the head to about one-third of its original dimensions, but manage to retain the features and expression exact. A gentleman in New York on a recent trip to Brazil secured one of these heads and shipped it home. It now lies in a box in the basement of the custom house, and he can get it no further, because the health officer will not give the necessary authority to the customs officer to pass the invoice, for the reason that no certificate has been furnished as to the cause of the man's death.—Cor. Chicago News.

In Frankfort experiments are shortly to be made to show the application of electricity to aerial navigation. The pulley which controls the ascent and descent of the balloon will be operated by an electric motor, and a telephone wire will enable conversation to be carried on between those in the balloon and those at the starting point below.

The late Senator Hearst was forty-nine years old when the Comstock silver mines were discovered. In six months after he reached the Comstock lode he had made $500,000, and from that date till his death his wealth went on multiplying.

STORIES ABOUT MEN.

Ex-Governor Magoffin's Interesting Talk with a Deaf and Dumb Man.

Ex-Governor Beniah Magoffin, of Kentucky, got in the train one day at Frankfort to go to Lexington. He sat down by the side of a very handsome, intelligent looking young man. The governor, who was a great talker, at once began to chat. The young man listened well, apparently, nodding his head from time to time, as if he agreed with the governor's views, but it seemed that he couldn't find room to put in a word. This continued until they reached Lexington, when a cordial hand shake and an exchange of cards took place. Subsequently, in the corridor of the Phœnix hotel, the governor was telling a party of friends about the meeting, saying the young man was one of the most agreeable fellows he ever encountered.

"Perhaps some of you know him," said he, "he has one brown and one gray eye. But stop, I have his card!"

"Why, governor," said one of the party, "that was Bob King; he's deaf and dumb. Everybody knows him!"—Philadelphia Times.

Didn't Know He Was President.

When Charles Crocker was at Portland on his spike driving tour over the California and Oregon, an incident occurred which is illustrative of the bewildering magnitude of the railway interests of that gentleman. He received a call at the Esmond house from the general manager of the Oregonian railway, a little narrow gauge formerly under the control of a Scotch company. Mr. Crocker regarded the visit as purely complimentary, but when the narrow gauge manager began to talk about the prospects of his line, the need of repairs at certain points, and gave the magnate the assurance that it was a fairly prosperous concern, Mr. Crocker's mind became cloudy. He clearly did not know what the man was driving at. Still the official went on until he was interrupted by a friend who happened to be present, and who said.

"Mr. Crocker doesn't understand what all this is about."

"Oh, I guess he does," said the general manager, with a confident air. "I guess he knows that he is president of this railroad."

"But I'm —— if he did," said Mr. Crocker, "until you said so this moment."

The incident created a ripple of merriment among the railroad men who happened to be present, and some of the Portland magnates who heard the story thought a great deal less of their railroad interests when they reflected on the fact that here was a man who was president of a railroad and didn't know it.—Lakeview (Ore.) Examiner.

"The Court Does Not Lunch."

A learned counsel in Mr. Justice Day's court, in the queen's bench, applied to his lordship to adjourn a case until after the "luncheon time" of the court, as the plaintiff had telegraphed that he had missed his train.

Mr. Justice Day—You should ask that the case be postponed until after "the adjournment," for "the court" does not lunch; that is not an epoch in the life of "the court." (Laughter.) I do not speak of what individuals do, but "the court" does not lunch.—London Telegraph.

Artist Whistler and Oscar Wilde.

A Boston artist tells this story of Whistler and Oscar Wilde, who has the reputation of borrowing Whistler's bright speeches. Having heard the artist say an unusually good thing Oscar exclaimed deploringly: "I wish I could have said that." "Oh," replied Whistler derisively, "but you know you will [illegible]"—Boston Herald.

Heard on the Road.

Proprietor Kansas Hotel—Have the waiter gentlemen had their dinner yet?

Head Waiter—Yes, sah.

"Has the professor of cooking saved out all he wants for his family and friends?"

"Yes, sah."

"Did the upstairs ladies and the stable gentlemen have all they wanted?"

"Yes, sah."

"Is there anything left?"

"A little, sah."

"Well, call in the boarders."—Omaha World.

The Pestiferous Horse Fly.

Of the fly species the horse fly is the most cruel and bloodthirsty of the entire family. He is armed with a most formidable weapon, which consists of four lancets, so sharp and strong that they will penetrate leather. When not in use they are nicely folded away in a sucker. He makes his appearance in June, and may often be seen in the vicinity of small streams of water. He is said to subsist in part upon an airy diet, and to pass his life harmlessly. Not so the female, for she is armed with six lancets, with which she bleeds both cattle and horses, and even human beings. She lays her eggs in moist places, and, after they are hatched into footless maggots, they make all necessary journeys by stretching and closing the segments of their bodies, their heads being supplied by two hooks, by which they get their food. In process of time this maggot goes down into moist earth, where it reposes for some weeks, after which it bursts the pupa case, and comes forth a large black fly, armed and equipped like its predecessors.

FRIDAY, JULY 31 1891

The Treasurer of the United States is responsible for the custody of 4500 tons of coin. It is estimated that if burglars broke into the vaults it would require 90,000 men of average strength to carry the money a distance of fifty feet.

The Superintendent of Immigration has decided that skilled labor may be imported into the United States when required to aid in the establishment of a new industry with which American workmen are unfamiliar. This decision has been made in the interest of the tin-plate industry.

California takes much interest in the Nicaragua canal enterprise, but this is expressed in the form of newspaper articles rather that subscriptions to stock. San Francisco's capitalists and merchants are remarkably apathetic in the matter in view of the general assent to the idea that the canal would double the trade of that port.

The Ohio Democracy has accepted the issue tendered it by the Republican Convention and has incorporated in its platform a declaration in favor of a "tariff levied for the sole purpose of producing a revenue sufficient to defray the legitimate expenses of the Government economically administered." To this the platform adds a rider to the effect that the verdict of the people of Ohio will be recorded against the iniquitous policy of the so-called protection championed by the Republican party in the interest of the favored classes against the masses.

It has just occurred to the Department of Justice that some effort ought to be made to enforce the National law against trusts. Congress passed the Act as much as a year age, but it has remained practically a dead letter ever since. Attorney-General Miller is now sending out instructions to the Federal District Attorneys, in the regular order of business, it is said, to see to it that the law is enforced. The law is a pet measure promulgated by Senator Sherman and it looks as though the present spirit of activity has especial reference to the farmer vote of Ohio.

The revenue bureau is attempting to make a lame excuse for its absurd sweet wine regulations by saying that there are a great many manufacturers of that kind of wine in New York who employ drugs, and that if any concession was made to the California vineyardist it would in the end be worse for him. This is mere rot. These New York people have no vineyards. As the thing stands now the regulations are adapted to play into the hands of the large vineyardists, and to crush out the small fry, which is all wrong. Common sense and a reasonable discrimination are what are needed in this matter.

Matthew Stanley Quay, the present chairman of the Republican National Committee, in a conversation with a newspaper correspondent the other day, said that Governor Pattison of Pennsylvania would make a strong Democratic candidate for President. Quay is going to step down and out as the director of the next Republican Presidential campaign. He is undoubtedly largely influenced in doing this by the fight that is being made against him by respectable Republicans in his own State. But he could have bull-dozed his way through, and he knows too much to be cashiered. He is influenced in his resignation in all probability, by his belief that his party will be beaten. Pattison has carried Pennsylvania twice for Governor and could carry it for President.

It is said that the conviction of masher Miller in San Francisco has had the effect of making the entire masher tribe disappear from the streets. The "statues" are no longer to be seen on the corners or curbs, and the entrances to hotels and cigar stands and theaters are no longer blockaded by these gross creatures. The story is almost too good to be believed; it is too much to accept as verity that women can walk the streets of the metropolis and no longer be insulted by the sensual glances, rude remarks and insulting following by mashers. If the vigor animating the San Francisco police can be kept alive, and the mashers in consequence kept down, there will be reason for believing that the days of the masher in San Francisco have indeed been numbered. The present success of the police authorities of San Francisco ought to inspire those of other cities of the State to deserve commendation for like reasons.

A DEAD LINE FOR CROOKS

WALL STREET AND BIG BUILDINGS CLOSELY GUARDED.

Why Men of Doubtful Reputation and Questionable Appearance Are Prohibited from Being Inside of New York's Recognized Money Center.

The Equitable building is one of the largest general office buildings in the world. Its actual floor space is about 400,000 square feet, equal in extent to eight or ten city blocks. It is a busy, bustling city in itself, and is occupied by nearly 4,000 tenants.

A special police force of seven men are constantly on duty in the halls and corridors. They are under the command of ex-Detective Sergeant Dusenbury, who for nearly thirty years was on the detective force of this city, and was one of the best known and most successful of Inspector Byrnes' staff. There are few men who have a wider acquaintance with the outlaws of society. He has been the guardian ever since the arcade was opened, and it is owing to the vigilance displayed by him and his subordinates that so little annoyance has been suffered by the tenants and the general public.

It is thoroughly understood by the lawless element and by professional criminals that they are not allowed below John street. Inspector Byrnes long ago issued an order to his down town detectives to arrest any known thief, burglar, confidence man or others of that class who intruded upon that section of the city. Broadway, Nassau, Wall and Broad streets are constantly patrolled by the sharpest and keenest officers in the inspector's command. Professional criminals, aware of the sharp lookout, as a usual thing give the financial center of the city a wide berth.

But in spite of the vigilance occasional visits are made by the more daring or by those who believe they are not personally known to the detectives. But they are so soon spotted and so closely watched that no serious case of depredation has been known for a number of years. When these people do venture down town they invariably visit the Equitable building.

WATCHING "CHECK BEATERS."

In the Cafe Savarin another special detective is employed to look after the undesirable customers in that favorite resort of down town business men. Theodore Wandell, who was for a long time one of Pinkerton's agents, looks out for this special corner in the busy city. He too, keeps a bright lookout that no professional rogues enter the place and rub elbows with their honest neighbors. But with Dusenbury and his force keeping general guard over the whole building he is seldom called upon to exercise his authority over the more serious characters, and his duties are generally confined to looking after check beaters.

"Check beaters are our special annoyance here," said Mr. Wandell to a reporter. "You would be surprised to see how many men attempt to beat the bar and the lunch counter. Their method is a very simple one and nearly the same in all cases. An apparent gentleman comes in, steps up to the bar and calls for a drink and receives his check. He then goes to the lunch counter, orders a more or less elaborate lunch, which he eats leisurely, and receives another check. Then he visits the cigar counter, selects a cheap cigar and gets another check, and finally walks to the cashier's desk, throws down his cigar check and the change and walks out with the other two checks in his pocket. They may be successful for a few times, but eventually we discover their game and then we take our innings.

"We are very careful not to make a mistake in following up gentlemen of this ilk. We sometimes allow them to go through their operations several times in succession until we are absolutely certain that it is their intention to cheat the place. We quietly inform them that they are discovered, and tell them to make restitution for the checks they had not formerly paid for. Of course these men are never allowed in the place again."

A BIG CHANCE FOR THIEVES.

There is one roving class of people that even the sharp eyed detectives are not always able to discover. Their ostensible business is honorable enough, and there are sometimes honest men among them. They are the "fakirs," peddlers and agents. There is an army of them in this city, and they circulate freely wherever men gather. Generally they are cheeky, plausible and voluble. An innocent looking parcel, such as any business man might carry, often contains their stock in trade. More often they carry their entire stock in their pockets. It is these people that invade offices and stores under the guise of legitimate business, but too often are nothing more or less than sneak thieves on the lookout for every opportunity to steal.

The reason for the strict police regulations as to the Wall street district are obvious to the casual visitor to that section. Every day men and boys may be seen going from office to office and from bank to bank with bags of coin on their shoulders or packages of bills in their hands. Messengers are scurrying hither and thither with stocks and bonds for delivery, sometimes in large amounts. Clerks and porters with boxes and sachels containing securities of great value are constantly coming and going to and from the different safe deposit vaults.

Express wagons with gold and bills are on the streets at all hours, and even trucks loaded with silver bricks are seen daily in front of the assay office or the bullion brokers. There is no place in the world where so much portable wealth is handled with such apparent carelessness, and yet there is probably no place where a successful robbery could be less easily affected.—New York World.

A Queer Provision in a Will.

The following will, though not especially curious in itself, throws a curious light on the streets of London in the Seventeenth century. John Cooke, among other bequests, left one pound sterling "for the maintenance of a lantern and candle—to be eight in the pound at the least—to be kept and hanged out at the corner of St. Michael's lane, next Thames street, from Michaelmas Day to Lady Day, between the hours of 9 and 10 o'clock at night until the hours of 4 or 5 in the morning, for affording light to passengers going through Thames street or St. Michael's lane."—All the Year Round.

CREPE PULLING.

A Disreputable Fraud Practiced Upon the Families of the Dead.

Reputable florists in this city are suffering greatly by a dodge called "crepe pulling," resorted to by unprincipled dealers in an attempt to increase their business. A reporter, desiring to ascertain just what the above term signified, visited several of the Broadway stores, but the majority of dealers were averse to conversing upon the subject. John B. Nugent, Jr., when spoken to, said:

"You wish to find out about this 'crepe pulling,' do you? Well, I'll tell you how the scheme is worked. Each morning these fellows pick up the papers and go through the death lists in a very careful manner. They select those people whom they know are in the middle walks of life. One of their men is then sent to the house of mourning, and he, upon entering the room where the bereaved relatives are seated, inquires in the most sorrow stricken tones what was the cause of death. Naturally, some one will ask whether he knew the deceased. And the reply will generally be that they have had many and many a good time together. Such a jolly good fellow was Jack. And they were almost brothers. He used to come over to the store every day for his bunch of violets or a pink.

"Before the relatives are aware of the fact the artful fellow has a ten or twenty dollar order. This in itself is bad enough, but when these florists make up a floral piece, instead of giving the family natural flowers, they make up the wreath, or whatever it may be, of what we term crepe flowers, an artificial flower resembling a white pink. These things are purchased at about one dollar per pound. A few natural roses are stuck into the design, and when the entire piece is made up the whole thing costs them in the neighborhood of two dollars. One cannot understand how much this pernicious practice is indulged in and what harm it does the majority of dealers."

Mr. Nugent told of a certain florist who sent one of his men down to Cherry street to a house where a woman had died. The man went up stairs, and leaning over the coffin actually forced tears to his eyes after declaring that the woman was his cousin, and while no one was looking, as he thought, strewed smilax around. The husband, a big, burly Irishman, and who, by the way, had worked in the flower business himself, caught the fellow, and after giving him a good trouncing, deposited him in the street without any show of gentleness.

"He," said Mr. Nugent, "at least got what he deserved."—New York Press.

The Place to Wear a Watch.

Half a hundred girls have been noticed lately in the Fifth avenue stages and on the west side of that thoroughfare to have little chains, with charms or lockets attached, hanging from their collars, either directly in front or a little to the left side. Not many days since a daughter of Eve, who was convinced that more was there than met the eye, determined to fathom the mystery. To that end she made frequent journeys in the stages and haunted Hayler's till her pocketbook grew emaciated, all to no end. The little chains dangled tantalizingly before her eyes, and no one told her why. At last, finding herself alone in a stage with a girl adorned after the manner described, she summoned up all her courage and asked the stranger to satisfy her curiosity.

The girl calmly produced a tiny watch, and languidly said it was the very latest thing to wear them in the collar, "and far more convenient it is," she said, "than to poke them in front of one's dress and have to unfasten two or three buttons whenever one wants to know what time it is." The questioner meditatively felt of her serviceable but ungainly, old fashioned turnip and decided that it would necessitate patting stiffly wired Medici collars on all her frocks were she to attempt following the latest fad.—New York Recorder.

Attended His Own Funeral.

The late Captain Ben Wakefield, of Biddeford, once attended his own funeral, being one of the few men who have had that privilege. He had gone on a fishing trip down on the Grand banks, and had been away from home a good while without his family hearing from him. The same season had proved very disastrous to a number of other fishermen who went out from thereabouts, and the vessel Captain Ben was in had her share of hard luck, and the report reached home that she, with her crew, was lost.

Time passed and Captain Ben did not return, until at last his family gave up all hope that he had been saved, and a day was set for the memorial services. The services were held in the church at Cape Porpoise, the minister had offered prayer for the absent fisherman, who was supposed to have found his grave in the sea, and was just beginning his sermon when Captain Ben walked into the church.—Bangor (Me.) Commercial.

Felt That He Had Been Cheated.

A young farmer from Canarsie, accompanied by his 250 pound wife, created much amusement on a bridge train coming to Brooklyn Sunday a little before midnight. The cars were as well filled as is usual at that hour. The rustics drew attention to themselves by the loud tones of their conversation. "Now, baby," the man was saying, "you know I ain't a bit stingy and I wouldn't care for the money at all, but I don't want any catfish of a toll grabber to do the dead swindle on me—Sunday nights, anyway."

"Oh, never mind, Reuben," said "baby" consolingly.

"Well, now, baby, you can see for yourself. There's eighty-four cents out of a dollar. Do you see that? That shark has kept back ten cents on me. It ain't the money I care for, baby. Here, do you want it?"

"No; I don't want it. I wish you would keep quiet."

"Well, if you don't want it, here goes," scattering the change on the floor.

"Baby" maintained a stolid silence, gazing ruefully at the coin on the floor. Finally Reuben realized that he had been guilty of criminal waste, and he said: "Well, if you don't want it, I'll take it," and he began clumsily to pick the money out of the spaces in the matting. At this point a general laugh arose from the other passengers. When the Brooklyn station was reached the farmer was still mourning his missing dime, and when I left his ponderous wife was struggling to prevent him from taking the next train to New York to get hunk with "that pirate" at the toll box.—Brooklyn Eagle.

Manners and Society.

Fine social intercourse is really the finest of the fine arts, and if painting and sculpture and architecture are worth cherishing, so is that higher standard of manners without which these things are merely a misplaced fringe for barbarism. It is true that manners joined with nothing better are disappointing. It is true that a hungry man would rather dine with a boor on venison than with Duke Humphrey on his proverbial dinner—that is, on nothing. But if the boorishness destroys one's appetite, where is the good of venison? and "a dinner of herbs where love is"—or even where refinement is—turns out the better bill of fare. The true charm of fine manners is best seen in poverty, when attainable there; but wealth is doubtless the better school for them at first, and this is one reason why men are tempted by wealth.

The English word "means," or the phrase "a man of means," is very instructive, for it views property but as a means toward something more important. And though many men go no further than the means, yet it is something that we have this great truth recognized in language. So all the love for fashionable novels is really an expression of a longing after the refinements of life. And though the "society columns" are often made up largely of the doings of the socially obscure, and though the socially prominent usually try to keep out of them, yet they are no doubt a humble school for good manners to those readers who distrust themselves. The young girl who with vague admiration reads of Mrs. A.'s and Mrs. B.'s entertainments perhaps acquires the wish that when she also is annexed to some matrimonial letter of the alphabet, she also may have an attractive home.—T. W. Higginson in Harper's Bazar.

Cheer for the Ailing.

A physician who has noted the dreariness of the typical waiting room for patients and its evil effects on people already in an unhappy frame of mind from bodily ills has devoted some time to making his reception rooms as cheerful and lively as good taste will permit. In place of bare, white walls, with an odd print or two upon them, a bookcase containing dry medical works and a stand filled with stiff looking bric-a-brac, he has an abundance of well executed paintings or prints, the subjects of which are of an interesting and cheerful nature. The center table is covered with copies of the latest novels, illustrated magazines and files of the humorous weekly papers. The furniture includes several large easy chairs, so restful that when once settled in one of them a person is reluctant to get up again.

"It costs something to do all this," said he, "but it is certainly a good investment. Waiting in a dull, cheerless room is very trying to the nerves, and most visitors to a doctor's office are nervous and irritable. Like all reforms, however, it is carried to excess by some physicians. I know several who have the walls of their reception rooms completely covered with oil paintings, so that the room looks like a badly crowded picture gallery. But the idea is a good one and is rapidly gaining ground."—New York Telegram.

Governor Stephens' Last Act.

Governor Alexander Stephens—dying a few years ago—persisted in having all business matters brought to his bedside. There was on the table a petition for the pardon of a distinguished criminal; the petition was signed by distinguished men. There was also on that table a letter from a poor woman in the penitentiary, written and signed by herself alone. "Dying," said the great governor. "You think that because I have been ill so many times and got well that I shall get well now, but you are mistaken; I will not recover. Where is that letter by that woman in the penitentiary? I think she has suffered enough. As near as I can tell she has no friends. Bring me that paper that I may sign her pardon."

A gentleman standing by, thinking this too great a responsibility for the sick man, said, "Governor, you are very sick now, perhaps you had better wait till tomorrow; you may feel stronger and you may feel better." Then the eye of the old governor flashed, and he said, "I know what I am about." Putting his signature to that pardon he wrote the last word he ever wrote, for then the pen fell from his pale and rheumatic and dying hand forever. How beautiful that the closing hours of life should be spent in helping one who had no helper!—Dr. Talmage in Ladies' Home Journal.

Shook the Deacon.

In the course of his sermon Rev. McLeod told the congregation that if any among them were asleep they had better wake up or they would miss hearing a good story. Much to the amusement of the congregation one old man left his seat, advanced a few steps up the aisle, grasped another old man by the shoulder, and, after giving him a sound shake, whispered in his ear sufficiently loud enough to be heard in all parts of the church: "Brother B.! Wake up! The elder is going to tell a story. If you would keep better hours Saturday nights you would be able to keep awake during church services." The unlooked for scene caused an audible titter in nearly every pew in the church, which in many cases had not entirely ceased when the benediction was pronounced.—San Prairie (Wis.) Countryman.

A Dangerous Figure of Speech.

At a diocesan conference held recently a bishop who was about to leave for another see uttered, if one may believe the Guardian, the following farewell words: "If in any way God uses me and permits me to do a little good work there in the last years of my life to bring people together, and to try to make peace and to show people when they are one rather than when they are not one—if anybody upsets a bottle of petroleum and sets it on fire, and if I try to throw a pail of water on it, it will be through the wisdom, and the experience, and the kindness and the many useful lessons I have learned from all of you."

Let his lordship be warned; sand is a safer extinguisher than water in the case of petroleum, as water is apt to float the burning fluid and to spread the danger.—Notes and Queries.

A Reasonable Proposition.

Bragg (pompously)—Sir, I am a self made man!

Flagg—I dare say you look like the kind of a man you'd be apt to make.—Life.

He Didn't Strike.

A hurrying crowd was pushing its way down the broad steps of the elevated platform at the city hall elevated station Wednesday afternoon. A handsomely dressed woman, accompanied by a tall man of the sporting class, moved leisurely along, trailing a foot and a half of her skirts behind her. A big, clumsy boy in his eagerness to reach the street planted a heavy foot on the trailing skirt, almost throwing the woman over backward. Naturally she was very angry and speedily found some very harsh words to bestow on the boy. Her male companion was angry, too, and at the foot of the stairs he collared the lad and raised his cane to administered chastisement. But the blow did not fall. A burly workingman caught the arm to which the cane was attached and half a dozen determined voices exclaimed, "Don't hit that boy!"

The tall sporting man braced himself for a fight, when a mild looking young gentleman looked him fixedly in the eye and said: "See here, my friend, you had better calm down right away. You have got the unpopular end of this dispute. If you have ever walked down stairs behind a woman wholets her skirts drag, you ought to understand what the public sentiment is on that subject." The sporting man made no reply. He let go of the boy and walked rapidly away, followed by a very indignant and talkative woman.—New York Times.

A Cause of Depression.

There is another and equally important cause of mental depression and physical disorganization as is that of overeating, and lack of sufficient exercise. This is the constant application to occupation which is in vogue in this country. Men and women alike, since women are formidable competitors of men in professional pursuits, have a practice of going on in the same treadmill manner, year after year, without any lapse for rest. We live in this country at too high a pressure, in a business sense. Men engage of course in business, more actively and in greater numbers than women, yet being brought into so close contact with the former, women naturally absorb not only personal interest, but are often plunged into its vortex, and become as bound up by its demands as the men themselves.

It is not unusual, in fact, for women to assume and carry out the management of the counting room, office and store as well as the household. The strain of these demands upon the system is naturally very great under the most favorable conditions, when the body is nurtured and rested in a reasonable manner.—Jenness-Miller Magazine.

Men Who Eat Pie.

A truly charming gentleman is Mr. Ethanal Russell, apostle and expounder of the Delsartean faith. We take back all the uncivil and cruel things we have uttered against old Delsarte and his creed, for we have seen Mr. Russell eat pumpkin pie at Reitor's restaurant late of nights. In the whole wide range of philosophy there is none other that appeals more directly or more potently to our sympathies than does that philosophy which justifies by practice the eating of pumpkin pie.

Mr. Whittier, the Amesbury poet, is as famous a punisher of pie as Ralph Waldo Emerson was, and that is saying much, for Emerson was mighty in the pursuit, comprehension, mastication, digestion and assimilation of that cheering viand. Apple pie, however, and not pumpkin, was Emerson's favorite diet, and is Whittier's.—Eugene Field in Chicago News.

Blood Oranges Cannot Be Stained.

"Blood oranges" have been investigated by order of the health officer of Washington. The story that they are "fixed" with a syringe and a little aniline dye has been going the rounds of the newspapers. It was seen by Dr. Townsend, and as the supply of "blood oranges" in the Washington market seemed to be abundant, he directed an inquiry with a view of condemning the fruit if it had been tampered with. The chemist to whom the matter was referred says in his report: "The oranges are naturally stained, no artificial coloring of any kind having been used. The small spot on the side is a fungus spot and not a puncture. It is impossible to stain an orange by injecting any artificial staining fluid into the fruit either before or after plucking from the tree."—Washington Letter.

An Opal Worth a Million.

The most famous opal in history was that which was worn in a ring by the Roman senator Nonius, in the day of the triumvirate. Its size equaled that of a medium sized hazel nut. Yet its beauty and brilliancy rendered it a marvel among the dilettanti of Rome, especially when it was known that the goldsmiths and "money changers" had set its value at $1,000,000.

Mark Antony made overtures to Nonius for its purchase, intending, it is thought, to present it to Cleopatra, but the senator refused to part with it, and for fear that it would be taken from him by sheer force sought safety in flight. Here history loses all trace of this famous gem, there being no record of its transference from Nonius to any of his family.—St. Louis Republic.

Dated July 24th, 1891.

WM. F. MALLACK,
Administrator of said Estate.

ASSESSMENT NOTICE

STEVENS DITCH COMPANY.

Location of principal place of business, Independence, California. Location of Ditch, near Independence.

NOTICE IS HEREBY GIVEN THAT AT A meeting of the Board of Directors, held the 27th day of June 1891, an assessment (No 6) of Twenty (20) Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, at Independence, Cal.

Any stock upon which this assessment shall remain unpaid on the 1st day of August 1891, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 24th day of August, 1891, to pay the delinquent assessment together with costs of advertising and expenses of sale. By order of the Board of Directors.

P. H. MACK
Secretary.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer with out cost of repairs than any other machine, has no ink or ribbon to bother the orator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

Geo. M. Gill, Superior Judge.

SATURDAY, July 25, 1891.

Johnson et als. vs. W. K. Miller—Filed original summons.

Estate of F. Paderes, deceased—Filed letters testamentary and bond.

MONDAY, July 27, 1891.

Frank Silva vs. Southern Development Company—Action dismissed.

THURSDAY, July 30, 1891.

Estate of E. Mallory, deceased—Filed return and account of sales of personal property and petition for confirmation and approval.

BORN.

CLARK—At Independence, July 25th, to Mr. and Mrs. J. W. Clark, a son.

DIED.

BOLINGER—At Crysópolis, July 30th, William A. Bolinger, aged 61 years.

A. C. Harvey was up from Lone Pine on Tuesday.

Receiver Clark is the proud possessor of a nine-pound boy.

The bluegrass sown in the Court House yard is making a lovely lawn.

Arthur Smith didn't go to Mexico. Inyo is a pretty good country, anyway.

Ed Stirling and Mrs. C. E. Harvey were down from Bishop early in the week.

Miss Stella Meysan visited friends at Independence several days this week.

The weather is much cooler the past week, the thermometer marking about 90 degrees.

Frank Fitzgerald and family started for Los Angeles last Sunday traveling by private conveyance.

The total assessed valuation of taxable property in Inyo county, exclusive of the railroad, is $1,368,789.

Mrs. N. E. Conklin returned on Wednesday from a visit with her parents, Mr. and Mrs. I. P. Yaney, at Bishop.

Mrs. Mark Hopkins-Searles, widow of the California multi-millionaire, died at Methuen, Mass., last Saturday.

Miss Anna Ryan of Oakland arrived at Independence on Wednesday and is visiting her sister, Mrs. I. H. Mulholland.

Yganacio Abechuco, Administratrix of the estate of Francisco Paderes, deceased, publishes a notice to creditors this week.

Tom. Webb and H. Giles arrived from Long Valley on Wednesday. They report cattle as doing very well this year, the loss being slight.

Inyo county is on the eve of a great change. There is more than one matter brewing that will work a vast improvement to Owens Valley.

At Judge Hannah's place at Fish Spring over a thousand young trees were set out last spring, mostly winter apples. They are making a very thrifty growth and will be a most profitable investment.

J. C. Roeper and family returned yesterday from a visit to the Greenhorn Mountain country where Mrs. Roeper has relatives living. The young folks enjoyed the trip immensely. Mrs. Roeper improved in health considerably.

Poor Lo is going to have a hard time laying in a supply of fire water. Up in Nevada they are making it particularly warm for those engaged in the nefarious traffic, and offenders are catching it hard and heavy here in Inyo.

The speed programme of the Nevada State Fair has been issued. There are twenty-one races for the week, aggregating $7,500 in purses. In addition to this there will be a running race on Tuesday, September 22d, for a purse of $1,500, one mile and a quarter, free for all and entrance free, given by the business men of Reno.

Wm. Rowan passed through town last Tuesday on his way home from Los Angeles. He brought up with him a fine Percheron stallion, a strongly built and well proportioned animal. Mr. Rowan has done a great deal to build up the grade of horses in Owens Valley. He has imported quite a number of fine stallions at different times, and their produce are scattered all through the Valley.

In 1884 Harris and Rhine brought suit against A. P. Minear and the Elna Furnace Co. for the recovery of about $2,000 and attached a quantity of bullion to secure payment. They released the bullion with the understanding that the claim would be paid. This was never done, however, and the case was recently decided in the Supreme Court in favor of the plaintiffs. There are several parties near Independence who had small claims which will now be paid. Hon. P. Reddy conducted plaintiffs' case.

Arizona Cattle Trade.

W. C. Land, an Arizona cattleman, made the following statement last week: "I have 20,000 head of cattle on a range near Tombstone. The business is pretty poor this year; in fact there has been no money in it for quite a while, the trouble being the over-supply of all American markets. Things are looking up a little now. Prices have gone up two dollars a head in the last twelve months, and for next year the outlook is better. This improvement is due to the fact that the cattlemen have, by a sort of tacit combination, killed off large numbers of breeding cows and thousands of calves. At Kansas City the shipments have been composed of cows to a greater extent than ever before. The same thing is true of most of the other markets of the United States."

Correspondence.

EDITOR INDEPENDENT—I observe in the *Index* that the speed programme of the 18th District Fifth Annual Fair provides for the distribution of $510 in purses. The advertised list amounts to $765, but the horsemen are expected to pay one-third of this amount, or $255, in entrance fees, as the rules require that at least 30 per cent shall be paid in all cases. This is the smallest amount ever yet offered by the association for racing. There is no question but that the races are the chief attraction to visitors and it is much to be regretted that sufficient inducements cannot be offered to horse owners to attend. I am of the opinion that unless a change is made there will not be a horse at the fair south of Bishop. A. P. Smith and Marshall Naylor of Big Pine have no horses in training and state that they will train none, as the purses are not sufficiently large, or the events so arranged that they could stand any reasonable chance of making expenses. At Independence J. W. Clark is working his Gibralter stallion a little for the stallion trot for which the best purse, $150, is offered, but I am told he is not giving him any especial preparation. There is not another horse anywhere south of Bishop being worked. In order to make any racing at all there must be competition, and if three men won the entire $510 they would be losers. Bronco is not in training and Rose says positively he will not be. Sagebrush is running out in Long Valley. Hayseed is being used for a buggy horse. There is no three-year-old purse for Patsy to compete for, and Fred B. is barred out and I understand is being used for a saddle horse. When it was proposed to hold only one fair in the Valley it was expected that the purses would be larger, that there would be more races on the card and that there would be good sport. Instead of this there is a smaller amount offered than ever before. In my humble opinion the Directors have made a serious mistake and I very much regret the fact. I fear it is now too late to remedy the evil for this year and I sincerely hope the management next year will avoid a short-sighted policy and will offer such inducements that every horseman in the Valley will attend the fair at Independence. There are so few good horses in the District that only by liberal offers can they be brought together, and too much encouragement cannot be given to the importation of fine stock. I crave the indulgence of your readers for obtruding my opinions and venture to hope that they will meet with the approval of those most interested. Respectfully, C.

The State Fair.

The thirty-eighth annual State Fair of California will be held at Sacramento commencing Monday, September 7th, and ending Saturday, September 19th. Drawing as it does upon the productive constituency of the State it ensures to exhibitors the attention their display merits, and likewise is an assurance to the visitor that the resources of the State in their varied form will be shown. The Speed Department is recognized by all lovers of equine sport as the leading race meeting of the Coast. For thirty-seven years it has held this position and it is the intention of the management to so conduct its business as to retain the supremacy it has so honorably gained. Eleven days will be devoted this year to trotting, pacing and running events, the character of which is bound to attract visitors who, while there, are enabled to examine the productiveness of the State in its various departments. The sum of $50,000 is offered in cash premiums and for special attractions. In a circular letter the Secretary says: "The premium list has been carefully revised and a large increase of premiums made over those of 1890. We expect the attendance of more than fifty thousand people during the two weeks of the fair and will do all possible to provide for their entertainment." Any information will be cheerfully given upon application to the Secretary, Edwin F. Smith, at Sacramento.

W. A. Bolinger Dead

Early this morning A. J. Wren came in from Chrysopolis with the word that Wm. A. Bolinger died there last night. Mr. Bolinger was born in Virginia in 1830 and came to California when a very young man. Nearly all the time he lived in the State he was engaged in mining pursuits. He managed the Crescent mine in Plumas County for a considerable time and afterward came to Inyo County. He bought the Crysopolis mine about seven years ago and has been working it ever since. Deceased was a brother-in-law to Craig Chambers, the millionaire owner of the Ontario mine in Utah. Mrs. Bolinger has been dead for many years; two daughters live with Mr. Chambers at San Francisco. Relatives of the deceased were wired immediately, but no reply having yet been received it is decided that the funeral will take place tomorrow (Saturday) at 10:30 a. m. at Independence. The remains will be interred in the Odd Fellows' cemetery.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,
Chicago, Ill., U. S. A.

A Quick Cure For Rheumatism.

In many cases persons subject to rheumatism, have got prompt relief from pain by applying Chamberlain's Pain-Balm. The relief it affords is alone worth many times its cost, which is but 50 cents, and its continued application effects a complete cure. For sale by A. K. EUGLEY,
Big Pine.

NOTCE TO CREDITORS.

Estate of FRANCISCO PADERES, Deceased.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, in Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGANACIA ABECHUCO,
Administratrix of the estate of Francisco Paderes, deceased.

Dated at Independence, Cal., July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence, Cal.

A Suggestion.

If you are troubled with rheumatism or a lame back, allow us to suggest that you try the following simple remedy. Take a piece of flannel the size of the two hands, saturate it with Chamberlain's Pain-Balm and bind it over the seat of pain. It will produce a pleasant warmth and relieve you of all pain. Many severe cases have been cured in this way. The Pain-Balm can be obtained from

A. K. EUGLEY
Big Pine.

Well Merited Praise.

In almost every neighborhood there is some one or more persons whose lives have been saved by Chamberlain's Colic, Cholera and Diarrhœa Remedy, or who have been cured of chronic diarrhœa by it. Such persons take special pleasure in recommending the remedy to others. The praise that follows the introduction and use makes it very popular. 25 and 50 cent bottles for sale by A. K. EUGLEY,
Big Pine.

Manuel Taran, the Mexican arrested last week for selling whiskey to Indians, was convicted of the offense last Friday and sentenced by Justice of Peace Hannah to pay a fine of $50 and serve one day in the county jail for each dollar of the fine until the time is up or the fine paid. He served four days, paid forty-six dollars, and was discharged.

Fashion's favorite fad, centers in that famous, fascinating game—lawn tennis.

But there are women who cannot engage in *any* pastime. They are delicate, feeble and easily exhausted. They are sufferers from weaknesses and disorders peculiar to females, which are accompanied by sallow complexions, expressionless eyes and haggard looks.

For overworked, "worn-out," "run-down," debilitated teachers, milliners, dressmakers, seamstresses, "shop-girls," housekeepers, nursing mothers, and feeble women generally, Dr. Pierce's Favorite Prescription is the greatest earthly boon, being unequaled as an appetizing cordial and restorative tonic. It's the only medicine for women, sold by druggists, *under a positive guarantee* from the makers, of satisfaction in every case, or money refunded. This guarantee has been faithfully carried out for years.

The demand for the revised version of the New Testament in 1881 exceeded that for any other book that has ever been published before or since.

The Archduchess Louise of Tuscany is a very skillful sportswoman, and has recently been shooting capercailzie in Austria, sometimes capturing three in one day.

The inimitable Dickens was another enthusiastic country walker, and his thorough knowledge of nature is seen in every one of his works, from "Pickwick" to "Edwin Drood."

A very extensive domestic industry in Russia consists of the manufacture of wooden spoons, which are made to the amount of 30,000,000 annually. They are nearly all made of birch.

GOOD NEWS FOR THE AFFLICTED.

A Remarkable Cure of Rheumatism and Catarrh.

Baldwinsville, N. Y.

Pardee Medicine Co.

GENTLEMEN:—About one year ago I chilled my blood and was under the Doctor's care for about six months when I had a counsel of eight *physicians* and was given up to die. Soon after, a lady friend came to see me and told me about *your great Remedy*. She said she had been cured by it after having the rheumatism *seven years*, and that her rheumatism was first brought on by a cold. At this time I was suffering severe pain all through my body and near my heart. The doctors called it only "frozen blood." Through the persuasion of my friend I procured a bottle. I found some relief. Seeing this I procured more and was entirely cured by its use; and what was my surprise and pleasure at finding that I was not only cured of my rheumatism, but the catarrh, which had been troubling me for years and had become very offensive, had entirely left me.

Wishing your remedy every success, and thanking you very much for my double cure, I remain,

Truly yours,
MRS. LUCY BRONSON.

Sworn Statement from a Well-known Individual.

Lockport, N. Y.

A short time ago I was afflicted with rheumatism so badly that I could not move. My hands and limbs were all swollen. One leg was so badly swollen that I burst the skin. The Sheriff of our County advised me to try Dr. Pardee's Rheumatic Remedy, and bought me a bottle. After taking the remedy one day I felt relieved and in less than two weeks I was able to go to work and have not felt rheumatism since. Three bottles cured me, and I recommend it to all who are suffering from rheumatism.

CHAS. ROBILLARD.

Subscribed and sworn to before me this 5th day of June, 1883.

M. J. TORELL, Notary Public.

Ask your druggist for Dr. Pardee's Remedy and take no other. Price, $1 per bottle; six bottles, $5.

Best in the World! Get the Genuine! Sold Everywhere!

THE SPLENDID SPUR.

Being Memoirs of the Adventures of Mr. John Marvel, a Servant of His late Majesty King Charles I, in the years 1642-3: written by himself.

EDITED IN MODERN ENGLISH BY "Q."

"Brandy!" he gasped. "Brandy! there—quick—for God's sake!"

And the next moment he had slipped from my grasp, and was wallowing in a fit on the floor. I ran to the cupboard at which he had pointed, and, finding there a bottle of strong waters, forced some drops between his teeth; and hard work it was, he gnashing at me all the time and foaming at the mouth.

Presently he ceased to writhe and bite; and, lifting, I set him in his chair, where he lay, a mere limp bundle, staring and blinking. So I sat down facing him and waited his recovery.

"Dear young sir," he began at length, feebly, his fingers searching the Bible before him from force of habit. "Kind young sir—I am an old, dying man, and my sins have found me out. Only yesterday the physician at Bodmin told me that my days are numbered. This is the second attack, and the third will kill me."

"Well?" said I.

"If—if Mistress Delia be alive (as, indeed, I did not think) I will make restitution—I will confess—only tell me what to do, that I may die in peace."

Indeed, he looked pitiable, sitting there and stammering; but I hardened my heart to say:

"I must have a confession, then, written before I leave the room."

"But, dear young friend, you will not use it if I give up all? You will not seek my life, that is already worthless, as you see?"

"Why, 'tis what you deserve. But Delia shall say when I find her—as I shall go straight to seek her. If she be lost, I shall use it—never fear; if she is found it shall be hers to say what mercy she can discover in her heart; but I promise you I shall advise none."

The tears by this were coursing down his shrunken cheeks, but I observed him watch me narrowly, as though to find out how much I knew. So I pulled out my pistol, and setting pen and paper before him, obtained, at the end of an hour, a very pretty confession of his sins, which lies among my papers to this day. When 'twas written and signed, in a weak, rambling hand, I read it through, folded it, placed it inside my coat and prepared to take my leave.

But he called out an order to the old servant to saddle my mare, and stood softly praying and beseeching me in the courtyard till the last moment. Nor when I was mounted would anything serve but he must follow at my stirrup to the gate. But when I had briefly taken leave, and the heavy doors had creaked behind me, I heard a voice calling after me down the road:

"Dear young sir! Dear friend! I had forgotten somewhat."

Returning, I found the gate fastened, and the iron shutter slipped back.

"Well?" I asked, leaning towards it.

"Dear young friend, I pity thee, for thy paper is worthless. Today, by my advices, the army of our most Christian parliament, more than twenty thousand strong, under the Earl of Stamford, have overtaken thy friends, the malignant gentry, near Stratton Heath, in the northeast. They are more than two to one. By this hour to-morrow the Papists all will be running like conies to their burrows, and little chance wilt thou have to seek Delia Killigrew, much less to find her. And remember, I know enough of thy late services to hang thee; mercy then will lie in thy friends' hands; but be sure I shall advise none."

And with a mocking laugh he clapped to the grating in my face.

CHAPTER XV.

I LEAVE JOAN AND RIDE TO THE WARS.

You may guess how I felt at being thus properly fooled. And the worst was I could see no way to mend it, for against the barricado between us I might have beat myself for hours, yet only hurt my fists; and the wall was so smoooth and high that, even by standing on Molly's back, I could not—by a foot or more—reach the top to pull myself over.

There was nothing for it but to turn homewards down the hill, which I did, chewing the cud of my folly and finding it bitter as gall.

Joan was not in the kitchen when I arrived, nor about the buildings, nor yet could I spy her anywhere moving on the hills. So, after calling to her once or twice, I stabled the mare and set off up the tor side to seek her.

Now I must tell you that since the day of my coming I had made many attempts to find the place where Joan had then hidden me, and always fruitlessly, though I knew well whereabouts it must be. Indeed, I had thought at first I had only to walk straight to the hole, yet found after repeated trials but solid earth and bowlders for my pains.

But today, as I climbed past the spot, something very bright flashed in my eyes and dazzled me; and rubbing them and looking I saw a great hole in the hill—facing to the southwest—in the very place I had searched for it, and out of this a beam of light glancing.

Creeping near on tip toe I found one huge block of granite, that before had seemed bedded among a dozen fellow bowlders against the turf—the base resting on another well nigh as big—was now rolled back, having been fixed to work smoothly on a pivot, yet so like nature that no eye, but by chance, could detect it. Now, who in the beginning designed this hiding place I leave you to consider, and whether it was the Jews or Phœnicians—nations, I am told, that once worked the hills around for tin. But inside 'twas curiously paved and lined with slabs of granite, the specks of ore in which, I noted, were

the points of light that had once puzzled me. And here was Joan's bower and Joan herself inside it.

She was sitting with her back to me, in her left hand holding up the mirror, that caught the rays of the now sinking sun (and thus had dazzled me), while with her right she tried to twist into some form of knot her tresses—black, and coarse as a horse's mane—that already she had roughly braided. A pail of water stood beside her, and around lay scattered a score or more of long thorns, cut to the shape of hairpins.

'Tis probable that after a minute's watching I let some laughter escape me. At any rate, Joan turned, spied me, and scrambled up, with an angry red on her cheek. Then I saw that her bodice was neater laced than usual, and a bow of yellow ribbon (fished up heaven knows whence) stood in the bosom. But the strangest thing was to note the effect of this new tidiness upon her; for she took a step forward as if to cuff me by the ear—as, a day agone, she would have done—and then stopped, very shy and hesitating.

"Why, Joan," said I, "don't be angered. It suits you choicely—it does indeed. Joan, art certainly a handsome girl; give me a kiss for the mirror."

Instead of flying out, as I looked for, she faced round and answered me gravely:

"That I will not; not to any but my master."

"And who is that?"

"No man yet; nor shall be till one has beat me sore; him will I love an' follow like a dog—if so be he whack me often enow."

"A strange way to love," laughed I.

She looked at me straight, albeit with an odd, gloomy light in her eyes.

"Think so, Jack? then I give thee leave to try."

I think there is always a brutality lurking in a man to leap out unawares. Yet why do I seek excuses, that have never yet found one? To be plain, I sprang fiercely up and after Joan, who had already started, and was racing along the slope.

Twice around the tor she led me; and, though I strained my best, not a yard could I gain upon her, for her bare feet carried her light and free. Indeed, I was losing ground, when, coming to the Jew's Kitchen a second time, she tried to slip inside and shut the stone in my face.

Then should I have been prettily bemocked had I not, with a great effort, contrived to thrust my boot against the door just as it was closing. Wrenching it open, I laid hand on her shoulder; and in a moment she had gripped me and was wrestling like a wildcat.

Now, being Cumberland bred, I knew only the wrestling of my own county, and nothing of the Cornish style. For in the north they stand well apart, and try to wear down one another's strength; whereas the Cornish is a brisker, lighter play, and—as I must confess—prettier to watch. So when Joan rushed in and closed with me I was within an ace of being thrown, pat.

But, recovering, I got her at arm's length, and held her so, while my heart ached to see my fingers gripping her shoulders and sinking into the flesh. I begged off; but she only fought and panted, and struggled to lock me by the ankles again. I could not have dreamed to find such fierce strength in a girl. Once or twice she nearly overmastered me; but at length my stubborn play wore her out. Her breath came short and fast, then fainter; and in the end, still holding her off, I turned her by the shoulders and let her drop quietly on the turf. No thought had I any longer of kissing her, but stood back, heartily sick and ashamed of myself.

For a while she lay, turned over on her side, with hands guarding her head, as if expecting me to strike her. Then, gathering herself up, she came and put her hand in mine very meekly.

"Had liked it better hadst thou stamped the life out o' me, a'most. But there, lad—am thine forever!"

'Twas like a buffet in the face to me "What!" I cried.

She looked up in my face—dear heaven, that I should have to write it!—with eyes brimful, sick with love; tried to speak, but could only nod, and broke into a wild fit of tears.

I was standing there with her hand in mine, and a burning remorse in my heart, when I heard the clear notes of a bugle blown, away on the road to Launceston.

Looking that way I saw a great company of horse coming down over the crest, the sun shining level on their arms and a green standard that they bore in their midst.

Joan spied them the same instant and checked her sobs. Without a word we flung ourselves down full length on the turf to watch.

They were more than a thousand, as I guessed, and came winding down the road very orderly, till, being full of them, it seemed a long serpent writhing with shiny scales. The tramp of hoofs and jingling of bits were pretty to hear.

"Rebels!" whispered I.

Joan nodded.

There were three regiments in all, whereof the first (and biggest) was of dragoons. So clear was the air, I could almost read the legend on their standard, and the coats of their captains were borne up to us extremely distinct.

Turning my head as the last rider disappeared on the way to Bodmin, I spied a squat, oddly shaped man striding down the hill very briskly; yet he looked about him often and kept to the hollows of the ground, and was crossing below us, as it appeared, straight for Joan's cottage.

Cried I: "There is but one man in the world with such a gait, and that's Billy Pottery!"

And, jumping to my feet (for he was come directly beneath us), I caught up a great stone and sent it bowling down the slope.

Bounce it went past him, missing his legs by a foot or less. The man turned, and, catching sight of me as I stood waving, made his way up the hill. 'Twas indeed Capt. Billy; and, coming up, the honest fellow almost hugged me for joy.

"Was seeking thee, Jack," he bawled, "learned from Sir Bevill where belike I might find thee. Left his lodging at Launceston this mornin', and trudged ivery foot o' the way. A thirsty land, Jack; neither horse' meat nor man's meat therein, nor a chair to sit down on; an' three women only have I kissed this day!" He broke off and looked at Joan. "Begging the lady's pardon for sea manners and way o' speech."

"Joan," said I, "this is Billy Pottery, a good mariner and friend of mine, and as deaf as a haddock."

Billy made a leg, and as I pointed to the road where the cavalry had just disappeared, went on with a nod:

"That's so. Old Sir George Chudleigh's troop o' horse sent off to Bodmin to seize the high sheriff and his posse there. Two hour agone I spied 'em, and ha' been ever since playin' spy."

"Then where be the king's forces?" I made shift to inquire by signs.

"Marched out o' Launceston today, lad—an' but a biscuit a man between 'em, poor dears—for Stratton Heath, i' the nor'east, where the rebels be encamped. Heard by scouts o' these gentry bein' sent to Bodmin, and were minded to fight the Earl o' Stamford whiles his dragooners was away. An' here's the long an' short o't: thou'rt wanted, lad, to bear a hand wi' us up yonder—an' the good lady here can spare thee."

And here we both looked at Joan—I shamefacedly enough, and Billy with a puzzled air, which he tried very delicately to hide.

She put her hand in mine.

"To fight, lad?"

I nodded my head.

"Then go," she said, without a shake in her voice; and, as I made no answer, went on: "Shall a woman hinder when there's fightin' toward? Only come back when thy wars be over, for I shall miss thee, Jack."

And, dropping my hand, she led the way down to the cottage.

Now Billy, of course, had not heard a word of this; but perhaps he gathered some import. Any way, he pulled up short midway on the slope, scratched his head and thundered:

"What a good lass!"

Joan, some paces ahead, turned at this and smiled; whereat, having no idea he'd spoken above a whisper, Billy blushed red as any peony.

'Twas but a short half hour when, the mare being saddled and Billy fed, we took our leave of Joan. Billy walked beside one stirrup and the girl on the other side, to see us a few yards on our way. At length she halted.

"No leave takin's, Jack, but 'Church and King!' Only do thy best and not disgrace me."

CHAPTER XVI.

THE BATTLE OF STAMFORD HEATH.

Night came, and found us but midway between Temple and Launceston; for though my comrade stepped briskly beside me, 'twas useless to put Molly beyond a walk; and, besides, the mare was new from her day's journey. This troubled me the less by reason of the moon (now almost at the full), and the extreme whiteness of the road underfoot, so that there was no fear of going astray. And Billy engaged that by sunrise we should be in sight of the king's troops.

"Nay, Jack," he said, when by signs I offered him to ride and tie; "never rode o horseback but once, and that 'pon Parson Spinks his red mare at Bideford. Parson i' those days was courtin' the widow Hambly, over to Torrington; an' I, that wanted to fare to Barnstaple, spent that mornin' an better part o' th' afternoon clawin' off Torrington. And th' end was the larboard hal yards broke, an' the mare jibed, an' to Torrington I went before the wind, wi' an unseemly bloody nose. 'Lud!' cries the widow 'tis the wrong man 'pon the right horse! 'Pardon, mistress,' says I, 'the man is well enow, but 'pon the wrong horse, for sure.'"

We had some trouble at Launceston gate, where were a few burgers posted for sentries, and, as I could see, ready to take fright at their own shadows. But Billy gave the watchword ("One and all"), and presently they let us through. As we passed along the street we marked a light in every window almost, though 'twas near midnight; and the people moving about behind their curtains. There were groups, too, in the dark doorways, gathered there discussing, that eyed us as we went by, and answered Billy's "Good night, honest men!" very hoarse and doubtfully.

But when we were beyond the town, and between hedges again, I think I must have dozed off in my saddle. For, though this was a road full of sharp memories, being the last I had traveled with Delia, I have no remembrance to have felt them; or, indeed, of noting aught but the fresh night air, and the constellation of the Bear blazing ahead, and Billy's voice resonant beside me.

And after this I can recall passing the tower of Marham church, with the paling sky behind it and some birds chattering in the carved courses; and soon, it seemed, felt Billy's grip on my knee, and opened my eyes to see his finger pointing.

We stood on a ridge above a hollow vale into which the sun, though now bright, did not yet pierce, but passing over to a high, conical hill beyond, smote level on line after line of white tents—the prettiest sight! 'Twas the enemy there encamped on the top and some way down the sides, the smoke of their trampled watch fires still curling among the gorse bushes. I heard their trumpets calling and drums beating to arms; for though, glancing back at the sun, I judged it to be hardly past 4 in the morning, yet already the slopes were moving like an ant hill—the regiments gathering, arms flashing, horsemen galloping to and fro, and the captains shouting their commands. In the distance this had a sweet and cheerful sound, no more disquieting than a plow boy calling to his team.

Looking down into the valley at our feet, at first I saw no sign of our own troops—only the roofs of a little town, with overmuch smoke spread above it, like a morning mist. But here also I heard the church bells clashing and a drum beating, and presently spied a gleam of arms down among the trees, and then a regiment of foot moving westward along the base of the hill. 'Twas evident the battle was at hand, and we quickened our pace down into the street.

It lay on the slope, and midway down we passed some watch fires burned out; and then a soldier or two running and fastening their straps; and last a little child, that seemed wild with the joy of living amid great events, but led us pretty straight to the sign of "The Tree," which indeed was the only tavern.

It stood some way back from the street, with a great elm before the porch, where by a table sat two men, with tankards beside them, and a small company of grooms and soldiers standing round. Both men were more than ordinary tall and soldier like; only the bigger wore a scarlet cloak, very richly laced, and was shouting orders to his men, while the other, dressed in plain buff suit and jack boots, had a map spread before him, which he studied very attentively, writing therein with a quill pen.

"What a plague have we here?" cries the big man as we drew up.

"Recruits, if it please you, sir," said I, dismounting and pulling off my hat, though his insolent tone offended me.

"S'lid! The boy speaks as if he were a regiment," growls he, half aloud. "Can'st fight?"

"That, with your leave, sir, is what I am come to try."

"And this rascal?" He turned on Billy.

"Why, since your honor is so pleasantly minded—let it be cider."

Now the first effect of this, delivered with all force of lung, was to make the big man sit bolt upright and staring; recovering speech, however, he broke into a volley of blasphemous curses.

All this while the man in buff had scarce lifted his eyes off the map. But now he looks up—and I saw at the first glance that the two men hated each other.

"I think," said he, quietly, "my Lord Mohun has forgot to ask the gentleman's name."

"My name is Marvel, sir—John Marvel," I answered him with a bow.

"Hey!"—and, dropping his pen, he starts up and grasps my hand—"Then 'tis you I have never thanked for his gracious majesty's letter."

"The Gen. Hopton!" cried I.

"Even so, sir. My lord," he went on, still holding my hand and turning to his companion, "let me present to you the gentleman that in January saved your house of Boconnoc from burning at the hands of the rebels—whom God confound this day!" He lifted his hat.

"Amen," said I, as his lordship bowed, exceeding sulky. But I did not value his rage, being hot with joy to be so repraised by the first captain (as I yet hold) on the royal side. Who now, not without a sly triumph, flung the price of Billy's cider on the table, and, folding up his map, addressed me again:

"Master Marvel, the fight today will lie but little with the horse—or so I hope. You will do well, if your wish be to serve us best, to leave your mare behind. The troop which my Lord Mohun and I command together is below. But Sir Bevill Grenville, who has seen and is interested in you, has the first claim; and I would not deny you the delight to fight your first battle under so good a master. His men are, with Sir John Berkeley's troop, a little to the westward; and if you are ready I will go some distance with you, and put you in the way to find him. My lord, may we look for you presently?"

The Lord Mohun nodded, surely enough; so, Billy's cider being now drunk and Molly given over to an ostler, we set out down the hill together, Billy shouldering a pike and walking after with the groom that led Sir Ralph's horse. Be sure the general's courtly manner of speech set my blood tingling. I seemed to grow a full two inches taller; and when, in the vale, we parted, he directed me to the left, where through a gap I could see Sir Bevill's troop forming at some five hundred paces' distance, I felt a very desperate warrior indeed, and set off at a run, with Billy behind me.

'Twas an open space we had to cross, dotted with gorse bushes, and the enemy's regiments, plain to see, drawn up in battalia on the slope above, which here was gentler than to the south and west. But hardly had we gone ten yards when I saw a puff of white smoke above, then another, and then the summit ringed with flame, and heard the noise of its roaring in the hills around. At the first sound I pulled up, and then began running again at full speed; for I saw our division already in motion and advancing up the hill at a quick pace.

The curve of the slope hid all but the nearest; but above them I saw a steep earthwork, and thereon three or four brass pieces of ordnance glittering whenever the smoke lifted. For here the artillery was plying the briskest, pouring down volley on volley; and four regiments at least stood massed behind, ready to fall on the Cornishmen; who, answering with a small discharge of musketry, now ran forward more nimbly.

To catch up with them, I must now turn my course obliquely up the hill, where running was pretty toilsome. We were panting along when suddenly a shower of sand and earth was dashed in my face, spattering me all over. Half blinded, I looked and saw a great round shot had plowed a trench in the ground at my feet, and lay there buried.

At the same moment, Billy, who was running at my shoulder, plumps down on his knees and begins to whine and moan most pitiably.

"Art hurt, dear fellow?" asked I, turning.

"Oh, Jack, Jack—I have no stomach for this! A cool, wet death at sea I do not fear; only to have these great hot shot burning in a man's belly—'tis terrifying. I hate a swift death! Jack, I be a sinner—I will confess; I lied to thee yesterday—never kissed the three maids I spoke of—never kissed but one i' my life, an' her a tap wench, that slapped my face for 't, an' so don't properly count. I be a very boastful man!"

(TO BE CONTINUED.

Her Old Charge in Danger.

There is a well to do young southern man in this city who lives in a handsome residence not far from Central park, and who has among other valued possessions a family of seven children.

He had been "brought up" by an old negro "mammy" somewhere near Alexandria, Va., and when his wife suggested that another nurse be secured for the children his thoughts reverted to Aunt Maria. He decided to bring the old negress here, and in a few weeks she was comfortably installed in the nursery, much to the awe of the northern born young southrons, who were not familiar with the institutions of a bygone age, and who did not quite understand Aunt Maria's authority.

The young man has a telephone in his house, and as the old negress had never heard of that invention she looked upon it at first with wonder and then with suspicion. The jingling bell, receiver and other necessary adjuncts were more than Aunt Maria's mind could master. She would never go near "dat debbil's t'ing nohow."

Finally one day S. rang up from his office, and after a brief conversation requested his wife to send the old woman to the telephone. A great deal of persuasion was required to make her consent, but she was finally induced to place the receiver at her ear and listen.

"Is that you, Aunt Maria?" inquired S. over the wire.

An expression of astonishment spread over the old woman's countenance, quickly followed by one of awe and another of fear. For several minutes she stood bewildered, and then she shouted:

"L-L-Lawd a masse. Mars' Randolp'! How you done git down in dar?"

Then she decided that he could not but be in danger. "Come out'en it!" she cried. "Youse up to some more dem pranks like when you was a chile. Come out'en it! You'll git hurt. I'se comin' den arter you," and with that she started toward the street door.

Mrs. S. had hard work to keep Aunt Maria at home until "Mars' Randolp'" arrived. She refused to have matters explained, but abjured him by everything not "to go down in dar again."

She has never gone near the telephone since.—New York Herald.

In China one can always borrow money on the strength of having a son, but nobody would advance him a cent if he had a dozen daughters. The former is responsible for the debt of his father for three generations. The latter is only responsible for the debts of her own husband.

The Regular Reduction.

"August Flower"

Perhaps you do not believe these statements concerning Green's August Flower. Well, we can't make you. We can't force conviction into your head or medicine into your throat. We don't want to. The money is yours, and the misery is yours; and until you are willing to believe, and spend the one for the relief of the other, they will stay so. John H. Foster, 1122 Brown Street, Philadelphia, says: "My wife is a little Scotch woman, thirty years of age and of a naturally delicate disposition. For five or six years past she has been suffering from Dyspepsia. She became so bad at last that she could not sit down to a meal but she had to vomit it as soon as she had eaten it. Two bottles of your August Flower have cured her, after many doctors failed. She can now eat anything, and enjoy it; and as for Dyspepsia, she does not know that she ever had it."

Doubting Thomas. Vomit Every Meal.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted .....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Forgiveness is the nobler part;
Teach "peace on earth, good will to men."

ACROSS THE DEEP, TO THE FAR WEST,

On steamboats, cars and stage-coaches, Hostetter's Stomach Bitters is carried as the most important item in the materia medica of the traveling public. It deprives vitiated, brackish water of its hurtful properties and execrable flavor, counteracts the pernicious effects upon the stomach of bad or indigestible food, remedies cramps, heartburn and wind upon the stomach. It is a fine defense against malarial disorders, nullifies the effects of excessive heat, cold and damp, relieves sick-headache, and is an incomparable cure for costiveness and biliousness. The fatigue of travel often tells most disastrously upon invalids and convalescents, occasionally to such an extent as to jeopardise life. Persons in feeble health, apprehensive of bad effects from travel, will, if provided with the Bitters, be far less likely to have their fears realized.

Those who plot the destruction of others often fall themselves.

THE USE OF COFFEE.

A Writer Who Holds it to be a Blessing.

THE "DIVINE BERRY" OF MOCHA.

The Universal Drink in Turkey and Greece.

We are persuaded, from our observation of many years in Greece and Turkey, that the moderate use of pure coffee is, one might almost say, a blessing to rich and poor. Excess in its use, or the use of it at all, except when the decoction is made from the genuine coffee berry, and properly made, is beyond any question an evil. One must live in the East for a while, or if not there confine himself to partaking of the beverage in other countries where the character of the cafe, or the house where it is served, is a guarantee of the purity, to appreciate what a cup of coffee really means. It is a recognized fact that the mixture drunk by the majority of people in Europe and our own country under the name of coffee is a vile, or, at the best, an adulterated compound of inferior berries, beans or other substitutes, and that when occasionally the genuine coffee berry is the basis of the hot fluid served at the hotels, railroad stations, restaurants and even in private houses, it is not prepared properly, and more frequently than otherwise injures the digestion and, consequently, the health of the constant drinker.

In Athens, broadly speaking, every third man indulges in cigarette smoking and coffee drinking, and this to an extent that astonishes the stranger. It is an every day sight, when entering an office or private sitting room, and not infrequently the family room, to see the tobacco box, cigarette paper and ash box lying on the table, and the visitor is expected, without invitation, to help himself and light his cigarette, as a preparation for, and a companion to, conversation. Little cups of black coffee follow as a matter of course, however early or late the hour may be. But the Greek does not confine his attentions to the coffee cup on these occasions. He often takes his first cigarette and his first cup in bed before rising, and continues the practice at intervals through the entire day. It is something akin to the habit of ice water drinking in the United States, but without the subtle, injurious results that follow an habitual use of cold liquids, which chill the stomach, impair the general health and produce decayed teeth. So far as our personal observation goes, strengthened by medical testimony, the Greeks in the condition of their general health do not support the theory that the habitual use of coffee injures the system or affects the eyesight.

The same is the case in Turkey. There coffee drinking is universal and continuous. The writer passed a greater part of four years in Constantinople, where he had occasion to call upon the officials of the Sublime Porte so frequently that it would be difficult to enumerate these official visits; and with few exceptions, when the visit was protracted to any length, black coffee, pure in quality and prepared with the grounds, was regularly served in small, delicate cups. All Turks, from the highest to the lowest, indulge in the beverage, a few swallows at a time, throughout the day, and without any evil effects. What makes the fact more remarkable is that neither the sedentary habits of the Turk nor the quick, energetic temperament of the Greek seems to be affected by the perpetual imbibing of this beverage. Spectacles, it may be remarked, are as little used in Turkey as in Greece; nor are complaints of the eyes more prevalent, if we except ophthalmia, which is brought from Egypt and exists chiefly among the unclean and dissolute lower orders. An old pasha once told us that he considered coffee to be one of the greatest blessings vouchsafed by Allah to the faithful, not only from its grateful aroma, but from its health preserving qualities. He referred, of course, to the "divine berry" of Mocha, and not to the questionable compound served up in the "infidel" countries of the west.—North American Review.

Personal Advertising.

A popular western novelist remarked the other day that sometimes a fool gets talked about so much that the other fools think he is a great man.

There is something in this view. But it is a mistake to limit the proposition to fools. It is of very general application, and hits sensible persons as well as others.

Some years ago a busy journalist said to a friend, "I am done with what you call work for the remainder of my life." His friend was surprised. "How will you live?" he asked. "By advertising myself," was the calm reply.

And the audacious newspaper man was as good as his word. He sauntered about and the papers began to print little paragraphs about his brilliant gifts and his phenomenal capacity to do anything and everything. People talked about the man, hunted him up and offered him money-making opportunities. In a short time he was making $10,000 or $12,000 a year as a sort of general manager or boss of half a dozen enterprises.

Perhaps it was work, but he did not call it work. He simply traveled, talked and allowed himself to be interviewed. And yet all the time he was putting in a few words for the enterprises with which he was connected.

Without his self advertising he would never have enjoyed such good fortune. Say what you will, judicious advertising will make enterprises and men, if they have anything in them, and sometimes it will float them on the high sea of prosperity when they are altogether unworthy.—Atlanta Constitution.

ARTS OF DIVINATION.

The Trivialities to Which the Old Astrologers Would Descend.

It is astonishing into what trivial detail astrologers were prepared to go. There is something, for instance, delightfully rich in interrogating the planets as to the whereabouts of a lost dog. And yet this was done, as related by William Lilly, who gives full particulars as to his method and success. His account is worth quotation. After drawing the usual plan of the state of the heavens, he continues: "The Quere unto me was what part of the city they should search; next, if he should ever recover him. The sign of Gemini is west and by south; the quarter of heaven is west; Mercury, the significator of the Dog, is in Libra, a western sign, but southern quarter of heaven, tending to the west.

"The moon is in Virgo, a southwest sign, and verging to the western angle; the strength of the testimonies examined I found the plurality to signify the west, and therefore I judged that the dog ought to be westward from the place where the owner lived, which was at Temple Barre; wherefore I judged that the dog was about Long Acre or upper part of Drury Lane. In regard that Mercury, significator of the beast, was in a sign of the same triplicity that Gemini his ascendant is, which signifies London, and did not apply to a trine aspect of the cusp of the sixt house, I judged the dog was not out of the lines of communication, but in the same quarter; of which I was more confirmed by the sun and Saturn, their trine aspect. The signe wherein Mercury is in is Libra, an avery signe.

"I judged the dog was in some chamber or upper room kept privately or in great secrecy; because the moon was under the beames of the sun, and Mercury, moon and sun were in the eight house, but because the sun on Monday following did apply by trine dexter to Saturn, lord of the ascendant, and moon to sextile of Mars; having exaltation in the ascendant, I intimated that in my opinion he should have his dog againe, or newes of his dog upon Monday following, or neer that time, which was true, for a gentleman of the querem's acquaintance sent him the dog the very same day about 10 in the morning, who by accident coming to see a friend in Long Acre, found the dog chained up under a table and sent him home as above said, to my very great credit." This astonishing success will form a fitting conclusion. Some of our readers may perhaps consider it belongs to that method of divination known as the romancy.—Leisure Hour.

Closing the Moscow University.

The university inspector, Brisgalof, is known as very narrow minded. During a concert given by the students he said to one of the singers: "You are drunk." "Your offensive expression is not deserved," was the reply, "as I never touch drink." "Then you are a dirty scamp!" was the inspector's reply, for which the student boxed his ears. On the morning following the procurator of Moscow, Count Kapnist, assembled the students and addressed them, saying: "Who among you should wish to justify the proceedings of your colleague under arrest is requested to rise and say so." There was no response, probably because the speech was not clear enough in its expressions to be readily understood. Then the count added: "Thus every one of you is a scoundrel." That word was followed by a storm of indignation. "Scoundrel yourself!" "Down with him!" "Out with him!" "Brisgalof must go!" "The council is infamous!" "The by laws must be amended!" and other cries were uttered in passionate vehemence. The greater number of the 1,500 students assembled succeeded in reaching the street, and forming groups awaited further developments. Soldiers had been posted near the university beforehand, and a great many lookers on were crowded in the streets.

Then Russian savagery was displayed in its fullest extent. The cavalry, without a word of warning, charged upon the crowd, wounding, trampling down and killing a great number. I saw an old lady, with her gray haired protector, whose road lay through that street, ruthlessly sabred and trodden down. The natural result of such outrages was that the infuriated populace charged back upon the soldiers, driving them back by the sheer impetus of their numbers, though without weapons of any kind. Meanwhile, the professors of the university, afraid of the number of students that had remained in the building, had recourse to the usual protectors in similar cases—the butchers of the district, who entered the hall brandishing their long knives. Under the countenance of their patrons, the professors, they proceeded to commit unspeakable outrages upon whomsoever had the misfortune to incur their displeasure. Two hundred students were imprisoned. The rest walked the streets in groups, singing their songs. At 11 o'clock on the morning following the students assembled peaceably on the boulevard, when the porters and scavengers, with orders from police headquarters, appeared and proceeded to renew the outrages upon the students as on the previous day, at which scuffle one student was killed. Then the students discontinued attending the university.—Moscow Letter.

Educational Progress in Africa.

The first school in Western Africa upon the plan of the German popular schools was opened at Kamaroons. Among the thirty-two pupils there are seven sons of King Bell, the native ruler. Like all the negroes of the region he complains terribly at the exorbitant cost of the education of his boys, which cannot fail, he says, making his exchequer bankrupt. The fee is settled at seventy-five cents a month a pupil, which, with the usual rule of compounding for a number of pupils from the same family, will bring the amount due by his majesty for the education of his seven princes to something like $4 a month, an immense sum for a royal darkey's treasury. The progress made by the pupils in general is said to be satisfactory in the three "R's," but class singing is not good. Bellowing is too natural an exercise for the black voices to allow them to have any pleasure in civilized chorus singing.—Chicago News.

England Near at Hand.

You have only to cross Niagara river to find old English ways followed. The bishop of Niagara is his lordship, and you will hear the natives of Fort Erie talk of their lively neighbors on this side as "the Americans," just as if they didn't live in a part of America themselves. In their spelling they are particularly English, you know. They put u into parlor and an extra g into wagon. Whereas we spell jail with a j, an a, an i and an l, they perversely make it gaol—but they get there all the same!—Buffalo Courier.

Floating Gardens of Cashmere.

The floating gardens on the rivers are formed by the long sedges being interwoven into a mat, earth being superimposed thereupon and the stalks finally cut under water, thus releasing them from the bottom of the lake. They are usually about 20 by 12 yards in size. A dishonest Cashmiri will sometimes tow his neighbor's garden away from its moorings and appropriate its produce, which generally includes cucurbitaceous fruits and vegetables and a fine description of grape.—The Highlands of India.

THE WALLS COMING DOWN.

Sharing the Wealth of Beautiful Grounds.

AMERICAN AND EUROPEAN VILLAS.

Was the Earth Meant for the Few or for the Human Race?

A man of wealth, residing in a beautiful suburban town, pointed out to me with delight that there was not a wall or even a fence remaining to divide the six successive estates, some dating back to colonial days, some quite recent, of which his was one. He had recently purchased it, and I had noticed that his first act after purchasing was to lower the wall separating it from the street. Ever since I have known that particular street the walls and fences have been growing lower. All the present tendency in our northern states is in that direction; in some attractive suburbs there are absolutely no fences whatever, and one sees roses and even strawberries growing unmolested up to the edge of the sidewalk. An American visiting Europe is extremely struck with the contrast; in many suburbs of London the walls are so high that you feel as if living in a kind of fortress; and on the continent you often walk through miles of lanes which are shut in on both sides, so that only an occasional elevation gives you a glance at the surrounding country. A villa in the United States usually implies something open, attractive, accessible to the eye. A villa on the European continent, and often in England, implies an inaccessible wall with iron gates.

It is impossible to deny that there is something very attractive in the privacy created by the wall. The world is left outside, and the family is as free within its own domain as if it lived on a planet of its own. A suburban villa at Kensington or Hammersmith, for instance, safe within its encircling wall, possessing its own fountain, its own nightingale, and almost its own moonlight—what can be more delightful? Or the patio, or inclosed court, of a Spanish house, where the house itself makes the garden, and the world is absolutely excluded? On the other hand, these very charms increase the regret felt by every generous nature for the exclusion thus implied. They press home the question, was the earth really meant for the few, or for the human race? Many an American traveler has felt this drawback on the delicious rural life of England. Charles Sumner, who was more petted in English society than any American since his day, and was suspected of Anglomania on his return by even his ever kindly friend Longfellow, yet wrote soon after, "I have always enjoyed the refinement of the best society, but I have never sat in the palaces of England without being pained by the inequality of which the inordinate luxury was a token."

Of course it may be justly said that property is property, and that the most imperceptible line drawn around real estate—or no line at all—leaves it just as clearly within private ownership as if the wall were there. This is true, but it is also true that the ownership becomes less exclusive from the moment when it ceases to be visible and, as it were, aggressive. If the foot of a stranger is excluded, it is something that the eye is not. I once heard a poor Portuguese woman say that she and her husband were so destitute they had "nothing but the day and the night;" but the day and the night are less valuable—say, rather, that there is too little day and too much night—for those who are shut out from even the sight of the landscape by high walls. The mere denial of all possibility of ownership is bad enough. I remember how depressing it was, on a first visit to Europe, when it suddenly dawned upon me that the whole beautiful region of Killarney, with lakes, hills, villages, factories and square miles of verdure, was all the literal property of two men—the Earl of Kenmare and "Herbert of Muckross," so that not a square foot of the territory could be bought by any one, and a whole village might at any time be evicted at the will of a single proprietor. It certainly set one thinking as to whether the human race, as such, had any rights in the planet.—Harper's Bazar.

A Fine Sermon.

Young Master X is an observant youth of 5. He returned from church, and was sent up stairs that his maid might remove his lordship's top coat. The following conversation ensued, which I dedicate respectfully to a certain well known clergyman:

Maid—Were you a good little boy in church today?

Young Master X—Oh, yes. Mamma said I was very still today.

Maid—Did you have a fine sermon today?

Young Master X—I guess we did. It sounded like a very fine one, indeed!

"Out of the mouth of babes and sucklings," etc.—Brooklyn Life.

An alarm for telling when a ship reaches a predetermined depth of water is being tried aboard her majesty's ship Rambler in the Red sea. It consists of a wire sounding apparatus having a sinker, which, on coming in contact with the bottom, relieves the drum on board ship and sounds a bell.

The air brake millionaire Westinghouse is a practical mechanic, being the graduate of a machine shop, in which he spent his youth. He is a skillful draughtsman, and his remarkable memory for facts and figures enables him to carry in his head the details of his vast business enterprises.

The form used by the king of Sweden in addressing the members of parliament differs from that used by many other rulers. His speeches begin with, "Good gentlemen and Swedish men." They end usually also with, "The blessing of God be upon you, good gentlemen and Swedish men."

Tenement House Women.

A series of lectures for working women is being given in the hall of the Working Women's society. The topic of the lecture given by Dr. Annie S. Daniels was "Working Women in Tenement Houses."

She gave some interesting facts. "Women who take their work home and do it in the tenement houses work from fourteen to twenty hours. On an average they work eighteen. In the making of artificial flowers they earn from four dollars to six dollars a week. They make straw sailor hats, put in the lining, fasten the band and bow or buttons for forty cents a dozen. The average wages at this work is three dollars. On rare occasions it rises to six dollars. Every child over twelve is sent to the mercantile establishments. Those under that age assist at home.

"They exist in two or three rooms, for which they pay from four dollars a month for a single room to twelve dollars for two or three, always in advance.

"In many cases water is attainable only after 12 at night and before 6 in the morning. For breakfast she has black coffee and bread; for dinner she has bread and coffee; for supper she has the same, with the addition of a little soup. In the meantime she has beer.

It takes four hours to digest a glass of beer. A woman who drinks it knows that for four hours she can continue work without moving. Out of every twenty of these very poor only 6.9 of them are destitute because of shiftlessness. Some eke out their living by taking boarders; more receive charity. Much is given in charity that should be given in wages."

After the lecture the members discussed the remedy for this condition. Some were in favor of enforcing the present laws, others suggested the agitation of a constitutional convention, having the constitution so amended that laws covering these cases could be made.—New York Recorder.

Ouida's Old Age.

Ouida is growing old now, and her works of late lack much of the eloquence and poetic fervor that used to make them so irresistibly attractive. She cannot at present be far from sixty. She never was a beauty, though in her prime she possessed her striking points—her "amber hair," of precisely the shade which she used to describe in her earliest novels, and a pair of exquisite little feet, of whose small size and perfect symmetry she was justly vain. She used to walk down the long dining room of the Langham hotel with her golden locks hanging down her back, and with her long skirts held up in one hand so as to show off her pretty feet in the daintiest of Parisian slippers.

She immortalized Mr. Sanderson, of New York, who was at the time manager of the hotel aforesaid, by making him the hero of her novel of "Tricotrin." The brilliant novelist was not often given to drawing the portrait of an American in such flattering colors. She dislikes our country people with an intensity of hatred that is altogether surprising, and never misses a chance of caricaturing them and holding them up to ridicule.—Paris Cor. St. Louis Post-Dispatch.

Two Women's Adventure in a Blizzard.

Mrs. Maggie McDowell, the wife of Andy McDowell, the noted trainer of trotting horses, who formerly resided here, had a very thrilling experience a short time ago at her present home in Montana. While she and a friend were out for a horseback ride and some distance from town they were overtaken by one of the blizzards which so often come up unexpectedly in that country.

After wandering around in a blinded condition for some time the ladies found they had lost their way, and decided to give their horses the head to see whither they would carry them. After a long ride the horses at last brought their riders safely into town, where they found every saddle animal in the place, with a rider for each, in readiness to start out to find them. They had been seen to go out in the direction from whence the blizzard came, and not returning the town had been aroused and a searching party was about to start after them when their faithful animals brought the ladies into town.—Pleasanton Times.

Mrs. Talmage's Egyptian Parlors.

Mrs. T. De Witt Talmage's parlors, by the way, are excellent examples of the craze for eastern furnishings. A dark hued slave boy wrought in bronze stands in the doorway carrying candles. Antique rugs cover the couches and lie thick upon the floor. On an easel stands a picture of slave girls in bright draperies, blowing long slender pipes, giving all the spirit of Alma Tadema's "Pastime in Ancient Egypt."

A bronze lamp is carried on the back of a crocodile. Another, with drooping yellow petticoats, has for a base a great bronze jar on whose sides are wrought bas-reliefs of the labors of Nile boatmen and fallaheen. On a pedestal is placed the bust in bronze of an Egyptian girl. There are hieroglyphics on a quaint scarf, woven of papyrus, that covers a table, and scarabs in a little cup of curios.—New York Cor. Savannah News.

Eugenie's Losses.

A contemporary announces that the Empress Eugenie has lost so largely by the depreciation in South American securities that she will probably part with her estate in Switzerland. As a matter of fact, the losses of the empress have been preposterously exaggerated, and it is quite on the cards that her South American investments will come round in the course of a few years. The Swiss estate consists simply of the Chateau of Arenenberg, on the Unter See, near Constance, and the small park by which it is surrounded, and is not a place of any value.—London Truth.

Miss Carter, of Wilmington, Mass., has given that town $10,000, the income of which is to be used in painting houses that may need it from year to year, "provided the applicant does not own a dog and is a member of some temperance organization."

EXTRAVAGANT RAJAHS.

Wearing Diamonds as Large as Hickory Nuts.

LARGE ARMIES AND HEAVY REVENUES.

A Sample City in the Heart of India.—The Shrewd Merchant.

The traveler who would see India as it is must go out of the regular line and enter the native states. There is in Hindostan a territory nearly one-fifth the size of the United States and containing a population of more than fifty-six millions, which is governed by rajahs. These rajahs have power of life and death. They have revenues of their own, levy taxation as they please and organize their people and armies on a different basis from the English portion of India. They are subject in a certain sense to the English, and most of them have English officers connected with their establishments. They are feudatory states to England, and England does not allow them to make war upon each other, nor can they have any relations with foreign states. If a rajah misgoverns his people or oppresses them the viceroy of India reproves him and if he does not come to time secures his removal. These states, however, have none of the new customs of English India. Few foreigners visit them and the people are substantially the same as they were years ago—before the railroad and the English desire for business came in to grind them up in the mortar of modern civilization.

One-third of the whole territory of India is possessed by such rajahs and their subjects make up one-fifth of the inhabitants. Their united armies amount to 300,000 men and their gross yearly revenues are about $80,000,000.

These rajahs live as grandly as did the kings of northern India in the past, and the English merchants of India cater largely to their wants. Some of the finest jewelry stores in the world are here in India, and under every glass counter you see barbaric jewelry set with diamonds worth a fortune. I saw two rings yesterday, one worth two and the other four thousand dollars. The first was a diamond of about the size of a hickory nut, set around with a cluster of small diamonds as big as peas, and the whole affixed to a finger ring, containing enough gold to make a hunting case for a Waterbury watch. The other was the same size as to the gold, but the central stone was a ruby fully as big as a chestnut, and the diamonds about it were very beautiful. The tops of these rings were as large around as old copper cents, and as I looked at them I asked the jeweler who would wear such gorgeous and unwieldy objects. He replied:

"Oh, we sell these to the rajahs. They want the most extravagant jewelry, and some of them fairly cover themselves with gems."

At another store I was told that a rajah had just been in and given an order for 200 yards of satin at $10 a yard. He wanted this to paper the walls of a room in a new palace and thought nothing of pasting this $2,000 upon the plaster. The sultan of Jahore, when I visited him in his palace at Jahore, had ropes of gold about twice the size of a clothes line about his wrists, and upon his fingers wore diamond rings. The fingers of the right hand were covered from the knuckles to the first joints with rings set with diamonds and emeralds so that a diamond alternated with an emerald all over his hand, and the whole made a blazing fist of white and green. On the left hand the fingers were covered with rings in the same manner, save that costly rubies took the place of the emeralds. At Delhi I was shown a dressing gown set with precious stones, which cost $35,000, and which had just been made for a rajah, and here at Jeypore, through the courtesy of one of the most noted rajahs of India, I have had a chance to visit his palace, to get a glimpse of his wonderful stables, to take a ride on one of his court elephants, and to see the life and business of his capital city.

Jeypore is one of the northwest provinces of India. It is a day's ride from Bombay, not far off from the borders of Afghanistan and some distance south of Cashmere and the Himalaya mountains. It has a population about as large as that of Ohio, and its rajah's income amounts to $2,000,000 a year. The capital is the city of Jeypore in which I am writing. It is said to be the finest native city of India, and it is certainly like no other city I have ever seen. It is bigger than Omaha, Denver or Kansas City, and is laid out as regularly as the city of Washington. Its main street is two miles long and 120 feet wide, and this is intersected at right angles by other streets of the same width and the whole is cut by narrow streets into rectangular blocks. The roads are better macadamized than those of any city of the United States. They are as hard as stone and as smooth as a floor.

The houses on the main streets are regularly built, and some rajah of the past laid out the city and made the property holders build after fixed regulations. It is more like a Spanish city than an Indian town. The houses come close to the sidewalks, and they have balconies over them with oriole windows jutting out at the second stories above arcades which run below from house to house; they are almost altogether two story buildings, and the painting of the whole is a delicate pink. Imagine miles of pink houses with lattice work windows, through which you may now and then see the eyes of the high caste Hindoo damsels. Let nut brown fingers here and there clasp the lattice work and through a larger hole let here and there an arm peep out. In some of the balconies you see turbaned men and boys sitting dressed in the richest of garments and beside them Hindoo maidens, their faces covered with shawls and their eyes peeping out through the cracks.—Frank G. Carpenter.

The Production of Petroleum.

In the Revue de Deux Mondes M. de Tchihatchef, whom it would probably be safe to take for a Russian, has a striking article on the sudden rise of Russia as a competitor of the United States in production of kerosene. Some abatement may properly be made from his confident predictions on account of the unconcealed partisan bias with which he writes; and his figures leave something to be desired on the score of entire self consistency and recentness, but what he has to say is nevertheless well worth the attention of our oil producers. He makes it evident, in the first place, that the only rival of the United States at present in sight is Russia. Following a late French estimate of the world's production of petroleum, putting the total at 100,000,000 hectoliters, it appears that the United States furnish 64,000,000, Russia 25,000,000, and all other countries only 11,000,000. In fact, while deposits of oil have been found in many parts of the earth—as in Burmah, China, Persia, Egypt, New Zealand and most of the European countries—their extent is so limited and difficult of operation so great that the race has narrowed down to the two contestants named.

The principal oil fields of Russia are found within a limited territory. The famous wells are almost all situated in the peninsula of Aspheron, which runs out into the Caspian sea at a point not far from the southern Russian boundary. Baku is the port whence shipments are made. The great natural advantages of the Baku field are the compact territory to be worked, the small depth of the wells, and their great steadiness of flow. The whole area worked does not exceed 1,100 square miles. Set this over against the area estimated for the United States — 571,240 square miles — and the richness of the Russian wells which produce at least one-third as much as those of the United States, will be at once perceived. The depth of the wells runs from 120 to 540 feet. One famous well is but thirty-three feet deep, yet out of it the oil jets up to the height of 246 feet. M. de Tchihatchef asserts also that the average flow in the Baku region is 88,000 pounds per day, as against 25,300 in the United States.—New York Times.

A Manicure's Queer Experience.

We have some very queer experiences in our trade. We could not help it. But the strangest one came under my notice quite recently. A tall, splendidly formed woman came in to have her "hands fixed," and while awaiting her turn attracted great attention by her extreme beauty, which was of the creamy, oriental style. Dazzlingly white teeth and great, slumberous eyes softened an otherwise too coarse cast of features. But her toilet! That was superb, in such quiet elegance and taste. As soon as possible I hastened to attend to her, but other customers having come in in the meantime, she expressed a decided disinclination to have her hands arranged until the rooms were vacated. I told her that would, perhaps, be not for hours, but if she preferred I would attend to the hand dressing in an alcove, which was curtained off at the extreme end of the room. To this she consented, and when my toilet articles were ready she drew off her gloves. What was my surprise to see a coal-black hand, ebony in flesh.

She briefly explained she was a negro or deep mulatto, from New Orleans. By every art of the face decorator and washes she had become whitened as I saw her, but her hands were more difficult to manage and she wore gloves at every possible opportunity. She desired me to manicure her hands as deftly as possible and she would have her maid arrange the blistering process at home. I did so and she left in a few moments closely gloved and I saw her enter her carriage. Subsequently I learned she possessed immense wealth, inherited, too. A very good, but vain woman, owning everything that she wished except what she most desired, white skin, and this she got by artifice and wealth.—Manicure in Globe-Democrat.

Poetry in the Newspapers.

There are comparatively few weekly papers in the country that pay for poetry. One can almost count them on one's fingers. These papers require that contributions shall reach a certain standard of excellence, and even then the poems must be "timely." It is singular that papers that pay nothing at all get very excellent work. I have known poems rejected by the "pay" journals to date an almost worldwide reputation from their publication in the gratuitous column.

The leading magazines pay good prices for poetry, but much that they publish is far inferior, as poetry, to that which appears in the weekly press at scantier rates. The most valued contributor seldom gets more than three poems a year into the magazines, and these, paid for, say, at the rate of $50 each, which is a good price, do not prove a bonanza. Writers of newspaper poetry fall into ruts, which, seemingly, unfit them for better work. One sees but seldom in the great magazines the names of poets who appear almost weekly elsewhere. The young writer, who has but a frail hold on the paying papers, finds that he sends in too much poetry, and too often; and when he has overcrowded one pigeon hole of the editorial desk, his occupation languishes. Editors, as a rule, will accept just so much of one author's work, and writers learn, by experience, that they must not milk the cow too often.—T. C. Harbaugh in The Writer.

Now Comes the Canine Cure.

The eccentricities of the medical profession will never be exhausted. An American surgeon in his travels through Europe noticed that the peasants when hurt by splinters, thorns or other dangerous substances would get their wounds licked by their dogs, and that they were speedily healed. Acting on this observation he carefully examined the tongue of the animals, and recognized the presence of a healing power of high degree. So convinced was he of the truth of his theories that he has opened a canine hospital near Zurich in Switzerland, where dogs of various breeds are utilized in licking the wounds and nervous centers of the patients under vigilant medical control. Already wonderful cures have been reported, and if the theories are successfully realized the canine cure may become the fashionable craze of the thousands of visitors to the spas of Europe.—San Francisco Chronicle.

A Friendly Suggestion.

"Do you read all your stories over in proof, Scribular?" asked Candidus.

"Every one of them."

"And get $10 a column for them?"

"Yes."

"Two for the writing and eight for reading the proof, I suppose?"—Harper's Bazar.

Sad Fate of a Rough Who Demanded Cigarettes from an Inoffensive Being.

The cars which run after midnight usually contain one or two who may at that unseemly hour enjoy the privilege of a smoke. Such a car from one of the suburbs was boarded by a dapper little dude who was smoking a cigarette. He was dressed in immaculate linen, evening dress and overcoat, and weighed probably from 115 to 120 pounds. His face was pale, and altogether he looked as though a good puff of wind would blow him away.

At the next crossing a big, burly fellow, apparently a bosom friend of Bacchus, got on board. He eyed Mr. Dude for a minute or two, and finally blurted out:

"Say, sonny! Give us a cigarette!"

The dude said not a word but reached into his coat pocket and drew forth the required article, which he handed to his unwelcome companion.

The latter was evidently primed for a bit of fun, a row, or anything else that came along. He reached over and took the dude's lighted weed from the latter's mouth, lit his own, and casting a look of scorn at his small victim threw the borrowed tobacco stick away.

Mr. Dude calmly lit another cigarette, without deigning to resent the insult.

The burly one smoked in silence for two or three minutes, then threw the remnant of the cigarette away, saying; "Say! Give us a cigarette."

"I gave you one," replied the dude.

"Give us a cigarette! Yer hear!" roared the bully, advancing threateningly.

But the little fellow didn't frighten a little bit. He merely answered:

"I gave you one."

"Dern yer! Give us a cigarette!" yelled the now infuriated bully, clutching at the coat collar of the dude and doubling his fist.

Just then there was a sudden movement on the part of the dapper little fellow. His small gloved hand shot out straight and caught his big friend between the eyes, and before the latter could recover he gave it to him right and left until, as the car came to a stop, he rolled off into the gutter.

He got up slowly and shuffled away without a word. The dude calmly lit another cigarette, remarking:

"These woughs are a dweadful bore!"—Wanderer in Boston Times.

A Born Liar.

Harold, a boy of 5, converses with his friend of equally mature years as follows:

"My father is going to get me a goat."

"I've got twenty goats."

"Where are they?"

"Oh, they're down in father's office, 'course."

"Why don't they bring them here?"

"They're sick."

A pause. Harold speaks:

"I saw Anthony's Nose last summer."

"I saw Anthony himself."

"Anthony's Nose is a rock, and it broke off and fell into the water."

"I saw it fall."

Jack's mother, an interested listener, at this point thought it expedient to interpose with a moral lesson.

"Why, Jack," said she, "did you never hear of Ananias and Sapphira."

"I knew them both."

"You know, Jack, they were struck dead for telling lies."

"Yes, I saw them struck."

"Jack, do you know where they went?"

"Oh, yes; I saw them go."—Watson's Illuminator.

Egypt's Consideration for the Dog.

It has been suggested that the consideration which the Egyptians of old had for the dog possessed some connection with their dependence for prosperity upon the periodical overflows of the Nile. To these floods they looked forward, as they do now, with anxiety, and it so happened that the inundations were customarily announced by the appearance in the heavens of Sirius, the dog star. As soon as that orb was seen above the horizon they hastened to remove their flocks to higher grounds and abandoned the lower pastures to the fertilizing stream. They hailed it as their god and protector and called it the dog star because of its apparent watchfulness over and protection of their interests. One of their deities—Anubis—had the body of a man with a dog's head.—Exchange.

Tattooing Convicts for Identification.

"The latest fad in prison management," said a prison official, "is tattooing. It is a ready means of identification, and is bound to become popular in prison management. My idea is to tattoo a convict every time he is imprisoned, and then we'll have his record as clear as the moon at midnight. Let each penal institution adopt a different mark or monogram and the problem of identifying convicts will be solved. It is the simplest and best system yet proposed. To some persons it may seem as harsh as branding, but it isn't. Tattooing isn't painful, and the marks could be put on the convict's back, arms or legs, and would not embarrass reformed convicts. Tattooing is now followed in several penal institutions abroad."—

PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, AUGUST 7 ..... 1891.

An exchange remarks that the half-dollar is not a popular coin and has a way of getting out of circulation. Most of us have noticed that peculiarity.

The Faylor case against the boodle Senators has been dismissed. It went far enough to convince the people that there was lots of crookedness in the last Legislature, and that the men who go there and take an oath to serve the people draw their pay and sell their votes in the most shameless manner.

The executive committee of the Republican National committee has accepted the resignations of Matthew Stanley Quay and William W. Dudley as chairman and treasurer respectively. Of course they were not permitted to retire without being completely whitewashed; but be the kalsomine never so thickly applied the public will still be able to discern the true color of this precious pair of political pariahs.

At a recent conference of the Board of Supervisors of Fresno county with the Board of Trade it was agreed to raise $50,000 for a county display at the World's Fair, the people to raise $35,000 and the Supervisors to vote $15,000 in two years. Fresno is to be congratulated on her good sense and business enterprise.

Excerpts taken from files of papers received from Bolivia, Lima and other places near the scene of the Chilean revolution confirm the charges made all along by the Constitutional party of the revolting brutalities of Balmaceda. His acts have placed him in the category of the worst despots the world has ever seen. The presumption that these papers are free enough from bias to give a truthful account of Balmaceda's methods of government. They are certainly near enough to the capital of Chile to be in the way of getting true advices from that city and of being able to determine from what they learn of the real character of the man whose unholy ambition is drenching his country with blood.

The American cruisers in Behring Sea have lost no time in carrying out the orders issued from Washington in regard to sealing in those waters. The British Columbia poachers are being driven out and each day brings the news of some of them returning to Victoria. In most cases the sealers promptly leave the sea when warned. The Marvin, however, was well armed and at first refused to obey the order. The officers of the United States cutter Rush promptly took the arms and ammunition from the schooner and towed her to Oonalaska, where twenty-one of the crew were placed on the prison-ship Alki and kept for two days, when they were turned over to the British man-of-war Nymphe, the commander of which ordered them to proceed to Victoria. This looks like business. It is probable that the sea will soon be cleared of poachers and the seals will get rest while the dispute over the question of their indiscriminate taking is being decided by arbitration.

It is sometimes said that it does not make much difference which party succeeds, in the United States, that the resources of the country are so great that the people will prosper in spite of bad government. The last census taken by great Britain throws some light upon the influence of government. The condition of Ireland and Scotland at the beginning of the century and their condition now shows what governments may do or leave undone. In 1801 the population of Scotland was 1,608,400 and in 1890 it had increased to 4,033,103. In the same period the population of Ireland decreased nearly a million. Ireland is the larger of the two countries and its natural resources are far greater. There does not appear to be any reason why the smaller and poorer of the two countries should show a handsome increase in population while the larger and more fertile actually loses, except that one has been in unison with its government and the other has not. It is not worth while at the present time to enter into any inquiry as to where the fault lies, whether in the disinclination of the Irish people to be governed by England, or the disregard manifested by the English Government of Ireland's wants. The fact is conceded that the decay of Ireland is largely due to the policy the English Government has pursued in its self-imposed task of ruling the Irish people.

TREATMENT OF CROUP.

WHAT TO DO FOR THE DISEASE IN THE ABSENCE OF A DOCTOR.

Dangerous Croup as Distinguished from False Croup—The Latter May Be Treated Without Medical Aid, but a Physician's Advice Is Always Safe.

The particularly dangerous characteristic of croup is, like pneumonia, its suddenness. Its action is so rapid, and the little patient is so soon in a condition that is very near to death, that parents "lose their heads," and from extreme fear and anxiety are unable to coolly go to work with their best judgment. There are two sorts of croup—one in which the hoarseness and choking are caused by a sort of spasm or contraction of the glottis, and known to physicians as pseudo-croup or false croup, and in this there is little or no formation of membrane. With false croup there is much tightness, the same harsh, brassy cough, the breathing is wheezy, difficult and rapid. The attacks come on with catarrh and hoarseness, and are apt to recur several nights, sometimes coming on in the daytime.

There are many causes for an attack of false croup. Sometimes it originates from the stomach. An exceptionally hearty supper or some indigestible food eaten during the evening may set up an irritation which will bring on the symptoms of false croup, but of course the usual cause is exposure and wet feet. It is really a mild disease, and quickly subsides under proper treatment, and is not apt to be followed by dangerous complications.

For immediate relief wet a towel in cold water and wring it out just dry enough to prevent its dripping, and fold it about the child's neck, then cover this with dry towels or flannel cloths to prevent the pillow, etc., from being wet. In many cases this wet packing of the throat is all that is necessary. Leave it on until the breathing is easy and natural, and be sure to rub the child dry and warm after taking off the pack. It is well to put a light woolen bandage about the throat for the remainder of the night, but never accustom a child to being "bundled up." If the cold pack does not prove sufficient to give relief at once, give repeated doses of sirup of ipecac, larger or smaller according to the violence of the spasm, until vomiting ensues.

An excellent cough medicine to keep in the house, and one which works well in cases of false croup, is the old fashioned mixture of sirup of squills and paregoric, or a mixture of glycerine and water in equal parts. If with this treatment the child does not get easy, and fall into a natural sleep, but, on the contrary, the choking sensation continues or becomes worse, you may conclude that you have a case on hand of true croup, and the sooner you get a doctor the better.

GUARDING AGAINST CROUP.

False croup you may relieve tonight, and tomorrow morning there may be no trace of it; tomorrow night and the next night and for several nights it may come on again as badly as ever. It is not so, however, with true croup—there is no "let up" in this case; the condition gradually gets more and more severe until death ensues from suffocation, or until the disease submits to treatment. The average duration of a case of real croup is about seven or eight days, and many methods and remedies are advised.

Both false and true croup may be guarded against in great measure. It is a mistake to accustom children to such bundling and wrapping up when they go out that active exercise is not easily taken, and of course I would not have you go to the other extreme and not clothe them warmly enough; but if they are strong and lively, the latter course is really the safest, provided they can come indoors to rest and get warm. Look to it that their feet are attended to when they come in from playing in the wet. A good rubbing, or better still, bathing in alcohol and water, and then rubbing, and dry, warm stockings, will often prevent a case of croup or some other form of cold.

If they are weak, or not really active and strong, a course of sirup iodide of iron will usually bring them up. See to it that they are regular and rather lax in their bowel movements, for nearly every preparation of iron has a tendency to promote constipation.

WHAT TO DO FOR CROUP.

Death is almost always caused by suffocation, on account of the closing up of the glottis by the membrane, which forms so rapidly that constant attention with the probang or spray is necessary to impede its growth. Whichever method of applying is used, any application that is irritating is dangerous and should be avoided, as, for instance, nitrate of silver and several of the mineral acids.

Probably the best solvent is freshly made lime water, and it may readily be applied in form of vapor without any apparatus. Small pieces of fresh, unslaked lime may be put into a wide mouthed bottle—a pint glass fruit jar will answer—and water poured upon it to slake it, and the patient may then breathe the fresh vapor as it arises. In cases of true croup this is probably the best course to pursue until the doctor comes. Tincture of iron (full strength) may be applied to the membrane with a camel's hair pencil or a probang. The latter instrument is simply a bit of fine soft sponge, fastened securely with silk thread to the end of a piece of whalebone or reed about as long as a lead pencil, and is simply a swab.

With this swab diluted lactic acid may be applied to the membrane, and next to lime water it is probably the best and safest solvent that can be used. To prepare it for use simply add the acid to water until it has a decidedly sour taste. During an attack of croup it is necessary that we should do everything to keep the patient nourished, as the tremendous exertion of breathing, together with the apprehension of fatal result, are most exhausting.—A Doctor in New York World.

Railway Clerks with Long Days.

The hours on duty of a booking clerk are usually ten a day; but they are at very irregular times. This is on account of trains starting to run as early as 5 a. m. and continuing till midnight. There must be always some one to book the passengers; and as there are nineteen hours to cover, and in many cases only two clerks, they have to work as best they can that both may have time for their meals.—Chambers' Journal.

A SHARP TRICK.

Yet It Shook the Faith That Two Young Boys Had in Their Older Sister.

Anna Mowry was left in charge of her two younger brothers one summer while her parents went to California. She was with them in a farmhouse on the Massachusetts coast, and frequently lectured them on questions of morals and manners. One evening she talked to them on the subject of honesty. "I have often read in the papers," she said, "of young men who are first led into extravagance and then rob or defraud their employers. If a brother of mine was to be guilty of such dishonesty I would never forgive him—never! I would not acknowledge him as my brother!"

The boys had never been tempted to steal, and the suggestion that temptation and fall were possible, together with their sister's threat, startled and impressed them. The next day, while the question of honesty was still fresh in their minds, Anna came in, eager and excited.

"I hear," she said, "that a woman in the neighborhood has some fine old Satsuma ware. Her husband was a sea captain and brought it to her fifty years ago. Come with me. I am going to try to buy a piece of it."

The house, when they reached it, was a meager, forlorn little cottage. The woman was old; her lean, pale face lightened when she saw Anna. She was poorly clad. Here was a chance of earning money!

"Lookin' for rooms, ma'am?" she said.

"I have some good ones to let."

"No," said Anna, carelessly. "We just stopped for—a glass of water."

"Why, sister!" exclaimed Bob, astonished at the deception.

She shook her head angrily at him to be silent, and when the woman left the room she whispered, "If she knew what I came for she would charge twice as high for the ware." Then she followed her hostess, who was opening a cupboard.

"You have some nice glasses there," she said.

"Yes; cost a dollar a dozen,"

"Very neat pattern indeed."

Anna turned the cheap, ugly shaped goblet in her hand, while her keen eye scanned the recess of the cupboard.

"Queer looking old china cup, that," she said. "May I see it? Thank you. What is it?"

"Some foreign kind of crockery. My husband brought it to me. I've been told it was worth considerable money."

"Ah? I shouldn't like to give much for it. It's a dingy looking bit of china. I think I would give seventy-five cents for it—just for the oddity."

"I couldn't let it go for less than a dollar," said the woman anxiously. "My husband gave it to me, but I do need money."

Anna laid the cup down, declaring that it was "dingy," but after some higgling she bought it for a dollar. She hurried away with it, her cheeks flushed and her eyes shining.

"Cousin Bell gave twenty-five dollars for not half so good a specimen!" she cried exultantly, when they were on the road.

"Is this worth so much?" asked Bob gravely.

"It is worth more, but she did not know it."

"That was a pretty sharp trick of yours, Anna," said Tom thoughtfully, after a pause.

Anna laughed complacently. "Yes, I think so," she said.

When the lads were alone that night Bob said: "Anna said she would not acknowledge us as brothers if we stole money. Didn't she the same as steal that cup from the old woman if it was worth twenty-five dollars? If the old woman had known it she would not have let it go for a dollar. Anna took advantage of her ignorance. She really stole it."

"It looks like that," replied Tom.

"Well, then, I guess Anna wouldn't mind sharp tricks in business if we were men, Tom, would she?"

"No," said Tom.

The seed was planted which would reach a deadly growth hereafter, and Anna's talk about dishonesty was always thought of with derision.—Youth's Companion.

To Circumvent Moths.

This is the season when our innocent looking little enemies, the moths, do their destructive work—at least this is the beginning. The small, cream colored moths flying around should be destroyed. They do the mischief, depositing numbers of eggs in woolen and fur garments, carpets, curtains, upholstered furniture—nothing escapes them, and before we know the danger frequently our most cherished garment is riddled by these little pests.

The great trouble comes from not putting things away clean and free from the moth eggs. Articles slightly soiled are certain to attract moths. It is therefore well to wash everything that can be washed, like flannels and stockings. Coats, cloaks, furs and similar things should be cleaned and beaten and aired several times before finally putting away for the summer. When carpets are kept down during the summer, tar paper should be laid under the edges and the room swept carefully with a stiff broom once in a while, particularly the edges of the carpet, corners and seams.—Chicago News.

Intelligence in Mice.

The organs of hearing and smelling in mice are very efficient; but their eyesight is, we believe, poor. Their intelligence is, we should think, low, as might be expected from the paucity of convolutions in their brains. We suspended a tin of flour at such a height from the ground that our little friends could not quite jump into it, though the smell of the food made them very persevering in their endeavors to do so. We then arranged a string so that by a detour they could get at the good stuff that way.

One mouse by following that course attained to the desired goal, but evidently by chance, for being startled out of the tin, it continued for a long while to make futile efforts to recover its lost position by jumping up, never again seeking the road which had led it before to the object of its desire. For hours we have lain in bed watching mice trying in vain to spring into the tin of flour, none of them ever perceiving that there was a feasible road leading thereto.—Chambers' Journal.

The president of France, who is of course the best paid official of the republic, receives a salary of $120,000 a year, to which is added $60,000 for household expenses and $60,000 for traveling.

TALKING WITH MOLTKE.

EX-PRESIDENT ANDREW D. WHITE'S DESCRIPTION OF HIM.

He Met Him at a Reception in Berlin on the Occasion of the Golden Wedding of the Old Emperor William—Baron Nothomb's Felicitous Introduction.

By many people ex-President Andrew D. White, of Cornell university, ex-minister to Germany, is regarded as one of the best authorities on German affairs in the United States. Years of patient study and observation give great weight to his views on the new Germany of today.

Regarding the great German soldier and strategist the ex-president says:

I first saw Von Moltke just after my arrival at Berlin at the festivals attendant upon the golden wedding of the old Emperor William. The first of these was a great theatrical representation at the Royal Opera house, at which the emperor and empress and very nearly all the crowned heads of Germany, with representatives of the various royalties of Europe, were present, and besides these, attracting even more attention, Bismarck, Von Moltke and the leading generals of the Franco-Prussian war.

The appearance of these people comes back before me very vividly, but no one is more distinctly present to me than Von Moltke. He seemed absolutely different from every other personage in that great hall. He was a tall, spare man, his face a mixture of determination and kindliness, his whole appearance, as more than one person has said at various times, being that of an intelligent, kindly college professor or schoolmaster.

There was something singularly gentle about his whole bearing, yet it was impressive. He sat very quietly, exchanging some little conversation with his next neighbor, Manteuffel, the dreaded viceroy of Alsace-Lorraine. The contrast between the two was very marked—Manteuffel, apparently, all keenness and severity, Von Moltke firm, but gentle.

INTRODUCED BY BARON NOTHOMB.

When I next saw him it was at an evening gathering where there was not a large number present, and where I had the opportunity to converse with him. I was introduced to him by the dean of the diplomatic corps, Baron Nothomb, sometimes called "the father of constitutional liberty in continental Europe," a man of very wide political knowledge and who more than once, as I sat at the table, gave me accounts of his conversations with Talleyrand and other men of the first Napoleonic period.

Baron Nothomb in presenting me to Von Moltke took advantage of a little sketch published in one of the German newspapers, and said: "Sir Field Marshal, I wish to make you acquainted with a gentleman who was born in Homer, who lives in Syracuse and who has aided in founding a university at Ithaca."

At this Von Moltke laughed pleasantly, and evidently did not understand the allusion, whereupon I told him that in the earlier days of this country we had a way of naming our townships and villages after noted heroes of antiquity, but at present we did better, naming them after the great men of these times, and telling him that no doubt in the newer states he would find his own name and that of Bismarck attached to some of our younger towns. He seemed interested in this and talked on very pleasantly.

I look back to that evening as one of the most interesting during my stay in Germany.

MOLTKE IN PARLIAMENT.

At various other times I met Von Moltke, but do not recall anything of especial interest. No man was more free from the slightest tincture of vanity. As he walked through the streets and in the parks, going to and from the office of the general staff, he was undistinguishable save by his tall, scholarly form from the crowd of military men about him. He evidently wore just as little in the shape of orders and decorations as was permissible.

At court he was expected, of course, to appear in more splendid attire, but even then there was always the same quiet modesty and simplicity. He seemed to me in some respects "the noblest Roman of them all."

But perhaps his most impressive appearance was as a member of the imperial parliament. From time to time as I happened in to hear the discussions I saw him in his seat, quiet, imperturbable; but on two occasions I heard him speak, and on each of these his subject was the necessity of larger votes of money and men to maintain the military supremacy of Germany.

Nothing could be better in their way than these speeches of his. He looked and spoke as I could imagine Julius Cæsar looked and spoke in the Roman senate. Nothing could be more simple and yet nothing more effective. He was listened to by men of all parties with the utmost respect.

He seemed to stand in a sense aloof from all parties, and to be guided simply and solely by what he considered the best interests of the German empire. On hearing him speak one could not resist this conclusion, and as his manner was simple, voice good and statements very clear, direct and strong, but without the slightest tendency to exaggeration, his words carried great weight.

I remember hearing him say in substance in one of these speeches that Germany must be prepared for any emergency, and must maintain the very highest condition of military efficiency possible for at least fifty years. And I remember, too, with what a sort of solemnizing effect these words, quietly uttered, but evidently the result of conviction based on knowledge, had upon the audience. They seemed to carry a sense of responsibility to the heart of every person present.—New York Herald.

A cubic inch of any of the stones from which the palaces, churches and fine residences of Paris are built contains hundreds of thousands of fossils, so that it may with truth be said that Paris, together with its pavements and quays, is composed entirely of the shells of the miliolore.

Forgot to Carry.

A township treasurer in Ohio forgot to carry "9" in adding up his accounts, and the committee to look over his books found him $750 short, and nearly broke up his family before it was discovered where the error lay. The surprising thing about it is that he didn't "carry" the whole boodle to Mexico or somewhere else.—Detroit Free Press.

PINNED A WOMAN TO THE GROUND.

The Matter Made Less Serious by the Fact That She Wore Army Shoes.

Richard M. Sommers, the foreman of the roller department in the mint, was recently chatting with some of the men who had seen service in the late war, and, after relating an interesting adventure that had occurred in 1862, said:

But I never was so frightened in my life as I was the day I pinned a fair young rebel to the ground with my bayonet. I thought I had killed her.

The circumstances were these: In August, 1863, when the Philadelphia brigade was moving toward Mine Run, Va., I was detailed from my command, the Seventy-first Pennsylvania volunteers, known as Baker's California regiment, to watch a farmer who was believed to be a spy.

In order to throw him off his guard and also to enable me to learn the better whether he was a spy or not, I was instructed to report at his house, on the Mountain View farm, in Fauquier county, and state that I had come there by command of Colonel W. Penn Smith, in in order to protect his home from any straggling soldiers that might trespass with a view to foraging on the premises.

I was well received by the family, who, living in that out of the way country, were quite timid and in constant fear of the passing troops. I was housed there, and fed at their expense, and soon I realized that the hospitality of Virginia's first families was all that it was reported to be. The two pretty girls, sisters, one a blonde and the other a brunette, were at first a little shy of the "wild Yankee," as they called me, but we soon became friends, however, although they would persist in telling me the Confederate cause was just, and that the Union troops were invaders, and all that sort of thing.

The Mountain View farm covered a good many acres of ground, but the owner was poor at that time, and "sweet sixteen," as I called the pretty blonde, had no shoes with which to cover her well shaped little feet. Now I had a brand new pair of army shoes in my knapsack and a fairly good pair on my feet. I asked her if she would wear my new pair if I would make her a present of them. She seemed a little loath to accept them at first, not because of pride, but because she thought it unfair to take them from a soldier who might soon stand in need of them himself. But at last she did accept them, and was real well pleased to do so. Of course, they were a mile too big for her, but that didn't matter. She soon got used to them.

It used to be her custom to watch for foraging soldiers and then to send me after them to drive them away. One morning she said: "Oh, Yank! there is a forager out there. Don't you see him? There he goes under the trees over there."

I started out after the intruder, but I ran all over the part of the farm indicated without seeing any one. It was very warm, and I was very warm and tired when I returned. On seeing her I told her that I could find no one, when she laughed right in my face and said:

"I just fooled the wild Yank for fun." It was fun for her, but not for me. However, I laughed with her. Just then I put my gun down on the ground, as was my habit, bayonet downward, intending to stick it into the ground and thus let the piece stand reversed, but instead of that I stuck it through her shoe and pinned the beautiful girl fast!

I was never so frightened in my life as I was then. I would not have harmed the young woman for the world; she had become to me like a sister.

Maybe I wasn't glad when I saw a twinkle in her bright, blue eyes, and heard her sweet voice ringing in laughter as she said:

"Well, Yank, you did not hurt me a bit; you know these shoes are a trifle large for me, and your bayonet just went through the upper and sole without grazing my toes."

I was rejoiced to hear her talk that way, I assure you. I was taken away from there in a few days after that, it having been found that her father was not what he was suspected to be. But I often thought about that family, especially of one member, in my marches and in later years, but I never met again with any member of it. Not even with my pretty "sweet sixteen" friend, for I was engaged in a great deal of active service in the army, and when I was mustered out of it I returned to Philadelphia and never went back to Virginia.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL.] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL
TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $25 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine. Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of typewriting. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

For Pamphlet giving Indorsements, &c., address

WEDNESDAY, August 5, 1891.

Frank Silva vs. Southern Development Co.—Entered order dismissing action.

Broder et als. vs. Conklin—Filed order changing place of further trial.

P. Reddy vs. W. F. Matlack, administrator of estate of J. C. Eddy, deceased, et als.—Filed complaint and issued summons.

A. Stecker vs. Andrew Fyfe et als.—Filed amended complaint.

Rhine vs. Thiebaut—Entered decree of foreclosure and order of sale.

THURSDAY, August 5, 1891.

Ah Sing vs. O. H. Hill—Issued execution.

BORN.

MULHOLLAND—At Independence, July 31st to Mr. and Mrs. Irv. H. Mulholland, a daughter.

Neil McLain and wife were up from Lone Pine early in the week.

There are no end of young quail in the Valley. Shooting should be very good this fall.

If you want to see a lovely place take a look at Densmore's orchard at Camp Independence.

Buggies, carts and harness for sale cheap or will exchange for hay and grain. Inquire at this office.

C. S. Swan returned to Independence on Tuesday after a lengthy visit through the Southern counties.

Parties who have been to Onion Valley report the fishing to be very poor. The fish are small and few of them.

Saddle horses are in brisk demand by camping parties. Several parties will go into the mountains during the next few days.

Jones & Son expect to start the Maxim mill about the 20th on a run of ore from Black Canyon. A. R. Jones was in town during the week.

Rev. H. J. Winsor has been returned by the M. E. Conference to the Independence charge. He is expected to arrive with his family to-day.

A letter received from Darwin states that matters are progressing very nicely at the Defiance mine. The Independence mine is also showing up very well.

The Crocker brothers are rapidly disposing of their property about Big Pine. The Naylor ranch was sold last week to A. K. Eugley. It is reported that they expect to remove to Arizona.

A. J. Church arrived on Wednesday's train from Hawthorne. Mr. and Mrs. Church intend joining a camping party and spending a couple of weeks in the high Sierras west of Independence.

George Mead and Gene Mallory passed through Independence yesterday with a ten-horse team en route for bishop from Mojave. They had on about 16,000 pounds of freight, most of it being for J. H. Bulpit. This team has been making regular trips to Mojave for some time past.

The State Board of Examines, at a meeting held on the 28th ult., had under consideration the payment of the bounty on coyote scalps. In the absence of the Governor no determination was reached, but it is probable that the Board will hold the law unconstitutional and the bounty will not be paid.

The town of Genoa, Nevada, was visited by a terriffic cloud-burst on the 28th ult. The rushing waters carried with them boulders weighing upward of a ton each, and water and mud stood three feet deep in the business houses. Damage is reported to have done to the extent of about ten thousand dollars.

Huile & Shoemaker have things well under way at the Blackrock sawmill and are turning out lumber. The best grade of picked lumber will be sold at the dump for $27.00 per thousand; prices of other grades will be made known on application. They are getting out a good grade of material and the price is placed at the lowest living rates. See their advertisement.

Artesian Well Boring

A few days ago a telegram in the Bakersfield *Californian* mentioned that an artesian well had been bored in Antelope Valley by some new process successfully and that no casing had been used. The facts as they have recently transpired are that a man brought a hydraulic artesian well machine from Colorado to Antelope Valley, sunk a hole there in one day 260 feet and got a good flow of artesian water. He only used 20 feet of casing at the surface. This well has been sunk over two weeks and is now spouting out a volume of soft, clear water, increasing in volume with time. It was sunk at a cost of five cents per foot and much of the time at the rate of a foot per minute. There is no country in the world where there are better indications of artesian water than in Owens Valley. Springs sound throughout the Valley; there is an extensive watershed and the pressure is enormous.

That Indian Affair.

Commenting on an article published in the INDEPENDENT two weeks ago the Kern county *Gazette* says:

An item in this issue, taken from the INYO INDEPENDENT, relates to the capture of the Indian who killed Constable Powers. The murderer is now confined in the Bakersfield jail. The INDEPENDENT speaks of a reward and indirectly intimates that while a reward should be paid for the capture of the assassin, our county may be inclined to shirk the responsibility. Drawing such conclusions in advance is hardly proper. When did the INDEPENDENT ever know of Kern county refusing to do what is just? From a legal standpoint there are no obligations resting against this county in the matter at present. From the report a citizen and an Indian made the capture. By virtue of those protections vouchsafed by our constitution and laws, every citizen is expected to do his duty to the county or State. If he knows of the whereabouts of a law-breaker it is his duty to do all in in his power to secure the capture of such law-breaker, and his reward comes in the protection given to him which he has assisted in extending to others. "Equal rights and equal burdens to all" should be considered by all citizens, and it is scarcely doing an American citizen right to surmise that every time he performs a good deed he will rise to his full height, and striking himself on the breast exclaim: "Behold, I have done a good and noble deed; now pay me for it." And the man who has done right merely for the pay that is in it, can scarcely be reckoned with the best citizens. But, nevertheless, it is probable that Kern county will pay the capturers of the red-handed murderer for the expense and time they have been out in bringing him to justice.

The event proves that the INYO was just about right in its surmise that the talk about five hundred dollars reward was mere gas. If Kern county was never known to shirk a responsibility, or act unjustly, before this, a lively precedent is certainly being set now. The capturers of the "red handed murderer" are out their time and money and see no prospect of getting any of it back. McDonough is a poor man and can ill afford to lose any money. As for the Indians who assisted him, they should be paid in any event and given every encouragement to assist the whites in similar emergencies. Without their assistance the slayer of Constable Powers of Kern county would be at liberty. The blatherskite in the *Gazette* about constitutional rights and duties of citizens amounts to a lame excuse for a petty meanness. Were the murderer still at large there is no doubt but a considerable reward would be offered; now that he is taken the men who risked their lives and climbed mountain trails that would make a Kern countyite's hair stand on end to get him, and were out cash for railroad fare and other expenses to boot, may whistle for their just dues.

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of July, 1891.

Mean barometer.....29.784
Highest barometer.....30.004
Lowest barometer.....29.607
Mean temperature.....81.6
Highest temperature, 29th.....100.
Lowest temperature, 1st.....57.
Greatest daily range temp'ture, 15t, 31.
Least daily range temperature, 27th, 16.
Prevailing direction of wind, East.
Total movemement of wind, 4092 miles.
Extreme velocity of wind, direction and date, 40 miles N. E. on 27th.
Total precipitation, 0.06 inches.
Number of days on which .01 inch or more of precipitation fell, 1.
Number of cloudless days.....19
Partly cloudy days.....7
Cloudy days.....5

H. E. WILKINSON,
Weather Bureau, Observer.

O. I. Mairs and Mrs. H. E. Jiggens returned on Monday's train from Colusa county. Harry Jiggens was preparing to close the store where he was employed about nine o'clock in the evening when he was stricken down and never regained consciousness. It was necessary that the funeral should take place before Mr. Mairs could arrive, and he was buried at Maxwell, where he died.

The much talked of race between Tenny and Longstreet was won last Saturday by the latter. Tenny is an unlucky brute in his match races—may be so. Anyway the dear public is invariably let down for big money in slow time.

A Quick Cure For Rheumatism.

In many cases persons subject to rheumatism, have got prompt relief from pain by applying Chamberlain's Pain-Balm. The relief it affords is alone worth many times its cost, which is but 50 cents, and its continued application effects a complete cure. For sale by A. K. EUGLEY, Big Pine.

Well Merited Praise.

In almost every neighborhood there is some one or more persons whose lives have been saved by Chamberlain's Colic, Cholera and Diarrhœa Remedy, or who have been cured of chronic diarrhœa by it. Such persons take special pleasure in recommending the remedy to others. The praise that follows the introduction and use makes it very popular. 25 and 50 cent bottles for sale by A. K. EUGLEY, Big Pine.

LUMBER FOR SALE

Huile & Shoemaker,

LESSEES OF

BLACKROCK SAWMILL,

Clear lumber, at the dump, $27.00 per thousand. Second class lumber, slabs and edgings for sale cheap. Inquire for our prices.

HUILE & SHOEMAKER.

A Suggestion.

If you are troubled with rheumatism or a lame back, allow us to suggest that you try the following simple remedy. Take a piece of flannel the size of the two hands, saturate it with Chamberlain's Pain-Balm and bind it over the seat of pain. It will produce a pleasant warmth and relieve you of all pain. Many severe cases have been cured in this way. The Pain-Balm can be obtained from

A. K. EUGLEY
Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.
Chicago, Ill., U. S. A.

What is lacking is truth and confidence.

If there were absolute truth on the one hand and absolute confidence on the other, it wouldn't be necessary for the makers of Dr. Sage's Catarrh Remedy to back up a plain statement of fact by a $500 guarantee.

They say—"If we can't cure *you* (make it personal, please,) of catarrh in the head, in any form or stage, we'll pay you $500 for your trouble in making the trial."

"An advertising fake," you say.

Funny, isn't it, how some people prefer sickness to health when the remedy is positive and the guarantee *absolute*.

Wise men don't put *money* back of "fakes."

And "faking" doesn't pay.

Magical little granules—those tiny, sugar-coated Pellets of Dr. Pierce—scarcely larger than mustard seeds, yet powerful to cure—active yet mild in operation. The best Liver Pill ever invented. Cure sick headache, dizziness, constipation. One a dose.

How would it do to have two kinds of money—a cheap kind for our creditors and a high kind for our debtors?

CHANGES OF CLIMATE

Kill more people than is generally known. Particularly is this the case in instances where the constitution is delicate, and among our immigrant population seeking new homes in those portions of the West, and where malarial and typhoid fevers prevail at certain seasons of the year. The best preparative for a change of climate, or of diet and water which that change necessitates, is Hostetter's Stomach Bitters, which not only fortifies the system against malaria, a variable temperature, damp, and the debilitating effects of tropical heat, but is also the leading remedy for constipation, dyspepsia, liver complaint, bodily troubles specially apt to attack emigrants and visitors to regions near the equator, mariners and tourists. Whether used as a safeguard by sea voyagers, travelers by land, miners, or of agriculturists in newly populated districts, this fine specific has elicited the most favorable testimony.

Advice to stage-struck young ladies: Think before you act.

Rochester, N. Y., April 22, 1886.

GENTLEMEN:—It is with pleasure I add my testimonial to the many well-known cures which your most excellent remedy has effected. For more than two years I was a great sufferer with rheumatism, being scarcely free from pain during the time. I found no relief until I procured Dr. Pardee's remedy, and it cured me completely. It is now two years since I discontinued its use and I have had no symptoms of the disease since. I know from my own and from the experience of many others also, that it will cure any case of rheumatism or neuralgia.

I am, very truly yours,
MRS. H. S. BONESTEELE.

Syracuse, N. Y.

GENTS:—I have been troubled with Rheumatism for three years, at times very badly afflicted; was in that condition about two weeks ago, when I got a bottle of Dr. Pardee's Rheumatic Remedy, and in three days time was greatly relieved, and have not been troubled with it since I finished this bottle. I feel like recommending it in the highest terms, as I believe it will do all that is claimed for it.

Yours truly,
JOHN BLODGETT,
62 Madison St.

Syracuse, N. Y.

THE SPLENDID SPUR.

Being Memoirs of the Adventures of Mr. John Marvel, a Servant of His late Majesty King Charles I, in the years 1642-3: written by himself.

EDITED IN MODERN ENGLISH BY "Q."

Now I myself had felt somewhat cold inside when the guns began roaring; but this set me right in a trice. I whipped a pistol out of my sash and put the cold ring to his ear; and he scrambled up, and was a very lion all the rest of the day.

But now we had again to change our course, for to my dismay I saw a line of sharpshooters moving down among the gorse bushes to take the Cornishmen in flank. And 'twas lucky we had but a little way farther to go, for these skirmishers, thinking perhaps from my dress and our running thus that we bore some message, opened fire on us; and, though they were bad marksmen, 'twas ugly to see their bullets pattering into the turf to right and left.

We caught up the very last line of the ascending troop—lean, hungry looking men, with wan faces, but shouting lustily. I think they were about three hundred in all. "Come on, lad," called out a bearded fellow with a bandage over one eye, making room for me at his side; "there's work for plenty more!"—and a minute after a shot took him in the ribs, and he screamed out, "Oh, my God!" and, flinging up his arms, leaped a foot in the air and fell on his face.

But in the midst of this skurry I heard the sound of cheering. 'Twas Sir John Berkeley's troop (till now posted under cover of the hedges below) that had come to our support; and the rebels, fearing to advance too far, must have withdrawn again behind their earthwork, for after a while the pressure eased a bit, and, to my amaze, the troop which but a minute since was a mere huddled crowd formed in some order afresh and once more began to climb. This time I had a thick set pikeman in front of me, with a big wen at the back of his neck that seemed to fix all my attention. And up we went, I counting the beat of my heart, that was already going hard and short with the work; and then, amid the rattle and thunder of their guns, we stopped again.

I had taken no notice of it, but in the confusion of the first repulse the greater part of our men had been thrust past me, so that now I found myself no farther back than the fourth rank, and at the very foot of the earthwork, up the which our leaders were flung like a wave, and soon I was scrambling after them, ankle deep in the sandy earth, the man with the wen just ahead, grinding my instep with his heel, and poking his pike staff between my knees as he slipped.

And just at the moment when the top of our wave was cleaving a small breach above us he fell on the flat of his pike, with his nose buried in the gravel and his hands clutching. Looking up, I saw a tall rebel straddling above him with musket clubbed to beat his brains out, whom with an effort I caught by the boot, and, the bank slipping at that instant, down we all slid in a heap, a jumble of arms and legs, to the very bottom.

Before I had the sand well out of my eyes my comrade was up and had his pike loose, and in a twinkling the rebel was spitted through the middle and writhing. 'Twas sickening; but before I could pull out my pistol and end his pain (as I was minded) back came our front rank a-top of us again, and down they were driven like sheep, my companion catching up the dead man's musket and ammunition bag and I following down the slope with three stout rebels at my heels. "What will be the end of this?" thought I.

The end was that after forty yards or so, finding the foremost close upon me, I turned about and let fly with my pistol at him. He spun round twice and dropped, which I was wondering at—the pistol being but a poor weapon for aim—when I was caught by the arm and pulled behind a clump of bushes handy by. 'Twas the man with the wen, and by his smoking musket I knew that 'twas he had fired the shot that killed my pursuer.

"Good turn for good turn," says he; "quick with thy other pistol!"

The other two had stopped doubtfully, but at the next discharge of my pistol they turned tail and went up the hill again, and we were left alone. And suddenly I grew aware that my head was aching fit to split, and lay down on the turf, very sick and ill.

'Twould be tedious to tell the whole of this long fight, which, beginning soon after sunrise, ended not till 4 in the afternoon, or thereabouts; and, indeed, of the whole my recollection is but of continual advance and repulse on that same slope.

But at 3 o'clock, we, having been for the sixth time beaten back, were panting under cover of a hedge, and Sir John Berkeley, near by, was writing on a drumhead some message to the camp, when there comes a young man on horseback, his face smeared with dirt and dust, and rides up to him and Sir Bevill. 'Twas (I have since learned) to say that the powder was all spent but a barrel or two; but this only the captains knew at the time.

"Very well, then," cries Sir Bevill, leaping up gayly. "Come along, boys—we must do it this time." And, the troop forming, once more the trumpets sounded the charge, and up we went. Away along the slope we heard the other trumpeters sounding in answer, and I believe 'twas a sursum corda! to all of us.

Billy Pottery was ranged on my right, in the first rank, and next to me, on the other side, a giant, near seven foot high, who said his name was Anthony Payne and his business to act as body servant to Sir Bevill. And he it was that struck up a mighty curious song in the Cornish tongue, which the rest took up with a will. 'Twas incredible how it put fire into them all; and Sir Bevill tossed his hat into the sky, and after him like schoolboys we pelted, straight for the masses ahead.

For now over the rampart came a company of red musketeers, and two of russet clad pikemen, charging down on us. A moment, and we were crushed back; another, and the chant rose again. We were grappling, hand to hand, in the midst of their files.

But, good lack! What use is swordsmanship in a charge like this? The first red coat that encountered me I had spitted through the lung, and, carried on by the rush, he twirled me round like a windmill. In an instant I was passed; the giant stepping before me and clearing a space about him, using his pike as if 'twere a flail. With a wrench I tugged my sword out and followed. I saw Sir Bevill, a little to the left, beaten to his knee and carried towards me. Stretching out a hand I pulled him on his feet again, catching, as I did so, a crack on the skull that would have ended me had not Billy Pottery put up his pike and broke the force of it. Next, I remember gripping another red coat by the beard and thrusting at him with shortened blade. Then the giant ahead lifted his pike high, and we fought to rally round it; and with that I seemed caught off my feet and swept forward—and we were on the crest.

Taking breath, I saw the enemy melting off the summit like a man's breath off a pane. And Sir Bevill caught my hand and pointed across to where, on the north side, a white standard embroidered with gold griffins was mounting.

"'Tis dear Nick Slanning!" he cried; "God be praised—the day is ours for certain!"

CHAPTER XVII.

I MEET WITH A HAPPY ADVENTURE.

The rest of this signal victory—in which seventeen hundred prisoners were taken, besides the Maj. Gen. Chudleigh, and all the rebels' camp, cannon and victuals—I leave historians to tell. For very soon after the rout was assured (the plain below full of men screaming and running, and Col. John Digby's dragoons after them, chasing, cutting and killing), a wet muzzle was thrust into my hand, and, turning, I found Molly behind me, with the groom to whom I had given her in the morning. The rogue had counted on a crown for his readiness, and swore the mare was ready for anything, he having mixed half a pint of strong ale with her mash, not half an hour before.

So I determined to see the end of it, and, paying the fellow, climbed into the saddle. On the summit the Cornish captains were now met and cordially embracing. 'Tis very sad in these latter times to call back their shouts and boyish laughter, so soon to be quenched on Lansdowne slopes or by Bristol graff. Yet, O favored ones! to chase Victory, to grasp her fluttering skirt, and so, with warm, panting cheeks, kissing her, to fall, escaping evil days!

How could they laugh? For me the late passionate struggle left me shaken with sobs, and for the starting tears I saw neither moors around, nor sun, nor twinkling sea. Brushing them away, I was aware of Billy Pottery striding at my stirrup and munching at a biscuit he had found in the rebels' camp.

We, the descent being gentle, broke into a run, in hopes to catch up with Col. John Digby's dragoons, that already were far across the next vale. The slope around us was piled with dead and dying, whereof four out of every five were rebels; and cruelly they cursed us as we passed them by. Night was coming on apace; and here already we were in deep shadow, but could see the yellow sun on the hills beyond. We crossed a stream at the foot, and were climbing again. Behind us the cheering yet continued, though fainter; and fainter grew the cries and shouting in front. Soon we turned into a lane over a steep hedge, under the which two or three stout rebels were cowering. As we came tumbling almost a-top of them they ran yelling, and we let them go in peace.

The lane gradually led us to westward, out of the main line of the rout, and past a hamlet where every door was shut and all silent. And at last a slice of the sea fronted us, between two steeply shelving hills. On the crest of the road, before it plunged down towards the coast, was a wagon lying against the hedge, with the horses gone; and beside it, stretched across the road, an old woman. Stopping, we found her dead, with a sword-thrust through the left breast; and inside the wagon a young man lying, with his jaw bound up—dead also. And how this sad spectacle happened here, so far from the battle field, was more than we could guess.

I was moving away, when Billy, that was kneeling in the road, chanced to cast his eyes up towards the sea, and, dropping the dead woman's hand, scrambled on his feet and stood looking, with a puzzled face.

Following his gaze, I saw a small sloop, moving under shortened canvas, about two miles from the land. She made a pleasant sight, with the last rays of sunlight flanning on her sails; but for Billy's perturbation I could not account, so turned an inquiring glance to him.

"Suthin' i' the wind out yonder," was his answer. "What's a sloop doing on that ratch so close in by the point? Be danged! but there she goes again;" as the little vessel swung off a point or two farther from the breeze that was breathing softly up channel. "Time to sup, lad, for the both of us," he broke off, shortly.

Indeed, I was faint with hunger by this time, yet had no stomach to eat thus close to the dead. So, turning into a gate on our left hand, we crossed two or three fields, and sat down to sup off Billy's biscuits, the mare standing quietly beside us and cropping the short grass.

The field where we now found ourselves ran out along the top of a small promontory and ended, without fence of any sort, at the cliff's edge. As I sat, looking southward, I could only observe the sloop by turning my head, but Billy, who squatted over against me, hardly took his eyes off her, and between this and his meal was too busy to speak a word. For me, I had enough to do thinking over the late fight; and, being near worn out, had half a mind to spend the night there on the hard turf; for, though the sun was now down and the landscape gray, yet the air was exceeding warm; and albeit, as I have said, there breathed a light breeze now and then, 'twas hardly cool enough to dry the sweat off me. So I stretched myself out, and found it very pleasant to lie still; nor, when Billy stood up and sauntered off towards the far end of the headland, did I stir more than to turn my head and lazily watch him.

He was gone half an hour at the least, and the sky by this time was so dark that I had lost sight of him, when, rising on my elbow to look around, I noted a curious red glow at a point where the turf broke off, not three hundred yards behind me, and a thin smoke curling up in it, as it seemed, from the very face of the cliff below. In a minute or so the smoke ceased almost, but the shine against the sky continued steady, though not very strong. "Billy has lit a fire," I guessed, and was preparing to go and look, when I spied a black form crawling towards me, and presently saw 'twas Billy himself.

Coming close, he halted, put a finger to his lip and beckoned, then began to lead the way back as he had come.

Thought I, "these are queer doings," but left Molly to browse and crept after him on hands and knees. He turned his head once to make sure I was following, and then scrambled on quicker, but softly, towards the point where the red glow was shining.

Once more he pulled up—as I judged about twelve paces' distance from the edge—and, after considering for a second, began to move again, only now he worked a little to the right. And soon I saw the intention of this; for just here the cliff's lip was cleft by a fissure—very like that in Scawfell which we were used to call the Lord's Rake, only narrower—that ran back into the field and shelved out gently at the top, so that a man might easily scramble some way down it, though how far I could not then tell. And 'twas from this fissure that the glow came.

Along the right lip of this Billy led me, skirting it by a couple of yards and wriggling on his belly like a blindworm. Crawling closer now (for 'twas hard to see him against the black turf), I stopped beside him and strove to quiet the violence of my breathing. Then, after a minute's pause, together we pulled ourselves to the edge and peered over.

The descent of the gully was broken, some eight feet below us, by a small ledge, sloping outwards about six feet (as I guess), and screened by branches of the wild tamarisk. At the back, in an angle of the solid rock, was now set a pan pierced with holes, and full of burning charcoal; and over this a man in the rebels' uniform was stooping.

He had a small paper parcel in his left hand, and was blowing at the charcoal with all his might. Holding my breath, I heard him clearly, but could see nothing of his face, for his back was towards us, all sable against the glow. The charcoal fumes as they rose choked me so that I was very near a fit of coughing, when Billy laid one hand on my shoulder, and with the other pointed out to seaward.

Looking that way, I saw a small light shining on the sea, pretty close in. 'Twas a lantern hung out from the sloop, as I concluded on the instant; and now I began to have an inkling of what was toward.

But looking down again at the man with the charcoal pan, I saw a black head of hair lifted, and then a pair of red puffed cheeks, and a pimpled nose with a scar across the bridge of it—all shining in the glare of the pan.

"Powers of heaven!" I gasped; "'tis that bloody villain Luke Settle!"

And, springing to my feet, I took a jump over the edge and came sprawling on top of him. The scoundrel was stooping with his nose close to the pan, and had not time to turn before I lit with a thud on his shoulders, flattening him on the ledge and nearly sending his face on top of the live coals. 'Twas so sudden that, before he could so much as think, my fingers were about his windpipe and the both of us struggling flat on the brink of the precipice. For he had a bull's strength and heaved and kicked, so that I fully looked, next moment, to be flying over the edge into the sea; nor could I loose my grip to get out a pistol, but only held on and worked my fingers in, and thought how he had strangled the mastiff that night on the bowling green, and vowed to serve him the same if only strength held out.

But now, just as he had almost twisted his neck free, I heard a stone or two break away above us, and down came Billy Pottery flying atop of us, and pinned us to the ledge.

'Twas short work now. Within a minute, Capt. Luke Settle was turned on his back, his eyes fairly starting with Billy's clutch on his throat, his mouth wide open and gasping; till I slipped the nozzle of my pistol between his teeth; and with that he had no more chance, but gave in, and like a lamb submitted to have his arms trussed behind him with Billy's leathern belt and his legs with his own.

"Now," said I, standing over him, and putting the pistol against his temple, "you and I, Master Turncoat Settle, have some accounts that 'twould be well to square. So first tell me, what do you here, and where is Mistress Delia Killigrew?"

I think that till this moment the bully had no idea his assailants were more than a chance couple of Cornish troopers. But now, seeing the glow of the burning charcoal on my face, he ripped out a horrid blasphemous curse, and straightway fell to speaking calmly.

"Good sirs, the game is yours, with care. S'lid! but you hold a pretty hand—if only you know how to play it."

"'Tis you shall help me, captain; but let us be clear about the stakes. For you, 'tis life or death; for me, 'tis to regain Mistress Delia, failing which I shoot you here through the head and topple you into the sea. You are the knave of trumps, sir, and I play that card; as matters now stand, only the queen can save you."

"Right; but where be king and ace?"

"The king is the Cornish army yonder; the ace is my pistol here, which I hold."

"And that's a very pretty comprehension of the game, sir; I play the queen."

"Where is she?"

For answer, he pointed seaward, where the sloop's lantern lay like a floating star on the black waters.

"What!" cried I. "Mistress Delia in that sloop! And who is with her, pray?"

"Why, Black Dick, to begin with—and Reuben Gedges—and Jeremy Toy."

"All the knaves left in the pack—God help her!" I muttered, as I looked out towards the light, and my heart beat heavily. "God help her!" I said again, and, turning, spied a grin on the captain's face.

"Under Providence," answered he, "your unworthy servant may suffice. But what is my reward to be?"

"Your neck," said I, "if I can save it when you are led before the Cornish captains."

"That's fair enough; so listen. These few months the lady has been shut in Bristol Keep, whither, by the advice of our employer, we conveyed her back safe and sound. This same employer"——

"A dirty rogue, whom you may as well call by his name—Hannibal Tingcorib."

"Right, young sir; a very dirty rogue, and a niggardly; I hate a mean rascal. Well, fearing her second escape from that prison, and being hand in glove with the parliament men, he gets her on board a sloop bound for the Virginias, just at the time when he knows the Earl of Stamford is to march and crush the Cornishmen. For escort she has the three comrades of mine that I named; and the captain of the sloop (a fellow that asks no questions) has orders to cruise along the coast hereabouts till he gets news of the battle."

"Which you were just now about to give him," cried I, suddenly enlightened.

"Right again. 'Twas a pretty scheme; for—d'ye see!—if all went well with the Earl of Stamford, the king's law would be wiped out in Cornwall, and Master Tingcomb (with his claims and meritorious services) might snap his thumb thereat. So, in that case, Mistress Delia was to be brought ashore here and taken to him, to serve as he fancied. But if the day should go against us—as it has—she was to sail to the Virginias with the sloop, and there be sold as a slave. Or worse might happen; but I swear that is the worst was ever told me."

"God knows 'tis vile enough," said I, scarce able to refrain from blowing his brains out. "So you were to follow the earl's army, and work the signals? Which are they?" For a quick resolve had come into my head, and I was casting about to put it into execution.

"A green light if we won; if not, a red light, to warn the sloop away."

I picked up the packet that had dropped from his hand when first I sprang upon him. It was burst abroad, and a brown powder trickled from it about the ledge.

"This was the red light—to be sprinkled on the burning charcoal, I suppose?"

The fellow nodded. At the same moment Billy (who as yet had not spoke a word and, of course, understood nothing) thrust into my hand another packet that he had found stuck in a corner against the rock.

"Now tell me—in case the rebels won where was the landing to be made?"

"In the cove below here—where the road leads down."

"Ay, the road where the wagon stood."

Capt. Luke Settle blinked his eyes at this, but nodded after a moment.

"And how many would escort her?"

He caught my drift and laughed softly.

"Be damned, sir, but I begin to love you, for you play the game very proper and soundly. Reuben, Jeremy and Black Dick alone are in the plot, so why should more escort her? For the skipper and crew have their own business to look after."

"Then, Master Settle, though it be a sore trial to you, those three knaves you must give me, or I play my ace," and I pressed the ring of my pistol sharply against his ear as a reminder.

"With all my heart, young sir, you shall have them," says he, briskly.

"And this is 'honor among thieves,'" thought I; "you would sell your comrade as you sold your king;" but only said: "If you cry out, or speak one word to warn them"——

Before I could get my sentence out, Billy Pottery broke in with a voice like a trumpet:

"As folks go, Jack, I be a humorous man. But sittin' here an' ponderin' this way an' that, I says, in my deaf an' afflicted style, 'Why not shoot the ugly rogue, if mirth, indeed, be your object?' For to wait till an uglier comes to this untraveled spot is superfluity."

How to explain matters to Billy was more than I could tell, but in a moment he himself supplied the means. For the rocks here were of some kind of slate, very hard, but scaly; and finding two pieces, a large and a small, he handed them to me, bawling that I was to write therewith. So, giving him my pistol, I made shift to scribble a few words. Seeing his eyes twinkle as he read I stood up.

The charcoal by this time was a glowing mass of red and threw so clear a light on us that I feared the crew on board the sloop might see our forms and suspect their misadventure. But the lantern still hung steadily; so, signing to Billy to drag our prisoner behind a tamarisk bush, I opened the second packet and poured some of the powder into my hand.

It was composed of tiny crystals, yellow and flaky; and, holding it, for a moment I was possessed with a horrid fear that this might be the signal to warn the sloop away. I flung a look at the captain, who read my thoughts on the instant.

"Never fear, young sir; am no such hero as to sell my life for that tag-rag. Only make haste, for your deaf friend has a cursed ugly way of fumbling his pistol."

So, taking heart, I tore the packet wide, and shook out the powder on the coals.

Instantly there came a dense, choking vapor, and a vivid green flare that turned the rocks, the sky and our faces to a ghastly brilliance. For two minutes, at least, this unnatural light lasted. As soon as it died away and the fumes cleared, I looked seaward.

The lantern on the sloop was moving in answer to the signal. Three times it was lifted and lowered; and then in the stillness I heard voices calling, and soon after the regular splash of oars.

(TO BE CONTINUED.

SOME NEW LIFE IN THE WHOLESALE TRADE OF SAN FRANCISCO.

A new hardware concern has just been started under the name of Miller, Sloss & Scott, in San Francisco, to do a jobbing business only.

They have secured the four-story building, Nos. 12, 14 and 16 Pine street, formerly occupied by Messrs. J. C. Johnson & Co.

The building has been completely fitted up for their business, having three hydraulic elevators to facilitate the handling of goods, two of which have been just constructed.

The firm was incorporated May 19th, and is composed of Charles E. Miller, President; A. W. Milligan, 1st Vice-President; John A. Scott, 2d Vice-President; Joseph Sloss, Secretary and Treasurer. These officers, with A. L. Scott and Leon Sloss, constitute the Board of Directors.

Chas. E. Miller, the President, is a native Californian, and well-known among hardware dealers on the Pacific Coast. Starting as an office boy with Hooker & Co., he served them seven years, and in 1876 entered the service of Dunham, Carrigan & Co., in whose employ he continued for a term of fifteen years, leaving there last month to engage in the new enterprise headed with his name.

A. W. Milligan, the first Vice-President, has, until the incorporation of Miller, Sloss & Scott, been connected with the Dunham, Carrigan & Hayden Co.'s New York branch, in charge of their iron, steel and pipe department. He represents the new concern at 145 Broadway, N. Y., and attends to all its purchases and placing of orders in the Eastern States.

John A. Scott and A. Lowndes Scott have also been identified with the Dunham, Carrigan & Hayden Co., and with their opportunities have acquired a large acquaintance among the trade, both in the city and throughout the coast.

Joseph Sloss, the Secretary and Treasurer, will have control of the office and financial department, being specially fitted for this work through his experience of several years in the Anglo-Californian Bank, L'd.

Messrs. Joseph and Leon Sloss are sons of Mr. Louis Sloss, whose name is known in all business circles in the West, as prominent in many of the leading industries and the progress of that section of the country.

They have also secured the services of W. A. Rice, W. A. Leonard and Carlton F. Moulthrop, men thoroughly posted in the business, having occupied responsible and leading positions with the Dunham, Carrigan & Hayden Co.

It is proposed to carry a complete line of shelf and heavy hardware, tools, mill and mining supplies, engineers' and railroad supplies, iron, steel, pipe, sheet iron, fittings, globe valves and steam findings; in fact, everything that goes to make up a first-class assortment and stock in their line.

All the members of the firm are young, enterprising and energetic, and will try for a fair proportion of the hardware trade. With their stock of new goods in, aided by all the improvements in conducting the business that their experience has suggested to them, they are fully prepared to meet all the requirements of intending purchasers who would do well to give them a call.

If you wish to remove avarice, you must remove its mother—luxury.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

In marriage, if the right one you are led to,
There's nothing like it;
And, also, if the wrong one you are wed to,
There's nothing like it!

If success is the true test of merit, it is a settled fact that "*Brown's Bronchial Troches*" have no equal for the prompt relief of Coughs, Colds, and Throat troubles.

Who waits until the wind shall silent keep,
Who never finds the ready hour to sow,
Who watcheth clouds will have no time to reap.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

A New Englander who bet that he could eat "over a hundred eggs in one hour" won the wager by making a hearty meal of shad roe.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

"German Syrup"

Martinsville, N.J., Methodist Parsonage. "My acquaintance with your remedy, Boschee's German Syrup, was made about fourteen years ago, when I contracted a Cold which resulted in a Hoarseness and a Cough which disabled me from filling my pulpit for a number of Sabbaths. After trying a Physician, without obtaining relief—I cannot say now what remedy he prescribed—I saw the advertisement of your remedy and obtained a bottle. I received such quick and permanent help from it that whenever we have had Throat or Bronchial troubles since in our family, Boschee's German Syrup has been our favorite remedy and always with favorable results. I have never hesitated to report my experience of its use to others when I have found them troubled in like manner." REV. W. H. HAGGARTY, of the Newark, New Jersey, M.E. Conference, April 25, '90.

A Safe Remedy.

MONOTONY IN FARM LIFE.

The Farmers Themselves to Blame for it.

PLAIN TALK TO TILLERS OF THE SOIL.

Give the Women a Chance to Manage Things.

That "variety is the spice of life" is very generally admitted. Yet farmers, as a class, do not get as much of the spice of variety as they should. Their lives are often monotonous almost beyond endurance. It must be confessed, however, that farmers are themselves largely to blame for this monotony. The isolation of the farmer's home is one of the greatest obstacles in the way of social enjoyment he has to deal with. It is our duty to one another to cultivate social habits! to visit each other's homes, compare notes and make suggestions as to the best methods of farming, etc. Nor does our duty end at this neighborly intercourse. Our first obligations, like charity, begin at home. We should make the farm home just as attractive as our means will allow.

How many farm homes are utterly devoid of attractions! The house is unpainted and uninviting; the fences are dilapidated; the gates have sagged down to the ground; the entire surroundings are dreary in the extreme. In the yard grow noxious weeds, where roses and other ornamental plants should be seen. Scrubby bushes stand where a neat grass plat should be. Instead of an orchard of beautiful fruit trees we see here and there, at long intervals, a few broken limbed, neglected apple and peach trees and a dense thicket of plum bushes hard by.

The adjacent fields have been cultivated for years in the same crops, plowed by the same shallow running plows, and producing their steadily decreasing little crops of corn or cotton. No manure has ever been applied since the land was first cleared. The same round of drudgery has been gone through with year after year; the same cry of "hard times" has always been heard on this farm, and the same doleful expression has been seen on the farmers' face for years past. Indeed, this lugubrious expression seems to have settled down to stay, and stay it doubtless will until the grave shall close over his weary form.

The work stock receives but a scanty and monotonous ration of corn and fodder, while the milch cows have to subsist upon what they can glean from the bare forests and old fields.

Is it at all strange that boys should abandon this kind of sordid, wearisome life and flee to the city as soon as they become of age? It would indeed be strange if they remained there.

But think of the hardships the poor wife must endure upon such a cheerless farm as this! Oftentimes without even the common luxury of a vegetable garden, and, perchance, little or no poultry or milk to aid her in her culinary cares. Is it not enough to run a sensitive woman crazy? There are thousands of just such dreary, monotonous, cheerless farm homes in the west and south, and perhaps elsewhere.

Executive ability is not confined to men by any means. I know plenty of women who have more practical common sense in a minute than their incapable husbands will have in a lifetime. Such women should hold the tiller and guide the agricultural ship. Had they full control of things there would be far less monotony of farm life. They would supply both the spice of variety and the sugar of sweet contentment to the boys and girls of the household.—Country Gentleman.

The Man Who Held the Fort.

It was Gen. Corse's bravery which led to the origin of Sankey's famous hymn, "Hold the Fort." He was on Sherman's staff, was one of his fire-eaters in daring and won an affection from old Tecumseh that lasted till death. You, perhaps, have heard the story of his defence of Allatoona Pass; how with a mere handfull of men he held the place most stubbornly against tremendous odds; how he persisted, even after every commanding officer was wounded and he himself thrown senseless for an hour by a rifle bullet in the face; how the signal finally waved from Sherman to "hold the fort," and how the plucky Corse replied in language more emphatic than religious that he would do so, and how he lived up to his word. They could not put the soldier's language into the hymn, but they embodied his sentiments there. It is, by the way, somewhat of a coincidence that the signal officer who waved that historical message from Corse to Sherman passed away a few days before the great figure in the story.—Boston Letter.

Iceland's Hot Springs.

The hot springs in Reykjadal, though not the most magnificent, are perhaps the most curious among the numerous phenomena of this sort in Iceland. On entering the valley you see columns of vapor ascending from different parts of it. There are a number of apertures in a sort of platform of rock. The water is 212 Fahrenheit, and it rises two or three feet into the air. A river flows through the valley, in the midst of which a jet of boiling water issues with violence from a rock raised but a few feet above the ice cold water of the river.

Not far from this is the grotto or cave of Surt, which is so large that no one has penetrated to its inner end.—Murray's Magazine.

Digging Holes and Living High.

There's a man at the Auditorium who two days ago paid gold for an $8 a day room, and today is digging post holes on the lake front for the World's fair buildings. His appearance, if not eccentric, at least attracts a vast amount of attention around the caravansary on Michigan avenue. He is tall and spare, wears his hair and beard long, and his blue jeans tucked inside of his coarse rawhide boots. He is nothing if not independent, and walks around the rotunda as if he owned the block. He walked into the dining room on the first floor, and sat down for his breakfast, but a waiter was instructed to ask him to step into the cafe. With smiling face he complied, and ordered a pot of coffee, which was served only after he had deposited twenty-five cents with the cashier. In reply to the question if he thought dining at the Auditorium and digging post holes was good policy he said:

"Well, I have lived here before, and why can't I do so now?"

His story is somewhat disconnected, and he gives evidence of being mildly insane. He claims that his name is Will Graham, and that he owns a house and lot on the north side worth $2,000, and that he has just come from Colorado, where he has been for some time. Yesterday morning, after drinking his coffee, he took a five cent piece that he had been holding in his mouth and left it on the table. As he went out of the door he turned and said to the bartenders, waiters and cashiers: "Say, you fellers, there's a tip you can wrangle for among you. Good day."—Chicago Herald.

As Bayard Taylor Did.

The Schliemann method of acquiring a language is well worth mentioning. It consisted simply in reading a great deal aloud without making a translation, taking a lesson every day under the constant supervision of a teacher, learning this by heart and repeating in the next lesson what was corrected on the previous day. It was his habit to learn at least two languages a year. The Russian he studied without a teacher, because none were to be had, while he lived in Amsterdam, and he paid a Jew four francs a week to hear his compositions in Russian, although the fellow did not understand one word.

The doctor was housed on the third floor, but as the ceilings were made of wood his recitations were plainly to be heard on the first floor, and his fellow lodgers were so annoyed by the racket that they caused him to be turned out of the house. As is well known, he was obliged to give up his grocer's apprenticeship on account of having ruptured a blood vessel in lifting a hogshead. The perfect muscular development and fine health with which he was afterward favored he attributed to the exercise of his lungs by constantly reading aloud.—Indianapolis News.

An Intelligent Florida Mule.

Jupiter can boast of the most intelligent mule on record. His muleship is free, white (gray) and 21 years old. Every night this much admired animal proceeds to the life saving station. It is customary for the man on watch to discharge his coston signal (a red light) when vessels come too near the beach. Now his muleship has "caught on" to what this signal means. So every night at 8 o'clock the sailor's four legged friend proceeds to walk the beach, and if a vessel comes too near the shore his muleship assumes the attitude of a stubborn bull, when trying to be led by the horns, but, instead of a coston signal, he sends forth a neigh that makes night hideous. "Port or starboard your helm" is the order on the ship, and away sail the jolly tars in perfect safety, and with a grateful heart to the four legged patrolman.—Florida Times-Union.

A Good Horse Story.

During the Belgian maneuvers a regiment of lancers was to attack a village and drive two companies of hussars away from it, then pursue them to the next town. A number of high military officers witnessed these maneuvers, among them an Austrian colonel. As one of the hussars passed him the galloping horse suddenly halted and squared up to the colonel's horse, nor could the rider stir him a foot. Quickly deciding, the hussar addressed the colonel: "Comrade, help me fly! My horse won't stir without yours." The colonel laughed, and put his horse on a run with him, and thus both riders reached the town before the pursuing lancers could capture them. All in maneuver.—Exchange.

Sawdust Bricks.

The Technical Royal School at Charlottenburg has been making a series of experiments with sawdust, and has now proved that it can be used as building material. The sawdust is mixed with certain refuse mineral products, and compressed with a pressure of 1,500,000 kilogrammes to the quadrameter in the form of bricks, and after this treatment the sawdust forms excellent building material, very light, impervious to wet and utterly uninflammable. A slab of this substance was placed for five hours in a coal fire, and came out of the test intact.—New York Telegram.

He Found It.

There is a story about almost every inland lake that it has no bottom. John Farmer, a New York man, has spent three months sounding the lakes of that state, and in no case has he found a spot in any lake deeper than ninety-one feet. That's water enough, however, to drown all the surplus cats and dogs.—Detroit Free Press.

A TELLING CONTRAST.

In Their Old Sphere Women are Well Paid.

THE ONES WHO SUFFER MOST.

Working in Factories.—Domestics can Save Money.

The working woman's sphere used to be confined chiefly to household work. And it is a notable fact that in those days the newspapers contained no stories about women dying of starvation and overwork in tenement houses. If anybody died from these causes it was a man.

Descriptions of the agonies of starving workingwomen and their families are now a feature of the penny papers. Only a few days ago a woman in Jersey City who had worked in a big tobacco factory and was thrown out of employment by her advanced years and inability to handle the tobacco leaf as deftly as the younger generation locked herself up in her room to wait till the pangs of hunger snapped the life cord. She almost succeeded.

Such an occurrence twenty years ago would have been commented upon by the newspapers and statesmen all over the country, and the philosophers would have philosophized to the extent of a book on the subject; but so common have such events become in these days since "the extension of women's sphere" that they attract little or no attention. Perhaps some newspaper may, for the purpose of advertising itself, get up a subscription fund to buy a few necessaries for the support, but the average citizen reads the little story without emotion. It disturbs him no more than a view of the dirty streets or a struggle to get a seat in an elevated train.

And right here it may be asked, in view of the present condition of workingmen, "Has any one ever heard of a woman, sticking to the old limited sphere of working women—domestic service—suffering for lack of the necessaries of life?" The newspapers record no such instances. One would be such a novelty that the ambition of the museum men to secure unheard of curiosities would be aroused.

The fact is that the only women dependent on their daily work for subsistence who are comfortably situated, with a few exceptions, are the domestic servants. All the thrifty ones have their bank accounts, and they don't know what it is to want for food or clothes. Moreover, their labor is comparatively light, and they have real homes.

So thoroughly is this fact recognized that the societies devoted to improving the conditions of working women and helping them in their difficulties with employers exclude servants from their range of work.

Mrs. M. J. Creagh, superintendent of the Working Women's Protective union, gives the reason, as follows:

"The working women in stores, factories and offices need all the assistance the union can give, for they are the sufferers. Women who work as domestics may sometimes have reasonable grounds for complaint, but their condition is so far above that of the other working women that they can always get along comfortably. They can get places whenever they want them, receive good wages, don't know what hunger is, and are well acquainted with the looks of a bank book. They don't need help.

"It is this poor saleswoman, the overworked factory girl and the sewing woman that has to be helped to live.

"Considering the board matter, they do not get one-half or one-third as much as the servants and have to work longer. Besides, they are often cheated out of their scant earnings. If they are sick for a time they lose their little pay, and perhaps their places are filled before they recover. The servant girl, on the other hand, gets her wages right along, and if she is in a good family she receives such medical and other attention as the store girl cannot receive. She is, in fact, settled, while her sisters in the world of business depend on their week's salary for food and lodging the following week, and a few days' sickness means to them starvation and inadequate attendance or a journey to a charity hospital.

"Therefore this society gives all its attention to women outside of domestic service. As women go further and further into the business world we have more to do than ever. Every day we have brought to our notice cases where rich employers try to beat women out of sums varying from twenty-five cents to $50.

"The records here show, better than anything I know of, the slavery into which women have been brought of late years. Employers know that women have not the money to pay lawyers to sue for them, so they take advantage of their helplessness whenever they can. It is remarkable, however, that they settle up with great rapidity when the women come here to complain. Our counsel conducts worthy cases free of charge and has got verdicts in the civil courts for more than $50,000 since the union began its work."

When Mrs. Creagh was asked why the wages of girls in factories, stores and offices were so small, she answered in almost the same way as Miss Van Etten did.

Women, she said, took the places of men in many occupations without organizing themselves to obtain fair compensation. They took anything they could get. They expected to get married some time, and their work was a temporary expedient, at first, to obtain pin money. Now many of them find that they have really to support themselves, and their meager wages won't do it. Still they bear their hardships, waiting ever for the gay cavalier who is to come along and relieve them. With some work is a necessity, with others it is not. But few of them seem to consider that men have suffered in consequence of the lower standard of wages.—New York Commercial Advertiser.

Not a Wreck.

It is not often that a ship abandoned as a wreck reaches port in safety. But such was the case with the ship Nathaniel Hooper, of Boston, which struck on the south shoal, off Nantucket, July 8, 1838. To lighten the ship Capt. Bogardus threw overboard several hundred boxes of sugar; but she remained fast, and as she was pounding heavily he abandoned her, fearing she might go to pieces.

All hands put off in boats for the nearest shore, and as soon as he was on land Capt. Bogardus hurried to Boston. It was two days before he reached the office with his bad news.

"Why, captain," said the owners, "you are dreaming. The Hooper is safe at India dock."

"Impossible!" cried the captain.

"Go and see," said the owners.

Down to the dock went Capt. Bogardus, and scarcely could believe the evidence of his senses. He rubbed his eyes and took a second look. Yes, there certainly was his ship that he had left aground on South Shoal with a storm coming up.

Immediately after the crew had left the vessel the wind changed and blew her off the shoal. She drifted until the next morning, when a Gloucester fishing smack fell in with her, and with the hope of salvage the crew boarded her and made for the port of Boston.

Capt. Bogardus was too good a seaman to lose, and after some pretty severe bantering the owners again gave him command of the Hooper.—Youth's Companion.

Foolish Saving.

Men go into trade and do dirty tricks, and screw, wherever they can, a profit. They will, with equal self-gratification, dine at another man's expense, and turn off, to face the workhouse, "a hand" who is growing useless from having consumed his strength and vigor in their service. The women darn dishcloths, and patch muslins and window curtains, lock up eggs and skim the cream off the milk themselves from a similar motive.

Their husbands "make" money, they "save it" and both succeed. Gradually the hoards increase; at first slowly and with pain the nucleus is formed. For years the nest egg is small, but a moment comes after which it accumulates with rapidity. The income has become considerable, but the outgoings are as meager as ever—overplus income becomes capital every year. The close habits which created the fortune are continued to preserve it, and the incongruity is presented of external display and internal pinching. Children are born in the meantime, and inherit their father's or mother's niggardliness as surely as their features.—New York Ledger.

Guests at Sorosis' Annual Dinner.

All the professions were well represented by the men who were guests at the recent Sorosis dinner, but the clergymen predominated. Two of the best addresses of the evening were made by Rev. Drs. Cuyler and Paxton. Among the other speakers were Judge Noah Davis, Dr. Titus Munson Coan, Mr. Moncure Conway, Mr. A. M. Palmer, Mr. Murat Halstead, Mr. McKelway, of The Brooklyn Eagle, and Mr. E. A. Dithmar, of The New York Times. Miss Kathryn Kidder recited charmingly, and there were addresses by the president of Sorosis, Mrs. Ella Dietz Clymer, and by the heads of the various committees of Sorosis. Conspicuous among these for its excellence was the address of Dr. Jennie T. Lozier, chairman of the committee on philanthropy.—New York Letter.

"A Nine Days' Wonder."

The memorable reign of Lady Jane Grey is said to have given rise to the phrase, "A nine days' wonder." Lady Jane was proclaimed queen of England July 10, 1553, four days after the death of Edward VI. After the lapse of a period of nine days, on July 19, she relinquished her title to the crown, thus terminating her reign in the short space of a week and a half. A noted English historian says, "Thus we come to the end of the diary of that short and troubled reign that from its length is said to have given rise to the now (1620) popular phrase, 'A nine days' wonder.'"—St. Louis Republic.

Are You in Correct Form?

The present fashionable walk affected by New York girls is decidedly tiresome, and it is very amusing to watch some well built tailor made girl, when she takes to one of the side streets, allow her arms to swing and her body relax, and apparently take some comfort in moving. The regulation gait requires the body to be carried perfectly erect and stiff, the arms held at the side, with elbows turned out and the hand slightly open. The arms must be held perfectly steady if one desires to be thought in correct form.—New York World.

Little Lamp Tables.

Tables are now bought on purpose for the large lamps, which are so much used. White enamel tables, about knee high, are used for the delicate colored porcelain lamps, and ebony tables are used for the various kinds of iron lamps. Some of these tables have a space underneath for a piece of bric-a-brac.—New York World.

Permission by Postscript.

"Ma, can I go over to Sallie's house and play a little while?" asked four year old Nellie.

"Yes, dear; I don't mind if you do.'

"Thank you, ma," was the demure reply; "I have been."—New Haven Register.

JUST A LIVELY BOY.

A 10-Year-Old's Execution of an Errand.

A REPORTER'S NOTES OF HIS PRANKS.

Fun With an Empty Can.—Fooling a Conductor.

There was nothing peculiar about the boy's appearance. He seemed just an ordinary 10-year-old boy in knickerbockers, shoes, stockings, jacket and polo cap, the latter worn on the back of his head as most other boys wear theirs. He was starting out of a house on Lexington avenue with a gallon tin can, a new, smooth, bright vessel, very strongly made, and carried by means of a handle of wire at the top. In turning the corner of Fiftieth street the boy suddenly came upon a large black dog asleep in front of the grocery. Just before he reached the dog he let go his hold on the can and launched it squarely beside the sleeping animal. It struck the flagging, rattled off its cover, bounded in the air, and sent the dog out of his sleep with a leap and a yell of terror. The dog ran away, and the boy gathered up the can and its cover, fastened the two together, and went on. There are iron palings in front of the houses on Fiftieth street, and the boy found much sport in holding the can firmly against them as he walked along. This made a prodigious noise, and caused the can to bob incessantly from paling to paling, denting it at every bounce.

The boy was tempted to desist from this exercise by the sight of a frowsy woman pitching along the street with uncertain steps, and with half a yard of her rusty black dress dragging on the pavement. The boy went up to her with a modest and kindly air and asked her if she would not like some beer. She replied affirmatively with brightening eyes.

"Follow me," said the boy.

He led her to a gate in a high brown painted fence, opened it, waited until the woman was in the gateway, and then gently shoved her in, slammed the gate, and hung on the top of the fence with his head just over the edge, shouting to her that there was a savage dog in there, and that she had better look out.

He dropped to the sidewalk an instant later, tired of this conceit, and seeing a Third avenue car bowling along, waited until it had passed the corner, and then yelled and whistled for it to stop. It stopped and he ran after it. When close to it he shouted: "All right; let her go," The car moved, and he flung his gallon can on the platform. At the same moment he boarded the car. He had thrown the can in such a way that it went on at one side and off at the other into the street. The conductor pulled the bell to stop the car. "Never mind; I'll get it," said the boy, as he plunged off the car after the can. The car stopped, and the boy got his can. He picked it up, and then continued walking hastily away from the car precisely as if he had never dreamed of wanting to ride on it.

At the moment that he reached the sidewalk he encountered a young playmate, who asked him what he was doing with the can.

"Got it to play shin loo with. Don't you know how to play it? It's the boss game out."

Without apparently taking time to think what he was about to say, he explained to the boy, who was two years younger than himself, all about the game, which he would have been obliged to admit he had never heard of before, but which he now said consisted in pitching pennies at the can, the rule being that all the coppers the little boy put in the can were "counters," and all that he failed to get in were "losers." The little boy had three cents, and threw them at the can, which the bigger boy had set up as a mark. All the little boy's coppers rolled away from the can, and the big boy picked up them and the can. After spending a moment over an expression of sympathy for his friend, and promising to give him "another chance tomorrow," he strode off, whistling light heartedly.

A little further down the street he noted the fact that a candy store was in charge of a little girl. He opened the store door and went in. "Hello, little girl!" said he, assuming a wicked appearance, "I am going to leave this thing behind the counter, and as soon as I have gone away it will burst up and blow the whole store over to Hoboken, and you'll be killed and your mother will be pulver"——

At this instant the stout German woman who kept the store opened the lace curtained inner doorway to the household apartment in the back and entered the store. The boy ceased teasing the child. His face looked blank and innocent, though the little girl's countenance expressed considerable alarm.

"Penny's worth er chewing gum," said the boy, "'n' I'm in a hurry."

He got the chewing gum and started to return. In his haste he opened the door so rapidly with one hand as to knock the gallon can out of his other hand. It banged on the floor, its lid rolled off, and there was noise beyond all estimate. The little girl had been expecting an explosion and screamed with fright. "Dropped my can," said the boy, and at once squatted on the floor, spread his legs as wide as possible, and described an arc with one and a circle with the other as he lunged first for the can and then for its lid. A bale of little red wooden wagons was disengaged from the nail it hung on and fell with a crash that brought the German woman around the corner of the counter just as the boy had gathered himself and his belongings and was darting out of the door.

In his flight he made a pretended dash at a pile of apples on an Italian fruiterer's stand, but neither touched the fruit nor stopped his flight. He did not take the trouble to look around in order to note the consequence of what he had done. He lost something by that, for the Italian in charge of the stand had almost leaped out of his coat in his haste to defend his goods. The boy ran until he came to the stairs of an elevated railroad station. These he mounted with only three falls, by reason of one of which he was obliged to chase his gallon can down to the foot, where it had gone with a series of bumps and bounces that aroused all the pleasure the boy's eyes had power to express.

He made believe to forget to put his ticket in the box, and when the gateman asked him for it he pretended to indulge in a weariesome search through all his pockets. The man discovered the ticket in the boy's mouth, took it away, and offered to cuff the lad's ears, but was not half quick enough.

In the elevated car he had rare fun. He put the now battered and dirty can bottom up between his knees, and to a tune whistled between his teeth in that grating, discordant way that only such a boy can manage, he drummed with his knuckles.

Thus the boy rode on his errand. Unfortunately, the reporter who observed him left him at the termination of the elevated ride, so that what he did on the return journey can only be guessed at. But he was evidently an every day New York boy, with only the ordinary excess of animal spirits.—New York Sun.

Only Partially Educated as Yet.

Mrs. Kidsma—John, Mary left a vase on the table today where Willie could reach it, and the little man went over, put his hands behind his back and said: "Willie mus' n' touch, Willie mus' n' touch!"

John—And he let it alone, eh?

Mrs. Kidsma—N-o; he said that three or four times, and then he grabbed the vase and dashed it against the mantel before I could stop him. But he's learning to let things alone a little; don't you think so?—Smith, Gray & Co.'s Monthly.

Ingenuity.

Tramp—Th' darned thing's chained, but it's got to be a ter'ble cold day when I can't git warm fer half an hour'r so!—Smith, Gray & Co.'s Illustrated Monthly.

Thought He Was Going to Sleep.

Congressman H—— is a very absent minded man by nature, and the influence of years has increased the propensity. It is told on last Sabbath morning at 9:30 Mrs. H—— said to him pleasantly: "Come, now, William, it is growing late; you must go in and change your clothes and get ready for church. And hurry, William, for you know how slow you are."

Congressman H—— passed into his bedroom.

Mrs. H—— waited, and waited, and waited. At 10:28 she tapped at his door.

"Come in," said the congressman.

Mrs. H—— entered. She saw the distinguished gentleman in bed with the clothes drawn up to his chin, gazing at the ceiling with the expression of a man wondering how two and two can possibly make four.

"Well, William," she exclaimed, "I do declare! If this doesn't beat all! We can never get to church now in time!"

"To church?" repeated the great statesman—"to church? I beg your pardon. I thought I was going to sleep."—Washington Critic.

The Sleeping Car Wreck.

Manager Bennett has three bright youngsters, ranging from 3 to 7. The other morning he was awakened by a heavy crash in the children's room, followed by a prolonged howl. He rushed in. The smallest kid was raising the roof, while the eldest stood, half frightened, contemplating a heavy bureau which was tipped over on the floor.

"Papa," he shouted, "Frankie's in the upper berf. Frankie's in the upper berf."

With considerable difficulty Mr. Bennett raised the wreck and skidded it on to the track. Then he opened the upper drawer, and young Frank popped his head out and surveyed the group.

"We was playing sleepin' car, pop," he exclaimed. "I got in all right, and Fwed tried to climb in the lower berf when the old car tipped over. But we didn't brweak nuffin, wid me, pop!"

"Nothing more valuable than your necks, you young train robbers," was the fond parent's comforting reply.—Washington Post.

New Industry.

Small Boy—I see you advertised for a boy, sir. Will I do?

Grocer—Well, we want a very spry, active young chap. You look about right.

Small Boy—What will I have to do?

Grocer—Well, you see, we are introducing a new fly paper, warranted to kill all the flies in a room in short order. Your work will be to catch flies and stick 'em on samples of the paper in the window.—New York Voice.

To What Base Uses May We Come!

"This is my grandfather's sword."

"Are those stains upon the blade blood stains?"

"Yes."

And the look of awe that came over the young woman's face showed that she was not aware that the revolutionary relic had been used the day before to behead an 8-year-old spring chicken.—Harper's Bazar.

His Own Fault.

Customer—You recommended a young lady with $10,000 to me, and I was just going to marry her.

Matrimonial Agent—Well, why didn't you?

"But I have discovered that she is paralyzed."

"Well, if you want a wife to climb mountains or run foot races, you should say so beforehand."—Texas Siftings.

He Didn't Know It All, After All.

Yellowly—Whitely is a very intelligent fellow, isn't he?

Brownly—He pretends to be.

"He knows lots."

"There's one thing he doesn't know."

"What is that?"

"He doesn't know that he doesn't know everything."—Boston Courier.

He Objects to It.

"I see the price of meats has gone up," said a traveling man to his wife.

"Has it?"

"Yes; and as a man with judicious sporting instincts, I object to it."

"To what?"

"Playing for such high steaks."—Merchant Traveler.

Extremely Polite.

He was a man noted for his Chesterfieldian address, and had been very ill.

"You were at death's door," remarked the doctor, as his patient began to mend.

"Really, doctor!" replied the man of the world. "Do—do you know whether I—ah—left my card?"—Harper's Bazar.

Felt Like Her Father's Boot.

Bixby (delirious after having been struck by the locomotive)—Now, look here, Mr. Bjones. This makes the second time you have used forcible means. If you don't want me to court your daughter say so, but don't kick me out.—Lawrence American.

Said with Feeling.

"Do great calamities move in cycles?" asked Brown.

"They frequently do in bicycles," said Smithers, who had recently left three layers of his nasal cuticle on a macadamized road.—Munsey's Weekly.

Tit for Tat.

Disgruntled Boarder (to landlady)—If I were in your place, Mrs. Tuffern, I'd discharge that cook.

Landlady (with spirit)—If I were in your place, Mr. Owen, I'd discharge that board bill.—Time.

A Dead Cat Mine.

It was the man on whose land natural gas was first struck in the Findlay, O., district, and he was telling some of us about it as we waited in the depot at Columbus.

"Wall, you know," he began, "my son Bill was a great hand to read. One day he laid away a book he had been reading and says to me:

"'Dad, I've been reading up on minerals and I'm goin' to find suthin' right here on our farm.'

"'Shoo, Bill,' says I, 'but you won't strike nothing outside of cobble stones and worms.'

"But he went at it and begun to dig and bore and fool around and leave me to hoe the corn, and one day he struck sunthin'. There cum sich an infernal smell that both of us was drove to the house, and then the smell got so bad that we was drove to a neighbor's, and we had to let the hogs out of the pen, or they would have keeled over.

"'Bill,' I says, when I got where I could breathe again, 'you said you'd strike sunthin', and you have. You've wasted three months' time gettin' down to whar Christopher Columbus buried about a thousand tom cats, and we've all been driv off the farm in consekence. It's my turn now to strike sunthin', and you kin git ready for the all-firedest lickin' a boy ever got.'

"I give it to him, gentlemen, and then I went spookin' around to find somebody who'd buy the farm at about the cost of the barn. A feller who seemed to hev catarrh and didn't mind the smell closed up a deal with me, and I had to grin as I walked off with his money under my arm. I kept on grinnin' fur about a week, but then I heard some news that stopped me, and I guess it's three years since I've opened my mouth sideways. Them dead cats was worth a hundred thousand dollars to me, and I sold 'em for $800 and walked around patting myself on the back fur bein' so all-fired cute."—New York Sun.

Miss Braddon as "My Lady."

Among the new knights are the brothers of two novelists, Miss Braddon and Miss Olive Schreiner. It has often occurred to me that it would be well to found an order for women which would give those possessing it the right to prefix "Lady" to their names. "Let me make the people's songs and I will govern them with ease," said somebody. And if any minister had the power to create "Ladies" my impression is that he would remain minister for a very considerable time. What peace would Jones, M. P., have if Mrs. Jones knew that it only depended on his submissiveness for her to blossom forth into Lady Jones?

Putting, however, aside this political advantage, why should distinguished men be made knights and distinguished women not be made ladies? If we are to have knights with ribbons round their necks and across their breasts, it would be only fair if these ornaments were also conferred on their wives. I am entirely against woman suffrage, but I see no objection to women sharing in all this sort of decorative adornment; and assuredly, if they merit a title, it is absurd that the only way for them to obtain it is to give one to their husbands. Mr. Braddon, I make no doubt, is deserving of the prefix of "Sir." But his sister, Miss Braddon, has at least an equal right to the prefix of "Lady."—Exchange.

A Successful Unknown Book.

I was talking with a subscription publisher, and in the course of our conversation he reached in his library and pulled out a book the title of which I never heard. It was called "God, Home and Heaven," a book as pretentious in size as in title. "What is there peculiar about the book? Well, I will tell you. Of that work there have been sold over one million copies," said the publisher, "and yet I'll wager that there are salesmen in the biggest New York stores who never heard of the book, and will tell you there is no such work printed."

This struck me as rather odd and I determined to make the test. I went into six of the largest book stores in New York that day and asked for a copy of "God, Home and Heaven." It proved exactly as my friend predicted. I encountered only one man who ever heard of the book, and he said he had no idea where I could get a copy. "Doubtless out of print for years," he added. And yet within two blocks of that man's store there was at that time printing an edition of 50,000 copies of the book on the presses!—Edwin W. Bok's Letter.

Eccentricities of Ministers.

Dr. Fisher, of Salem, had a singular way of satisfying his conscience. He was asked how he could read the Athanasian creed when he did not believe it. He replied, "I read it as if I did not believe it." Mr. Pyle, being directed by his bishop to read it, did so, saying, "I am directed to read this, which is said to have been the creed of St. Athanasius, but God forbid that it should be yours or mine!" John Patriot Wilson, when speaking of Nicodemus as referred to in the third chapter of John, would uniformly say, "There was a gentleman of the Pharisees called Nicodemus," and when commenting on the parable of the ten virgins he used to call them the "ten young ladies."—St. Louis Globe-Democrat.

Barnes' Chivalry.

George—I'm surprised that Barnes struck Homer on the nose after he was down.

Henry—Oh, Barnes is chivalrous. He always prefers to do a thing to a man's face rather than to his back.—Kate Field's Washington.

Capital and labor could get on well enough together if there were not so many men trying to get capital without labor.—Texas Siftings.

The man who lets his wife split all the wood may mean well, but he should not be allowed to do all the talking at prayer-meeting.—Ram's Horn.

If reports from London are reliable, there will be no lack of royalty visiting the world's fair. Several members of Victoria's family contemplate coming, and it is more than probable that Emperor William will join the caravan.

Balmaceda seems to have made up his mind to declare war against Bolivia because that country has recognized the Chilean insurgents as belligerents. The pluck of the Dictator is up to standard but few people would care to go "long" on his judgment.

The vaporings of prize-fighters occupy an excessively large space in the daily telegrams. These amiable gentlemen have an uncommonly fine knack of passing through the several stages of drunkenness into a fine climax of brutality. The laws should be asserted. Where found insufficient they ought to be amended and inflexibly enforced. Between the Sullivans, Slavins, Charley Mitchells and Pony Moores the American people have had a great surfeit. The chain gang should be recruited from these burly ruffians, who are able bodied and could be made to do a great service to the State.

The death of Judge Ogden Hoffman removes from the scene of active life a man who took a conspicuous part in the growth and development of California. In his capacity as a federal judge he was called upon to decide questions involving immense interests. Again and again the opportunity was presented of enriching himself at the expense of his conscience, but he never wavered in his firm conviction of what was right and just. In all the forty years that he occupied the bench not the slightest stain besmirched the purity of his motives. The breath of suspicion never was directed against him. It is such records that sustain our faith in mankind. They are legacies to which the world is heir. The accumulation of material wealth, though it be millions, can never accomplish for humanity the lasting good effected by even one upright life.

The statement is made again with much confidence that a treaty of alliance between France and Russia has been signed. Whether such a treaty has actually been signed or not the Triple Alliance makes an understanding of this nature almost inevitable. Germany, Austria and Italy, with the financial backing of England, would form more than a match for either France or Russia singly. Consequently it is not probable that either will look on while the other is being crushed. Some doubt has been expressed as to the relative strength Austria and Italy can give to Germany. It is said that Austria has not much money, and that Italy has not any. But Austria has an army, Italy a navy, and either nation resources in the way of men. England can without exhausting her credit keep the Austrian and Italian forces in the field for the year or two the war will last. There will be no more seven years' wars in Europe. It is more likely that one party or the other will dictate the terms of peace within seven months after the first gun is fired. The question may be raised if England will add a thousand millions to her debt to maintain the Triple Alliance in its war against Russia and France. The present indications are that she will. If Austria and Italy should be crippled through lack of means, Germany could not long resist an attack upon her western and eastern borders. England knows what supremacy in Europe means. With nothing to apprehend from a European power, Russia could push her way down to British India at her leisure. In this contest Russia would have an immense advantage. The Czar could easily march a million of men into India, while England can only send a limited number by water. It takes a good many transport ships to land even 100,000 men in a distant country, but England would need at least 500,000 to meet Russia on anything like even terms in India. The conclusion is reasonable therefore that if fighting commences, England will supply the sinews of war rather than incur the consequence of an overthrow of Germany, which would probably happen if left to fight the battle alone.

W'EN MELINDY TOL' ME YES.

Jest two weeks from my big fall out with my
first sweetheart, Lucindy,
Did Melindy, my Melindy, tell me "Yes;"
An' the atmosphere wuz windy, 'way from
Pokumville to Indy,
Windy with the breezy music of eternal
blessedness.
An' she said it fair an' squarely, an' not "Call
again" or "May be,"
An' a New Jerusalem glory lit the fiel' an'
wilderness.
An' the sun burst out like laughter on the
round face of a baby,
W'en Melindy, my Melindy, tol' me "Yes!"

Like a twenty million orchestra away beyond
all countin',
The bob'links bubbled over in a music water-
fall,
An' I felt jest like a-mountin' on the meetin
house an' shoutin'
That Paradise was open, with admission free
to all.
Each grass blade in the medder wuz a string
to Natur's fiddle,
That was played on by the zephyrs with a vel-
vety caress;
An' ol' Natur's jints were limbered, an' she
sashayed down the middle,
W'en Melindy, my Melindy, tol' me "Yes!"

An' the angels played so bully thet the music
reached the gateway
An' came spillin' through the op'nin, and
a-singin' down to earth—
Came a-singin' such a great way thet the uni-
verse wuz straightway
Shoutin' in the glad redem'tion of a holy
secon' birth;
An' I—I set a-straddle on the ridge pole of cre-
ation,
An' only fit to holler in my hootin' happi-
ness,
W'en Melindy, my Melindy, filled my heart
'ith jubilation,
W'en Melindy, my Melindy, tol' me Yes!"

—Yankee Blade.

UNDER A CLOUD.

I am Agnes Grey; or at least that was my name when one bright summer day, the sky as blue as though there never could be another cloud in it, I came home across the fields from Nellie Hobart's wedding. Very sweet she looked in her bridal dress, and very fond the gentleman to whom she had given her hand seemed to be of her. The church was decked with flowers, and not one of those who sat there but wished the pretty young creature well; and as she stepped out from the shadow of the painted windows into the clear, golden, out of door light I thought of the old rhyme—

Happy is the bride
Whom the sun shines on.

And thought that she looked like one of those fair saints the old masters were so fond of painting, blue eyed and blond, and with mouths like those of smiling babies.

I thought of something else, also, as I suppose every girl who had been to that wedding did, could one but know the truth. I wondered whether it would ever be my turn to stand where Nellie stood that day, and what manner of man my bridegroom would be; for I had never yet seen any one I could fancy giving myself to, almost body and soul, as a wife must. I was making a picture of him for myself, like a goose, when my foot caught in the grass, where some boys had tied it, and down I fell, twisting my ankle and hurting my head, so that for awhile I knew nothing.

At last I felt some one lift me off the ground, and opened my eyes to see that it was a great, swarthy, black eyed girl of seventeen or so—a girl with a careless look about her dress which was not ladylike. But she had the voice and manner of a lady, and she asked me very kindly if I were much hurt; and, seeing that I was, picked me up in her strong arms and carried me through a garden gate and into a little parlor, where she laid me on a sofa and bathed my head with rose water and told me to keep up my courage, for "Gideon has gone for a doctor."

That name told me where I was. I was under a roof that I had never thought would shelter me, no matter what would come to pass. I would have risen and gone away if I could have stirred from the odd old sofa. For this was Gideon Lee's old homestead, and here dwelt the children of the man who, sixteen years before, had been hung for the murder of my Uncle Mathew.

I was but a baby when it all happened, but I could remember how the whole village was astir in search of the missing man, and how a body was found at last in the heart of Alcott's woods, and how the facts that there had been a quarrel between Gideon Lee and Uncle Mathew, and that Gideon Lee owed the latter money, and how they were last seen together quarreling in Gideon's garden, where a bloody handkerchief, marked "M. G.," was found soon after, and brought Gideon to the gallows.

Perhaps hearing the story afterward from my grandfather made me fancy I remembered it, but at all events the name I had learned to hate was that of Gideon Lee. And now it was the child born on the day of her mother's death—the very day on which the father met his awful fate—who lifted me from the ground, dusky Madge Lee, who had never found a playmate nor a friend in the town because of the ban upon her father's name, and Gideon, the son, who had been old enough to understand it all at the time, who came in with old Dr. Humphries soon after.

They were not poor people. The house was a substantial one, and there were more books and pictures and tokens of refinement within than country homes generally boast of. But even the farm hands spoke contemptuously of the "son of the man who was hung," and the servants who were hired by Madge Lee were not natives of the place.

And here was I, Mathew Grey's own niece, lying under the roof, and likely to be there for some time, for the doctor forbade my removal.

"I must go home—I must go away from this house!" I said, angrily and feverishly.

And Madge Lee looking down on me as an Indian princess might, with her dark eyes aglow, said, in a bitter voice, "Never fear, Miss Grey, we'll not murder you!" and somehow abashed me, haughty as I was.

Grandpa was away from home, or I think even the risk of my life would not have kept him from taking me home; and I grew ill and delirious, and Madge Lee nursed me as a sister might, and Gideon was kinder than a brother. He read to me; he brought me cooling drinks made of fruits after some Oriental recipes which he possessed; he found sweet flowers dripping with dew in the woods, and he sang, as I never heard any one sing before, those Scottish ballads that are lovelier than any other music ever written, to my mind; and it ended in my loving them.

So when I was well enough to go away I took Madge's hand in mine and said, "How shall I ever thank you for your tender care of me?"

And she answered, "Agnes Grey, the [illegible] I ask is [illegible] people down there" (and she pointed with her brown hand toward the town) "call us the children of a murderer. We are the children of a martyr instead. I never saw my father, but we both know that he is innocent. And Gideon remembers his kindness, his tenderness, his gentleness and his honor.

"Your uncle Mathew—forgive me, but it is the truth—was a wild, bad fellow. He quarreled with my father, not father with him, and the debt was paid. Mother saw it done, and heard him boast that the money should take him beyond the reach of irksome laws and chattering tongues. And for the bloody handkerchief, he had cut his hand, and unbound and washed it, and tied it up afresh in mother's very sight that day. Don't dare to doubt it, don't be so cruel as to doubt it, Agnes Grey."

Then she brought me the picture that they kept as a sacred relic, and verses written by his hand and tender love letters yellow with age, and as I looked at the face—so sweet, so good, so like that of the Gideon Lee I knew—I felt sure that those who stood before me, though they were the children of the man who was hung, were not the offspring of a murderer. And afterward Gideon also spoke.

"It is hard to bear," he said; "hard to know that we must bear it all our lives; but if you only see the truth—if only, without proof, you will understand that we know no murder was ever done by our dear father's hand—we, who have his pictured face upon the wall, the letters written to our mother, the words our mother wrote begging us to read them often when she was dead, and never doubt the man who on his knees in the condemned cell, calling on God to witness his last words, had sworn to the wife who would have loved him even had he in some hasty moment dealt a fatal blow, that he knew nothing of Mathew Grey's death and even doubted that he was dead at all—if you can believe with us and not with those who were his murderers, I, at least, shall have a lighter heart."

And I put my hand into his, and gave the other to Madge, and said honestly, "I do believe as you do, and I always will."

And so I went away; but I took their faces with me, their pleasant ways, their voices. As for Gideon's face, it haunted me. There was about him a charm that no one else ever had. They were all quaint, all charming in their way, but he most of all.

A pretty scandal there was through the town when I began to go down to the farmhouse to see my friends. I knew it, and fought it bravely.

"Gideon Lee never killed any one," I vowed aloud to those who chided me, "I will not ban his children for the fault of others."

But there in the town were those who had been at the trial, and eleven of the jurymen and witnesses; and under a stone in the graveyard were the bones that had been sworn to as Uncle Mathew's, and in a bleak, lonely spot near the prison the coffin of the man who was hung; and how dared I, a baby almost at the time, to judge for myself.

I knew they were right enough, but I never faltered. I was as sure as Madge was that her father never killed Uncle Mathew.

They would not come to my home. Indeed, grandfather would have had the door closed in their faces, but nothing could keep me from them. And it was dangerous work for me, too, as I began to know before long, to sit so much by Gideon Lee's side, to hear his dear voice so often, to feel my heart thrilling with a loving pity for him for which I had no words. He was my wounded and despised knight, this dear Gideon Lee, before I had known him three months, and I would have given my life for him. But he said no words of love to me nor I to him. Just friends we were, and nothing more, outwardly. That was enough for the town—enough for grandfather. I was called unnatural. I found my dearest friends grown cold. Even the clergyman asked me if "it would not harm me to hold companionship with such people."

And I said: "They are the best people I have ever known. And even had their father done the deed for which he died, they would be no worse for it. As it is he was murdered, and you are all cruel to these poor children of his—cruel and unchristian."

So he left me angrily, and so many a friend left me, and all my comfort was to sit between Madge and Gideon in the quiet evenings and talk to them.

In the summer time we used to light no candles, and the moonlight fell through the ivy leaves upon us, and the old dog lay at our feet and put his curly head upon Madge's lap. We would tell stories of fairies and goblins or sing romantic songs written before any of us were born. Now and then Gideon would steal his arm about my waist or hold my hand awhile, and wrong though any one might have thought there was no more harm in it than though we had been children.

Just so we were sitting one evening, when grandfather walked into our midst and clutched me fiercely by the arm. No need to repeat the words he uttered. The insults stung me as sharply as they could Gideon Lee's children. But he forbade me ever to speak to them again and took me home with him.

The last glimpse I caught of the brother and sister showed them to be standing hand in hand, their fingers clutched tight, their teeth set, their faces white with wrath under the moonlight. It was my last glimpse for many years, for the day after this we sailed for Canada. Grandfather was a Canadian, and it was partly to revisit his native land and partly to put the ocean between the Lees and me that he took the voyage. But he could not tear my heart from them. I loved them better than any people I ever met; most of all I loved Gideon.

But I never heard of him or from him, nor could I guess whether he lived or died, remembered or forgot me, for three long years.

At the end of that time my grandfather died, and I, his heiress, returned to my native land a rich woman and my own mistress, though this was the codicil to the will that left me all:

"I, Henry Grey, having cause to fear that my beloved grandchild is easily misled by artful persons, and is not guileful enough to understand their guile, do, for her own welfare, add this proviso, That, should she ever give her hand in marriage to the son of the murderer of my son, Matthew Grey, all claim upon the moneys and estates above bequeathed her shall be forfeited, and said property go, without reserve, to the Hospital of St. Martha, to be used by the trustees of said institution as they see fit."

But, despite this codicil, I went down into the valley in which Gideon Lee's homestead stood before I had been at home a day. It was sunset when I reached it, but the light did not as of yore gild the panes of the upper windows to sheets of burnished gold. Every shutter was closed and the house seemed to frown upon me. The garden had run wild; the fields lay desolate; the broken branches of the orchard trees told of boyish depredation. Strange cattle grazed in the meadow and Rover's kennel was empty. The sight brought tears to my eyes. I went up the old porch and found there, wet with rain and tangled in the relics of last year's vine, a scarlet ribbon, one Madge must have worn. I put it in my bosom and came away. No one could tell me anything of Gideon Lee's children, except what the empty house had told me—that they were gone.

I had lost them; and what did I care that all the country place besides welcomed me home? Gideon's smile would have been more to me than all their greetings, and Madge would have given me a kiss that had true love in it.

I was not happy; I could not be gay. I could not care for anything very much. I lived a quiet life for two long years, and, let those call me cold and proud who would, I was not cold, but those who courted me were Gideon Lee's enemies, and had persecuted pretty Madge since her very birth, and had done their innocent father to death, and I hated them for it, though I said nothing.

But at last, one bright morning, walking up the road to look at the desolate dwelling where I had learned to love Gideon Lee's children, I saw a change in it. The windows were open; a man was at work in the garden. Three figures in traveling costume had just entered the porch and a carriage stood at the gate.

I knew Gideon's tall figure at a glance, but who was this—superb, glowing, beautiful, with a look of triumph on her face—who came toward me? And who was that old man with the strange, sarcastic smile, that I fancied I had seen before?

As I advanced I knew that it was Madge who ran to meet me—Madge, grown to be a magnificent woman—Madge, who kissed me as of yore, but more gladly, and who left me in a moment alone with Gideon and drew the stranger away with her.

And Gideon held my hand, and I could only say, "it has been very long, Gideon," and try and hide my tears.

"It has been long for me, Agnes!" he said. And then there was a pause. He broke it by kneeling down beside me, with my hands in his as I set on the low step of the porch.

"You are Miss Agnes Grey," he said, "and the world honors you. I am the son of the man who was hanged. Even now, loving you as I do—as I have all this weary while—that stands between us, a barrier you could not cross. Is it not so? Were I all else, and so worthy of you, I should still be Gideon Lee, and an outcast, branded with Cain's brand upon the forehead, and you could neither love nor wed me!"

Could I say "I love you?" It was not in maidenhood to do that. It was impossible. I trembled; I faltered; I only said these words: "It is an unjust brand—unjust and cruel. My eyes never see it, Gideon Lee!"

He showered fond kisses on my hands, but he spoke again.

"Do you dare to do it, Agnes—to love an outcast man; to bring upon yourself contempt and hate; to relinquish wealth for the humble life of a simple farmer? Is your love strong enough for this? Will you never repent?"

"Never," I said.

"When your gold is gone, your land another's, your friends turned to enemies and your name, your very name, Agnes—that of the man who was hanged!" he asked slowly. "Think! can you bear that ignominy? I know how terrible it is."

And I took my hands from his and laid them on his broad shoulders and said—but no matter what I said. I have forgotten the words that told him that I loved him too well to doubt my courage to bear anything for his dear sake.

But suddenly, as he knelt there looking up into my eyes, I saw a look in his face that I could not understand—a look that made me cry out and begin to tremble; and I saw others draw near; and I saw Madge clasp her brother's hand, and the old man held out both of his to me.

"We have been parted five years," said Gideon. "In that time I have been searching for something that I believed must be hidden in the wide world. I have found it."

"Gideon, tell me," I cried.

"Could any earthly thing but one embolden me to speak as I have spoken to you?" said Gideon. "Do you think that I would ever have offered any woman a name that would have made her an outcast? That which I sought, that which I found, was a living proof of my dear father's innocence. Look! do you know this man? Have you no recollection of him?"

And I turned my eyes upon the old man, who had taken my hand in his, and knew that I looked upon my uncle Mathew.

The whole town knows the story now. He has told them how, yielding to his wandering impulses, he left, as he had done once before, the home and friends of his early manhood, and far from all news of Christian lands dwelt in the Arab's tent upon the desert and wandered with him over the burning sands, loving the life too well to leave it, and never hearing of Gideon Lee's unjust condemnation, or of his terrible fate, until his son stood before him and bade him, if one drop of Christian pity lingered in his soul for the man on whom he had brought this awful doom, to return and prove by his living presence the fact of his innocence and of his unjust death.

They speak of Gideon Lee's children now as of those of a martyr; and the ban is lifted from the name that I have taken for my own.—Buffalo News.

The Ancient Mines of Laurium.

United States Consul Manatt, at Athens, in a recent report on Greek mining and metallurgy, enters into the history of the subject in an interesting manner.

The mines of Laurium, now worked for zinc, lead and iron, are, he says, the very mines from which Themistocles drew the silver supply to fit out his fleet and beat back the Persian invader at Salamis (490–480 B. C.), and so to lay the foundations of the Athenian hegemony. More than this, it is thought probable that the Phœnicians delved here before the Greeks came, as they are known to have done in the Island of Thasos.

At any rate, Thoricus was a free city before Theseus welded the Attic boroughs into a single commonwealth (that is to say, before the name of Athens appeared in history) and its importance must have been due to the mines; so that the mining industry at Laurium may possibly boast an origin as remote as thirty centuries back, while it is again in full blast today.

In walking through the French company's great mine at Camaresa, in the heart of the Laurium region, one traverses here a gallery in active exploitation for zinc and lead and hard by another worked out by the old Greeks two or three thousand years ago. These ancient works are among the most interesting monuments of Hellenic civilization.

Etiquette in the Reign of Louis XIV.

The etiquette which prevailed at Versailles was of the most minutely elaborate character, and governed every movement of the king and those about him from the very moment he opened his august eyes until he closed them in sleep. He was the center of the whole; it was a drama, daily repeated—the same characters, the same scenes, the same details—oppressive in its sameness, fatiguing in its constant pressure.

I have neither the space nor the inclination to dwell on all the extraordinary ceremonial of the state dinner; the twenty or thirty grandees fluttering around the king's plates and glasses; the sacramental utterances of the occasion; the gaudy procession of the retinue; the arrival of la nef—that is, the center piece of plate which contained, between scented cushions, the king's napkins, and Pessai des plats—the tasting of each dish by the gentlemen servants and officers of the table before the king partook of it.

The same custom was observed with the beverages. It took four persons to serve the king with a glass of wine and water. Well might Frederick the Great, on hearing an account of all this tyranny of etiquette, exclaim, that if he were king of France his first edict would be to appoint another king to hold court in his place.—All the Year Round.

Cost of Booming in Georgia.

I heard an amusing conversation between two property holders. One was speaking of improved values of property around Augusta, when he said: "A real estate holder in Augusta is afraid to try to boom his property for fear of having his tax assessment increased. If a man goes out on the street and makes the innocent remark that he wouldn't take $25,000 for certain property, up goes the assessment to $25,000, even though he couldn't get $20,000 for it."

The other speaker said: "One day I had some friends at my house to dine. During the dinner I was asked what my place was worth, and we were all feeling good, and I wanted the value of the place to sound well, so I gave some extravagant figure which I could never have got for it. One of my guests happened to be a tax assessor, and, would you believe it, my assessment was increased according to my rosy hued statement."

The moral seems to be either that a man had better talk "poor," or else that the assessors should take something more substantial as their basis of assessment than a man's after dinner or ante-trading talk.—Augusta (Ga.) Chronicle.

The Tonic Effect of Bathing.

The tonic effect of bathing is caused by the contraction of the surface blood vessels, which drives the blood back to the larger blood vessels and the heart. These react and send the blood rushing back to the skin, causing the glow which follows the bath, or ought to follow it, the free respiration and the vigorous feeling of the muscular system. The bath should always be followed by friction with the hand, a brush or a towel.

The frequency with which it should be taken depends entirely on circumstances. It should be often enough to keep the pores open and the skin clean, for the skin does one-third of the breathing, and if it is clogged the lungs must do the work and they will be overburdened. As a rule the more rapidly a bath is taken the better will be its effects.—Herald of Health.

A Secularist "Christening."

On Sunday evening, at the Hall of Science in London, G. W. Foote, president of the National Secular society, performed a ceremony which has of late become almost obsolete among Freethinkers—"the naming of infants," to wit: The parents appeared on the platform with their child, a baby of three months. Mr. Foote briefly explained that the custom of publicly naming children, which had been frequently observed by Mr. Bradlaugh, Mrs. Besant and other Secularist lecturers, was in no sense intended to be a travesty of any religious function. If parents desired their offspring to be publicly identified with the Freethought party, there was no reason why this should not be done.

Then Mr. Foote, having kissed the baby with due solemnity, named it "Carlile Bradlaugh Owen Golding." The first of this portentous string of "given names" is derived from Richard Carlile, who suffered ten years of imprisonment early in this century for asserting the right of free publication. Mr. Foote expressed a hope that, when the child becomes old enough to understand the significance of the names he bears, he may prove worthy of them.—Cor. Public [illegible]

" "	57	100	20 00

And in accordance with law, and an order of the Board of Directors, made on the 27th day of June, 1891, so many shares of each parcel of such stock as may be necessary, will be sold at public auction, at the office of the Stevens Ditch Company, Independence, California, on Monday, the 24th day of August, 1891, at the hour of 3 o'clock p. m. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

P. H. MACK,
Secretary.

NOTCE TO CREDITORS.

Estate of FRANCISCO PADERES, Deceased.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGANACIA ABECHUCO,
Administratrix of the estate of Francisco Paderes, deceased.

Dated at Independence, Cal., July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence, Cal.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine. Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

For Pamphlet giving Indorsements, &c., address

Estate of Benjamin Theban, deceased—Filed order of sale of personal property. Entered decree establishing notice to creditors.

Estate of Barna Peeler, deceased—Entered decree establishing notice to creditors.

The Fair Directors meet at Independence to-morrow.

Vernon Smith brought a drummer down from Big Pine to-day.

Miss Mary Mulhollan returned from a visit to Lone Pine yesterday.

A heavy shower yesterday morning proved refreshing after the intense heat.

There will be a social hop next Friday evening at Mairs' Hall. Everybody invited.

Manuel Diaz, of Lone Pine, will please accept our thanks for the nice large box of fruit received this week.

The voting for bonds in Fish Spring School District resulted in the appropriation of $1,500 for the purchase of a site and the erection of a school house.

Last night about nine o'clock Dr. I. J. Woodin was called to attend Judge Hannah. He has been failing considerably lately and last night medical services were required.

During the absence of Mr. Murphy Arthur Smith has been in charge of the blacksmithing department of the Independence Foundry—the workmen there will always be found dry.

State Senator, Thomas Flint, Grand Vice President, N. S. G. W., will be here next Friday night, August 21, on an official visit. A Social Dance will be given in his honor by Mt. Whitney Parlor, to which all are cordially invited.

The Sheriff of Kern county has written to Sheriff Gorman in regard to the Indian known as "Jack Gunn." Mr. Gorman informed him that the Indian was wanted here and sent his description together with an offer of fifty dollars reward to be paid by himself and Under-Sheriff Holland. He also informed Mr. Borgwardt that an additional reward would be paid by the citizens of Lone Pine.

The stallion Allerton, Aug. 5, lowered his record to 2:12, which equals Axtell's record. The only two stallions with faster records than Allerton are Nelson, 2:10¾, and Stamboul, 2:11. It is a remarkable fact that Axtell and Allerton, two of the fastest four stallions in the world, were bred by a man named Williams, who formerly drove a milk cart in the city of Chicago. Allerton is 5 years old, and looms as a formidable candidate for stallion championship honors. Nelson, Stamboul and Allerton are all in training to have a shy at still further reducing their records. Three years ago Maxey Cobb held the stallion record with a mark of 2:13¼.

Will Be Paid.

Last week Tom McDonough sent a bill to the Board of Supervisors of Kern county for expenses incurred in the capture of the Indian "Doc." Sheriff Borgwardt of Kern mailed blanks for making out the claim in proper form to Sheriff Gorman and requested that the same be filled out and verified. At the next monthly meeting of the Board of Supervisors of Kern county the bill will be presented and quite likely allowed. A letter from Judge Conklin, of Kern, to Mr. Gorman states the reward of fifty dollars will also be forwarded. It is a matter of considerable satisfaction that Mr. McDonough receives recognition of the meritorious services rendered.

Indian Trouble at Bishop.

Last Sunday evening, while patroling the town of Bishop as night watchman Fred George had occasion to remove three drunken Indians from the town. The third offending Piute was Duckie, the Indian Sheriff. Duckie resented George's order to leave the town and became very quarrelsome. The watchman finally found it necessary to shoot the besotted Indian and the shot proved fatal. After a preliminary examination George was discharged, but his life is still in a hazardous position as the Bishop Indians vow vengeance for the killing of Duckie. The affair promises unpleasant developments both for Indians and whites, and one can but regret that a heavy punishment cannot be dealt out to the wretch who sold Duckie and his comrades the whiskey.

It is reported that George was discharged after the Coroner's inquest, no preliminary examination being held. This seems rather a strange proceeding. Proof should have been made before proper authorities that the man shot in self defense before he was released.

Smallpox Near Carson.

The railroad boys yesterday brought in the news that there was smallpox at the Indian school near Carson.

A dispatch to Dr. S. L. Lee from this office was answered as follows:

"Yes; two severe cases—one confluent.
"LEE."

Confluent smallpox is the worst form of the disease known among civilized people, although there is a Chinese article still more to be dreaded. Smallpox is called confluent where the pits run one into the other.

Several years ago a father buried two of his children who died of smallpox on the grounds now occupied by the Indian school. It is believed that the children partly resurrected these bodies and caught the infection. No other theory can be advanced for the cause, particularly at this time, when the entire Coast is almost free from the infection.

Carson stepped promptly in the breech and established a quarantine. The Indian school-house was properly flagged and communication cut off.

We cannot vouch for reports. It is reported in Virginia that several persons who attended the picnic Saturday visited the Indian school, and it is also reported that one of the Indian boys who was taken sick Sunday attended the picnic Saturday. In justice to the management of the school, it is only fair to state that at the time the picknickers visited the school there was no alarming cause of sickness known.

Those who were at the Indian school Saturday, if any there be, in all deceney, should immediately repair to a physician and get a good disinfectant, and follow instructions with regard to its use.

A good way to disinfect clothing is to place it in a close room and burn sulphur in it, leaving the clothing in for two hours or longer.

The Carson *Tribune* says: As soon as they learned that smallpox was in the building the balance of the Indians began to light out for parts unknown, only a half-dozen remaining.

It is unfortunate that they were not kept together. They came from every part of the State, and they will return to their several homes to spread the disease.—*Enterprise.*

Estray Notice.

Came to my place at Black Rock on or about the 19th day of July one bay colt and one brown filly branded JR, connected, on right shoulder, also one brown colt branded with half-circle and T connected on right shoulder. The owner is hereby notified to pay charges on said animals and remove them or they will be sold on Saturday the 12th day of September, 1891, to pay said costs.

CHARLES WALTER.

Superior Judge, Geo. M. Gill, will leave to-morrow morning for San Francisco for medical treatment. While there he will consult the ablest physicians and specialists in regard to his ailment, and it is earnestly hoped he will meet with success. He expects to be gone about two months and during his absence County Clerk Yandell will act as Court Commissioner.

A. P. Smith passed through town to-day on his way home from Bakersfield.

A Quick Cure For Rheumatism.

In many cases persons subject to rheumatism, have got prompt relief from pain by applying Chamberlain's Pain-Balm. The relief it affords is alone worth many times its cost, which is but 50 cents, and its continued application effects a complete cure. For sale by A. K. EUGLEY,
Big Pine.

Well Merited Praise.

In almost every neighborhood there is some one or more persons whose lives have been saved by Chamberlain's Colic, Cholera and Diarrhœa Remedy, or who have been cured of chronic diarrhœa by it. Such persons take special pleasure in recommending the remedy to others. The praise that follows the introduction and use makes it very popular. 25 and 50 cent bottles for sale by A. K. EUGLEY,
Big Pine.

HUILE & SHOEMAKER.

A Suggestion.

If you are troubled with rheumatism or a lame back, allow us to suggest that you try the following simple remedy. Take a piece of flannel the size of the two hands, saturate it with Chamberlain's Pain-Balm and bind it over the seat of pain. It will produce a pleasant warmth and relieve you of all pain. Many severe cases have been cured in this way. The Pain-Balm can be obtained from

A. K. EUGLEY
Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

Talk's cheap, but when it's backed up by a pledge of the *hard cash* of a financially responsible firm, or company, of world-wide reputation for fair and honorable dealing, *it means business!*

Now, there are scores of sarsaparillas and other blood-purifiers, all cracked up to be the best, purest, most peculiar and wonderful, but bear in mind (for your own sake), there's only *one guaranteed* blood-purifier and remedy for torpid liver and all diseases that come from bad blood.

That *one*—standing solitary and alone—sold *on trial*, is

Dr. Pierce's Golden Medical Discovery.

If it don't do good in skin, scalp and scrofulous diseases—and pulmonary consumption is only lung-scrofula—just let its makers know and get your money back.

Talk's cheap, but to back a poor medicine, or a common one, by selling it *on trial*, as "Golden Medical Discovery" is sold, would bankrupt the largest fortune.

Talk's cheap, but only "Discovery" is *guaranteed.*

When Prince George of Greece reached Omaha three men came on the car, and rushing up to him, shook his hand with great force, while one of them said, "Hello, George; my name is George, too."

EVERYONE SPEAKS WELL OF IT.

Rochester, N. Y., March 18, '86.

For many years I have been troubled with severe pains in the back of my head and neck, the pain being so severe at times that I was nearly insane, and my friends feared that I would be. Lumps as large as a hickory-nut, would swell up on my forehead and neck. I tried many different kinds of medicines and physicians, but none seemed to reach my case, until I commenced the use of Dr. Pardee's Rheumatic Remedy, and before I had used it four days, the pain left my neck and shoulders and went to my hips and limbs. I continued taking the remedy, and the disease seemed to work downward. but there was but little pain. I am still using the remedy, and I feel confident it will entirely cure me; for I am so much better and stronger than I have been for years. I cheerfully recommend it to all.

Very respectfully yours,
MRS. PHŒBE WHEATON.
110 Mt. Hope Avenue.

A LETTER
From the Mother of Miss Jessie Bonesteele.

Rochester, N. Y., April 22, 1886.

GENTLEMEN:—It is with pleasure I add my testimonial to the many well-known cures which your most excellent remedy has effected. For more than two years I was a great sufferer with rheumatism, being scarcely free from pain during the time. I found no relief until I procured Dr. Pardee's remedy, and it cured me completely. It is now two years since I discontinued its use and I have had no symptoms of the disease since. I know from my own and from the experience of many others also, that it will cure any case of rheumatism or neuralgia.

I am, very truly yours,
MRS. H. S. BONESTEELE.

Lockport, N. Y.

GENTLEMEN:—I think the medicine prepared by the Pardee Medicine Company is in fact the best rheumatic medicine now on the market; its equal is not known. My boy only six years old was confined to his bed with rheumatism; I got a bottle of the medicine and in a few days he was out of bed and playing around the house. I can cheerfully recommend this medicine to all rheumatic sufferers.

J. K. PERRY, Shoe Dealer.

Ask your druggist for Dr. Pardee's Remedy and take no other. Price $1 per bottle; six bottles, $5.

Pardee Medicine Co., Rochester, N. Y.

Darwin and His Children.

His son Francis states that he does not remember ever hearing his father speak an angry word, yet the children never thought of disobeying him. "I well remember," says his son, "one occasion when my father reproved me for a piece of carelessness; and I can still recall the depression which came over me, and the care which he took to disperse it by speaking to me soon afterward with especial kindness.

"He kept up his delightful, affectionate manner toward us all his life. I sometimes wonder that he could do so, with such an undemonstrative race as we are; but I hope he knew how much we delighted in his loving words and manner.

"How often, when a man, I have wished when my father was behind my chair, that he would pass his hand over my hair, as he used to do when I was a boy. He allowed his grown up children to laugh with and at him, and was, generally speaking, on terms of perfect equality with us."—Holder's Life of Darwin.

THE SPLENDID SPUR.

Being Memoirs of the Adventures of Mr. John Marvel, a Servant of His late Majesty King Charles I, in the years 1642-8: written by himself.

EDITED IN MODERN ENGLISH BY "Q."

There was no time to be lost. Pulling the captain to his feet, we scrambled up the gully, and out at the top, and across the fields as fast as our legs would take us. Molly came to my call and trotted beside me—the captain following some paces behind, and Billy last, to keep a safe watch on his movements.

At the gate, however, where we turned into the road, I tethered the mare, lest the sound of her hoofs should betray us, and down towards the sea we pelted, till almost at the foot of the hill I pulled up and listened, the others following my example.

We could hear the sound of oars plain above the wash of waves on the beach. I looked about me. On either side the road was now banked by tall hills, with clusters of bracken and furze bushes lying darkly on their slopes. Behind one of these clusters I stationed Billy with the captain's long sword and a pistol that I by signs forbade him to fire unless in extremity. Then, retiring some forty paces up the road, I hid the captain and myself on the other side.

Hardly were we thus disposed before I heard the sound of a boat grounding on the beach below, and the murmur of voices, and then the noise of feet trampling the shingle. Upon which I ordered my prisoner to give a hail, which he did readily.

"Ahoy, Dick! Ahoy, Reuben Gedges!"

In a moment or two came the answer:

"Ahoy, there, captain—here we be!"

"Fetch along the cargo!" shouted Capt. Settle, on my prompting.

"Where be you?"

"Up the road here—waiting!"

"One minute, then—wait one minute, captain!"

I heard the boat pushed off, some good-nights called, and then (with tender anguish) the voice of my Delia lifted in entreaty. As I guessed, she was beseeching the sailors to take her back to the sloop, nor leave her to these villains. There followed an oath or two growled out, a short scrimmage, and at last, above the splash of the retreating boat, came the tramp of heavy feet on the road below.

So fired was I at the sound of Delia's voice, that 'twas with much ado I kept quiet behind the bush. Yet I had wit enough left to look to the priming of my pistol, and also bid the captain shout again. As he did so a light shone out down the road, and round the corner came a man bearing a lantern.

"Can't be quicker, captain," he called; "the jade struggles so that Dick and Jeremy ha' their hands full."

Sure enough, after him there came in view two stooping forms that bore my dear maid between them—one by the feet, the other by the shoulders. I ground my teeth to see it, for she writhed sorely. On they came, however, until not more than ten paces off; and then that traitor, Luke Settle, rose up behind our bush.

"Set her here, boys," said he, "and tie her pretty ankles."

"Well met, captain," said the fellow with the lantern—Reuben Gedges—stepping forward; "give us your hand!"

He was holding out his own, when I sprang up, set the pistol close to his chest and fired. His scream mingled with the roar of it, and, dropping the lantern, he threw up his hands and tumbled in a heap. At the same moment out went the light, and the other rascals, dropping Delia, turned to run, crying "Sold! sold!"

But behind them came now a shout from Billy, and a crashing blow that almost severed Black Dick's arm at the shoulder; and at the same instant I was on Master Toy's collar, and had him down in the dust. Kneeling on his chest, with my sword point at his throat, I had leisure to glance at Billy, who in the dark seemed to be sitting on the head of his disabled victim. And then I felt a touch on my shoulder, and a dear face peered into mine.

"Is it Jack—my sweet Jack?"

"To be sure," said I; "and if you but reach out your hand, I will kiss it, for all that I'm busy with this rogue."

"Nay, Jack, I'll kiss thee on the cheek—so! Dear lad, I am so frightened, and yet could laugh for joy!"

But now I caught the sound of galloping on the road above, and shouts, and then more galloping; and down came a troop of horsemen that were like to have ridden over us, had I not shouted lustily.

"Who in the fiend's name is here?" shouted the foremost, pulling in his horse with a scramble.

"Honest men and rebels together," I answered; "but light the lantern that you will find handy by, and you shall know one from t'other."

By the time 'twas found and lit there was a dozen of Col. John Digby's dragoons about us; and before the two villians were bound comes a half dozen men, leading in Capt. Settle, that had taken to his heels at the first blow and climbed the hill, all tied as he was about the hands, and was caught in his endevor to clamber on Molly's back. So he and Black Dick and Jeremy Toy were strapped up; but Reuben Gedges we left on the road for a corpse. Yet he did not die (though shot through the lung), but recovered—heaven knows how; and I myself had the pleasure to see him hanged at Tyburn, in the second year of his majesty's most blessed restoration, for stopping the Bishop of Salisbury's coach in Maidenhead Thicket, and robbing the bishop himself with much added contumely.

But as we were ready to start, and I was holding Delia steady on Molly's back, up comes Billy and bawls in my ear:

"There's a second horse, if wanted, that I spied tethered under a hedge yonder"—and he pointed to the field where we had first found Capt. Settle—"in color a sad black, an' harnessed like as if he came from a cart."

I looked at the captain, who in the light of the lantern blinked again. "Thou bloody villain!" muttered I, for now I read the tragedy of the wagon beside the road, and knew how Master Settle had provided a horse for his own escape.

But hereupon the word was given, and we started up the hill, I walking by Delia's stirrup and listening to her talk as if we had never been parted—yet with a tender joy, having by loss of it learned to appraise my happiness aright.

CHAPTER XVIII.

JOAN DOES ME HER LAST SERVICE.

We came, a little before midnight, to Sir Bevill's famous great house of Stow, near Kilkhampton; that to-night was brightly lit and full of captains and troopers feasting, as well they needed to, after the great victory. And here, though loath to do so, I left Delia to the care of Lady Grace Grenville, Sir Bevill's fond, beautiful wife, and of all gentlewomen I have ever seen the pink and paragon, as well for her loyal heart as the graces of her mind; who, before the half of our tale was out, kissed Delia on both cheeks and led her away. "To you, too, sir, I would counsel bed," said she, "after you have eaten and drunk, and especially given God thanks for this day's work."

Sir Bevill I did not see, but, striding down into the hall, picked my way among the drinking and drunken; the servants hurrying with dishes of roast and baked and great tankards of beer; the swords and pikes flung down under the forms and settles, and sticking out to trip a man up; and at length found a groom who led me to a loft over one of the barns; and here, above a mattress of hay, I slept the first time for many months between fresh linen that smelt of lavender, and, in thinking how pleasant 'twas, dropped sound asleep.

Sure there is no better, sweeter couch than this of linen spread over hay. Early in the morning I woke with wits clear as water, and not an ache or ounce of weariness in my bones; and, after washing at the pump below, went in search of breakfast and Sir Bevill. The one I found, ready laid, in the hall; the other seated in his writing room, studying in a map; and with apology for my haste, handed him Master Tingcomb's confession and told my story.

When 'twas over, Sir Bevill sat pondering, and after a while said, very frankly:

"As a magistrate I can give this warrant; and 'twould be a pleasure, for well, as a boy, do I remember Deakin Killigrew. Young sir"—he rose up, and, taking a turn across the room, came and laid a hand on my shoulder—"I have seen his daughter. Is it too late to warn you against loving her?"

"Why, yes," I answered, blushing; "I think it is."

"She seems both sweet and quaint. God forbid I should say a word against one that has so taken me! But in these times a man should stand alone; to make a friend is to run a chance of a soft heart; to marry a wife makes the chance sure"——

He broke off, and went on again with a change of tone:

"For many reasons I would blithely issue this warrant. But how am I to spare men to carry it out? At any moment we may be assailed."

"If that be your concern, sir," answered I, "give me the warrant. I have a good friend here, a seafaring man, whose vessel lies at this moment in Looe Haven, with a crew on board, that will lay Master Tingcomb by the heels in a trice. Within three days we'll have him clapped in Launceston jail, and there at the next assize you shall sit on the grand jury and near his case, by which time, I hope, the king's law shall run on easier wheels in Cornwall. The prisoners we have already I leave you to deal withal; only, against my will, I must claim some mercy for that rogue Settle."

To this Sir Bevill consented; and, to be short, the three knaves were next morning packed off to Launceston; but in time, no evidence being brought against them, regained their freedom, which they used to come to the gallows, each in his own way. Their doings no longer concern this history, and so I gladly leave them.

To return, then, to my proper tale, 'twas not ten minutes before I had the warrant in my pocket. And by 11 o'clock (word having been carried to Delia, and our plans laid before Billy Pottery, who on the spot engaged himself to help us) our horses were brought round to the gate and my mistress appeared all ready for the journey. For though assured that the work needed not her presence, and that she had best wait at Stow till Master Tingcomb was smoked out of his nest, she would have none of it, but was set on riding with me to see justice done on this fellow, of whose villainy I had told her much the night before. And glad I was of her choice, as I saw her standing on the entrance steps, fresh as a rose, and in a fit habit once more; for Lady Grace had lent not only her own bay horse, but also a riding dress and hat of gray velvet to equip her, and stood in the porch to wish us god-speed, while Sir Bevill helped Delia to the saddle.

So, with Billy tramping behind us, away we rode up the combe, where Kilkhampton tower stood against the sky; and, turning to wave hands at the top, found our host and hostess still by the gate, watching us, with hands raised to shield their eyes from the sun.

At Launceston, Billy Pottery took leave of us; and now went due south, towards Looe, with a light purse and lighter heart, undertaking that his ship should lie off Gleys, with her crew ready for action, within eight-and-forty hours. Delia and I rode faster towards the southwest; and having by this time recovered my temper, I was recounting my flight along this very road, when I heard a sound that brought my heart into my mouth.

'Twas the blast of a bugle, and came from behind the hill in front of us. And at the same moment I understood. It must be Sir George Chudleigh's cavalry returning, on news of their comrades' defeat, and we were riding straight towards them as into a trap.

Now what could have made me forgetful of this danger I cannot explain, unless it be that our thorough victory over the rebels had given me the notion that the country behind us was clear of foes. And Sir Bevill must have had a notion we were going straight to Looe with Billy. At any rate there was no time to be lost, for my presence was a danger to Delia as well. I cast a glance about me. There was no place to hide.

"Quick!" I cried; "follow me and ride for dear life!"

And, striking spur into Molly, I turned sharp off the road and galloped across the moor to the left, with Delia close after me.

Down the hollow we raced with three dragoons at our heels, the rest going round the hill. But they did little good by so doing, for after the hollow came a broad, dismal sheet of water (by name Dozmare pool, I have since heard), about a mile round and banked with black peat. Galloping along the left shore of this, we cut them off by near half a mile. But the three behind followed doggedly, though dropping back with every stride.

Beyond the pool came a green valley, and a stream flowing down it, which we jumped easily. Glancing at Delia as she landed on the farther side, I noted that her cheeks were glowing and her eyes brimful of mirth.

"Say, Jack," she cried, "is not this better than love of women?"

"In heaven's name," I called out, "take care!"

But it was too late. The green valley here melted into a treacherous bog, in the which her bay was already plunging over his fetlocks and every moment sinking deeper.

"Throw me the rein!" I shouted, and, catching the bridle close by the bit, leaned over and tried to drag the horse forward. By this, Molly also was over hoofs in liquid mud. For a minute and more we heaved and splashed; and all the while the dragoons, seeing our fix, were shouting and drawing nearer and nearer. But just as a brace of bullets splashed into the slough at our feet, we staggered to the harder slope, and were gaining on them again. So for twenty minutes along the spurs of the hills we held on, the enemy falling back and hidden, every now and again, in the hollows—but always following; at the end of which time, Delia called from just behind me:

"Jack—here's a to-do; the bay is going lame!"

There was no doubt of it. I suppose he must have wrung his off hind leg in fighting through the quag. Anyway, ten minutes more would see the end of his gallop. But at this moment we had won to the top of a stiff ascent; and now, looking down at our feet, I had the joyfulest surprise.

'Twas the moor of Temple spread below like a map, the low sun striking on the ruined huts to the left of us, on the roof of Joan's cottage, on the scar of the high road, and the sides of the tall tor above it.

"In ten minutes," said I, "we may be safe."

So down into the plain we hurried; and I thought for the first time of the loyal girl waiting in the cottage yonder; of my former ride into Temple; and (with angry shame) of the light heart with which I left it. To what had the summoning drums and trumpets led me? Where was the new life, then so carelessly prevented? But two days had gone, and here was I running to Joan for help, as a child to his mother.

Past the peat ricks we struggled, the sheep cotes, the straggling fences—all so familiar—crossed the stream and rode into the yard.

"Jump down," I whispered; "we have time, and no more." Glancing back, I saw a couple of dragoons already coming over the heights. They had spied us.

Dismounting, I ran to the cottage door and flung it open. A stream of light, flung back against the sun, blazed into my eyes.

I rubbed them and halted for a moment stock still.

For Joan stood in front of me, dressed in the very clothes I had worn on the day we first met—buff coat, breeches, heavy boots, and all. Her back was towards me, and at the shoulder, where the coat had been cut away from my wound, I saw the rents all darned and patched with pack thread. In her hand was the mirror I had given her.

At the sound of my step on the threshold she turned with a short cry—a cry the like of which I have never heard, so full was it of choking joy. The glass dropped to the floor and was shattered. In a second her arms were about me, and so she hung on my neck, sobbing and laughing together.

"'Twas true—'twas true! Dear, dear Jack—dear Jack, to come to me; hold me tighter, tighter—for my very heart is bursting!"

And behind me a shadow fell on the doorway; and there stood Delia regarding us.

"Good lad—all yesterday I swore to be strong and wait—for years, if need be. Fie on womankind to be so weak! All day I sat an' sat, an' did never a mite o' work—never set hand to a tool; an' by sunset I gave in an' went cursing mysel', over the moor to Warleggan, to Alsie Pascoe, the wise woman—an' she taught me a charm—an' bless her, bless her, Jack, for 't hath brought thee!"

"Joan," said I, hot with shame, taking her arms gently from my neck; "listen: I come because I am chased. Once more the dragooners are after me—not five minutes away. You must lend me a horse, and at once."

"Nay," said a voice in the doorway, "the horse, if lent, is for me!"

Joan turned, and the two women stood looking at each other—the one with dark wonder, the other with cold disdainfulness—and I between them scarce lifting my eyes. Each was beautiful after her kind, as day and night; and though their looks crossed for a full minute like drawn blades, neither had the mastery. Joan was the first to speak.

"Jack, is thy mare in the yard?"

I nodded.

"Give me thy pistols and thy cloak." She stepped to the window hole at the end of the kitchen and looked out. "Plenty o' time," she said, and pointed to the ladder leading to the loft above—"Climb up there, the both, and pull the ladder after. Is't thou they want—or she?" pointing to Delia.

"Me chiefly they would catch, no doubt—being a man," I answered.

"Ay—bein' a man; the world's full o' folly. Then, Jack, do thou look after her, an' I'll look after thee. If the rebels leave thee in peace, make for the Jews' Kitchen and there abide me."

She flung my cloak about her, took my pistols and went out at the door. As she did so the sun sank and a dull shadow swept over the moor. "Joan!" I cried, for now I guessed her purpose and was following to hinder her; but she had caught Molly's bridle and was already astride of her. "Get back!" she called, softly, and then, "I make a better lad than wench, Jack," leaped the mare through a gap in the wall and in a moment was breasting the hill and galloping for the high road.

In less than a minute, as it seemed, I heard a pounding of hoofs, and had barely time to follow Delia up the ladder and pull it after me, when two of the dragoons rode skurrying by the house and passed on yelling. Their cries were hardly faint in the distance before there came another three.

"'A's a lost man, now, for sure," said one, "be danged if 'a's not took the road back to Lan'son!"

"How 'bout the gal?" asked another voice. "Here's her horse i' the yard."

"Drat the gal! Sam, go thou an' tackle her; reckon thou'rt warriors enow for one 'ooman."

The two hastened on; and presently I heard the one they called Sam dismounting in the yard. Now, there was a window hole in the loft facing, not on the yard, but towards the country behind; and running to it, I saw that no more were following—the other three having, as I suppose, early given up the chase. Softly pulling out a loose stone or two, I widened this hole till I could thrust the ladder out of it. To my joy it just reached the ground. I bade Delia squeeze herself through and climb down.

But before she was half way down I heard a wild screech in the kitchen below and the voice of Sam shrieking:

"Help—help! Lord ha' mercy 'pon me—'tis a black cat—'tis a witch! The gal's no gal, but a witch!"

Laughing softly, I was descending the ladder when the fellow came round the corner screaming—with Jan Tergagio clawing at his back and spitting murderously. Delia had just time to slip aside, before he ran into the ladder and brought me flying on top of him. And there he lay and bellowed till I tied him, and gagged his noise with a big stone in his mouth and his own scarf tied around it.

"Come!" I whispered; for Joan and her pursuers were out of sight. Catching up her long skirt Delia followed me, and up the tor we panted together, nor rested till we were safe in the Jews' Kitchen.

"What do you think of this for a hiding place?" asked I, with a laugh.

But Delia did not laugh. Instead, she faced me with blazing eyes, checked herself, and answered, cold as ice:

"Sir, you have done me a many favors. How I have trusted you in return it were best for you to remember, and for me to forget."

The dark drew on; but as I think, about 10 o'clock, I heard steps coming over the turf. I ran out. 'Twas Joan herself and leading Molly by the bridle. She walked as if tired, and, leaving the mare at the entrance, followed me into the cave. Glancing round, I noted that Delia had slipped away.

"Am glad she's gone," said Joan, shortly. "How many rebels passed this way, Jack?"

"Five, counting one that lies gagged and bound down at the cottage."

"That leaves four"—she stretched herself on the ground with a sigh—"four that'll never trouble thee more, lad."

"Why? how"——

"Listen, lad; sit down an' let me rest my head 'pon thy knee. Oh, Jack, I did it bravely! Eight good miles an' more I took the mare—by the Four Holed Cross, an' across the moor past Tober an' Catshole an' over Brown Willy, an' round Roughtor to the nor'west; an' there lies the bravest quag—oh, a black, bottomless hole—an' into it I led them; an' there they lie, every horse, an' every mother's son, till Judgment Day."

"Dead?"

"Ay—an' the last twain wi' a bullet apiece in their skulls. Oh, rare! Dear heart—hold my head—so, atween thy hands. 'Put on his cast off duds,' said Ailsie, 'an' stand afore a glass, sayin' "Come, true man!" nine-an'-ninety time.' I was mortal 'feard o' losin' count; but afore I got to fifty I heard thy step an'—hold me closer, Jack."

"But Joan, are these men dead, say you?"

"Surely, yes. Why, lad, what be four rebels, up or down, to make this coil over? Hast never axed after me?"

"Joan—you are not hurt?"

In the darkness I sought her eyes, and, peering into them, drew back.

"Joan?"

"Hush, lad—bend down thy head, and let me whisper. I went too near—an' one, that was over his knees, let fly wi' his musket—an' Jack, I have but a minute or two. Hush, lad, hush—there's no call! Wert never the man could ha' tamed me—art the weaker, in a way; forgie the word, for I loved thee so, boy Jack!"

Her arms were drawing down my face to her, her eyes dull with pain.

"Feel, Jack—there—over my right breast. I plugged the wound wi' a peat turf. Pull it out, for 'tis bleeding inwards, and hurts cruelly—pull it out!"

As I hesitated, she thrust her own hand in and drew it forth, leaving the hot blood to gush.

"An' now, Jack, tighter—hold me tighter. Kiss me—oh, what brave times! Tighter, lad, an' call wi' me—'Church and King!' Call, lad—'Church an'"——

The warm arms loosened; the head sank back upon my lap.

I looked up. There was a shadow across the entrance, blotting out the star of night. 'Twas Delia, leaning there and listening.

(To be Continued.)

Incident of the Franco-Prussian War.

We breakfasted on a bit of chocolate cake and a sip of wine and a rank and rough cigar, and after a toilsome march, broken by the chance that the telegraph wagons happened to be going our way a few miles, we reached Gorze some minutes after 10 o'clock, and saw a Frenchman hanging by the neck beside a well, his breast torn by rifle shots—a ghastly spectacle, to warn the people that they must not pollute the water to prevent the German soldiery from drinking it. We pushed on, a shade sickened by an object so repulsive. A beautiful bronze figure of an angel, the signal of the establishment of a benevolent sisterhood, appeared above low trees on the right. There was a remote rattle of musketry in the same direction, and occasionally the grumbling, beyond wooded hills, of cannon.—Murat Halstead.

For Consistency's Sake.

For the sake of being consistent a man just stupid enough to be consistent will go and do and say the same fool things he has done and said before. The fool cannot catch on to any ideas of progress.—New Orleans Picayune.

CHANGES OF CLIMATE

Kill more people than is generally known. Particularly is this the case in instances where the constitution is delicate, and among our immigrant population seeking new homes in those portions of the West, and where malarial and typhoid fevers prevail at certain seasons of the year. The best preparative for a change of climate, or of diet and water which that change necessitates, is Hostetter's Stomach Bitters, which not only fortifies the system against malaria, a variable temperature, damp, and the debilitating effects of tropical heat, but is also the leading remedy for constipation, dyspepsia, liver complaint, bodily troubles specially apt to attack emigrants and visitors to regions near the equator, mariners and tourists. Whether used as a safeguard by sea voyagers, travelers by land, miners, or of agriculturists in newly populated districts, this fine specific has elicited the most favorable testimony.

Some men are born great, some men achieve greatness, and some men are not worth a continental.

OF INTEREST TO ATHLETES.

James Robinson, the Athletic trainer at Princeton College, Princeton, N. J., says: "I have found it imperative to have sure and simple remedies on hand in case of cuts, bruises, strains, sprains, colds, rheumatism, etc. Shortly after entering upon my profession, I discovered such a remedy in ALLCOCK'S POROUS PLASTERS. I tried other plasters, but found them too harsh and irritating. ALLCOCK'S POROUS PLASTERS give almost instantaneous relief, and their strengthening power is remarkable. In cases of weak back put two plasters on the small of the back and in a short time you will be capable of quite severe exercise. In "sprint," and "distance" races and jumping, the muscles or tendons in the legs and feet sometimes weaken. This can invariably be relieved by cutting the plaster in narrow strips, so as to give free motion, and applying on muscles affected."

A man never wants anything so bad as when he is told he will have to fight for it to get it.

DEAFNESS CAN'T BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that we cannot cure by taking Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.
Sold by all Druggists, 75c.

"Walla Walla, Wash.," is painfully suggestive of a hog's method of making his toilet.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

A goose farm has been started in Michigan. It will be managed by a Michigander.

For Catarrhal and Throat Disorders, "*Brown's Bronchial Troches*" are renowned and marvellously effective, giving immediate relief.

The politician who wrote an open letter wishes now he had kept it closed.

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

"August Flower"

"I inherit some tendency to Dyspepsia from my mother. I suffered two years in this way; consulted a number of doctors. They did me no good. I then used your August Flower and it was just two days when I felt great relief. I soon got so that I could sleep and eat, and I felt that I was well. That was three years ago, and I am still first-class. I am never without a bottle, and if I feel constipated the least particle a dose or two of August Flower does the work. The beauty of the medicine is, that you can stop the use of it without any bad effects on the system. While I was sick I felt everything it seemed to me a man could feel. I was of all men most miserable. I can say, in conclusion, that I believe August Flower will cure anyone of indigestion, if taken with judgment. A. M. Weed, 229 Bellefontaine St., Indianapolis, Ind."

Relieved in Two Days.

Life of Misery

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted .....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

HELP THE BOYS.

Every man, woman and child in California is called upon to assist the Armitage Orphanage in raising a building fund of $50,000, so that the good work carried on for the past four years may be extended.

Contributions of money, merchandise, farm products and clothing are solicited. The Wells-Fargo Express Company will transport free from any of its offices in California any box or package addressed to the "ARMITAGE ORPHANAGE, SAN MATEO, CAL." Orphan or abandoned boys under 14 years of age from any part of the State will be received at the Orphanage, given a good home, clothed and educated in the free public school. There are now 88 boys in the Orphanage. This is a grand opportunity for the people to aid a worthy charity. No amount is so small that it will not be acceptable. For further information address Mrs. A. L. Brewer, President Armitage Orphanage, San Mateo, Cal. Visitors are always welcome.

The Electric Alarm Clock will ring until you get up and stop it. People who over-sleep should have one. For particulars address Imperial Jewelry Co., 26 O'Farrell st., San Francisco.

Use Enamelline Stove Polish; no dust, no smell

Try Germea for Breakfast.

Dr. Price's Cream Baking Powder.

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

EUREKA FRUIT PITTER.

For pitting PEACHES, PLUMS, APRICOTS, NECTARINES etc. With this machine one person can do the work of four to six hands using knives. Price, $4 each with Cushion. Price with both Cushions, $5 each. Extra Cushions of either size, $1 each.

For sale by all hardware stores.

Delivered at your Express office on receipt of price. Farnsworth & Co., San Francisco, Cal.

Hot Winds of Africa.

In the vast deserts of Africa, Asia and Australia we find all the requisites for the full development of heated air currents. The whole surroundings are favorable, and sand being a poor conductor the powerful rays of an undimmed sun warm the superficial layers to an extraordinary degree, and this excessive temperature is communicated to the superincumbent atmosphere in the usual way. Between Tripoli and Murzuk there is a sterile tract of more than fifty miles of sandy country, where a thermometer thrust six inches below the surface recorded a temperature of 130 degs. In South Africa Sir John Herschel found a ground temperature of 159 degs. In the severe drought of the summer of 1877, in the Fiji Islands, the black bulb thermometer on the grass registered 172 degs. So exceedingly hot was the ground that the poor natives, whose feet are "as tough as cowhide, often enabling them to walk over fire or on the top of live coral, an ordeal almost equally severe," were compelled for once to bandage their feet for protection against the fiery soil.

On some arid desert plains the temperature of the sand reaches 200 degs. and even higher. During Capt. Sturt's wanderings in Australia he found that a match would fire by simply dropping it on the ground. Burton's feet were scorched while pitching his tent in the Arabian desert. The same authority, describing the Inenge district of Central Africa, states that "under the burning yellow sky the grass is as white as the soil; the fields—stubbles stiff as harrows—are stained only by the shadows of passing clouds; the trees, except upon the nullah banks, are bare; the animals are walking skeletons, and nothing seems to flourish but flies, white ants and caltrops. Intense heat and want of water have dried the land." The Ragolay, an important river system of Abyssinia, receiving many tributary streams, is unable to reach the sea, as the hot dry air and sand between them drink up the whole volume of water.—Cornhill Magazine.

Overloading the Dining Table.

But what have the women to do in this matter? Do they, too, not vie with each other as to who can set the finest table? Even the plain farmers' wives do not always give us a good example. Count the varieties at a single meal, especially if they have company. Besides bread, butter, milk, meat, vegetables, etc. (enough for any Christian), there are cakes, pastries, preserves, jellies, pickles, puddings, side dishes innumerable, with coffee or other hot drink, over and above. I think I once counted no less than sixteen dishes at a plain little "tea" in a country village. With this state of things in the rural districts, what are we to expect in the large cities? Listen to one who has just spoken his mind on this subject:

"The essential difference between barbarism and civilization, according to epicures, is that then men ate to live, and now they live to eat. In American cities, notably in New York, there are, it must be confessed, many so called civilized beings of this order. When they are not eating, they are talking or thinking about it; and their faces show what an absorbing idea and habit it is. They may be seen any evening at Delmonico's, the Brunswick, the Hoffman, or at some one of the fashionable clubs, intent upon the dinner they have ordered, and enjoying with repellent sensuality their various dishes and wines. They are apt to have round, protruding eyes, large, coarse mouths, double chins, florid, oleaginous complexions, a general expression of matter dominating and controlling mind. They are barbarians in the midst of high civilization; for they are consecrated to their appetites, and impervious to the finer issues of life."—Susanna W. Doods, M. D., in Demorest's Monthly

Trick of a Theatre Goer.

A manager whose path in life is evidently not strewn with roses, speaking of the tricks that are attempted by some persons who attend the theatre, said: "The odd things that people will do to get what they have not paid for makes a very interesting study. Last night a well dressed, apparently prosperous citizen who had purchased a 50 cent admission ticket took a stand down one of the side aisles. A few minutes after the curtain had gone up he quietly sidled into a vacant seat. None of the ushers observed him. I did, but I wanted to study this case. When the act closed he walked out in the lobby. I missed his second entrance, but after some scrutiny discovered him in an aisle seat well down to the footlights. He had evidently spotted that as unoccupied, and came down the aisle with other people who had left their places at the close of the first act. His cleverness had been rewarded by the enjoyment of the performance from a $1.50 orchestra chair for just the 50 cents admission fee."

"Did you disturb him?"

"Oh, no; that would have hurt his finer sensibilities, and perhaps made an enemy of him."

"What did you do?"

"I jumped on the usher who was on that aisle."—New York Herald.

The Young Kaiser's Physique.

The appearance of the young kaiser does nothing to discourage the admiration evoked by what we hear of his military performances. He is above the average of his officers in height, carries himself with a grace seldom allied to the profession of arms, and in proportion he is of full body, though suggesting muscular development rather than stoutness. His left arm has not developed normally, but it is not unless one's attention is called to it that its impotency becomes striking. With this left arm, however, he holds his horse's reins, and once at least I saw him take a ditch which three of his officers refused, a feat that does not harmonize with the current stories about his feeble powers. His right arm, on the other hand, has absorbed all the vigor which was denied its mate, as is remarked by all who experience the powerful grasp he applies when shaking hands, a grasp which in Berlin has passed into a proverb. How little his left arm has interfered with his love for sport may be judged from the fact that he is an excellent shot and a good oar—all with the single right arm alone. He is also a very strong fencer.—Poultney Bigelow in Army and Navy Gazette.

Spaniard and His Guitar.

I suppose it must have been by way of burlesque that Spaniards were always represented as playing on a guitar, my first knowledge of them being from the pictured wrappers in raisin boxes from Malaga. However, their affection for this instrument is not overestimated. They carry their guitars with them everywhere, even in the railway carriages, which are always crowded. Its musical tinkle is heard ever before the peasants' doors, under the vine, by the plow left in the furrow; and generally there is some one dancing to its music.—W. Parker Bodfish in Demorest's Monthly.

LOUISE MICHEL.

A Brief Account of Her Late Lecture.

NOTED PERSONS SEEN IN THE AUDIENCE.

A Homely but Strong Face.—Surprise of Many of her Hearers.

The little Salle des Conferences in the Boulevard des Capucines was filled last night by a mixed crowd, assembled to hear Louise Michel lecture on the "Role of Woman in Modern Society." On one side of the hall was a group of personal friends of the "grande citoyenne," habitues of her sort of political meetings, and these had for the occasion donned their Sunday head covering instead of the slouch hats they wear usually. In the front row sat the Italian Revolutionary Cipriani, recently arrived from the peninsula kingdom, where he has been spending the last few years of his life in prison. He does not seem to have suffered much from the long confinement; his long beard is jet black, his hands are white, his face bears a contented expression, and he wears his broad brimmed, high hat jauntily inclined to one side, with the air of a man who knows that he is a fine looking fellow.

AMONG THE AUDIENCE.

Among the determined enemies of society I noticed also Pere Hyacynthe Loyson and many other well dressed bourgeois. Indeed the respectable element formed four-fifths of the audience, and most of them were young ladies and middle aged or venerable matrons who had come out of curiosity to see and hear the "monster" whose name appears in reports of all meetings at which incitations to acts of pillage and violence form the burden of the oration delivered. When the "monster" made her appearance she seemed a little bit surprised at finding herself in the presence of such a nice audience. She had not gotten herself up especially for the occasion and wore the shabby black dress, small crape bonnet and long veil thrown back over her shoulders that form her ordinary costume when in public. It was with shaky accent, and in a rather nasal voice that she announced her subject, but as soon as the first words were pronounced Louise Michel, herself again, had recovered that presence of mind and cool boldness which rarely desert her.

As she spoke the physiognomy of most of her hearers, especially those of the female portion of the audience, betrayed a surprise quite amusing to contemplate. It was easy to read on their faces that most of them were saying to themselves: "What! Is that her? Is that the Louise Michel we have heard and read so much about? That the woman? Why she looks like a Protestant school teacher, and as ugly as a scarecrow!" Yes, Louise Michel is undoubtedly a very homely person, but there is a gleam of intelligence about her face which, when she speaks, becomes exceedingly animated and mobile. It was evident, however, that most of the audience were disappointed, and after she had spoken a few minutes their attention began to flag. Moreover, what she was saying was not easy to follow or understand because of the disjointed connection between the ideas and the remarkable rapidity with which she was speaking. She never picks her words, but she frequently uses images of wonderful poetic freshness, which sound all the more strange coming from such lips. Once started, she goes on at break neck gallop, catching at a thought here, throwing off a daring expression there, leaping over all obstacles, and apparently endeavoring to realize some dream of unattainable perfection of which her credulous soul has caught a glimpse through the mists that becloud her exceedingly crude conceptions of things here below.

RELATING AN ANECDOTE.

Starting with the assertion that "woman has today the faults of a slave and man those of a conqueror," she declared that women are necessary, and that a time will come when the world will learn how to utilize their rare faculties. That time will be an epoch, and "wars will no longer be waged, because electric mitrailleuses will have been invented which will suppress thousands of men at a shot, and thus force nations to disarm." For the present it was the duty of woman to prepare for the advent of that golden age when nothing would prevent them from reaching a perfect equality with men. To prove that her sex were capable of that equality, she related an anecdote from her own experience:

"When I was attending lectures," said she, "in order to secure a diploma as a qualified school teacher, I one day heard an old savant trying to demonstrate, with the aid of two skulls, that a woman's head was smaller than that of a man, but he never noticed that, misled by a change of labels, made by a pupil with whom I am well acquainted, he was all the time using one anatomical specimen for the other."

Now and then Miss Michel said things which pleased the revolutionary group of her hearers, but were not at all to the liking of the rest of the audience. Speaking of woman, as affected by novel impression, she said that for her part she had never felt anything comparable to the sensation experienced when, marching at the head of a battalion of communists, she contemplated the marvelous picture of burning Paris spread out before her eyes against the red background of the glowing sky. But this cynical declaration called forth angry protests, and Louise wisely dropped into another strain, protesting that she did not wish to see women concerning themselves with politics. Scientific and artistic studies were the only ones to which they should devote themselves. "Let us have no leagues," said she, "for the purpose of demanding rights today which will no longer be our rights to-morrow. Woman is naturally good and virtuous, and when she knows all things she will no longer be the charming creature whose coquetry troubles man; she will no longer be faithless, because she will not be ignorant of the fact that her neighbor's husband is not a bit superior to her own."—Henry Haynie in New Orleans Picayune.

If you carry five $20 gold pieces in your pocket one day the amount of value rubbed off is exactly two cents. If you adopt the newspaper way and carry a $100 bill in your coat tail pocket it's all there when night comes.—Detroit Free Press.

A soldier belonging to a detachment of the Austrian army in Transylvania was recently killed by a bullet from a Manlicher rifle, discharged during target practice at a distance of more than two and one-half miles.

WHALE MEAT AS DIET.

It Is Not Only Wholesome but Also Very Palatable.

Talk of butchers' shops. A whale is a whole meat market in itself. It is a floating Smithfield, a marine edition of Copenhagen fields, an entire Billingsgate. Nobody need ever starve when whales are in season. A few of them would provision a city for a long siege. Fortunately, as the world grows older, it learns to judge more fairly of neglected kinds of provisions. It is a pity that the true value of whale flesh has not been discovered long ago. How many poor families might have been amply fed if only "whale extract" had come into fashion years back. Gourmands should also show their gratitude for the gift of a fresh flavor. It must be admitted, with regret, but without hesitation, that the list of ordinary articles of food is very limited, and that beef and mutton are apt to become monotonous, even when varied with fish and poultry, and all the eatable fruits of the earth as well. The edibility of the whale is, therefore, an exciting discovery."

The only drawback to the pleasant picture which arises when the mind contemplates 50,000 people dining off one animal is contained in the thought that whales, when they are proved to be valuable for dietetic purposes, will be hunted until they become scarce and perhaps extinct. To guard against this danger we have no doubt that whale breeding would come into fashion. People who found other forms of food culture unremunerative might remove to countries where the climate allowed whales to live in comfort and establish whale farms at the mouths of tidal rivers. There is, in fact, no end to the opening for enterprise and ingenuity which are available owing to this remarkable addition to the domestic larder.—Medical Classics.

Tricks of Indian Jugglers.

Some of the tricks are performed by every juggler you meet; others again are of such an astonishing nature, and border so nearly on the miraculous as to be beyond the capacity of an ordinary performer. Of this character are the orange tree trick and the burial trick. If, after having witnessed these feats performed in broad daylight, one is of the opinion that it was an optical delusion produced by the mesmeric power of the operator, I can only say that the ability to obtain an absolute mastery over every faculty of the observer is no less astonishing than would be the actual performance of an apparently impossible feat.

The most noticeable feature in the performance of the Indian juggler is the entire absence of any kind of apparatus. His scanty clothing affords no opportunity for concealment, and every feat is performed simply by manual dexterity or is a delusion effected by mesmeric influences. The famous wizards of Europe and America were nothing without apparatus, and a great deal of the effect of their performances was due to their magnificent and costly paraphernalia. Ingenious mechanisms and expert assistants were absolutely essential to the success of their delusions. As an illustration of this I may mention that Anderson—who, by the way, was the poorest wizard I ever saw, considering his reputation—made oath some thirty years ago in an English bankruptcy court that his apparatus, destroyed by the burning of Covent Garden theatre, London, was worth over $80,000, and that the effort to replace it was the cause of his insolvency. This amount, of course, included stage properties and everything necessary in his business. A 75 cent carpet bag would hold all the appliances deemed necessary by a Hindoo juggler. Even in the beautiful butterfly trick he manufactures his paper butterflies as occasion requires.—Charles E. Romain in The Cosmopolitan.

The Japanese Wooden Shoe.

Clatter, clatter, clatter! What a noise the people make as they go along the road! They all wear wooden sandals, and their stockings are a kind of mitten with a finger for the big toe. During wet weather their sandals become stilts, and the whole Japanese nation increases its stature by three inches when it rains. These sandals are held to the foot by straps coming over the toes, and there is a straw sole between the foot and the sandal of wood. A tall Japanese on a stilt sandal closely approaches the ridiculous. He sometimes tucks up his long gown under his belt to keep it from being spattered by the mud, and the backs of his bare calves seem to be walking off with the man. The Japanese walk is peculiar. The men put their feet straight in front of them, like the American Indian. They lift them high off the ground, and they have a get there air about them. The women wabble and wabble; they bend over as they walk, and they have what is now in America the fashionable stride. Their little feet in sandals turn inward, and all female Japan is pigeon toed. Your Japanese beauty is not averse to showing her ankle, and the soul of the Japanese beau does not flutter when he sees a two inch slice of cream colored skin above the three inch foot mitten. The Japanese shoe store is one of woodenware rather than of leather, and the cobbler mends his shoe with the chisel and planer.—Frank G. Carpenter's Letter.

The Contents of an Eggshell.

The weight of an ordinary new laid hen's egg is from one and a half to two and a half ounces avoirdupois, and the quantity of dry solid matter contained in it amounts to about two hundred grains. In 100 parts about 10 parts consist of shell, 60 of white and 30 of yolk. The white of the egg contains a larger proportion of water than the yolk. It contains no fatty matter, but consists chiefly of albumen in a dissolved state. All the fatty matter of the egg is accumulated in the yolk, which contains relatively a smaller proportion of nitrogenous matter and a larger proportion of solid matter than the white. Therefore, in an alimentary point of view, the white and the yolk differ considerably from each other, the former being mainly a simple solution of albumen, the latter being a solution of a modified form of albumen, together with a quantity of fat.—Cassell's Domestic Dictionary.

The Influence on Watches.

Often you hear street car conductors or drivers talking of the almost impossibility of keeping their watches on good time for any reasonable time. At the same time another individual can carry the abused time piece and have the most perfect time. I have tried the idea and found it worked admirably. I have a theory to advance as a cause. I believe that magnetism has much to do with it. For instance, an individual with a strong flow of magnetism will carry a watch that will gain a fraction. Another person with a less flow will carry the same watch and it will drop off in time.—Conductor in Globe-Democrat.

A STATE BANQUET.

White House Dinners Past and Present.

THE INVITATIONS AND THE GUESTS.

The Highest Social Events in Washington Life.

The president gave his first state dinner not a great while ago. It was to the cabinet, and each guest received a heavily engraved invitation inclosed in an envelope, which bears the national coat of arms. The White House paper and cards have a gigantic eagle printed in gold upon them. It bears a gold shield on its breast, and its beak holds the words "E Pluribus Unum." The card of invitation to a state dinner is almost as big as a cabinet photograph. It is engraved in black, and it bears the words: "The President and Mrs. Cleveland request the pleasure of the company of —— at dinner on —— evening, at — o'clock, 1888."

These dinners last several hours, and the guests first assemble in the East room, and it is here that the president and Mrs. Cleveland receive them. They go to the table at once, and there they eat often as high as twenty courses. The dinner just mentioned was one of thirty covers, and the state dining table was set in its ordinary form. There are three ways in which the table may be arranged, according to the number of guests who are to be seated, and the table, as it usually stands, is fitted to seat thirty-six. It is a long oval, and it runs the full length of the state dining room. When more than thirty-six sit down it is changed by adding to each end, making in one shape a gigantic letter "I," and in another, by hollowing out the sides, a figure like the stand of an anvil.

The dining room is gorgeous during a state dinner. It is a great oblong parlor, as large as the ground floor of a house thirty feet wide and forty feet deep, and its ceiling is so high that it would reach to the base of the windows of the second story of a city house. It lies at the left of the great promenade corridor, and its windows look out on the Potomac and the monument. It adjoins the Red parlor on the east, and it has windows on the opposite side of the room which look into the grand conservatory of the White House.

The flowers of a state dinner table are beyond description, and the florist puts his best efforts on the gold lake which lies in the center of the table. This lake runs nearly the whole length of the table, and it is a mirror with a gold rim about three inches high, and this, during a great state dinner, is framed with the choicest of flowers and greens. A thousand roses are often used at state dinners, and about the same number of carnation pinks. During a single season the state dinners have consumed 6,000 sprays of lilies of the valley, 400 strings of similax and thousands of other flowers, such as camellias and calla lilies. At times canoes are made, and ships of flowers in full sail are seated upon the table. At others there may be bridges and castles, and once there was a design which represented the Hanging Gardens of Semiramis. To these flowers is added the brilliance of the state china, and the wine sparkles in cut glass.

It goes without saying that guests at state dinners always appear in full dress. The men wear boiled shirts and the decollete dress prevails, as a rule, with the ladies. At the dinner referred to Mrs. Fairchild's dress was decollete and Mrs. Endicott's dress was well filled in with lace at the front. Mrs. Gen. Joe Hawley wore a blue satin train of silver brocade and her corsage was low, and Mrs. J. V. L. Pruyn wore a ruby velvet, with a low necked waist. Mrs. Whitney appeared in pearl gray satin, and Mrs. Ingalls looked regal in a trained robe of black velvet.

The men looked well, too, and Bayard walked out with Mrs. Cleveland, while the president sat with Miss Bayard on his right. Speaker Carlisle looks like a statesman in a swallow tail coat, and Senator Hearst was straighter than ever in his claw hammer garment. Secretary Lamar appeared almost judicial, with his long hair hanging down over his collar, and Admiral Porter and Gen. Sheridan were as courtly as usual. Put thirty such guests around this big table, let the light glitter, make the wine flow and add the gorgeous table decorations and you have some idea of the scene. Bring on waiters in full dress suits and have the dark-eyed steward presiding over the whole, and you may begin to appreciate a state dinner.

To this, however, must be added the food, and it comes on in shapes that please your eye while at the same time it tickles your stomach. The cook of the White House gets a better salary than a New York bookkeeper, and he is as much of an artist as some of the big chefs of Europe. He builds his dishes with the care of the painter or the sculptor, and castles and boats and nearly every object in nature is represented by him in the form that the dishes assume on the state dinner table. At the recent dinner there was a curious stand for the pates, and there was a sugared building covered with conserves and candied fruits. He had near these tall and low candelabra, and the tapers were tipped with white, pink and ruby shades.

The cooking in the White House is done in the kitchens below stairs, and the chief room is directly below the dining room. The White House kitchen consists of two large rooms, hung with cooking utensils of every character and color. Ranges big enough to roast an ox are set into the walls, and on these mammoth kettles and boilers smoke with an appetizing flavor. A big zinc table stands in the center of the room and the cook has a number of assistants. He wears a white cap and an apron, and he takes pride in his calling.

The ices for state dinners usually come on the tables in forms as widely different as the flowers, and an old French woman here has made a fortune in furnishing ices to noted dinner tables. She has supplied the presidents with their ice cream since the days of Buchanan, and she is almost as much of an artist as the chef.—Frank G. Carpenter in New York World.

It Was a Double Hit.

"Well, good-by," said one as she finally turned to go.

"Well, if you must go, good-by," replied the other.

"Shestnuts!" called the Italian who keeps the stand on the corner.

Both women halted and looked back at him in surprise and indignation, and it is not unlikely that he has been overhauled by one of their husbands ere this.—Detroit Free Press.

Young Man (in shoe store, to clerk)—I say, d'ye know that old gentleman who just went out is the father of my girl?

Clerk—Is that so?

Young Man—Yes. I don't know him personally, but I expect to meet him soon.

Clerk—Yes, you probably will. He just purchased a pair of cowhide boots.—New York Sun.

Fancy stationery of any kind is held to be "bad form" and "inelegant," but there will always be curl paper girls to doubt this.

POVERTY'S PANGS.

Tale of Privation and Suffering Told by a Visitor to the Spring Valley Mines.

Mr. Henry D. Lloyd, of this city, who has just returned from a visit to Spring Valley, Ills., where he distributed among the destitute miners medicine furnished by a charitable New York lady, writes a long letter to The New York Tribune, in which he describes the wretched condition of the people there. He says: "Among other means of getting intelligent and unbiased information as to the exact state of things I visited the Catholic school and the public school, in which together there are over 600 children, and talked with the teachers and many of the children. The sisters who teach in the Catholic school said that their children gave unmistakable evidence of not having sufficient food. They were pale and they could not study as well.

"Children would frequently fall asleep at their desks from weakness. But so sturdy was their pride and self respect that it was almost impossible for their teachers to obtain from them any acknowledgment that they did not get enough to eat at home. Children who were unmistakably suffering for want of nourishment would even refuse food when offered them by their teacher, and in some cases, the sister superior said, when food was taken by some such children, it was immediately rejected by the stomach, showing how far the exhaustion of hunger had gone. One of the teachers in the public schools stated that on her way to the school in the morning she would sometimes meet as many as a dozen of her class out with baskets going to beg. As they saw her the little things, ashamed, would try to hide from sight until she had passed. In both schools numbers of the children were insufficiently clothed, little boys and girls of the tenderest years having on only some light sack or jacket, with no underclothing. It was a cold, bleak day, but many were barefoot. How the people have lived at all is a mystery.

"There have been during the last four weeks, ending Sept. 25, five distributions by the relief committee—all in goods, and no money has been given out—and the extent of this 'charity' is sufficiently indicated by the statement taken from the account of the committee that each family of seven, and others in proportion, had received for the entire period of four weeks flour, meal, etc., to the value of $5.88, or 84 cents' worth for each person for the whole four weeks. The mayor of the city, the editor of The Spring Valley Gazette, the Congregational clergyman, Mr. Stringer; all the physicians of the place, every one, in fact, stated without qualification that were it not for the relief from without the people would be starving. To check so scanty a stream of relief, 84 cents' worth of food for each person monthly, by talk about 'exaggeration' seems to me nothing short of inhuman."

Mr. Lloyd declares that the death rate is high there, and that it will be greatly increased as the weather grows cold. He declares, of his own knowledge, that the sick and poor have been refused medicines and medical advice by the poor authorities there.

He urges that contributions be sent to these people.—Chicago Dispatch in St. Louis Republic.

A Good Word for the College Boys.

An American college contains from 500 to 1,500 boys, rich, poor, ambitious or thoughtless, as the case may be. Among them there is sure to be a mischief making element. The escapades of these are telegraphed over the country and commented on by a sternly indignant press. Had the indiscretions been committed by boys out of college they would never have attracted even passing attention. From these widely circulated stories, always exaggerated and affecting at most but a handful of students, the idea has sprung that to send a boy to college is to cast him into a moral fiery furnace, where he will be assailed by every form of temptation. This is as far from the truth as it can well be.

There are few temptations in college life which are not encountered in the everyday world. On the other hand, there is a standard of college morals which must be lived up to by any student who cares to preserve his social standing among his fellows. This is not, in some ways, a high standard, but it is higher than any to be found in common use outside college walls. To live by it is to acquire the habits of thought and the manners of a gentleman. The only wonder is that college disturbances are so rare.—Albany Journal.

Marriage Not a Failure!

"I pronounce you man and wife," said Judge Mitchell in his office Wednesday morning to Miss Sallie Stephens and Mr. Dellie Myrick, a couple who had stepped into the judge's office to be made one.

And they walked down stairs, up the street and out into the broad and glorious country, where the birds were singing, the golden harvest being gathered, and the little rills singing on their way to the sea; where the sky was blue and the air pure; where the wild flowers were blooming; where the gentle breezes were whispering through the pines; where the aroma of new mown hay permeated the surroundings; where the song of the reaper was heard; where grazing herds were seen; where the sunlight danced through the overhanging boughs; where the green grass—nature's carpet—was spread out; where field and forest and hill and dale alternated; where the husbandman tilled the fields; where flower bordered paths meandered through wooded lawns, and where Dame Nature opened wide her arms to receive her children. Happy rural couple!—Thomasville Enterprise.

At last Venice is to be made a subject of municipal improvement. She is going to have new boulevards or new canals laid through her, after the manner of the new boulevards of Paris, and there is a tremendous hubbub of alarm among those desiring to keep her as she has always been.

Advantage of a Big Wedding.

There is a certain frankness of tone in this sentence from a recent article by Mrs. Florence Howe Hall, "One advantage of a large wedding over a small one, and therefore, in most cases, of a church wedding, is that the bride is likely to receive a greater number of presents."

POLICE IN JAPAN.

Their Politeness When Arresting an Offender.

SCENE IN A JAPANESE POLICE STATION.

The Bureau of Newspaper Censorship.—Secret Service.

A Japanese policeman was never known to smile, but when he finds it necessary to proceed to the extreme step of arresting a lawbreaker his face becomes clouded over with a pall of sorrow and solemnity that would do credit to an Irish undertaker taking the coffin measurement of an archbishop. Grasping the offender firmly with one hand, with the other he extracts from an invisible pocket of great capacity a roll of strong cord. Whispering polite and minute directions in the ear of the victim, who obeys them with scrupulous consideration for the feelings of his captor, he winds the cord several times around his waist and then attaches his wrists in optical contact with the small of his back. Six feet of cord remain; the policeman grasps the loose end, and bowing to the prisoner with an "After you, sir," the pair march away in a touching union of sadness and security. The neighborhood is paralyzed during the performance, business is suspended and traffic is stopped.

MARCHED OFF TO PRISON.

The formality of an arrest, however, is the only amusing side of Japanese justice. If you follow the white clothed policeman and his prisoner you will soon reach a police station in which sit a dozen clerks and functionaries hard at work at books and accounts and reports, with nothing except their physiognomy and the little teapot and tobacco brazier beside each one to differentiate them from similar European officials. The prisoner will be taken before a superior officer, the charge against him noted down; he will be searched and then put in one of a dozen wooden cells, ten feet square perhaps, separated from the central passage by great wooden bars reaching from floor to ceiling, and making a cell curiously like an elephant house, but providing admirably for ventilation in this hot climate. At the police station he may not be kept more than twenty-four hours, and then he is removed to a central station, which is simply the first police station on a large scale, minus the functionaries and plus the necessary arrangements for the detention of prisoners for long periods. The courts are much like European courts.

After visiting many court rooms we reached a room where twenty particularly intelligent looking officials sat at both sides of a long table piled up with newspapers, scissors, blue and red pencils, paste pots and all the familiar equipment of the exchange editor's sanctum. I turned to my guides for an explanation, and caught them regarding me and each other with amused smiles. Then I saw the joke. It was the Bureau of Newspaper Censorship, and these gentlemen with the spectacles and scissors and paste were examining all the newspapers of Japan for treasonable or seditious sentiments or improper criticism of ministerial and imperial affairs. I was introduced, the twenty gentlemen rose simultaneously and the laugh became general. "This," said my guide, waving his hand proudly over the piles of newspapers and the teapots of the censors, "is an institution you have not yet reached in England."

CENSORSHIP OF THE PRESS.

The procedure of this branch of the Japanese police is simple in the extreme. A lynx eyed censor discovers an article which seems to his conservative notions to threaten the stability of the government, to bring a minister into contempt or to foster improper agitation among the people. He extracts it and submits it to the director of the bureau, who probably takes counsel with the higher authorities. If the censor's view is confirmed the editor of the paper is peremptorily but politely summoned—everything is done politely in Japan, and I have no doubt that the school boy is politely birched and the criminal politely executed—to appear at the department of police at a certain hour on a certain day. When that summons comes to join the innumerable caravan of martyrs to a sense of journalistic duty he knows that—in the expressive language of the Bowery—he is a "goner." "Sir," he is told, "your estimable journal is suspended for so many days. Good morning."

The whole system of secret police is highly developed in Japan. There is a regular staff of detectives who disguise themselves as laborers, merchants or travelers, or even in case it is necessary to hunt down some great criminal, hire a house in the suspected neighborhood and live there. One of these men loses caste very much in his office, if he does not actually suffer a degradation of position, by failing to return with information he is dispatched to secure. Besides these, however, there is a regular staff of private police correspondents in all parts of the country, and one whole bureau at the department of police is devoted to receiving, ordering, classifying these, and taking action upon them. A good deal of information must be picked up from the teahouses, each of which is a center of gossip, and in one or other of which almost every male well-to-do inhabitant of Tokio is an habitue.—Tokio Cor. New York World.

There is still a good supply of Quakers in Philadelphia, though a contrary impression prevails. Twenty-five years ago the same impression prevailed, but today the benches in the meeting houses are as full as then. The explanation is that after coqueting with worldly ways and fashions for a season the young generation of Friends undergo a reaction and gradually fall into the same ways and the same austere life, even to the plain garb of their grandfathers and grandmothers.—New York Telegram.

Snuff Dipping in Maine.

Snuff dipping is on the increase at Lewiston. In fact the practice is growing quite the fashion. The devotees don't inhale it as did our grandfathers; they make what is called "a smear" with castile soap, and what not, and apply it delicately, voluptuously to the nostrils. A species of mild intoxication is said to result. Twenty-five pounds of snuff is one tobacconist's order for a week. It comes in ox bladders as big as your head and as solid as a Dutch cheese.

A while ago a student preached in a New England city "with a view." After his Sunday evening sermon one of the "pillars" said to him: "We have been much pleased with your sermons and I am very sorry we are never going to see you again." This suggestive remark convinced the candidate that he was not likely to be elected to the vacant pulpit.—Christian Inquirer.

A HOLY PLACE IS THE HEARTHSTONE.

A holy place is the hearthstone,
Where loved ones are gathered round,
Where mothers, sires and sisters dear
And brothers and friends are found.
A holy place is the hearthstone,
Home's innermost shrine is there,
Laden with blessed benison
And hallowed by loving prayer.

A holy place is the hearthstone;
What clustering joys abide
Where the cradle of our infancy
Was rocked by a mother's side.
A holy place is the hearthstone,
Where childhood's pattering feet
Go glancing in shade and sunshine
To the music of pleasure's beat.

A holy place is the hearthstone,
Where the youth have wooed and won,
And wed and gone to the battle
Of life with full armor on.
A holy place is the hearthstone,
Where manhood has settled down
With blessings blossoming round him,
And love for a priceless crown.

A holy place is the hearthstone,
Whence the old and young have gone
To rest from their weary labor
When the battle of life was done.
And oh, from the holy hearthstone,
When parted from those we love,
May we go to meet by the hearthstone
Of our Father's house above!

—New York Ledger.

A Cornish Custom.

Of the more modern and wholly quaint and innocent customs of Cornwall a few pleasant illustrations may be cited. The fish wives of ancient St. Ives are an incorrigible lot. Should you visit the town at the height of pilchard fishing, and enter the dark cellars where hundreds of women and girls are engaged in "bulking," or salting, the fish, scores of grinning Amazons will rush at you, and the fleetest one will daub your shoes generously with the odorous fish oil which has drained from the piles of curing fish. This is called "wiping the shoe," and if you do not respond with tribute of at least a half crown for luck of the "fair maids that feed and clothe the poor"—that is, the pilchard fishes—your subsequent "hustling" by these savory wenches will certainly cost you a new suit of clothing. The same custom, save that the daubing is done with "miner's clay," prevails within the mines, where the stranger is expected to pay something for his initiation into their mysteries.—Edgar L. Wakeman in New York Sun.

A 'Longshoreman's Sense of Modesty.

"You would hardly believe what silly ideas some rough, uneducated men have about propriety," said the nurse, as she smoothed out the pillow and rearranged the bed covers with a gentleness and a dexterity that recalled to the patient the ministering hand of a mother to her sick boy. "I recollect nursing a big 'longshoreman when I was in the hospital, who had an idea of chivalry which, mistaken and nonsensical though it was, yet was refreshing in one of his class. He had been in some fight in a shop near the river, and had received a number of bad wounds. His antagonist had cut right for his heart, and had made three or four gaping slashes in his chest.

"The injured man was one of the best built men I ever saw, and if his chest had not been padded with thick muscles, he would have been murdered outright. As it was, he was in a critical condition, and only the best care and treatment could save his life. The surgeons dressed his wounds the first few days, and then turned the task over to me. I went up to the patient, whose name was Jackson, the next day, and began to lay back the covers of the bed.

"'What are you doing?' he asked.

"'I am going to dress your wounds,' I answered.

"'You, a lady!' he said in astonishment.

"'Of course; come, no nonsense,' I went on, for he had grasped the cover in his weak hands and was trying to prevent my laying it back. I tried to argue with him, but he blushed and said doggedly that he wouldn't let a lady dress his wounds. I told him he would die if he didn't let me take care of him, but he said he didn't care if he did, so I had to send for the surgeon. After several days the patient was persuaded to let me dress the wounds, but he turned crimson when he bared his chest for me, although he had to expose little more than a society woman does when she wears a ball gown. Well, the 'longshoreman got well, and since then I have been convinced that the coarsest men are not without instincts of gentility."—New York Tribune.

Woman's Fancies Concerning Jewelry.

A long time ago, that day when the world moved at the nod of Cleopatra, the Egyptian women saved all their gold to buy emeralds for their daughters, because the possession of them not only insured freedom from all physical ills, but made in their hearts an ever spring well of hope, forcing them to be cheerful, happy women. Sometimes the emerald was engraved with cabalistic characters, oftener its smooth surface was untouched; what could not be accomplished by the precious gem itself certainly could not by the aid of a mysterious symbol. Then the Sicilian women bought coral for their babies, believing that it not only brought to them good health, but counteracted the effect of the evil eye and kept away the wicked spirits. It seemed for a while as if the same interest was going to be taken in coral now that was then, for beautiful pink coral framed in diamonds was not only shown in the large jewelry shops, but was worn by some very smart women. However, the fancy seems to have died out; coral is no longer either displayed in the window or on the woman. Unfortunately both of these health giving ornaments, the emerald and the coral, are easily imitated, which destroys their value in the eyes of the gem collecting woman.

INDEPENDENCE, CAL.

FRIDAY, AUGUST 21 ..... 1891.

Do the people who use kerosene to light fires ever read the papers? At least a dozen lives a year are lost on the Pacific Coast through that recklessly dangerous practice, but still the folly continues. Three deaths have just occurred in the town of Redding from this cause.

The appointment of Mr. Samuels of Kentucky, as chief of the horticultural bureau of the worl's fair has been again hung up by the Chicago local directory. It is alleged that more time is needed to investigate the character and qualifications of the appointee. As it has been often remarked, this continued postponement savors strongly of boodle.

Ex Congressman Morrow and Judge Van Fleet are mentioned as candidates for the for the position vacated by the death of Judge Hoffman of the United States District Court. Either of these gentlemen would make a capable successor to Mr. Hoffman. Judge Van Fleet has for several years past been one of the Judges of the Superior Court of Sacramento county, and has earned an enviable reputation for ability and integrity.

California, Nebraska and Virginia are the only States and Utah the only Territory that have thus far embarked in the production of beet sugar. Virginia is doing little more than experimenting in the business, but the output of sugar in California and Nebraska will be large this year. This State has exceptional advantages for success in this new field for enterprise and the number of beet sugar factories here promises to be large.

The London News says that the American farmers are masters of the wheat situation, and hopes they will use their power mercifully, alleging that to make a corner in the present condition of affairs in Europe would be "little short of fiendish." All the same, the American farmers will take the best prices they can get for their wheat, just as English shipmasters will charge the biggest rates they can get for carrying it.

During the last decade the population of Great Britain increased a trifle over fourteen per cent. During the same time the population of France increased only a trifle one per cent. During the same period the national debt of England was largely decreased while that of France was enormously increased. Wages are sixty per cent. higher, taking all trades and classes of work into consideration, in England than in France (vide the United States consular reports). Yet France is an ideal protection country and England is incurably afflicted with free trade.

That the entire country is a unit on the necessity for strict enforcement of the immigration laws, and for much greater restriction than now existing, is apparent from the tone of the press irrespective of locality or party affiliation. The reports just issued by the English customs department will be sure to strengthen this feeling. The figures show that during the first six months of the present year that out of 69,087 pauper immigrants who landed at British ports 53,177 were noted as en route to the United States. The time has come for putting up the bars and keeping them up against such undesirable additions to our population.

The fiasco attending the efforts of California to secure the headship of the horticultural department of the world's fair will always be a melancholy page in our history. Calumny and lies have pursued every successive aspirant from Maxwell to Shorb. This is a development that is mortifying and discouraging in the extreme. It is a disastrous thing for a State to know that envy and malice form so large an element in the composition of so many of her citizens. It seems to be conceded that with a little unison and good judgment California could surely have secured the prize. It would have meant much for our people, and was really deserved by the prompt and liberal manner in which our State met the situation by an appropriation that exceeds in amount that of any other State, with the exception of Illinois. It is to be hoped that we shall be able to know better how to go about such things in the future. The four gentlemen who have been in turn applicants for the position have had the equivocal satisfaction of knowing that there are in California men who delight in nothing so much as in pulling down their fellow citizens.

Arrested, Then Married.

Monday William Jones and Chester Smith, two young Canastota men, came to Utica to enjoy a day's pleasure. They devoted the day to seeing the sights and expended their money in various ways. They thereupon decided to pawn two watches which were in their possession, and by attempting to do this they fell into the clutches of the law upon suspicion. At the police station they said their sweethearts, Minnie Perry and Hattie Dailey, of Canastota, had given them the watches, and Chief of Police Dagwell used the telephone to find out whether the story was true. The young women immediately swore out warrants for the arrest of the young men, claiming they had simply loaned them the watches, and United States Marshal J. E. Stimson came to Utica Tuesday and took the twain back to their native town.

They were arraigned before Justice Northrop, and the young women were not able to establish their charge of larceny. It appeared, however, that while they had given their hearts freely and wholly to the young men, they had only loaned them the watches, but the crime of larceny was not proven, and the young men were discharged from custody.

At this point of the proceedings a consultation took place. Remorse was displayed on both sides, and some one of the four proposed that the whole affair could be nicely arranged in a few minutes by a couple of weddings. The parties most interested agreed to this pleasant way out of the mess, and Justice Northrop tied the double knot with dispatch. Miss Dailey became the bride of Mr. Jones and Miss Perry was wedded to Mr. Smith.—Utica Observer.

He Kept His Youth.

There was one man in New London before the college boat races had ended who was a refreshing treat to those who were in the Connecticut town. He had a son who was rowing in one of the big university boats, and he was an example of the paternal college spirit which may grow old, but which seldom dies. Here was a man sixty years old, who spent three weeks in New London following college oarsmen from one end of the town to the other. You might see him with a couple of young men whose arms were locked in his. No years could rob him of the sentiment which hung around his memory of his college days.

He was an undergraduate again with the undergraduates who were classmates of one of his sons. Whenever he saw a college man whom he knew, whether the youngster were 100 or 500 yards away, the old man would hurry off, crying after the other, "Halloa, old man, wait a minute." That college boy forty years a graduate was one of the most popular men to be found near the famous old four mile course on the historic Thames.—New York Tribune.

An Indiana Snake Charmer.

Joseph Freibur, of Cincinnati, has acquired a reputation in this vicinity as a snake charmer. Yesterday was his first opportunity to display his powers. He and Samuel Benz hired a rig, and accompanied by Mrs. Benz drove to Taswell, seven miles distant. En route they alighted to gather some wild raspberries, when they were attacked by rattlesnakes. They were in a rattlesnakes' den. A small terrier which accompanied them was bitten, and almost instantly swelled to twice his size. Mr. and Mrs. Benz fled and called for Mr. F. to follow, but he stood his ground, and the snakes, which appeared to gather from every quarter, began to huddle round his feet and act as if they had found a long lost friend.

Mr. F. now picked up one and ordered Mr. B. to get an old barrel at a house near by. This was procured and Mr. F. put the reptiles into it and brought them back to English. While in English Mr. F. gave several exhibitions of his power over the snakes, such as wrapping them round his neck and body, and stirring them around in the barrel with his naked arm.—Indianapolis Sentinel.

A Statue of Andreas Hofer.

The emperor Francis Joseph has visited the sculptor Natter's studio to inspect the statue which he is completing of Andreas Hofer, the heroic Tyrolese who defended his country and was shot by the French in 1809. The statue is to be the central figure of a monument to be erected on Mount Isel, facing Innsbruck, with a tablet bearing the inscription, "Fur Gott, Kaiser und Vaterland."

The figure of the handsome peasant in the picturesque Tyrolese costume will stand bearing on high the Austrian flag. The bearded face surmounted by the simple broad brimmed hat is copied from a good picture of Hofer taken during his life, and now the property of the Count of Meran, who has lent it to the sculptor. The emperor was very much pleased with the statue of the popular national hero.—London News.

A Companion Hero.

A day or two before Frederick Brokaw lost his life there was enacted at Washington, Pa., a scene more tragic and not less heroic than that. Walter Jones, aged fourteen years, and three younger companions went in bathing and got beyond their depth. Jones could swim, the others could not. But, instead of saving himself, as he could easily have done, he set about trying to rescue his drowning companions. He succeeded in piloting one of them safely to shore and was in the act of landing the others when the death grip of the boys about him bore him down and they all three perished together.—Pittsburg Commercial Gazette.

A Cow's Motherly Love Betrays Her Calf.

In a pasture on a farm in East Hartford, recently, one of the cows had a calf which no one of the farm hands was able to find the day after its birth. A search proved a failure until some one suggested a novel scheme. It was to bring a dog into the lot, when, in all probability, the cow would return to her calf to defend it. The dog was brought, and sure enough the cow started for a clump of bushes, and among them the calf was found, where the leaves had concealed it.—Hartford Courant.

A Queer Ocean Chase.

The ocean tug Britannia is engaged in a chase after a Maine vessel that is floating on the ocean with $20,000 worth of mahogany in her hold. That vessel is the Wyer G. Sargent, owned by William G. Gower, of Sedgewick, and abandoned in a storm last March, when about eighty miles off Hatteras. Since then she has drifted over 2,000 miles, crossing the gulf stream three times. At one period of her wild cruise she went 500 miles in twenty-two days. When last sighted, June 19, a part at least of the cargo was yet on board.—Philadelphia Ledger.

DOUBLE PHOTOGRAPHS.

Methods of Making a Figure Appear in Different Positions on One Plate.

The making of double pictures on one negative plate has been practiced by photographers for some time. It has been supposed that they were made by using reflections from mirrors to double the object to be photographed. Doubles may be made that way, but the reflection of the glass always shows, while the figures are invariably distorted. The most common way of making successful doubles is to extend the reach of the lens with a small box of the same depth of the focal depth of the lens. The inside of the box should be smooth and blackened a dead black, to prevent its appearance in the picture.

The front of the box is then divided equally by two small doors or flaps. In making the exposure open one flap, draw the slide from your plate holders and expose the plate. Then replace the slide, close the door that was open, let the person being photographed change position, open the door that was closed on the first exposure, leaving the other one closed, focus the object, draw the slide again and expose the plate again, and you have the same person in two different attitudes in the same negative, without any line of demarkation showing in the background.

Captain John N. Riker goes further than making doubles. He makes triples, quadruples or any number wanted, in the most grotesque and ghastly forms, on one plate. His system of making doubles on the same plate is more complicated than the one described. It is done by placing a kit or shutter over the plate in the holder and exposing a part at a time.

The kit is hinged in sections, the upper corners opening like little doors to the side. Decapitated heads are taken by opening the doors and just exposing the part of the plate directly behind, on which the head has been focused. After these exposures have been made the doors are closed and the subject is focused with outstretched hands. After proper focusing, the kit, except the upper corners, is drawn away and a full exposure made.

A few days ago Captain Riker walked into the house and tossed an envelope into Mrs. Riker's hands. On opening it she found a picture of the headless body standing upright with arms outstretched, and in each hand a platter on which lay a ghastly head—his own.

Captain Riker said that while he had known for many years the secret of making the pictures, he now desired to show simply what really is behind the making of alleged spook and spirit pictures. The secret of making the pictures has been known for many years also by Professor George R. Cromwell.—New York Sun.

An Improvement in Tunneling.

The frequent and serious difficulty experienced in the operations of tunneling, namely, the subsidence of the surface after the completion of the work, has lately been found to be preventable by a simple system resorted to by a London contractor, by the use of which no ground outside the actual section of the subway in hand need be disturbed. The system in question comprises a series of steel bars placed side by side with the excavation so as to form a complete temporary lining and support to the roof, and within this series of bars the permanent brick arch of the tunnel is built.

The bars used in this work are ten feet long, six inches wide, and two inches thick, being provided at their edges with longitudinal grooves, by means of which each is linked to the next one in such a way as to admit of separate longitudinal motion, and yet to prevent lateral separation. The bars are inserted in the same manner, as well as supported, as ordinary tunnel bars, the ground being excavated only the exact section of the tunnel, plus the trifling thickness of the bars.

After the brickwork has been built within them the bars are separately pushed forward by jackscrews as the earth is excavated for the succeeding length. The bars are provided with longitudinal tubular cavities, through which grouting or other filling material may be introduced from time to time to fill the space left vacant by the advancing bars between the top of the lining arch and the earth above and around, this preventing any subsidence.—New York Sun.

Maine's Female Tramp.

A city female tramp of giant stature is annoying some of our western Maine towns. She comes to the farmhouses, generally after dark, and begs to be allowed to stay all night. Her request is generally granted, though unwillingly, for her person is very repulsive. She always carries several large bundles covered with a waterproof. In one of them are a clean dress and whole shoes which she saves to put on in Boston. They are too good for tramping in Maine.

To all appearance she hasn't a relative in the world, and prefers this roving life to any kind of labor, for she is frequently offered a chance to do housework at farmhouses, but always declines. Once she did work for a day or two, but declared she'd rather walk and beg. She expects to go to the poorhouse, but not until she can no longer travel. It is said that to hear her talk without looking at her one would imagine her a lady, so correct is her language.—Lewiston Journal.

Returned After Thirty Years.

The return to Milwaukee of Kyrle A. Sidley after an absence of forty-one years is to his relatives almost as if the dead had come to life. The father of Mr. Sidley was a physician and druggist in Milwaukee in the forties. Kyrle Sidley spent most of his youth in the east, but was in Milwaukee during the year 1849. The next year he went east and shipped as a sailor.

In 1861 Mr. Sidley went to Australia. For some time his relatives heard from him regularly. Suddenly the correspondence ceased, and for thirty years he was mourned as dead. As was afterward learned Mr. Sidley lost everything by fire, the addresses of his relatives being destroyed. The families had moved and his letters did not reach their proper destination. Likewise Mr. Sidley had moved and the letters sent by his family failed to reach him.

Three years ago he employed a lawyer to find his relatives, and after a few months he was in communication with them. This year Mr. Sidley, now sixty-two years of age, decided to visit his relatives in Milwaukee, and he arrived there this week from Australia. He found two of his sisters living there, and a brother came from New York to meet him. After his visit Mr. Sidley will return to Australia.—Chicago Tribune.

WHERE BEAVERS LIVE.

KILGORE'S BIG FARM INHABITED BY BEAVERS FOR MARKET.

One Man Who Hopes to Grow Rich Out of the Scarcity of Sealskins—A Queer Kind of Live Stock to Raise—Beavers Are as Social as Pigs.

"You have never heard of Dick Kilgore's beaver farm? That's queer." The speaker was old "Mud Cat" Williams, who has been a fisherman in the southeast Georgia streams for forty years.

"Dick's going to make a pile of money," he continued.

"You see, Dick has about 200 beavers, young and old, but there are not more than twenty to be killed for their skins this year. It's a new industry, an experiment with him, and he don't want to kill any except the surplus males for the present. But suppose you go out with me and see the farm."

A drive of ten miles through the swamps along Briar creek and the Kilgore place, or Beaver Dam Hollow, was reached.

"Now, here's the farm," said Williams, pointing to the creek, across which every few yards were rough dams, and above them, in the almost still water, were mounds of earth, rocks and sticks coming out a few feet above the surface of the water.

"You know beavers don't show themselves much in the day. They do their work at night. Dick owns about 1,000 acres running up and down the creek. He has the land posted and keeps everybody off, but it is not fenced. Fences would not keep the beavers in, but there is no danger of them going off, for this is a natural home for them, and every beaver here knows old Dick. He feeds them every night, and they come, when he calls, like hogs."

Kilgore has been a farmer down here for years, and beavers have been in the creek for all time, but it was not until recently that he began to protect and care for them with a view to making beaver raising a regular business. It will be a profitable business, for the scarcity of sealskins has increased the value of beaver skins, and they will continue to increase year by year. A few years ago beaver skins sold as low as four dollars per skin, but they should now bring at least ten dollars each.

VALUE OF BEAVER SKINS.

Beaver skins sent to London and properly dyed a seal brown are splendid imitations of the seal. The seal fur, you know, is naturally a gray. The reason I say send beaver skins to London is because that is the only place in the world, it seems, that furs can be properly dyed. However, the fur of the beaver is naturally a reddish brown, and is a beautiful fur.

The beaver is a queer little animal. When full grown it weighs from fifty to sixty pounds. Its hind legs are its principal propellers, both when in and out of the water. The hind feet are webbed and the front ones have claws, which are about as convenient to the beaver as a monkey's hands are to him. They can carry stones and sticks about in them with ease. In the water especially a beaver can carry a quantity of freight, for he swims with his hind feet and carries his load in his mouth.

Just after dark Mr. Kilgore went down to the edge of the stream to feed the beavers.

"I don't often feed them in the summer," he said, "for they get all they want along the banks of the stream. They eat bark off the trees, and at this season there is an abundance of fresh, tender bark and grasses and roots. In the winter they lay up a supply of food for themselves along the banks and in their holes in the dams, which they build of roots and sticks and stones. I feed them nearly all the time in winter, when they flock together and unite in building dams, but in summer they scatter—every fellow for himself—and I only call them up occasionally, just enough to keep them tame. As they are scattered off for miles around, but few will come to a call for food."

HOW THE BEAVER WORKS.

But there were a dozen romping about in the stream then, and in a few minutes quite a number had gathered. Among them were a score or more little fellows born only a month ago. The females have from two to six young each annually, and as a consequence the families increase very rapidly.

A mixture of green food and a little grain was thrown out on the ground to the herd of little animals, and they scampered around and picked it up like so many hogs. Some of them would gather up an ear of corn or a young cornstalk and dive off with it into the stream. They were tame, but, like hogs, would scamper off if you tried to catch one.

A beaver seems to be almost human in intelligence. They actually gnaw down young trees, drag them into a stream and let them float down, swimming with them to the place they want to build a dam. Then they will drag stones and roots and sticks and grasses, and indeed everything used to dam a stream, until they have practically as substantial a dam as a man could construct. They do this to make the water above deep enough to sport in and placid enough to build their homes of sticks and mud in, which are very warm and comfortable in winter and large enough for a family of eight or ten.

The beaver's principal tool in building these homes is his tail. The tail is a scaly, trowel shaped appendage about ten inches long and four or five inches broad. The beaver's main strength is in the tail. He can take up soft mud on it, place it against the sticks and stones used to build his home, and pat it down with the tail as firmly and as well as a man could do the work with a trowel. Besides its fur, which is the main revenue from the beaver, it furnishes castoreum, a product used in medicines, and its flesh is a food that when properly prepared is delicious.—Bascom (Ga.) Cor. St. Louis Globe-Democrat.

His Nose Cut Off by a Barber.

Letter Carrier G. W. Yost went into a Western Addition barber shop to get shaved. His face was lathered and the barber was strapping the razor on a strap affixed to the chair in which Mr. Yost reclined. Suddenly, by some unaccountable slip of the barber's arm, the razor flashed by Yost's face and severed his nose completely. The poor young man will be disfigured for life, and when he saw his nose lying on the floor he first wept and then fainted from loss of blood. Of course the barber apologized.—San Francisco Report.

A July Episode.

He stood before the shop window gazing at the display of fireworks, with big, bright eyes. He was a little fellow, about seven or eight years old, and below the usual size for his age. After he had stood there long enough to count all the packs of firecrackers and imagined the grand time he could have with even a dozen of these noisy red sticks, he turned away with a tiny, wistful sigh, and walked up to a fruit stand that was close by.

"Gi'me one yer bestestest oranges an' a peach," he said. The Italian looked at him; first at the dirty little face, then down at the bare feet, blue from the cold pavement and blackened with mud. The little fellow felt the contempt in the look given him, and drawing himself up with all the dignity worthy of a perfectly dressed gentleman, extended a silver ten cent piece and said: "I got the money. Come, hurry up, now; my time's val'able."

He received the orange and peach, which he tucked into the pockets of his ragged trousers without taking a bite. Just then another small street arab came on the scene.

"What's yer been getten—firecrackers?" he asked in eager tones.

"Naw," replied the other. "Me little sister's sick, an' the dispensary doctor says she ain't a-goin' ter see no Fourth, so I thought I'd give 'er a kinder s'prise picnic afore th' Fourth comes."

"An' yer not goin' ter have no firecrackers?" ejaculated the other boy.

"'Course not," was the reply, and the noble little fellow marched off whistling "Comrades" in a trembling key, which betrayed that the victory over self indulgence had been a hard won battle.—New York Advertiser.

Coal in a River.

During the several freshets which have occurred in the Susquehanna river the past spring a vast amount of "culm" from the anthracite coal fields floated down the river with the debris coming out of the North Branch and its tributaries. Large quantities of this culm or coal dirt, which was washed from the huge banks of that material at the coal breakers, lodged at the heads of the several islands opposite and above the city, and recently parties have secured tons of it by digging it out of the sand and screening it, producing a good quality of pea and chestnut coal for boiler use.

A considerable quantity of egg or larger sized coal is also gathered from the bottom of the river, where it has lodged among the gravel, and is removed in a perfectly clean state. All the larger sizes of coal have become more or less rounded by the action of the water. Tons of this material are gathered during the summer when the river is low.—Harrisburg Star.

A Dog's Sympathy.

Saturday afternoon a case of remarkable sympathy on the part of a dog was witnessed on Church street, near the postoffice. A small dog strayed out into the street and was run over by a passing vehicle. He was not permanently crippled, but appeared hurt across the back, and at first lay howling and squirming in the street. Another dog of an entirely different breed was standing on the sidewalk when the accident occurred. Promptly he went to the assistance of his injured companion, and by pushing him with his nose aided him in rising, and then escorted him to the sidewalk with every possible demonstration of mute sympathy, and stood by him until the partly paralyzed animal was able to hobble off. Persons who witnessed it expressed astonishment at the unusual spectacle.—West Chester (Pa.) News.

To Keep Insects Off from Trees.

The tying of a piece of wool round a tree stem to keep down the bugs and vermin is a poor idea, because it is based on the supposition that all these nuisances ascend from the ground, whereas, in most instances, the eggs are laid in the foliage above the supposed guard. The only actual preventive involves a delicate operation, which, however, can be successfully performed by a man with a steady hand. It consists in boring a small hole in the tree near the ground and filling it with sulphur. The sap carries this over the tree and there will be few insects settle or crawl on any part of it. The spring is the best time to do this, but with a strong healthy tree it can be done now with perfect safety.—St. Louis Globe-Democrat.

Seats a Hundred Francs.

Three hundred seats at a hundred francs per seat, and all of them filled! This, briefly, was the result of the recent ultra fashionable charity performances given by the Duchesse d'Uze. The great feature of the entertainment was a magic lantern display by a noble amateur, whose highly original slides are still the talk of aristocratic Paris.—London Figaro.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.

COURT NOTES.

Geo. M. Gill, Superior Judge.

FRIDAY, August 14, 1891.

A. Stecker vs. A. Fyte et als.—Notice of motion to set aside amended demurrer. Filed plaintiff's brief answering demurrer.

SATURDAY, August 15, 1891.

P. Reddy vs. estate of J. C. Eddy, deceased—Filed demurrer to complaint.

THURSDAY, August 20, 1891.

A. Stecker vs. Andrew Fyte et als.—Filed stipulation fixing times for filing briefs in submission of demurrer.

D. Hessian was down from Big Pine early in the week.

Social dance at Mairs' Hall to-night. A good time is sure to be had.

W. H. Uhlemeyer and E. Spencer of Big Pine visited town during Tuesday.

George Gilliam showed the light of his countenance in town a few days ago.

L. Wood is erecting a new warehouse near his store building. H. P. Cartier is doing the carpenter work.

J. Vagt is working steadily on the race-track at his place. It will soon be in good condition for speeding.

Frank Densmore Esq. accompanied Superior Judge Gill to San Francisco and will remain during the latter's stay there.

Mrs. Wm. Rowan of Bishop is visiting at Independence with her brother, County Clerk Yandell.

Allen Shannon, George Huckaby and George Drake arrived from Bishop to-day on land business.

Judge Hannah still continues very ill, but is resting easier to-day and we hope to soon see him around again.

A. Church and family will return to Hawthorne to-morrow after a vacation spent at Independence and vicinty.

Mr. and Mrs. N. E. Conklin have been visiting in town during the week. Mrs. Conklin is a member of the Board of Education now in session.

O. I. Mairs has purchased the residence owned by C. S. Swan in Independence and the latter started for Redlands, San Bernardino county, last Saturday.

We don't mind telling a joke, if it is on ourself. If you doubt it, ask Jack Welsh about the bear—you needn't mind saying about old Ward.

The Board of Supervisors of Kern county have ordered that a reward of $250 be offered for the arrest and conviction of Long John for complicity in the murder of John L. Powers and Oliver McCoy.

A party of Government Entomologists camped near town on Tuesday night and next day went south to join the main outfit near Mt. Whitney. Mr. and Mrs. Zumwalt of Visalia were traveling with them.

The stallion Nelson lowered his record at Independence, Iowa, last Saturday to 2:10. The fact of his trotting so fast so early in the season makes it extremely doubtful if Maud S. will carry the banner at the end of the year.

The Methodist Conference, Nevada Mission, will be held at Bishop. It was held there six years ago, Bishop Fowler being present, and the ministerial brethren expressed themselves as being much pleased with their reception at that place.

A cloud burst occurred at Hawthorne on last Saturday afternoon. The main street was filled with water and considerable damage done to the railroad track. One of the washouts was ninety feet wide. Train No. One was delayed several hours about three miles north of Hawthorne.

The Board of Education met at Independence on Tuesday all the members as follows, being present: J. H. Shannon, H. H. Howell, Mrs. Etna Conklin, A. E. Janvier and C. W. Rathbun. Miss Lottia Armstrong, of Reno, is taking the examinations for a first-grade certificate.

The Directors of the 18th District Agricultural Association met at Independence last Saturday. There were only five members present, Robinson and Enos being absent and Connelly too ill to attend. Various minor matters relating to the coming fair were attended to and the Board adjourned until September 19th.

When A. D. Gilbert returned from Bakersfield recently he was accompanied by Messrs. Bacon and Edmiston of Tulare county. The result of their trip was that they purchased from Mr. Gilbert his half interest in the 8-mile ranch, the other half of which is owned by J. W. Robinson, of Carson. On Wednesday the parties named returned from Tulare with their families, numbering twelve persons in all and will make their homes in Owens Valley.

Senator Tom Flint, Grand Vice-President of the N. S. G. W., will pay an official visit to Mt. Whitney Parlor to-night. The boys have arranged a banquet in his honor which will take place at the Norman House and will be attended by many of our leading citizens. After a meeting of the Parlor a social hop will be given in honor of the visitor, to which all are cordially invited. The Native daughters have arranged some elegant table pieces and altogether the arrangements will be most carefully made. Mr. Flint in the natural order will next year fill the President's chair and is a young Californian who reflects much credit upon the State as well as the Order of Native Sons.

Correspondence

ED. INDEPENDENT:—I again take the liberty of addressing you on the subject of the coming fair. I am gratified to find that my memory was not at fault in the facts stated in my last letter. The *Index*, in its review of my article, completely verifies the fact that the present amounts offered for racing purses are the smallest yet given by the Association. The list stands as follows:

FAIR	GROSS	NET	RACES	AV'GE
1. 1887.	$775	$542 50	8	$67 50
2. 1888.	850	595 00	10	59 50
3. 1889.	850	595 00	7	85 00
4. 1890.	900	630 00	8	78 75
5. 1891.	750	525 00	8	65 62

I have taken the above from the *Index*, with the exception of 1887, which is given at $675. I am trusting to memory but am positive these figures are wrong and think that the difference must be that the special stallion purse of $100, won by Billy Kingsley, is not added in. I regret that the review referred to calls forth more discussion, as it does not alter existing errors. The question simply resolves itself into this: Do, or do not, good races prove an attraction at fairs? I am a lover of the sport and therefore biassed, but I contend that without racing the main attraction at fairs is lacking. Granting that this is true an important element of attraction will be missing for there will be no racing. I make this statement carefully and fully believe that the prediction will prove true, while I earnestly hope I may be mistaken. Hitherto there have been two fairs in the Valley and the same horses attended both of them, needing no additional preparation. This year there is but but one fair, the purses are small, and the conditions of entering are such that I do not believe a single race will fill on the 19th of September. The *Index* says that $500 is to be paid for the use of the race track four days. Now, permit me, does not this seem—well, incongruous? The sum of $500 is given for the use of a track four days, paid out of the money given by the State, and but $525 given to the horsemen. This certainly looks a trifle queer. Further: "There is no good reason why the race-horse-men should be dealt with any more liberally than other classes. As a rule the men who are doing most to improve the stock of this Valley do not indulge largely in horse racing." It is not a question of liberality to horsemen; it is simply a matter of what will attract visitors to the fair. As to improving the breed of horses in the Valley, before the first fair of 1887 there was not a first-class thoroughbred in the Valley; now there are a number. The first trotting race was won by Echo in 3:36; the next year by Ned in 3:20; the following year by Patchen in 2:55 and last year by Fred B. in 2:44. This certainly looks like improvement, and all other races, particularly the colts, have improved in proportion. There are now in the county two as well bred thoroughbred stallions as can be found anywhere, and two standard bred stallions with the best blood in the world in their veins. Any candid person, looking backward, will at once admit that the despised "race-horsemen" have certainly added vastly to the improvement of the stock in the District. As you know I have no special axe to grind beyond the general good, and believing that free discussion, in a fair minded spirit, will do much toward improvement, I thank you for lending your valuable space to me, and promise not to intrude too often.

C.

Standing In.

The last issue received of the Kern Valley *Democrat* contains the following:

"The INYO INDEPENDENT insists that a reward is due to the persons who captured the murderer of Officer Powers, and that journal takes a contemporary to task for opposing the suggestion. We are inclined to agree with the INDEPENDENT. A great service has been done this county by persons not particularly interested in our well being. If no capture had been made undoubtedly a reward would have been offered. What reason can there be, then, for refusing to reward a meritorious deed which was accomplished without the incentive of a financial consideration? It would be a graceful act on the part of Kern county to pay the captors and pay them liberally."

A Quick Cure For Rheumatism.

In many cases persons subject to rheumatism, have got prompt relief from pain by applying Chamberlain's Pain-Balm. The relief it affords is alone worth many times its cost, which is but 50 cents, and its continued application effects a complete cure. For sale by A. K. EUGLEY, Big Pine.

Well Merited Praise.

In almost every neighborhood there is some one or more persons whose lives have been saved by Chamberlain's Colic, Cholera and Diarrhœa Remedy, or who have been cured of chronic diarrhœa by it. Such persons take special pleasure in recommending the remedy to others. The praise that follows the introduction and use makes it very popular. 25 and 50 cent bottles for sale by A. K. EUGLEY, Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

A heavy burden—all the ills and ailments that only female flesh is heir to. It rests with you whether you carry it or lay it down. You can cure the disorders and derangements that prey upon your sex, with Dr. Pierce's Favorite Prescription. It's a legitimate medicine, carefully compounded by an experienced physician, and adapted to woman's delicate organization.

For all organic displacements and weaknesses, accompanied by weak back, bearing-down sensations, and for all uterine diseases, it's a positive specific. It's *guaranteed* to give satisfaction, in every case. If it doesn't, you've only to ask for your money and it's cheerfully refunded. If it does, you'll want to ask for nothing more. It's the *cheapest* medicine you can use, because you only pay for *the good* you get. It improves digestion, enriches the blood, invigorates the system, and produces refreshing sleep.

A lawyer's reputation clings to him to the last. A north-country paper speaks of a legal gentleman "who lies at death's door."

CHANGES OF CLIMATE

Kill more people than is generally known. Particularly is this the case in instances where the constitution is delicate, and among our immigrant population seeking new homes in those portions of the West, and where malarial and typhoid fevers prevail at certain seasons of the year. The best preparative for a change of climate, or of diet and water which that change necessitates, is Hostetter's Stomach Bitters, which not only fortifies the system against malaria, a variable temperature, damp, and the debilitating effects of tropical heat, but is also the leading remedy for constipation, dyspepsia, liver complaint, bodily troubles specially apt to attack emigrants and visitors to regions near the equator, mariners and tourists. Whether used as a safeguard by sea voyagers, travelers by land, miners, or of agriculturists in newly populated districts, this fine specific has elicited the most favorable testimony.

The two "captains" who are racing across the Atlantic in dories seems to be engaged in a competitive suicide.

DEAFNESS CAN'T BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that we cannot cure by taking Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by all Druggists, 75c.

Revolution gives a chance for changes. When streets are turned upside down the mud gets on top.

VIRTUE IN BRANDRETH'S PILLS.

There is more virtue in one BRANDRETH PILL than in a bottle of the best Sarsaparilla. The solid extract of Sarsaparilla contained in BRANDRETH'S PILLS in combination with other Vegetable Extracts, makes them the strongest blood purifier known. One or two at night for a week will remove all pimples and eruptions of the skin and make the complexion fair as an infant's.

BRANDRETH'S PILLS are purely vegetable, absolutely harmless, and safe to take at any time.

Sold in every drug and medicine store, either plain or sugar coated.

Youth is the only fault that every man is sure to outgrow, and when he outgrows that he developes a worse one—age.

For the Cure of a Cough or Sore Throat, "*Brown's Bronchial Troches*" are a simple remedy.

Champagne has gone up. This fact will prove a serious obstable to its going down.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

When it comes to house-cleaning, there is only here and there a man who seems to be truly religious.

A LETTER

From the Mother of Miss Jessie Bonestesle.

Rochester, N. Y., April 22, 1886.

GENTLEMEN:—It is with pleasure I add my testimonial to the many well-known cures which your most excellent remedy has effected. For more than two years I was a great sufferer with rheumatism, being scarcely free from pain during the time. I found no relief until I procured Dr. Pardee's remedy, and it cured me completely. It is now two years since I discontinued its use and I have had no symptoms of the disease since. I know from my own and from the experience of many others also, that it will cure any case of rheumatism or neuralgia.

I am, very truly yours,

NESTEELE.

THE SPLENDID SPUR.

Being Memoirs of the Adventures of Mr. John Marvel, a Servant of His late Majesty King Charles I, in the years 1642-3: written by himself.

EDITED IN MODERN ENGLISH BY "Q."

CHAPTER XIX.

THE ADVENTURE OF THE HEARSE.

The day spring came at last, and in the sick light of it I went down to the cottage for spade and pickax. In the tumult of my senses I hardly noted that our prisoner, the dragoon, had contrived to slip his bonds and steal off in the night.

And then Delia, seeing me return with the sad tools on my shoulder, spoke for the first time:

"First, if there be a well near, fetch me two buckets of water, and leave us for an hour."

Her voice was weary and chill, so that I dared not thank her, but did the errand in silence. Then, but a dozen paces from the spot where Joan's father lay, I dug a grave and strewed it with bracken, and heather, and gorse petals, that in the morning air smelt rarely. And soon after my task was done, Delia called me.

In her man's dress Joan lay, her arms crossed, her black tresses braided, and her face gentler than ever 'twas in life. Over her wounded breast was a bunch of some tiny pink flower that grew about the tor.

So I lifted her softly as once in this same place she had lifted me, and bore her down the slope to the grave, and there I buried her, while Delia knelt and prayed, and Molly browsed, lifting now and then her head to look.

When all was done, we turned away, dry eyed, and walked together to the cottage. The bay horse was feeding on the moor below; and, finding him still too lame to carry Delia, I shifted the saddles, and, mending the broken rein, set her on Molly. The cottage door stood open, but we did not enter; only looked in; and seeing Jan Tergagle curled beside the cold hearth, left him so.

Mile after mile we passed in silence, Delia riding and I pacing beside her with the bay. At last, tortured past bearing, I spoke:

"Delia, have you nothing to say?"

For a while she seemed to consider; then, with her eyes fixed on the hills ahead, answered:

"Much, if I could speak; but all this has changed me somehow—'tis, perhaps, that I have grown a woman, having been a girl—and need to get used to it and think."

She spoke not angrily, as I looked for, but with a painful slowness that was less hopeful.

"But," said I, "over and over you have shown that I am nought to you. Surely"—

"Surely I am jealous? 'Tis possible—yes, Jack, I am but a woman, and so 'tis certain."

"Why, to be jealous you must love me!"

She looked at me straight, and answered very deliberate:

"Now that is what I am far from sure of."

"But, dear Delia, when your anger has cooled"—

"My anger was brief; I am disappointed, rather. With her last breath, almost, Joan said you were weaker than she; she loved you better than I, and read you clearer. You are weak. Jack"—she drew in Molly, and let her hand fall on my shoulder very kindly—"we have been comrades for many a long mile, and I hope are honest, good friends; wherefore I loathe to say a harsh or ungrateful seeming word. But you could not understand that brave girl, and you cannot understand me; for as yet you do not even know yourself. The knowledge comes slowly to a man, I think; to a woman at one rush. But when it comes, I believe you may be strong. Now leave me to think, for my head is all of a tangle."

Our pace was so slow (by reason of the lame horse) that a great part of the afternoon was spent before we came in sight of the House of Gleys. And truly the yellow sunshine had flung some warmth about the naked walls and turrets, so that Delia's home-coming seemed not altogether cheerless. But what gave us more happiness was to spy, on the blue water beyond, the bright canvas of the Godsend, and to hear the cries and stir of Billy Pottery's marines as they hauled down the sails.

And Billy himself was on the lookout with his spyglass. For hardly were we come to the beach when our signal—the waving of a white kerchief—was answered by another on board, and within half an hour a boat puts off, wherein, as she drew nearer, I counted eight fellows.

They were (besides Billy) Matt. Soames, the master; Gabriel Hutchins, Ned Masters, the black man Sampson, Ben Halliday and two whose full names I have forgot—but one was called Nicholas. And, after many warm greetings, the boat was made fast, and we climbed up along the peninsula together, in close order, like a little army.

All this time there was no sign or sound about the House of Gleys to show that any one marked us or noted our movements. The gate was closed, the windows stood shuttered, as on my former visit; even the chimneys were smokeless. Such effect had this desolation on our spirits that, drawing near, we fell to speaking in whispers, and said Ned Masters:

"Now a man would think us come to bury somebody!"

"He might make a worse guess," I answered.

Marching up to the gate I rang a loud peal on the bell, and, to my astonishment, before the echoes had time to die away, the grating was pushed back and the key turned in the lock.

"Step ye in—step ye in, good folks! A sorry day—a day of sobs an' tears an' afflicted blowings of the nose—when the grasshopper is a burden an' the mourners go about seeking whom they may devour the funeral meats. Y' are welcome, gentlemen."

'Twas the voice of my one eyed friend as he undid the bolts; and now he stood in the gateway with a prodigious black sash across his canary livery, so long that the ends of it swept the flagstones.

"Is Master Tingcomb within?" I helped Delia to dismount, and gave our two horses to a stable boy that stood shuffling some paces off.

"Alas!"—the old man heaved a deep sigh, and with that began to hobble across the yard. We trooped after, wondering. At the house door he turned:

"Sirs, there is cold roasted capons, an' a ham, an' radishes in choice profusion for such as be not troubled wi' the wind; an' cordial wines—alack the day!"

He squeezed a frosty tear from his one eye, and led us to a large bare hall, hung round with portraits; where was a table spread with a plenty of victuals, and horn handled knives and forks beside plates of pewter; and at the table a man in black, eating. He had straight hair and a sallow face; and looked up as we entered, but, groaning, in a moment fell to again.

"Eat, sirs," the old servitor exhorted us; "alas! that man may take nothing out o' the world!"

I know not who of us was most taken aback. But noting Delia's sad, wondering face, as her eyes wandered round the neglected room and rested on the tattered portraits, I lost patience.

"Our business is with Master Hannibal Tingcomb," said I, sharply.

The straight haired man looked up again, his mouth full of ham.

"Hush!"—he held his fork up, and shook his head sorrowfully, and I wondered where I had seen him before. "Hast thou angel's wings?" he asked.

"Why, no, sir; but the devil's own boots—as you shall find if I be not answered."

"Young man—young man," broke in the one eyed butler, "our minister is a good minister, an' speaks roundabout as such; but the short is, that my master is dead, an' in his coffin."

"The mortal part," corrected the minister, cutting another slice.

"Ay, the immortal is a-trippin' it i' the New Jerroosalem; but the mortal was very lamentably took wi' a fit three days back—the same day, young man, as thou camest wi' thy bloody threats."

"A fit?"

"Ay, sir, an' verily such a fit as thou thyself witnessed. 'Twas the third attack, an' he cried, 'Oh!' he did, an' 'Ah!'—just like that. 'Oh!' and then 'Ah!' Such were his last dyin' speech. 'Dear master,' says I, 'there's no call to die so hard;' but might so well ha' whistled, for he was dead as nails. A beautiful corpse, sirs, dang my buttons!"

"Show him to us."

"Willingly, young man." He led the way to the very room where Master Tingcomb and I had held our interview. As before, six candles were burning there, but the table was pushed into a corner, and now their light fell on a long, black coffin, resting on trestles in the center of the room. The coffin was closed and studded with silver nails; on the lid was a silver plate bearing these words written: "Hannibal Tingcomb, MDCCLIII," with a text of Scripture below.

"Why have you nailed him down?" I asked.

"Now where be thy bowels, young man, to talk so unfeelin'? An' where be thy experience, not to know the ways o' the blessed dead in summer time?"

"When do you bury him?"

"To-morrow forenoon. The spot is two mile from here." He blinked at me, and hesitated for a minute. "Is it your purpose, sirs, to attend?"

"Be sure of that," I said, grimly. "So have beds ready to-night for all our company."

"All thy—! Dear sir, consider; where are beds to be found? Sure, thy mariners can pass the night aboard their own ship?"

"So then," thought I, "you have been on the lookout;" but Delia replied for me:

"I am Delia Killigrew, and mistress of this house. You will prepare the beds as you are told." Whereupon what does that decrepit old sinner but drop upon his knees.

"Mistress Delia! Oh, goodly feast for this one poor eye! Oh, that Master Tingcomb had seen this day!"

I declare the tears were running down his nose; but Delia marched out, cutting short his hypocrisy.

In the passage she whispered:

"Villainy, Jack!"

"Hush!" I answered, "and listen: Master Tingcomb is no more in that coffin than I."

"Then where is he?"

"That is just what we are to discover." As I said this a light broke on me. "By the Lord," I cried, "'tis the very same!"

Delia opened her eyes wide.

"Wait," I said; "I begin to touch ground."

We returned to the great hall. The straight haired man was still eating, and opposite sat Billy, that had not budged, but now beckoning to me, very mysterious, whispered in a voice that made the plates rattle:

"That's—a damned—rogue!"

'Twas discomposing, but the truth. In fact, I had just solved a puzzle. This holy speaking minister was no other than the groom I had seen at Bodmin fair holding Master Tingcomb's horses.

By this time the sun was down, and Delia soon made an excuse to withdraw to her own room. Nor was it long before the rest followed her example. I found our chambers prepared, near together, in a wing of the house at some distance from the hall. Delia's was next to mine, as I made sure by knocking at her door; and on the other side of me slept Billy with two of his crew. My own bed was in a great room sparely furnished, and the linen indifferent white. There was a plenty of clean straw, though, on the floor, had I intended to sleep—which I did not.

Instead, having blown out my light, I sat on the bed's edge, listening to the big clock over the hall as it chimed the quarters, and waiting till the fellows below should be at their ease. That Master Tingcomb rested under the coffin lid I did not believe, in spite of the terrifying fit that I could vouch for. But this, if driven to it, we could discover at the grave. The main business was to catch him; and to this end I meant to patrol the buildings, and especially watch the entrance, on the likely chance of his creeping back to the house (if not already inside) to confer with his fellow rascals.

As 11 o'clock sounded, therefore, I tapped on Billy's wall, and finding that Matt. Soames was keeping watch (as we had agreed upon), slipped off my boots. Our rooms were on the first floor, over a straw yard, and the distance to the ground an easy drop for a man. But wishing to be silent as possible, I knotted two blankets together and, strapping the end round the window mullion, swung myself down by one hand, holding my boots in the other.

I dropped very lightly, and looked about. There was a faint moon up and glimmering on the straw; but under the house was deep shadow, and along this I crept. The straw yard led into the court before the stable, and so into the main court. All this way I heard no sound, nor spied so much as a speck of light in any window. The house door was closed, and the bar fastened on the great gate across the yard. I turned the corner to explore the third side of the house.

Here was a group of outbuildings jutting out, and between them and the high outer wall a narrow alley. 'Twas with difficulty I groped my way here, for the passage was dark as pitch, and rendered the straighter by a line of ragged laurels planted under the house; so that at every other step I would stumble, and run my head into a bush.

I had done this for the eighth time, and was cursing under my breath, when on a sudden I heard a stealthy footfall coming down the alley behind me.

"Master Tingcomb, for a crown!" thought I, and crouched to one side under a bush. The footsteps drew nearer. A dark form parted the laurels; another moment, and I had it by the throat.

"Uugh—ugh—grr! For the Lord's sake, sir!"—

I loosed my hold; 'twas Matt. Soames. "Your pardon," whispered I; "but why have you left your post?"

"Black Sampson is watchin', so I took the freedom—ugh! my poor windpipe!—to—to"—

He broke off to catch me by the sleeve and pull me down behind the bush. About twelve paces ahead I heard a door softly opened and saw a shaft of light flung across the path between the glistening laurels. As the ray touched the outer wall I marked a small postern gate there, standing open.

Cowering lower, we waited while a man might count fifty. Then came footsteps crunching the gravel, and a couple of men crossed the path, bearing a large chest between them. In the light I saw the handle of a spade sticking out from it; and by his gait I knew the second man to be my one eyed friend.

"Woe's my old bones!" he was muttering, "here's a fardel for a man o' my years!"

"Hold thy breath for the next load!" growled the other voice, which as surely was the good minister's.

They passed out at the small gate, and by the sounds that followed we guessed they were hoisting their burden into a cart. Presently they recrossed the path and entered the house, shutting the door after them.

"Now for it!" said I in Matt.'s ear. Gliding forward, I peeped out at the postern gate, but drew back like a shot.

I had almost run my head into a great black hearse, that stood there with the door open, backed against the gate, the heavy plumes nodding above it in the night wind.

Who held the horses I had not time to see; but, whispering to Matt to give me a leg up, clambered inside. "Quick!" I pulled him after, and crept forward. I wondered the man did not hear us; but by good luck the horses were restive, and by his maudlin talk to them I knew he was three parts drunk—on the funeral wines doubtless.

I crept along and found the tool chest stowed against the farther end; so, pulling it gently out, we got behind it. Though Matt. was the littlest man of my acquaintance, 'twas the work of the world to stow ourselves in such compass as to be hidden. By coiling up our limbs we managed it; but only just before I caught the glimmer of a light and heard the pair of rascals returning.

They came very slow, grumbling all the way; and, of course, I knew they carried the coffin.

"All right, Sim?" asked the minister.

"Ay," piped a squeaky voice by the horses' heads ('twas the shuffling stable boy)—"ay, but look sharp! Lord, what sounds I've heard! The devil's i' the hearse, for sure!"

"Now, Simmy," the one eyed gaffer expostulated, "thou doesn't think the smoky king is a-took in, same as they poor folks up stairs! Tee-hee! Lord, what a trick!—to come for Master Tingcomb, an' find—aw dear! aw, bless my old ribs, what a thing is humor!"

"Shut up!" grunted the minister. The end of the coffin was tilted up into the hearse.

"Push, old varmint!"

"Ay—push! push! Where be my young, active sinews? What a shriveled garment is all my comeliness! 'The devil inside,' says Simmy—haw, haw!"

"Burn the thing! 'twon't go in for the tool box. Push, thou cackling old worms!"

"Now so I be, but my natural strength is abated. 'Yo-heave ho!' like the salted seafardingers up stairs. Push! push!"

"Oh, my inwards!" groans poor Matt. under his breath, into whom the chest was squeezing sorely.

"Right at last!" says the minister. "Now, Simmy, my lad, hand the reins an' jump up. There's room, an' you'll be wanted."

The door was clapped to, the three rogues climbed upon the seat in front, and we started.

I hope I may never be called to pass such another half hour as that which followed. As soon as the wheels left turf for the hard road, 'twas jolt, jolt, all the way; and this lying mainly down hill, the chest and coffin came grinding into our ribs, and pressing till we could scarcely breathe. And I dared not climb out over them, for fear the fellows should hear us; their chuckling voices coming quite plain to us from the other side of the panel. I held out and comforted Matt. as well as I could, feeling sure we should find Master Tingcomb at our journey's end. Soon we climbed a hill, which eased us a little, but shortly after were bumping down again, and suffering worse than ever.

"Save us," moaned Matt.; "where will this end?"

The words were scarce out when we turned sharp to the right, with a jolt that shook our teeth together, rolled for a little while over smooth grass, and drew up.

I heard the fellows climbing down, and got my pistols out.

"Simmy," growled the minister, "where's the lantern?"

There was a minute or so of silence, and then the snapping of flint and steel and the sound of puffing.

"Lit, Simmy?"

"Ay, here 'tis."

"Fetch it along then."

The handle of the door was turned, and a light flashed into the hearse.

"Here, hold the lantern steady! Come hither, old Squeaks, and help wi' the end."

"Surely I will. Well was I called Young Look-alive when a gay, fleeting boy. Simmy, my son, thou'rt sadly drunken. O youth, youth! Thou wine bibber, hold the light steady, or I'll tell thy mammy!"

"Oh, sir, I do mortally dread the devil an' all his works!"

"Now, if ever! 'The devil,' says he—an' Master Tingcomb still livin', an' in his own house awaitin' us!"

Be sure, his words were as good as a slap in the face to me. For I had counted the hearse to lead me straight to Master Tingcomb himself. "In his own house," too! A fright seized me for Delia. But first I must deal with these scoundrels, who were already dragging out the coffin.

"Steady there!" calls the minister. The coffin was more than half way outside. I leveled my pistol over the edge of the tool chest and fetched a yell fit to wake a ghost—at the same time letting fly straight for the minister.

In the flash of the discharge I saw him, half turned, his eyes staring and mouth agape. He clapped his hand to his shoulder. On top of his wild shriek broke out a chorus of screams and oaths, in the middle of which the coffin tilted up and went over with a crash. "Satan! Satan!" bawled Simmy, and, dropping the lantern, took to his heels for dear life. At the same moment the horses took fright, and before I could scramble out we were tearing madly away over the turf and into the darkness. I had made a sad mess of it.

It must have been a full minute before the hedge turned them, and gave me time to drop out at the back and run to their heads. Matt. Soames was after me, quick as thought, and very soon we mastered them, and gathering up the reins from between their legs, led them back. As luck would have it, the lantern had not been quenched by the fall, but lay flaring, and so guided us. Also a curious bright radiance seemed growing on the sky, for which I could not account. The three knaves were nowhere to be seen, but I heard their footsteps scampering in the distance, and Simmy still yelling "Satan!" I knew my bullet had hit the minister; but he got away, and I never set eyes on any of the three again.

Leaving Matt. to mind the horses, I caught up the lantern and looked about me. As well as could be seen, we were in a narrow meadow between two hills, whereof the black slopes rose high above us. Some paces to the right my ear caught the noise of a stream running.

I turned the lantern on the coffin, which lay face downwards, and with a gasp took in the game those precious rogues had been playing. For, with the fall of it, the boards (being but thin) were burst clean asunder; and on both sides had tumbled out silver cups, silver saltcellars, silver plates and dishes, that, in the lantern's rays, sparkled prettily on the turf. The coffin, in short, was stuffed with Delia's silverware.

I had picked up a great flagon, and was turning it over to read the inscription when Matt. Soames called to me and pointed over the hill in front. Above it the whole sky was red and glowing.

"Sure," said he, "'tis a fire out yonder!"

"God help us, Matt.—'tis the House of Gleys!"

It took but two minutes to toss the silver back into the hearse. I clapped to the door, and, snatching the reins, sprang upon the driver's seat.

CHAPTER XX.

THE ADVENTURE OF THE LEDGE.

We had some ado to find the gate; but no sooner were through, and upon the high road, than I lashed the horses up the hill at a gallop. To guide us between the dark hedges we had only one lantern and the glare ahead. The dishes and the cups clashed and rattled as the hearse bumped in the ruts, swaying wildly; a dozen times Matt. was near being pitched clean out of his seat. With my legs planted firm, I flogged away like a madman, and like mad creatures the horses tore upward.

On the summit a glance showed us all—the wild, crimsoned sky—the sea running with lines of fire—and against it the inky headland whereon the House of Gleys flared like a beacon. Already from one wing—our wing—a leaping column of flame whirled up through the roof, and was swept seaward in smoke and sparks. I marked the coast line, the cliff tracks, the masts and hull of the Godsend standing out clear as day; and nearer, the yellow light flickering over the fields of young corn. We saw all this and then were plunging down hill, with the blaze full ahead of us. The heavy reek of it was flung in our nostrils as we galloped.

At the bottom we caught up a group of men running. 'Twas a boatload come from the ship to help. As our horses swept past them one or two came to a terrified halt; but presently were running hard again after us.

The great gate stood open. I drove straight into the bright lit yard, shouting, "Delia!—where is Delia?"

"Here!" called a voice; and from a group that stood under the glare of the window came my dear mistress running.

"All safe, Jack! But what"— She drew back from our strange equipage.

"All in good time. First tell me—how came the fire?"

"Why, foul work, as it seems. All I know is I was sleeping, and awoke to hear the black seaman hammering on my door. Jumping up, I found the room full of smoke, and escaped. The rooms beneath, they say, were stuffed with straw, and the yard outside heaped also with straw, and blazing. Ben Halliday found two oil jars lying there"—

"Are the horses out?"

(To be Continued.)

Lovers at a Baseball Game.

It may have been the rain that hoodooed the Oaklands, or perhaps it was that touching little scene from "Romeo and Juliet" enacted in one of the boxes. Along about the middle of the game some one in the grand stand discovered the simpering, sad eyed lovers in the act of plighting their troth in the box.

They had evidently wandered in from the Alfalfa girded regions round about Milpitas to take in the Decoration Day exercises. Then somebody steered them out to the ball park, where they placed themselves on exhibition in their great two-hearts-that-beat-as-one act.

In plain sight of 4,000 people and the players they sat lovingly clasped in each other's arms, thinking thoughts too utterly utter for words. First he would rapturously kiss the maiden and then gaze down into the sweet, soulful depths of her lovelit eyes, and she would bury her face in his celuloid collar and sigh like a bathtub exhaust.

"Does her love her 'ittle tootsey?" he would exclaim with all the fervency of which a strong man is capable.

"Well, I should gurgle, Petie," and the listening winds wafted the answer to the eight thousand expectant ears in the grand stand.

They took no interest whatever in the game as they sat in silent bliss, utterly oblivious to the shouts of "Shut the door" and "Break away." Both audience and players forgot the game for three innings while watching the unconscious young couple in the box.

Once, while the uproar was at its height, Romeo tore himself away from Juliet's side long enough to go out on the balcony and ascertain, if possible, the cause of the excitement. He glanced down toward the score board, thinking, perhaps, that some important news had just arrived from San Jose. He then returned to the impatient maiden, who had not been kissed for nearly two seconds, and made it as pleasant for her as he could.

Not until the game was over did the young folks learn that their sacred seance in the box had been exposed to the vulgar gaze of a cold, unfeeling world. As they were leaving the park some one exclaimed, "There they are," and the crowd gave them a vigorous round of applause. The girl wound a veil around her crimson cheeks, and Romeo instinctively felt in his girdle for a dagger with which to stab himself to death.—San Francisco Chronicle.

Summer Furniture.

Decorations for summer homes are now engrossing. The wide vine shaded piazzas are justly regarded as the most delightful lounging places and receive much attention from the tasteful housekeeper. Handsome rugs are strewn about, low sewing chairs flank trefoil and star shaped tables, and a divan piled with cushions is a sine qua non of all well regulated piazzas. For the lower and most used veranda one covered with corduroy may be recommended to wear indefinitely. Dark blue or stone blue are good colors, though one seen last summer of rich scarlet corduroy was wonderfully effective after the sun went down.

These couches are usually covered plain, with a box plaited valance of the material around the seat. They are wide and low, and their pillows are of many shapes, square, oblong, big and little, to fit into restful attitudes. Such couches are put out in May and are not taken indoors till November, and even under such conditions keep fresh for a number of seasons. Other piazza divans are done up in blue denise, which requires a little embroidery at least on the pillows to be effective.

For the upper verandas, where the women of the family loiter through the mornings with sewing, reading and writing, cane sofas, with sateen and china silk pillows, are popular. The cane work table, with brass tipped legs, is apt to be found in this alfresco sitting room, and a cane rack to hold newspapers and magazines secure from an invading breeze is another essential.

Some novelties are seen in foot cushions. Among such are those of embossed leather red and brown, pretty for the library and dining room. Small tufted oblongs, closely resembling mattresses, are covered with rugs, and are suitable for foot rests in any room. For the cool looking white and gold parlors and drawing rooms of pretentious residences, the llama foot stools with gilt feet are effective, and the young woman whose slipper rests upon one may fancy her pet poodle is supporting it.—Her Point of View in New York Times.

Nationality in Art.

The men most prominent in American art today are, in the majority, of Parisian training, so much so that the most familiar reproach directed against their work is that it lacks national character. That this criticism, if applied to a period of transition, has a basis of truth is undeniable, for nothing is more natural than that the first steps in any career should be directed by the influences which have presided over preparatory studies. But if we take ten years to be the shortest period in which a young painter on his return from Europe can gain a foothold here, it will be found at the end of that time that, subjected to the various influences of the intellectual and material life of his native country, he has taken on more of our national characteristics than he is given credit for.

Modern art is essentially cosmopolitan, and as nations obey the iron rule of the general average, so in art the national characteristics become fused and blended until they are questions of detail more than of fundamental construction. Paris fin de siecle has a keen eye for detail, however, and we may depend upon it that, measured by its standards, the exhibition by our painters may be found wanting in many things rather than in the personality which results from race and temperament modified by conditions of environment.—Scribner's.

Winkle—How did you like that girl you had on the beach yesterday?

Nodd—First rate. I came very near proposing to her until I found she had on a ready made necktie.—Cloak Review.

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.

SAN FRANCISCO, CAL.

LOUISVILLE, KY. NEW YORK, N.Y.

YOU ARE PAYING FROM 30C. to $1.00 FOR SHEET MUSIC We sell for 10 CENTS Send for our Catalogue of 4,000 titles, mailed free. S. F. Music Print, 1225 Pierce St., S. F. Cal.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

At the end of life we discover that we have passed nearly one-half of it in being happy without realizing it, and the other half in imagining that we were miserable.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

Sure of Her Happiness—St. Peter—Won't you come in? Summer Girl—No, thanks; I'll drop in later in the season, if I'm not engaged.

Use Enameline Stove Polish; 10 cts., no dust, no smell.

Try Germea for Breakfast.

Dr. Price's Cream Baking Powder.

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

WANTED SOLDIERS' HOMESTEADS The addresses of all soldiers who homesteaded a less number of acres than 160 and made final proof on the same before June 22, 1874. W. E. MOORE, P. O. Box 1765, Denver, Colo. Mention this paper.

"German Syrup"

A Farmer at Edom, Texas, Says: "We are six in family. We live in a place where we are subject to violent Colds and Lung Troubles. I have used German Syrup for six years successfully for Sore Throat, Cough, Cold, Hoarseness, Pains in the Chest and Lungs, and spitting-up of Blood. I have tried many different kinds of cough Syrups in my time, but let me say to anyone wanting such a medicine—German Syrup is the best. That has been my experience. If you use it once, you will go back to it whenever you need it. It gives total relief and is a quick cure. My advice to everyone suffering with Lung Trouble is—Try it. You will soon be convinced. In all the families where your German Syrup is used we have no trouble with the Lungs at all. It is the medicine for this country.

John Franklin Jones.

Various Ways in Which Time is Wasted.

LITTLE EXCUSE FOR GOSSIPY GABBLE.

Callers Who Bore us.—With Ignorant People.

I have been trying to enumerate at least a part of the ways in which life slips into insignificance; for until we know the new we shall not find the remedy. Gossip unquestionably takes a high place in the list of mental and moral worth. By gossip I do not mean the vulgar racking of a neighbor's character or qualifications with delight at the sport of backbiting. This sort of business I rank no higher than cock fighting and bull baiting. Whoever engages in it is either too coarse to comprehend the values of time, or is nauseated by each indulgence until cured or ruined. The confirmed backbiter is so thoroughly diseased that she or he may be ranked with phthisical patients—not to be cured or not worth the curing.

But gossip is something a great deal more general than backbiting. It is the application of the mind to questions of positively inferior importance to the exclusion of matters of permanent value. Of course it is not easy from your standpoint to judge of what I should be conversing. A man is quite sure to despise questions of woman's dress—perhaps of dress altogether. But with us it involves art, and develops the peculiarly feminine capacity of appreciating fitness in form and color. But clearly there is a vast deal of intellectual waste on small topics. This is somewhat excusable at parties, when the mind is stupefied, often, in its abnormal desire to please or shine; when we are compelled to converse with those whose intellectual tastes we know nothing of. Perhaps it is for this reason that it has come to be held as ill breeding to introduce any topic of weight. Can not society move with a higher grade conversation? The effect at present is to send sensible people home with a feeling of distress and loss, while the vapid are made to consider that vapidity has value.

LITTLE EXCUSE FOR GABBLE.

In our home life and general social relations there is far less excuse for gossipy gabble. Those who are unable to converse except on trash should be classed with the ash barrel scavenger and denied the privilege of controlling any portion of our time. We are privileged by nature to exclude the gossip from any household familiarity. With these scavengers I class the bores who lack all valuation of the time of other people, persons who do not gossip, but in reality do nothing, and compel you to do the same. An honest person, man or woman, should have the days apportioned with great nicety to occupancy and use. For the unexpected and unforeseeable interruptions one may allow justly an hour a day. For probable interruptions another hour. To avoid the loss of two or three more hours requires both tact and decision. It is perfectly right to require all callers to report themselves, and to reply to many of them "not at home," or an equivalent.

There is no substantial reason why our callers should not only send in a card, but should also add the object of the call and specify the amount of time desired. This, placed on a card, will cause the applicant little time and trouble, and will save the recipient vast loss. Is all the social obligation on the side of the visited? I think not. I believe no one has a right to ask one minute of our time without apology and explanation. My time is my money. One hour is worth a cash value. Whoever takes it from me takes from my income as well as my comfort. This it is not righteous to demand nor right for me to allow. There are claims of friendship. These are compatible with work. True friends will not rob each other. There is compensation in such cases.

WITH IGNORANT PEOPLE.

I am not so confident what reward or compensation there may be for our necessary dealings with ignorant people; and as a rule this includes all the help we can employ. The narrowness of their vision makes it impossible for them to see or feel with us, and if we get on with them at all we must come down to their level and talk from their standpoint. This may not be altogether injurious; for we are likely to get too far away from the masses, and lose all communicating power. More than that, the highest mental life is too strictly a brain life. It is an invaluable power to be able to drop down at times into a more physical and simple life, provided our doing so does not involve sensuous degradation. That danger is constantly near, and must be carefully guarded against.

Too close familiarity with the grosser sort is overwhelmingly fatal. But we may go so far as to be kindly and friendly, and help to lift to a higher plane. But nothing is more difficult than honestly to secure the real friendship of people morally and intellectually our inferiors. The largest generosity and most kindly treatment will not make a firm friend of one who cannot understand you. And as a rule the ignorant can never understand the cultured. They may understand the more ignorant, but can use no mental measure greater than that possessed by themselves.—Mary E. Spencer in Globe-Democrat.

The Footgear of Kings.

A curious museum has just been opened at Dresden. In it are collected a number of boots, shoes and slippers in which emperors, kings, queens, princes and other august or famous persons have some time or other trodden the path through life. Among them are a pair of boots worn by Napoleon I at the battle of Dresden, on April 27, 1813, and a pair of white satin shoes, embroidered in gold, which the same great emperor wore on the day of his coronation; another pair of strong leather boots which belonged to the famous French marshal, Murat, afterward king of the Two Sicilies; a pair of high heeled boots of Maria Theresa; boots of the philosopher Kent, and many others, forming a curious assembly.

If the promoters of the museum have any energy they will not find it difficult to increase their curious collection considerably and to make it one of the sights of Dresden. But they must search both highways and byways for their treasures; thus, for instance, they might perhaps obtain an interesting article from the good nuns at Nazareth House, Hammersmith, who preserve a large comfortable looking slipper of the late pope under a dainty glass case in one of their large rooms.—Pall Mall Gazette.

Mere Force of Habit.

Distinguished Foreigner—I think the voices of American girls very sweet, but they would be still more musical if conversation were carried on in a lower tone.

Chicago Belle—We make a good deal of noise, but you must remember our favorite amusement is concert going, and one gets in the habit of loud talking trying to make one's voice heard above the music, you know.—Omaha World.

NOBODY CARES!

A wearily wan little face,
A feeble, forlorn little smile,
Poor faltering feet,
That must pace their beat
For many and many a mile—
A star stealing out in the dusk,
A lamp that luridly flares,
In the wide city's whirl
Just a nameless girl—
Nobody cares!

A desolate, dearth stricken room,
A pillow pushed up to the wall,
A flicker that shows
A face in repose,
Silence, and that is all,
Save just on the woebegone cheek
That look which such raptness wears,
That light on the brow—
Ah, who shall say now,
"Nobody cares?"
—Cornhill Magazine.

He Traveled with the Lions.

"I had an interesting experience," said Mr. George Boniface, Jr. "I happened to be passing one of the dime museums when I noticed a large placard announcing the appearance of the elastic skin man. Having never seen this curiosity I bought a ticket and entered the museum. I was startled by the resemblance which the elastic skin man bore to some one I had seen. I could not recall the name, but the resemblance haunted me like a dim ghost that had come out of long ago. While I stood wondering the reporter for a local paper came up to interview the elastic skin man, and I heard the elastic skin man say: 'My name is D. B. Hodges. In 1837 I was agent for Rumsey & Newcomb's minstrels. Since then I have been idle.'

"In a few moments," continued Mr. Boniface, "who should come along but Arthur Cambridge, Charley Griste and Gus Pennoyer. They shook hands with the elastic skin man and began talking over old times.

"'Let's see, Charley,' asked the elastic skin man, 'what show were you traveling with when I first met you?'

"'Upon my word, I don't remember,' said Mr. Griste. 'The first show I ever traveled with was a den of performing lions, run by—well, now, it's curious that I can't recall the name!'

"'Was it Van Amburgh?' asked the elastic skin man.

"'Bless your heart, no,' said Mr. Griste. 'Why, he taught Van Amburgh the business. Funny I can't think of his name. He was a great friend of old Bill Coup's—oh, yes, now I recall the name; it was Daniel!'"—Eugene Field in Chicago News.

The Tradeless People of Paris.

In a great city like Paris there are thousands of persons who have no trade or profession, and who are obliged to resort to all sorts of tricks to get their daily bread. Some manage to accomplish this feat honestly, while others work unscrupulously upon the credulity of their fellows. Vaudevillists and caricaturists repeatedly exercise their wit at the expense of the unfortunate ones whom necessity forces into strange and improbable callings. Doubtless these wits often exaggerate the reality, but the fact remains that there are quantities of poor wretches here who really get their living by pursuing the queerest and most ingenious occupations.

If you question one of these tradeless individuals upon his manner of living he will reply, "Oh, I have a dodge!" It is very rare that he will consent to give you more ample explanations. For common mortals his way of procuring food, clothing and lodging is decidedly enigmatical. These men who invent "dodges" generally live in furnished lodgings, where the chambers contain several beds.

A "dodger" divines, so to speak, a man who is in the same line of business, and the similarity of their characters unites them on a common footing. They club together to get rid of the strange merchandise that others have invented. The one who creates does not reveal his manner of inventing to his partner, and this one in his turn conceals as well as he can the profits obtained by the sale. The mistrust is reciprocal.

The principal dodgers are the street peddlers who hawk about the thousand and one ingenious toys that are constantly invented in this great city, who sell newspapers when they have a few francs in their pocket to buy a stock from the wholesale dealers in Rue du Croissant, or who traffic in theater tickets during the evening.—Paris Cor. New York Epoch.

The Best Lighted City in the World.

Paris is now on the eve of a revolution in her lighting system. Gas lighting was first introduced in England, but Paris followed in good time and with a splendor unequaled elsewhere. In like manner America, Germany and some other countries have been earlier in the use of electric lighting, but the Parisians, with their superior taste and skill in all matters of municipal arrangements and appointments, are destined to make by far the most brilliant use of the new illuminant.

Within one year, or within two years at the furthest, it is confidently claimed that Paris will be incomparably the best lighted city in the world, and that electricity will have superseded gas in public use. In 1878, at the time of the universal exposition, the municipal goverment ordered the experimental illumination of the Avenue de l'Opera and several open spaces with electricity; but the new system was not ripe for large use, and the experiment was soon abandoned. Its principal effect was the stimulus it gave to the gas company, which invented and put into use certain large compound burners using 1,400 liters per hour, and giving a most brilliant light.

The great electrical improvements of the past decade were exhibited in the French exposition of 1889, and were studied with the utmost care by the Parisian authorities and municipal engineers. Undoubtedly the displays at the exposition had the most pronounced effect in stimulating the new zeal Paris is showing for the appliances of the electric age.—Dr. Albert Shaw in Century.

Where the Needles Go.

I can beat the pin and needle cushion thus far. Awhile ago, wondering what had become of the needles, I opened a cushion used by the family and found 328—five were darning needles, the rest all sizes of common sewing needles.—Cor. Newburyport News.

The spiders found in England are small and quite harmless to man, but it is probable that some poisonous fluid is secreted in the mandibles of all spiders. Even the bite of the common house spider (Tegenaria domestica) is quickly fatal to flies and other insects on which it preys.

VANDERBILT'S ESTATE.

How the Old Commodore Made His Fortune.

SUCCESSFUL RAILROAD UNDERTAKINGS.

Not an Educated Man.—His Physical Appearance.

Another great estate is the Vanderbilt estate. It was founded by Cornelius Vanderbilt, as its fellow was by John Jacob Astor, born thirty-one years, and died twenty-nine years earlier, at the same age. Vanderbilt, who was an American for several generations, had first seen the light on Staten Island, and inherited various traits from his Dutch stock. He had more financial capacity—it amounted to genius—than Astor; had far greater originality, boldness and power of combination; but it was exclusively of a monetary sort. He divided mankind into two classes, those who could and those who could not make money, and the latter he condemned as blank fools. Probably no man of this century ever bent himself more entirely to the pursuit of wealth, from the time he bought a periagua, at 16, after his father's death, to carry farm products to the New York market, until his final illness at 82.

NOT AN EDUCATED MAN.

He was illiterate throughout life, having a violent prejudice against education, which he believed to interfere with practical success, and talked a peculiar English, defiant of syntax and orthoepy. Letters he almost never wrote—correspondence was as severe a task for him as for Sam Weller—but he invariably wanted everybody else to put any business proposal on paper. He never, so far as known, expressed the slightest regret for his lack of education, and, presumably, never felt any, being in this an exception to his race. But as a compensation—fully sufficient for him—he was phenomenally astute at a trade, big or little, and had a marvelous instinct for commercial profit. Before 20, he removed to this city, and three years later was worth $10,000, which was harder, he said, to get than any subsequent sum. At that time he built the first steamboat to run between New York and New Brunswick, and received $1,000 a year as captain. He continued on the line until he made its revenue $40,000 a year; his wife meanwhile keeping an inn—he had married at 19—at the New Jersey terminus, and turning it to good account.

For fifty-four years he followed the water, owning steamboats on the Delaware, the Hudson and Long Island sound, and steamships on the Atlantic and Pacific, steadily overcoming opposition and swelling his fortune. At 70, with property estimated at $40,000,000, the commodore, as he was called, directed his attention to, and concentrated his interest in, railways, having been for many years a heavy stockholder in the New York and New Haven road. At so advanced an age such a change was hazardous to say the least; but he was brilliantly successful in it, showing the energy and force of youth in all his plans and combinations. He scarcely ever miscalculated, but in attempting to gain command of the Erie road, when Fisk and Gould controlled it, he found that they were supplying, without any thought of responsibility, all the shares that he or others were willing to pay for. Soon tiring of pitting his money against their printing press, he confessed his mistake, which he ascribed to his advisers, to whom he had yielded, he said, against his better judgment.

HIS PURPOSE ATTAINED.

When he saw his days closing—he had a long illness—he had the supreme satisfaction of having amassed not far from $100,000,000, and he cared for nothing else. His one purpose in existence he had splendidly attained. Although averse by constitution to giving away money—it could do no permanent good, in his opinion—he presented the steamship Vanderbilt, which cost $800,000, to the government at the outbreak of the civil war, and endowed, through the influence of his second wife, the Vanderbilt university, at Nashville, with $700,000. He also made, toward the last, various bequests, some of which indicated that he was not impervious to artful gallantry. He often helped men that he happened to like, and it may be said, to his credit, that he was always as good as his word. Totally without pretense or presumption, he was generally accessible, having so much executive power that he was seldom pressed for time.

Fine looking, especially in his old age, his handsome face, erect carriage, and elastic step were likely to draw attention, even in crowded Broadway. He might have been a prince in disguise, if princes were what they are imagined to be. He certainly did not appear, physically, like the hard headed, unconditional, unlettered business man he was. His two recreations were driving and whist. He loved good horses, had plenty of them, and was the despot of the road. In whist, he played the rigor of the game, and could not bear to be beaten, which he seldom was. At Saratoga, where he usually spent the summer, he was disappointed if he did not win enough to meet his hotel bill. When his memory began to fail he ceased to play; serious as was the deprivation, he was unwilling to lose the rank he had so long occupied. He did not bother himself about theology; but if he had believed the Biblical announcement of the difficulty attendant upon a rich man's entering heaven, he would have had a very poor opinion of heaven.—Paul R. Cleveland in The Cosmopolitan.

A first class American watch, well kept, will last thirty or forty years, or sometimes even longer, before the works wear out, but the average life of an ordinary low priced American watch is ten years, and that of a Swiss watch of the same grade seven years. The length of life for a watch depends largely on the number of its jewels. The range of prices for American watches runs from $5 to $500, the costliest being a split second minute register timing watch. In the United States about 3,500 watches are manufactured every day. The Waltham factory turns out 1,500 per day and the Elgin factory between 1,200 and 19,000.—Chicago Herald.

Chart of the Pleiades.

A remarkable photo-engraved chart of the Pleiades, showing 2,326 stars from the third to the seventeenth magnitude, has been produced at the Paris observatory.

Sir Isaac Newton's autograph, in the shape of a letter, brought $315 at a recent sale in England. It was bought for Trinity college, Cambridge.

A comparison of the work of English, French and American detectives show the latter to be 12 per cent. ahead all around.

Getting Out a Baseball Extra.

Newspaper men and printers may be interested in knowing how baseball extras are issued so quickly. The first five innings are described in detail by the reporters, who send their copy to the office by messenger, or telegraph it if the game is in another city. The result of the remaining four innings they telephone or telegraph, the latter being done by instantaneous ticker. While the last four innings are being played the printers set the type, the form is stereotyped and put on the press, and then everybody waits for the result of the last inning. The foreman of the press room stands with a mallet in his hand, and before him lie ten pieces of steel. On the end of each of these you see a figure. A man shouts down stairs, "Chicago 1!" Grabbing up a die with one blow the foreman stamps the figure "1" upon a blank in the stereotyped page. Then comes the shout, "New York 0!" Another blow stamps that. Two or three more blows stamp the totals made by each club, the press is instantly started, papers roll out at the rate of 40,000 an hour, the couriers put spurs into their horses, boys run all over the city crying "Extra, all about the ball game!" and a dozen wagons take on loads of papers and are driven at breakneck speed for certain distant corners, where a score of eager newsboys are waiting for each of them. About 45,000 of these sporting extras are sold in Chicago every evening.

Sometimes the extras appear with big head lines, "The Chicagos Win," or "New York Victorious," etc. This is done by making two stereotype plates. In one the head line is for a Chicago victory, in the other for defeat. If the Chicagos chance to win it is on the first plate that the pressman stamps the result of the last inning and the totals.

While one of the three sporting editors employed on a morning paper is reporting the ball game another is at the races, while the third is taking care of other sporting events. Sporting editors are always on the lookout for midnight prize fights, and as these affairs are usually held secretly and in out-of-the-way places, they give reporters no end of anxiety. Sometimes a "straight tip" as to where a fight is to be held turns out to be a wrong tip. I remember one occasion on which a reporter of The Herald was told, confidentially, where an interesting fight was to come off. Five or six other sports told him, confidentially, that the fight was to take place in as many different spots, many miles apart. The young man was nervous about it, but he didn't lose his head. He had a reporter sent to each of the half dozen places, and was lucky enough to be at the right one himself.—Walter Wellman's Chicago Letter.

The Costumes of Corea.

But the colors are what give the streets of Seoul such a quaint holiday appearance. White or blue predominates, and the long, flowing gowns, well starched and ironed, glisten in the sun and blend their colors together, making a dazzling picture together with the red of the children's dresses and the occasional bright silk gown of an official or well to do merchant. The people mostly dress in imported white cotton, victoria lawns and silks. These are thickly padded with cotton for winter wear, and then present a very balloon like appearance. Originally they colored the cloth as a rule, but now white is the prevailing color for the common people, a custom which is accounted for by the following tradition: White is the mourning color and three years the period of mourning. Once, during a period of ten years, three kings died, necessitating a change of raiment by the whole people each time. It of course was burdensome, as a Corean wardrobe is rather extensive and quite costly. In order, then, to avoid the difficulty in the future, they decided to dress altogether in white and be ready for the caprice of their kings. Of course, the wealthy are not obliged to follow this custom, but may dress as they please.—Cor. San Francisco Chronicle.

Railway Stations of Russia.

The railway stations, and especially the station for Moscow, are scenes of intense human interest. You usually go to catch a train in Russia half an hour too soon. If you are going any distance all your family and friends come to see you off. Every one is admitted to the platform, which, as a consequence, presents a crowded and interesting spectacle, the like of which I have seen in no other country. The restaurants at the stations are admirable. The restaurants in St. Petersburg are numerous, the hotels comfortable, and, thanks to the depreciation of the ruble, not too dear. In most of the Russian restaurants digestion is supposed to be facilitated by the strains of a gigantic musical box or mechanical organ, which discourses loud voiced music all the time dinner is going on.—W. T. Stead in Contemporary Review.

Peculiar Postal Regulations.

It is rather an odd thing that if you paste a printed slip on a postal card the government will charge the receiver letter postage, while if the same matter is printed directly on the card nothing extra is demanded. The same slip which, if pasted on a postal card, would be charged extra for, may be put into an unsealed envelope, and it will then go at printed matter rates, or the whole paper from which the clipping is taken may be sent containing the article marked at a much less rate than the government would charge for the same article attached to the card. That is, the government would rather carry four ounces for a cent than the four-fifths of an ounce for the same money.—Detroit Free Press.

Nutmeg Hickory the Strongest Wood.

Professor Sargent is credited with making the statement that the "strongest wood in the United States is that of the nutmeg hickory of the Arkansas region and the weakest is the West Indian birch. The most elastic is the tamarack, the white or shellbark hickory standing far below it. The highest specific gravity, upon which in general depends value as fuel, is obtained by the blue wood of Texas."

Didn't Wait for Him.

City Editor (to new reporter)—You say this man was blown up by a can of nitroglycerine, but you don't state whether he is dead or alive.

New Reporter—I waited around there four or five hours, but couldn't learn it.

City Editor—Why couldn't you learn it?

New Reporter—Because he hadn't come down yet when I left.—Binghamton Republican.

A Close Approximation.

In 1864, in Memphis, in a refugee school that I visited while chaplain in the army, the Bible lesson was John xv, 1, "I am the true vine, and my Father is the husbandman." One little fellow recited it thus: "I am the vine and my father is a married man."—American Missionary.

A RIDE IN GUATEMALA.

A Rough Trip Over the Mountains.

DRIVING THROUGH TOWN AT FULL GALLOP

A Lively Scene.—Indian Ways.—A Tiresome Ascent.

I left Quezaltenango by stage for San Marcos recently. The road runs through the side spurs of the Cordilleras for thirty-six miles, and the up grades are so heavy that to make any time the animals are whipped along on every level stretch and sent faster down hill, the brake being applied only when the wagon gains too much on the horses. The team we had was made up of three miserable horses, not more than fourteen hands high, and one lazy mule of about the same size. The stages are canvas covered spring wagons, seating four people inside and one with the driver, all seats on the same level and cushioned with leather stuffed with straw, and as hard as the boards underneath. Most of the drivers are Mexicans, wearing sandals and such clothes as they may beg, borrow, or steal. The diligence company supplies a few extra pieces of chain, leather, an immense lash whip, and a large knife, with which the driver fashions the leather to repair the dozen or so breaks of the harness in the course of the day.

The first town reached was San Mateo, about two leagues from Quezaltenango, and one league further on, as we neared the foot of the mountains, we passed through San Juan Ostuncalco, a "pueblo" of 600 or 700 souls. It was about 8 o'clock in the morning and the streets were filled with Indians bringing in market produce, some carrying the loads in baskets on their heads, but the majority had their cargoes on their backs in what is called a "canasta." This is a wooden framework of shelves fastened into four upright pieces of wood and stiffened with rawhide thongs, those of ordinary size being about four feet high, thirty inches wide and twenty inches deep. Cords around the bottom and middle are joined to the leather headpiece, or broad strap, which passes across the man's forehead and serves to hold the contrivance in place. The Indian, inclining his body slightly forward, travels for days thus laden with his pack of 150 pounds so delicately balanced and adjusted that he feels no excess of strain on any particular point. Many were driving goats and sheep in front of them, and others dragging them with ropes tied around their necks.

The pretty, bright colored dresses of the Indians added much to this lively scene. Now and then you could see the entire family bringing in the produce of their farm, the father himself carrying his load and driving the "burro," so heavily packed that nothing but the tips of his ears and his feet could be seen, followed by the mother with a basket on her head and the youngest strapped to her back, with his legs dangling out of the folds of the shawl and his little black head peeping out of the top. Then come the two boys, both carrying loads; the older one tugging at a rope tied to the neck of an obstinate, squealing pig, who wishes to go in any direction but the proper one, and who is being urged forward by the younger boy, who is laying his whip across his hind quarters at every step. They seem to make but slow progress, but they will reach the plaza and in time for market hours.

Through the main street of San Juan, paved with cobble stones and filled with such a crowd, our driver forced his animals at a gallop, urging them on with his whip and a shrill whistle, and being comparatively fresh they responded quite willingly. The leaders, with sleigh bells tied to their necks, warned all in advance to get out of the way. Away we went, bounding over the uneven pavement with a great racket, and in ways so narrow that the crowd had to hug the sides of the houses to escape our wheels. For blocks in front you could see the Indians escaping into the side streets when possible, and though these people are subjected to the danger of being run over every time a diligence passes, they seem to bear no ill will to the careless drivers. They have never seen any other management of horses, and I presume they think that this is the proper way to drive. And besides, they depend on the stage line for the execution of any commissions they may have in the neighboring towns. Many times our driver stopped in the long streets of San Juan, always a welcome guest, dropping packages here, picking them up there, and at every stop receiving his small piece of silver and a drink in payment. He took so many drinks before coming to the hills that I began to have some fears for our safety on the steep and dangerous roads to come.

Three miles to the north of San Juan the long and tiresome ascent begins, and so narrow that horsemen only can pass the stage. The road is cut into the mountain side, many places in solid rock, in which, as you go slowly ahead, can be seen many names and prettily carved crosses; and on nearing the summit you see many wooden crosses planted on the roadside, inscribed with the names of the saints in whose honor they were erected. Looking back, the entire valley of Quezaltenango is spread out before and about 2,000 feet below you, and often obscured by the clouds, for you are above them and in them, and the blankets over your knees and your heavy wraps do not make you feel over warm. We were nearly five hours making the ridge, a distance of about seven miles. The mountain scenery in this region is grand, but any views, no matter how beautiful, would become monotonous when seen from an almost springless vehicle, dragged over a rain washed, rocky road at a gallop, accompanied by a Mexican driver's yells and whistles, and the incessant snapping of his whip; so, at about 1 o'clock when we pulled up at the breakfast station in a lovely green mountain valley, it was not the meal that pleased us, but the relief felt in getting out of that hard cushioned, wagon and away from the driver's noise.

The stages meet at this stopping place, and when the drivers had finished their conversation without any consideration for the feelings of the impatient passengers we were again off, and soon on the down grade. It was so rocky that with my feet braced in front and holding on to the sides, I very often came down on the seat with so violent a bump that I felt as if my spinal column had gone up through my brain. Now and then the stage would give a side lurch and smash the brim of my hat against the side sticks. This down hill ride continued for two hours, until, thoroughly exhausted, we arrived at the town of San Pedro, where we caught a glimpse of a rather level country in advance.—Guatemala Cor. New York Times.

What It Once Meant.

A teacher writes: "One of my pupils who had been teaching during the summer came to me in despair over a sum, saying, 'I can't understand sympathizing fractions.'" (When we went to school, years and years ago, "sympathizing fractions" meant broken candy. We understood, but the teacher didn't. Times change, and we change with them).—American Missionary.

AN OREGON AMAZON.

A Frontier Beauty on the Back of a Bronco—A Great Surprise.

The jar of heavy feet was heard. Some young horses came down a steep hill at full run. Behind was a reckless, rapid rider. The loose stock dashed past. The horse that bore the rider was tossing his head madly and slinging white foam in flakes from his mouth. He was a rearing, restless, heavy built, regulation bronco, but it was remarked that he was well under control, for he seemed to be fairly lifted from side to side by the reins at the will of the rider, who drew up to our resting place. We stared in a way that was not mannerly, even in the wilds of Oregon. The rider of the restless pony was a young girl. She waited with embarrassment for us to tell our errand.

"Who lives here?" we asked.

"I do," she replied, in a tone that did not make us feel any more at home.

"Whose garden is this?" was the next question.

"Mine."

After a pause she added: "Can I do anything for you, gentlemen?"

"Well, well, no," was about the only intelligible answer at command.

"Will you come to the house?" she added; "it is near dinner time."

As she rode before we looked upon a graceful rider, a well rounded, neat figure, a brunette with the languid beauty so much admired in the Castilian women, clad in coarse, strong, short skirts, below which showed a small boot and a keen, bright spur. Her rich saddle was new and strong and double rigged. Her horse had not stopped at the gate till she sprang to the ground. My companion stepped forward with a Chesterfield bow, but too late to assist her. She asked us to go the house while she led her horse to the stable. When we were within a rod of the door we both started with surprise. A repulsive, sullen, scowling Indian was at each window. We were greatly surprised to learn that our hostess was half breed. In her features or actions we had observed not one trace of the Indian. Her demeanor was modest, while at the same time she was fully imbued with that western liberality that allows no man to pass without an invitation to partake of a meal or night's lodging. We bade her good-by reluctantly, and continued our hunt, thinking how much more appropriate such grace and such wealth would be in the circles of society than on the back of a bronco.—Oregon Cor. San Francisco Chronicle.

Boston Women as Pedestrians.

The Boston woman is in need of a walking teacher. She has now about every sort of an instructor save in this matter of gait and carriage, and there she is singularly deficient. Strange as it may seem to the dear creatures who have turned their toes out in a dancing class from the age of 4 till they were old enough to graduate as rosebuds in society, not one of them knows how to walk. Observe, if you please, the sloppy, hippity hop, the waddle and the bounce which characterize the gait of young women of the present day, and tell me if there is the least excuse for it. High heels, tight clothes, tied in skirts! Perhaps, but even with these feminine disadvantages the graceful, free limbed goddess of society ought to be able to get over the ground with ease and dignity. That she does not is obvious to every student of woman's winning ways.

We have seen, once at least the most of us, our ideal in this regard, and, having seen, will simply wonder why on earth her sisters do not imitate her noble movements and get the kinks out of their legs or add a little spring to their feet. If dancing lessons do not lend grace to the deportment they fail in their intention, but the dancing master, after having taught the figures of the german, how to reverse in the waltz and given the pupil a pas known for three generations as "Papanti's," considers his or her duty is fulfilled. The natural gait, the real "step," has not been given a thought, and so mademoiselle runs out her chin, carries one shoulder higher than the other, and comes down on her heels with a stride or mincing walk which is fatal to "style." Who tells her what she is doing? Apparently no one, because there are so few girls who know how to walk. The stage is supposed to be an excellent school for pedal instruction, and the "devitalizing" of the Delsarte method is believed to saturate a disciple with grace. But a "stage walk" in the street is simply dreadful, and the tragedy queen prance as much to be avoided as the wiggle waggle of the bustle made girl. It would be delightful could the coming generation strike the happy mean, and very likely it will, if the world once begins to appreciate that walking is an art to be cultivated, as it now cultivates a love for the beautiful and a taste for outdoor sports.—Boston Herald.

Curious Case of Kleptomania.

There died in New York city not long ago an old woman, who to hundreds of New Yorkers presented a grotesque figure. Ten or twelve years ago she was a popular lecturer, gifted with a strong though unpolished eloquence. For nearly two decades this curious woman lived a lonely life. After her retirement from the lecture platform she was wont to haunt daily the public libraries of the city, and this fact soon led to the discovery that she was afflicted with kleptomania. Her character was quite above the theory of deliberate theft, and some of her few friends even now are ignorant of the shadow which hung over her. By reason of her constant visits she became a familiar figure, and an unmitigated nuisance to the librarians. She would enter a library, apparently bent on finding some extract of importance. Volume after volume would be called for and consulted in vain, until finally a pile of thirty or forty books lay before her. Then she would give it up, and hasten out without even thanking the disgusted attendant.

Several times books were missed, but no one dared accuse her. One day, however, an attendant detected her as she made her exit with a valuable volume. He followed her home, and the next day when she appeared she was gently reminded of her absent mindedness. But she indignantly spurned the insinuation, and the affair went no further; though she ceased to visit that particular library. When she died a large collection of books was found in her house, each book bearing the stamp of the institution from which it had been taken. Many of them, too, were from private libraries, and those most closely guarded. Her skill as a book thief must have been considerable. The volumes were all returned to their rightful owners by her executors.—New York Sun.

On the Tops of Stages.

One of the drivers of the Fifth avenue stages says that the young ladies, no matter if they live on the very tiptop of Murray Hill, like to climb up and ride on the outside seats. But they usually do it only in the evening. They are more graceful and quick about it than half of the men. On Sundays in pleasant weather a good many girls ride on the outside, and a good many go to the end of the route and back just for the excursion. The German girls are the most independent about climbing to the tops of the stages in the day time.—New York Press 'Every Day Talk."

ODDS AND ENDS.

The United States has 1,000,000 miles of telegraph wires.

It has been discovered that almanacs date back to the year 100 A. D.

Unbound palm leaf fans are effectively used in decoration of summer houses.

Woman's love of admiration is apt to vary inversely with her power of exciting it.

The caterpillar is making fearful havoc with the fruit trees in southern New England.

The hardest thing to do is to get people to think of the things that concern them most.

Take iron stains from marble with lemon juice or a mixture of spirits of wine and oxalic acid.

In Great Britain there is one elector to about six of the population; in Belgium only one to about forty-six.

On Irish railways women are much employed as booking clerks, and in Dublin tickets are given almost entirely by women.

A Sonoma county, Cal., vineyardist has purchased 10,000 paper bags to cover the young vines and protect them from grasshoppers.

All that can be said of very slow people is that it is their duty to avoid conversation and get through life as inoffensively as possible.

It has been found after elaborate experiments that sewage can be more efficiently filtered through open sand than through sand covered with soil.

The first dress of embroidered bobbinet ever woven in France was presented to the Duchess d'Anguleme, who, it was thought, would be one day queen of France.

The cheval glass is becoming more and more a necessary piece of bedroom furniture to the modern woman, and with it come into use the dressing table and high chest of drawers.

The Newest Thing in Refrigeration.

The latest elaboration of the refrigeration process is a new thing entirely. A plant has just been established near Washington market from which there is to be supplied a current of cold that will chill all the refrigerators in the stalls of the market—over 300 in number. One of the men who have worked for some years to perfect the scheme has said: "The company proposes to do what the great steam distributing companies are doing, with a difference. What they are doing is to distribute and sell plus units of heat. What we are doing is to distribute and sell minus units of heat."

The only sense in which this is new is that it is done on a larger scale than ever before. It is like applying the principles of the telephone to the long distance telephone. As has been already explained, the idea of refrigerating an icebox or a house is not new. The idea of doing it from a central plant, and supplying minus heat or positive cold through pipes is new. It does away with the handling of ice at each box owned by a customer, and enables the butchers and other dealers in the market to keep their wares as long and as well as if they were packed in ice. In one up town hotel, where the plan has been in operation for nearly two years, the saving has been found to be over 75 per cent. of the former cost. It is distinctly one of the great steps forward in modern progress.—Harper's Weekly.

The First Departure for the World's Fair.

A small, rosy cheeked girl picked up her doll and her doll's trunk and trudged a mile or more over frosty roads until she reached a railway station. There she boarded the first train that came along and contentedly settled herself and her doll into a vacant seat.

By and by the conductor appeared. He looked down at the little woman, who was pointing out flying trees and other objects of interest to her traveling companion, the doll.

"Where are you going, little one?" asked the big man with buttons.

"Why, I'm going to the World's fair, of course."

The conductor coughed.

"Aren't you rather early?" he asked. "I don't believe the doors are open yet."

"Dear me," said the child in alarm, "what shall I do?"

"Perhaps you had better go home and ask your mother," suggested the conductor.

And she did. She was loaded with pretty things by interested fellow passengers, and returned to her mother in safety. We may reasonably expect that she will be among the first visitors when the World's fair opens its doors.—Golden Days.

This Pensioner Had a Queer Career.

Frank M. Pennington, a well known citizen here, has just been granted a pension of eight dollars a month. This was one of the most complicated and interesting claims which has ever been filed in the pension bureau. He is a native of Florida. In April, 1861, he enlisted in a Confederate regiment for ninety days. Just before his term expired he was conscripted for three years. At the battle of Kenesaw Mountain he was captured.

While a prisoner in Illinois he enlisted in the United States navy, on board the old Ironsides, where his gallantry in action at the final assault on Fort Fisher is officially mentioned. He was afterward transferred to another vessel, and in consequence of leaving it without proper papers he was placed on record as a deserter. The sentence of desertion has been corrected and an honorable discharge procured, with arrears of pay and now a pension.—Burgettstown (Pa.) Enterprise.

Limewater.

It has come to be a usual thing if "anything ails baby" to be advised by the physician to make a free use of limewater, which he says must be put with the milk. Now, lime is a strong alkali, and it should be used with care and caution, and its effect on the baby closely watched.

It is in itself such a harmless looking and tasteless medicine that many mothers think it scarcely necessary even to measure the quantity used, and great detriment is done the baby because of such carelessness. If used too freely it causes constipation, and in consequence many ill effects follow its use. Taken in small doses, carefully measured, lime water is of great benefit to infants.—Detroit Free Press.

INDEPENDENCE, CAL.

FRIDAY, AUGUST 28 1891

Cardinal Manning has come out in condemation of raffles and lotteries at church fairs. It has long been a puzzle to the lay mind how the church fair lottery could be less of a gamble than any other sort of lottery. Lottery reform should begin with the churches, if anywhere.

It is said that the trouble with the Prince of Wales is that he wanted "thrills," and there was nothing in the dreary, aimless life of the heir to the throne to give them to him, so he had to find them as best he could, in ways commendable or otherwise. That is the trouble with too many people—they want thrills.

Senator Felton, Representative Bowers, Governor Markham and a number of leading citizens of Los Angeles, visited San Pedro last Saturday and took a careful view of the harbor. They then proceeded to Redondo Beach where they had a chance to see what had been done there to bring ship and rail together. Senator Felton and Representative Bowers will go to Washington with clear cut ideas of what can be done to give us a harbor or deep sea vessels at San Pedro if sufficient money is appropriated to do the work that is required.

The Reno Gazette says: "Reports show that all around us the spirit of progress is aroused and Nevada is standing still. Utah, Idaho, Oregon Arizona and California are making great advances. Why not Nevada?" Poor, corporation ridden Nevada! She has vast natural resources of land and water, but the spirit of the dead bonanza days and wild-cat speculation must cease to haunt her ere they can be developed. A general reform in State government and reduction in taxes is necessary to induce capital to enter the State.

It is unfortunate that Governor Campbell's health has become, at this particular time, so broken that he has had to cancel all his campaign engagements. The brilliant and triumphant canvass Mr. Campbell made two years ago for the same office he now holds shows what a loss it will be to the Democratic party to have him away from the platform this year. It will be a great advantage to McKinley and his party will avail itself of it. The absence of Campbell from the stump ought to be made up by sending into Ohio the best speakers of the party outside that State.

There is a great deal of speculation of late in the press of California as to the practicability of growing tobacco and cotton in California. Both have been shown to be feasible. Good specimens of both were shown at the New Orleans Exposition. Sixteen years ago excellent cigars were manufactured at Gilroy from tobacco grown near that place and sold in Los Angeles. Haggin & Carr have raised fine staples of cotton in Kern county. Doubtless the reason why these branches of industry were allowed to languish is because they did not pay. They are both cheap labor staples and cheap labor in California is an unknown quantity.

The Daily Report criticises the status of the World's Fair in San Francisco as follows: "There is no enthusiasm in San Francisco over the World's Fair. Should the Supreme Court sustain the State Controller in his refusal to honor the Legislature's draft for $300,000 in aid of California's exhibit at Chicago, resort will have to be had to private subscription; and, in the present condition of business, and general absence of enthusiasm over anything, we feel that the response would be slow and discouraging When $200,000 is all that can be raised in San Francisco toward a competing transcontinental railroad or the Nicaragua Canal the prospects are not promising for a liberal contribution toward the World's Fair. About the best way to improve the prospects would be for some of our contemporaries to sink their business rivalries and abandon their old personal feuds to the extent of not letting them come to the front whenever the World's Fair is spoken of. If they continue as they are now doing it would not surprise us were our people to conceive a deep and lasting disgust for the World's Fair and everything and everybody connected with it." This is hitting the nail squarely on the head. The constant hounding of the Chronicle by the Call, the stupid child's play bickering, the real subject of which is purely personal, is becoming exceeding wearisome.

AFTER THE MUD MARCH.

AN INCIDENT OF CAMP LIFE SPOILS SUNDRY DINNERS.

How One Regiment Got the Laugh on a Company of Yankees—Jerseymen Feasted on Roast Dog—It Was Then Served to Vermonters as Head Cheese.

Every old soldier of the Army of the Potomac remembers Burnside's mud march. It began on Jan. 22, 1863. This was forty days after his defeat at Fredericksburg. In an effort to retrieve it he followed the example of Charles XII and opened a winter campaign. He tried to strike the Rappahannock some miles above Fredericksburg, cross the river on pontoons and reach Lee's rear. It began to rain on the evening of the 22d, and it rained incessantly for three days. The pontoons never reached the river. They were stuck in seas of mud. Nearly every man in the army was wet to the waist for days in efforts to drag them to dry ground.

The Confederates on the other side of the Rappahannock quickly divined the situation. They stuck up immense placards on the bank of the river bearing such inscription as "Burnside's Army Stuck in the Mud," "Burnside is not McClellan," and other pat sayings. When the sun began to shine and the pontoons were dragged from the sloughs the army went back to its old camp.

Everybody was disheartened. The peninsula veterans, who were stanch McClellan men, shook their heads mournfully, saying, "I told you how it would be." The discontent rose to such a pitch that there was a spirit of mutiny in some of the regiments. Hundreds of desertions occurred every day and the army had no confidence in its commander until Joe Hooker succeeded Burnside.

THE REGIMENTS.

I was a sergeant in Company C of the Twenty-sixth New Jersey volunteers at this time. The New Jersey regiment was part of the Second brigade. This brigade had won a brilliant reputation on the Peninsula and at Antietam. It was known in the Army of the Potomac as the Vermont brigade. It was composed, with the exception of the Jersey regiment, of Vermont troops.

They were tall, ungainly Yankees. They drawled their words and gave them a peculiar nasal twang. Their feet were so big that the Johnnies compared them to old-fashioned griddles.

A Mississippian once told me they were so big that whenever he killed a Vermont Yankee he had to go up and shove him over before he would tumble.

I saw some captured North Carolinians sent in from the front at the first battle of Fredericksburg. In stature, gait and accent they resembled the Vermonters. I believe that if they had worn the Federal uniform the Vermonters themselves would have taken them for brothers.

We went into camp after the mud march near White Oak church. About two weeks afterward Bill Young, a big Scotchman in our regiment, confiscated a sheep owned by some farmer in the vicinity. He had found a little copse in an out of the way nook, where he butchered the the sheep, hung the carcass to the limb of a tree by its hind legs and dressed it. He had hardly finished the work when he was frightened by a file of men who were approaching the spot. After hastily concealing the carcass he sneaked back to camp.

Two hours later he returned to the copse. The mutton seemed to be all right. It did not appear to have been disturbed. He avoided collision with the camp guard, and managed to get it to his shelter tent after dark. Then he cut it up and distributed it among his friends in the ranks and the commissioned officers.

DOG INSTEAD OF MUTTON.

Twenty-four hours afterward a Vermont regiment, then commanded by Louis A. Grant, now assistant secretary of war (and by the way, Redfield Proctor was a captain in the same regiment), passed through our camp on picket detail. As they struck company C's street, through which they marched down the hill, they all began to bark like dogs. The Jerseymen rushed from their tents and wondered what the barking meant. The Vermonters kept up the canine demonstration for half a mile, yelling with delight.

Commissioned officers who had partaken of the mutton were the first to solve the riddle. Some of the cold meat was left. After the Vermont demonstration it did not taste like mutton. It was a little rank, one said, and tasted more like coon meat that hadn't been parboiled. Many who had received the gift were sick at the stomach.

It turned out that some bright Vermonter had seen Young at work on the sheep. He rang in his comrades and frightened the Scotchman back to camp. Then they stole the carcass, and put in its place the dressed body of an old Newfoundland dog that had been following a Wisconsin brigade.

When the Vermonters returned from picket duty and began to cross our camp the barking was resumed. This time the Jerseymen were ready for them. From 700 throats came the cry: "Head cheese, head cheese, you Yankees!"

This cry gave a pallor to the Vermont faces. Their stomachs were turned. While they were on picket duty some Germans in the Jersey regiment had gathered all of the cold roast dog in camp, turned it into head cheese, and peddled it on the Vermont picket reserve. Head cheese was a delicacy rarely seen in the army. It had gone like hot cakes. Everybody bought it. Possibly even Secretary Proctor and General Louis A. Grant got their share of it. At all events there was no more barking and no more buying of head cheese on the picket line.
—Amos J. Cummings in New York Sun.

A Curious Freak of Lightning.

To strike and shatter into splinters a dozen telegraph poles, one after the other, is rather curious. Lightning did this on Cemetery Hill road, near Coatesville. It did not select a pole here and there, but took the twelve in regular order, and splitting some in two it shattered into splinters the others. It is quite a sight to see them as they stand in their present condition.—West Chester (Pa.) News.

Odd Bicycle Incident.

A bicycle and a horse and buggy collided on Commercial row yesterday. The bicycle struck the horse broadside, and both wheel and rider went over him. The man in the buggy was simply astounded, and as the wheelman, who was none the worse for his jump, remounted and rode off, asked, "What was that?"
—Reno (Nev.) Journal.

A Very Hungry Frenchman.

Fin de siecle in everything, Paris has discovered that she is the proud possessor of the very latest thing in cannibals—a man who eats his own flesh. A policeman on duty on the Boulevard a day or two ago was astonished to see an itinerant vender of some commodity or other deliberately and without apparent suffering cut off a long strip of the muscular part of his left arm with a pair of scissors. This eccentric individual, who is only twenty years of age and goes by the name of Leon, was taken to the police station, where it was discovered that he had in a similar manner removed large slices of flesh from his thighs and calves.

So far as could be gleaned from the poor fellow's incoherent talk he has for six months past been under the influence of a mad desire to eat the body of a girl. He related how on many occasions he had followed little children with an open knife concealed in his hand, ready to cut off and devour a portion of their flesh, and how he had just, and only just, control enough to prevent him from carrying out his desire. His mania, however, remained, and in order to satisfy it he had recourse to his own limbs, which are mutilated shockingly. This extraordinary case of mental aberration is being studied carefully by the medical authorities at the Sainte Anne hospital.
—London Graphic.

Free Delivery of Newspapers.

"I believe in the extension of the free delivery system," said Mr. Wanamaker. "Free delivery is like gas or water to a town. It increases its metropolitan character. It adds to its attractions as a business and a residence community. I believe that the introduction of the free delivery extends the circulation of newspapers and increases letter writing. It is not convenient for a man to go to the postoffice for his newspaper.

"If he could get it delivered at his door it would be a welcome visitor. But take a young couple, for example, living in a small town. The husband is at work all day. The wife does not care to go to the postoffice, or perhaps she cannot go, especially if there is a baby in the house. That man would like to take a daily paper perhaps. But he is too tired to go to the postoffice for it every evening, and so he takes a weekly paper or no paper at all.

"As I said, the extension of a free delivery system would increase letter writing too. It is astonishing to me how hard it is to convince the people that you can increase the business of the postoffice."—Washington Cor. Philadelphia Press.

The Reported Cure of Cancer.

Dr. H. J. Hardwicke, surgeon to the Sheffield Public Hospital for Skin Diseases and the Ear and Throat hospital, who has studied for twenty years the treatment of cancer and lupus, believes that he can now cure both diseases without resorting to the surgeon's knife. He has been in communication with Professor von Moretz and finds that his system is similar to that recently announced by that gentleman to the Society of Physicians at Vienna.

Dr. Hardwicke has hitherto for various reasons refrained from publicly explaining his treatment, but having now almost brought his method to a state of perfection he is anxious and willing to place the details before such of his medical brethren as express to him any desire to be acquainted with them. With this object in view he will be glad to invite such would be inquirers to visit a selected number of cases now under treatment and carefully examine them, and also to examine a number of persons who have been cured during the past eighteen years.—Pall Mall Gazette.

Venerable Prelates.

The announcement that Bishop Huntington at the age of seventy-two asks for assistance because the duties of his diocese are beyond his ability to discharge them, reminds us that this active and indefatigable prelate is one of our venerable men. Bishop Clark, who is the acting diocesan in Massachusetts today, is over eighty and exhibits but few of the marks of old age. Bishop Coxe is already several years beyond threescore and ten, and is still a vigorous and active man. Bishop Williams, of Connecticut, the present primate of the Episcopal church, is very nearly seventy-five and is still in charge of his diocese, though his duties fall heavily upon him. Bishop Littlejohn, of Long Island, is not far from seventy, and must be classed among these older men.—Boston Herald.

New York Produces the Most Beans.

"Can I tell you something about beans?" said B. B. Smith, the bean broker, to a reporter on the floor of the Produce exchange. "Well, I think I can. About the acreage—it is larger in New York state than it has been for the last ten years, and the Empire State produces practically all of the beans produced in the United States. Last year the domestic crop was small, and the foreigners made a handsome thing by sending their beans here. But this year I think the New York farmers will get the benefit of the market."—New York Tribune.

A Troublesome Question.

The boundary line between the United States and the British possessions in North America once more threatens to become the subject of international dispute, conference and arbitration. A half century ago "Fifty-four Forty or Fight" was a campaign cry, and the coming controversy begins at that line, from which President Polk retreated, the once northern boundary of Oregon territory being the southern boundary of our territory of Alaska. The discussion of the ownership of Revillagigedo, Pearse and Wales islands, and of the line of the Portland canal, will rival the contest over San Juan island and San Rosario or De Haro straits, decided in favor of the United States, by the emperor of Germany as arbitrator, in 1872.

Each year that the boundary line between Alaska and British Columbia remains in question increases the difficulty of determining it. Each year settlements are increasing in numbers, more private interests are involved, and the region in dispute becomes more valuable to each claimant. There is great indifference to the question on our side of the line, but in the Dominion it is well understood, and parliament and public opinion have taken their stand. Canadian maps now differ from the United States maps of that northwestern region, and this boundary question promises to provoke more international bitterness than the present Behring sea dispute.—Century.

The Bridegroom Was Flustered.

On Wednesday evening a young man with a pretty woman on his arm, entered the Hotel Boyer.

At the door they parted, she remaining in the vestibule, where her rustic beauty caused a sensation, while he went up to the desk and registered. He was evidently nervous, for he nearly put the wrong end of the pen in the ink, and finally wrote: Mr. and Mrs. Blank and wife, and forgot to set down the place he came from. The clerk, however, was used to such vagaries, and assigned the newly married couple to a room.

The bridegroom taking the key, still in a state of flusterment, forgot all about the bride he had left upon the threshold and hurried off up stairs. When he reached the room of course he remembered his life partner, and returned headlong to the office to find her. But in the meanwhile the clerk had observed Mrs. Blank's plight and sent a bellboy to take her to her room. So when the bridegroom landed in the lobby he found no trace of his better half, and his consternation was indescribable.

By this time a good many people about the lobby had got wind of the singular comedy that was being played, and bets were being offered as to whether the bridegroom would throw himself into the Allegheny or call for the police. Before any such tragic ending to the drama could take place, however, the clerk informed the husband where his wife was, and a reunion of a most affecting nature was soon brought about in the corridor above.—Pittsburg Dispatch.

Precocious Infants.

Professor Henry L. Chapman's speech at the Bowdoin commencement dinner was a model for after dinner orators. In telling of the deeds of the class of '66 he spoke of the remarkable precocity of one member, George William Kelley, of Portland, of whom the following is recorded in Cleveland and Packard's History of Bowdoin college: "George William Kelley was born in Portland, November, 1844. He at once entered on a theological course of study in Bangor seminary," etc. The only case of precocity approaching this, he said, was in the class of '53, one member of which was Ephraim C. Cummings, of whom the same history records: "Ephraim Chamberlain Cummings was born in Albany, 1825. His first year was spent in teaching in the academy at Bucksport," etc. Of the two cases Professor Chapman held that the class of '66 led, as it was evidently a more precocious thing to study theology in Bangor than to teach in Bucksport.—Lewiston Journal.

Young Talleyrand's Engagement.

The engagement of the youthful Comte de Talleyrand Perigord to Mlle. de Rohan Chabot, daughter of the Prince and Princess de Leon, has raised the question in aristocratic Paris as to the most fitting age at which young men and maidens should enter the holy state of matrimony. The French aristocracy, it appears, is divided on the matter.

The Duc de Broglie was twenty-four when he married, the Duc de Fezensac only twenty-two, but Prince Alphonse was thirty-seven and Prince Ludovic forty-seven when they quitted the ranks of the bachelors. On the whole, however, it seems that the average age at which the inhabitants of the Faubourg Saint Germain marry is twenty-six; that of the ladies of the same quarter is not given, probably on the principle that "a woman on her wedding is exactly the age she looks."—Pall Mall Gazette.

Sheep Frozen in the Month of June.

A Skowhegan (Me.) Reporter correspondent, in speaking of the year 1816, says it was so cold on the night of June 6 that sheep that had just been sheared suffered severely. "We took fifteen or twenty of the worst cases," he says, "laid them down in rows and covered their bodies with straw. They were so chilled that they lay so still that some of them never stirred again. I think we found seven dead in the morning.

"The neighbors lost so many that they loaded them into an oxcart and drove down the ferry road that ran through our field to the river and dumped them in. About 8 or 9 o'clock that morning a few flakes of snow were seen in the air. A number of little birds of a gosling green color were picked up dead, chilled to death."

Another Smoke Consumer.

Mr. Elson J. Hadlock, of Big Springs, Tex., has just patented an invention for arresting all sparks on locomotives and consuming all smoke that well informed railroad men say must undoubtedly soon come into general use. It entirely does away with the ordinary smokestack of the locomotive. The smoke and sparks, after arising in a pipe a few feet above the boiler, curve downward through double pipes and pass back into the furnace, where everything is reconsumed. There can be no danger of fire from a locomotive thus arranged, and it is claimed that this reconsumption makes a great saving of fuel. It also largely improves the draft on the furnace.—Boston Transcript.

The Fast of Ramadan.

Ramadan, the Mussulman's terrible month of daily fasting, is like the Chinaman's New Year, governed by the moon. This year, precisely at the moment the new moon became visible on the morning of April 8, Ramadan began and continued throughout the lunar month. The origin of this long fast seems shrouded in mystery, as it is said to have been observed by the fire worshipers long before before the the time of Mahomet Ali, who thought the command to all true believers to fast for eleven months in the year was too much to require of mortal flesh. Through the angel Gabriel he therefore besought the Great Spirit to reduce the time one-half. Finding this still a heavy trial, he again interceded and got the time fixed at one lunar month, where it still remains. During this awful month nothing in the way of food passes the true Mohammedan's mouth between dawn and sunset. In the morning, as soon as a white thread can be distinguished from a black one, the fast begins.—St. Louis Republic.

Block island fishermen are having poor luck with mackerel, and several boats have given up trying to catch the fish. Thus far the total catch is about half what it was at the same time last year.

Of all his decorations, the late Emperor Frederick most prized the medal which was given him for saving a man from drowning many years ago.

Mosquitoes in Paris.

Mosquitoes are, I venture to say, for the first time within the memory of the oldest inhabitant, a plague of many parts of Paris. The dampness of the spring is said to be the reason why they nightly buzz, bite and leave faces and hands covered with hard, red blotches. But I believe the true cause is the wholesale destruction of Seine fish when the ice floes in that river were being dynamited last winter.

I never suffered so much in warm weather in any part of the south of France from mosquitoes as I have done this week. If one sits by a lamp near an open window along many of the boulevards a swarm of them assails one. The mosquito bednet not being used in Paris, one lies down at night unprotected, and is liable to rise in the morning with a disfigured face in a state of painful itchiness.—Paris Cor. London News.

Home Is Where the Heart Is.

A small family, consisting of man, wife and baby, is living in a big dry goods box in an open field just off Mountain street, near the division line between Worcester and Holden. The woman is twenty-one years of age and her babe seven weeks. She says about a year and a half ago she married Joseph Pitts, a farm laborer, at Greendale. The baby was born in a boarding house, and she and Pitts have been living, together with the infant, in the dry goods box for two or three weeks. Pitts hires the land, and the woman says he intends to put up a better shelter. She has a brick fireplace outside the box, where she does cooking. Joseph Pitts, the husband, is a cripple and walks with two canes. The marshal says there is no call for police interference. The woman is satisfied with her lot, and the baby seems healthy.—Worcester Spy.

Proving an Old Proverb.

Ancæus, king of the Leleges in Samos (an island in the Grecian archipelago), planted a vineyard; and so heavily did he oppress his slaves that one of them, it is said, prophesied to him that he would never live to taste the wine thereof. When the wine was made he sent for his slave and said, "What do you think of your prophecy now?" The slave made answer, "There's many a slip 'twixt the cup and the lip." The words were scarcely uttered when Ancæus was informed that a wild boar had broken into his vineyard and was laying it waste. Ancæus, setting down the cup untasted, hastened to attack and drive out the boar, but he was killed in the encounter.—Detroit Free Press.

A Well Known Garment.

Landlady—Oh, Mr. Spendem, a small thief came in and stole your overcoat.

Mr. Spendem (gayly)—No matter, no matter; I'll soon get it back. He'll doubtless attempt to pawn it and every pawnbroker in town knows my overcoat.—Good News.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL
TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer with out cost of repairs than any other machine, Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

Estate of E Mallory, deceased—Entered order discontinuing family allowance.

DIED.

KEOUGH—At Bishop, August 27th, Mrs. P. P. Keough.

HANNAH—At Independence, August 21st, Hon. John A. Hannah, aged 72 years.

Hot! Hotter!! Hottest!!!

☞ Try a sack of "Rhine's XX Family Flour."

G. Sanger of Alvord was in town last Tuesday.

New grain is being delivered in town every day.

The thermometer registered 102° in the shade on Tuesday.

Ben. Lasky and P. Labarge were up from Lone Pine early in the week.

John W. Lacey returned last Monday from a trip through Tulare county.

Attention is invited to the advertisement for sale of house and lot in town of Darwin.

C. Mulholland arrived from Los Angeles on Thursday and will go north on to-morrow's train.

John Clarke and W. L. Zimmerman came down from Bishop to attend the funeral of Judge Hannah.

M. W. Trask is visiting Independence. He has been rusticating on Kern River for a few weeks past.

Mrs. P. H. Mack will start for San Francisco to-morrow morning and expects to visit in the city about a month.

The price of tickets from Independence to Bishop and return during Fair week will be $2.00. This is very liberal.

The news was received yesterday that E. P. Lovejoy died at Wabuska on Wednesday night. No particulars have been learned.

Miss Anna Ryan returns to Oakland to-morrow after a month's visit with her sister, Mrs. I. H. Mulholland, at Independence.

The second crop of alfalfa is being cut on the several ranches in the neighborhood and the crop is fully up to the average.

John Kelly came in from Darwin early in the week and spent a few days in town. He started below on yesterday morning's train.

Mrs. Parris came in from Darwin yesterday. She was accompanied by her little daughter who expects to remain here and attend school.

Louis Munzinger of Bishop spent several days in town this week. Likewise the genial Harry Louden. They are both jolly good fellows.

The proprietors of the Blackrock Sawmill have hard work to supply their orders for lumber. They are constantly at work to fill the demand.

Wonder if the Fair Directors could be induced to give a three-year-old trotting purse? There would be at least three entries from Independence.

Mrs. Jennie Smith of Stockton is visiting with her brother, A. N. Bell, at Camp Independence. She is accompanied by her daughter, Miss Nellie Smith.

If there is there is any better fruit country on God's footstool than Owens Valley we would like to know where it is located—and then we'll bet that it isn't.

Last night the sad news was wired from Bishop of the death of Mrs. P. P. Keough. She was a most estimable lady, kind and charitable, and respected by all. The funeral took place at 10 o'clock to-day.

James Hillyer has been granted an invalid pension by the bureau and the action taken is certainly a most righteous one. The old man was crippled in his country's service and he is certainly deserving of support in his old age.

A. B. Hall arrived from Tehachipa on yesterday's train. He is agent for the Mojave and Keeler stage line and he is here on business connected with improving the facilities of travel over the route. He expects to return Monday.

The last Kern county *Californian* says: "Soon after Constable Powers was killed an Indian was arrested who was thought to have been connected with the murder, brought here [Bakersfield] and lodged in jail. An investigation of his case resulted in no evidence being found against him and he was finally liberated. He returned to his old haunts and a man from Kernville brings the news that a few days ago he was found dead near the scene of the murder."

Obituary.

Last Friday night at about half-past ten o'clock Hon. John A. Hannah, ex-Superior Judge of Inyo county, died at his residence at Independence. He had been ailing for years past with a disease of the kidneys, which finally resulted in his death. Judge Hannah was born in Kentucky seventy-two years ago. When a young man he removed to Missouri with his people. Since arriving at the age of manhood he has all his life been connected more or less with public affairs and has filled positions of honor and trust. On the 25th of November, 1839, he was commissioned by Governor L. W. Boggs of Missouri as Captain of First Company, Second Battallion, Twenty-second Regiment, Third Division. On December 22d, 1843, he was commissioned by Governor Thomas Reynolds of Missouri as Lieutenant-Colonel of Twenty-second Regiment, Second Brigade, Third Division During his first appointment he performed good service in the Seminole war, which was brought to a close in 1840, after having lasted seven years. On August 14th, 1847, he was commissioned by President James K. Polk as Second Lieutenant Company C., Santa Fé Battallion, Mounted Volunteers. He served over a year in the Mexican War and was honorably discharged October 17th, 1848. He drew a pension as a Mexican War Veteran at the time of his death. He came to Inyo county in the early 60's and was elected Justice of the Peace at Cerro Gordo during the flush times of 1868-69. He was elected County Judge of Inyo county and served, with re-elections, from 1871 until 1879. He was admitted to practice in the District Court on July 8th, 1879, by Hon. Theron Reed, District Judge. He was commissioned by Governor William Irwin of California as Superior Judge of Inyo county on November 1st, 1879. He was re-elected to the same position in the Fall of 1884 and was commissioned by Governor Stoneman on the 8th of December of that year, and served until his term expired on the first Monday in January, 1891. He thus served as Judge of Inyo county for the long term of twenty years. He was married in early life, but his wife died childless before he came to Inyo county and he never re-married. He leaves considerable property to be distributed among his heirs. The funeral ceremonies were conducted by the Masonic Fraternity, of which he was a member, and the remains interred in the Masonic and Odd Fellows cemetery on Sunday last. The familiar figure of the "Old Judge" is greatly missed on our streets.

It is learned that deceased left a will directing that all his property be sold and the proceeds divided among the heirs. Mr. W. L. Hunter is appointed executor.

A Notable Visitor.

State Senator Thomas Flint of Hollister arrived at Independence last Friday and was entertained by the N. S. G. W., of which order he is Grand Vice-President. A banquet was given at the Norman House and a number of citizens invited to meet the Senator. A social dance was given at Mairs' Hall which was well attended and a jolly time assured, but the news of the death of Judge Hannah being received about 11 o'clock the party adjourned in respect to his memory. Mr. Flint, accompanied by Messrs. Bert. Rhine and Dave Holland, went into the high Sierras west of town on Saturday and remained until Monday. They caught a number of fine trout and had a most enjoyable time. On Tuesday Messrs. Flint and Rhine visited the Parlor at Bishop. A banquet was given by the N. D. G. W. at Mrs. Clark's Hotel. The arrangements were in perfect taste and the affair a most pleasureable one. A social dance was given Spencer's Hall and a good time was had till the "wee sma' hours." Mr. Flint enjoyed himself so thoroughly while here that he will visit the Valley again next year and spend several weeks in the mountains about Mt. Whitney. He is evidently a young man of much intelligence and is certainly an agreeable gentleman to meet.

A New Departure.

Nathan Rhine is having his own brand of flour made up into what will be known as "Rhine's XX Family Flour." He will select all wheat so made up and will, by reducing the percentage of flour per ton of wheat, insure a better and cleaner grade of flour. Every housewife should give this brand of flour a fair trial, and Mr. Rhine wishes it distinctly understood that he will refund the money in all instances where this flour fails to give satisfaction.

Card of Thanks.

We wish to offer our heartfelt thanks to the many friends who so kindly rendered their assistance to us in the sickness and death of our friend, Hon. John A. Hannah. MR. & MRS. BROWN.

A Quick Cure For Rheumatism.

In many cases persons subject to rheumatism, have got prompt relief from pain by applying Chamberlain's Pain-Balm. The relief it affords is alone worth many times its cost, which is but 50 cents, and its continued application effects a complete cure. For sale by A. K. EUGLEY, Big Pine.

For Sale!

House of five rooms and lot in town of Darwin. Terms very reasonable. For particulars apply at this office, or to MRS. REDDY, Darwin, Cal.

Fifth Annual Ball,

18th DISTRICT

Agricultural Association,

—Will be given at—

Spencer's Hall

—On—

Friday Eve., Oct. 2d,

☞ Under the auspices of the Fair Directors.

Well Merited Praise.

In almost every neighborhood there is some one or more persons whose lives have been saved by Chamberlain's Colic, Cholera and Diarrhœa Remedy, or who have been cured of chronic diarrhœa by it. Such persons take special pleasure in recommending the remedy to others. The praise that follows the introduction and use makes it very popular. 25 and 50 cent bottles for sale by A. K. EUGLEY, Big Pine.

A Suggestion.

If you are troubled with rheumatism or a lame back, allow us to suggest that you try the following simple remedy. Take a piece of flannel the size of the two hands, saturate it with Chamberlain's Pain-Balm and bind it over the seat of pain. It will produce a pleasant warmth and relieve you of all pain. Many severe cases have been cured in this way. The Pain-Balm can be obtained from A. K. EUGLEY, Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

An imitation of Nature—that's the result you want to reach. With Dr. Pierce's Pleasant Pellets, you have it. They cleanse and renovate the whole system *naturally*. That means that they do it thoroughly, but mildly. They're the smallest in size, but the most effective—sugar-coated, easiest to take. Sick Headache, Bilious Headache, Constipation, Indigestion, Bilious Attacks, and all derangements of the Liver, Stomach and Bowels are prevented, relieved, and cured. Purely vegetable, perfectly harmless, and gently laxative, or an active cathartic, according to size of dose. As a Liver Pill, they've been imitated, but never equaled.

Some men live to eat and some eat to live, or, in other words, some live for grub and others grub for a living.

EVERYONE SPEAKS WELL OF IT.

Rochester, N. Y., March 18, '86.

For many years I have been troubled with severe pains in the back of my head and neck, the pain being so sevese at times that I was nearly insane, and my friends feared that I would be. Lumps as large as a hickory-nut, wou'd swell up on my forehead and neck. I tried many different kinds of medicines and physicians, but none seemed to reach my case, until I commenced the use of Dr. Pardee's Rheumatic Remedy, and before I had used it four days, the pain left my neck and shoulders and went to my hips and limbs. I continued taking the remedy, and the disease seemed to work downward but there was but little pain. I am still using the remedy, and I feel confident it will entirely cure me; for I am so much better and stronger than I have been for years. I cheerfully recommend it to all.

Very respectfully yours,
MRS. PHOEBE WHEATON.
110 Mt. Hope Avenue.

GOOD NEWS FOR THE AFFLICTED.

A Remarkable Cure of Rheumatism and Catarrh.

Baldwinsville, N. Y.

Pardee Medicine Co.

GENTLEMEN:—About one year ago I chilled my blood and was under the Doctor's care for about six months when I had a counsel of eight *physicians* and was given up to die. Soon after, a lady friend came to see me and told me about *your great Remedy*. She said she had been cured by it after having the rheumatism *seven years*, and that her rheumatism was first brought on by a cold. At this time I was suffering severe pain all through my body and near my heart. The doctors called it only "frozen blood." Through the persuasion of my friend I procured a bottle. I found one relief. Seeing this I procured more and was entirely cured by its use; and what was my surprise and pleasure at finding that I was not only cured of my rheumatism, but the catarrh, which had been troubling me for years, and had become very offensive, had entirely left me.

Wishing your remedy every success, and thanking you very much for my double cure, I remain,

Truly yours,
MRS. LUCY BRONSON.

A LETTER
From the Mother of Miss Jessie Bonesteele.

Rochester, N. Y., April 22, 1886.

GENTLEMEN:—It is with pleasure I add my testimonial to the many well-known cures which your most excellent remedy has effected. For more than two years I was a great sufferer with rheumatism, being scarcely free from pain during the time. I found no relief until I procured Dr. Pardee's remedy, and it cured me completely. It is now two years since I discontinued its use and I have had no symptoms of the disease since. I know from my own and from the experience of many others also, that it will cure any case of rheumatism or neuralgia.

I am, very truly yours,
NESTEELE,
Lockport, N. Y.

GENTLEMEN:—I think the medicine prepared by the Pardee Medicine Company is in fact the best rheumatic medicine now on the market; its equal is not known. My boy only six years old was confined to his bed with rheumatism; I got a bottle of the medicine and in a few days he was out of bed and playing around the house. I can cheerfully recommend this medicine to all rheumatic sufferers.

J. K. PERRY, Shoe Dealer.

Ask your druggist for Dr. Pardee's Remedy and take no other. Price $1 per bottle; six bottles, $5.

THE SPLENDID SPUR.

Being Memoirs of the Adventures of Mr. John Marvel, a Servant of His late Majesty King Charles I, in the years 1642-3: written by himself.

EDITED IN MODERN ENGLISH BY "Q."

"Oh, Jack—I do not know! Shame on me to forget them!"

I ran towards the stable. Already the roof was ablaze, and the straw yard beyond, a very furnace. Rushing in I found the two horses cowering in their stalls, bathed in sweat, and squealing. But 'twas all fright. So I fetched Molly's saddle and spoke to her, and set it across her back, and the sweet thing was quiet in a moment, turning her head to rub my sleeve gently with her muzzle, and followed me out like a lamb. The bay gave more trouble, but I soothed him in the same manner, and, patting his neck, led him, too, into safety.

I had fastened the horses by the gate and was ready to join in the work when a shout was raised:

"Billy! Where's Billy Pottery? Has any seen the skipper?"

"Sure," I called, "you don't say he was never alarmed!"

"Black Sampson was in his room—where's Black Sampson?"

"Here I be!" cried a voice. "To be sure I woke the skipper before any o' ye."

"Then where's he hid? Did any see him come out?"

"Now, that we have not!" answered one or two.

I stood by the house door shouting these questions to the men inside, when a hand was laid on my arm, and there in the shadow waited Billy himself, with a mighty curious twinkle in his eye. He put a finger up and signed that I should follow.

We passed round the outbuildings where, three hours before, Matt. Soames and I had hid together. I was minded to stop and pull on my boots, that were hid here; but (and this was afterwards the saving of me) on second thought let them lie, and followed Billy, who now led me out the postern gate.

Without speech we stepped across the turf, he a pace or two ahead. A night breeze was blowing here, delicious after the heat of the fire. We were walking quickly towards the east side of the headland, and soon the blaze behind flung our shadows right to the cliff's edge, for which Billy made straight, as if to fling himself over.

But when, at the very verge, he pulled up, I became enlightened. At our feet was an iron bar driven into the soil, and to it a stout rope knotted, that ran over a block and disappeared down the cliff. I knelt, and, pulling at it softly, looked up. It came easy in the hand.

Billy, with the glare in his face, nodded, and, bending to my ear, for once achieved a whisper.

"Saw one stealing hither—an' followed. A man wi' a limp foot—went over the side like a cat."

I must have appeared to doubt this good fortune, for he added:

"Be a truth speakin' man i' the main, Jack—lay over 'pon my belly, and spied a ledge—fifty feet down or less—reckon there be a way thence to the foot. Dear, now! what a rampin', tearin' sweat is this!"

For, as fast as I could tug, I was hauling up the rope. Nearly sixty feet came up before I reached the end—a thick twisted knot. I rove a long noose, pulled it over my head and shoulders, and made Billy understand he was to lower me.

"Sit i' the noose, lad, an' hold round the knot. For sign to hoist again, tug the rope hard. I can hold."

He paid it out carefully while I stepped to the edge. With the noose around my loins I thrust myself gently over, and in a trice hung swaying.

On three sides the sky compassed me—wild and red, save where to eastward the dawn was paling; on the fourth the dark rocky face seemed gliding upward as Billy lowered. Far below I heard the wash of the sea, and could just spy the white spume of it glimmering. It stole some of the heart out of me, and I took my eyes off it.

Some feet below the top, the cliff fetched a slant inward, so that I dangled a full three feet out from the face. As a boy I had adventured something of this sort on the north sides of Gable and the Pillar, and once (after a nest of eaglets) on the Mickledore cliffs; but then 'twas daylight. Now, though I saw the ledge under me, about a third of the way down, it looked, in the darkness, to be so extremely narrow that 'tis probable I should have called out to Billy to draw me up but for the certainty that he would never hear so, instead, I held very tight and wished it over.

Down I swayed (Billy letting out the rope very steady), and at last swung myself inward to the ledge, gained a footing and took a glance round before slipping off the rope.

I stood on a shelf of sandy rock that wound round the cliff some way to my left and then, as I thought, broke sharply away. 'Twas mainly about a yard in width, but in places no more than two feet. In the growing light I noted the face of the headland ribbed with several of these ledges, of varying length, but all hollowed away underneath (as I suppose by the sea in former ages), so that the cliff's summit overhung the base by a great way, and peering over I saw the waves creeping right beneath me.

Now all this while I had not let Master Tingcomb out of my mind. So I slipped off the rope and left it dangle, while I crept forward to explore, keeping well against the rock and planting my feet with great caution.

I believe I was twenty minutes taking as many steps, when at the point where the ledge broke off I saw the ends of an iron ladder sticking up, and close beside it a great hole in the rock, which till now the curve of the cliff had hid. The latter no doubt stood on a second shelf below.

I was pausing to consider this, when a bright ray streamed across the sea towards me, and the red rim of the sun rose out of the waters, outfacing the glow on the headland, and rending the film of smoke that hung like a curtain about the horizon. 'Twas as if by alchemy that the red ripples melted to gold; and I stood watching with a child's delight.

I heard the sound of a footstep, and faced round.

Before me, not six paces off, stood Hannibal Tingcomb.

He was issuing from the hole with a sack on his shoulder, and sneaking to descend the steps, when he threw a glance behind—and saw me!

Neither spoke. With a face gray as ashes he turned very slowly, until in the unnatural light we looked straight into each other's eyes. His never blinked, but stared—stared horribly, while the veins swelled black on his forehead and his lips worked, attempting speech. No words came—only a long drawn sob, deep down in his throat.

And then, letting slip the sack, he flung his arms up, ran a pace or two towards me, and tumbled on his face in a fit. His left shoulder hung over the verge; his legs slipped. In a trice he was hanging by his arms, his old distorted face turned up, and a froth about his lips. I made a step to save him, and then jumped back, flattening myself against the rock.

The ledge was breaking.

I saw a seam gape at my feet. I saw it widen and spread to right and left. I heard a ripping, rending noise—a rush of stones and earth; and, clawing the air, with a wild screech, Master Tingcomb pitched backward, head over heels, into space.

Then followed silence; then a horrible splash as he struck the water, far below; then again a slipping and trickling, as more of the ledge broke away—at first a pebble or two sliding—a dribble of earth—next, a crash and a cloud of dust. A last stone ran loose and dropped. Then fell a silence so deep I could catch the roar of the flames on the hill behind.

Standing there, my arms thrown back and fingers spread against the rock, I saw a wave run out, widen, and lose itself on the face of the sea. Under my feet but eight inches of the cornice remained. My toes stuck forward over the gulf.

A score of startled gulls with their cries called me to myself. I opened my eyes, that had shut in sheer giddiness. Close on my left the ledge was broke back to the very base, cutting me off by twelve feet from that part where the ladder still rested. No man could jump it, standing. To the right there was no gap; but in one place only was the footing over ten inches wide, and at the end my rope hung over the sea, a good yard away from the edge.

I shut my eyes and shouted.

There was no answer. In the dead stillness I could hear the rafters falling in the House of Gleys, and the shouts of the men at work. The Godsend lay around the point, out of sight. And Billy, deaf as a stone, sat, no doubt, by his rope, placidly waiting my signal.

I screamed again and again. The rock flung my voice seaward. Across the summit, vaulted above, there drifted a puff of brown smoke. No one heard.

A while of weakness followed. My brain reeled; my fingers dug into the rock behind till they bled. I bent forward—forward over the heaving mist, through which the sea crawled like a snake. It beckoned me down, that crawling water.

I stiffened my knees, and the faintness passed. I must not look down again. It flashed on me that Delia had called me weak, and I hardened my heart to fight it out. I would face round to the cliff and work towards the rope.

All the way I kept shouting, and so, for half an hour, inch by inch, shuffled forward until I stood under the rope. Then I had to turn again.

The rock, though still overarching, here pressed out less than before, so that, working round on the ball of my foot, I managed pretty easily. But how to get the rope? As I said, it hung a good yard beyond the ledge, the noose dangling some two feet below it. With my finger tips against the cliff, I leaned out and clutched at it. I missed it by a foot. "Shall I jump?" thought I, "or bide here till help comes?"

'Twas a giddy, awful leap. But the black horror was at my heels now. In a minute more 'twould have me, and then my fall was certain. I called up Delia's face as she had taunted me. I bent my knees, and, leaving my hold of the rock, sprang forward—out, over the sea.

I saw it twinkle, fathoms below. My right hand touched—grasped the rope; then my left, as I swung far out upon it. I slipped an inch—three inches—then held, swaying wildly. My foot was in the noose. I heard a shout above, and, as I dropped to a sitting posture, the rope began to rise.

"Quick! Oh, Billy, pull quick!"

He could not hear, yet tugged like a Trojan.

"Now, here's a time to keep a man sittin'!" he shouted, as he caught my hand and pulled me full length on the turf. Why, lad—hast seen a ghost?"

There was no answer. The black horror had overtaken me at last.

They carried me to a shed in the great court of Gleys, and set me on straw; and there, till far into the afternoon, I lay betwixt swooning and trembling, while Delia bathed my head in water from the sea, for no other was to be had. And about 4 in the afternoon the horror left me, so that I sat up and told my story pretty steadily.

"What of the house?" I asked, when the tale was done, and a company sent to search the east cliff from the beach.

"All perished!" said Delia, and then, smiling, "I am houseless as ever, Jack."

"And have the same good friends."

"That's true. But listen—for while you have lain here, Billy and I have put our heads together. He is bound for Brest, he says, and has agreed to take me and such poor chattels as are saved to Brittany, where I know my mother's kin will have a welcome for me, until these troubles be passed. Already the half of my goods is aboard the Godsend, and a letter writ to Sir Bevill, begging him to appoint an honest man as my steward. What think you of the plan?"

"It seems a good plan," I answered slowly, "the England that now is, is no place for a woman. When do you sail?"

"As soon as you are recovered, Jack."

"Then that's now." I got on my feet and drew on my boots (that Matt. Soames had found in the laurel bushes and brought). My knees trembled a bit, but nothing to matter.

"Art looking downcast, Jack."

Said I, "How else should I look, that am to lose thee in an hour or more?"

She made no reply to this, but turned away to give an order to the sailors.

The last of Delia's furniture was hardly aboard, when we heard great shouts of joy and saw the men returning that had gone to search the cliff. They bore between them three large oak coffers, which, being broke, we came on an immense deal of old plate and jewels, besides over £300 in coined money. There were two more left behind, they said, besides several small bags of gold. The path up the cliff was hard to climb, and would have been impossible but for the iron ladder they found ready fixed for Master Tingcomb's descent. In the hole (that could not be seen from the beach, the shelf hiding it) was tackle for lowering the chest; and below a boat moored, and now left high and dry by the tide. Doubtless, the arch rascal had waited for his comrades to return, whom Matt. Soames and I had scared out of all stomach to do so. His body was nowhere found. The sea had washed it off; but the sack they recovered, and found to hold the choicest of Delia's heir looms. Within an hour the remaining coffers and the money bags were safe in the vessel's hold.

The sun was setting as Delia and I stood on the beach beside the boat that was to take her from me. Aboard the Godsend I could hear the anchor lifting, and the men singing, as, holding Molly's bridle, I held out my hand to the dear maid who with me had shared so many a peril.

"Is there any more to come?" she asked.

"No," said I, and God knows my heart was heavy; "nothing to come but 'Farewell!'"

She laid her small hand in my big palm, and, glancing up, said very pretty and demure:

"And shall I leave my best? Wilt not come, too, dear Jack?"

"Delia!" I stammered. "What is this? I thought you loved me not."

"And so did I, Jack; and, thinking so, I found I loved thee better than ever. Fie on thee, now! May not a maid change her mind without being forced to such unseemly, brazen words?" And she heaved a mock sigh.

But as I stood and held that little hand, I seemed across the very mist of happiness to read a sentence written, and spoke it, perforce and slow, as with another man's mouth.

"Delia, you only have I loved, and will love! Blithe would I be to live with you, and to serve you would blithely die. In sorrow, then, call for me, or in trust abide me. But go with you now I may not."

She lifted her eyes, and looking full into mine, repeated slowly the verse we had read at our first meeting:

"In a wife's lap, as in a grave,
Man's airy notions mix with earth.

Thou hast found it, sweetheart—thou hast found the Splendid Spur!"

She broke off, and clapped her hands together very merrily; and then, as a tear started:

"But thou'lt come for me ere long, Jack! Else I am sure to blame some other woman. Stay"——

She drew off her ring, and slipped it on my little finger.

"There's my token! Now give me one to weep and be glad over."

Having no trinkets I gave my glove, and she kissed it twice and put it in her bosom.

"I have no need of this ring," said I, "for look!" and I drew forth the lock I had cut from her dear head that morning among the alders by Kennet side, and worn ever since over my heart. "Wilt marry no man till I come?"

"Now, that's too hard a promise," said she, laughing and shaking her curls.

"Too hard!"

"Why, of course. Listen, sweetheart—a true woman will not change her mind; but, oh! she dearly loves to be able to! So, bating this, here's my hand upon it—now, fie, Jack! and before all these mariners!—well, then, if thou must"——

I watched her standing in the stern and waving till she was under the Godsend's side, then turned and mounting Molly rode inland to the wars.

THE END.

Suits Against New York.

Chief Bonner said the other day that claims aggregating at least $2,000,000 were pending against this city for alleged violations by the fire department of patent rights. "Syndicates have been formed to push these claims," said the chief, "and there are two big suits in the courts now. One is for an alleged infringement of a patent on the heater stove used on our fire engines and the other suit relates to the Nibbs relief valve. The city authorities have been legally advised that none of these claims can hold against the city."—New York Times.

Almost to the Bourne.

Jones Brown is rich and stingy. An acquaintance of his met Brown's son the other day and said:

"Your father seems to have lost a good deal of money lately. The last time I saw him he was complaining and saying he must economize."

Economize? Did he say where he was going to begin?"

"Yes; on his table, he said."

"Then he must be going to take away the table cloth," was the filial declaration.—New York Ledger.

It Was a Cold Night.

Mrs. Kohldphiet—What on earth are you doing, Clarence?

Mr. Kohldphiet—Only securing my half interest in bedclothes against possible confiscation this evening.—Puck.

TALE OF A BALLOONER.

One Man Who Charged Him $2.25 for Dropping Onto His Farm.

"I used to make balloon ascensions in connection with Warner's circus," said an old and retired aeronaut the other day, "and one day I went up from Pekin, Ills. The balloon was new and light and I got a much longer ride than what I expected. I finally descended in a farmhouse yard about ten miles away, my anchor having caught in a cherry tree. The farmer was an old fellow, about 60 years of age, and he sat reading on his doorstep as I came down. He removed his glasses, put them in their case, put the case in his pocket and then came forward and carelessly observed:

"'That a balloon?'

"'Yes. Help me pull it down.'

"'Are you a balloonert'

"'Yes. Pull hard.'

"We got the air ship down and I wanted him to take me to town in his wagon. He had none, and I had hired a rig of a neighbor, and was about to depart when the old fellow stepped forward with:

"'I have a little bill here, sir.'

"'Bill! What for?'

"'Damage to cherry tree, 2 shillin's; skeering my poultry, 50 cents; skeering my old woman, the same; services of myself, $1. Total, $2.25, which is mighty cheap considerin' the times.'

"'But I won't pay it,' I protested.

"'Oh, you won't? Well, I'm a justice of the peace and I'll issue a warrant. My naybur is constable and he kin serve it. The old woman is out of her fit by this time and she'll be witness, and I sort o' reckon I'll fine you about $25 for disturbin' of the peace and contempt of this court!'

"And I was made to realize that the best way out of it was to come down with the amount of his bill, and luckily I had it, with a quarter to spare."—Chicago Herald.

Mistakes of Near Sighted Men.

Lawyer Ashley, of New York, was telling Judge Day a story of Daudet, the novelist, who is extremely near sighted. The story ran thus: Daudet visited some place in which were kept many animals. He sauntered slowly about peering into their cages until he came to a secluded spot where a furry object, not in a cage, attracted his attention. "Ah!" said the distinguished Frenchman, "this must be a tame bear." And, taking some cake from his pocket he flung it with a "There, old fellow," straight into the face of a Russian nobleman who, enveloped in his sables, had stopped to look at the bears near by. Imagine his anger and surprise. Daudet apologizes, etc., etc., etc.

The judge listened intently, but after the lawyer had finished he said gravely:

"I can tell you something far ahead of that in the way of mistakes caused by nearsightedness.

"A friend of mine who lives in the suburbs came from the city one summer evening just at twilight. He had broken his glasses and was almost feeling his way along, when he became conscious of somebody walking directly in front of him. It seemed to be a short woman in a bright gown, wearing a wrap about her shoulders, one end of which trailed down behind her. She walked so heavily that my friend began to think that, though short, she must be exceedingly stout. A few steps more and the wrap touched the ground and dragged in the mud. This was more than his gallantry could stand, so stooping forward he said: 'Allow me, madam, to replace your mantle,' at the same time gently raising a red cow's tail and placing it across her back."—Detroit Free Press.

Better Left Unsaid.

A young man from Omaha who made his debut in Washington society one evening last week was chatting with a charming lady, when the theatre became the topic of conversation. He did not know much about the theatre, so he cautiously maintained as much brilliant silence as the circumstances permitted.

"Did you know that I once appeared upon the stage in opera?" the lady asked.

"N-n-no." He was not quite sure but it was uncomplimentary to the lady to say he had never heard of it, but truth was mighty and did prevail.

"Yes," said she cheerily; "I once played Katisha—in an amateur company, of course."

The young man felt relieved. It could not be expected that he had heard of that half way across a continent.

"I should think you would play Katisha capitally," said he.

There was silence for a spell.

"Of course," said she, "I did not make up for it as they usually do; I wouldn't"——

"Of course not," he interrupted confidentially and gallantly, "you didn't have to."

After he had left the house he asked a friend what sort of a part Katisha is, and what he learned explained lots of strange things to him.—Washington Post.

Suiting a Customer.

Bristle—I want to look at some dress shirts.

Clerk—Yes, sir. You're a stranger in town, are you not?

Bristle (proudly)—Yes, sir, I am. My home, sir, is in Chicago.

Clerk—Ah, yes. What kind of flannel do you prefer?—Clothier and Furnisher.

Women and Men.

Society is composed, principally, of women and ladies. They call upon each other and bore each other fearfully, yet each would feel mortally injured if the other did not call.

The natural prey of man is woman, and of woman, man; but man has less leisure to pursue his natural instincts.

The appreciation by which a woman is held by the male sex gives a good index, on the inverse ratio method, of the estimation in which she is held by her own.

Nor, though husband and wife are one and indivisible, does it follow that the admirers of the one will be equally attached to the other? Politically speaking, England and Ireland stand to each other in a very similar relationship.

Intellect in woman is appreciated by man only in so far as it qualifies her to appreciate it in him.—Murray's Magazine.

Where Nobody Starves.

Within a hundred miles of the east coast of Australia no native in an uncripled condition has ever died from lack of digestible food—a rather comprehensive term in a country where fern roots are boiled like potatoes, and snails and grasshoppers are considered tidbits. Strange to say, the martyrs of that horrid diet get old, as a proof that freedom from care is, after all, the main condition of longevity. A similar phenomenon may be observed in the villages of Central Russia, where mental stagnation prevails in its ugliest forms, but where charity and parish poor laws protect every native from the risk of actual starvation. — Professor Oswald in Good Words.

Two Famous Men Converse.

A young woman was favored with a chance to hear two famous poets converse. She was walking in Cambridge, and saw Longfellow and Lowell strolling a little way ahead. Her quick step soon brought her near them. She thought to herself, "Now I will get the freshest utterances of two great men." Just before she overtook them she saw a pretty child coming along, and about to meet them. "What are little girls made of?" said one poet to the other. "Sugar and spice and all that's nice, and that's what little girls are made of."—Christian Union.

Canned Fruits in Pompeii.

A curious story is told of the origin of canned fruits. Years ago, when the excavations were beginning at Pompeii, some jars of preserved figs were found in the pantry of one of the buried houses. On being opened the fruit was found to be fresh and good, thus showing that centuries ago the art of preserving fruit was practiced and that we are indebted to the ancients for many a delicious dish. —New York World.

The biggest natural beehive in the world is that in Kentucky known as the "Mammoth Beehive." It is in reality a huge cave, the main compartment of which is 150 feet high, and whose floor covers ten acres in extent. The beehive is of solid rock, the roof of which has been entirely honeycombed by bees.

CHANGES OF CLIMATE

Kill more people than is generally known. Particularly is this the case in instances where the constitution is delicate, and among our immigrant population seeking new homes in those portions of the West, and where malarial and typhoid fevers prevail at certain seasons of the year. The best preparative for a change of climate, or of diet and water which that change necessitates, is Hostetter's Stomach Bitters, which not only fortifies the system against malaria, a variable temperature, damp, and the debilitating effects of tropical heat, but is also the leading remedy for constipation, dyspepsia, liver complaint, bodily troubles specially apt to attack emigrants and visitors to regions near the equator, mariners and tourists. Whether used as a safeguard by sea voyagers, travelers by land, miners or of agriculturists in newly populated districts, this fine specific has elicited the most favorable testimony.

It makes no mortal difference
How new your joke may be,
You'll find some Aleck smart who heard
It back in '63.

EXPERIENCE OF AN EX-CHAMPION.

Athletes and men who take ordinary outdoor exercise such as walking, running, bicycle riding, jumping, swimming, tennis, etc., are often the subjects of acute troubles. The experience of an ex-champion walker will be of interest to all who are afflicted. Read the following letter:

"No. 324 East 19th St., NEW YORK, Apr 12, 1886.

Numerous statements relative to the merits of different plasters having been brought to my attention, I take this opportunity to state that I have used ALLCOCK'S POROUS PLASTERS for over 20 years and prefer them to any other kind. I would furthermore state that I was very sick with catarrh of the kidneys, and attributed my recovery entirely to ALLCOCK'S POROUS PLASTERS.

HARRY BROOKS."

Kind Lady—If you pile up this wood properly I will give you some more work to do. Weary Raggies—Den I throw up de fust job, mum.

For relieving Throat Troubles and Coughs, "*Brown's Bronchial Troches*" have a world-wide reputation. *Sold only in boxes.* Price 25 cents.

Nurse Girl—Why don't ye put that brat to sleep an' have a good time while yer in th' park? Ex-Nurse Girl—It's me own.

DEAFNESS CAN'T BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that we cannot cure by taking Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by all Druggists, 75c.

A Dismal Wail—"With me, life has been a continuous failure."—Delaware Peach Crop.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 808 Market street, San Francisco.

Fussy Old Gentleman—here's a fly on your nose, mum. Irascible Old Lady—Well, he ain't yours, is he?

The Electric Alarm Clock will ring until you get up and stop it. People who over-sleep should have one. For particulars address Imperial Jewelry Co., 26 O'Farrell St., San Francisco.

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

Old Gold and Silver Bought; send your old Gold and Silver by mail to the old and reliable house of A. Coleman, 41 Third street, San Francisco; I will send by return mail the cash, according to assay; if the amount is not satisfactory will return gold.

DOLLARS SAVED, DOLLARS MADE.

Our reporter called on California Wagon and Carriage Co., 36½ Fremont Street, San Francisco, and found them shipping vehicles to all parts of the country, at the extraordinary and unprecedented low prices as follows:

Road Carts, $13.98; Body Carts, $19.89; Runabout Wagons, $39.98, $50.98 $57.98 and $58.98; Open Buggies, $48.98 to $72.98; Top Buggies, $60.98, $69.98, $73.98 and $77.98; Spring Wagons at $42.98, $47.98, $63.98 and $82.98; Phaetons, $93.98; surries, $126.98; Carriages, $124.98; Harness, $6.98, $9.98, $12.98 and $76.98.

The Company guarantees these goods superior in every respect to goods now and heretofore sold at double their price. They are sold without any middle profit added to price and they have no expensive traveling men whose salary and expenses are added to prices. The figures quoted are their retail prices which are actually lower than wholesale rates. They buy for cash and sell for spot cash. One wanting a buggy can certainly be suited by this Company as they have upward of ninety samples set up for inspection. It will pay you to write for catalogue.

Perhaps it is because history repeats itself that some of it gets so very dry.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted .....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

"August Flower"

What is It For? This is the query perpetually on your little boy's lips. And he is no worse than the bigger, older, balder-headed boys. Life is an interrogation point. "What is it for?" we continually cry from the cradle to the grave. So with this little introductory sermon we turn and ask: "What is AUGUST FLOWER FOR?" As easily answered as asked: It is for Dyspepsia. It is a special remedy for the Stomach and Liver. Nothing more than this; but this brimful. We believe August Flower cures Dyspepsia. We know it will. We have reasons for knowing it. Twenty years ago it started in a small country town. To-day it has an honored place in every city and country store, possesses one of the largest manufacturing plants in the country and sells everywhere. Why is this? The reason is as simple as a child's thought. It is honest, does one thing, and does it right along—it cures Dyspepsia.

G. G. GREEN, Sole Man'fr, Woodbury, N.J.

EVERY SKIN AND SCALP DISEASE whether torturing, disfiguring, humiliating itching, burning, bleeding, scaly, crusted, pimply, or blotchy, with loss of hair, from pimples to the most distressing eczemas, and every humor of the blood, whether simple, scrofulous, or hereditary, is speedily, permanently, and economically cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. "THE SPECIFIC A NO. 1."
YOUNG MEN! Cures all unnatural discharges of men, no matter how long standing. Prevents stricture, it being an internal remedy. Cures when everything else has failed. Price, $3.00. Circular on application. Sold by Druggists or sent on receipt of price by The A. Schoenheit Medicine Co., San Jose, Cal.

BIG G Cures in 1 TO 5 DAYS. Guaranteed not to cause Stricture. Mfd only by THE EVANS CHEMICAL CO. CINCINNATI, O. U. S. A. Trade Mark. This is the acknowledged leading remedy for all the unnatural discharges and private diseases of men. A certain cure for the debilitating weakness peculiar to women. I prescribe it and feel safe in recommending it to all sufferers. A. J. STONER, M.D., DECATUR, ILL. Sold by Druggists. PRICE $1.00.

25 CTS PISO'S CURE FOR 25 CTS
Best Cough Medicine. Recommended by Physicians. Cures where all else fails. Pleasant and agreeable to the taste. Children take it without objection. By druggists.
CONSUMPTION

A STRUGGLE WITH DIRT

Goes on in civilized society from the cradle to the grave. Dirt is degradation—and degradation is destruction. Women, especially, are judged by their habits of household cleanliness, and no stronger condemnation can be expressed than "she keeps a dirty house and a filthy kitchen." But the struggle with dirt is often unequal. The woman's weakness or the worthlessness of the soaps she uses make it impossible to overcome the demon of dirt. By the use of SAPOLIO she wins easily.

ENDLESS
GANDY THRESHER BELTS.
BEST IN THE WORLD.

A TRAINING HOTEL.

The Development of Trusty "Kitchen Help."

CLEAN LODGINGS AND WHOLESOME BOARD

For Guests of Limited Means and Good Moral Character.

The cry for clean lodgings, wholesome board, moderate and reasonable prices goes up on every hand. Thousands of clerks, both male and female, in our stores and offices, thrown upon their own resources, find themselves in a large city without a home. Students, apprentices, young men just starting either in their professions or in business must live as well as people better off. How infinitely better for many a young man and young woman if they could marry when but a few years older relatively than their parents when they married—providing the aforesaid young man can support himself and family. Commercial drummers, tourists and others, commonly known as "transients," an army ever on the increase, are continually seeking clean and respectable places whereon to lay their heads and whereat to be filled, with the reasonable assurance of having enough money left after paying their hotel bills in the morning with which to get out of town.

A practical solution of these much mooted questions—the condition of the "city slave girl" and of the "hired girl," and the betterment thereof—to a limited extent at least, would seem to lie in a proper recognition and a skillful combination of these two great public demands: (1) The demand, on the one hand, for experienced and trustworthy help; (2) the demand, on the other hand, for clean lodgings, wholesome food, moderate prices.

Now as to the "modus operandi." Secure a suitable location, probably near one of the large railroad stations in the city. Erect there a plain, fireproof, commodious hotel, with the modern improvements, capable of comfortably accommodating 1,000 guests, both as "transients" and as "regulars." Furnish an ordinary 50 cent meal or bed for 25 cents, or board and lodging at $1 per day or $5 per week. Such hotel would necessarily be furnished very plainly throughout. Perhaps no carpets would deck the oiled hard pine floors. But, notwithstanding, everything could be kept scrupulously clean; the food could be wholesome, well cooked, and plenty of it, even if the delicacies of the season were wanting. And under proper management such institution could be made to pay for itself in time. Prices would be so reasonable, the service so excellent, that people would naturally flock to such places of refuge without the expense of advertising. In other words, it would advertise itself. The two chief conditions for admission into such hotel home would be good moral character and weekly payment in advance.

To run such a hotel properly would probably require no more servants than are today required to minister to the wants of an equal number of guests in any ordinary hotel. Although the domestics would be novices, still the hotel would make little pretensions at anything but cleanliness. Everything would be constructed to save work wherever possible. Such hotel to accommodate 1,000 guests would require probably anywhere from 150 to 200 domestics all the time. These servants would be under experienced instructors, the best that money could command. For instance, dinner would be prepared by a class of fifty, if necessary, each at her own range, arranged in semi circles, with the chief cook in the center, much as instruction in chemistry and other sciences in our colleges is now imparted. There would be regular courses of instruction in cuisine, in laundering, etc. The primary object would be to give each graduate adequate knowledge of how to go into any well regulated kitchen or laundry and take entire charge thereof.

The immediate consideration for such service would be none other than board, lodging, necessary clothes, aforesaid instruction, and the promise that so soon as competent the institution would do all in its power to find its graduates acceptable situations in respectable families or other hotels at remunerative wages. The surplus in the receipts of this hotel—for instance, 1,000 regular boarders at $5 per week or $260,000 yearly—left after paying all running expenses, salaries of the various necessary instructors and assistants, besides possibly 4 per cent. interest on the original investment, would form a fund from which prizes would be given those girls who had completed a systematic course of training, possibly averaging $50 to $75 cash per year for each graduate during preparation. This would be better than paying them weekly wages, however small, for the incentive to complete the course, not only for the knowledge but for the pecuniary reward awaiting the faithful, would be so strong as to practically prevent their working a few weeks, getting a respectable outfit of clothing, and then quitting. Then, again, receiving upon completing the course (instead of weekly) whatever pecuniary inducement such institution might be able to extend them would prevent their fooling away upon trifles their earnings, thus quietly reducing to a minimum their inordinate desire to "run," which discipline they would find when in service in private families not to be their least recommendation. All their necessary wants would be supplied and they would have no occasion for pocket money.

After a year's faithful service in such institution a sergeant could command from one-third to two-thirds more wages than before, and after two years such service she would receive double, or, in exceptional cases, triple her present wages, besides being forever insured a good home in some well to do and respectable family. Should she afterward conclude to marry—for with such a woman it would no longer be a question whether or not a man could be found to ask her—her husband would find her to be a veritable treasure.—E. H. Sanford in Chicago Times.

Philosophy of the Plantation.

Mr. Levi Fisher sold a couple of bales of last year cotton to the Bensons this week. Some one told him he could have got more for it if he had sold it last year. "Yes," was the reply; "but if I had sold it then I wouldn't have the money now." Something in that.—Hartwell Sun.

Taking the Lead.

Southern women are said to have taken the lead of their sex in money making in New York. The head of the richest firm of dressmakers is a southern woman, and women of southern birth come to the front in other directions.—Chicago Herald.

The Effects of Novel Reading.

The mischief of voracious novel reading is really much more like the mischief of dram drinking than appears at first sight. It tends to make all other literary nourishment intolerable, just as dram drinking tends to make all true food intolerable, and to supersede food by drink. The voracious novel reader of today, as we have said, rejects Scott, because Scott's novels contain so much good food that it is not mere story telling. The genuine novel reader detests what he calls tame stories, stories in which the interest is not exaggerated and piled up ten times as high as the interests of ordinary life. He wants always to be feeling a thrill of excitement running through his nerves, always to be living in imagination through the concentrated essence of the perils of a hundred adventurous lives, instead of toiling calmly through the ordinary hopes and fears of one.

No state of mind can be more unwholesome, because none is more calculated to divert the energies from the sort of quiet tasks to which they should be habitually applied, and to keep them stretched on the tenter hooks of expectation, waiting for a sort of strain which is never likely to occur, and if it did occur, would certainly not find a man's energies any the better prepared for it for having been worn out previously with a long series of imaginary excitements. The habit of dram drinking, it is said, leads to fatty degeneration of the heart, i. e., excessive fattening round the heart, and weak action of the heart in consequence. So, too, the habit of exciting novel reading leads to fatty degeneration of the literary mind, i. e., to an unhealthy and spasmodic action of the imagination, and a general weakening of the power of entering thoroughly into the solid interests of real life. So far as we know, the only effective cure for this habit of literary dram drinking—a cure not always forthcoming—is a moral shock of some kind which exposes the hollowness of all these unreal interests, and makes them appear as artificial and melodramatic as they actually are. That, however, is a cure which is an extremely painful one, almost cruel in its disillusionizing power.—London Spectator.

The Care of Domestic Animals.

The family cat is regarded with far greater respect in England than America. Every householder in New York, when he packs off for the summer, leaves the cat to live in the streets. The consequence is that during the hot weather the cats of the Empire city cry aloud and shout; they wail in anguish to the earless moon in moans "most musicall, most melancholie." They make night hideous for callous hearted man, who ignores their affection and rejects their companionship. Among cranks, commend me to the animal loving crank. He is a bit weak headed at times, but softness of heart is quite compatible with strongness of mind. Whether the Baroness Burdett-Coutts was cranky or not as a connoisseur in husbandry she shows admirable judgment in the care of animals. And her care for them when they cease from age or malady to be serviceable beasts of burden entitles her to public homage. At Holly Lodge, her beautiful suburban home at Highgate, she keeps her worn out horses, donkeys, cattle, dogs, cats and other pets in well tended pastures and stables until they die. And she visits them with the regularity of a doctor, sparing nothing that can give them comfort. Others here and there do the same.

I have seen pedigree cattle with famous names and records living in luxury to a grand old age, and I have also seen poor folks' broken down horses and pets kept in country quarters at an expense they could but ill afford. "The merciful man is merciful to his beast." What of New Yorkers and their cats? If they sneer at the bare idea of imitating the example of those who have established a home for cats in London, let them do something better. For a very small fee the Londoner who locks up house to go a-holiday making can have his cat properly cared for until the family return. This is common humanity and common sense. If the wealthy New York houseowner cannot afford to keep his cat all the year round, he should have it killed rather than cruelly subject it to the horrors of New York street life.—New York Cor. Globe-Democrat.

People of New Brunswick.

They are a splendid people here. There is a certain dignity about every one of them far more striking than with any English in England. And what is better, they are truly kind hearted and polite. I used to know, a quarter of a century ago, some of those grand old Hudson Bay company's factors; and fine fellows they were—brave, cultured, chivalrous, gentle and good, but with a roaring sort of way with them that suggested the entrancing Manitoban Indian summer with a lurking, howling blizzard element beneath. These are like them. Climate has had to do with it; true culture of brain and brawn, more. They are near enough to the states to be emulative; far enough from England to abhor incivility.

They—and all New Brunswick folk—are less pretentious than we; more tolerant than others of their nationality. In all that makes sociologic distinction, these people are immeasurably better than Englishmen, and infinitely less the time servers and snobs than some Americans. I should say they had got further away from the England we profess to condemn than many of us whose cheeks should flame for our cockney apings; that they were, in moderation, level headedness, clean culture, and in the freedom from feverish ambitions and vanities, far in advance of most of our communities; that they possessed the best of Old World equipoise and conservatism, and of New World virility; and that if by any good fortune of diplomacy or war their country should become our country, we would secure a fine bit of possession and as admirable a class of people as are now within our farthest boundaries.—Edgar L. Wakeman's Letter.

A Non-Transferable Railroad Ticket.

A young railroad man of Atlanta has come to the front with an invention in the way of a ticket that will bring him fame and an enviable bank account. It is simply this: The purchaser of an ironclad ticket is not to be required to write his name or make any formal declaration as to his intention in regard to the ticket. Nothing of the kind. The agent who sells the low rate round trip points his little camera at you while he gives you your change. It records the image of the purchaser in an instant. The agent pulls out the slide, rubs his chemical sponge over the sensitized paper and—there you are. In the upper left hand corner of the ticket he pastes that picture, puts it in under a stamp that embosses the edges, and unless you can find somebody that looks enough like you to risk the chance of a return on your image the ticket will carry the original purchaser and nobody else.—Atlanta Constitution.

FOOD AND DRINK.

A Physician Gives Some Advice to the Public.

WATER DURING THE HEATED TERM.

Concerning "Appetizers."—Berries.—Soup.—Cold Meals.

While undeniably a mixed diet is the best for man, there is a mistaken notion, which prevails to a great extent, that meat should largely enter into the same. As a consequence, much more is eaten than is needed or can properly be disposed of in the system. Never eat meat oftener than once a day, and very sparingly in summer. Men of sedentary habits might with safety for several days at a time during that season live on vegetables, fruits, milk, breadstuffs and foods of like cearacter, which are easy of digestion. For those who have good reason to believe that their "kidneys are weak," a diet largely made up of meat is ill advised. Those organs are intimately concerned in its disposal in the system, and hence are overtasked if it is taken in too great a quantity.

Some drink too freely of water, especially during the heated term. There is, however, a class largely made up of women who do not at any time drink sufficiently of that eminent essential to health. As a rule they suffer from constipation. Every one ought to drink about two quarts of water daily to meet the needs of the system. "Water is fattening" is an expression of some truth. Very fleshy people are proverbially thirsty, and when they attempt a reduction in weight, to lessen as much as possible the quantity of fluids habitually taken is one of the recognized rules of treatment. But a rigid adherence to it is dangerous for many, if not all. Unless advised by a physician to do differently, they should drink all they crave, within reason, excepting during the hour before and the hour after meals. With the food only the smallest quantity of fluids possible is allowable.

ICE WATER IN MODERATION.

Much has been written for and against ice water. It is not only agreeable and refreshing, but harmless when used in moderation. In certain forms of dyspepsia characterized by flatulence—bloating, as it is popularly called—very cold water acts as an agreeable tonic, and quickens gastric and intestinal activity in many cases if taken when the stomach is comparatively empty. If taken on a full stomach it, as a rule, intensifies the trouble. Over indulgence is always harmful, and it is especially so at meal times.

For a robust person in hot weather to reduce one-half the quantity of food he is habituated to eating would be a most salutary custom, for he would then not only suffer infinitely less from the heat, but be stronger and more active, both mentally and physically. Those especially who are wedded to their "appetizers" would do well to forego them at least until cooler weather comes, and leave nature, uninfluenced by the seductive cocktail, to direct the quantity of food necessary for the body's support.

That berries are healthy food can in truth be said, and yet some kinds should be denied people who have certain forms of digestive disturbance. Blackberries, for instance, which contain small seeds, to some extent irritate the intestinal canal. It is in that way that they are useful in constipation; they stimulate and quicken activity of the bowels. But if the stomach and bowels are what is generally termed weak, then in such a case they are likely to do harm. Very young children should, of course, be denied them.

The average farmer knows as little of dietetics as an infant. He dilates on his wholesome food, which largely consists of substances which require for digestion the stomach of an ostrich. Plain living is all right, but that does not mean that a man should make a meal essentially on one course, varied only by a piece of pie or something of the sort. The greater the variety the better, as long as a proper selection of the food is made.

Soup is, by people generally, considered indispensable at dinner. It stimulates the stomach and makes that organ ready for the work before it. For that purpose clear soup may properly be indulged in by nearly all; there are, however, comparatively few who do not find soup thickened by stock meat, vegetables, etc., a tax upon digestion if "hearty" foods are eaten after it. It "sours on the stomach," and hence should be forbidden dyspeptics, for whom only clear soup is allowable.

TROUBLE WITH FATTY FOODS.

The digestive organs find an admixture of several fatty foods difficult to dispose of. The man who has fried fish, bacon, steak, eggs and dry toast for breakfast is made uncomfortable, and feels dull and heavy for several hours afterward unless he eats very sparingly. With the butter, which is, of course, an essential, there are in such a meal as generally prepared five different kinds of fat. And they are still more indigestible when taken hot.

In this country there is a most decided prejudice against cold meals. Of course some foods should be served warm, but none hot. Americans are scarcely satisfied with tea or coffee unless it is near the boiling point; potatoes, also, must be steaming hot. Dyspepsia is the natural consequence. The English in this respect are a delightful contrast. People who are forced to be early in the morning at their labors would be much better did they eat cold meats for breakfast, and how much such a custom would lessen the burden of their poor, overworked wives.

The question what shall we eat may be best answered by simply quoting the fact that man is an omnivorous animal. Why and how much we shall eat can be set forth tolerably well by saying that it is impossible for an engine to make steam without coal or water and that no competent engineer would make his machine carry 100 pounds of steam when fifty pounds would do the work in hand. An important duty of those who work with engines is to see that the fire is freed from clinker and ash. So waste must be regularly eliminated from the human system. The skin, the kidneys and the bowels are the main channels for the escape of this, and when these sieves fail to act, the state of affairs in the body is very parallel to what would occur should a fireman fail to clean the grate, and presently the fire will cease to burn. — Boston Globe.

Inquiring Boy (looking up from a book)—What does "paying the piper" mean?

Worried Father (absently)—Tell him to call next week.

"I said 'the piper,' pa."

"Well, if it's a plumber, he needn't call for a month."—Good News.

A Drummer Squelched.

It was in the old days, when traveling by stage coach was more common than it is at present, that the then archbishop of Paris, Monseigneur Affre, voyaging to a nearby parish, took place in a diligence with a number of gentlemen of different social stations. Among the group was a young drummer for a business house who, like his successors of a later era, was ever on the lookout for a good story in his own mind and practical joke. The clerical standing of the archbishop did not exempt him even from attempts at banter or witticism, but with the consideration he thought due to the company present he passed the youngster's efforts over with merely an indulgent smile. Waxing bolder by this apparent immunity, the young traveler at last went beyond all bounds of proper respect.

"Can you tell me, your grace," he asked spiritedly, "the difference between the archbishop and an ass?"

The reverend gentleman, with his customary courtly manner and without the least appearance of offense or resentment, replied that he could not.

"Because," replied this clown in his own little circus, "the one bears a cross on his breast and the other on his back."

The sally, such as it was, was met by the most frigid silence by all the passengers save the archbishop, who smilingly inquired:

"Now, in my turn, I'd like you to tell us the difference between a commercial traveler and an ass?"

As though it were a mystery as deep as the Sphinx the young wit pondered for some time and then gave it up.

"I don't see it," he confessed.

"Neither do I," replied the archbishop; "there isn't any."

The smart drummer got off at the next changing of horses.—Washington Star.

The Conversational Circle.

The circle must not be too large. I say nothing of public banquets of strangers. They are a contradiction in terms. Big dinner parties of ill assorted guests also are failures from a conversationist point of view. A fireside, or a table, round if possible, and, say, four or half a dozen guests, are sufficient. More will break up into separate knots, and fewer mean a tete-a-tete. "I had," says Thoreau, "at Walden three chairs in my house, one for solitude, two for friendship, three for society." The hermit Thoreau in his hut at Walden was wiser than the man who looks for society in a crush.

An unhappy husband, living in Portland place, whose wife inflicted huge parties upon him, was standing in a very forlorn condition leaning against the chimney piece. A gentleman came up to him and said: "Sir, as neither of us is acquainted with any of the people here, I think we had best go home." Social crowds must not expect the great men amongst them to talk well. She must have been a most unreasonable person who was disappointed with Napoleon because, when a lot of ladies were presented to him, he only remarked to each of them how hot it was.—Gentleman's Magazine.

Poison by Absorption.

The slow absorption of many poisons changes in some more or less modified form the complexion, but arsenic and ammonia show their effect about as quickly as any. The popular belief that arsenic clears the complexion has led many silly women to kill themselves with it in small, continued doses.

It produces a waxy, ivorylike appearance of the skin during a certain stage of the poisoning, but its terrible after effects have become too well known to make it of common use as a cosmetic.

The effects of ammonia upon the complexion are directly opposite from that of arsenic. The first symptoms of ammonia poisoning which appears among those who work in ammonia factories is a discoloration of the skin of the nose and forehead. This gradually extends over the face, until the complexion has a stained, blotched and unsightly appearance. With people who take ammonia into their systems in smaller doses, as with their water and food, these striking symptoms do not appear so soon. The only effect of the poison that is visible for a time is a general unwholesomeness and sallowness of the complexion.—St. Paul Globe.

The Notices Are All Right.

Visitors to the clerk's office of the superior court who have occasion to use the writing table that stretches across the room have been startled recently by large placards tacked about two feet apart informing whom it may concern that "these inkstands must not be taken away." Since "these inkstands" are about the size of the average hat, and are kept filled with ink, the warning seems quite as gratuitous as it would be to placard notices to people not to walk off with a red hot stove.

A lawyer who took offense at these notices got one of the office veterans in a corner the other day and asked him if he did not think such a notice was carrying a joke perilously far. The veteran shook his head, and in saddened tones thus answered:

"In the mistakes of the past we should seek our guidance for the future."—New York Times.

Somewhat Trying, Nevertheless.

Do not suppose that a young woman is necessarily in an unamiable frame of mind when you meet her bearing a muddy overshoe in hand. The relief that she experienced when she gave up trying to keep the thing on more than balanced her vexation at spoiling a glove and boot; but oh! the things that women think and don't say when at every step a misfit overshoe drops down at the heel would make a volume for the government to suppress.—Boston Commonwealth.

The Service Is Civil.

Bunting—In Japan the servants invariably treat their employers with deferential consideration.

Larkin—Japan has a civil service law, I suppose.—Munsey's Weekly.

ICE CREAM AND CANDY.

Fallacies Concerning Their Adulterations.

THE USE OF TERRA ALBA AND GLUCOSE.

The Tyrotoxicon Theory.—Ptomaines in Canned Meat.

Many people are naturally inclined to believe the worst, to imagine that they are being poisoned by the water they drink and the food they eat. If they can find statements which seem to bear out their theories, they are only too anxious to flaunt them in the faces of their more reasonable friends with a triumphant "I told you so." The time is coming, however, when all this will be changed—thanks to the public schools, where the pupils receive a certain amount of instruction in the natural sciences. They will be better fitted to judge of scientific facts when they go out into life.

During the summ r months persons are frequently reported as poisoned by eating ice cream. The statement is still often wrongly made in such cases that the trouble was caused by leaving the cream over night in the freezer, and that it had absorbed some of the zinc or tin of which the freezer was made. That is a plausible explanation, and one which, as a rule, satisfies the popular mind. Of course, everybody understands that the metallic salts are poisonous, and, knowing this, it is only necessary to show that it is possible for them to be present, to convince the average person that they are the actual cause of poisoning. To create the violent symptoms of acute metallic poisoning it would be necessary to take into the stomach quite a large quantity of the harmful agent, enough to cause in most cases an unpleasant taste in the mouth, so much so as to render any article of food unpalatable. The quantity of poisonous material which could be dissolved from a freezer by ice cream is very small, and where suspected cream has been analyzed only traces have been found,

When the fact that metallic poison was not the cause of these cases had been repeatedly demonstrated, it was, of course, necessary to look for another probable explanation. It had been noticed that in the majority of the cases of the poisoning by ice cream the flavoring used was vanilla. That substance was then suspected. Accurate and minute investigation by scientific men showed the fallacy of the theory, however, for over two-thirds of all the ice cream made was flavored with vanilla, or tonka, a cheaper substitute, and hence the prevalence of the substance in the suspected samples was simply a coincidence. Within a few years it has been demonstrated that, whenever specimens of cream alleged to have caused poisoning have been obtained and examined by competent observers, they have shown the presence of a poisonous substance called tyrotoxicon, which has been extracted from the cream, and when given to animals caused precisely similar symptoms to those in the persons made ill. The isolation of this substance really settled the question, for, by assuming it to be the cause of poisoning, every objection raised in the case of the metallic or vanilla theories could be answered. The same violent symptoms have often been observed after eating cream cakes and lemon pies, both of which, as generally made by bakers, contain a paste made of corn starch. As is well known, the cheaper kinds of ice cream—with which the greater number of cases of poisoning occur—are also largely made of that material. This fact is in itself a strong argument in favor of the tyrotoxicon theory. Tyrotoxicon is the product of an organism which can be cultivated artificially, and a medium such as corn starch jelly would be more favorable to its growth than simple frozen cream.

A few words in regard to the symptoms of this kind of poisoning will not be out of place, although they have been, some time since, given in these columns. Soon after eating anything which contains this substance a harsh metallic taste is noticed, and violent pains in the stomach, vomiting with much effort, and coldness of the limbs and body follow. When these symptoms are observed an emetic of mustard water should at once be given and a physician summoned. Matter vomited should be saved and shown to him, as it will greatly aid him in arriving at the probable cause of the trouble. Similar cases of poisoning arise after eating cheese; that sometimes contains tyrotoxicon, and it was in cheese the poison was first discovered.

The discussion of ice cream naturally calls up the subject of candy, and here, too, the general public is at fault. No popular writer on adulteration would consider that he had done his duty unless he had devoted a large part of his discussion to candy. Quite a harrowing picture can be drawn of the tons of terra alba and glucose used, while the list of poisonous chemicals to be found practically exhausts chemical nomenclature. But the facts are far different from this overdrawn picture. Beyond the use of glucose for sugar, which is, perhaps, allowable, since it is certainly not more deleterious, and the use of terra alba, which cannot be defended on any grounds, the candy of the present is freer from adulteration than almost any common article of food. Beyond a doubt there are occasionally to be found cases of poisoning caused by injurious coloring materials, but in the vast majority of cases the real cause is from eating too large a quantity of the candy. It is natural to attempt to excuse one's neglect, and when the blame for allowing a child to eat too much can be plausibly placed on the coloring material, that is the first thing to be done, and is a natural consequence of the popular fallacy that the majority of confectioners use such harmful ingredients. There is, however, one kind of cheap candy which should never be indulged in. Many grocers and confectioners have for sale gum drops at from ten to twelve cents per pound. These are made from a kind of gelatine which is little better than glue. They are, of course, nearly insoluble, and scarcely dissolve in the mouth. Children almost invariably swallow them without chewing, and, as a consequence, serious trouble is invited.

The poisonous agent in unsound canned meats, generally a substance similar to tyrotoxicon, is called a ptomaine. Very rarely it happens that the poisonous meat is from a diseased animal, in which case the symptoms are not so violent at first, but the effect is more lasting, and very often death ensues. Meat decomposes very quickly, and, fortunately, unwholesome changes are easily recognized.—Boston Herald.

Old Friend (to old maid)—Didn't I understand you to say you were 28 years old?

Old Maid (indignantly)—No, sir; you did not. I never said it.

Old Friend—Never!

Old Maid—No, sir; never?

Old Friend (persistently disagreeable)—Think a moment. Don't you remember one morning, just fifteen years ago, you told it to me in a moment of confidence?—Washington Critic.

A Dust Destructor.

A correspondent asks, What is the "dust destructor?" The dust destructor is a group of furnaces set in an inclosed space containing the requisite yards and buildings used for consuming the rubbish which is swept off the London streets, which amounts to many thousands of tons in a year. The furnace house is approached by an incline driveway leading to a covered place above the furnaces. In this place the scavengers' carts shoot their rubbish, which by simple apparatus is dropped into the furnaces, where it is speedily converted into "clinker." This clinker is then removed and broken up. Some of it is ground, some reground, and some ground a third time.

In the ward are seen piles of broken and ground clinker, some of course lumps, some resembling gravel, some looking like the finest sand. For all this material there is a use. Some of it goes to form the foundation of roads; some, mixed with tar, is made into a durable pavement; some makes admirable sand for mortar and cement, and some is made into imitation stone for sidewalks. In the Battersea district of London the parish wagon houses, stables, blacksmith shops, etc., have been constructed entirely of this imitation stone made from the refuse of domestic dust bins and the streets.

If any of the residents of the parish want any of the broken or ground clinker for any purpose they are permitted to take as much of it as they can carry away in barrows or carts. Nothing goes to waste. The process of cremation is cheap, and this method of disposing of the refuse of a crowded district has had a wholesome effect from a sanitary point of view. In Battersea the death rate has gone down from eighteen to eleven.—New York Commercial Advertiser.

The Rugby Boys' Busy Day.

I give the everyday routine at Rugby just as my young "Lower Middle" friend rattled it off to me: "Well, the 6:15 morning bell wakes us, but we don't want to get up. Then another bell rings at 6:50 for five minutes. We've got to get in our places in chapel in that time to be 'called over,' and if we are too lazy to make it, it means a 'licking,' that's all. After service we march in order to our different 'form' rooms and say lessons till 8:15. Then we have fifteen minutes to buy any little luxuries, like penny loaves—the house bread's pretty dry—and then comes breakfast. From 9:15 to 1:15, lessons; and dinner's at 1:30.

"We get a rest spell from dinner until 3, and then lessons go on again until 6, except Tuesdays, Thursdays and Saturdays. Them's half holidays. Every boy has got to join the games then, unless he's got good excuse. Sometimes we get off by shamming a sore foot and many other ways well known to us boys. But whatever we're doing at 6 o'clock, games, sauntering or study, everything's dropped, and we give a grand rush for 'tea.' After tea in winter, and after 7:15 in summer, comes 'locking up.' Nobody likes that. Then we have to pitch in 'on preparation'—that's getting our lessons for the next forenoon—until 9 o'clock, when they give us a very light supper that don't make anybody dream. Then it's go to bed, and no fooling, or it means another 'licking,' sure as fees and marshals, that's all!"—E. L. Wakeman in Wilmington News.

The Sargossa Sea.

The Sargossa sea is a region in the Atlantic, about midway between southern Europe and America, extending from 21 to 23 degs. north latitude and between 29 and 45 degs. west longitude. It derived its name from a Portuguese word signifying a grape, and was so called because the seaweeds characteristic of the region bear on their branches small air cells, which in shape are not unlike the grape clusters. The weeds themselves are among the most peculiar of vegetable productions, since they have no roots, nor any signs of fructification, and are propagated by division. They float in the water, sometimes in dense masses extending for miles.

This portion of the Atlantic is a great eddy, little affected by the currents which surround it on every side, and the stillness of the water, it is supposed, has contributed to the development of the weeds in the vast quantities in which they are found. The floating masses were noticed by Columbus and his men, to whom they were a source of uneasiness, as the sailors supposed they indicated shallow water. Detached masses of the weed are often seen in the Gulf stream, and the long, yellow lines of floating weed are a sure indication of its close proximity.—St. Louis Globe-Democrat.

An Expensive Laugh.

A railroad man who knows Senator Brice intimately told this story of him: Mr. Brice for some time wanted certain matters arranged at Sandusky, but his desires were prevented by two of the younger Vanderbilts, and he finally went to them. They laughed at him, and Brice became quite angry. "Young men," said he sternly, "you must not laugh at me; I won't permit it. Your father laughed at me once and it cost him nearly $9,000,000, and I know he had a great deal more sense than you have."

President Brice in a month's time got what he asked for at Sandusky.—Indianapolis News.

Bad Temper.

Many people consider that "bad temper" is entirely voluntary on the part of the person who displays it. As a matter of fact, it is often to a very great extent involuntary, and no one is more angry at it than the bad tempered person himself. Of course every one, whether he is born with a bad temper or has acquired one from habit, or has been visited with one as the result of disease or injury, should at least try to control it. But his friends should also bear in mind that bad temper may be, and often is, an affliction to be sympathized with, not an offense to be punished.—New York Ledger.

A SURPRISED FENCER.

The Lesson Taught a Young American Swordsman—Disarmed.

A young bank clerk in Albany is wiser than he was a year ago. In the bank where he was a clerk a new man was given a somewhat inferior position. The newcomer was a small, slight framed Frenchman, whose English was decidedly lame, but who so seldom spoke that it made little difference. The senior clerk had a decided penchant for fencing, and compared with most fellows of his age and position was unquestionably a good swordsman. In addition to this he was a most insufferable braggart, and his military accomplishment was his one topic of thought and conversation. He had about him a very patronizing air, which he proceeded to inflict upon the inoffensive Frenchman, and his familiar slaps on the back evidently displeased the stranger. Finally a particularly emphatic thump between the little Frenchman's shoulders produced as response a stinging slap in the face, which left the red mark of a small hand sharply prominent against the otherwise deathly pale face of the young American.

Speechless with rage, the young man found his desk, and shortly afterward, through a friend, challenged the Frenchman to mortal combat. The latter apologized, in fact did all in his power to undo the mischief of his hasty blow, in vain. "Nothing but blood can wipe out that insult," the young man said haughtily. The details were arranged, the Frenchman, as the challenged party, choosing rapiers. Greatly to the surprise of the hot blooded young challenger, the cashier of the bank, who knew the Frenchman well, acted as the latter's second. The day came and the hour. The principals stepped to position, saluted, and the blue blades crossed with that smooth, gliding sound which is music to the ear of the true swordsman. The Frenchman, whose familiarity with his weapon was evident at the start, confined himself at first entirely to defense, turning his opponent's point with a grace of movement and absence of fear or nervousness which were poetry in action. The young man grew bolder, his thrusts began to have an air of ferocity which seemed to anger the Frenchman a trifle, and turning aside his opponent's thrust he made a quick lunge, and the young American barely parried.

Another quick thrust and a turn of the wrist were too much for him; there was a sharp snap and the top button of his coat flew across the room. Angry at this evident trifling, the button's owner made a spiteful lunge, which was quickly parried and the next button was snapped away. One after another the shining buttons on his natty blue braided jacket were cut off by the Frenchman's ready point. Decidedly "rattled" at his opponent's skill and the irrepressible smiles of the seconds and surgeon, the young clerk now, with greater rapidity and less caution, made fierce lunges, any one of which would have driven the sharp rapier through the body of the cool Frenchman, while the little man, quietly parrying, with the sharp point of his weapon stripped the front of the young man's jacket to ribbons.

The contest had lasted some twenty minutes when suddenly the Frenchman caught the swiftly advancing point of his opponent, turned it aside, slipped his own sword quickly down along the other's blade, turning it with a quick wrist motion so that it partly wound around it, and with a sharp wrenching motion tore the weapon away and sent it flying across the floor. Then he saluted, threw his weapon down and left the room. It subsequently transpired that the foreigner was—and is—a member of a once noble French family, a captain in the French army, and his teachers have been some of the best swordsmen in France. The young American has not challenged any miscellaneous foreigners since, and is less inclined to talk of his experience or skill.—Albany Journal.

New York's Night Workers.

The number of night workers in New York would make quite a formidable army. It is calculated that 60,000 people begin their labors after dark and their numbers are being constantly increased. The hotels and restaurants employ the greatest number, about 10,000 people being necessary to supply the city's night wants in that direction. The bakers come next on the list, and that the sleeping portion of the city may have its hot rolls and fresh bread for the coming day 7,000 people are laboring. The saloon keepers and their assistants number the same as the bakers. The butchers are 3,000 strong and the gardeners and marketmen are equally numerous.

The steamboatmen and sailors, the liverymen and hack drivers, and the milkmen are 7,000 in number. The surface cars need 2,000 men and the elevated roads 1,500. There are 2,000 engineers and firmen, 1,000 district messenger boys, 1,000 printers, and 1,000 men in the fire department. The different telegraph offices employ 700 men, and the journalists, postoffice clerks and custom house inspectors number each about 400. There are 1,700 men in the police department, and just one-half of these patrol the streets every night. Then there are private watchmen, laborers, fruit venders, etc., and the number is estimated at 10,000. Only for these night workers the life and wellbeing of the city would be sadly incomplete.—New York Cor. Richmond Times.

A Philadelphia dude carries a cane 250 years old that has been in almost every country of the globe.

Calf love is called calf love because man is such a stupid animal as to remember it all the days of his life.

The accumulated savings of the working people of Massachusetts would pay one-third of the national debt.

The oldest reigning sovereign in Europe is the king of Denmark, who is one year the senior of Queen Victoria.

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 4 1891

The latest dispatches from Chile are to the effect that the the long-drawn-out contest between Balmaceda and the Congression party is over and the far more difficult task of reconstruction begun.

It is not surprising to learn that a bar has formed across the Colorado river below the point where the flood escapes into the desert region. The formation of a bar is the usual result in such cases. But this does not necessarily oblige the river to leave its old bed. In most rivers the bottom of the channel is much below the level of the country adjacent to the banks, and with the subsidence of the flood the stream ceases to flow out through the crevasse, and the current then gradually cuts away the bar that had formed in consequence of the previous diversion of the water. This is likely to be the case of the Colorado.

The gang that wrecked the Keystone bank and defrauded the State of Pennsylvania and the city of Philadelphia are being sent into seclusion for longer or shorter terms. Bardsley, the rascally City Treasurer, is serving a fifteen years sentence in the penitentiary. Charles Lawrence, late assistant cashier, has been given eight years for falsifying the books of the Keystone bank. Francis W. Kennedy, President of the Spring Garden bank, who was mixed up in the Keystone matter, will hear his fate next month. Strange to say, however, the man who made money out of the dirty business is as free as the wind that blows. That man is John Wanamaker.

The following is an extract from a speech made by ex-Senator Ingalls: "If the government owned the railroads, some people would ride in the coaches, some in freight cars, some in private cars, and some would tramp the ties as they do now. If an even distribution of property was made next January 1st, each person would have $875.30. Before July 1st the same conditions would exist as at present. Some people would be on the bench, some would be in Congress and some in the penitentiary. Some would ride on horseback, some in buggies, some would go afoot, and some would sit on the fence corners waiting, and over and above all would be heard the voice of the leather-tongued orator, who earns his bread by the perspiration of his jaw, clamoring for a new distribution of property."

Governor Boies, of Iowa, in the opening speech of the campaign, declared that prohibition had wrought more harm in that State, and worked greater injury to individuals, than could have been accomplished by the loosest system of saloon license. He said that there were four thousand houses dealing out liquor under the federal license; and that the law against liquor dealing was grossly and persistently evaded. The amount of drunkenness by jug was becoming a crying evil in the State, and one that was particularly ruinous to families. He believed that strict regulation and high license would accomplish the best results of which the liquor traffic is susceptible. There is food for thought in these declarations.

At the meeting of the National Bar Association Mr. William B. Hornblower, of New York, took the ground that it was high time that Congress should take steps toward putting an end to the farce of recognizing the Indian tribes as independent nations, with power to levy war, conclude peace and make treaties with the United States government. It will be remembered that a young officer was murdered by an Indian chief near Pine Ridge agency just at the close of the recent ghost-dance hostilities. The Indian was handed over to the civil authorities and was dismissed by the court on the ground that the Indians were at war with the government at the time of this murder, and the officer was engaged in it as a belligerent and lost his life. It is ridiculous for a government like ours to continue a legal fiction that no longer has the semblance of common sense to justify it. The Indians are recognized as wards of the nation and treated as such; how can the charges of a government be considered as its equals in their tribal capacity? When the Indians were strong and capable of levying destructive war against the whites and retarding the march of civilization, there was some reason for treating them as independent nations. There is none now.

AMERICA'S BEAU BRUMMEL.

Reminiscences of Colonel Richard Hickman, a Famous Character.

Washington's most famous character, if selected by popular vote, would be decided to be Colonel Hickman, known the country over as Beau Hickman, the Prince of Bummers.

Colonel Hickman was born in Virginia, presumably, as he came from that state to this city, arriving here in the year 1834, about twenty-two years old. From this date for about three years may be included the beau's joyful period of existence, when the world was seen only through rose colored glasses, and life was but a merry game of love and lasses, amours and petty "affaires." He swung the old globe about as quickly as possible, and was as gay and merry a high roller as the city has ever seen.

In a short while his name was as well known in Washington as that of Beau Brummel in London. He moved in exclusive circles, had all the polish and graces and spent his patrimony with a lavish hand. At the races he was a valued tipster and knew more about horses and their merits than a paddock full of jockeys. He was a frequenter, too, of the theaters, and was as much at home behind as before the scenes.

For the short three years of affluence and high flying indulged in by the beau he was compelled to repay more than thirty years of what would have been to any other a most humiliating and wretched existence. From the society reveler he was reduced to a state of pitiable penury. He never learned the state of his finances until he had none, and then, it being too late to retrieve his squandered fortunes, it became necessary for him to adapt himself to his altered fortunes in the most expedient manner. There was but one course left open to him, to become a dependent upon charity. To his high strung and sensitive nature this was an achievement so difficult of execution that he at one time even admitted that the sums he extorted by his bumming methods could be characterized as offerings of charity.

His fall from his high estate was not as sudden as his financial wreckage. He did not cease his swell existence when he found that all his resources had become exhausted, but kept on spending the money that he had not as recklessly as he had spent the money that he had formerly possessed. Where he had before liberally bestowed gold and greenbacks he now distributed notes and "I. O. U.'s," trusting to the recalcitrant Dame Fortune to visit him again at some time in the hopeladen future. He at this time patronized the most exclusive hotels, kept up his social connections and was as great a beau as ever. His reputation as such was the only thing that prevented his creditors from swarming in upon him.

Beau Hickman's few years of prosperity left but faint impress on the public mind. It is as the prince of bummers that he is best remembered. For years the principal hotels knew him but to fear him, afterward they looked upon him as a sideshow feature to be pointed out to visitors to the national capital as the famous Beau Hickman. Every new visitor was legitimate prey and liable to assessment. Beau's home seemed to be in the lobbies of the hotels. He was often seen at the capitol and other public hostelries.

Here was always an opportunity to pick out his man, and as this meant often meals and bed to him he naturally devoted a considerable portion of his time to selecting his victims. The assessments mulcted were seldom more than a quarter or a half dollar, and these extorted with such a good grace that the victims felt truly it was more blessed to give than to receive. He also had a regular list of patrons, mainly congressmen, on whom he levied assessments at regular periods.—Indianapolis Journal.

Self Possession Is a Strong Trait.

There is nothing like self possession in all emergencies. Not long ago a clever woman was dining at a handsome board in an interior city. She had never, as it happened, seen lime juice offered in the course of a meal. When the bottle was handed around, some salad had just been served to her, and without giving the matter any thought she assumed the liquid to be a sauce piquante for the salad and dashed a few drops on her lettuce hearts.

In an instant she became aware, by that sort of intuition which is in the air at such times, that she had done something wrong, and when she saw her neighbor adding some of the contents of the bottle to his glass of water, she divined at once what her blunder had been.

The meal progressed and she finished her salad with apparent relish. Her hostess pressed more upon her, and she accepted a second serving. Then, with a little air of not having everything quite to her liking, she looked up and down the table and signaled the waitress: "The lime juice, please," she said nonchalantly, as if salad without lime juice were an uneatable dish. This bit of adroitness at once set her in a niche among the company as an epicure of occult and unquestioned knowledge.—Her Points of View in New York Times.

Pretty Stingy.

The Augusta Journal tells of a deaf man there who is too stingy to buy an ear trumpet or much of anything else and is notorious for his niggardly traits. The other day he went into a meat room and wanted to know how much he could purchase a certain soup bone for. The proprietor is a generous fellow and replied, "Oh, I'll give you this." Then the old man with his hand on his ear exclaimed, "Can't you take a little off from that?" Poor old fellow, he hadn't heard, and the dealer taking pity on him said, "Yes, call it ten cents."

London as It Was.

Haydn's "Dictionary of Dates" makes the statement that the old name of the city of London was written Lynden or Llyndiu, meaning "the city on the lake." An old tradition gives us to understand that London was founded by Brute, a descendant of Æneas, and called New Troy, or Troynovant, until the time of Lud, who surrounded the town with walls and named it Caer-Lud, or Lud's town. This latter is probably the correct version of the story, if for no other reason because it is an easy matter to detect a similarity between the expression Lud's town and London. It is claimed by some writers that there was a city on the same spot 1,107 years B. C., and it is known that the Romans founded a city there called Londinium A. D. 61.—St. Louis Republic.

Strange Spirit Manifestations.

One of the best authenticated instances of ghostly visitation is connected with Dr. Kerner's so-called Seeress of Provost. Dr. Kerner for many years conducted an asylum for the insane at Weinsburg, in Southern Germany. There came to him for treatment a Mrs. Hauffe, a lady in delicate health, of great nervous irritability, and with a mind which was, to say the least, not too well balanced. Wherever this afflicted woman went, and Dr. Justinus Kerner is authority, she was pursued by a variety of strange noises. Chinaware and glassware, tables and chairs were mysteriously moved in the presence of witnesses. A medicine vial rose slowly into the air and had to be brought back by one of the bystanders.

On several occasions an easy chair was lifted up to the ceiling by unseen power and then returned slowly to the floor. On one occasion the great skeptic, Dr. Strausz, was one of her visitors, and during his stay Mrs. Hauffe fell asleep on her sofa when there immediately arose long, fearful groanings close by the doctor's side and in the vicinity of his amiable but remarkable hostess. The strange suffering woman was the only one who knew the cause of these phenomena. She ascribed them all to a dark spirit who appeared to her as a black column of smoke with a hideous head, whose unseen approach oppressed even the bystanders.

Dr. Kerner relates countless mysterious phenomena which occurred in this patient's bedroom. He beheld Mrs. Hauffe's shoes pulled off by invisible hands while she was lying almost inanimate in a trance on her bed. She revealed secrets which, upon writing to utterly unknown persons at a great distance, Dr. Kerner proved to be correctly stated.—Philadelphia Press.

Helping the Maids.

During the War of the Revolution, while the American and British armies were contending in Pennsylvania, General Washington was in the neighborhood of Marietta, Lancaster county. General Lee, with two or three aides-de-camp, rode in advance, and stopping at a wayside inn, informed the landlord that General Washington and his staff officers would quarter at his house for the night.

This news, of course, caused great confusion among the inmates of the establishment. They wanted to do honor to the beloved commander, and bustled about to have all things in readiness upon his arrival.

"Here, you," said the genius who presided in the kitchen to General Lee, ignorant of his rank in the army, "just go out to that woodpile and split an armful for me. I must hurry up this fire, or I cannot get a good supper for General Washington."

The officer, enjoying the joke, obediently took up the ax, and soon the chips were flying in all directions. He was busily working away when Washington and his staff rode up to the tavern.

"Why, General Lee," said the commander-in-chief, "what in the world are you doing?"

"Oh," replied Lee, lifting his head, "I am helping the maids in the kitchen. General Washington and his officers are coming here for supper to-night."

Both generals burst into a hearty laugh, in which their companions joined; and even the landlady, who had set the general at work, enjoyed the joke after she had recovered somewhat from her mortification.—Youth's Companion.

The Bridegroom Had a Dog License.

People who have lived in cities where marriage licenses are required often have great difficulty in understanding the system in vogue here. They cannot realize that the services of a minister or alderman are all that is necessary when the parties have reached the proper age. A German whose knowledge of the English language is limited wished to get married not long ago, and being under the impression that a license was necessary he started out to secure one. He wandered around the postoffice and the various municipal and county buildings for an hour or two, unable to find the place where licenses were to be had.

Finally he managed to explain to a policeman that he wanted a license, although he was unable to make it clear what kind of a one he was after. The officer directed him to the place where dog licenses are issued, and the happy suitor paid his fee and received the precious paper.

That evening the German and his blushing affianced went to the house of a minister to have the Gordian knot tied. When the bridegroom proudly handed over his dog license the worthy pastor could hardly perform the ceremony for suppressed laughter. The couple, however, were none the less firmly married because the paper allowed the husband to keep a dog instead of to wed a wife.—New York Tribune.

Prepare to Surrender Your Neckties.

The young man of the period must not be surprised if, when he is off on his vacation and sitting on the hotel piazza with his best summer girl, she should suddenly inform him that the necktie he has on is "very pretty and quite the thing for my rug. Just give it to me when you are done with it, please." Of course he meekly hands it over without so much as asking why, but the reason is soon given and the astonished man finds that she is saying the same thing to all the other fellows. She must need quite a collection.

But what this girl does with them is this: She cuts them into strips about an inch wide and sews them together, forming long strips of varied colors. This is pleasant work for a summer afternoon and the maiden makes a pretty picture seated with a large box overflowing with daintily colored silks, and while she chatters away and easily sews them together her attendant cavalier winds the long strips into good sized balls. Not a very different picture from that her grandmother made while being assisted to wind a skein of worsted. At the end of the season there will be several large balls and then these are sent to be woven into a soft pretty rug that will grace the hardwood floor of our maiden's room.—New York Sun.

A Comparison.

Jack—I have come to believe that there's a good deal of similarity between a car porter and Cupid's arrows.

Nellie—Gracious! How do you make that out?

Jack—Well, neither is effective unless tipped with gold or silver.—Pittsburg Bulletin.

TACT IS THE THING.

How a New York Boy Got a Position When Times Were Different from Today.

Tact is one of the first qualifications of a business man, and the following little incident in the history of one of the most successful merchants shows a development of this trait early in his business career.

Coming to New York from the country, without friends and with very little money, he found his way to "lower Wall street," and walking into the store of W. & Co., passed back into the counting room and waited modestly and patiently till he should divert the attention of Mr. W——, who was at the moment busily engaged with some friend. At last the frank, open face of the boy attracted his notice, and he addressed him with:

"What can I do for you, sonny?"

"I want a place, sir."

"Well, what can you do?"

The boy answered eagerly:

"Most anything, sir."

Mr. W——, partly for a joke and partly to rid himself of the almost too confident boy, said:

"Ah, ah! Well, just go out and borrow me a couple of thousand dollars."

The lad placed his hat on his head, walked out of the store, then passed slowly down Front street till he came to another large store in the same line of business, our friends of the past, Messrs. S. C. & C., then, with a bold but honest look, he walked up to the head of the house and said:

"Mr. W——, of W. & Co., sent me down to borrow $2,000."

"He did, my son? How is business up at your place?"

The boy, having seen the appearance of large shipments, answered quickly:

"Very good, sir."

"Two thousand dollars did you say? Will that be enough?"

"Well, $2,000 is all he told me, but if you have plenty I think he would like it if you sent him $3,000."

"Just give this boy a check for $3,000 for W. & Co.," remarked Mr. S—— to his cashier.

The boy took the check and with it returned to Mr. W——, walking back into the office with an air of successful pride, and said:

"Here it is, sir."

Mr. W——, taking one look at the check and then at the boy, said:

"Young man, come in here; you are just the one I have been looking for."

And giving him a desk he set him to work.—New York Recorder.

Odd Epitaphs.

While strolling in the fields near a small hamlet not thirty miles from Rochester I came across an antiquated graveyard overgrown with ivy and mosses, the stones of which bore dates between 1736 and 1820. I scraped the mold from a few of the stones and brought to light these inscriptions. This one is modest:

My boddy to the grave I give,
My soul to God I hope is fled;
When this my children
You do see, remember me.

This, on a child's grave, is not without pathos:

This lovely bud so young and fare,
Call hence by erly doome,
Just caught to show how sweet a flower in
Paradise would bloom.

This one also preserves the phonetic method:

Youth like a morning flour,
Cut down and withered in an hour.

Notice the unexpected word division in these:

To worlds of sperits I am gone,
And left my friends behind to mourn.
My body lies here in the dust,
My soul is stationed with the blest.

Hark, my gay friends, to you my voice has been,
Refrain from folly and forsake your sin;
Still from the dead I fain would send my cries,
Trust in the Saviour, don't His grace despise.

This one is as good as any I have seen:

A thousand ways cut short our days,
None are exempt from death,
A honeybee by stinging me,
Did stop my mortal breath.

—Rochester Union.

A Whiphoisting Drum.

A novel machine called a whiphoisting drum has been invented in Rhode Island for unloading lumber and other freight from vessels, and is found to be a great improvement on ordinary methods in the saving of time and labor. The machine has three drums which operate two derricks and a central line which runs to the hold of the vessel; the power is furnished by an electric motor of ten horse power, the capacity of the motor being 500 volts and making 1,600 revolutions to the minute.

A belt connects the motor with the shaft which operates the drums, the power being transferred to the drums by what is called a paper friction; each drum is operated by a lever, and can be stopped in an instant. The motor is a self oiling machine, a drop of oil falling on the bearings every thirty seconds. When the lumber is drawn from the vessel, a large hook from the wharf derrick is attached, and the sticks are transferred in the most ready manner to any part of the yard.—New York Sun.

Queer Provisions.

The will of the Earl of Pembroke, of the English civil war notoriety, does not portray a mind exactly in the state it should be when he proceeds to say: "As regards my other horses, I bequeath them to my Lord Fairfax, that when Cromwell and his council take away his commission he may still have some horses to command. Above all, put not my body beneath the church porch, for I am, after all, a man of birth, and would not that I should be interred there where Colonel Pride was born."—San Francisco Argonaut.

A new system of protection for gunners in exposed places on men-of-war in action is to be adopted by the navy department—a wire webbing made of intertwining spirals remarkably flexible and strong. It resembles somewhat the old fashioned chain armor of the Crusaders' time, and curtains of this material will be used to protect gunners behind shields from fragments of exploding shells.

The Chillian war has had a very serious effect on the English hatmakers who supply the majority of Chillians. The latter have been so busy fighting that they have had no time to attend to their sombreros.

A fly-wheel weighing over twenty tons, and twenty feet in diameter, with a 42-inch face, is a casting of no mean measurement. Such a one was recently cast in Massachusetts.

Appreciate a Courtesy.

In a recent issue the Japan Gazette says: "We desire to express on behalf of all British residents our recognition of the kindly courtesy displayed by the United States man-of-war in harbor in firing a salute of twenty-one guns in honor of her majesty the queen's birthday when there was no English man-of war here to do so."

Franklyn W. Lee, author of "A Shred of Lace," is a well known newspaper man of St. Paul, and a descendant of Chancellor Kent. Although but twenty-seven years old he has edited two papers, written a novel and published a volume of verse, both of which have enjoyed wide popularity. He will bring out another story in September.

The average number of men employed by the Chicago, Rock Island and Pacific company last year was 11,372 against 11,431 in the preceding year, while the average monthly pay roll was $595,286, as compared with $570,014 in the year before—the monthly wages showing an increase from an average of $49.86 to $52.33.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 137 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 137 Montgomery street, San Francisco, California.

DESERT LAND, FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL., Sept. 31, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG Register.

ANNUAL MEETING.

INYO MARBLE COMPANY.

The Regular Annual Meeting of the Stockholders of the Inyo Marble Company will be held at the office of the Company, No 137 Montgomery street, San Francisco California, on Thursday, the Tenth day of September, 1891, at the hour of One o'clock p. m., for the purpose of electing a Board of Directors to serve for the ensuing year, and the transaction of such other business as may come before the meeting.

Transfer books will close on Monday, September 7th, 1891, at 2 o'clock p. m.

G. W. LUCE Secretary.

Office, G. W. Luce, Secretary, No. 132 California street, San Francisco, Cal

Dated at Independence, Cal., July 29th, 1891

Mack & Laird, Attorneys for Estate, Independence, Cal.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE undersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated Jul, 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $25 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine. Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

Frank Silva vs. Southern Development Company of Nevada—Filed stipulation of Defendants waiving right to appeal from order dismissing case.

DIED.

LUBKEN—At Lone Pine, September 3rd Charles Lubken, son of Mr. and Mrs. John F. Lubken aged 13½ years.

T. C. Boland of Keeler was in town last Saturday.

S. P. McKnight C. E. was in town yesterday.

Milt. Clark of Bishop was in town yesterday.

If dog fights are a sign of life Independence is booming.

The genus drummer has been plentiful in town during the past week.

Miss Alice Rose returned home from Hawthorne on Wednesday's train.

Mrs. A. R. Conklin and Miss M. S. Conklin will visit Independence next month.

Mr. and Mrs. J. A. McKenzie were in from Darwin early in the week.

The regular annual meeting of the Inyo Marble Company will be held at San Francisco next Thursday.

Al Staudinger has been appointed postmaster at "Inyo" as the marble quarry is now known.

Mrs. J. J. Gunn and little daughter returned on last Friday's train from a visit to San Francisco.

A number of Independence people went to Lone Pine to-day to attend the funeral of the late E. P. Lovejoy.

For sale cheap, or will exchange for hay and grain, a fine new A-grade jumpseat buggy. At this office.

C. W. Craig of the local Land Office went to Dayton last week to attend the funeral of the late E. P. Lovejoy.

John R. Kittrill has removed from Modesto to Reno where he will resume the law practice of Mr. Hayden.

The town of Winnemucca, Nevada was nearly destroyed by fire last Sunday. The losses amount to about $250,000.

Meetings of the Lone Pine Canal Company and the Stevens Ditch company were held at Independence last Saturday.

On Monday of this week Allerton lowered his record to 2:11. This puts him within a half second of Nelson's top notch.

John Fichman came up from Keeler yesterday to attend the meeting of the Odd Fellows Lodge. He returned on to-day's train.

A. W. Eibeshutz has carpenters at work erecting a commodious ware-house near his store building. The structure will be completed about the end of next week.

Direct, the black California stallion, has lowered his record to 2:09¼. This is the fastest mile paced or trotted by any horse bred in this State. Sunol comes next with 2:10¼ at three years.

W. M. Richards, late railroad agent at Citrus, has been transferred to Keeler. Mr. and Mrs. Richards will be welcome additions to Keeler society. Mr. Shearer of Keeler is now in charge at Citrus.

Very heavy crops of grain, particularly barley, are being harvested in this vicinity. On Mr. Vagt's place at Camp Independence the yield was nearly two tons to the acre. George Lewis also had a very heavy yield.

J. G. Bone, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhoea Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY, Big Pine.

The Keeler and Mojave stage line, under the new management, will be greatly improved. The trip will be made each way in about twenty-three hours. More and better stock will be used, new stations provided and changes of horses made more frequently. A fine new thorough-brace coach is used and every convenience for passengers that can be obtained will be provided.

Rev. H. J. Winsor delivered a most interesting lecture at the M. E. Church at Independence last Tuesday evening, his subject being "London." He was listened to attentively and his discourse was a revelation to his hearers, imparting as it did information that could not have been obtained except from one who had visited the scenes described daily and observed closely what he saw. Mr. Winsor expects to start for San Francisco to-morrow, to be gone about two weeks.

Yesterday the sad news was brought to Independence of the death of Charley Lubken at Lone Pine. He went to the mountains last Monday but was too ill to remain and returned to Lone Pine on Wednesday. Dr. I. J. Woodin was sent for but the little fellow was stricken with death and his fate could not be averted. He had all his life been afflicted with heart trouble and his death resulted in consequence. The funeral takes place at one o'clock to-day. The heartfelt sympathy of the community is with the bereaved parents.

The Pine Nut Boom.

CARSON, Nevada, August 26th.—Fifteen sacks of gold-bearing ore were brought in from Zirn's mine at Pine Nut to-day guarded by armed messengers. The sacks averaged $1,000. A gentleman from San Francisco, representing an Italian Mining Syndicate, offered Schultz, (Zirn's partner), $200,000, to be deposited in 60 days, for the mine, which was refused. Oliver Roberts, Charles Colburn and A. D. Barney have incorporated the Mountain View, the Valley View and the Mascot under one head, with a capital stock of $1,000,000. Another party has arrived from Red Bluff to inspect the hill back of Carson.

The *Enterprise* says: "Wm. Zirn opened his mine in Pine Nut for inspection last Saturday. E. S. Daugherty of Carson says the mine is all that Zirn claimed for it. Zirn was offered $1,000 for permission to work the mine twenty-four hours. In four hours Zirn took out $1,500. Daugherty with a pick dislodged chunks of gold and decomposed quartz. Since the inspection of Zirn's mine the price of ground in the vicinity has advanced. Zirn now has three men in his employ and on Thursday last during the limited time of one hour and thirty minutes they succeeded in taking out ore valued at $1,000. Joe Raycraft, who inspected Zirn's claim, says that the deposit is a wonderful discovery, and he is sanguine that from one to ten thousand dollars daily can be obtained from the claim. It is estimated that the twelve sacks of ore brought in to Carson last week from the Zirn & Schultz Pine Nut mine will yield $3,000."

General R. P. Keating, Captain P. J. Dunne and T. W. O'Conner Esq. of Virginia City have been visiting in the Valley during the week. They arrived at bishop last Monday and spent a couple of days examining land locations they have there. They came to Independence on Wednesday's train, occupied Thursday on business in the Land Office, and to day visited various ranches in this vicinity. They expect to return home to-morrow. The gentlemen speak enthusiastically of the future of Inyo county; they say that the climate, water and productions of the soil cannot be surpassed in any country.

J. H. Bulpitt, Bishop's enterprising merchant, still continues his freight shipments from Mojave. This one team alone saves to the Valley upwards of $5,000 a year and provides a market for a considerable quantity of hay and grain.

There strayed from Lone Pine Station last Monday evening a three-year-old iron-gray gelding branded and vented SM and a mare and colt. Any person knowing their whereabouts please communicate with this office or with Mr. Halliday, Lone Pine

A. K. EUGLEY
Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by

A. K. EUGLEY,
Big Pine.

There is no doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain's Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Hugenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,

There's a patent medicine which is not a patent medicine—paradoxical as that may sound. It's a discovery! the *golden* discovery of medical science! It's the medicine for you—tired, run-down, exhausted, nerve-wasted men and women; for you sufferers from diseases of skin or scalp, liver or lungs—it's chance is with every one, it's season always, because it aims to purify the fountain of life—the blood—upon which all such diseases depend.

The medicine is Dr. Pierce's Golden Medical Discovery.

The makers of it have enough confidence in it to sell it *on trial.*

That is—you can get it from your druggist, and if it doesn't do what it's claimed to do, you can get your money back, *every cent of it.*

That's what its makers call *taking the risk of their words.*

Tiny, little, sugar-coated granules, are what Dr. Pierce's Pleasant Pellets are. The best Liver Pills ever invented; active, yet mild in operation; cure sick and bilious headaches. One a dose.

Austria will further strengthen her navy.

The Duke of Portland pays out $8,000 a year in newspaper and periodical subscription.

GOOD NEWS FOR THE AFFLICTED.

A Remarkable Cure of Rheumatism and Catarrh.

Baldwinsville, N. Y.

Pardee Medicine Co.

GENTLEMEN:—About one year ago I chilled my blood and was under the Doctor's care for about six months when I had a counsel of eight *physicians* and was given up to die. Soon after, a lady friend came to see me and told me about *your great Remedy.* She said she had been cured by it after having the rheumatism *seven years*, and that her rheumatism was first brought on by a cold. At this time I was suffering severe pain all through my body and near my heart. The doctors called it only "frozen blood." Through the persuasion of my friend I procured a bottle. I found one relief. Seeing this I procured more and was entirely cured by its use; and what was my surprise and pleasure at finding that I was not only cured of my rheumatism, but the catarrh, which had been troubling me for years, and had become very offensive, had entirely left me.

Wishing your remedy every success, and thanking you very much for my double cure, I remain,

Truly yours,
MRS. LUCY BRONSON.

A LETTER

From the Mother of Miss Jessie Bonesteele.

Rochester, N. Y., April 22, 1886.

GENTLEMEN:—It is with pleasure I add my testimonial to the many well-known cures which your most excellent remedy has effected. For more than two years I was a great sufferer with rheumatism, being scarcely free from pain during the time. I found no relief until I procured Dr. Pardee's remedy, and it cured me completely. It is now two years since I discontinued its use and I have had no symptoms of the disease since. I know from my own and from the experience of many others also, that it will cure any case of rheumatism or neuralgia.

I am, very truly yours,
BONESTEELE.

INDISPENSIBLE TO HOUSEKEEPERS. Ask Your Dealer for it. Write for Circular. AMERICAN OIL CO. Agts. 11 to 15 Main St. San Francisco, California.

KIDNEY

Bladder, Urinary and Liver Diseases, Dropsy, Gravel, and Diabetes, are cured by

HUNT'S REMEDY

THE BEST KIDNEY AND LIVER MEDICINE.

HUNT'S REMEDY

cures Bright's Disease, Retention or Non-Retention of Urine, Pains in the Back, Loins, or Side.

LOVE'S SEASONS.

The wall flowers to the frolic wind
Do dance their golden aiglets,
And elf maids steal the hawthorn beads
To wear for fairy amulets.
The spring is here, the spring is here—
The love time of the year, my dear!

All heavy hang the apple boughs,
Weighed down by balls of yellow gold;
The poppy buds, so fiery bright,
Messeems would burn the hearts they hold.
The summer's here, the summer's here—
The kiss time of the year, my dear!

The birds are winging for the south,
The elf maids haste them to their bowers,
And dandelion bells do float
Like silver ghosts of golden flowers.
The autumn's here, the autumn's here—
The wife time of the year, my dear!

Now are the heavens not more gray
Than are the eyes of her I love;
More dainty white than her sweet breast
The snow lies not the earth above.
The winter's here, the winter's here—
But love time lasts the year, my dear!

—Amelie Rives in Harper's Magazine.

MY MOUNTAIN OF GOLD.

While I was in Europe, nearly twenty years ago, teaching the world that there was something else than grizzly bears and centipedes in California, and inducing English travelers to make the circuit of the globe by way of our lines instead of going to and from Australia direct—I say while engaged in this no light task, and with what success let the land testify, some enterprising newspapers discovered that the secret of my life on Mount Shasta among the savages was not for the lofty purposes of writing poetry from nature, but for the purpose of robbery and plunder.

And I did not deny it. So far from that I took the facts, as furnished me by the newspapers of the time, and wrote out a full and elaborate confession. But I stopped short of the secret source of my wealth; the vast wealth which paved my way to the first steps of the thrones of Europe. And now again these same enterprising historians of my deeds are pushing their inquiries as to the source of my present great fourtune. For how indeed can a man build a castle and be the lord of so many acres in the suburbs of a great city without a mountain of gold, or at least canyons of buried treasure, at his back? Besides that another delegation of old miners and mountaineers, who got all their facts from the same source, have come down from their snowy heights to gaze on the secrets of "The Lost Cabin," "The Buried Treasure," "The Mountain of Gold."

Well, I am growing old; and remembering the time and money that has been spent in searching for the lost treasure of Capt. Kidd and his companions, I have resolved at last to take up the narrative where I left off in my book, and give The Golden Era the story of the discovery of my mountain of gold and every incident connected therewith up to the last moment I beheld it. And in return for this secret I only ask that you who undertake the perusal of this narrative will read it to the end. For all the point, all the purpose, all the real secret and solid truth and moral of the matter lies in the last paragraph, if not in the last line. In fact I feel quite certain that if we could only get at the true deathbed confessions of some of our greatest men—as the world estimates greatness to-day—we would find something not very widely different from this I have here set down.

But I know you are eager to hear of the gold, and I proceed at once. In my narrative heretofore published, after the escape from the old adobe prison, I record the fact that we rode and rode night and day and day and night, and were now near to the borders of the river in the dear old mountains. The Indian girl had brought the best men of her tribe, also her father and her three brothers, to aid in the escape and flight. Be patient. I pass hurriedly on over the bloody event that left me entirely alone. I must, I see, come at once to the mountain of gold.

We met the soldiers who had been set to watch for us at the steep and wooded crossing of a deep, wide river. We did not attempt to turn back on our weary and half dead horses; but, dashing to one side, we leaped, desperate and reckless, down the precipitous bank and struck out bravely for the steep basaltic precipice that frowned to the very clouds on the other side.

And oh, the rain of deadly lead that followed and that fell from the soldiers as they stood on the high bluff above and fired down upon our heads.

Weary, so weary! Slow, so slow! The deep and the dark and the cold blue waters from the eternal mountain of waters before us were so cheerless and so chill! The rain of lead from above, the steep and inaccessible bluff before, the deep, dark waters below, were a tomb to many now. A shot would strike a horse in the spine, the back of the head, anywhere, and he would then drift silently down, the hot blood bursting from the nostrils and reddening the blue waters far around. A shot would strike an Indian in the back, on the head. He would slip from the saddle silently, and down, down and away; the great boughs of the mighty pines and firs and cedar and tamarack leaning darkly over. And down, down, down, one after another, under that rain of deadly lead, till only I and the Indian girl, as if we had been too small for death to find there in the dark, deep waters—we alone survived as we neared the steep and snow crowned bluff before us.

Another, a last farewell, shot from the soldiers on the bank behind us, and I climbed out on the reedy, grassy, desolate and lonely bank alone!

How I wanted to die! To die and float away in the great watery tomb with those who had silently died for me. I arose at last and went to the water, and there saw two little hands clinging to the grass roots, two brown bare arms reaching up from out the water, too weak to climb up, too weak to cling longer, just letting go, the warm blood making the waters red around her!

I caught her up and with all my strength bore her back and up against the steep bluff that was warm with sunshine gone away!

I implored her to speak. But she could only look at me, her lips quivering, her little brown hands clutching, her life blood trickling down on the grasses. Be patient; I come to the gold scene soon!

At length the curious moon came out from the lofty tree tops on the other side, and looked down at this child of the woods in pitying wonder. And then the stars, larger than tiger lilies, they too came down to see.

For the girl was dead. I laid her down on the dry reeds, pine cones and drift wood, and stood there alone, so alone!

And my desolate life widened and widened there, widened away till it touched and took in the shores of death, and I was even then as an old man. Patience; I come to the gold soon!

But where now? What next? We had drifted down, down, after having been forced to take to the river, far below the crossing and here I stood face front to a steep and stupendous precipice, where no human feet had ever trod.

Only a little spot of sand and stone, with its drift of washed and whitened wood, the pine cones, the kelp, the weeds, the thousand curious bits of bark and leaf and cast away from this river when full and raging. But oddly enough crickets were here. And they came out to sing; came clad in black, crept up close on the rocks and on the edge of rocks around her, as if singing on some hearthstone. And they knew they were safe, these little crickets clad in black. Her little brown hands had never harmed anything. And now! They were still and cold now. Patience; I pass on soon to the gold!

The moon slowly sinking. The moon was going away. She was going to leave me alone with my dead. The very stars seemed restless and uncertain, and kept wheeling about and around the crown and summit of eternal snow before me. I caught up two flints from the rocky little sandbar, and eagerly, desparately struck a fire. It was a friendly sight. The flames leaped up in my face, as a dog leaps up to lick your face with his red tongue when you have been long absent.

Oh, the kindly, friendly, familiar fire! It was as if I had known it a thousand years—this friendly fire leaping in my face. The red man's fire and the white man's fire, the northerner's fire and the southerner's fire, are the same. Patience; the gold soon!

And now the fire spread and ran to the dead. It reached out its arms to her where she lay pallid and alone on the white and rounded drift wood.

I understood. I heaped up the white and light and abundant wood. The fire took her in its pure embrace; and she mounted on stairs of fire to the stars.

The sudden and impethous flame that had leaped far up against the mighty granite wall before me had shown a narrow, almost precipitous path leading crosswise up the perilous pass to the world above.

And when I had laid a circle of white stones about the ashes of my dead I went up to this narrow little path and examined it closely. It was smooth to the touch. I was thrilled with delight. May be it was smooth from the touch of human feet. At least it was a path of some wild animal; some sort of life was surely in the habit of passing from this awful depth and narrow spot to the light and life above; and surely I could climb where either bear or mountain lion could climb.

The moon was getting far around. But I felt that if I could climb up for a few hundred feet I could then get her light full on the steep rocks before me, and then know whether or not to proceed. One thing certain: I could not remain where I was. Bear with me; we now come to the gold.

Tightening my belt, tying my moccasin strings so that my feet might be certain as the feet of the wild beasts of the forest about me, I sprang desperately up the ledge.

One hundred feet! 200 feet! And then my breath began to fail a little, and, hanging on to the rocks in the narrow little pass, I began to look out and above and over the great, deep waters below.

Not a sound; not even a single object in sight below. Death had come and death had taken my friends and fled. The fire had come and gone. The fire had come out of the rocks below and taken my life, my love, the beautiful Indian girl, and gone away. How alone I was now! Listen! We come to the gold now! But the moon was with me, lingered with me a little still. I had overtaken her in her flight. And the stars were close about me now. I was companioned with worlds I shall see hereafter. I was set apart, as it seemed to me, and belonged to space. Patience; one moment more, then the gold!

The narrow path had not been quite perpendicular. It ran up the river, as it were, but steep, so steep! Another struggle forward; but now my narrow little path, which I could see by the moonlight, was made in the track of an old and decayed quartz vein. It was smooth as oil to the touch, this precipitous, overhanging path of mine; and I wondered what beast could find pleasure or profit in passing up or down this frightful route.

I began to think of returning. Then I shuddered at the thought. It was so dark, so desolate, so deadly there. Then I felt of the smooth rock under my feet, and I knew that there was less peril in going ahead than in attempting to descend. Death was before me, behind me. I tightened my belt again with my left hand as I held on hard with my right to a jutting crag on the edge of my steep, smooth path, and then again, with clenched teeth and set lips, I struggled up and on.

The path wound out and still further over the dark abyss below. But the moon was there, close about me, closer than before; and the stars! I shall never have them so close about me again on earth.

But the path was so narrow now! So steep and so very narrow that my body could hardly be drawn between the smooth hard rocks.

And at the last this steep and narrow groove began to grow shallow! What if it should come entirely to the surface? What if it should end entirely here?

I had now made at least 300 feet. At an angle of 45 degs. you can calculate with precision how far above the dark waters I was hanging.

I did not dare look below. I did not dare dream of turning back now. I hardly dared breathe. On! on! on! Slowly, steadily, up! up! up! My fingers were benumbed. My feet also had almost failed me!

At last! suddenly my outstretched hand struck a level spot, and I drew myself up and into a little resting place. And with such thankfulness as few can ever know!

The moon was full in my back now, and looking straight into the rounded narrow little level resting place before me. There was a pool of water here in the heart of this niche in the awful overhanging precipice. And around this little pool of water, with all the order of nature undisturbed, there was growing a little garden of yellow flowers. As if this fissure of the earth was some angel's own perfect little garden.

I gathered these flowers. They were only a few, and, oh, so frail! Then reaching my right hand out and over the dark waters below I threw them with all my might down and away toward where a heap of ashes lay. Be patient; the gold now!

The moon was going behind the steep wall very suddenly now. Soon it would be dark. Would wild beasts come down the pathway then? It was not wide enough for two of us to meet anywhere except at this one narrow little resting place where these flowers were. Would they come?

Suddenly I began to wonder why those frail little flowers had grown in such untroubled perfection. How could these flowers grow there under the passing feet of the wild beasts?

I looked up. The path was nearly precipitous now; and it literally hung above the waters.

To my horror I now saw trickling down the deepest trench and groove of the cleft in the overhanging rock a feeble stream of water!

Ah, then I knew why the flowers had not been broken. No foot mark had ever been made on this smooth rock by either man or beast!

No living thing had ever passed this way before. This seam of old and decaying quartz had been fashioned out by the rains of heaven and the melting snows. Where did this little water course come from? Would it end suddenly and leave me hanging on the face of the precipice and in mid air?

I grew desperate at the thought of it. I sprang up and on, determined to know the worst. It was hard work getting on and up; but I was refreshed by my rest. I was also made desperate by my surroundings.

I had known from the first that this old decayed seam of quartz was a gold bearing vein; but there was nothing new or of special interest in that; for I had galloped my horse many a time over mountains of gold, and never had once cared to get down and pick it up.

Gold was abundant here all up and down this precipitous vein. I could see it in seams wherever I turned my eyes. I could feel it with hands as I climbed. It has a softer touch than stone, and seems smooth and oily.

At last, when almost ready to abandon all hope, when almost ready to let go my hold and fall to the dark deep waters under me, I found another little resting place. I had not gone far this last effort. Yet I was entirely exhausted. And how far to the summit now?

I was in utter despair. The place where I rested was almost precipitous, and I could not rest long here. Besides being so very steep, it was very slippery from the smooth oily gold, made more smooth and oily by the little rivulet that trickled down under my feet.

I should certainly slip and fall if I remained. But could I go on? I attempted it, and a few feet further on I found my way literally barred with bars of gold that crossed the groove! The quarts had decayed and fallen away, and the waters had washed and rounded and smoothed these bars of gold while they deepened the narrow little vein where the decayed rock had been. These dreadful prison bars of gold had only been washed smooth and beautiful and bright to shut me from the upper world forever. These bars and cords of gold were stretched across like the golden cords and strings of some mighty mountain harp of gold.

And now I knew that I must fall. Nor did I dispair even now of life. In fact I remember perfectly well how precise and how careful I was in my calculations. I estimated the distance, the depth of the cold dark waters below, where I should strike in my fall, how deep I would sink, how soon I should rise, how far I should have to swim, and all the terrible details. We think very fast at such times.

I had laid hold of the two strongest and longest bars of gold which blocked my progress. I felt certain that they could not be very firmly fixed in the narrow vein of rotten quartz. I shook at them as I had shaken at my prison bars when in a terrible prison. I felt them surely begin to yield! Cool, calm and deliberate, I decided not to attempt to leap, but to hold on fast to the bars of gold which I felt were gradually giving way. My feet were slipping from under me. This would throw my whole weight on the bars of gold. They were surely, certainly, fast giving way. When they no longer held me I should drop; down, down, down!

I had decided to hold my hands straight and hard and fast and firmly above my head, as I was holding them at that moment.

This would keep my body stiff and straight in the descent. I should pierce the water below like an arrow.

When once deep and far down in the waters I should let go the gold, dart up like a cork to the surface and be saved. I did not have long to wait. I did not have to wait ten seconds. The bars of gold gave way! I could not save myself! Down! down! down! The stars looked me in the face, full and tranquil, as I fell!

I struck the water straight as a shot. I felt the cool, sweet waves in my face. I heard the waters crash above my head as I went down, down, down, with my gold.

I retained my senses. I am perfectly certain of that. I did all things just as I had decided to do.

Nay, I did all things as I had intended to do, except just one thing. And that was my fatal mistake. I did not like to let go of my gold. I would not, I could not let go of my gold. And so I was drowned.—Joaquin Miller in The Golden Era.

What a Sportsman Says.

I once peeped in upon the meeting of a society for the protection of wild birds, or something of the sort, and noted that nearly every man present wore beaver or otter or fox fur ornaments, and every woman had on a sealskin. Poor little soft furred animals, why are they so cruelly treated? I suppose there is a difference of a radical sort between fur and feathers. Up in the far north they beat seals to death with clubs and dressy women everywhere are glad of it; down in Florida they shoot herons with guns, and the bird cranks wail about it from the depths of their luxurious furs. Oh, humanity, thou art a delicious fraud! If sealskin were ugly it would not be fashionable; if plumes were not beautiful herons would not be killed.

Ah, do you know my beautiful young lady, how many murdered silk worms your resplendant gown represents? Poor little creatures, they had to be killed in order to get their cocoons! Let's get up a society for the protection of silk worms. Don't you feel rather mean when you reflect that each time you twang your guitar or scrape your violin you are torturing the bowels of a crucified insect? What cruelty for the mere luxury of music! Take that transparent comb out of your hair this minute; it's made of a shell torn from the back of a murdered tortoise! By the way, there is a heron plume in your hat. Your gloves once covered the delicate flesh of a kid; your shoes, too, once bleated and kicked up and played in the sunshine of France, as lively a goat as the one that ran away from good M. Seguin in Daudet's charming story. Let those who reside in transparent houses refrain from peeping through other people's windows. There's no telling where the peeping business is going to end.—Maurice Thompson in Chicago Inter Ocean.

Gazing at the Stars.

In some remarkable mathematical observations by M. Hermite concerning the number of stars, he shows that the total number visible to the naked eye of an observer of average visual power does not exceed 6,000, and of these the southern hemisphere contains somewhat the larger number. In order to see this number of stars the night must be moonless, the sky cloudless and the atmosphere pure, and here the power of the unaided eye stops; an opera glass will bring out 20,000, while a small telescope will bring out at least 150,000, and the most powerful telescopes yet constructed will show more than 100,000,000. M. Hermite concludes from his various observations that the light emitted by all the stars upon the whole surface of the globe is equal to one-tenth of the light of the full moon.—Chicago Herald.

Various Uses for Sawdust.

The uses for sawdust are steadily multiplying, and it is in ever increasing demand. It is used very extensively in packing goods for shipment. For stabling purposes it is used quite largely, being cheaper and cleaner than straw. Many thousands of cords are used yearly in the manufacture of terra cotta. It also enters largely into the construction of apartment houses, for filling walls and floors to deaden sound. These are but a few of the uses for which sawdust is in demand. Shingle excelsior, when made of cedar, is an excellent moth exterminator, and is much used in packing. Planer shavings are used for all kinds of packing, and also for bedding in stables, stock cars and stockyards.—Bangor (Me.) Industrial Journal.

Railways in South America.

The average reader will be hardly prepared to learn that in the Argentine Republic railways are multiplying so rapidly that it is proposed to introduce legislation against "paralleling." Competing and unnecessary railways are being projected in large numbers, and the country is fairly wild over railways. The republic has already a very creditable system, but needs some additional lines and some extensions. But the projects are coming up in astonishing numbers, far beyond the needs of the country, their promoters being stimulated by the concessions and guarantees which the government has been making.—Public Opinion.

A Duel with Tricycles.

Two young Germans in Berlin fought a duel with tricycles. Starting at 300 yards apart, they charged full tilt against each other, with slight injury to themselves and serious hurts to their machines. Their honor was satisfied.—New York Sun.

The Bible in Shorthand.

In the library of Dr. Williams, in London, is a copy of the Bible in shorthand. It is exquisitely written, and is said to have belonged to an apprentice of the time of James II, who feared that the Bible was about to be prohibited, and so wrote this copy.—Brooklyn Eagle.

The Moon Frozen.

Mr. S. E. Peal, of Sibsagar, Asam, supposes the moon to be entirely covered with snow, with frozen and ice covered seas, and thus accounts for the chief features of the lunar landscape, including the absence of water.—Arkansaw Traveler.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

Oh Chinaman, if it be true
That through the eye the soul doth shine,
There must be much obliquity
About that silent soul of thine.

PREVENTION BETTER THAN CURE.

Many persons are afflicted with skin eruptions, boils or ulcers. BRANDRETH'S PILLS taken freely will in a short time effect a complete cure of all such troubles. Ulcers of long standing have been cured by them. Carbuncles have been checked in their incipiency by them. The worst fever sores, bed sores, and the like have been driven from the skin by them. Only begin in time and a few of BRANDRETH'S PILLS will prevent many a sickness.

BRANDRETH'S PILLS are purely vegetable, absolutely harmless, and safe to take at any time.

Sold in every drug and medicine store, either plain or sugar coated.

The excuse of every man who does not mind his own business is that he is trying to do good.

THE PARENT OF INSOMNIA.

The parent of insomnia or wakefulness is in nine cases out of ten a dyspeptic stomach. Good digestion gives sound sleep, indigestion interferes with it. The brain and stomach sympathizes. One of the prominent symptoms of a weak state of the gastric organs is a disturbance of the great nerve entrepot, the brain. Invigorate the stomach, and you restore equilibrium to the great centre. A most reliable medicine for the purpose is Hostetter's Stomach Bitters, which is far preferable to mineral sedatives and powerful narcotics which, though they may for a time exert a soporific influence upon the brain, soon cease to act, and invariably injure the tone of the stomach. The Bitters, on the contrary, restore activity to the operations of that all important organ, and their beneficent influence is reflected in sound sleep and a tranquil state of the nervous system. A wholesome impetus is likewise given to the action of the liver and bowels by its use.

We all know people with whom we should never quarrel in the world if they would keep 5,000 miles away.

In 1850 "*Brown's Bronchial Troches*" were introduced, and their success in relieving Coughs and Bronchial Troubles has been unparalled.

Minister—Have you ever cast your bread upon the waters? Mrs. S. (proudly)—Never, since my first batch.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O

THAT'S IT.

St. Jacobs Oil CURES RHEUMATISM.

The Great Remedy

—FOR—
PAIN,

18 Hill Street, San Francisco, Cal., April 23, 1890.

"Having been sorely afflicted with rheumatism, my mother and daughter with sore throat, we have, by the use of St Jacobs Oil, been cured."
LOUIS IMHAUS.

CURES NEURALGIA.

Ellenville, N. Y., Jan. 6, 1890.

"I suffered with neuralgia, bought a bottle of St. Jacobs Oil and soon recovered. I treated a sprained ankle with same results."
THOS. M. VAN GORDER.

CURES SCIATICA.

Baltimore, Md., Dec. 19, 1889.

I suffered a long time with sciatic pains in the hips; found no relief till I tried St. Jacobs Oil, which completely cured me.
CHAS. A. FULDA.

ALSO CURES
Promptly and Permanently
LUMBAGO, SPRAINS, BRUISES.

"German Syrup"

Asthma. "I have been a great sufferer from Asthma and severe Colds every Winter, and last Fall my friends as well as myself thought because of my feeble condition, and great distress from constant coughing, and inability to raise any of the accumulated matter from my lungs, that my time was close at hand. When nearly worn out for want of sleep and rest, a friend recommended me to try this valuable medicine, Boschee's German Syrup. I am confident it saved my life. Almost the first dose gave me great relief and a gentle refreshing sleep, such as I had not had for weeks. My cough began immediately to loosen and pass away, and I found myself rapidly gaining in health and weight. I am pleased to inform thee—unsolicited—that I am in excellent health and do certainly attribute it to thy Boschee's German Syrup. C. B. STICKNEY, Picton, Ontario."

Gentle, Refreshing Sleep.

DON'T!

Don't cheat yourself out of a good smoke by taking a poor imitation for the genuine Seal of North Carolina Plug Cut Tobacco.

HAY FEVER & ASTHMA CURED TO STAY CURED. We want the name and address of every sufferer in the U. S. and Canada. Address P. Harold Hayes, M.D., Buffalo, N.Y.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and Itching of the private parts, and nothing else. Every box is warranted .....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

A Puzzle—Mrs. Eupec—If you don't love me what did you marry me for? Eupec—Why don't you go and hire out to some paper to run their puzzle department?

DEAFNESS CAN'T BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that we cannot cure by taking Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by all Druggists, 75c.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

Dr. Price's Cream Baking Powder.

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

GENDRON SAFETY BICYCLE

FOR LADIES AND GENTLEMEN.

Handsomest Wheel in the market. Strictly High Grade in every particular. Cushion Tires, Tangent Spokes, from $85 to $115. Send for illustrated Catalogue *free.*

KELLOGG & HALL,
Pacific Coast Agts., 15 First St., San Francisco, Cal.

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

BROOKLYN HOTEL Bush St., bet. Montgomery & Sansome, S. F.; conducted on both the European and American plan. The Hotel is under the management of Charles Montgomery, and is the best Family and Business Men's Hotel in San Francisco. Home comforts, cuisine unexcelled, first-class service, highest standard of respectability guaranteed. Board and room, per day, $1.25 to $2.00; single room, 50 cts. to $1.00 per night. Free coach to and from the Hotel.

FRAZER AXLE GREASE

Best in the World! Get the Genuine! Sold Everywhere!

FOR MEN ONLY!

VIGOR AND STRENGTH For LOST or FAILING MANHOOD, General and NERVOUS DEBILITY, Weakness of Body and Mind, Effects of Errors or Excesses in Old or Young. Robust, Noble MANHOOD fully Restored. How to enlarge and Strengthen WEAK, UNDEVELOPED ORGANS & PARTS OF BODY. Absolutely unfailing HOME TREATMENT—Benefits in a day. Men testify from 50 States and Foreign Countries. Write them. Descriptive Book, explanation and proofs mailed (sealed) free. Address ERIE MEDICAL CO., BUFFALO, N. Y.

"THE SPECIFIC A NO. 1."

YOUNG MEN! Cures all natural discharges of men, no matter how long standing. Prevents stricture. It is an Internal remedy. Cures when everything else has failed. Price, $2.00. Circular on application. Sold by Druggists or sent on receipt of price by The A. Schoenheit Medicine Co., San Jose, Cal.

BIG G. Cures in 1 to 5 DAYS. Guaranteed not to stricture. Mfd only by THE EVANS CHEMICAL CO. CINCINNATI, O. U. S. A. Trade Mark. This is the acknowledged leading remedy for all the unnatural discharges and private diseases of men. A certain cure for the debilitating weakness peculiar to women. I prescribe it and feel safe in recommending it to all sufferers. A. J. STONER, M.D., DECATUR, ILL. Sold by Druggists. PRICE $1.00.

PISO'S REMEDY FOR CATARRH.—Best. Easiest to use. Cheapest. Relief is immediate. A cure is certain. For Cold in the Head it has no equal.

CATARRH

It is an Ointment, of which a small particle is applied to the nostrils. Price 50c. Sold by druggists or sent by mail. Address: E. T. HAZELTINE, Warren, Pa.

ALWAYS READY, AND A BOY CAN START IT AT ONCE.

The HERCULES

Gas or Gasoline ENGINE

For Power and Pumping Purposes.

Makes No Smell or Dirt.

NO CARBURATOR TO GET OUT OF ORDER.
BATTERIES OR ELECTRIC SPARK TO CARE FOR.
DOUBLE OR FALSE EXPLOSIONS, WHICH ARE FREQUENT WITH THE UNRELIABLE SPARK.

Just light the burner, turn the wheel, and it runs all day.

It oils itself from an oil reservoir.

It runs with a cheaper grade of Gasoline than any other engine, and consequently it costs less to run it.

For simplicity it beats the world. It has fewer parts, and is therefore less likely to get out of order than any other gas or gasoline engine now built.

We are now making from 1 Horse Power to 10 Horse Power.

Prices and Terms upon Application.

Manufactured by PALMER & REY,
San Francisco, Cal., and Portland, Or.

What would you give for a Friend who would take half your hard work off your shoulders and do it without a murmur? What would you give to find an assistant in your housework that would keep your floors and walls clean, and your kitchen bright, and yet never grow ugly over the matter of hard work? Sapolio is just such a friend and can be bought at all grocers.

CUMBERLAND COAL.

H & B BRAND.

From Maryland. Highly recommended by Carriage-Makers, Blacksmiths and Horse-Shoers.

Sole agents for "DUCKENFIELD" SYDNEY, from Newcastle, Australia; the greatest gas and steam producing coal ever brought to the Coast. "PLEASANT VALLEY" and "CASTLE GATE" from Utah; the best of Rocky Mountain coals; superior to all other coals for domestic use. "NEW SEATTLE" from Seattle, Washington; a popular domestic and steam coal.

SCIENCE'S TIMELY AID.

How Railroad Accidents Will Be Prevented.

THE INVENTION OF DR. A. H. R. GUILEY.

An Accurate Description of the New Life Saver.

An invention which will tend to prevent railway collisions, by giving a timely alarm to an engineer on a moving locomotive when approaching a standing or moving locomotive on the same track, and which will give notice of an occupied grade crossing, an open switch, an open drawbridge, or a car projecting from a side track over the main track, and which will afford a signal effective in daylight or darkness, on a straight or curved track, or in a tunnel, is one which would cover most of the causes of disaster on railways,

and would prove a boon to travelers, and a paying investment for railways if generally adopted.

Such an invention has been made by Dr. A. H. R. Guiley, and has been patented in this and most other countries in the world.

According to this invention, which is illustrated in the annexed engraving, one of the rails is made a continuous conductor by connecting the rails electrically at the joints, and the other rail is divided into sections or blocks, and provided with electrical connections which overlap from one block to another. Between the rails at suitable intervals, preferably at opposite ends of the blocks, are placed electric contact pieces, each formed of two plates insulated from each other and provided with vertical ribs arranged diagonally. These ribs lie in the path of an arm or "feeler" carried by the locomotive, and upon the locomotive is placed a battery and alarm mechanism.

The arrangement of the circuits is such that when a train is passing in one direction, the feeder strikes a set of contacts controlling the circuit arranged for trains passing in that direction. When the train passes in the opposite direction, the feeder strikes the opposite contact plate, securing opposite results. The feeder, which extends downwardly from the pilot of the locomotive, is capable of swinging laterally, and is protected so that it is not injured by the shock due to striking the contact plates, or other objects lying on the track.

In the cab of the locomotive is arranged an electrical alarm which is set off by the contact of the feeler with one of the plates, and continues to ring until the engineer readjusts it for another alarm. The inventor has devised an attachment to the feeler by means of which steam is taken through pipes and through the contact end of the feeler for thawing snow and ice that may accumulate upon the feeler or upon the contact plates.

This improved system applied to a railway furnishes a complete grade crossing protection, and a very efficient block signal, while at the same time, under certain conditions, it may be used as a train signal by which one train may signal to another.

In the annexed diagram, the contacts, B, B', etc., and the electrical connections, as arranged upon the main track, A', and branch track, and on opposite sides of the crossing, as shown in the diagram, protect the grade crossing, G4, and the switch, I.

The switch, H, is provided for the use of track master and others for sig-

naling a train in case of necessity. The detached view shows the application of the invention to a draw bridge, J, the contact springs, K, in this case serving to make or break the connections as the bridge is closed or opened.

Mr. E. B. Cornell, 922 North Nineteenth street, Philadelphia, Pa., has the business management of this invention.

Electricity in the Printing Office.

No discovery has yet been made and no contrivance has been introduced that will absolutely dissipate or nullify the disturbing effects of electricity in paper, either latent or generated by the revolutions of the press. Many employers have paid out considerable money to electrical experts and others who claimed to have discovered or to be in possession of infallible remedies for this trouble; but not one of them has squarely fulfilled the terms of his contract. We have studied the effect of wires connected with batteries and of wires connected with gas or other pipes leading to the grounds; the latter on the principle of the lightning rod. While these do to a certain extent help to modify the action of electricity or the generation of it, they fall far short of doing it effectively and completely, and for that reason do not justify the outlay of much money upon them. Again, many printeries throughout the country are beyond the reach of those who could help them with the appliances described; are at an expense which, as we have just said, the modicum of benefit that would be derived would not justify. It is for this reason that we recommend to all who have trouble with electricity in paper the adoption of the simple and inexpensive but surprisingly effective remedy we now present.

In nearly every printery a bottle of glycerine is kept for one purpose or another. Take this bottle and a clean rag or other cloth, wet the cloth with water and wring it out well until it is only damp, then pour a little glycerine upon the damp cloth, and wipe the surface of the tympan sheet with it, only on the part of the sheet where the impression is, as it is there that reaction is affected---at the point of pressure. Do not put on too much glycerine, as it will wrinkle the sheet too much. Simply go over it as you would in oiling the sheet to prevent offset, but do not saturate it. If you find that one application or wiping will not stop the trouble, go over the impression parts again in the same manner. Some kinds of stock are more susceptible than others, and call for an additional application.

This is the simplest and cheapest of all the remedies, and as good as any hitherto known.

How Tin Plates are Made.

Following is a summary of the Morewood process of tinning plates now in use at the works of the United States Iron and Tin Plate Company, Limited, at Demmler Station, Pa.:

The plates are rolled in the ordinary manner into black sheets, eight of these sheets being rolled at one time, and after being sheared to size are placed in the "clack pickle" bath of sulphuric acid, where all oxidation is removed. They are placed in an annealing furnace for thirty-six hours and are next passed through the cold rolls, receiving a smoothly polished surface, after which they are annealed again and put into the "white pickle," where they are thoroughly cleansed from any oxidation and are ready for the tinning process. The mode of putting on the coating of tin is a very simple one, and is begun by submerging the plates in a bath of palm oil until all the water disappears, the oil forming a flux for the tin, the first coat of which is received in the tin pot, the plates next being dipped into the "wash pot," and when taken out the tin is spread over the surface with a brush by hand. The final act in the tin coating process is in passing the plates through rolls running in palm oil, whereby the tin is evenly distributed and a smooth surface is obtained. There are 5 feet of these rolls used, 3 running on top of 2, and the plates make two passes through them, first being let down through the first and second of the upper set, and by a cradle arrangement are returned the second and third. This completes the tinning operation proper, and the polish is obtained by rapid movements of the plates through bran and middlings, respectively, and then polishing with sheepskin. The result obtained at the Demmler works is a very excellent article of bright tin plate.—Iron Indus. Gazette.

The Phosphorescence of Diamonds.

In the New York Sun, Mr. G. F. Kunz, the well-known expert in gems, has recently called attention to a property of the diamond which may serve as a means of distinguishing it from other substances. Referring to the paper of Robert Boyle "On a Remarkable Diamond that Shines in the Dark," published in the Transactions of the Royal Society in 1663, Mr. Kunz remarks that this paper has been indirectly alluded to by a number of authors, but never read. Among a quantity of facts Boyle mentions one diamond that phosphoresced simply by the heat of the hand, absorbed light by being held near a candle, and emitted light by being rubbed. He stated that many diamonds emitted light by being rubbed in the dark. The experiments made by Mr. Kunz show conclusively not only that Boyle's statement that some diamonds phosphoresce in the dark after exposure to the sunlight or an arc of electric light is true, but also that all diamonds emit light by rubbing them on wood, cloth or metal, a property which will probably prove of great value in distinguishing between the diamond and other hard stones, as well as paste, none of which exhibit this phenomenon, and will be welcomed by the general public who do not possess the experience of the dealer in diamonds. The property is evidently not electric, or it would not be visible on being rubbed on metal.

Resin Oil in Mineral Lubricants.

Ten to 15 grms. of the lubricant containing resin oil, but no fatty oils, is gently heated on the water bath in a small flask with 5 vols. alcohol at 96 p. c., shaken up and let cool down to the temperature of the room. The alcohol is then placed in a small Erlenmeyer flask about 7 cm. in height; the mineral oil which remained in the first flask is rinsed round (not shaken) with a few c. c. of 90 per cent alcohol, the solution poured into the second flask and heated upon a water bath which is slightly simmering, inclosing it within a beaker with the bottom cut off, to avoid too rapid condensation on the sides of the vessel. The heat is continued until the residue in the flask is free from bubbles. It is weighed when cold, and the residue is covered with ten parts by weight of alcohol at 96 per cent. If the residue consists entirely of resin oil, this quantity of alcohol will suffice for its solution. The alcoholic solution is treated as above, and the residue contains small quantities of mineral oils.—L. Storch, Chemiker Zeitung.

From Jest to Earnest.

Primus—"The theater caught fire in the midst of the topical song."

Secundus—"Did the comedian retain his presence of mind?"

Primus—"Yes; he told the audience there was a fire under the stage, but they need not be alarmed as the manager was a Universalist."

SOME ENGLISH JUSTICE.

The Scoring of North and Cummings.

CHIEF JUSTICE COLERIDGE'S ARTICLE.

Sensational Cases Preferred.—A Queer Verdict.

Lord Chief Justice Coleridge, of England, is a character, and Colonel North, the so-called "nitrate king," is a character. This is G. W. Smalley's opinion expressed in the New York Tribune. Each has his own sphere, he says. If

Lord Coleridge went into the city, as the phrase is in London, to measure himself against the great operator who has convulsed two continents, it is hardly probable that he would get the best of it. So when Colonel North tries a fall with the lord chief justice in the law courts it is not the great operator who comes away with the honors of war. Each is best on his own ground. Colonel North, of course, had no idea of entering upon any such contest. His is the position of many men before him. He thought he had been robbed by his architect, Mr. Cutter, and refused to pay him the balance he claimed. The architect sued him, and that is why Col. North happened to find himself in the awful presence of the lord chief justice.

What first apprised the public that the lord chief justice was going for Col. North was a line on the placards of the London afternoon papers: "Col. North sharply rebuked from the bench." Everybody bought the papers and read how the lord chief justice had told the witness—the redoubtable colonel himself being then under cross-examination—that he must behave himself to the court as if he were the poorest subject of the queen; that he had no business to make such an answer and that they could not be overborne in that manner. Unluckily, what Colonel North had said or done was not told; it had been inaudible and invisible to the reporter. People imagined it must be something awful—perhaps that he had sworn at the court or threatened to heave half a brick at the bench, or perhaps the New Testament on which he had been sworn was the missile. But now the colonel writes a letter to say that, in answer to a question whether his architect had not received £3,000 or £4,000 commission before he (the colonel) had sailed for Chile, he said: "I do not know the amount, but I do know he took care to obtain all he could on account of commission during my absence." This it was which brought down upon his head the thunders of a judicial Jove.

When he came to sum up Lord Coleridge argued the plaintiff's case with his well-known ingenuity and ability. The question being whether Col. North ever

authorized any expenditure beyond at first £40,000, which the plaintiff admitted naming as the probable cost of the house, and then £65,000, Lord Coleridge told the jury he had, at any rate, got value for his money. If then a man wishes to spend £40,000 and his architect runs it up to over £100,000 it seems a sufficient answer that the house is a good one at that price.

The tone to Col. North is one of severity throughout. He is lectured, rebuked, even sneered at. The jury were invited to consider the "lordly tone" in which he had given his evidence. They were told that he was an overbearing person, accustomed to have his own way, with the obvious suggestion that such a person ought to pay roundly for it.

The lord chief justice of England may elect to try, in certain circumstances, any cause which for any reason attracts him, and he elected to try the Cumming cause. Whether he exercised this prerogative in the action against Colonel North is not known. Very likely it came before him in the regular course of business. But this eminent judge is commonly believed to like to try what are called sensational cases and the North case was a sensational one and remarkable for more reasons than one. The picture it presents of Colonel North himself is remarkable—a man who gives an order for a palace like an oriental prince, without a word in writing about the price, and who "gives fits" to anybody about him whose conduct does not suit him. No wonder such a case with such a defendant had an attraction for such a judicial lover of the picturesque as Lord Coleridge.

The jury in the North case followed his lordship's lead and promptly returned a verdict for the architect—that "respectable man of thirty years' standing"—for the full amount claimed, with interest; and the judge "absolutely and entirely" refused to stay execution in order that the millionaire might appeal.

15,000 MILES OF RAILROAD.

Analysis of the Work and the Money Required for Building It.

The railways laid out 15,000 miles of new road for 1887, and as near as the best laid plans of man can go it was completed. If not done inside January and January it was still matter of unfinished business left over, and when the work laid out is closed up it will be found that it was a round 15,000 miles of new lines for which the builders set out at the beginning of 1887. As this is becoming complete, and the competition created by it appears, the necessity for adjusting rates and business relations, and the care of the bonds, and some interstate questions are presented, the managers have set down to digest the new responsibility they have created. To do this is likely to occupy six months at least, and the question comes up, what is to be the outcome?

In bonds and pledges and bonuses this 15,000 miles of new road represents a round sum of $450,000,000, which has been placed in new relations to the business world. A large part of this has been taken out of the control of Wall street, and leaves that most bare of the material for speculation and re-speculation. The greater part of this has been absorbed and cannot go back to Wall street again, except in dividends and products and in the sale of new bonds to European investors. But the expenditure of $450,000,000 in new roads is but a small part of the work, and only a part of the expense. The "ballasting up" and "rounding out" of the skeleton of the creation is an equally important work. There must be locomotives and rolling stock, and repair shops, and the straightening of curves, and reducing of grades, and building of switches and sidings, and depots and storehouses to an extent almost equaling the first expenditure of labor and money.

When this is done, and every car shop and machine shop in the country has been taxed to the utmost, and the new employes at work, and the new freight arrangements made, then comes that other question of a set battle with each other for business. In this is the governing phase of all new railway building. If by the construction of a feeder or the extension of a parallel the war of rates created destroys the profits upon the old line, then the "profit and loss" is a serious consideration.—Chicago Journal of Commerce.

A Tiny Winged Messenger.

"One afternoon in the summer of 1881," said Doctor Melnikoff to me, in the course of a conversation about his fortress life, "I was lying on the bed in my casemate, wondering how I should get through the rest of the day, when there flew into the cell through the open port hole in the door a large blue bottle fly. In the stillness and loneliness of one of those casemates any trifle is enough to attract a man's attention, and the occasional visit of a fly is an important event in one's life. I listened with pleasure to the buzz of his wings, and followed him with my eyes as he flew back and forth across the cell until I suddenly noticed that there was something unnatural in the appearance of his body. He seemed to have something attached to him. I arose from the bed in order to get nearer to him, and soon satisfied myself that there was a bit of paper fastened to his body. How to catch him and secure that paper without attracting the attention of the guard in the corridor I hardly knew, as he was flying most of the time in the upper part of the cell beyond my reach.

"For ten or fifteen minutes I watched him without being able to think of any way to capture him; but at last he came down nearer to the floor, and as he passed me I succeeded in catching him in the hollow of my hands without injuring him. Attached to his body by a fine human hair I found a small folded scrap of thin cigarette paper, upon which a man's name had been written with the burned end of a match. It was not the name of any one whom I knew; but as it was evident that some strictly guarded prisoner hoped by this means to let his friends in the bastion know either that he had been arrested or that he was still alive, I fastened the paper again to the fly as well as I could and put him out into the corridor through the port hole."—George Kennan in The Century.

Amusements of the Eskimo.

In the matter of amusements the Eskimo are not badly off. They have a form of cup and ball, the ball being a block of ivory pierced with holes at different angles, into one of which the players strive to insert an ivory peg as the block falls, the position of the hole determining the value of the stroke. Another game closely resembles dominoes, and contains pieces running as high as "double thirties," but the sequences are not regularly carried out, the breaks in them seeming to be without system.

When they can borrow or purchase a pack of cards they will play euchre and high low jack with considerable skill; and they also enjoy draughts, having learned these games from the whalers. They have a game exactly like solitaire, with the exception that ivory pegs take the place of glass balls. The special amusement of the women is a species of "cat's cradle," which has been brought to such perfection that they develop from twenty to thirty different figures in it. Indeed, they are extremely clever in performing tricks with string, winding and twisting a piece in and out among their fingers, and then disentangling it by a single pull on one end.—American Magazine.

A Valuable Fifty Cent Piece.

Within a few weeks a man who handles large amounts of silver, and who is something of an expert on rare coins, found in his currency a half dollar piece of 1853 without arrows. The oldest dealer in the west declares that he has heard of but one other piece like it, and thinks the value of this piece is between $500 and $1,000. He thinks that the omission of the arrows from the die was discovered after a mere handful of coins had been struck off. The die was then broken and the few coins sent into circulation. Save for the two above mentioned all have disappeared, just as most of the famous silver dollar issue of 1804 has. Most of this latter issue was sent into Florida to pay for supplies during the Seminole war. It is supposed that some of the coins are still there in the hands of negroes or old settlers, who have hoarded them for years, ignorant of their rarity. The last dollar of 1804 which was offered for sale brought $750 at auction.—Chicago News.

Vaccination and Anti-Vaccination.

Statistics are against the few persons who insist that vaccination is useless and unnecessary. A compulsory vaccination law had entirely driven out smallpox from Zurich, so that not a case occurred in 1882. The law was repealed in 1883, and in every 1,000 deaths that year two were caused by smallpox; in 1884 there were three; in 1885, 17, and in the first quarter of 1886, 85. In England the deaths from this disease in 1838-1842 were 57.2 per 100,000 living; but in the five years 1880-1884 the death rate was only 6.5 per 100,000. Vaccination has not only vastly reduced the number of victims directly, but seems to have had an indirect influence in rendering the offspring of vaccinated parents less liable to the disease.—Arkansaw Traveler.

LEGENDS OF INSECTS.

Popular Superstition About the Busy Bee.

GNATS, ANTS, LADY BIRDS AND CRICKETS

A Hindoo Tradition.—Stolen Bees in Holland.—Divination.

No members of the animal kingdom are regarded by most persons with greater aversion than certain insects and reptiles. The folk lore of these branches of that kingdom is therefore a very extensive one. It frequently assigns to the minutest members of the insect tribe considerable power for good or evil, and popular tradition even anticipated scientific discovery in the matter of insect intelligence.

Popular superstition has concerned itself much about that busy little insect, the bee. A Welsh tradition says bees came from paradise, leaving the garden when man fell, but with God's blessing, so that wax is necessary in the celebration of the mass. The ancients generally maintained that there was a close connection between bees and the soul. Porphyry speaks of "those souls which the ancients called bees."

There is a Hindoo superstition that the Rakshas or demons keep their souls in the bodies of bees. Many persons accord unusual intelligence to bees. They are said in parts of England and France to revere the consecrated wafer. They are also said to sing a Christmas hymn, beginning at midnight. They are said never to thrive in a quarrelsome family, nor will they stay with you if you quarrel about them or in their presence. It is a custom in many parts of England and the continent to announce to the bees a death in the family, especially that of the master. It is said in many parts of England and Germany that if a swarm of bees settle on the dead branch of a live tree a death will occur in the family within a year. Stolen bees are said in Holland never to thrive. In some places in England it is thought unlucky to sell them. They are given away for another gift.

Flies are sometimes regarded as furnishing prognostications of the weather, and even of other events. Wilsford, an old naturalist, who writes much of popular import, says: "If they are busier or blinder than ordinary, sporting in the sun or showing themselves in warm places, it may be taken as a sign of hail, cold showers of rain or wet weather."

Fleas are not too small to enter into popular lore. An abundance of them indicates rain, here and in England. Their eager biting also prognosticates wet weather. These tormenting insects are not without their benefits, according to the English fishermen, for they consider that an abundance of them indicates good hauls of fish.

Gnats are regarded by many as accurate weather indicators. Fair weather is said to be coming when they fly about in clouds in the sun's beams; heat follows unusual friskiness, and rain is indicated by their seeking the shade and biting fiercely. An abundance of these insects in the spring foretells a warm autumn.

Since the days of Solomon the ant has enjoyed quite a reputation as a worker. Mohammedans recognize its industry, and accord it a place among the ten animals that alone enter Paradise. Without mentioning his authority, Emerson says, in "Nature," that they never sleep. Ants' eggs were of old an antidote for love. It is said that they close their holes in the ground on the approach of a storm. If they are unusually frisky wet weather is at hand. The migration of ants from low ground is said to indicate heavy rains, and stormy weather is imminent when they travel in lines, fair weather coming when they scatter abroad.

Superstition has been very busy with that common household insect, the cricket. Its lively and cheerful chirp has caused it to be generally viewed with favor. It is usually regarded as a good omen in England and Scotland. In Hull it is unlucky to kill them, and in Lancashire, it is said, they cut holes in the worsted stockings of those members of a family that kill them. In Shakespeare's time this notion that the presence of the cricket was a good omen, indicating cheerfulness and plenty, was a prevalent one.

The little insect commonly known as the lady bird or lady bug has been the object of many superstitious observances. Its name indicates its sacred character, it being everywhere the Virgin's bird, the lady cow, the lady fly, the lady's little beast, Mary's bird, God's calf, etc. Young girls, on finding one, try to divine their lovers by it. The flight of the insect indicates the direction in which the lover is to be sought. German peasants also try to divine from its flight how they will fare in the next world. If, on being appealed to, it flies upward, they will go to heaven; if downward, to hell, or if horizontally, then purgatory awaits the questioner.

The insect known as "granddaddy long legs" is thought in this country to possess some mysterious knowledge. Children, on seeing it, ask it, "Granddaddy long legs, where's my cow?" believing that it will indicate the proper direction by raising one of its legs.

Spider superstitions are also abundant. They should not be killed. Spaniards, in the Sixteenth century, believed that spiders indicated gold, where they were found in abundance. In Germany, it is said to indicate good luck to have a spider spring his web downwards toward you, but bad luck when he rises toward you. There are said to be no spiders in Ireland, nor will spiders spin their web in an Irish oak, nor on a cedar roof.—F. S. Bassett in Globe-Democrat.

Philadelphia's Bald Heads.

A Philadelphia barber makes the statement that there are fewer bald heads among the people of wealth and fashion in Philadelphia than among the same class of any other American city.—New York Evening World.

Likes to Be Accurate.

Slithers always likes to be strictly accurate. Upon a recent occasion he was asked the age of his baby, and immediately replied, "Six weeks and thirteen days, thank you."—Harper's Bazar.

Decrease of Indians.

A recent official publication estimates the average annual decrease of the Indians at nearly 2,000. Their present total number in the United States, exclusive of Alaska, is about 245,000.

The stern of a departing ferryboat is more polite than that of other boats. It always returns a bow.—Syracuse Christian Advocate.

A broken eye glass may well be called a woful spectacle.

Ancestry of the Elephant.

The origin of the great proboscidian race in general, and of the mammoth and elephant group in particular, like the early history of Jeames de la Pluche, is "wrop in obscurity." All we can say about them with any confidence is that they form a comparatively late order of mammals, whose earliest recognizable representative in geological time is the monstrous deinotherium, an aquatic animal with a long trunk and with two immense curved tusks, projecting downward paradoxically from his lower instead of his upper jaw. The deinotherium makes his first appearance upon this or any other stage in the miocene period; but as he couldn't, of course, have appeared there (like Aphrodite and Topsy) without any parents, and as he was then already a fairly specialized and highly developed animal, we must take it for granted that his earlier ancestry, though ancient and respectable in its own time, had long passed away, leaving not a wrack behind, so far as yet known, in the matter of tangible geological vouchers.

These unknown ancestors, in all probability, gave birth during their earlier and more plastic stage—for species, like individuals, are most readily molded in their green youth—to three main family branches. The senior branch produced the deinotherium, a vast brute, who, finding the world too full to hold him, about the close of the tertiary period, demised suddenly without issue, leaving the honors of the family in subsequent ages to the junior members. The second branch produced the mastodons—huge creatures of elephantic outline and majestic tread, most of them with tusks both in the upper and lower jaws, though the under pair were always the smallest. The third branch produced the true elephants, including both our modern Indian and African species, as well as the mammoth himself, and many other extinct congeners. All the elephants proper have but one solitary pair of tusks, and that pair is quite correctly located in the upper jaw instead of the under one. Thus is evolution justified of all her children. The true elephants made their first appearance, so far as known, in the Pliocene period, that is to say, the epoch immediately preceding the Great Ice age in Europe and America. They blossomed out at once, with all the usual impetuosity of youth, into an alarming number of distinct species.—Cornhill Magazine.

The Chair Bearers of China.

One of the most amusing adventures I ever had with chair bearers was the following: I hired two men to carry me in a "mountain chair" to a district city about eighteen miles off. Our route lay over some very rough granite hills to a tiny village, where I was to meet some Christian brethren for an hour or two. Reaching this place about 10 o'clock in the morning, my friends, who wished to do me honor, extended their favors to my hired men, and unfortunately brought out the sanshoo, a strong liquor generally reserved for feasts and special occasions. Of this I was quite unaware when I left the village. We had not gone far before one of the men showed signs of a collapse. Two or three times he fell on his knees, but always declared there was nothing the matter with him. Another mile, and both had succumbed. We were now upon a ridge of hills, and before us was a wide, sandy plain, stretching along for several miles, with nothing to break the line of view.

Pausing here until one of the men had partially recovered, I made him take the chair upon his back and follow me; and the other I stuck up against a rock to fend for himself. My companion's endeavor to carry that chair properly would have made the most sober temperance lecturer lose his gravity. By the time we reached an eating house on the farther side of the plain we saw No. 2 on the far horizon, doing his utmost to make up for lost time, and an hour sufficed to bring him up moderately sober. When we arrived at the city I paid them their stipulated fare, contenting myself with adding a little teetotal discourse; but they amazed me by asking for more. "What!" I said, "you dare to ask an extra fee after compelling me to walk for miles and delaying me for several hours!" "But think, sir," one of them said, with a broad grin, "think what a trouble we have had to get you along!"—Cor. Boston Bulletin.

An Artist's Adventure.

The following adventure is told by Mulready, the artist: One bright moonlight night, in my student days, I was walking in a street on the outskirts of London, little better than a country lane, when a man came out of the shadow thrown by a large tree, and producing a pistol, addressed me in the usual robber fashion with:

"Your watch and money, please!"

"I am a poor artist," said I. "See, these are my drawings. I have no watch; I have never been able to buy one."

"Your money, then, and be quick!"

All this time I was watching the fellow's face; it was very white, and I think he was more frightened than I was. I gave him all the silver I had about me; he said "Good night" civilly enough, and started off towards London.

I made the best of my way home, and before I went to bed I drew the man's face very carefully. The next morning I went to Bow street with my drawing, hoping it might be recognized by the officers there, but no! The face, they said, was new to them.

"If you will leave the likeness here, sir," said the chief detective, "we may, perhaps, come across the person it represents." That very soon happened; a fortnight had scarcely passed before I was called on to identify the man who had robbed me. He had been arrested for murder and was easily convicted.—Youth's Companion.

Protection from Lead Poisoning.

Much of the ill effects of the white lead manufacture may be avoided by due care on the part of the men. The chief precautions are strict attention to personal cleanliness so that none of the dust of the white lead may remain on the skin. No food or drink should ever be partaken of or be allowed to remain in any of the work rooms, and "sulphuric acid lemonade"—that is, sweetened water with a few drops of pure sulphuric acid to the glass, enough to communicate a pleasant tartness without setting the teeth on edge—should be used as the ordinary drink. It is not pleasant having to admit that in some cases where white lead manufacturers have provided protective appliances, such as hot baths, a room where such of the men as live at a distance may take their meals away from the poisonous substance—all such precautions are neglected, if not positively refused.—London Scientific News.

A Philadelphia man of 80 and a woman of 75 were recently married again after fifty years of divorce. This is the season for the reunion of veterans.

A PLUCKY MULE.

Running the Gauntlet of a Cannonade.

HAULING A LOAD OF AMMUNITION.

A Critical Moment.—The Last Shot.—Safe at Last.

Sometimes the mule is called upon for special service, requiring qualities for which he does not generally receive credit. The lines were tightening about Charleston when Admiral Dahlgren's fleet began operations in the harbor, and rendered it practicable for the troops on shore to advance with some hope of being able to hold points previously untenable. During the night a detachment of the Tenth corps dislodged a picket post on the eastern end of Morris island, and when daylight came had thrown up quite a formidable beginning for a field work. But the place was within easy range of Fort Sumter and Battery Wagner, and every Confederate gun that could be brought to bear began to drop shell into the little earthwork. It was thought that an attempt was about to be made to carry the place by assault, and, while there were men enough to hold it, they were a little short of ammunition. The only practicable road was a mile and a half of hard, smooth sand beach, commanded from end to end by the Confederate batteries.

But there was a combination in the Federal camp that was equal to the emergency; namely, a fleet mule and a plucky driver. The mule is mentioned first, only because he has long since kicked his last kick, but the driver, if he still survives, will acknowledge that without the mule he could not have done what he did. It may be assumed that the mule had a good feed of oats before he was called upon to run the gauntlet, and possibly the driver, too, may then have felt justified in fortifying the inner man. Be that as it may, just before noon a few boxes of ammunition were thrown into the lightest available wagon, and, after looking the harness over carefully, the driver took his seat in the shelter of the sand hills. The mule stood with his extensive ears raking aft and a wicked gleam in his eye, as if the oats were beginning to rise into his brain.

"Good-by, boys! G'up, mule!" and the equipage started down through the dry sand to the hard level of the beach. Mule shook his head and executed a demi-volt when he felt the damp sand under his feet, but driver soothed him with endearing words. It had not not yet dawned upon the Confederates that the expedition was intended for the relief of the garrison. But presently the gleam of intelligence was indicated with a rush in the shape of a shell from the southeast angle of Sumter. It struck the water fairly in line, ricocheted, and burst over in the marsh; but it was the signal for action. Up went the whip, and the mule gathered his mighty hind legs under him. For a moment it was uncertain whether he was going to kick or run, but a few remarks from the driver convinced him that there was demand for forward movement, so he "lit out for all he was worth." At least thirty guns commanded that stretch of beach, and they pounded away as fast as they could be fired. Now and then a shell would burst rather too near the mule's ears for comfort, and he would sheer violently and try to make for home. But the gallant driver plied the lash, and held him to his work.

At length a ten inch shell tore up the beach and exploded so near that the mule was entirely demoralized; but not so his driver. Leaping down from his seat he caught the mule by the head, backed him rapidly round once or twice, and was off again on the keen jump before the gunners could get his range as a fixed object. On he went, and at last dashed into the redoubt; but there was no shelter in it for the mule. His ears waved conspicuously above the low lying parapet.

The ammunition boxes were tumbled out unceremoniously, and the mule's nose pointed for home! With the lightened load and the prospects of unlimited fodder, he beat the previous record. But the Confederate artillerists were on their metal now. They had failed to stop the supplies, but their hearts burned for revenge. Their shots now came more from the rear, and bets were freely offered with no takers, on what the result would be should the mule have a fair chance to kick a ten inch shell, as it were, "on the fly." The crescendo scream of shell chasing him up the beach, lent wings to his heels, and he fairly flew toward the sheltering sand hills. There were only a few rods more to be covered, when some careful gunner made a close calculation as to the lengthening range, and pulled his lanyard almost in the nick of time. The huge mass of iron struck the beach, as it seemed to the anxious spectators, exactly behind the wagon, and the next instant nothing was to be seen there but a cloud of white smoke and brown sand. In an instant, however, this floated away, and the mule was seen vigorously reducing to kindling wood what was left of the quartermaster's wagon.

And the driver, where is he? Well, he was apparently knocked over by the explosion, but he got on his feet in a moment, and, having cut the traces, was on the mule's back in another, waving his hat in response to the cheers that rolled across the water from Yankee blue jackets, from Confederate garrisons, and from the dark blue masses that crowned the distant sand dunes.

It is a pity that the driver's name has not been preserved, for his daring act certainly deserves recognition and reward. Perhaps he received both, but the writer has been unable to find mention of the fact.—Adrian Rexford in American Magazine.

Barber (desirous to please)—How would you like your hair cut, sir?

Customer (innocently) — First rate! That's what I came in here for.—The Idea

PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 11 ..... 1891.

There is a prospect of a big delegation of labor members in the next Parliament. Gladstone intimates that the Liberals will stand in with them in their demands regarding local government and land holding reforms. A junction of these forces would effect great changes in English life.

The McKinley bill increased the tariff on oat meal 100 per cent. The oat meal manufacturers of the United States have organized a trust, advanced prices fifty per cent, and reduced wages forty per cent. This does not help the farmer who raises the oats but it cinches the consumer and the workman. It is a characteristic McKinley blessing.

The American hog is at last on top. The German government has finally notified the authorities at Washington that the restrictions on the importation of pork from this country have been removed. This result is supposed to be owing to the zealous efforts of United States Minister Phelps, but it is due, in fact to the clamorous demand if the German people for cheap and wholesome food.

Imports of gold from Europe now exceed the amount exported. It is the first indication of the turning of the financial tide, which will not reach its highest point for months. European banks are hoarding their gold to pay for the cargoes of American wheat sent to feed the millions there who are less fortunate than their American cousins. This gold will be distributed to every section of the Union and should cause prosperity to visit the farming regions. And prosperity for the farmer means prosperity for the miner, mechanics, day laborers, tradesmen and everybody. Great is the wheat of the Americans in this year of grace, 1891.

The Republicans of Ohio are now claiming that the low price of wool is due to a wicked combine of the manufacturers of woolen goods to use the imported fleece. It has been an unfortunate coincidence that wool becomes lower in price every time the tariff is raised, and one would have to come to the conclusion a conspiracy is always formed at such a time. The facts are that every time the tariff is raised the manufacture of woolen goods is decreased, for the want of free raw material. The Mission woolen mills of San Francisco is an example in point. Those mills turned out the finest blankets in the world, and they wese closed down because they could not get the Australian wool free of duty as English manufacturers do. Eight hundred workers in these mills were turned adrift when the Mission mills were closed, and the price of wool was reduced at that time, now three years ago.

Keystone State Democrats seem to be full of fight and faith, and why not? If there is a region in the United States that has been bled, and bled again, by Republican spoliators, it is certainly Pennsylvania. Bardsley's defalcations are perhaps the most striking evidence of Republican malversation and peculation that we have had of late years, but this monumental infamy was simply an outgrowth of the system patented by Quay, Mackey and Rutan, and invented by Simon Cameron, of happy fame. The Pennsylvania Democrats are on solid ground. The movement which elected Pattison has received a prodigious momentum through the tremendous Republican defalcations in Philadelphia. Why should not the Democrats, who won last year through a general revolt against "bossism," win again, aided, as they will be, by these revelations of official crime. Still another feature of the Repulican situation is the identification of the Republican party nationally with these grave crimes. Bank Examiner Drew was obliged to resign. He was selected as a scapegoat by the administration of Mr. Harrison. But Comptroller of the Currency Lacy, and Nettleton, the assistant secretary of the treasury, still remain in office. These officials and Mr Postmaster-General Wanamaker, were clearly concerned in propping up the rotten Keystone bank with which Bardsley was connected. Such concentric rings of fraud, embracing the Republican party in all its ramifications from Harrisburg to Philadelphia, and from the City of Brotherly Love to the City of Magnificent Distances, certainly call for rebuke from the voters, irrespective of party. This is another way of saying that probably even Pennsylvania will be wrested from the Republican thrall this fall.

STORY OF A RUSSIAN.

IF IT IS TRUE HE HAS HAD HIS FULL SHARE OF ADVENTURE.

He Is But Thirty-eight Years Old and Has Escaped from the Mines of Siberia. How He Made His Way to America. His Fall from a Balloon and Escape.

Recently there came to Boston a man whose history was probably never equaled by anybody, and probably will never be. The man was Ivan Orloff, a Russian, who was born in St. Petersburg about thirty-eight years ago. One of the most important things in the history of his wonderful career is the fact that he is one of a few who have escaped from the coal mines of Siberia.

Orloff arrived in this city from New York. One of the hottest days of the year he was overcome by the heat at the north end. Some passersby who noticed his condition came to his aid and gave him some whisky, while another stole from him a new electric battery, which he had bought recently.

On regaining consciousness he inquired his way to the nearest police station, and was directed to station 1. Upon his arrival there he asked Captain Cain if he could not lie down and rest for a while. The good natured officer of course said yes, and the man, soon after sitting down in the guardroom, began to doze. The captain, noticing his condition, sent for Dr. Elliott.

The stranger was then taken to the surgery room and examined by the doctor and his assistant, Dr. Dunn, who applied the usual restoratives. The doctors told him to keep quiet and that he would soon be all right, but he appeared to be so nervous that he excited the suspicions of not only the doctors, but the police. In his pockets Captain Cain found a lot of instruments. Upon being questioned he informed the people in the room that they were musical instruments.

"Can you play?" asked Captain Cain.

"Well, a little," was Orloff's reply.

ESCAPE FROM SIBERIA'S MINES.

He was then invited to go to the parlor of the house, where he was shown the piano. The first piece he played was a selection from Mendelssohn, and never before, and probably never again, was such music heard inside the walls of the station. After he had played numerous fine selections the officers and doctors became greatly interested in him, and began questioning him. As a result he told a story, which was as follows:

He was born in St. Petersburg, Russia, and was a student in a medical college in that place. One day the rooms of the students were raided and a lot of inflammatory documents and seditious papers were found in his room. However, he would not admit that they belonged to him. He was arrested and sentenced to Siberia, where he was put at work in the coal mines, from which he managed to escape.

Assuming the role of an Englishman, this he being able to do as he speaks English very fluently as well as the other languages, he was easily enabled to work his way through the country without being detected, as he was penniless. After a good deal of traveling and suffering he managed to reach western China. Arriving there he was arrested on the charge of stealing food.

"The residents of this portion of China are exceedingly barbarous, and without trial I was sentenced to have my head chopped off. However, luck was again with me, and by some hook or crook an English official heard of my predicament. After a great deal of hard work he managed to secure my release.

"I started across China again, all the time being afraid I would be arrested and sent back to the awful mines. However, I finally managed to get a job aboard a vessel and shipped to America, landing at San Francisco.

A MIRACULOUS ESCAPE.

"During the Franco-Prussian war I was in the French army commanded by McMahon, but I was directly under Marshal Bazaine."

He then branched from his own history and told of the surrender of Metz to the Germans and the escape of Bazaine to England.

Continuing his story, he said:

"During the war, while the Germans were besieging the city, two companions and myself were sent up in a captive balloon (one which had a long rope tied to the ground) to ascertain the number of the opposing army. When in midair the balloon was struck by a shell, causing the airship to explode.

"My companions and myself fell to the ground, my companions being instantly killed, while I was knocked senseless and the bones of my arms, feet and hands being broken in several places. My skull was also fractured.

"I was in the hospital at Metz for over a year. After leaving Metz I traveled considerably and was in Alexandria at the time of the siege by the British early in the eighties."

Here the man, who must bear a charmed life, showed the doctors and the police his body, which, to say the least, was a "sight." His arms, hands, legs and feet plainly showed that they had been broken. Upon examining his skull the physicians found inserted in his head a piece of platinum of silver, where his scalp was missing.

Orloff told more about his life, which is full of exciting incidents. Owing to the injuries with which this wonderful man has met his system is naturally a very nervous one. A hot atmosphere always affects him and he is easily overcome. His normal temperature is 98.2. —Boston Record.

Water in the Bible.

The question of water goes back much further than we stop to think. For example, we are told in the book of Joshua that when Caleb's daughter Achsah was given to General Othneil in consideration of his capture of the city of Debir, and the matter of her dowry was being discussed, she said to her father: "Thou hast given me a south land; give me also springs of water." She understood that the tract sloping southward toward the deserts of Arabia was mountainous, swept by hot winds and deficient in rain supply. So she wanted besides a piece of land well watered and fertile, that it might be profitably cultivated. Caleb was so well pleased with the victory won for him by Othneil that he could deny the bride nothing. "And he gave her," the record adds, "the upper springs and the nether springs"—more than she had asked, as fathers are apt to do with daughters whom they rear and love, only to lose when the inevitable bridegroom comes.—St. Louis Globe-Democrat.

Male and Female Babies.

"What is the use of rearing daughters?" asked an intelligent Chinaman not long ago of an inquiring Englishman. "When young they are only an expense, and when grown they marry and go away. Whereas, a son"——

What a world of difference there is between that sentiment and this of "A Cradle Song," a recent poem by the young poet, W. B. Yeats, where the mother addressed her baby thus:

I kiss you and kiss you, my arms round my own:
Ah! how I shall miss you, my dear, when you're grown!

To us, in these later times, and with all the sentiments of Christian civilization fostered in us, it is almost incomprehensible that any grown human being could have the heart to extinguish the first struggling life of babies; most of all does it seem incomprehensible that the mother, whose nature is went to well up and flow out at the first helpless cry of her infant, and the father, whose instinct is to hover over and protect and "fend for" both mother and child in their weakness, could ever surrender, or with their own hands destroy, the creature whom they have brought into the world. But, strong as are the natural instincts, stronger still is many a religious fanaticism, stronger is a national or tribal tradition.

And when we consider that it has taken ages of Christian culture and feeling to bring us to our present height of imaginative sympathy with all forms of life, till now we are agreed that no more beautiful, sacred or divine sight is to be seen under the sun than that of a mother with a child in her arms, then we can understand that, while it is an outrage, a sin and a crime to destroy a child among the taught of Christendom, it is but a hideous barbarism among the uninstructed of heathendom.—Strand Magazine.

Reading the Human Face.

Every one knows that men's passions, propensities and peculiarities as well as their callings are reflected in their faces, but it is only the few who have made the study of physiognomy an especial pursuit who are gifted with the power of reading those faces. Judges who have served long terms on the bench, lawyers in large practice and doctors of eminence possess the power of interpreting physiognomies more largely than other people, but any one can acquire the rudiments of the art by dint of hard study.

It is as impossible to disguise a face (without putting on a mask) as it is to disguise one's handwriting. When the expert comes the disguise is torn off and the face tells the true story of the spirit inside the body. One only needs to visit the penitentiary to realize how undeniably vice writes its sign manual upon the features. It is not the drunkard only whose red nose, flabby cheeks and watery eyes betray him; it is the sensualist whose vice is read in his lips, the knave whose propensity is revealed by the shape of his mouth, and the man of violence who has been betrayed by his eyes.

An experienced detective or a trained jailer seldom asks the crime of which a prisoner is guilty; he can tell it on the criminal's face. In short, all the advantages which Fowler told us we were going to derive from the study of phrenology we may possibly gain from the older and more mysterious science of face reading.—St. Louis Republic.

Spurgeon Says Hats Off.

Mr. Spurgeon has always been perfectly appalling in his readiness to deal with insolence in the house of God. The finest case on record is, perhaps, one in which three young fellows came in and settled themselves conspicuously in the gallery with their hats on. In vain the officials requested them to uncover.

Of course Mr. Spurgeon's eye was soon upon them, and leading his discourse around to the respect which all Christians are bound to show for the feelings of others, "My friends," he said, "the other day I went into a Jewish synagogue, and I naturally uncovered my head; but on looking around I perceived that all the rest wore their hats, and so, not wishing to offend against what I supposed to be their reverent practice, though contrary to my own, I conformed to Jewish use and put on my hat. I will now ask those those three young Jews up in the gallery to show the same deference to our Christian practice in the house of God as I was prepared to show them when I visited their synagogue, and take off their hats."

He would indeed be a pedant and a prig who could refuse a sympathetic smile of approval, even in the sanctuary, to a rebuke so genial, so witty and so just!—Contemporary Review.

Valuable Coverings.

Talk about a ninety dollar gown as a wonder on graduation day in the city! What will you think when you are told that a lady up in Oxford county protects her house plants while out of doors from frosts with a $300 coat? Early in the month, during the frosty nights, a woman residing in a beautiful village in Oxford county took her husband's old coats to cover up her plants. Several days later he inquired for his coat, and when told the purpose for which it had been used and that probably it was left in the flower garden, said he guessed it had better be brought in, as there was a $300 roll of bills in the inside pocket, which he had carried there for some time.—Lewiston Journal.

Cold Though Burned.

Calvin Meek, a colored man, who was stealing a ride in the first coach of the passenger train, was found over the engine of that train. When the freight engine mowed its way under the coach Meek was thrown up and came down upon the steam drum, to which he was pinned by a mass of wreckage, which was removed after the greatest difficulty. While his injuries were being dressed Meek implored those around him to do something for the intense cold that he felt from his burns, and he begged them not to let him freeze. He asked for a blanket, and kept calling out that he was freezing to death.—New Orleans Times-Democrat.

A Stage Subject.

A good stage subject occurs in a recent volume of memoirs. Two men fight with small swords in a drawing room, while somebody plays a piano to drown the clash of swords. Make this some one a lady, make her keenly interested in the duel, and we think you have a fairly attractive stage scene—especially if the lady brains the winner with a music stool. Or she can comfort the conquerer with her blandishments. —Saturday Review.

HIS FIRST ASSIGNMENT.

Initiation of a Fresh Young Man From College Into Reportorial Work.

Horace Greeley once said, "Of all horned cattle deliver me from the college graduate who wants to break into journalism." The commencement season had hardly opened, but the advance guard of the graduate crop walked into the city editor's room the other day, exhibited his college diploma, said that he had "written several pieces for the county paper," and asked for a chance to show what he could do. Like all writers of his class he did not want a salary so much as he wanted an opportunity to jump right into the middle of journalism. The annual vacation season had left the city force short handed, and the editor decided to try the new man.

"Go down to the Illinois Central depot right away," he said, "and see what there is in a case of mayhem there. I know nothing about this except that some one telephoned me a few minutes ago that there was a case of mayhem at the depot. Go down there and see what you can find. Ask the railroad and depot employes about the case, and if you strike a lead follow it up and investigate the matter thoroughly."

Two hours later the would be journalist reported at the office with a very long face.

"Well, what was there in that case," asked the editor.

"I do not know, sir," replied the new reporter.

"Don't know! Why don't you know? Didn't I give you instructions to look into it?"

"Yes, sir, but I couldn't find it."

"Did you canvass the subject thoroughly? What did you do?"

"I went down to the Illinois Central depot and told the freight agent that I was looking for a case of mayhem. He asked me the name of the consignee. I told him I didn't know it. He asked me where the case was from and wanted to know if it was shipped alone. I couldn't tell that, of course, so we went over the whole stock of shipping bills, but we didn't find the slightest trace of it.

"I don't believe there is any such case at the Illinois Central depot, but I didn't look for it anywhere else. I found that it would be useless for me to stay there longer, however, because the agent assured me that unless I had an order from the consignee he would not permit me to look into it, even if we succeeded in finding it. What shall I do next?"

After a moment's reflection the editor slowly replied: "Well, as there is no vacancy just now in our janitorial department, perhaps you had better step into the composing room and ask the foreman to let you clip the bangs off the hair spaces in the cases. If you escape, come back and I'll let you answer the telephone until it is time for you to draw your salary tonight." — Chicago Mail.

Relative Strength of Men and Women.

By means of a specially devised instrument a French scientist has carried out some experiments for determining how the average strength of the two sexes compares. The palm of the hand is placed on the instrument, and then the greatest downward pressure which the individual can give is exercised upon it, and the force thus produced is recorded by the usual clockwork device. Fifty robust men, and the same number of healthy women, both belonging to the middle class of society, with ages varying from twenty-five to forty-five years, were tested in this way by the Paris scientist.

The strongest man of the company was able to produce with his right hand a pressure equivalent to eighty-five kilograms (a kilogram is rather more than two pounds) and the weakest to forty kilograms, the average being fifty-six kilograms. One curious result was arrived at: The short men were all very nearly as strong as the tall men, the average difference between equal groups of two sizes being only three kilograms. The force of the strongest women of the fifty who were selected amounted to only forty-four kilograms, and that of the weakest to sixteen kilograms, while the average was thirty-three kilograms.—Herald of Health.

An Industrious Turkey.

Henry Curtright, of this township, has the best paying turkey hen in this county. Early in the spring she began laying, and after she had laid the usual number of eggs went to sitting. She was broken from sitting and soon laid another sitting, and this time was permitted to sit and hatched out a brood of young turkeys. During the entire time she was sitting she laid an egg regularly every other day, and since she has been out with her young she has still laid every other day. This information was given us by Mr. Curtright, and he is a truthful man.—Paris (Mo.) Appeal.

For Sale!

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

Snug little FORTUNES have been made at work for us by Anna Page, Austin, Texas, and Jno. Rom, Toledo, Ohio. See cut. Others are doing as well. Why not you? Some earn over $500.00 a month. You can do the work and live at home, wherever you are. Even beginners are easily earning from $5 to $10 a day. All ages. We show you how and start you. Can work in spare time or all the time. Either sex, young or old. Profits unknown among workers. Failure unknown among them. NEW and WONDERFUL. Footprints free. H. Hallett & Co.

$6000.00 a year is being made by John R. Goodwin, Troy, N.Y., at work for us. Reader, you may not make as much, but we can teach you quickly how to earn from $5 to $10 a day at the start, and more as you go on. Both sexes, all ages, in any part of America, you can commence at home, giving all your time, or spare moments only to the work. All is new. Great pay SURE for every worker. We start you, furnishing everything. EASILY, SPEEDILY learned. PARTICULARS FREE. Address at once, GEORGE STINSON & CO., PORTLAND, MAINE.

DESERT LAND FINAL PROOF

D. E. No. 571.

LAND OFFICE AT INDEPENDENCE, CAL. September 9, 1891.

Notice is hereby given that Maggie S. Conklin, of Independence, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim, No. 571, for the N W ¼ of S W ¼ Sec. 14, Tp. 11 S., R. 34 E., M. D. M., before the Register and Receiver at Independence, Calif., on Thursday, the 22d day of October, 1891.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Hines and Norman E. Conklin, all of Independence, Inyo County, Calif.

C. W. CRAIG, Register.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 137 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 137 Montgomery street, San Francisco, California.

DESERT LAND FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL. Sept. 3d, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G. Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

ANNUAL MEETING.

INYO MARBLE COMPANY.

The Regular Annual Meeting of the Stockholders of the Inyo Marble Company will be held at the office of the Company, No. 137 Montgomery street, San Francisco, California, on Thursday, the Tenth day of September, 1891, at the hour of One o'clock p. m., for the purpose of electing a Board of Directors to serve for the ensuing year, and the transaction of such other business as may come before the meeting.

Transfer books will close on Monday, September 7th, 1891, at 2 o'clock p. m.

G. W. LUCE, Secretary.

Office, G. W. Luce, Secretary, No. 132 California street, San Francisco, Cal.

NOTCE TO CREDITORS.

Estate of FRANCISCO PADERES, Deceased.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGANACIA ABECHUCO.
Administratrix of the estate of Francisco Paderes, deceased.

Dated at Independence, Cal., July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence, Cal.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine, Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

COURT NOTES.

Geo. M. Gill, Superior Judge.

TUESDAY, September 8, 1891.

Estate of W. A. Bolinger, deceased—Filed petition of B. Rhine for letters of administration.

Manuel Diaz was in town on Wednesday.

Wm. McDonald of Bishop was in town this week.

W. K. Miller was up from Lone Pine last Monday.

Under-Sheriff Dave Holland went to Bishop yesterday.

Regular meeting of the Masonic Lodge to-morrow night.

Mr. and Mrs. Mike Anton of Keeler visited Independence yesterday.

Mrs. E. A. Reddy went south on Wednesday's train to join her husband at Darwin.

Twenty-five cloudless days in the month of August is a good record for fair weather.

John Dumphy visited Independence early in the week on his way to Cerro Gordo.

Miss Matilda Meysan of Lone Pine will teach the primary department of the Big Pine school.

J. J. Gunn intends to return to his mine near Modock some time this month to continue operations.

R. J. Laws passed over the line of the C. & C. to Keeler on Wednesday, returning north next day.

Frank Fitzgerald and wife returned to Lone Pine Wednesday after a visit to Los Angeles and San Francisco.

M. Montano of Lone Pine has taken a contract to pack ore from the Independence mine at Darwin.

Superintendent McDonald of the Defiance mine who left for San Francisco last Saturday is expected home to-day.

G. P. Rixford, President of the Inyo Marble Company, went down to the quarry last Monday and spent a couple of days inspecting the property. He returned to San Francisco on Thursday.

The Newtown Mining Co. of Cerro Gordo has been doing extensive "dead work" for some time but will soon be taking out large quantities of ore. A cross-cut has been run from the main shaft to the ore body.

J. J. Gunn and J. C. Irwin made a trip to the White Hills this week to inspect a group of mines there. They visited the Hirsch mine on the way and Mr. Gunn says there is a fine body of ore in sight.

We have received a copy of the new "Directory of the Grape Growers, Wine Makers and Distillers of California" issued by the State Board of Viticultural Commissioners. It contains complete statistics that are of much value to all engaged in the vine industry.

Last Sunday Mr. Lo Jr. chartered a coach and took the dusky maiden of his affection for a spin to Georges Creek. By some "devilish cantrip's sleight" the rig became an utter wreck and the gay Lothario is calculating how many moons of hard labor will settle the damages.

J. N. Evans of Reno, accompanied by his family and a number of friends, arrived at Independence last Saturday. They had spent two months camping along the Eastern slope of the Sierras. Nine of the party, including Mr. Evans and the ladies, took the North-bound train on Tuesday and returned home. The remainder of the party will go back with the wagons.

J. G. Bone, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhoea Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY, Big Pine.

There was an unusually heavy crop of barley harvested in this section this year. E. Robinson received 292 sacks, or two tons per acre, off eight acres. J. Vagt threshed about two tons to the acre and George Lewis the same. In fact there is more barley than there is market for it. As low as a cent and a quarter has been offered but this price the farmers refuse to take as grain at that price will not pay for raising it.

The *Golden West* for August contains the following item: "Grand Vice-President Thos. Flint, Jr., has returned from a visiting trip in Inyo county. He visited Mt. Whitney Parlor, No. 136, on August 21st, and Inyo Parlor, No. 141, August 26th. He reports the order in a very flourishing condition in that county and is more than pleased with the reception accorded him. He intended to visit the Donner Parlor at Truckee upon the 29th but could not get the hall for a meeting on that date."

The *Index* says: "Complaint reach here that horsemen in and about Bishop are kicking in regard to the track there. This seems unnecessary, as the Eastern Slope Association agreed to place and keep the track in firest-class condition and will certainly do so." This may be very true, but the "kicking" goes on just the same. J. W. Clark informs us that R. W. Scott will discontinue training his stallion Gibraltar Jr. because the track is so rough that it is not safe to drive a track sulky upon it. For the sum of $500 the track should be put in such condition that a driver would not risk breaking his neck. And then why should all just complaint against mismanagement be stigmatized as "kicking?

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of August, 1891.

Mean barometer.....29.822
Highest barometer.....29.971
Lowest barometer.....29.613
Mean temperature.....81.8
Highest temperature, 23rd.....101.
Lowest temperature, 7th.....60.
Greatest daily range temp'ture, 9th, 32.
Least daily range temperature, 16th, 16.
Prevailing direction of wind, South.
Total movemement of wind, 3734 miles.
Extreme velocity of wind, direction and date, 36 miles S. on 10th.
Total precipitation, 0.02 inches.
Number of days on which .01 inch or more of precipitation fell, 1.
Number of cloudless days.....25
Partly cloudy days.....3
Cloudy days.....3

H. E. WILKINSON,
Weather Bureau, Observer.

¡Quien Sabe?

The *Index* says that $625 has been subscribed by the citizens of Bishop for race purses. This is a very liberal offer and the Bishop people show commendable enterprise. How does it happen, however, that only $525 is offered to compete for? What is to become of the other $100, together with the gate receipts and the funds obtained from the sale of privileges? We do not wish to ask impertinent questions, but information upon any subject relating to the coming fair is difficult to obtain. By the way, where are those printed premium lists and speed programmes? We have a vague impression that it was intended to distribute them through the district, but as yet we have not yet had the pleasure of seeing one.

The coyote hunters are in luck, for the State Board of Examiners have passed upon the claims that accrued under the law and have pronounced them valid and payable. The decision was agreed to unanimously on the ground that so many parties had invested in the scalps on their faith in the constitutionality of the law. This faith was superinduced by the fact that the Governor signed the bill. Secretary of State Waite did not believe the bill was valid, but it is understood that he joined in the decision for the reason stated. Coyote claims to the large amount of $50,000 are now due.

World's Records Beaten.

INDEPENDENCE, Iowa, Sept. 4.—Two of the world's records were broken to-day. Allerton trotted a mile in 2:10 flat, crowning himself king of stallions, and enhancing his value $50,000. Direct covered a mile in 2:06, breaking the records for both trotters and pacers. Allerton made the first quarter in 32¼; the half in 1:05½; three-quarters in 1:38 and the mile in 2:10. Direct made his first quarter in 32; the half in 1:04; three-quarters in 1:35½ and mile in 2:06.

George Lewis came in on the train yesterday morning from a trip to Darwin. He visited a number of mines there and makes a most favorable report of mining matters in that section. The Defiance mine is showing up very well. He reports the Independence mine to be full of ore and a considerable quantity on the dump ready for shipment. This property is bonded by P. Reddy from J. Wilson. The mine belonging to the estate of Pellegrine has a fine body of ore in sight.

Card of Thanks.

LONE PINE, September 7th.

ED. INDEPENDENT:—We desire, through the columns of your paper, to express our deep sense of gratitude for the kindly feeling that was shown us on the death of our little Charlie. MR. & MRS. LUBKEN.

A force of men is engaged repairing the road leading from Keeler to Cerro Gordo, which was badly washed out during a recent storm.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,
Chicago, Ill., U. S. A.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain,s Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. Which will you have, sickness, suffering and despair, or health, strength, and spirit? You can take your choice. All chronic diseases and derangements peculiar to women are permanently cured by Dr. Pierce's Favorite Prescription. It restores the female functions to healthy action. It removes the obstructions and suppressions which cause trouble and misery. For periodical pains, internal inflammation, ulceration and kindred ailments, it is a positive remedy. The system is invigorated, the blood enriched, digestion improved, melancholy and nervousness dispelled. It's a legitimate medicine, the only *one* that's *guaranteed* to give satisfaction in the cure of all "female complaints."

"I never use tobacco. No!
"I've never touched it yet!"
And then he took a match and lit
His nasty cigarette.

Sworn Statement from a Well-known Individual.

Lockport, N. Y.

A short time ago I was afflicted with rheumatism so badly that I could not move. My hands and limbs were all swollen. One leg was so badly swollen that I burst the skin. The Sheriff of our County advised me to try Dr. Pardee's Rheumatic Remedy, and bought me a bottle. After taking the remedy one day I felt relieved and in less than two weeks I was able to go to work and have not felt rheumatism since. Three bott'es cured me, and I recommend it to all who are suffering from rheumatism.

CHAS. ROBILLARD.

Subscribed and sworn to before me this 5th day of June, 1883.

M. J. TORELL, Notary Public.

Ask your druggist for Dr. Pardee's Remedy and take no other. Price, $1 per bottle; six bottles, $5.

Pardee Medicine Co., Rochester, N. Y.

A Texas View of It.—"Can lying be justified?" asks the *Courier-Journal*. Justified! Why, down this way, if it is on the right side, it can be sanctified.—*Waco Day.*

"IN THE SWIM"

For sportsmen, tourists and others who spend their time in the open air, Mastiff cut plug smoking tobacco is absolutely the best. Packed in patent canvas pouches which retain the moisture and flavor. More solid comfort in one package of Mastiff than you can get out of a dozen others.

S. F. N. U. No. 477. New Series No. 32

THE CONFEDERATE PRESS.

Printing Southern Papers in War Times.

SCARCITY OF PAPER MAKING MATERIALS.

Straits of Publishers of Books and Sheet Music.

Side by side with the reports of battles and the records of peace commissions, congresses and legislatures, the blurred columns of the Confederate press were wont to teem with domestic recipes for cheap dishes, directions for raising and utilizing various vegetable products, instructions for making much of little in matters pertaining to every phase of household life. Hard by a list of dead and wounded would stand a recipe for tanning dog skins for gloves; while the paragraphs just succeeding the closing column of the description of a naval engagement off Hampton roads were directions for the use of boneset as a substitute for quinine.

The journals of that day were printed usually upon the poorest paper, made of straw and cotton rags, and so brittle that the slightest touch mutilated it. The ink, like the paper, was of the cheapest and commonest, and left its impression, not only on the face of the sheet, but on the hands no less than on the mind of the reader. Few fonts of new type found their way into the Confederacy during the war, and at the end of four years the facilities for printing had come to a low ebb. It was no uncommon thing for publishers to issue half sheets in lieu of a complete paper, with scarcely an apology to subscribers for the curtailment of their literary and news rations. It was generally understood that this happened only through stern necessity, and not from any disposition on the part of the newspaper men to give less than an equivalent for the subscription price.

Sometimes the journal which on yesterday appeared in all the glory of a six column page was today cut down to a four column half sheet, or publication was suspended with the announcement that the stock of materials had been exhausted, and that as soon as the office could be replenished publication would be resumed. Eagerly as the rough sheets were looked for and closely as they were read, a diminution of matter in them, or a failure to appear, caused only passing comment or dissatisfaction. Men's minds were so filled with the thousand things that each day brought forth about them, there were so many rumors in the air, and news flew so rapidly even without newspaper aid, as to cause them not too greatly to miss that which today has come to be one of the veriest necessities of American life—a daily journal full of all the doings of all the world.

Sometimes even the coarse straw paper failed the publishing fraternity when an edition was absolutely imperative, yet in such emergency the inventive talent never deserted them. It was considered a wonderful journalistic feat on the part of its publishers for The Vicksburg Citizen, during the siege of that city, to make its appearance, when all other resources had failed, upon wall paper.

Publishers of books and sheet music occupied a scarcely less helpless condition than the newspaper people. Their sole grounds of superiority consisted in the fact that the demands upon them were not so urgent. The girl who sang to her soldier lover the popular songs of that time, "Lorena," "When This Cruel War is Over," "The Standard Bearer," or "Harp of the South," which were all duly advertised at the retail price of $1 per sheet; the trade supplied, however, at half off, with an additional discount where 100 of one piece are ordered, "did not experience that immediate and insistent need of the song and its music which men and women alike felt for the newspaper that would tell them where the last battle had been fought, which army had been victorious, who had been promoted and who had fallen. The fateful column might contain evil or good report of some dear one, and its coming was full of interest and apprehension. Yet the sheet music, printed like the newspapers, in the roughest style, upon the commonest paper, with now and then a caricatured lithographic likeness of some Confederate general on the title page, continued to be sold and sung, even though its price ran from $1 to $2 per sheet.

War songs and war music were the order of the day, and the soldiers in the camps and the small boys in ragged jackets shouted with an equal zest:

The despot's heel is on thy shore!

or

Farewell forever to the star spangled banner!

from diminutive paper covered books of martial ballads. The little song books cost anywhere from two and a half to five Confederate dollars, and their contents, with a few notable exceptions, were as mediocre as the paper on which they were printed. The sentiment was there, nevertheless, and this was cared for by the singers more than the music or the lyrical or literary excellence of the songs.

The missionary and religious publishing houses never ceased their praiseworthy labor of printing tracts and pamphlets for distribution among the soldiers, but publications of a more ambitious or secular standard were very few. Now and then some adventurous firm in Richmond or Charleston or New Orleans would issue a badly printed edition of a new novel, reproduced from a copy smuggled in "through the lines" or brought by the blockade runners from Nassau. Still, even "John Halifax, Gentleman," and "Les Miserables," which first appeared in the south in this way and this dress, lost much of their attractiveness in their Confederate garb of inferior ink, bad type and worse paper.—A. C. Gordon in The Century.

Fishing for Husbands.

Recently there was a gathering of young married couples in Louisville, and the conversation turned on the manner in which the wives had secured their husbands. One had paved the way to the altar by making a face at the fated one because she thought he had stared at her impudently. He admired her mettle, and sought an introduction. Another made the acquaintance of the man who is now her husband by accidentally sousing him with a pan of dishwater, which she tossed out of the kitchen window into an alley just in time to catch him as he was passing. The one that was, however, voted to be the most novel was the experience of a young man connected with the municipal government. The latter was in the habit of passing, on his way home, the residence of the young lady who is now his better half, and one evening, out of a spirit of mischief, she "accidentally on purpose" turned the hose on him. He faced about, blushed violently, and stammered a "thank you" in response to her roguish smile, and from that moment he knew he was fated.—Chicago Herald.

"This, ladies an' gents," vociferated a menagerie orator in a small town in Kentucky, "is the great Arabian dromedary, with two humps upon his back instead of one, but the extra hump will cost you nothing. He is the Arab's beast of burden. He fetches an' carries, while the Arab sits idly in the sand and (impressively) he can go eight days without water!"

"Only eight days!" was the general exclamation, and then the crowd moved on in search of something interesting.—Phil H. Welch.

LIFE ON THE FARM.

Rural Employments Not Odious in Themselves—City Vocations.

There is a frequently recurring complaint from the farm, reached through the agricultural press, of the reluctance of boys to remain in farming pursuits; indeed, sometimes even to enter on such a life. What is the cause of this restless and unwilling spirit? Are country employments odious in themselves? Is it a task more dreary or more dangerous to break a fiery colt than it is to face the winter as brakemen on a freight train? Is it more perilous to attend a shorthorn bull than it is to be a policeman and club burglars? Is it worse to do chores as a small boy on his father's farm than it is to work for $4 a week and pay traveling expenses to reach the office, where the boy is the scapegoat who is always wrong, and at whose door the shortcomings of every other employe lie? Is it harder lines to plow behind your own team, to drive your own mowing machine, or do a good part of your own carting, than it would be to work in a factory at any one of the various industries carried on throughout our land?

While we are compelled to acknowledge that farming has its unsatisfactory points, none can disprove that much discontent is broadcast everywhere. The advantages offered by agriculture to its followers are freedom, not from duties, but from personal inconveniences. It is the farmer's own fault if his house lacks comfort; the artisan must work in his employer's shop or factory—the larger the establishment the less the individual. How many typesetters have injured sight? How many brakemen are maimed and killed? How long is the dark list of mechanics worn out before they have reached maturity from the hardships incident to the duties of their callings?

So take a look at a higher social grade as contrasted with what country avocations offer. It is appalling to note the young lives wrecked in cities; youths who strain every nerve and use every means to attain a profession, who just reach the threshold and then succumb, worn out in mind and crushed in body. Of the vast multitudes who year after year leave their country homes to seek fortune in cities, how many succeed? The percentage is very small, even of those who find a moderate amount of success. Some lack ability, others endurance, and many do not possess sufficient strength.—American Agriculturist.

Memory of a Railroad Conductor.

An illustration of how the memory may be cultivated in retaining a long list of numbers, one has only to observe the freight conductors, and very often remarkable examples of retentive memories will be found. I have been on the road as a freight conductor for fourteen years, and in that time my memory has had a careful training in the particular line of retaining numbers on the cars. I start out on a run and know the numbers of all the cars with which the train is made up, and while some cars will be left at stations along the road, and other cars will be taken up, yet at the end of my run if an officer asks me whether I have a car number so-and-so, I can invariably tell him without referring to my book.

Now, when it is remembered that the train may be made up of forty cars, and that the numbers run all the way from the hundreds to the twenty-five and thirty thousands, and that a dozen cars may be taken off and another dozen taken on along the run, my statement undoubtedly seems incredible to those not familiarly acquainted with this particular department of railroading. But it is a fact, nevertheless, and I have known quite a number of freight conductors who have memories of equal retentiveness. Noting the numbers on the cars daily for years, a conductor becomes so familiar with the work that his memory holds these large numbers with but little difficulty. The style and peculiar finish of the cars from different roads are also learned, and a conductor at a glance can tell the road to which a car belongs as far as he can see it.—Globe-Democrat.

Unlucky Horseshoes.

We had a rum customer in our jail recently, remarked the sheriff of an adjoining county in Kansas. I was away when he arrived at the jail, but a day or two later, when I was making the rounds, I saw him in his cell.

"Hello!" I said. "What are you in here for?"

"Are you the sheriff?" he replied.

"Yes, sir," said I.

"Well," he returned, "the community in which you live and in which I was so unfortunate as to sojourn is the most intolerant I ever heard of."

"How so?" I asked. "Have you anything to do with the liquor traffic?"

"No," he replied, "but they arrested me for superstition, and here I am in jail. The idea of arresting a man for superstition. This is a free country. Hasn't a man a right to be superstitious?"

"Why, I guess so," I replied. "What was your superstition?"

"Well, sir," said the prisoner, "my mother always told me to pick up a horseshoe whenever I found one, for good luck. I picked up four in this town; they were found in my possession, and I was arrested, tried, convicted and jailed."

"I guess you're lying," said I, and with that I went out of the jail, and met the prosecuting attorney. I asked him about the case and he said:

"Those four horseshoes had a horse fastened to them. That fellow is the most notorious horsethief in the state."—Kansas City Journal.

One of Mr. Conkling's Hobbies.

Bathing was one of Mr. Conkling's hobbies. The operators at the Hoffman house and the Lafayette place baths like to tell how they have rubbed down his manly form. One of the Hoffman house bath attendants said in the hot room there the other morning that the Senator preferred the Russian mode, and that he had taken at one period two and three baths a week. After he moved into the Hoffman house annex he had the bath room connected with his suite fitted up especially for him. A large porcelain tub was made and put in, and the Senator used it every morning. He used salt in profusion, and often bathed with the water at a very low temperature. It was about the only form of indoor exercise that Mr. Conkling took of late years. Once he used the gloves and Indian clubs a great deal. He didn't hesitate about exposure, and often went out for long drives of twenty and twenty-five miles. It made no difference how severe the weather was, he felt that he could brave it and he did.—New York Sun.

Cholera Germs in the Bay.

It is extremely unpleasant to know that Dr. J. J. Kinyoun, of the Marine Hospital service, has proved that the Asiatic cholera spirilla thrives and reproduces ad libitum in the water of New York bay. Hence the discharges of cholera patients, when they reach the tide or sea water, do not lose their dangerous character. On the contrary, the germs will reproduce and be left on the flats at low tide, where they will have the sun's heat and plenty of filth to revel in. In the present struggle for existence between microbes and human beings, the former seem to have a good many advantages.—Philadelphia Times.

Tramps Never Bald Headed.

"I never saw," said an officer who has done duty for a long time, "a bald headed tramp. Whether they stop tramping when their hair falls out, or whether those who tramp never lose their hair, I can't say, but tramps are never bald headed."—Grand Rapids Eagle.

Indian Corn in Russia.

It is reported that the culture of maize or Indian corn is rapidly increasing in Russia. It is now used for fattening hogs, and the prospect is that large quantities of it will soon be exported to countries in western Europe.

WOMEN WHO SMUGGLE.

Tricks Resorted to by Them to Avoid Discovery.

CURIOUS PLACES OF CONCEALMENT.

Considered an Act of no Special Harm. —Bribes.

It takes twenty very zealous and careful women of keen perception, great force of character and considerable nerve to keep Uncle Sam from fairly being cheated out of his eyes by other women. Smuggling is the way the latter do it, and do it well. Women like to smuggle, it would seem. They have an elastic conscience in the matter that really seems to tempt them to what is, of course, swindling the government, but to themselves an act of no special harm and of little consequence. Of course there is the genuine woman smuggler who knows just what she is doing, just what trouble she is liable to get into and what the result will be. It is business with her, and she considers it an ordinary business risk. But she is caught just as certainly as the other little woman is, who doesn't think it any special harm just to save a little by tucking away a few pairs of gloves which only make her leg a bit plumper, if they don't slip down and give her a queer shaped ankle, or filling her corset with some rare and dainty lace, that if purchased here would cost a pocketful of money on account of the duty.

Women are far more wary than men in smuggling, and their devices for bringing in goods of a dutiable nature are many. It is usually the case that the inspectress can tell by the face and contour of the person. As a general rule, the woman who has goods hid away will look the searcher of her luggage calmly in the face, seldom turning away, and if the searcher politely informs her that she thinks that she has dutiable goods on her person, she will, of course, be greatly insulted and invite a careful examination. She gets it—and a little trouble in the bargain. The self assurance that a woman smuggler has is of such great quantity that it will lead her to do the most absurd and foolhardy deeds, whereas, if she had less, perhaps she would not rely so much upon its carrying her through, and would, therefore, be more careful. The bustle is a godsend to the woman who wants to smuggle. They are made large and roomy, are of iron framework, and in them may be safely carried yards of the most valuable goods.

The most absurd thing for a woman to do who has goods hid about her person is to wear a heavy ulster when it is too warm for one. She will have to refuse to remove it when graciously asked if it is not a bit warm, and such refusal of course results in a necessary investigation on the part of the inspectress. The manners of the woman smuggler are always very charming, and therefore it is in such a kindly way that they inform the tired inspectress that she is really tired and needs a little rest, therefore need not examine their trunks, as they will tell the inspectress what is in them and save her so much extra trouble. But she doesn't look at it in that light, and does inspect the trunks, much to the regret of the owner. These smugglers possess a quiet and careless air, but the inspectress can always tell them by the way they attempt to sit down. Their bodies then have a stiffness that is hardly in keeping with the manner in which they carry the head and arms, and of course they are immediately suspected of having goods concealed somewhere about their skirts. There are many curious places of concealment, and it can hardly be improbable that many thousand dollars' worth of dutiable goods are brought through by smart tricks. For instance, diamonds and other precious jewels have been brought over fastened in the front and in the plumes of the bonnet. They are generally wrapped in black cotton and securely fastened in such a manner that it would be necessary to take the hat apart to find them. The heel of the shoe is another queer but secure place where jewels have been carried. The heel is false, having a hollow place in the center, where, packed in cotton, the gems rest safely.

Sometimes a woman is found with lace wrapped around her form. Yard after yard of it is thus securely carried until the eye of the inspectress looks with suspicion upon the peculiar shape of the wearer and she examines her. In the bustles have been found toilet bags filled with all sorts of odds and ends, such as silks, gloves, hat frames, yards or rather hundreds of yards of ribbon, stockings and everything dear to the eye of the female. To a lean woman the curvatures in their corsets offer a snug resting place for quite a number of dutiable goods that can be carried safer there than almost anywhere else. One woman was found with lace curtains pinned under her dress, taking the place of her usual underskirts. Silk has been found worn in the same manner, and ribbon has been wound around the legs and body until yard upon yard was concealed. When a discovery is made the woman smuggler of course attempts a bribe, but the amount is absurd, always very much smaller than a man would for a minute think of offering. A woman will offer the inspectress $1 and consider it a big amount. Ten dollars would break them all up. A man's bribe is hardly ever less than $10, and frequently as high as $50. The women inspectors will accept no such favors, however. When a woman is suspected the inspectress informs the suspect of the necessity of undergoing inspection, and she is requested to go to her stateroom. Then she is ordered to remove her outer garments, then the bustle, and, if the inspectress considers it necessary to go further, she removes the remainder of her clothing.

It is said that a good deal of solid information regarding smugglers is furnished by many dressmakers. During the season these dressmakers send their forewomen abroad to purchase goods. They keep their eyes open, know all the women who go abroad to buy goods in the hope of evading duty on them, and send the information straight to New York. Another source of information is the stewards and stewardesses on the big steamship lines. They receive a percentage on all goods seized, and they will most remorselessly disclose the names of passengers who are smugglers. They almost always know.—New York Star.

Limits to His Ambition.

Bobby was ill. "Mamma," he asked wearily one day, "will I get well again?"

"Yes, darling," replied the mother; "you will soon be well again and grow up to be a big man."

Silence of one minute. "Mamma," he asked earnestly, "will I be a big man like Uncle Dick?"

"Yes, my dear."

"Then I guess," he continued thoughtfully, "I'd rather die."—Binghamton Republican.

All Got Their Share.

"Sin, my dear pupils," said Deacon Barnes to his Sunday school class, "is the legacy of Adam."

And the bright boy in the class remarked that that was probably the first case on record where a will was not broken.

"Yes," said the deacon, "but it should be remembered that there was enough to go round. I don't remember hearing of anybody who didn't receive his share of the inheritance."—Boston Transcript.

The Critic's True Function.

Your individual self perfection is the most laudable thing in the world to strive for, but as the nucleus of a gospel it is insipid. Frequent the busy haunts of men who occupy themselves with kindred pursuits—not literally, of necessity, but sympathetically and in imagination. It is in union that there is strength. Remark tendencies, try to sum them up, to point out their significance and direction. Few men can be Ruskins—et encore!

And do not imagine that you can permanently attach and benefit your kind by the mere force of correct, gentle and chaste diction on the one hand, or of setting an example of repose and serenity on the other, because nowadays warfare of any kind—even literary criticism—is accustomed to weapons of more robustness and reality, and in this sphere preaching by specific precept is far more efficient than preaching by general example. And the most important of all things is to be in harmony with one's time and environment. Be sure, O critic! there is something magical in this, however it may transcend consciousness. See, for instance, how much finer is Mr. Woodberry's essay on Browning—a piece of real criticism—than are his lucubrations about "the ideal life."—Scribner's.

ATHLETES OF THE PRESENT DAY.

J. E. Sullivan, Secretary of the Amateur Athletic Union, President of the Pastime Athletic Club, and Athletic Editor of *The Sporting Times*, writes:

"For years I have been actively connected with athletic sports. During my active participation in field sports I always found it to my advantage to use ALLCOCK'S POROUS PLASTERS while in training, as they quickly remove soreness and stiffness; and when attacked with any kind of pains, the result of slight colds, I always used ALLCOCK'S with beneficial results. I have noticed that most athletes of the present day use nothing else but ALLCOCK'S PLASTERS."

To earn a vacation, for years at his desk
And his books day by day had he toiled like a Turk;
He got it at last, but he got it too late,
For he died of an aching to get back to work.

For Throat Diseases, Coughs, Colds, etc., effective relief is found in the use of "*Brown's Bronchial Troches.*" Sold only in boxes. 25 cts.

There would be a better prospect of the farmers beating the old parties if they were not too busy "threshing" their wheat.

The Electric Alarm Clock will ring until you get up and stop it. People who over-sleep should have one. For particulars address Imperial Jewelry Co., 26 O'Farrell St., San Francisco.

"August Flower"

Mr. Lorenzo F. Sleeper is very well known to the citizens of Appleton, Me., and neighborhood. He says: "Eight years ago I was taken "sick, and suffered as no one but a "dyspeptic can. I then began taking August Flower. At that time "I was a great sufferer. Every "thing I ate distressed me so that I "had to throw it up. Then in a "few moments that horrid distress "would come on and I would have "to eat and suffer "again. I took a "little of your medicine, and felt much "better, and after "taking a little more "August Flower my "Dyspepsia disappeared, and since that time I "have never had the first sign of it. "I can eat anything without the "least fear of distress. I wish all "that are afflicted with that terrible "disease or the troubles caused by "it would try August Flower, as I "am satisfied there is no medicine "equal to it."

For that Horrid Stomach Feeling.

DON'T.

Don't cheat yourself out of a good smoke by taking a poor imitation for the genuine Seal of North Carolina Plug Cut Tobacco.

HAY FEVER & ASTHMA CURED TO STAY CURED. We want the name and address of every sufferer in the U. S. and Canada. Address P. Harold Hayes, M.D., Buffalo, N.Y.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 a box. J. J. Mack & Co., Wholesale Agents, San Francisco.

People never get the big head because they know too much.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON, *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

Quite a Fellow.—"What is the cause of Dumley's sudden popularity at the club?" "Sh! Don't let it go any further. He was caught cheating at cards."

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

Dr. Price's Cream Baking Powder.

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes— 40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

I prescribe it and feel safe in recommending it to all sufferers.

A. J. STONER, M. D., DECATUR, ILL.

Sold by Druggists. PRICE $1.00.

PISO'S CURE FOR CONSUMPTION 25 CTS. 25 CTS.

Best Cough Medicine. Recommended by Physicians. Cures where all else fails. Pleasant and agreeable to the taste. Children take it without objection. By druggists.

ALWAYS READY, AND A BOY CAN START IT AT ONCE.

The HERCULES Gas or Gasoline ENGINE

For Power and Pumping Purposes.

Makes No Smell or Dirt.

NO CARBURATOR TO GET OUT OF ORDER.
BATTERIES OR ELECTRIC SPARK TO CARE FOR.
DOUBLE OR FALSE EXPLOSIONS, WHICH ARE FREQUENT WITH THE UNRELIABLE SPARK.

Just light the burner, turn the wheel, and it runs all day.

It oils itself from an oil reservoir.

It runs with a CHEAPER grade of GASOLINE than any other engine, and consequently it costs less to run it.

FOR SIMPLICITY IT BEATS THE WORLD. It has fewer parts, and is therefore less likely to get out of order than any other gas or gasoline engine now built.

We are now making from 1-Horse Power to 10-Horse Power.

Prices and Terms upon Application.

Manufactured by PALMER & REY, San Francisco, Cal., and Portland, Or.

"The best is aye the cheapest."

Avoid imitations of and substitutes for SAPOLIO—It is a solid cake of scouring soap. Try it in your next house-cleaning.

REAL ECONOMY.

It is worse than nonsense to buy a cheap article with which to damage more valuable property. Scouring soap is at best only a trifling expense, but with a poor and cheap article it is likely to do considerable damage to fine marble or other property.

CUMBERLAND COAL. H & B BRAND.

From Maryland. Highly recommended by Carriage-Makers, Blacksmiths and Horse-Shoers.

Sole agents for "DUCKENFIELD" SYDNEY, from Newcastle, Australia; the greatest gas and steam producing coal ever brought to the Coast. "PLEASANT VALLEY" and "CASTLE GATE" from Utah; the best of Rocky Mountain coals; superior to all other coals for domestic use. "NEW SEATTLE" from Seattle, Washington; a popular domestic and steam coal.

HUSBAND & BROOKS, Main office, 14 and 16 SPEAR ST., San Francisco, Cal. YARDS: Main and Folsom, 14 and 16 Spear St., 132 and 134 Spear St.

SEEN IN THE CITY PARKS.

They are the Parlors of the Poor.

SOME OF POVERTY'S SAD PICTURES.

What a Millionaire Saw While Taking a Stroll.

WARM WEATHER, park strolls, and nocturnal sparking go hand in hand. Take a walk out to the park any nice evening and note what is to be seen. Here is a pair of lovers strolling 'neath the outstretched arms of the green maples, which form an impenetrable archway, defying the soft, mellow light of fair Luna. They are happy, so happy. Telling their tales of love for each other, they slowly wander on as if hypnotized by the magnetic influences of Cupid. They are dreaming of the day that has been named already, when their filial affection will have its consummation.

Look over at that seat, near a cluster of branches. Another couple sits there. They, too, are dreaming of happier days to come. The young man is Billy Dillon, one of the brightest young men at the foundry. He gets $1.50 a day, but in a year or so will be getting $3.00 a day. Then he will tell the girl by his side that he will get a license the next day. Who is she, did anybody ask? That is Nanette, the sweet-faced girl who came from Canada a year ago. She is working in the kitchen of Mr. Cotton, the local millionaire. Her folks were poor, so she left home that she might earn some money for their support. She secured a place at Mr. Cotton's the day following her arrival in the city. A few days later Mr. Cotton sent down to the foundry for a man to do some repairing and Billy Dillon was sent. That is how it all happened, and who will grudge this

young couple the seclusion afforded by their remote place of courtship? Not I, at any rate for I quickly move on, but only to see another and still another couple.

Over there are a pair engaged in a quarrel. It is only an affair of love, however, and is quickly drowned in the river of affection.

I pass on down the pathway and into the moonlight. Then I wonder if these happy lovers realize the obstacles that this world throws in their pathway. Do they know that they are merely slaves after all? No, they cannot see this. The light of pure love in its brilliancy shuts out the darkness that is gradually thickening over the producers of wealth. The producers of happiness, too, but, alas; happiness—not for them. I look into their lives, then into mine. Had I to work in a foundry ten hours a day like Billy Dillon, I would not be the rich man that I am to-day. No, I never worked a day in my life, neither am I burglar—not in a technical sense at any rate. Society will not look upon me as a burglar. I have merely accumulated my millions by sitting idly by and planning to get the lion's share of that which thousands like Billy Dillon produce. I allow them enough to feed their stomachs—if they are not too extravagant—and they can buy clothes too. I keep the balance.

And you are not a burglar? a voice asks. It seems to come from heaven. My flesh begins to burn with a foreign fire. Am I a burglar? The very idea. But no, I cannot drive it out of my mind. I imagine I see a masked ruffian enter my house through a window. He is desperate. I send a bullet crashing through his brain. An inquest is held and he turns out to be Jimmy Donnelly whom I knew when a boy. His father used to work for my father and Jimmy might have been a good boy and a good man. But they didn't have enough to send him to school, so he got running with the gang and now he's dead; I've killed him. Am I a burglar? God pity me.

The park policeman rudely awakens me from the dream which seemed so real. I am so glad that I didn't kill Jimmy Donnelly who attempted to forcibly take back all the money I have stolen from him. I am going to write the Board of Pardons to let him out on parole that I may show him the way to be an honest man.

I turn again to the park. The poor are still telling their tales of love in their parlor. The sons and daughters of the poor have no parlors but the park. They are cooped up in tenements and over stores where it is hot and dirty and without fresh air. They have no yards where hammocks swing, and no archways of green branches. Their houses are only to eat and sleep in. They must do the rest under heaven's blue canopy.

To the park they saunter at eventide. Soon every seat is occupied. Each man's arm is about the waist of the girl he is with and his head is resting on her shoulder. At every few steps you take an arm is seen to tighten, and then a sound as if the chirp of a bird—only not that—is heard.

The park policeman is not like other policemen. The aroma of simplicity that pervades in the park has taken possession. He is the friend of lovers. He wouldn't disturb the occupants of one of those benches for the world. If he is not rich he is contented that he is not a tyrant. Often at eventide he too is seen to sit down on one of these rustic benches, a woman by his side. Are they too thinking of the future? No, not they; but of the past, the long ago, when, on the Emerald shores of Erin, down by the

rippling river which winds through Phoenix Park, they too whispered words of love. Katheryn is not as pretty as she once was. No, not by far. She wears a careworn expression. Then she asks her husband if he has had any word from them boy—the boy whom the policeman's salary would not suffice to send to school. A few days before, in another State, the loved boy was convicted of a crime and sentenced to five years. And now the tract societies are trying to convert him, and, in their own way of doing good, say to each other, "What bad parents he must have had."

I have often read in the papers gossipy and foolish articles about scenes in the park, and perhaps that is why I went there. But I must confess I saw nothing to lift the burden that is ever weighing down. ANON.

THE "SOLITARY MAN".

The Secluded Life of the Sovereign of One-Third of the Human Race.

Here is a picture of the "Son of Heaven," the "Solitary Man," known to the outside barbarians as the Emperor of China, as he appeared years ago when a little child. The Emperor is never seen by barbarian eyes although it is said that he has a very persistent and intelligent interest concerning the ways of foreigners. He lives in the Kin Ching or Prohibited City, which is situated right in the center of the Tartar City of Pekin. This inner city is sacred ground and it is death for any foreigner to set foot on it. A newspaper man a few years ago tried to penetrate to the sacred precincts and nearly lost his life. The attendants are above bribes, faithful in all things to their duty. Very little, in fact nothing is known of the Emperor's personality. He is enveloped in mystery and hedged about with divinity. He eats alone and only of eight sacred dishes. Divine honors are paid him by his family and courtiers. When they enter his presence they fall prostrate, strike their head repeatedly upon the floor and crawl to the foot of the throne on their bellies. This ceremony is called Ko-Taou. No man may ever touch him or see him without permission and the permission is only given to his most intimate associates in his family and government. The Emperor's aunt, who acted as regent during his minority, is a woman of great force of character and did not yield her authority willingly. As it is she gives the Emperor a great deal of trouble. She

PRINCE CHUM AND HIS TWO SONS.

[The child on the Prince's left is the present Emperor of China at the age of 3.]

forced the Emperor into a disagreeable marriage with a Chinese blue-stocking and to console himself he has since fully stocked his seraglio. Legally he may have seven of these plural wives, but in fact he has as many as he wants.

AN AMPHIBIAN BOY.

His Hands and Feet Are Webbed. But His Tongue is Tied.

Jackson, Miss., is to the fore in way of curiosities with a web-footed and handed boy, who spends the greater part of his life in the water. He is the son of a negro day laborer, John Peterson by name, employed on Cant & Battle's plantation. The boy is now nearly 15 years old and is considered half-witted, as he has not been known to speak intelligently for years, though expressing his few wants well enough by the means of signs. He is undersized, though unusually strong and agile. He lives entirely on fish, which he catches in some unknown way, employing neither line nor net.

The membrane between his toes and fingers is exactly like that of a duck's, only much broader, but with the exception of this peculiarity and some property of the skin which prevents its wrinkling by long immersion in the water, he exhibits no physical deformity, and enjoys the best of health. He haunts a small turn in the Pearl, where, sheltered by the rushes and flags, he will lie for hours completely submerged, save for the extreme tip of his nose and his eyes. His movement in the water is a sort of paddling rather than swimming, but exceedingly rapid. Summer and winter appear to be all the same to him, as he has been known to disport himself in the river for hours when ice was thick. His mother declares that she knows of no cause for the boy's singular nature.

THE ETERNAL CITY.

The Growing Disrespect for the Sabbath.

THE PRIESTHOOD AND THE MILITARY.

The Effect of Modern Ideas in Ancient Rome.

Rome is unquestionably the high school of art, but in its everyday aspect it is a disappointment. The city has lost its individuality. Government employes pave the streets on Sunday, and men saw wood in public on the same day. Everything is done left handed, literally or figuratively. Cabmen run their vehicles at a furious rate with a stumpy horse and withering curses, always managing to keep to the left; the knobs of doors turn in that direction, and men who cut timber for fire purposes put their left foot on one rim of a wood saw with the blade in a perpendicular position, and run the stick over the teeth.

Business is ablast on Sundays. Boys begin early in the morning to scream their disinterestedness in the wealth of this world by announcing the low prices they ask for big onions they carry with them on a long string; greasy looking men, with fish on platters, cry out the excellence of their stock, while others, with huge bunches of celery balanced on their head, desecrate the festival with their noise and grimaces. The shopkeepers pull down their shutters and hang on the outside wall specimen articles. The butcher will in this way display sides of meat and the shoemaker ropes of boots. A tailor, tape measure in hand, is at his door ready to execute an order for a suit of clothes. The sight of thousands, prayer book in hand, en route to the churches, has no effect on those who violate the day. Once a rarity indeed, now to be seen frequently on Sundays, intoxicated men go along the streets staggering or singing aloud from hired carriages. Others, with their backs to walls, where sunshine will keep them aglow, lounge for hours, relieving the time by quaffs from their long necked bottles, held on a finger by a loop of braided straw.

MODERN NOTIONS.

A vast change toward modern notions has arrived. A street railway skirts the Coliseum, and omnibuses chase one another into the famous precincts of the city. The site of a grand palace, reared in 1886, is now a beer garden, with the beverage at three cents a glass, and the walls of the building altered to suit the purposes of the business conducted therein. Public life has lost much of the traditional picturesqueness and romantic appearance. To be sure, the brown hooded, long bearded Benedictine monks, the barefooted Capuchins, with their hair cut into a topknot, the white robed priests of the Red Cross, the Christian brothers, in their black gowns and immaculate collars, clergy in knee breeches, black stockings and silver buckled shoes, and students in flowing robes and wide brimmed, low crowned felt hats, are met at every turn; but they are dwarfed in number and novelty by the uniforms of the military, for Rome is policed by 15,000 troops, in all the glory of infantry, engineer, riflemen, cavalry, field artillery, grenadier and gendarmes dress. They line the streets and fill the houses. To their uses, as well as those of the civil authorities, the oldest of buildings are being appropriated. Eligible locations for private or governmental uses are selected, without regard to the antiquity of the surroundings, and structures of the living era erected. Here and there on street corners strapping young fellows in blue jackets, breeches of the same color, red vests and blue stockings, with their feet in huge hobnailed shoes or sandals, and swathed at the ankles, loiter in the company of graybeards, in rags hidden beneath a cloak that reaches to the ground, who pose with artistic effect on an umbrella of blue stuff.

American and English are such numerous visitors that the influence of their customs, manners and habits is crowding the typical resident out of existence. They have now their doctors, their dentists, patent medicines and tailors, and one sees the announcement in all quarters that English is spoken. The peasant who comes to town with his team of three horses, resplendent in flaming trappings, plumes and tinkling bells, and driven tandem to his cart, has to pull to one side to allow stylish broughams, coupes and family carriages, with prancing animals and clean shaven coachmen and footmen with the asparagus bunch looking tuft on one side of their shining high hats, to pass.

THE ROMAN COWBOY.

In this day the Roman cowboy is looked upon curiously enough by even those who speak his own tongue when he comes to the city for the holidays. A veritable "bull pusher" he is indeed, with his short stick and its iron point in hand to goad the cattle. The sombrero of his North American contemporary differs only in color from his black felt hat, while the accouterments of leather leggings and spurs are alike.

Deserted, save with occasional exceptions, is the public square around whose massive steps Neapolitan girls of rare beauty and bright hued dress were wont to congregate to hire their charms for the artist's guidance in his work. A few are still left, and a striking comparison they make with their sisters in bonnets, sealskin sacques, velvet jackets and silk dresses. No bustle or padding serves to fill out their highly colored dresses, nor bangs to set off the classic arrangement of their hair, parted in the center and falling in even proportions on each side of the head. Tapering from shoulders to the hips, their waists are symbols of healthful ease and good twenty-four inches in circumference. No corsets mar the outlines of the graceful figures. Their swan-like necks are bare almost to the shoulder blade. Theirs are the "eyes black as sloes and hair the color of the raven's wing." In one particular only do they resemble the Roman girls in modern dress; they love high heels on their shapely low cut shoes, and oftentimes have them four inches in length. Women in Rome have a passion in this direction, for thereby the foot is arched, its size curtailed to the eye and the instep gracefully turned.

The glory of Rome has well nigh departed; the tag end of its once every day self is alone determinedly preserved in its bad cigars and leathery bread made without yeast. The former burn as if composed of brown paper wrapper and pine shavings for fillings. For the latter, the sarcasm of Hawthorne that the most lasting monument of the memory of the bakers of Rome would be a pile of their own loaves is as applicable now as it was in his day.—Rome Cor. Baltimore Sun.

In Mr. Gladstone's Study.

Mr. Gladstone's study at Hawarden castle holds 15,000 volumes, which are ranged on shelves jutting out into the room. There is not a book that Mr. Gladstone cannot lay his hand upon the moment he wants it. There are three writing desks in this room, one of which is for the exclusive use of Mrs. Gladstone. The ex-premier breakfasts at 7 and dines at 8, breaking his fast by a light luncheon at 2 o'clock.—Harper's Bazar.

VIVACIOUS AND WINNING.

Jennie Satterlee the Charming Comedienne of Canada.

The accompanying portrait is a fair likeness of Jennie Satterlee, vivacious actress inimitable impersonator of bravado comedy roles in American plays. She has been on the stage for

the past three years and came from an aristocratic family of Toronto, Canada. She is soon to star in a play said to be already written.

An Athlete's Misfortunes.

Pete Skillman, the New York amateur runner, who has been on the Pacific coast for several years, has been playing in very hard luck of late. He recently had occasion to take trip "up country," during which time he fell into the hands of the Philistines, who relieved him of his watch and other articles of jewelry, besides making away with some of the trophies which bore witness to his fleetness of foot. Upon returning to 'Frisco, he found that during his absence members of the fraternity of burglars had invaded the apartments of a friend with whom he had left a number of his medals, the same being carried off bodily. So, if unfortunate Peter desires to have anything in the way of trophies to show in support of his claim to athletic ability, he will have to hustle on the path again.

Handy With the Clubs.

Homer W. Crawford was born in Columbiana county, Ohio, June 16, 1868, of Scotch-Irish parents. Public attention was first attracted toward him by some remarkably long tours he made on a bicycle, developing the fact that his powers of endurance were beyond the ordinary limit. He contested in a ten mile race at Salem, Ohio, Oct. 19, 1889, for a purse of $50, his competitor being W. B. Faucett, who, mounted on an ordinary, won in thirty-seven minutes. Crawford was handicapped by riding a safety. In the fall of the same year he turned his attention to Indian club swinging, and on April 3, 1890, in G. A. R. Hall, at New Lisbon, he broke the world's record by swinging for six hours and thirty-one minutes clubs weighing eight pounds and ten pounds each. On March 12, 1891, he regained the premier position (which had been wrested from him by Brown of Maine). On this occasion he eclipsed all former performances in this line by swinging ten pound clubs continuously for seven hours. He stands 5 feet 8 inches in height, and in condition weighs 149 pounds. He has local fame as a dumb-bell lifter and takes a deep interest in

athletic games and sports. At the close of the great feat referred to, he appeared fresh and strong, and was apparently able to have prolonged the performance for a considerable period had there existed any necessity for so doing.

Sporting Notes.

Cincinnati has released Rhines.

Lefty Marr is wanted by the Cincinnati association team.

It will be three weeks before Bug Holliday will be able to play ball.

Cincinnati, of the American association, has released "Yank" Robinson.

John J. O'Brien, second baseman of the Portland, Oregon, club, has been signed by Brooklyn. He will succeed Collins.

Joseph A. Locke wishes to swim any one-legged or one-armed man in the United States for $200 a side, barring none.

E. G. Norris, of Athens, Ohio, who stands 6 feet 4 inches in his stocking feet and is said to have wonderful speed and fine command of the ball, will be given a trial in the box by Cleveland.

Marty Bergen is the champion jockey of America and the public favorite. In all parts of the country, every time Bergen rides, his mounts are backed, because the jockey always tries to win. Starter Caldwell has for over a year, it is alleged, persecuted Bergen by suspending him on alleged charges, and the jockey could get no satisfaction. After the board of control was appointed it was supposed that Bergen would receive fair play, but he did not. On June 24 he was suspended for the balance of the Coney Island Jockey club meeting.

FREAKS OF SMUGGLING.

Articles Sent by Mail From the Other Side.

HOW AN EXPENSIVE BOOK WAS RUINED.

Women Find it Difficult to Resist the Temptation to Smuggle.

Women are especially susceptible to the enticements of smuggling. It has been said that no woman can resist the temptation to make an effort to carry goods subject to duty past a custom house officer, and it is a statement made by certain officials in the customs service that if every passenger on board incoming ocean steamers were thoroughly and completely searched as he might be, it is probable that not one out of fifty would be found to have resisted the allurements of just a trifling bit of smuggling to add romance to the home coming. Oftentimes such carrying in of dutiable goods is merely inadvertence, lack of knowledge or oversight.

Presents bought for the "dear ones at home" have been overlooked when an estimate was made of the dutiable goods and were only recalled to memory when found by the customs officer. Many a name high in society and well known in religious, financial or professional circles has been upon the books of the special treasury agent's office, but it is a fact worthy of note, and which reflects much credit upon the department, that such matters are kept as secret as any portion of the work.

"There is no necessity," said a man who had made smuggling the study of his life, and who is employed by the custom house, "for dragging these legal and governmental skeletons-in-the-closet into the light of day. Oftentimes it is a sad fact that they have occurred, and for our own satisfaction (for we are, withal, at times, men of some sensibilities) we prefer to let them drop and remain unmentioned. Then, again, there may be certain arguments used of a more or less persuasive value which would naturally induce the inspector to give as little publicity as possible to the details of the case.

"I do not mean by this to imply that the practice of bribery is in vogue to any extent. This fact may not be due to original lack of sin, but it is true, nevertheless, although honesty is enforced to a certain degree by the remembrance of the previous good record of the special treasury agent's department."

Perhaps the most novel and popular form of amusement for the smuggler nowadays is to use Uncle Sam's post bags for his exciting trade. A number of books have lately been entered at the postoffice, sent from foreign countries, which were not altogether intended for reading purposes. Several months ago there was received at the New York postoffice a handsomely bound volume of Italian poetry. The book was printed on a high grade of paper and bore the date "Padua, 1733." Its title was "Le Tregedie Di Giovanni Delfino." It was probably supposed that the postoffice authorities would "pass" the book on looking at its title on its examination. Unfortunately in this, as in all cases where books are in the mail, the volume was opened and carefully examined.

A section of the center of 200 leaves was cut out, through the book, and in the cavity thus formed was placed a green table spread, with cotton embroidery, upon which an extreme valuation of three dollars could barely be placed. Buyers of antique books who have examined the volume, which is now in the customs seizure room, say that had it not been mutilated it would have readily been worth $100. It was addressed to Judge William Allen, of Southampton, Mass., but Judge Allen has never read it.

Lately this volume has been followed by a volume of the "Report of the British National Fisheries Exposition," which was not all a report, for quite a collection of jewelry was placed in a neatly scooped out orifice in the center of its leaves. Extremes met when a Latin dictionary was put in use as a carton for transporting a pipe, and the "Odd Fellows' Quarterly Magazine" did duty as a packing case for two razors. A novel called "The Great Tontine" held two diminutive and very prettily decorated Chinese vases, but the height of incongruities was reached when the "Sermons of Bishop Rrookfield, of London," drifted into the New York postoffice artfully surrounding several sets of false teeth.

It is not generally known that no merchandise other than books can be shipped through the mails from foreign countries. Cigars, cutlery and chinaware, jewelry and fabrics of cotton and silk are often started on their long journey, with notations accompanying them stating that they are samples or gifts, but these casual remarks never save the goods. They find their way to the United States custom house seizure room, and there remain until the yearly auction.

Steerage passengers of the kind who seek the services of philanthropical people on landing are no freer from the taint of smuggling than their more aristocratic brethren above deck. One of the customs inspectors saw an Italian of mean dress and poor appearance who wore on the little finger of his left hand a diamond ring which glittered in the rays of the sun shining over Miss Liberty's left shoulder as the vessel was coming up the bay. He thought the occurrence unusual and investigated. Two thousand dollars' worth of jewelry was taken from the immigrant's person. He had fallen a victim to his own vanity. He was unable to resist the delights of making a display before his fellow passengers.—New York World.

"One word more," said a speaker, "and I am done." And the reporters found when that word was written down that it contained 1,500 syllables. The famous word of Aristophanes was outdone. The same fellow is the speaker who often says, "A single remark," and then talks for fifteen minutes.

A Horse's Deliberate Revenge.

"I will just tell you a story," said Mr. Foster L. Backus, "about the memory and reasoning power possessed by a horse on my father's farm. This horse was in the habit of making journeys about the neighborhood in charge of a certain groom, who was coarse, ignorant, low and cruel. The horse had been brought up on our farm and was very good tempered and gentle, but the groom's roughness and foudness for laying on the whip confused him so much that he was not prompt in obeying orders sometimes. Then the groom beat and bullied him. The horse never showed the slightest sign of resentment till one day the groom approached him in the pasture field. The horse was free for the first time in the presence of his enemy and he charged the groom. A short halter was around his neck, and the groom seized this and hung on. The horse tried to strike him with his forefeet; tried to bite and kick him. The man dodged and shouted for aid.

"The fight was desperate and very exciting. The horse fairly roared with rage. The groom was nearly fagged out, and in another five minutes would have been knocked down and trampled to death, when my father came on the scene. He seized the halter and told the groom to run. As soon as he was gone the horse subsided and was as docile as ever. Now, I am satisfied that the horse deliberately planned to kill that groom at the first favorable opportunity. See how carefully he chose the time and place of the assault. A lonely pasture field where he had his enemy all to himself. He had never shown the faintest sign of viciousness before. The groom kept away from him after that, and the horse never afterward was known to exhibit rage. If he had killed the groom it would have been murder in the first degree, for the element of deliberation was there. Yes, sir; horses have reason, and they have memory also."—Brooklyn Eagle.

American Medical Students Abroad.

In regard to the medical education of American physicians compared with those of Europe, I have been struck forcibly by the fact that our students seem to be more practical and better able to grasp and develop ideas than those of European countries. Especially in the operative courses, in Vienna, I have noticed that the American students performed their work more neatly and thoroughly and with greater dispatch than the comparatively slow going Continental members of the class, and that while those from this country had possibly had but a three years' course of study before graduation, yet they were more than the equals of the German students of six years' standing. I think this difference is due to the more practical and thorough methods of teaching in vogue in this country, and I believe it to be but a question of time when, instead of us going to Europe, the continental physicians will be anxious to avail themselves of the facilities offered in the United States.

The present superiority of foreign over American medical institutions lies in the fact that all their expenses are sustained by the government, but if there was a tendency on the part of the wealthy to endow our schools, whatever doubt there may be as to comparative merit would soon be set at rest. Regarding surgery, one of Von Bergmann's assistants, a man known throughout the world by his connection with the case of the crown prince, has told me, in the course of conversation, that he considered the American surgeon ahead of the world in ingenuity, practical ability and in operative technique.—Dr. A. V. L. Brokaw in Globe-Democrat.

A Romantic Little Story.

A curious instance, which we think has never before been published, of the admiration which an ardent and imaginative reader may feel for his favorite author, is illustrated in the case of a young man residing in Florida, who had long been an enthusiastic admirer of "Kathleen Mavourneen." On learning that the author was alive and in poverty he visited Baltimore, and found in the appearance and conversation of the old professor all that his fancy had pictured. As he was possessed of some means, and had no ties or living relatives—having lost father and brothers in the rebellion—he remained some time in Baltimore, and finally prevailed upon Professor Crouch to adopt him as his son. By an act of the legislature of Maryland his name was changed to that of Crouch, and the pecuniary assistance which he has since rendered has done much to brighten the declining years of the old composer. The action of this young man forms the latest incident in the strangely romantic history of the author of "Kathleen Mavourneen."—Charles F. Adams in Detroit Free Press.

Skill of Irish Boat Women.

The women of these coasts and islands are as skillful as the men in handling the oar and rudder. They know every sunken rock and dangerous current of the intricate channels between the great island of Aran and the mainland, and take the boats in and out in all weathers. For many years a Grace Darling of this western coast, the daughter of a pilot who lived on Eights Island, went out in storm and darkness with her old father, never trusting him alone, as she knew his weakness for the whisky. This brave girl never flinched from facing the wildest gales, fearing that disaster might befall her father, and the vessels it was his business to guide to a safe anchorage, if she were not at the helm. Many a ship's crew beating about between Aran and Owey owed its preservation to Nellie Boyle. Two sisters have taken the post boat into Aran for many years past, their father, John Nancy, being now old and infirm.—Woman's World.

Uses for Oxygenized Water.

A German authority recommends hydrogen peroxide for a variety of domestic purposes. Being inodorous and non-poisonous, it is a desirable substitute for chloride of lime and oxalic acid for bleaching and removing stains of every description. It whitens yellowed fabrics and articles of bone or ivory. It is the best application for cleansing and binding wounds and sores; and has a most beneficial effect in diphtheria, croup, whooping cough, etc. Bleeding is stopped by its use. A weak solution will remove disagreeable tastes and smells from the mouth, or purify the atmosphere of a sick room when sprayed into it. Pots, pans and wooden vessels may be freed from foul odors by peroxide of hydrogen, and it will sweeten and preserve butter and keep fresh meat for a long time.—Arkansaw Traveler.

When Turning the Leaves.

It is stated upon medical authority that readers should refrain from damping their fingers in turning over the leaves of library books, as this is a sure way to attract any stray bacilli that may be lurking around.—Chicago Herald.

AFTER 12 O'CLOCK.

Grewsomeness of the Voices of the Night.

SCENES IN THE STREETS OF A GREAT CITY

The First Faint Indications of the Early Morning.

Night in a great city is an impressive and awesome time, filled with strange and, to the uninitiated, unintelligible sounds, strange sights and strange deeds. There is a peculiar, indescribable sense of something mysterious in the air; the atmosphere rests in folds upon the city, and is heavy and almost palpable to the touch; the sounds are acoustic etchings, the sharp outlines blurred and dimmed, but the meaning and expression impressively clear, distinct and mellow. Values and perspectives are either entirely lost or grotesquely distorted. Soft airs, unnatural and gruesomely cool, steal in their currents round the corners, with a suggestion of damp vaults or still, black waters in their breath.

BAYING THE MOON.

It is still. The silence is heavy and oppressive, yet seems unnatural. All sorts of grotesque thoughts obtrude themselves in disconnected and senseless confusion. A quick footfall startles the ear and echoes sharply back from the tall brick walls. You watch intently till a form is vaguely outlined in the black shadow of the opposite wall, and feel intensely disappointed because the eye fails to make it out distinctly, and the imagination immediately busies itself in framing all kinds of suppositions regarding him, which are suddenly broken off by the sharp barking of a dog. The barking continues. The animal is baying the moon because—because he is a dog and has to. But why did Providence implant such an absurd, useless and totally irrelevant necessity in a dog's economy? This question begins to assume an overwhelming and vital importance, when it is driven from the mind by a sharp rattle far off up the street. What is that? The vehicle approaches, a curiosity is keenly alert. It approaches rapidly, and passes with a din that irritates every nerve in the body. It is only a light carriage, containing a tired man, who is hastening home to bed. Gradually the sounds die away, but a moment later the silence is again desecrated by heavy voices in maudlin dispute. A party of roisterers are leaving a saloon. They stop on the corner and engage in a long, aimless and heated discussion over the most trivial subject, but finally break up, with shouts and protestations of mutual regard, and the last car rolls slowly up the street with two or three passengers whose slumbers are rudely broken by their noisy entrance. A cool breeze steals up from the river, and a light, scarcely visible opaline mist floats over the streets like a vail. Strange, half articulate sounds issue from the bosom of the night that mysteriously whisper of wierd deeds, yet leave the story half untold and stir the imagination to wild flights.

Far down the river the deep, full notes of a steamer's whistle rise in mellow cadence that rolls slowly along the sodden air. Up a neighboring street an owl car bell faintly jingles, and a moment later the clocks in neighboring church towers deliberately strike the wee, sma' hour. Again there is the sound of hurrying wheels far down the street, and soon the faint strokes of a gong are heard. Ah! a fire. The sound increases, and then swells louder with a sudden burst and there is a flash of light and a long train of bright sparks trail out a moment on the air, and the engine has passed. There is no second sound and the noise dies away. It is growing very late and the silence becomes deeper. The moon rides high and her polished beams play strange tricks with familiar objects.

BLIND, CHILDISH TERROR.

Suddenly a startling impression—it is nothing more—one of those strange, impalpable, noiseless voices of the night—chills the blood. A cool breeze springs up, and dies away again. Ah! what was that? There is a shudder in the air, and the silence is intense. What is it? Every nerve is strained to highest tension. The breath is stopped. Objects before distinct and unimpressive take on weird and threatening shape. What is that strange, ill-defined shape to the right? Surely it was not there before. See! It moved! No—yes—ah, then it moved! It is approaching—no, it recedes. Again that awful impression of something. A grizzly phantom seems clutching at one's back. The flesh creeps. A scream rises to the lips, but dies unuttered. There is a wild desire to flee, but the body is chained to the spot. The eye glances warily around, but not a muscle moves. On would give years to turn suddenly around and confront the nameless specter standing there, but could not do it, were a life at stake. Reason is summoned to the rescue, but for a time it cannot combat the blind, childish terror that has seized the soul; but the effort is a healthy one and the struggle to exert the faculties and control the mind abstract the thoughts from the exciting cause, and gradually the causeless fright gives way to nervousness and surrounding objects assume their normal shapes.

A policeman turns the corner and paces past with measured tread, and he is gladly hailed. The presence of the law's minion brings instant assurance and calmness, and, with a long breath, one enters into a weather wise conversation and accompanies the officer on his beat. In a little while a faint, gray line makes visible the eastern horizon. A butcher's cart rattles down the street with the sleepy driver catching naps between crossings. The breeze freshens. Another wagon follows the first. Then the first down town car appears. A red eyed man comes to the door of a saloon and gives the policeman a tired salutation. Confused and jumbled sounds fill the air. Vehicles of all kinds are becoming more numerous, and several hacks leave their stand for an early trip to the depots. A window on the opposite side of the street is thrown up with a bang, and a man with a frowsy head leans out and looks up at the sky and down the street. A dog barks excitedly, and a tugboat emits a deep throated howl. The light increases, and it is morning.—St. Louis Republic.

About seventy-five women and girls are busily employed in the cannery at Eugene, Oregon, this season.

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 18 .....1891.

The Marquis of Lorne gives it as his opinion that the Argentine Republic is "destined sooner or later to become European by means of a protectorate." His idea is that it should become a German colony at once. There is one great, big objection to that project It has bothered European potentates before, and can be very much alive if goaded a trifle. It is known as the Monroe Doctrine. Europe can keep her hands off. If there is to be any protectorate the United States will have something to say.

"It is a noticeable fact," says the San Bernardino Times-Index, "that the railroad assessment in this county has fallen off $60,000 from last year." This noticeable fact is noticeable in other counties than San Bernardino. While increasing the assessments of private property in several of the counties, the State Board has been very tender toward the railroads. If lawyers decide that fraud is the only ground upon which the State Board assessment can be resisted, the fact referred to by our San Bernardino contemporary may figure in the city's case. Some limit must be placed on the power of officials to rob the public.

The Los Angeles Express says that the nomination of Governor Hill for president would suit the Republicans very well. It would evidently suit the Democracy equally as well, as is shown by the fact that he has occupied the gubernatorial chair of the Empire state seven years. This is a longer period, with two exceptions, than the office has ever been held by any other man. The real Republican sentiment is "anybody but Hill." New York and Indiana are the keystones of the struggle should the Republican party regain its hold on the states which have heretofore been Republican in presidential years, and with New York and Indiana will go New Jersey, Connecticut, probably New Hampshire, the solid south and possibly even Rhode Island since the poor man has been enfranchised in that state.

An order was published in Berlin on Thursday of last week to the effect that the prohibition of the importation of swine, pork and sausages of American origin shall no longer be enforced when such live animals or hog products are furnished with official certificates stating that they have been examined in accordance with American regulations and found free from qualities dangerous to health. The Chancellor has sent instructions to the proper officials that the order be given immediate effect.

At last, then, the American hog has triumphed over the prejudices which have excluded him so long from Germany. He is to be admitted upon the same terms as the porcine representative of the most favored nation, and when once he gets his snout and fore feet over the German border he may be trusted to hold his own. There has been a long and gallant struggle made in his behalf, but hereafter he may be relied upon, we think, to protect his own interests.

Most of the objections urged against American food products of this nature were based on false pretenses. In order to aid her own home product Germany set up the claim that American pork in its various forms was injurious to health; that it was diseased, or, at least, not perfectly sound, and that it was incompetently or insufficiently inspected in the United States. Instead of putting on a high tariff this other plan was resorted to in order to make the prohibition of imports absolute. This, however, was met by an invitation to Germany to test the thoroughness of American inspection, and the invitation could not be refused consistently. The consequence was that this particular objection went by the board, there being no facts to support it.

It is impossible at this time to even estimate the amount of trade which the removal of the prohibition will create. We can say with certainty that it will be very large, but that is all. The people of Germany are great consumers of pork in all forms, and the country cannot produce enough to supply the demand. We have an abundance for export, and we may be assured that it will take but a very short time to build up a flourishing trade in this American product and one which will be extremely profitable to the producer.

Sacramento papers complain of the prevalence of a sort of "human epizooty" in the great interior valley. The epidemic is described as a mild form of catarrh, affecting chiefly persons of sedentary occupations.

THE GATE OF SLEEP.

Lying between the dusk and dawn of night,
Upon the borders of the sea of sleep,
Lo, oft there cometh in the fading light
The break of surges in the eternal deep.

The soul of me swims out across the space
That yawns between the pulse of life and death;
The senses fall; the spirit seeks its place
With those that dwell beyond the gates of breath.

A touch, a start; the passing power is broken;
The soul is moveless midway in its flight;
The body claims it, and there is no token
Brought out from that haven of the night.

If I could hold the light that on me grows
When o'er the brink of sleep my spirit speeds,
Then could I voice the mystery that flows
'Twixt life and death, 'tween truth and human creeds.

But lo! upon the sacred door of sleep
There is a graven law of import high:
"He who would sound the secrets of this deep
Must lay him down in solitude to die."
—W. J. Henderson in New York Times.

A Bull Fight with Fun in It.

In ordinary accounts of bull fights you hear of the sickening sight of disemboweled horses and bleeding men and butchered bulls. This went on with ever changing fun, shouts and laughter, but no one was either hurt or got the cocardes. Whoever thinks it is merely a joke to go down into one of these enormous arenas and snatch the tiny rosette from between the horns of a beast who has been trained all his life to keep him from getting it, will find that he has a large piece of work cut out for him. For fun a Provencal bull fight beats a pantomime.

For danger and expertness it is far ahead of anything I ever saw. As it goes on every Sunday in the summer time all over Provence, Frenchmen regard it as too common an affair to be worth description. Foreigners, never going there at the proper season—the summer and autumn—never or scarcely ever see it. And even down in La Camargue, on the banks of the Rhone, in little towns, all of which save Aigues-Mortes are unknown, the courses, like baseball matches, are held every fete day. They are the sport of the people, and have much more character in the small towns.—Joseph Pennell in Century.

How Expensive Tea Is Selected.

Mr. F. K. Andrews writes to the London Times: "It may be interesting to some of your readers to know how the tea sold at almost fabulous prices is selected. Every chest of very fine Ceylon tea contains a great quantity of "flowery Pekoe," i. e., small golden tipped, undeveloped leaves. A tea of this description is usually sold at about four shillings a pound. A handful of such tea is spread on a piece of satin about 24 inches by 6 inches, the satin is then lightly folded and the tea lightly shaken to and fro half a dozen times, which process causes the fluffy tips to become entangled in the silk; the heavier black leaves are then shaken out. The flowery Pekoe thus obtained still has mixed with it some of the coarser leaves, so the process is repeated again and again until the product is quite golden and flossy. About half a pound may thus be obtained out of every chest of choice Ceylon tea.

Newspaper Enterprise Unappreciated.

You may talk about the necessity of newspaper enterprise, but what good comes of trying to originate something grateful and pleasing to the public when such a protest as the following meets the effort of a well known journal to print a more convenient sheet as well as a handsomer one? "Please use those large sheets again," writes a subscriber, "because they were so handy to do up bundles in. Mother and I quite miss them when we go to put away our winter cloaks and other clothing. Of course, I know they were a little harder to read, because they had to be turned, but just think how handy they were when it came to doing up bundles."—Macon Telegraph.

When Women Did the Grinding.

While women were milling they usually relieved the monotony of their work by singing songs of a lively and cheerful character. Ordinarily they prepared as much meal in the morning as would be required for the day. On this account Hebrew members associated the noise of the morning mill with prosperity and happiness. If, on the contrary, this work was performed in the evening, they imagined there was the sound of adversity and sadness in the notes of the song.—Detroit Free Press.

The causes of headache are many. Some grave headaches are due to cerebral disease—meningitis, tumor, abscess, softening of the brain. In these cases there will be other symptoms pointing to the cause. Other causes are overfulness of the blood vessels, caused by the condition of the heart; a plethoric condition of the body; mental excitements. Such cases are marked by a flushed face, glittering eyes, a beating in the ears and giddiness on stooping.

It is imagination, rather than reason, that distinguishes man from brute; and no person who is devoid of imagination can know extremes of happiness or misery. Happiness greatly depends on the faculty for forgetting.

No age is so old fashioned as childhood. That childhood was happy may be one of the illusions which is fostered, if not engendered, by lapse of time. Of the happiness of second childhood there can be no question.

Humboldt calculated the mean level of North America to be 748 feet above the sea, and he found that in 4,500,000 years the whole of North America might be worn down to the sea level.

The young czarewitch of Russia has been a most industrious student, and is now one of the best informed men of his age in Eastern Europe. He is especially well versed in the higher sciences.

Dynamite for Foundation Work.

A correspondent of Indian Engineering says he recently witnessed a very interesting mode of obtaining a foundation for a new building. A hole was bored in the ground (which was previously damp) from ten to twelve feet deep and an inch and a half wide, and a string of cartridges was lowered into it. The subsequent explosion not only produced a cavity a yard in diameter, but also drove the water out of the surrounding earth by means of the expansive action of the gases. The water did not return to its former place for fully an hour, so that an opportunity was afforded to fill up the cavity with quickly settling concrete, and a rapid rate of working was thus attained.

Babies of the Japanese.

It is an odd thing that by no people on earth are children—both girls and boys—treated with more affection and indulgence than by the island neighbors of the Chinese—the Japanese, namely; and no children have a greater abundance of toys and amusements. It must, however, be said that the fondness and patience of Japanese parents are reciprocated by the love and obedience of their children. Both father and mother are equally devoted to their offspring. The mother commonly carries her baby slung in front of her, and when she is tired the father cheerfully accepts the burden; but fathers and mothers and elder sisters and brothers may often be seen in the gay, sunny streets of Tokio or Yokohama giving pick-a-backs to delighted, crowing babies.

The Japanese baby, moreover, is not only indulged, he is also treated with the greatest care and intelligence. He is judiciously fed; he is regularly bathed either at home or in the public bathhouses, and his skin is stimulated and his health hardened by his being frequently plunged in a cold stream or even in the snow. A Japanese baby would appear to us a very droll creature. If you would know how he looks you have only to examine a well made Japanese doll. He has his head shaved, with the exception of four tufts of hair—one in front, one behind and one over either ear. He wears bright and gaudy clothes (or did wear; for children, like their parents, sad to say, are gradually being being arrayed in European fashion), and his loose jacket has very long and very wide sleeves. Very poor children go barefoot; others wear stockings and clogs, the stockings having a separate pocket for the big toe.—Strand Magazine.

Remarkable Ghostly Actions.

One of the most remarkable modern instances of supposed ghostly disturbance occurred in the home of Rev. Dr. Phelps, of Stratford, Conn. Upon returning from church one day he found that all the doors of his house, which he had carefully locked on his departure, were wide open and the contents of the rooms on the first floor in the wildest confusion. Nothing had been stolen. In a room in the upper story, however, eight forms were found, each one with an open Bible held close to its face. On examination these were found to be bundles of clothes, cunningly and very skillfully arranged to represent living beings. Everything was cleared away and the room locked, but within five minutes the same scene was repeated, although the clothing had been carefully put away.

For seven months the house was disturbed by extraordinary phenomena. The most unearthly noises were heard day and night. Furniture and kitchen utensils were mysteriously moved. Glassware and window panes were broken by unseen hands before the startled inmates, and once the eleven-year-old son of the doctor was lifted bodily and carried some distance. The most diligent research discovered nothing, and not until he applied to some spiritualists in Boston did the disturbance cease.

How a Diamond Cuts Glass.

It has been ascertained by a series of experiments that a diamond does not cut out the glass, file fashion, but forces the particles apart, so that a continuous crack is formed along the line of the intended cut. The crack once begun, very small force is necessary to carry it through the glass, and thus the piece is easily broken off. The superficial crack or cut need not be deep, a depth, according to fine measurements, of a 200th part of one inch is quite sufficient to accomplish the purpose, so that the application of much force in using the diamond only wears out the gem without doing the work any better.

Numerous stones, such as quartz and other minerals, when ground into proper form, will cut glass like a diamond, but are not so valuable for that purpose, lacking the requisite hardness and soon losing the sharp edge necessary to make the operation a success.—St. Louis Globe Democrat.

The Men Who "Toe In."

Here is a fortunate man who can walk half a mile on Broadway on a busy day and escape being trodden on by some one behind him. It is a curious fact that nearly all of the men who—unconsciously of course—step on women's dresses and wipe their feet on other men's trousers are victims of the unfortunate habit of "toeing in."

"Show me a man who toes in and I will show you a man who is eternally stepping on somebody's heels," said a Wall street philosopher the other day. "There are a great many men who toe in down town, and as I am obliged to be on the street a good part of the day I have to suffer from them. Why, some days it becomes necessary for me to invoke the aid of a bootblack three or four times in order to keep the bottoms of my trousers clean and to renew the polish on the heels of my shoes."—New York Times.

Looking Out for the Horses.

A wise cavalry officer keeps a sharp eye upon the horses of his command, as the success of the next engagement may depend upon their good condition. A sergeant was out of patience with an awkward recruit. "Never approach the horses from behind without speaking!" he exclaimed; "if you do, they'll kick you in that thick head of yours and the end of it will be that we shall have nothing but lame horses in the squadron."—San Francisco Argonaut.

Had a Trade.

Housekeeper—An ablebodied man like you ought to have a trade.

Tramp—I have, mum. I break in new boots for a livin'. Has yer husband any on hand?—Good News.

The amount of coloring matter in a pound of coal is enormous. It will yield enough magenta to color 500 yards of flannel, vermilion for 2,560 yards, aurine for 120 yards and alizarine for 255 yards of Turkey red cloth.

He Was a Specialist.

Miss Mabel (to young M. D.)—And what particular branch of the profession do you practice chiefly, Dr. Shinyseam?

Dr. Shinyseam (a little sadly)—At present, Miss Mabel, I am making a specialty of vaccination cases.—New York Times.

A Liverpool (England) man was recently sentenced to five years' penal servitude for obtaining a shilling under the pretext that it was to be used for a charitable purpose.

OFFICIAL.

DESERT LAND FINAL PROOF
D. E. No. 571.
LAND OFFICE AT INDEPENDENCE, CAL., September 9, 1891.
Notice is hereby given that Maggie S. Conklin, of Independence, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim, No. 571, for the N W ¼ of S W ¼ Sec. 14, Tp. 11 S., R. 34 E., M. D. M., before the Register and Receiver at Independence, Calif., on Thursday, the 22d day of October, 1891.
She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Hines and Norman E. Conklin, all of Independence, Inyo County, Calif.
C. W. CRAIG, Register.

ASSESSMENT NOTICE.
INYO MARBLE COMPANY.
Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.
Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 137 Montgomery street, San Francisco, California.
Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.
By order of the Board of Directors.
G. W. LUCE, Secretary.
Office, 137 Montgomery street, San Francisco, California.

DESERT LAND, FINAL PROOF.
D E No. 513.
LAND OFFICE AT INDEPENDENCE, CAL., Sept. 30, 1891.
Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.
He names the following witnesses to prove the complete irrigation and reclamation of said land: G. Sangar, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.
C. W. CRAIG, Register.

ANNUAL MEETING.
INYO MARBLE COMPANY.
The Regular Annual Meeting of the Stockholders of the Inyo Marble Company will be held at the office of the Company, No. 137 Montgomery street, San Francisco, California, on Thursday, the Tenth day of September, 1891, at the hour of One o'clock p. m., for the purpose of electing a Board of Directors to serve for the ensuing year, and the transaction of such other business as may come before the meeting.
Transfer books will close on Monday, September 7th, 1891, at 2 o'clock p. m.
G. W. LUCE, Secretary.
Office, G. W. Luce, Secretary, No. 132 California street, San Francisco, Cal.

NOTCE TO CREDITORS.
Estate of FRANCISCO PADERES, Deceased.
Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.
YGANACIA ABECHUCO,
Administratrix of the estate of Francisco Paderes, deceased.
Dated at Independence, Cal., July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence, Cal.

NOTICE TO CREDITORS.
Estate of PAULINO PELLEGRINY deceased
NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.
Dated July 24th, 1891.
WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.
Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.
The people of the State of California send greeting to Stephen Decker, Defendant:
You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.
The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.
And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.
Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.
[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.
$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.
It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine, Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.
Reliable Agents and Salesmen wanted. Special inducements to Dealers.
For Pamphlet giving Indorsements, &c., address

MARRIED.

HANNAGAN—PARISH—Near Lone Pine, Sept. 16, 1891, by Rev. J. G. Smith, William Hannagan and Elsie May Parish.

COURT NOTES.

Geo. M. Gill, Superior Judge.

FRIDAY, Sept. 11, 1891.

People vs. S. P. Smith—Filed stipulation as to time for arraignment.

TUESDAY, September 15, 1891.

People vs. Smith—Filed citation.

WEDNESDAY, September 16, 1891.

Filed notice of sale of real estate of B. F. Theban, deceased. Filed order of continuance. Order entered.

Filed order of continuance in the estate of John Mullane. Order entered.

Filed order of continuance in the estate of C. D. Begole. Order entered.

THURSDAY, September 17, 1891.

Filed deposition of Martin Mee in the case of P. Reddy vs. W. F. Matlack et als.

FRIDAY, September 18, 1891.

Filed demand for entry of default P. Reddy vs. Wm. F. Matlack et als.

See the notice published by R. C. Spear this week.

G. Sanger was down from Alvord on Tuesday.

Martin Mee came up from Lone Pine on Wednesday.

Independence was well represented at Lone Pine on the 16th.

Willows are fashionable ornaments for masculine hats of Independence and vicinity just now.

A. D. Gilbert has returned from the otherside with another party of intending settlers.

The weather has been cold and raw for the past week. It savors somewhat of the Eastern equinoctial.

The Independence Silver Cornet Band has been practicing constantly and make really good music.

L. McLean, of San Mateo, was in town yesterday. He is largely interested in Eastside Canal property.

Louise I. Woodin, M. D., went to Pasadena last week with her son Irving, who will remain there and attend school.

It is said that a well known and deservedly popular young man of Big Pine will "add" to his happiness next Wednesday.

W. F. Matlack has been at Bishop during the week on business connected with the estate of Benjamin F. Theban, deceased.

All parties having in their possession books belonging to the Independence school library are notified to return them at once.

The first snow of the season fell in the high Sierras on Tuesday. The higher peaks received quite a coating of the icy cold mantle.

The Fair Directors will meet at Independence to-morrow. Bids for the various privileges will be inspected and race entries closed.

After next Tuesday reserved seats to "Rebecca's Triumph," can be obtained from J. E. Dunlap, Bishop, at 25 cents each. Admission 50 cents.

The prospects of the corn crop are very slender. The spring was cold and backward and the frost has come too soon to give the grain a chance to mature.

For anything in the harness or saddle line send to J. E. Dunlap, Bishop. He keeps a fine stock of goods on hand, including supplies needed by parties training horses.

There is no J. P., Judge, or any committing magistrate in town now. As a consequence the suppliers of liquor to Indian are getting bolder. But look out for breakers.

Mr. Vagt has placed the race track a his place in good condition and offers excellent accommodations to parties who are training horses. The best of timothy hay and good, clean oats at the track.

It is expected that a large colony of people will be located on Eastside lands before spring. It is reported that fifteen thousand acres of land have been sold to parties who have this end in view.

Last Tuesday testimony was taken before Notary Public Stewart at Lone Pine in the suit of P. Reddy, plaintiff, vs. Joseph and Herman Waterman and the Eddy estate, defendants. P. H. Mack appeared for the plaintiff and Mr. Forbes for the defendants.

The Bakersfield *Californian* of last week says: "Mrs. H. L. Borgwardt Jr., with her daughter Gertie, Mrs. D. A. Leonard, Ed. Smith and Gussie Walters left for Inyo Tuesday, making the trip overland via South Fork and the Mojave desert." The parties named arrived here last Saturday.

The school at Independence opened last Monday with Mr. Oman, of Stockton, in charge. The gentleman has created a very favorable impression and we predict a most successful term. Mr. Oman is also a practical printer and we cordially extend him the hand of fellowship.

Prospects Good for a Lively Camp.

It is highly probable that a rich mining property will be developed at Pine Mountain. S. P. Roberts has been located in that country for many years past and had located quite a number of claims. He is a poor man and unable to develop the property himself, but his faith that the mines would ultimately be developed was great and he pluckily hung on. Some time ago Andrew Fyfe inspected the country and the result was that he has bought Roberts' interest in the group with the exception of one mine, which the latter reserved. A good wagon road has been completed up Black Canyon and a small mill erected at the mines. Dick Whittaker, who came in from there last Sunday, says the stamps will commence dropping to-morrow, D. J. Hessian is interested with Mr. Fyfe and has a team engaged in freighting. A carload of ore was shipped during the week. Some two years ago, at the invitation of Mr. Roberts, the editor of this paper visited the Pine Mountain country and predicted that some day a good paying camp would be located there.

Grand Fair Ball

The Fifth Annual Fair at Bishop will close with the usual Grand Ball, Friday Eve., Oct. 2, at Spencer's Hall. The Ball will be under the direction of the Directors of the Eighteenth District Association and no pains or expense will be spared to make it the event of the season. The music will be a feature; five pieces in all, and each player a soloist on his instrument. The floor and dance will be in the hands of competent managers assisted by a corps of young gentlemen from the District. Premiums will be given for dancers, which will add a new and interesting feature, and all residents of the district may compete for them. Judges will be selected from the spectators and an impartial decision rendered. Altogether the Fifth Annual Ball is to be made one Par Excellence and all who attend will be assured of a good time.

Labor Rewarded

A good illustration of what may be accomplished by a little labor can be seen at the 8-mile ranch. The lessees, McSweeney & McNash, seeded about five acres to potatoes and will dig about forty tons; from an acre and a quarter of land seeded with onions at least fifteen tons will be gathered. An abundance of corn, cabbage, tomatoes and other garden truck was also raised. Last spring ten acres were planted in locust and walnut trees which have made a rapid growth, fully 90 per cent. of all planted being healthy and strong. The work was done in order to cultivate a timber culture location according to law and a profitable crop is obtained from what might have been considered as "dead work."

Poleta Parlor, N. D. G. W., will present the drama, "Rebecca's Triumph," at Spencer's Hall, Bishop, on Tuesday and Wednesday evenings, September 29th and 30th, 1891. The young ladies who have the affair in charge have hitherto conducted similar entertainments in a most successful manner and that this will present even greater attractions than former plays there can be no doubt. Elsewhere will be found a complete cast of characters, including Mr. Blank, whose name is ———.

The Mexican National holiday was fittingly observed at Lone Pine on Wednesday, the 16th. There were fewer sports during the day than in former years. A free ball was given in the evening, which was largely attended. There was an entire absence of disorder of any kind and the many people present seemed bent on having a jolly good time, and succeeded thoroughly. Independence was well represented.

It is reported that Frank Inman and Miss Louisa Lee, of Nevada, were married at Bishop last Sunday. Frank certainly looked too happy for an ordinary occasion when we saw him that day, but did not suspect that he had joined the list of Benedicts. Miss Lee visited at Camp Independence for several months this Spring and has many friends here who wish her every happiness.

Mrs. Theresa Fair, the divorced wife of Senator James G. Fair, died last Sunday, aged forty-six years. She was a most estimable lady and not a word of reproach was ever uttered against her regarding the enforced separation from her blackguard husband. In justice to Fair be it said that he treated her generously as regards money matters, he having settled upon her property to the extent of $5,000,000.

J. G. Bone, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhoea Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY, Big Pine.

Notice.

All persons indebted to me are requested to come forward and settle before Oct. 17, 1891, as I intend to place all uncollected bills in the hands of my attorneys for collection on that day.

R. C. SPEAR.

Dated, Lone Pine, Sept. 17, 1891.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,
Chicago, Ill., U. S. A.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain,s Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. For sale by A. K. EUGLEY, Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by A. K. EUGLEY, Big Pine.

St. Patrick's Pills are carefully prepared from the best material and according to the most approved formula, and are the most perfect cathartic and liver pill that can be produced. We sell them A. K. EUGLEY Big Pine.

Pretty strong reasons for trying Dr. Sage's Catarrh Remedy. In the first place, it cures your catarrh—no matter how bad your case, or of how long standing. It doesn't simply palliate—it *cures*. If you believe it, so much the better. There's nothing more to be said. You get it for 50 cents, from all druggists.

But perhaps you won't believe it. Then there's another reason for trying it. Show that you can't be cured, and you'll get $500. It's a plain business offer. The makers of Dr. Sage's Remedy will pay you that amount if they can't cure you. They know that they can—you think that they can't. If they're wrong, you get the cash. If you're wrong, you're rid of catarrh.

ROCHESTER, N. Y.

GENTS:—For the past winter I have been very badly afflicted with rheumatism. About six weeks ago was confined to my bed, and whenever I was able to get around was obliged to use cruches. All the time I had the best medical attendance.

After one week's use of Dr. Pardee's Remedy, I was able to walk with a cane. I continued its use and can now move around without assistance of any kind, and am better in health than I have been for years. It has effected a permanent cure and I take pleasure in recommending it. C. R. FINNEGAN,

Supt. Fire Alarm Telegraph, City Building, Front Street.

Send for pamphlet to Pardee Medicine Co.

O. order, or express. Estimates furnished on all kinds of Marble and Granite Monuments, Vaults Copings, etc. A. H. Mac Nutt, Pacific Marble and Granite Works, 46 Eighth Street, San Francisco, Cal.

FOUR AMERICAN SONGS.

The Sources of Inspiration of the Writers.

ONE OF THEM AVERTED A WAR.

Strange Fact About the Music of "America."

The four great lyrics of our country are "Columbia, the Gem of the Ocean," "Hail Columbia," "The Star Spangled Banner" and "America."

The first named was written by Timothy Dwight, ancestor of Timothy Dwight, the present president of Yale college. He wrote other patriotic anthems, but "Columbia" is the only one by which he became famous. Dwight was a native of Massachusetts and a graduate of Yale.

He studied law, intending to adopt it as a profession, but there being a dearth of chaplains in the Revolutionary army he became one in Parson's brigade of the Connecticut line and served some time there. It was during this service that he composed the immortal song "Columbia," which at once attracted general attention, and from the first became famous.

It was composed without much thought, the times being full of patriotic feelings, which inspired the poet, and he is said to have expected no more than passing fame for his production. It was caught up, however, by the patriots, and soon became known throughout the struggling colonies. After the war Dwight went back to the pursuits interrupted by his entering the army, and eventually became president of Yale college, a position which he held until his death in 1817.

The author of "Columbia" was a voluminous writer, turning out many extended poems and books, but all seem to have been forgotten but the great lyric which he gave to his country during the struggle for freedom. It will ever remain his monument.

A SONG THAT TOLD.

The words and music of "Hail Columbia" were composed under the American flag. Its author, Joseph Hopkinson, was a native of Philadelphia and the son of a signer of the Declaration of Independence. Like the composer of "Columbia," he was the author of many other things in prose and verse, but nothing has come down to our day with any fame but his national song.

"Hail Columbia" was written in the summer of 1798, when we were having complications with France which threatened to end in war. Hopkinson had an actor friend named Fox, who was to have a benefit at a theater, and it was for him that the song was composed.

The music which accompanied the song, and to which it is sung today, was originally the "President's March," which was written ten years before, on the occasion of Washington's visit to New York, by a German orchestra leader named Fyles. "Hail Columbia" sprang into sudden popularity, and it is said to have averted the threatened war, as it incited national pride and roused the whole country.

Joseph Hopkinson lived until 1842, filling various important offices and loved by all for the great song he had given to his nation. He helped to revise the constitution of Pennsylvania, was a warm friend of Joseph Bonaparte's during the ex-king's sojourn in this country, and at the time of his death was holding the office of United States judge for the eastern district of his native state.

INSPIRED BY BATTLE SMOKE.

Of the many national song writers none have enjoyed more enduring fame than the author of "The Star Spangled Banner." It is perhaps the greatest and most popular of all our songs and lyrics. It was composed amid the roar of cannon and the bursting of bombs, and seems to have sprung without effort from the mind of its author.

Francis Scott Key, the author, was a prisoner in the hands of the British when the song was composed. He had gone down the bay at Baltimore, then being attacked by the British fleet, for the purpose of securing the release of a friend who was held by the enemy. He carried a message from President Madison asking for the prisoner's release. The British commander agreed to the request, but told Key that he must be detained during the attack. Key and his friends were therefore held back, and it was while they watched the terrific bombardment of Fort McHenry, now and then losing sight of the flag that waved over its ramparts, that he wrote "The Star Spangled Banner." This took place in 1814.

When he was released Key took his poem back to the city, where it was speedily printed to the music of an old English song, "Anacreon in Heaven," and in a short time was being sung all over the country.

Dr. Smith's beautiful ode "America" was also adapted to an English air, that of "God Save the Queen." Strange to relate, this same melody answers for the national song of the German empire, Great Britain and Ireland, Bavaria, Switzerland, Brunswick, Hanover, Norway, Prussia, Saxony, and does service in the United States as "My Country, 'Tis of Thee."

"America" has no stirring history surrounding its composition. It was composed in 1832, and was first sung at a children's celebration at the Park Street church, Boston, on the Fourth of July the same year. Samuel Francis Smith, its author, is still living. He is a native of Massachusetts, where he was born in 1808. His famous missionary hymn, "The Morning Light Is Breaking," was written at the same time and place as "America." Dr. Smith has filled many important stations in the church, and has written voluminously, his contributions embracing nearly every branch of good literature.—New York Telegram.

Revenge.

Horne (to his friend at the concert who is applauding enthusiastically)—For goodness sake don't, man; that was abominable! You'll bring that cruel music butcher out again!"

O'Bowie (with increasing enthusiasm)—Good! Can't you see he's half fainting with exhaustion? I want some revenge, my boy.—Exchange.

It should be remembered that the deeper the well the larger the area from which the rain water finds its way into it. No discharges or other secretions from the room of a sick person should be thrown on the ground or buried in it within at least 100 feet of the well.

SAM'S PHILOSOPHY.

He and Kate Married Because They Found Themselves so Old and Poor.

Half a dozen men were discussing the problem of marriage in the cafe of the Southern society one evening.

"These young New Yorkers make me very weary," said a Kentucky colonel. "I mean these young fellows who, though in receipt of good incomes, spend all their money in tomfoolery, and then say they can't afford to marry."

"I agree with you, colonel," said a Maryland gentleman from Princess Anne county. "If a man wants to marry he never reckons the cost. I am reminded of a story of our two old house servants. They had both been in our family for years. When the emancipation proclamation was signed we told them that they were free. We sympathized with the north during the war, you know.

"We could scarcely drive them away with a club, however. They had been born and reared on the place. Sam had lost his wife. He was eighty years of age. Old Kate was our 'mammy.' She was sixty or seventy. Her husband was killed duck shooting a dozen years before the war. It was a great blow to the old people when we told them they would have to go. They did not want to leave us and hustle for themselves, but we could ill afford to keep them at that time. It was particularly hard for the old 'mammy.' She thought we children all belonged to her.

"Finally we compromised the matter and let old Kate have the use of one of the cabins and work on the place. Sam went to live in a little shanty in the town a mile or two away. Kate did washing and Sam did washing too, whenever he could get a job—whitewashing I mean.

"We were astonished one day at hearing that these old creatures, each with one foot in the grave, had married. My father sent me to Sam to learn if the report was true. I found him whitewashing the wooden fence around his shanty.

"Sam," I said, "what in the world have you and old Kate been up to, marrying at your age? What did you do it for?"

"'Why, Massa Will,' he replied, 'yo' see it war this way. Ole Kate an' I were a talkin' an' I say to ole Kate, "Kate, we po' fool niggers. I's done live 'bout's long's I ker to."

"'An Kate,' she say, "I dunno 'bout dat, Sam, but guess yo' is tellin' de truff."

"'So Kate, she say as how she's ole too, an' can't grow much ol'er, an' how she po' an' can't be no poo'er. An' so we 'clude to get married, kase we can't be no ol'er, no' poo'er when we's married, den when Kate is juss Kate an' Sam's juss Sam.'

"And so those two old darkies were married," said the Princess Anne man, "because they were old and could not live much longer, and because they were poor and could not be any poorer, whether they were single or married."—New York Herald.

You Don't Tire of Them.

There are people of whom one never tires, no matter how often one sees them nor how intimate the associations may be. There is about them that air of perpetual charm and variety that makes them delightful companions. They are sure to be good tempered. There is never any fear of finding them in a pet, nor a prey to some ill humor wholly unreasonable and unexplainable.

They are pleased when you are pleased and interested in what you have to say. They are so sympathetic that your ills and troubles become their own, and your friends become so dear to them that not for the world would they do anything to rob you of them. Sometimes with these bright, sweet natures you find the added charm of originality, and when you come across such a one treasure it and preserve it as one of the pearls of your life, for seldom indeed are talent, originality and good nature found combined in one mortal frame. A nature that is so richly endowed is threefold talented. It has the talent of magnetism, the talent of keeping good natured and the priceless talent of originality, which, as Rudyard Kipling says, is not the discovery of anything new, but is rather a new way of looking at old things. And that makes it all the more delightful.—New York World.

The First Woman.

By the way, speaking of Eve, why is not her name, in its English and Bible form, bestowed upon more little girls? Eva is common enough; it is simply the Latin form of the name. No doubt parents often bestow it in this form without thinking that they are naming a daughter for the naughty mother of all mankind, whose "mortal taste" for green fruit brought death into the world and all our woe. But this is an age of rehabilitation, and Eve has been pretty thoroughly rehabilitated in character herself. A great many really good women are not so sure but they would have done just the same as she did under the same circumstances. But whether or not Eve has been vindicated or needs vindication she had a very pretty name. Bestowed upon girl or woman, and without any final a—just plain Eve—no name could be more charming.—Boston Transcript.

Burglars' Weapons.

Over 100 tools and processes, which are marvels of ingenuity and scientific knowledge, have been invented by safe burglars. A recent burglar's outfit captured by the police consisted of a little giant knob breaker, a diamond drill and a high explosive of the nature of dynamite, but put up in the form of a powder. It would open the strongest bank safe in a half hour, and without noise enough to disturb people in the next house, while the entire outfit could be carried in the pockets of an ordinary coat.—Rochester Democrat.

It is said if a looking glass be held before roaches they will be so frightened as to leave the premises. In England hedgehogs are kept in kitchens to destroy cockroaches. These curious little beasts are nocturnal in their habits, and are amazingly fond of such prey.

A secret chemical powder introduced abroad when sprinkled over the top of the coal in a newly made fire cements the upper part of the fuel together and causes the coal to burn at the bottom and throw the heat into the room, instead of allowing a large part of it to go up the chimney.—New York Journal.

Indiana contains only a dozen men who can properly be ranked as millionaires. And there are probably not more than two men in the state who are worth $2,000,000 apiece.

A PET AND A NUISANCE.

The Antics of a Mischievious Monkey.

AN EXHIBITION OF TIGHTROPE WALKING.

He Picks Putty out of a Skylight and Steals Pennies and Milk.

For two years now Jocko has been having things pretty much his own way in a back yard in East Fourth street. But at last he has run up against a snag. Doubtless if Jocko had been content with his own back yard and had not gone about prowling for new back yards to conquer, his name today would not be on the blotter of the health board's big book. At the weekly meeting of the board it will be decided whether he may keep up his nomadic proclivities unmolested or whether in the future he is to be chained to a ring in the area steps.

Jocko is the pet monkey of Josef Hoffmann, who does a brisk business in the basement at 37 East Fourth street. A sea captain, who had come home from a voyage to South America for cocoanuts, brought back Jocko with him, and gave the animal to Mr. Hoffmann. If Jocko had stuck his long, sharp claws into Mr. Hoffman's heart he couldn't have secured a deeper hold on that portion of the latter's anatomy than he did on the first day of his installment in the basement in East Fourth street.

Every twenty-four hours which have passed since then have only soldered more firmly the ties between the monkey and his master. So fond, indeed, has his owner become of the curious little animal that he has never had the heart to correct him in any way. The result was the usual one. Jocko was spoiled.

JOCKO AND THE CLOTHESLINE.

So one day, as Jocko was sitting ruminating in the back yard, with a leg swung about the trellis and his tail wound around the grape vine, he spied Mrs. Kaufman, of the third floor, back hanging her washing out to dry.

Mrs. Kaufman closed the window, leaving her linen, which she had got up at 6 o'clock to wash, hanging in the sun. Jocko waited a whole minute after he heard the sash bang. Then, with a cat-like movement, he gained the top of the high back fence, scampered up the fire escape of an adjoining building, made a well calculated leap of three feet and landed on the nearest point of vantage of the taut ropes of Mrs. Kaufman's clothesline.

Like a tightrope walker, Jocko tripped along the line. He put up one paw to his whisker, just as the real performer does when he smirks and throws the inimitable kiss to the audience. Then Jocko began his aerial feats in earnest.

When Mrs. Kaufman went to haul in her lines that evening she stood as one amazed. Her stockings strewed the ground below like the fallen leaves of Vallambrosa. Her tablecloths and sheets, where they were not torn in places, were tracked in a pattern in which the chief figure was the imprint of a muddy paw. Some of her linen was actually missing. Mrs. Kaufman had to get up early the next morning again, pull out her thread and needle, and, after mending for almost an hour, do her whole wash over.

But Jocko never ran amuck among Mrs. Kaufman's wash any more. He had experienced a new sensation, and having once satisfied himself with that he began to cast about for fresh fields and pastures new. Of course, if he wanted to make use of Mrs. Kaufman's or any other person's convenient lines, Jocko never hesitated to use them as a public thoroughfare. But as a diversion, clotheslines had lost their seductive charms for the monkey.

THE HATTER PROTESTS.

So while looking about another morning for something "new and strange" he clambered up on to the roof of the extension built out from a hat store on the Bowery. The skylight was open and Jocko began dropping odd bits which he picked up off the roof down into the room below. His Simian Majesty was scared away.

Then Jocko's instinctive feeling of dislike for the Hyman family asserted itself. The next day and the next Jocko quietly perched himself on the rim of the skylight over the extension of the hatter and began picking away the putty about the panes. But Jocko had not progressed far in his operations before he was found out. Then Mr. Hyman's patience gave out, for he saw his living apartments threatened with a leak. He was not as complacent as his neighbor, Mrs. Kaufman, who satisfied her grievance by shouting out vengeance from her back windows upon the monkey. The latter went right down to the board of health and lodged a complaint against Mr. Hoffmann's pet.

One of Jocko's tricks is to go out early in the morning and steal the pennies which are placed in milk pitchers, and another is to gather up letters which the postman leaves under the basement gates near the monkey's home. Whether he views the Italian at the corner with instinctive hatred or as a natural friend it is impossible to say, but sure it is that when Jocko wants a peanut or a fig he makes no scruple of bagging one from the stand. Another one of Jocko's cunning ways is to stick his snout into any inviting bottle of milk or dish of pudding that is set out of a back window to cool, and then make his escape with his stomach full of the delicacy.

Pending the result of the inquiry Mr. Hoffmann is a little anxious for fear the health board may compel him to imprison his dear Jocko. But Jocko runs about as usual with no fear for consequences at all. One shake of his right paw against his left whisker "fixed" the sanitary inspector. And if that was not sufficient Jocko knows enough to question the right of the health board to interfere in his case at all.—New York World.

Echo Answers, "Where?"

"Mother, don't the angels wear any clothes?"

"No, darling."

"Then where do they put their pocky-hankies?"—London Judy.

The royal standard of Persia, it is said, is an apron. Stout old Gao, the Persian blacksmith, raised a revolt that proved successful, and his leathern apron covered with jewels is still borne at the van of Persian armies.

The best talking parrot is the gray bird with scarlet tail that comes from the Congo. A few of these have a scarlet breast as well as tail, and are known as king birds. They are very rare.

A Somewhat Mortifying Omission.

One of the pleasures of extreme youth is to walk in pride in rubber boots. The haughty yet indifferent air with which the rubber booted small boy will swash through a quarter of a mile of gutter must be seen to be appreciated. As the Listener was making his way past one of the city schools the other day, he saw before him two midgets of girls wearing rubber boots beyond their years. These little girls were walking through the puddles in their way with the evident pride of conquering heroines.

"Why, Mary Jane," said the larger, "if you didn't forget that puddle at the crossing!"

"So I did," said Mary Jane, mortified, "I dont know what's coming over me," and turning about she retraced her steps and twice paraded through the forgotten puddle before rejoining her companion.—Boston Transcript.

A Music Teacher's Education.

I heard, the other evening at a musicale, a naive remark about one of the performances, which seemed so characteristic of Boston it deserves to be repeated. A young woman, whose musical education has been somewhat limited, but of unbounded belief in her own capability, was discussing a very brilliant artist who had just been playing a group of Chopin's familiar masterpieces. "Oh, yes, he plays well enough," she said in answer to an enthusiastic comment, "but I don't care to have lessons from him. It wouldn't pay." "And why not?" asked an astonished listener. "There is only one other man here who is such a master of his art." "Yes, I know," was the reply, "but you see, as I want to teach, I shall take a few lessons of Mr. Long, and that will get me as many pupils as I shall need?"—Boston Herald.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the Itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

Official—"I hear Mawson is going to leave Barton, Hicks & Co." "Who told you? Mawson?" "No, Barton. Mawson doesn't known it yet."

TRUE ESTIMATE OF VALUE.

Remember that when we assert the value of BRANDRETH'S PILLS, we at the same time refer you to the thousands of testimonials we have published supporting all and even more than we claim. The best evidence of their value lies in these testimonials. The pills have been in use in this country for over fifty years and in that time have surely been well tested. We never heard complaint of them. They are harmless, being vegetable, and always do their work well.

BRANDRETH'S PILLS are sold in every drug and medicine store, either plain or sugar coated.

When a man rubs up against the world he either becomes calloused or exposes his tenderness.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

WHY!

WHEREFORE. The virtues or merits of a remedy for pain do not consist in its being as good for relief as other remedies, but in the fact that it is better, in being the prompt and sure, and therefore the best, the specific purpose. It is not an idle catchline that strikes the eye thus:

ST. JACOBS OIL

THE GREAT REMEDY FOR PAIN

IS THE BEST.

It is the best cure for all aches and pains and it holds

THE TRUE PROOF.

To this specific fact Archbishops, Bishops, Clergymen, Lawyers, Doctors, Governors, Generals, Senators, Members of Congress and Legislatures, U.S. Consuls, Army and Navy Officers Mayors and Officials, testify and unite in saying: "We suffered pain;

OTHER REMEDIES FAILED,

and St. Jacobs Oil cured promptly and permanently." For the same reason

THE POOR MAN

finds what he seeks and needs, is not deceived and will have it at any price.

"German Syrup"

Here is something from Mr. Frank A. Hale, proprietor of the De Witt House, Lewiston, and the Tontine Hotel, Brunswick, Me. Hotel men meet the world as it comes and goes, and are not slow in sizing people and things up for what they are worth. He says that he has lost a father and several brothers and sisters from Pulmonary Consumption, and is himself frequently troubled with colds, and he often coughs enough to make him sick at his stomach. Whenever he has taken a cold of this kind he uses Boschee's German Syrup, and it cures him every time. Here is a man who knows the full danger of lung troubles, and would therefore be most particular as to the medicine he used. What is his opinion? Listen! "I use nothing but Boschee's German Syrup, and have advised, I presume, more than a hundred different persons to take it. They agree with me that it is the best cough syrup in the market." ①

Hereditary Consumption

INDISPENSIBLE TO HOUSEKEEPERS. Ask Your Dealer for it. Write for Circular. AMERICAN OIL CO., Agts. 11 to 15 Main St., San Francisco, California.

Dyspepsia is the bane of the present generation. It is for its cure and its attendants, sick headache, constipation and piles, that

Tutt's Pills

have become so famous. They act gently on the digestive organs, giving them tone and vigor without griping or nausea. 25c.

S. F. N. U. No. 478. New Series No. 33

CAMEO CUTTING.

A Process Generally Little Understood.

THE METHODS OF THE "COLORER."

The Round Chalcedonous Pebble of Brazil.—The Engraver.

Cameos are of two kinds—those cut in stone, or in pietra dura, and those cut on mollusc shells. The latter are found chiefly on the African and Brazilian coast. They show, as a rule, two layers—a pale coffee color, or deep red and white. They are classified in the trade as the Bull's Mouth, the Black Helmet, and the Queen's Conch. The first has a red or sardonyx inner coat, the second a blackish ground and the third a pink ground. The first are found mostly at Madagascar and Ceylon, and the second at Jamaica, Nassau and New Providence. They are formed of three distinct layers of calcareous matter, and their peculiar structure, while it affords the greatest protection to the animal, serves also to give the cutter a secure foundation for his work.

Designs upon shell cameos, which are very much softer than stone cameos, may be effected by the process necessary in the treatment of the latter. Or, when the shell yields readily, the cutter does not resort to the engine, but, having drawn an outline upon the prepared ground, cuts away from it as the wood engraver does, with tools carefully made for this particular industry. They are files and gravers. The tool most used is flat on side and round on the other, and serves therefore either as a gouge or chisel. Of Sicilian origin, the manufacture of shell cameos was carried from Italy to Paris; and more than one-half the output of the lapidaries goes to England and is thence sent to the United States. The shell cameo is, of course, inferior, both in durability and artistic quality, to the stone cameos, which enable the engraver to give considerable relief and remarkable fidelity to any design which may be placed upon them.

The prize stones are those which show four or five distinct layers of different colors. Thus, for a heroic head, the face would be in the lightest color, the helmet dark, the crest a shade lighter, and the ground gray. Artists like to cut a Medusa on stones having a red layer, so as to use that shade on the snakes. The stones now in favor are those showing layers of black and white of equal breadth. Before a process of coloring was found—or refound, rather, for it is now known to have been in use and lost in antiquity—German agates of two shades of gray were much in demand, and many beautiful designs were engraved upon them. Very few cameos seen in jewelers' cases confess to the careless observer that their beautiful colors and high polish are due more to chemistry than to nature. The coloring process is very curious.

The round chalcedonous pebble is the original stone cameo. In Brazil it is found in river beds. At Oberstein it is found under the rocks that are the great ribs of the high formation, and it lies freely also in the ground like flint stones in chalk. From the mills of Oberstein and Idar the lapidaries of the world are supplied. When the pebble is first tested the trier breaks off a small bit and moistens the fragment with his tongue. He watches keenly the rapidity with which the moisture is absorbed and whether the absorption is in bands, and in one band more rapidly than in another. Thus he conjectures its capacity to receive color. The pebble may be nothing but what we call agate; but chemistry is going to make it onyx or sardonyx. By its sensitiveness to moisture he rates its commercial value, and then it goes not to the engraver but to the slitting mill, where its roughness is ground off, and it is cut so as to bring the white stratum or layer uppermost. Then it is ground with emery and polished with water and rotten stone on a pewter lap.

It goes next to the colorer. He immerses it in honey and water, and for several weeks it is kept in its bath at a temperature just below boiling. When done it is transferred to another tub, and covered with sulphuric acid heated to 350 or 400 degs. After ten hours it is finished. It goes next into clean water and is dried in an oven. After polishing it lies in oil, which removes the appearance of flaws and adds to the brilliancy of the polish. Bran removes the oil. The secrets of the coloring have never been fully understood, and the operation of the various influences is uncertain. It is taken for granted that the honey invades the pores and is carbonized by the sulphuric acid. The deposition of the carbon increases the color of each band which the honey has permeated. If the color of the stone is uniform throughout it is natural; if it has been chemically heightened or produced by sulphuric acid, which makes the black ground, or nitric acid, which produces the carnelian ground, the color will be found on examination superficial and uneven. Only experts can detect pure chalcedony from colored agates.

If a portrait is to be engraved upon the stone, many artists prefer first to make the model in wax and prove it in plaster, as the engraver of old tested the design he intended to put in enamel upon gold. The model being accepted, and the stone selected of the size and strata desired, it is placed upon a cork and leather handle, which holds it so firmly that it will not be displaced in the slightest degree by the action of the engine. Then the artist's task actually begins. The slightest error of eye, the least infirmity of hand, and the failure is complete. The engraver and etcher apply a sharp instrument to the ground, upon which they operate. The cameo engraver applies the ground to a sharp instrument, which does the cutting, and which, in Amsterdam, in the diamond factories, is run by steam power.

The engine is a miniature lathe head. It stands on a solid table before the engraver, and it is confronted by rows of small iron tools, some of which look like little wheels on the ends of iron stems; and most of them like dentists' tools of half the common length. A microscope would be necessary to discover that the smallest of them ends in a disc; for some of the discs are less than the one hundredth part of an inch in diameter. These little wheels are the cutters on the cameo ground. They receive a touch of oil and diamond dust just before the operation commences; and the diamond dust cuts while the oil polishes. The artist must change them frequently, according to the depth of the incision, the nature of the grain, and the direction of the line. His training must, therefore, be slow and accurate, his eye true, and his sense of form developed into microscopic exactness. Many sculptors prefer the training for cameo portraiture as an invaluable part of their education. St. Gaudens was a cameo cutter.—Chicago Tribune.

An American "Les Miserables."

It is not a prodigious prophecy to say that the revolution, the war of 1812, the civil war, the slave question and the numerous phases of life in the United States of a quarter of a century ago, will invite the serious attention of a novelist, and an American "Les Miserables" will be written.—The Epoch.

CALIFORNIA'S GREAT MOUNTAIN.

Going Up to the Top of the Shasta and Then Down Again.

Now that we were within a few miles of Shasta, it did not look so wholly white. Its snows were plowed by many a rocky ridge, not perceptible at a greater distance. It did not, however, lose its supernatural appearance thereby, but rather gained an effect more startling by the sharp contrast of lava rock and sweeps of snow. Shasta was named by Russian travelers, the proper derivation of the word being Tcheste, meaning chaste, pure. It is the culminating peak of the coast and Sierra ranges, and has an altitude of 14,444 feet. Its glaciers extend for more than two miles down its slopes. We sat for an hour on the hotel porch trying to familiarize ourselves with this strange mountain, but its unearthly aspect did not change for us.

"It is terrible to be up there!" said Hal, with almost a shudder. "One is in no danger of forgetting the experience. As I was following that lava ridge this side of the Devil's Thumb, I saw far off on the snow a black object about the size of my finger, wriggling and staggering about, falling flat occasionally and then resuming its fantastic gyrations. I observed it carefully, and discovered that the object was forked, and then it flashed through me that it was a man climbing the glacier. When our party reached the cleft peak that forms the summit we were met by a perfect avalanche of clouds that tossed and tumbled about, giving a ghostly indistinctness to everything. We appeared to be in a world of unrealities, peopled by shadowy creatures that lengthened and contracted, and flung about their vast, white wings above the sickening fumes that steamed up from the hissing, spurting hot springs at our feet. A momentary parting of the clouds showed the sky blue as indigo, closing down in awful nearness. Through a revolving glare the blood red sun swung in the frightful purple of the heavens. Fronting these unaccustomed elements a solemn dignity possessed the soul and gave a conscious feeling of infinitude. The loss of all familiar landmarks lent an indescribable terror to the scene. This dead volcano's throat is choked with snow. On its icy rim one of the ladies slipped and fell headlong over the fearful chasm. The guide caught her by one of her feet. Her escape from a horrible death was almost miraculous. We were nearly frozen with the cold, and yet our mouths were parched and hot as in a desert. Our hearts throbbed painfully, and we drew our breath in gasps.

"Before we commenced the descent a fierce blast tore the mists asunder, revealing the grandest picture we shall ever behold on earth. From the majestic temple we could see hundreds of miles of kaleidoscopic landscape. Mountains, rivers and valleys, with spurs of rocky ridges cutting through tawny farm fields far away; green meadows starred with lakes, and billowy ranges running toward the sea, while fifty miles of dense pine forests spanned the McCloud and Pitt to touch the snowy heads of the Sierras. And Oregon's rich prairies, linked to ours by a chain of silver surfaced lakes; to the south, beyond the mighty Lassen Buttes, we catch a glimpse of dusky plains, with isles of clustering peaks. Three times I have seen all this, and yet I feel an irresistible desire to go again. In spite of the labor and exhaustion attending the ascent, the vision from the top is worth a greater sacrifice."

We slowly descended the mountain, gazing silently toward Mount Shasta until the intervening silver firs shut off our view. The train was two hours late that night, and as I turned from bidding Hal good-by we saw a radiant mantle fall on Shasta's head from the departing sun. "And the glory of the Lord was like devouring fire on the top of the mount!" he quoted solemnly, and within its reflected light we parted hands.—Overland Monthly.

The Rainfall of the West.

The one thing needful to develop the agricultural and pastoral possibilities of this region—in a word, the key to its destinies—is an adequate rainfall; and this suggests a topic regarding which has arisen nearly all of the controversies connected with the success of the new west. Experts who knew absolutely nothing whatever about the actual facts in the case have written many a weighty article to prove that we do not have, never have had, and never can have any rainfall worth mentioning. On the other hand, the people out here, who know from their actual experience that we do have a liberal and bona fide rainfall in every portion of our immense desert, are not content with stating the facts, or making affidavits to them, but rack their brains to find ingenious reasons for the beneficence of Providence. One asserts that every yard of steel rail laid in the desert will draw from the heavens a gallon of water per annum; another claims that there has always been a good rainfall here, and points in evidence to the numberless canyons and creek beds twisting and turning in every direction, but all ultimately converging to the rivers which empty into the Missouri. A third contends that rain follows the upturning of the sod, and that every acre of land plowed makes a draft on the clouds for a definite quantity of water.

It is certain that the buffalo grass sod which has covered these plains for centuries has become as impervious to water as a cowboy's slicker. Hence the rain never penetrates it, but rushes off the "divides" in a fury to reach the rivers. Any one who has seen it rain on the plains can understand something of the deluge which covers the entire prairie to the depth of twelve to twenty-four inches during the summer showers. It is easy to comprehend then how the numerous canyons in Kansas and Nebraska are cut by the eagerness of the flood to roll eastward. But when the prairie sod has once been plowed the soil absorbs water like a sponge. After a day's heavy rain there is no mud visible in a plowed field; the moisture soaks downward to great depths, and the soil retains it through weeks of dry weather afterward, sustaining its crops without additional rain for a wonderful length of time. It is at least reasonable to suppose that under this changed condition of large portions of the soil, which now absorbs rain instead of shedding it like a rubber coat, the climate retains its atmospheric moisture better, and the rainfall becomes more regular, less falling at a time, but falling oftener. This change may account, too, for the heavy dews which of late years have been remarked in this country—a thing absolutely unknown ten years ago. The upturned soil parting with but a little of its moisture every day, it returns to it at night, well nigh as refreshing as a shower.—Frank H. Spearman in Harper's Magazine.

The Use of Saccharine.

The use of saccharine as a substitute for sugar is not considered safe from a medical point of view. Dr. Worms, in a communication to the French academy of medicine, states that of several patients who made use of saccharine by his advice, all but one were compelled to give it up on account of the occurrence of dyspeptic symptoms, nausea, loss of appetite, etc. It is usually not until after the substance has been taken from ten to fifteen days that it manifests its evil influence. It then appears to accumulate in the system.—Scientific American.

SOME STAGE MECHANISM.

A Peep Behind a Modern Theater's Curtain.

HOW BIG STAGE FIRES ARE PRODUCED.

Flashes of Lightning.—A Shower of Rain.—Using Fireworks.

STAGE MOUNTING has become one of the most complex and refined of arts. The spectator, in fact, is no longer satisfied, as of old, with a vain illusion that his imagination is called upon to complete, but he requires a semblance of reality capable of giving him the sensation of the genuine thing, and, naturally, all hands, the impresarii, machinists, scene painters, etc., put their wits to work (in most cases with success) to gratify his taste. Each new spectacular piece reveals to us some novel innovation, and, in truth, it is an occupation not without interest or utility to study the modifications and improvements that have been made in time in the same scenic effect.

Let us take, for example, the representation of fires, in the theater. Formerly, as in Mignon, or in the Prophet, some flames of lycopodium and some red Bengal lights sufficed to satisfy everybody. Great improvements have been made since, and in recent years the skillful stage mounters of the opera-house have twice shown us (first in Sigurd, and but a few days afterwards in the Magian, Mr. Massent's new opera) conflagrations that have been improved to such a degree as to be capable of vying with real fires, as far as effect is concerned. In this regard, the setting of the Magian is particularly remarkable. We are at the last act of the drama. The temple of Djahi is in ruins. The Turanians have burned it. Alone stands intact the triumphant statue of the goddess, before whom, like smoke of incense, rise puffs of bluish vapor from the rubbish. The Magian Zarastra contemplates the pile of debris with horror, and near him stands Anahita, the queen of Turan. Meanwhile, the priestess of the temple, Varedah, mortally wounded and lying prone upon the earth, revives and, seeing Zarastra triumphant near her rival, invokes the Djahi in a burst of fury. The latter obeys her voice. The fire, which is still smoldering under the ashes, breaks out again. At first, the smoke becomes more intense, and its spirals, on rising in the air, become tinged with red. Then the flames soon reappear along the cornices that are still in place, the statue gives way, the fire extends by degrees, and the stage is soon nothing but an immense glowing brazier, in which sparks are crackling, flames are flickering and smoke is curling.

Now what is the secret of this wonderful stage mounting? It will be recalled that in Sigurd the effect obtained is produced by jets of steam to which a rose color is given by means of Bengal lights. The steam under pressure enters through large conduits running under the stage and escapes through small tubes soldered to the supply pipes and traversing the stage floor. The maneuver is executed by operating a cock. The inconvenience of the process lies in the loud strident noise made by the steam escaping into the air.

In the Magian, where the orchestra music at the moment of the fire is relatively soft and low, this circumstance would have been most annoying. It therefore became necessary to find a means of producing the steam in abundance, while at the same time preventing noise being made by its escape. The difficulty was happily surmounted as follows:

The steam generated by a boiler is

Apparatus for Imitating Lightning.

here again led by pipes as in Sigurd; but instead of its being allowed to escape through a thousand narrow orifices, it is made to pass into special apparatus—large boxes in the shape of an isosceles triangle connected in pairs at the two extremities of the same supply-pipe. These boxes, which are fixed by the apex opposite the base of the triangle, have, at their point of attachment, considerable thickness, which gradually diminishes in measure as the wide part of the apparatus is approached. At the base of the triangle the thickness is greatly reduced, so that the steam, which is distributed throughout the whole extent of the box, escapes without any noise, and throughout its width, through a narrow orifice between the two faces of the apparatus. In the interior of the boxes there are pieces of felt, the principal object of which is to absorb the drops of water carried along mechanically. (Fig. 1).

The advantage of this peculiar arrangement, which at the opera-house, was installed entirely by Mr. David, is that it permits of the disengagement of steam everywhere where it is necessary. These boxes, in fact, are easily manipulated by two men, and hooks fixed to their surface permit of attaching them at will, and in an instant, along a strip of light or elsewhere, above the stage or on a level with it. After a simple coupling pipe has been connected with the steam conduit, the apparatus begins to operate.

In the Magian, twenty-nine of these double boxes are employed. Seventeen are distributed over the stage at different points and nearly up to the height of the soffit curtains. The twelve others are beneath the stage and the orifice whence the steam escapes and traverses the flooring.

This system of conflagration, the effects of which are heightened by Bengal lights, lycopodium flames, variously colored jets of electric light, and small pieces of fireworks designed to stimulate the leaping of the sparks produced by the sinking of the statue, is not absolutely new. It has, in fact, already been employed at Dresden, and in the Theater de la Monnaie, at Brussels, in the mounting of Valkyrie. At Paris, for example, it has been notably improved by Mr. David. At Dresden, in fact, the boxes were of wood and al-

Apparatus for Imitating the Smoke.

lowed of the spreading of the steam, which soon filled all the parts beneath the stage. They are now made of galvanized iron, and leakages are impossible.

This new method of producing the illusion of a fire is not the only innovation made at the opera-house apropos of the Magian, says a Paris writer. The method of imitating thunder has also been improved. In the third or mountain act, we see a terrible storm, the lightning flashes of which are as vivid and blinding as those observed in nature. They are produced in a very simple way, and are due to the sudden combustion, upon a highly heated grille, of a mixture of three parts of magnesium in powder and one part of chlorate of potash (Fig. 2). It is a similar process that is employed by photographers for taking instantaneous pictures at night. Combined with the flames of lycopodium, these magnesian flashes produce surprising effects of realism and far exceed anything that can be obtained in this direction with the electric spark.

The Weather Bureau.

The signal service corps of the army was relieved, on July 1, according to the provisions of an act of Congress, of the duty of furnishing the public with the daily weather reports, and this work was turned over to the Department of Agriculture. Gen. Greeley is succeeded as chief of the Bureau by Prof. Mark W. Harrington, professor of astronomy in the University of Michigan, at Ann Arbor, and editor of the American Meteorological Journal. He is about 43 years old, and is regarded as an accomplished student of meteorology and climate problems. He has had considerable correspondence with the department about climatic matters in relation to agriculture, having prepared a bulletin on the subject, which is about to be published by the forestry division of the department. The intention of Congress in making the change was that the work of the weather bureau might be extended beyond its present scope in every way where such enlargement could possibly be of benefit to our agricultural interests. Secretary Rusk says the work of the meteorological service of the United States government must go far beyond the mere forecasting of the weather, and be so extended as to include a thorough systematic investigation into the climatic conditions of the various sections of the country, in order that a full knowledge of them and of their effects upon plant growth should be available for the farmers.

Government Note Paper.

Anybody who wishes can go into the big Crane & Co's factory at Dalton, Mass., and see the workmen place the blue silk on the machine that makes paper for all the United States notes. The silk comes in spools, and is made by Belding, of Northampton. It is sold in Bangor. There is no more secret about it than there is about the water flowing over the dam above the toll bridge. The real secret is in the composition of the paper. The silk thread idea is secured by patent, to be sure, but the making of the paper, the compound of the ingredients, is safe in the head of J. Murray Crane, who received the art from his father, who made bonds for Salmon P. Chase, Lincoln's Secretary of the Treasury, away back in war times. The pure linen pulp is in a big room, looking for all the world like any linen pulp. Then comes J. Murray Crane with a gripsack. He and the "grip" enter the room together, and it is presumed that he locks the door, for the door is locked on the inside, and the "grip" does not seem able to do it. They are closeted a half an hour. When they come out the pulp goes to the paper machine, and Mr. Crane and the grip go home. But the pulp is changed by that visit, and nobody has been able to penetrate the Crane secret. The company gets about fifty times as much for that paper as for other linen paper made in the same mill.

A Power Hack Saw.

A powerful little machine for sawing steel and other metal bars is manufactured by the Millers Falls company, of New York city, and is adapted to be run by a belt. One saw blade used in this machine will do much more work than one used by hand, as the speed and pressure are regulated and uniform. We have seen a steel bar five inches in diameter that was cut quite clean by this machine. It may be used for cutting railroad rails. The machine runs at the rate of forty strokes a minute, and does its work without attention.

THROUGH THE FLUME.

Ancient History Helped out the Miners.

THE EXAMPLE SET BY CYRUS THE GREAT.

Tons of Silver Ore However, Instead of a City, at Stake.

There were gathered in the lobby of the Windsor hotel a number of engineers and mining superintendents. As is frequently the case, there was a good deal of talk of shop. Among the number present were men who had been working, at one time or another, in nearly every prominent silver camp in the United States. The climax, however, was reached when one of the mining men showed how a knowledge of ancient history once came into play and paid a man exceedingly well.

"Of course," he said, "you have all heard of the Pelican and the Dives mines at Georgetown, and know that there has been very rich ore taken from these claims. There was a dispute between the owners of the claims. The Dives used to keep its ore and have it all sampled Sunday. The idea was that no civil process could be served Sunday, and by getting the ore down and sampled that day there was no chance for their opponents to do anything. Of course, after the ore was sampled, no one could swear to its identity when removed from the sampler, and so it was safe the rest of the week.

"The Dives people aimed to ship down about 100 tons each Sunday, this amount of ore being valued at about $50,000. Mr. Schneider, the banker, who was afterward shot, was the owner of the Pelican and was anxious to get even with the Dives people in any way possible.

"One day he told one of the miners around Georgetown that he could have all the ore that he could get from the Dives people, and that he would purchase the same at full value at the Pelican mill.

"The bargain certainly gave no one a legal title to the ore thus to be obtained, and as to the moral aspects of the question I suppose that didn't bother any one of them. The law certainly would have looked upon ore taken from the Dives people under this arrangement as stolen ore.

"The miner with whom the arrangement had been made had for some time had some low grade ore in sacks in one of the bins of the Foster sampler, a mill about half a mile above the sampler where the ore of the Dives people was sampled. One evening, after he had made arrangements with a couple of friends, he went to Mr. Foster, after the latter had locked up his sampler, and asked him for the key of the mill, as he wanted to get the sacks holding the low grade ore stacked in the mill. Mr. Foster, of course, had no objection and handed over the key.

"During the night there came along a wagon loaded with ore picked out at the Dives mine by one who knew the grade of the ore. It was dropped on the hill and the two men packed the ore in the Foster sampler. The ore was put in the sacks which formerly held the low grade galena ore. It was impossible to take away the ore that night, so it was left, with the hope that Mr. Foster would not notice anything out of the way. But when the next night it was noticed by the two conspirators that a brand new lock was placed on the door of the mill, and that all the windows had been firmly fastened down, they needed no one to tell them that Mr. Foster wanted an explanation of how worthless galena ore had suddenly become ore running 500 ounces in silver.

"The two conspirators sneaked around the mill, hunting for an unguarded place, but every point was locked, no door opened, no window was unshut. To break in meant burglary, and burglary means Canyon City for a term, if discovered. So what to do became the question.

"Here came in the advantage of reading. Says the one to the other, 'Have you ever read any ancient history?' 'No,' was the reply, 'and what good would it be here?' 'Well, if you had, you would know how to solve the problem of entering this mill without breaking it. Cyrus entered Babylon by turning the river that flowed beneath the walls of the city and entered by the way thus opened. We must do the same with the water running through the flume entering the mill, and thus enter without breaking through the wall or through the roof.'

"It wasn't much of a job to turn the water of the flume at the headgate, and in a few minutes the flume was dry. Here was a good pathway leading into the mill, and nothing needed to be broken or in any way injured.

"It wasn't very long before our two conspirators were in the mill and were moving the sacks with the rich ore, about which Mr. Foster was so particular and anxious to learn something.

"The time at command did not allow of carrying the ore entirely away. Not only that, but it was not safe to handle just that class of ore immediately, for, at the least, it meant a cutting of a good deal of the profit of the job. Here again the flume and its supply of water came in handy. The sacks with the ore were dropped over the tail flume, and as soon as the water was turned on there was a veil of water hiding all that wealth hidden behind it.

"When the conspirators had moved all the ore they returned by the way they had come, again turned on the water, and then nothing on the outside showed that the mill no longer held the ore it once did. When the doors were opened in the morning everything was found as usual, except that the ore, to guard which all the paddocks and nails and screws had been brought into requisition, was gone.

"In due time the ore was removed from beneath its curtain of water, brought to the Pelican sampler and sold. It ran 476 ounces in silver to every ton, and as there was a little more than five tons, it can be readily calculated that good pay was received for the sleep lost at night."—Denver News.

A FLEET FORTY-SIXER.

The Beatrice's Brilliant Achievements at Marblehead, Mass.

The forty-six footer Beatrice has jumped into sudden notoriety as a result of her recent achievements and splendid victory at Marblehead bay. The race with the Oweenee was the finest exhibition of sailing seen on the course for many a day.

It was a royal battle all day. Capt. Barr clung like a bull-dog to the Beatrice, and never weakened an instant. Do what he would Capt. Crocker could only maintain his lead on the windward work. At one time the Beatrice would gain a few lengths, but soon the Oweenee would make a spurt and gain

it back. The closeness of the sailing is shown by the fact that there were but 11 seconds of difference in the sailing of the two cracks in the long beat from Nahant to Minot's. On the last reach in from Nahant to the finish the wind freshened, and the Beatrice plainly showed her superiority, as she carried her sail splendidly and dropped the keel boat steadily. The Beatrice won the race finally by the small margin of 2m. 42s. It was a case where the start was almost worth the race, and if the Oweenee had got off in the lead it might have resulted in a dead heat.

A BEAUTIFUL CUP.

It Will Prove a Stimulus to Atlantic Yachtsmen.

The yacht which wins the Manhattan Athletic club cup will carry off the handsomest prize of the year. Few know probably that there is a club within a club in the palatial club-house of the Manhattan Athletic Club, says a New York correspondent, but such is the case none the less. Early this last spring, just after the club had taken possession of its new home, and when things M. A. C.-ward generally were booming, the idea of merging the yachting department into a club was suggested, and eventually carried out. The result is the Cherry Diamond Yacht club, with an encouraging membership and a good sized fleet. To J. C. Summers more than any other one man in the club is due the credit of the yachting activity, and finally the offering of this beautiful cup recently finished. He is commodore of the fleet, and aside from having suggested this cup, has practically made the club itself a possibility. The conditions for this gold challenge cup, valued at $500, and the first gold cup ever offered for a yacht-

race in this country, are that there shall be three races each season between the yachts of the 46-foot class, the cup becoming the property of the one winning three times—not necessarily in the same year, of course.

TO YACHTSMEN.

An Important Decision by the Treasury Department.

American yachtsmen will be interested in a test case which was begun in the United States District court in New York the other day. United States District Attorney Edward Mitchell has filed a libel suit against the schooner yacht Miranda, owned by H. B. Hill of New York, for $43.35 "light money." It is the first time such a suit has ever been instituted against a pleasure yacht built abroad and owned by an American, and is the outcome of the trouble over the Vanderbilt yacht Conqueror. Should the suit prove successful it is quite certain that American owners of foreign-built yachts will hasten to get rid of their costly purchases, for even the richest among them would find the payment of light money too great a burden to be long borne. One gratifying result, however, would be that our yachtsmen would buy their boats from American builders, instead of making their purchases abroad. The complaint sets forth that the Miranda was built at Wivenhoe, England, and is 84.69 tons. She was transferred by Albert John Pritchard, of South Kensington, on Aug. 34, 1886, to Mr. Hill, and the sale was recorded by Thomas J. Dunn, Deputy Collector of Customs, of this city. The suit is brought under Section 4,225 of the revised statutes of the United States.

The Wheel.

Aug. 20, 21—New York State Division, L. A. W., meet, Rochester.

Aug. 29—Montreal (Can.) Bicycle club annual meet and races.

Sept. 8, 9—Annual tournament at Hartfort, Conn.

Sept. 10, 11—Springfield Bicycle club tournament, Hampden Park, Springfield, Mass.

MEXICAN PASTIMES.

The National Amusement of Bull Fighting.

CIRCUS AND MARIONETTE PERFORMANCES

Trifling Pleasures and Flirtations of an Evening Promenade.

If the English do, indeed, "take their pleasures sadly," then the Mexicans must have somewhat of a relationship with the former named nation, for these last, notwithstanding the vast amount of vivacious description expended upon their impulsive, passionate nature and fiery impetuosity of behavior, maintain their native reserve and melancholy in their diversions as consistently as if it were an actual sin, or worse yet, a breach of educacion (that is, good form, good breeding) to display enthusiasm over any matter whatsoever.

The simplest form of social gathering is that variously known, according to the section, as retreta, or serenata, a sort of open air reunion, or promenade concert, on the main plaza usually, at which the people gather "to hear the lily white bandsmen play." Every Mexican city, town, village or hamlet, above the limits of a rancho—indeed, often the haciendas, even—has at least one plaza or open square for public use. The larger towns and cities have a dozen or twenty. These plazas range from the bare, dusty and unadorned open space in the village, through various grades of setteed and tree planted perimeter to the great zocalo or plaza de armas of the capital city, with its smoothly rolled walks, its grass and flower plots, its great trees, its smart iron benches, its fountains and columns, which were surmounted by statues before they were annexed by an æsthetic minded chief magistrate (according to the gossips), its electric lights and the pretentious pavilion for the musicians who play there thrice a week.

Likewise, in the minor cities, on from one to two nights weekly, usually Sundays and Thursdays, sweet music is discoursed by the really good bands, one of which is pretty sure to be stationed in every garrison town, at least. To this levee al fresco flock the ninas and the lagartijos—the damsels and the dandies—mesdemoiselles nestling coyly beneath the wing of mother or some other relative.

Most towns in Mexico have an alamoda, or species of boulevard; and here, also, once or twice a week—in the national capital daily—there is music and a parade more formal and more dressy than that on the plaza, and people promenade and drive during the appointed hours.

The lowest in importance of Mexico's amusements proper are the titeres—a marionette performance—and in many towns this is the only public diversion. To those centers of population which seem to offer sufficient inducements comes the circus—the great American circus—on its yearly tour through the provinces during the off season in Mexico city. The larger towns are visited with more or less frequency by theatre companies, according to the distance from the metropolis and facilities for transportation, the accommodations offered by the local theatre building, the wealth of the community and the propensity of the citizens for pleasure. Most of the larger towns, particularly the capitals, have well arranged theatres, fairly well patronized, though first class troupes are rarely seen outside the national capital and a few of the larger cities near by, such as Puebla, Vera Cruz, etc.

Even balls, or tertulias (dancing parties), would seem tame, "weary, stale, flat and unprofitable" to the youth of the United States prone to seek sequestered nooks in conservatories and coigns of vantage on staircases, wherein to exchange speeches more or less confidential and sentimental. Such a procedure would be social ruin to a Mexican girl. The unwritten law demands that the women at a ball be ranged severely together on one side of the room, the men on the other. The music begins for a dance, the men "make a break" for their partners. The piece over, the ladies are restored to their chaperones.

While bull fights may really be called the great national amusement in Mexico, it must not be supposed that public opinion on this subject is undivided. The champions of bull fighting are very enthusiastic, but its opponents are numerous and vehement enough to delight the hearts of the Society for the Prevention of Cruelty people. Occasionally a corrida de toros is organized by amateurs for purposes of beneficence, and then the press loads the unhappy projectors with censure and satire. While many high caste Mexicans undoubtedly delight in this sport, a very large number regard it with abhorrence, and the Mexican ladies almost always express against it disapproval, fear and horror.

The pelea de gallos, or cock fight, is a much more brutal and sickening show than a bull fight. It is a most vicious sport, too, in the way of gambling, enormous sums being staked on the issue of these combats. The greatest attention is paid to the breeding, rearing and care of the game cocks, and animals of noted record are conveyed between distant towns of the republic to engage in these contests.

Lectures, concerts, etc., are rare, and poorly patronized in Mexico. Parlor games are little followed on the plateau, but more common in the "warm lands," where, indeed, life in every respect assumes a brighter, gayer aspect under tropical influences. Ladies ride little, though equestrian exercise is creeping in to some extent, chiefly through the influence of foreigners. Mexican men, of course, almost all ride surpassingly well. Drives in Mexico are a formal and stupid matter, consisting of monotonous turns on the Alameda boulevard. Picnics, lawn parties, tennis, croquet and many other amusements dear to the Anglo-Saxon heart, are almost unknown in Mexico, due to the aforesaid social restrictions, which also sorely hamper the line of evening calls, etc. Rinking and baseball begin to be known in sections affected by American contact, but it will be long ere the youth of Mexico enjoys an adequate share of amusement.—Y. H. Addis in San Francisco Chronicle.

The biggest raft ever made consists of 3,500,000 feet of timber and it has just been towed from New Brunswick to New York.

PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 25 ..... 1891.

There is much talk in San Francisco of resisting the recent raise in the assessment roll by the people of that city and county. As the state board is expressly endowed with this power, which is recently exercised, by the Constitution of California, it is difficult to see just how this can be done.

A frightful state of affairs exists in the famine stricken provinces of Russia. It is reported that men commit crimes in order to get imprisoned and thus escape starvation, and that in the desperation of hunger people attack soldiers who are guarding the transport of grain and other food. Some relief is attempted by the authorities but the government seems to be doing little or nothing to relieve the distress. The Czar is paternal chiefly in respect to exacting military service and the most unquestioning obedience from his subjects. But when they cry for bread he gives them a stone.

The Chileans have not made the mistake of repudiating the paper money issued by Balmaceda. Of course much of it was uttered to help suppress the Congressional party, but now that the latter is on top it must bear in mind the fact that the Balmaceda Government, although obnoxious to them, was the regularly established Government of Chile, and as such the integrity of its promises must be maintained. Any other course would give a great shock to confidence, for the outside world would naturally argue that if the Congressionalists could so easily repudiate the obligations of their predecessors some one might come after them who might refuse to redeem their promises.

From present indications politics is the rock on which the Farmers' Alliance ship will go to pieces. Instead of confining themselves to one or two great issues the Alliance appears to have undertaken a universal crusade against everybody and everything, its objective point being the securing of federal offices, from the President of United States down. Naturally, with such a programme, the farmers will fall easy victims to the shrewd and wily politicians, who have been trained to the business. The contest is entirely unequal. It is raw militia against veterans, and the chances are a hundred to one in favor of the latter. Then, too, the Alliance is not harmonious. One state wants one thing and another state another thing; personal quarrels and differences crop up; local ambitions demand to be satisfied and local jealousies are destructive of unity. The Alliance will probably put a ticket in the field next year, but as matters look now it will not poll one fifth of the vote of the Alliance itself

The recent decision of a judge at Detroit that Chinese coming into the United States from Canada can be sent back only to Canada under the Exclusion and Restriction acts, and not to China, cannot be accepted as the proper exposition of those acts—at least not until the question has been decided by the Supreme Court of the United States. The purpose, and the only purpose of those acts is to keep Chinese out of this country. To carry out that purpose it was provided that Chinese coming into the country illegally should be returned to the country whence they came. That country is evidently China, and not Canada, through which they have merely passed en route to the United States, because they were not allowed to come here directly. If this decision were the law the Exclusion act would be entirely nullified. The Chinaman who is sent back across the border simply finds another unguarded place on the 3000-mile frontier line and smuggles himself in, and then if caught and sent back a second time he tries it again until he at last escapes detection and makes good his residence in this country. It would be quite as reasonable to say that a man coming overland from New York and who stops over a day at Salt Lake City should be judiciously decided to have come from Utah, as to hold that a Chinaman who skips through British Columbia into the United States should be held to have come from that province. The pretense is very fine for the Chinamen and for the Americans who are engaged in the business of smuggling them in, but it will not do to have the anti-Chinese legislation done to death in such a way. California worked too hard and too long to secure it to stand idly by and see it nullified by a judge who certainly did not understand the question at issue.

A CAVE IN THE WOODS.

A NEATLY CONSTRUCTED DWELLING WITHOUT A TENANT.

A Cave That Was Probably the Haunt of a Sneak Thief—Evidences That Show the Builder to Have Been a Skillful Mechanic—Contents of the Hut.

Saxton's swamp has its head in the woods between Islip and Brentwood. Whortleberries are plentiful in the vicinity. George L. Benjamin and Alexander Combs were roaming carelessly about in the vicinity and made a discovery that interested the town not a little. They saw smoke curling up as if out of the ground and began an investigation. They found a fire and a kettle over it in which beans, potatoes and chicken were simmering. There was no one visible in the vicinity.

The boys went to Bay Shore and spread the news, and a score or more of men went to the woods to see the surprising sight. They concluded in advance that the swamp was a thieves' den, and some of the men carried guns, others revolvers and a few hayforks. They found the simmering pot and the fire almost out. For the fun of the thing the men began playing robber, and several shots were fired as part of the pantomime. They had reason to conclude later that this was a mistake, for it served as a signal to the occupant of a cave in the woods to make himself scarce. A man with a pitchfork kept jabbing it into the earth and detected a hollow spot.

A little digging threw a large sheet iron tray up from under the leaves and left exposed a hole about two feet square. It had wooden sides leveled so that the tray set in snugly. Over the tray were leaves, grass and brush, in keeping with the surroundings. Through a hole in the tray was run a piece of telegraph wire, and at each end of the wire was fastened a nicely rounded stick which served as a handle to lift up the tray on the outside and pull it down on the inside. The hole in the earth was four feet deep and eight feet long under the ground, forming an alleyway.

CONTENTS OF THE CAVE.

The earth had been carefully cut out and must have been carted away, as no evidence of it could be found in the vicinity. There could not have been less than several wagon loads of it. At the end of the alleyway there was a depression of two feet, running a distance of six feet and being five feet wide. The roof was six feet high. This was the bedroom. It had a bunk on each side filled with leaves and grass and both had been slept in. The walls were lined with logs, and the ceiling, so to speak, was covered with muslin.

There were two closets and several brackets and a fireplace at one end, with a capped pipe running up to the top, which could be raised for use and lowered at will, to prevent detection. Five tin gutter pipes were so arranged as to admit light and air and enable the occupant to observe what was going on about him in the woods. On one side of the passage a post was driven down and into it a staple had been bolted, to which was attached a trace chain. It was a mystery what use could have been made of this, and the belief is that it was used to keep some person a prisoner at some time.

The cavern had undoubtedly been inhabited up to within a few hours, and if the men who went out to see a sight had not made fools of themselves instead of watching the hole in the ground they would undoubtedly have discovered the tenant of the queer abode and perhaps made an important discovery.

A tub in the farthest west corner of the cavern contained salt pork, and sliced chicken meat had been put into the brine to pickle. A silver spoon was found marked "The Austral." It was probably stolen from the Austral hotel, at Brentwood. Among other things were a muslin shirt, a flannel shirt and a pair of lawn tennis shoes, which are supposed to be the ones stolen from Mr. William M. Van Anden's house.

EVIDENCES OF ROBBERY.

No evidence was found that the cave dweller committed the robbery in the house of Mr. Gibb. A copy of the Bay Shore Journal was pinned up against the wall with a mark drawn around an advertisement offering $250 reward for the arrest of the butcher who killed John H. Vail's cow and carried away a part of the meat. Fastened to the paper was a slip giving an account of the robbery in Mr. Van Anden's house. Copies of city papers were strewn about. The cave, it could be seen, had been occupied for a considerable time. It was constructed by a good mechanic.

It may be interesting to state that soon after Mr. Vail's cow had been killed by a thief, who was in need of meat, a hog was killed in a pen on the premises of Mr. Marvin and the hams carried away. A few nights later a dozen chickens were stolen from Justice Clock. The thief cut their heads off and threw them on the justice's back stoop.

A colored man known as "Long Steve," otherwise Stephen Green, was arrested for stealing Mr. Marvin's hog and incidentally he was suspected of committing the other crimes. The proof against him did not positively establish his guilt, although a boy who lived with him accused him, but he had so bad a reputation that Justice Clock came to the conclusion that the public welfare required him to be incarcerated, and he was committed to the county jail at Riverhead.

Notwithstanding there have been no robberies since Green was deprived of his liberty—a circumstance which was thought pretty clearly to establish his guilt—the people are now wondering whether, after all, the dweller in the cave was not the real culprit. He was not Green, that is certain.—Brooklyn Eagle.

A Cold Day.

Gentleman (on railway train)—Pardon me, madam; is this seat beside you engaged?"

Lady (distantly)—I presume I can remove my satchel and bundles and make room; but the three seats behind me are entirely unoccupied.

Gentleman—Yes, madam. Your open window is in front of them.—New York Weekly.

A One Sided Contract.

The Hon. Benjamin H. Field was relating the other day how he induced his son to abstain from chewing tobacco. "When my boy was at college," said Mr. Field, "I agreed to pay for all of the cigars he might smoke, provided he would not chew tobacco. He entered into the agreement, and although that was several years ago he still holds me to the contract."—New York Times.

SO, MOON, DON'T TELL.

O Moon! did you see
My lover and me
In the valley beneath the sycamore tree?
Whatever befell
O Moon! don't tell;
'Twas nothing amiss, you know very well.

O Moon! you know,
Long years ago
You left the sky and descended below
Of a summer night
By your own sweet light;
You met your Endymion on Patmos' height—

And there, O Moon!
You gave him a boon
You wouldn't, I'm sure, have granted at noon.
'Twas nothing amiss,
Being only the bliss
Of giving—and taking—an innocent kiss!

Some churlish lout,
Who was spying about,
Went off and babbled, and so it got out;
But for all the gold
The sea could hold,
O Moon! I wouldn't have gone and told!

So, Moon, don't tell
Whatever befell
My lover and me in the leafy dell.
He is honest and true,
And, remember, too,
He only behaved like your lover and you!
—New York Truth.

Minneapolis Larger Than Paris.

The existing Paris covers 19,275 acres, or about thirty square miles, while metropolitan London, with 4,000,000 population, contains 118 square miles, and Chicago provides an area about as extensive for 1,100,000. The average distance from the center of Paris to the circumference is only three miles. Minneapolis, with only 165,000 people, has a municipal area more than twice as large as that of Paris. Almost the entire population of Paris is housed in the flats of tenement structures averaging from four to five stories in height.

According to the revised figures of the census of 1886 there were nearly 75,000 houses in Paris, and the average number of people in a house was about thirty. In the old arrondissements of the inner Paris there are probably about 30,000 houses, accommodating about 1,000,000 people.

For a total contrast in the plan of house construction we have only to cross the channel and to examine London, where we find an average of about eight persons to a house for the whole metropolis. But the people of Paris are better housed, all things considered, than those of London. A population of 2,500,000 within a circle whose radius is only three miles is certainly very dense, but it must be remembered that Paris is a many storied city.—Dr. Albert Shaw in Century.

Sighs on Bridges.

The front stoop offers facilities for courtship, and among the young people of Brooklyn the front stoop is a popular summer institution. The Brooklyn bridge is a bridge of sighs. It is the high bridges over the Central tracks in upper New York, however, that are most ardently worked for this purpose.

An evening stroll that takes the observer over one of these bridges will show dozens of couples leaning against the rails and apparently investigating the myriad tracks and colored signal lights and passing trains below. A manly arm will be withdrawn from a slender waist as you pass, to be stealthily slipped back again within the moment. The skirmish of hearts is going on there while you are asleep or at the theater. It is the engagement ground of the poor and lowly who live in tenements and have no front gate and no doorsteps. For them the bridge on these warm nights is a dish of ice cream with two spoons in it.—New York Herald.

All on Account of a Dog.

A devoted husband who was lately asked after the health of a dog by a friend who had presented it to his wife exclaimed: "De dog! De dog! You question me about dat dog! De dog is vell enoof! Mein vife, she vant to go to Saratoga, unt she take the dog mit her, unt ven she take him into de car de conductor he object! Unt vot my vife do? She ride in de baggage car all de way from New York to Saratoga mit dat dog! Unt ven ve go to de hotel de proprietaire he say, 'Ve take no dogs here!' but he make me pay for my room vot is engaged! Unt we go to some other hotel. De same vords, 'Ve take no dogs here!' Unt my vife, who like always de best, she go into a cheap boarding house and make herself so uncomfortable for dat dog! You tink somebody shoot him by mistake? I vill gif one huntert follars to someboty if he shoot dat dog by mistake! Dat dog! You question me about dat dog!—New York Times.

How to Get Ink Out of Clothes.

Nearly every housekeeper has many garments spotted with ink. Here is a good way to get the ink out. Ink spots may be removed from linen with tartaric acid while wet. To remove ink from cotton, silk or woolen goods, saturate the spot with spirits of turpentine and let it remain several hours; then rub between the hands. It will crumble away without injuring the color or texture of the article.—New York Journal.

Velocity of Meteorites.

The singular fact has been demonstrated that, while the most rapid velocity of cannon balls scarcely ever attain a speed of 600 meters a second—about 1,500 miles per hour—meteorites are known to permeate the air with a velocity of 40,000 or even 60,000 meters per second. This unthinkable speed instantly raises the temperature of the air to 4,000 or 6,000 degrees centigrade.—St. Louis Republic.

A New Antiseptic Agent.

A new antiseptic agent called microcidine, which is composed of 75 per cent. of naphtholate of sodium and 25 per cent. of naphthol and phenyl compounds, has been tried in France. It is a white powder, soluble in three parts of water. The solution, which is cheap, is said to be a very effective antiseptic, without being poisonous or caustic or injurious to instruments or linen. Its antiseptic properties are inferior to those of corrosive sublimate or napthol, but surpass those of carbolic and boracic acids ten and twenty times respectively. The solution has given excellent results in dressing wounds.—St. Louis Globe-Democrat.

The prize fish liar of 1891 is a Dexter man who says the mosquitoes were so thick and so fierce that they ate all the worms off his hook before he could drop it into the water.

A tornado at Trenton, Ga., carried off the roof of a house, leaving a sick man in his bed unharmed but shelterless. His neighbors at once built a temporary shelter over him.

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

These are irrigating ditches on each division of forty acres, and the tract reaches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,
C. MULHOLLAND,
Independence.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of John A. Hannah deceased.

Notice for publication of time appointed for probate of will.

Notice is hereby given that Saturday, the 26th day of October, A. D. 1891 at 10 o'clock a. m. of said day, and the Court room of said Court, at the town of Independence in the County of Inyo, State of California, have been appointed as the time and place for proving the will of said John A. Hannah, deceased, and for hearing the application of W. L. Hannah for the issuance to him of Letters of Administration with the will annexed thereon.

J. N. YANDELL, Clerk.
P. W. FORBES, Attorney for Petitioner.
Dated Sept. 25th, 1891.

DESERT LAND FINAL PROOF

D. E. No. 571.

LAND OFFICE AT INDEPENDENCE, CAL. September 9, 1891.

Notice is hereby given that Maggie S. Clark, of Independence, Inyo Co., Cal. for 1, has filed notice of intention to make final proof on her desert land claim No. 571 for the N W ¼ of S W ¼ Sec. 11, Tp. 11 S., R. 34 E., M. D. M., before the Register and Receiver at Independence, Cal., on Thursday, the 22d day of October, 1891.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Innes and Norman L. Conklin, all of Independence, Inyo County, Cal.

C. W. CRAIG, Register.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 1st day of August, 1891, an assessment (No. 4) of Two (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 13 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.
G. W. LUCE, Secretary.
Office, 137 Montgomery street, San Francisco, California.

DESERT LAND FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL. Sept. 31, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Sec 1 on No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

NOTCE TO CREDITORS.

Estate of FRANCISCO PADERES, Deceased.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, in Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGNACIA ABE BUCO.
Administratrix of the estate of Francisco Paderes, deceased.
Dated at Independence, Cal. July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence Cal.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo

Dated July 24th 1891.

WM. F MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL
TYPE WRITER.
$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.
It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine, Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.
Reliable Agents and Salesmen wanted. Special inducements to Dealers.
For Pamphlet giving Indorsements, &c., address

Sunday School at Lone Pine at 10 a. m.; Independence 2:00 p. m.

COURT NOTES.

Geo. M. Gill, Superior Judge.

FRIDAY, September 18, 1891.

Reddy vs. estate of Eddy—Clerk's entry of default as to Joseph and Herman Waterman, two of Defendant's.

Estate of John A. Hannah, deceased—Filed will and petition for probate thereon.

Fred Hodbert has returned from Los Angeles.

John Lubken of Lone Pine was in town last Saturday.

A very favorable report comes from the Modock mines this week.

Mrs. J. D. Blair and Miss Maud Cook are visiting at Hawthorne.

S. P. McKnight C. E. is engaged in surveying roads on the Eastside.

Don't fail to secure reserved seat tickets for "Rebecca's Triumph" immediately. For sale at J. E. Dunlap's.

Meetings of the Stevens Ditch Company and the Lone Pine Canal Company will be held at Independence to-morrow.

L. McLean went to Bishop on Wednesday to to take charge of work that is being done by the Hillside Canal Company.

Independence takes the plum as a peaceable community. There is not a judge, justice of peace nor lawyer in the town.

P. H Mack Esq., started for San Francisco on Wednesday going by way of Mojave. He expects to be absent about three weeks.

Ben Williams has been visiting Independence during the past week. He expects to take in the fair at Bishop before returning to Modock.

The C. and C. railroad has placed rates to the fairs at Reno, Carson and Bishop at very low figures. No reason for anybody staying home.

On Wednesday afternoon P. W. Forbes received a telegram stating that his sister was dangerously ill at Los Angeles. He started at once to join her, going by stage via Mojave.

The regular meeting of the Board of Supervisors will begin on Monday, Oct. 5 and not next Monday, as our contemporary states. Little mistakes like this might lead to serious inconvenience.

Tom Webb came down from Long Valley last Friday. He reports a prosperous season among cattle owners. He says that the cattle will be moved out of Long Valley about the 15th of October.

Felix Meysan came down from Round Valley last Tuesday. He has been prospecting a ledge of lead ore near there for some time past and reports about thirty tons of ore in the dump. He returned Wednesday, John Parish accompanying him.

The best music in the State of Nevada has been secured by the Directors for the Fair Ball at Bishop. It is Tom Cara's famous Virginia City band which was engaged and furnished music at the pavilion for the Nevada State Fair at Reno.

The Reno State Fair, which takes place this week, is the biggest affair of the kind ever held in the State of Nevada. The management have had the business sense to make known their attraction to the people through the newspapers. Merit, accompanied by judicious advertising, wins.

J. W. Robinson came down from Carson last Friday. He prepared a very nice selection of vegetables, corn etc. from his 8-acre ranch and shipped it to Carson for exhibition at the Ormsby county fair. It is just such enterprise as this that shows to the world what can be done in Inyo county.

There is a fatal disease again prevalent among stock. So far it has been confined to young colts, and several have died. J. C Irwin lost a fine filly colt by Albenton, and Mike Maddon lost another by the same horse. It is to be hoped that the coming of cold weather will check the spread of the disease.

The weather clerk managed to give us a snowstorm last Tuesday evening—the first one of the season. It came just about a month earlier than the first storm of last winter, and now our local weather sharps look wise and solemnly declare that the coming winter will be a long and severe one. We shall see.—*Bodie Miner.*

A man named Louis Ortiz was hanged by a mob at Reno last Saturday morning. He was in the habit of getting on drunks and shooting a pistol promiscuously. He got on a "jam" last Friday night and turned his gun loose, injuring one man slightly and wounding officer Dick Nash, it is supposed mortally. He richly deserved the fate he met.

Recently Billy Boyd and Jake Pfohl returned from a trip to the Greenhorn Mountain country where they had been to test the efficacy of certain mineral springs. They were greatly benefited by using the water and reported so favorably that last Monday John Baxter, John McSweeny and Martin Mee started for the same place. They expect to be gone about a month.

St. Patrick's Pills are carefully prepared from the best material and according to the most approved formula, and are the most perfect cathartic and liver pill that can be produced. We sell them

A. K. EUGLEY
Big Pine.

J. G. Bone, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhoea Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY, Big Pine.

PIKE COUNTY ASTRONOMY.

God bless the dear old miner, who works
down under ground,
And took his children out of school becase the
world was round.
For he who'd teach sich doggoned trash is
seaseless as a rat;
My dad, in old Missoury, teached me that it
was flat.

And while I'm diggin' in this hole, and on this
boulder pound,
I know I felt them pillars shake; they wouldn't
if 'twas round.
To prove I'm right, dear children, I'll stick
that punkin on a post,
'Twill be thar in the mornin' if 'taint bucked
off by a ghost.

don't believe in part young gals runnin' the
streets in silks;
They'd look better in their homespun, helpin'
mar to milk.
Nor see them traipsin' off to church just fur to
make a show;
They'd better tu act like mar did, some forty
years ago.

Now, gals, while diggin' in this hole a-workin'
to earn your bread.
If that durned teacher comes around you'd
orter bust his head.
If you-uns wuz to marry him you'd sartin be a
flirt;
He eats such grub as codfish balls and sleeps
in a long-tailed shirt.

MILES CADOGAN.

Race Entries

Following is the list of races and entries for the fair at Bishop next week:

SEPTEMBER 29th.—Trotting, mile and repeat, 2 year-olds raised in district, purse $100. N. C. Young names Black Bart; J. M. Horton, Jack; R. W. Scott, Ben Benton. Running, ½ mile and repeat for three-year-olds raised in district, purse $75. Leslie Horton names Black colt; Charles Dixon, Queen; Charles Williams, Stockings; A. L. Conklin, 19½.

SEPTEMBER 30th.—Running, ¼ mile dash free for all, $50. J. M. Horton, names Butler; Ed. Rose, Bronco, ——to be filled. Trotting, mile and repeat, for untried horses raised in district, $100. C. M. Dixon names Bay Dexter; Stoutenborough, June; J. G. W. Birchim, Pete; I. H. Mulholland, Inyo.

OCTOBER 1st:—Running, ½ mile and repeat for horses owned six months in district, $75. S. P. Smith names Pickpocket; Leslie Horton, Black Colt; C. Williams, Billy G.; Ed. Rose, bronco. Trotting, mile and repeat, 3 minute class, $100 S. P. Smith names Antare; J. G. W. Birchim, Pete; I. H. Mulholland, Inyo.

OCTOBER 2nd:—Trotting, mile heats 3 in 5, for stallions owned in district, $150. A. H. Allen names Andy; Conklin Bros., Mt. Vernon Prince; S P. Smith, Antare; N. C. Young, Truckee Jr. Running, mile dash, free for all, $100. S. P. Smith names Pickpocket; Leslie Horton, Black Colt; C. Williams, Billy G.; Ed Rose, Bronco.

Grand Fair Ball.

The Virginia City String Band under the leadership of Prof. Thos. Cara has been secured for the District Fair Dance. This will be unquestionably the best music ever heard in the county and makes the success of the Ball doubly sure. The premiums to be awarded to the best dancers is a new and novel feature and is sure to attract the best dancers. A committee of judges will be selected from the spectators, and a decision rendered at the dance immediately preceding supper. The awards will be made with impartiality, grace, motion and general appearance of the dancers to be considered. The directors are desirous of making this, the fifth Annual Fair Ball, one long to be remembered, and no effort or expense will be spared to make it a grand success. The badges for the Floor committee are in themselves a feature of beauty and are now on exhibition at Cohn's store. The success of this affair is sure to be a pleasant wind up of a glorious week, and the committee extends to all a cordial invitation.

Big Pine Correspondence.

BIG PINE, Sept. 22, 1891.

ED. INDEPENDENT:—Early this morning John Irwin arrived from Deep Spring Valley bringing sad news from one of the old settlers of Owens Valley. Mr. A. G. McAffee while on the road from Fish Lake to Big Pine was taken with severe illness at Mr. Gilbert's in Deep Spring Valley. Mr. and Mrs. George Hall left immediately for the valley, and George Hall Jr., son of Dan Hall, started at once for the doctor at Bishop. Word was at once sent also to Mrs. A. G. McAffee at her residence at Fish Lake Valley. Mr. A. G. McAffee is one of the leading citizens of the valley and has always shown himself honest and upright in all business matters. Their son, Addison McAffee, is the only child and dearly worshiped by his parents who have given him all the show in the world for an education Master Addison having been sent to the High school at Oakland by his parents a short time since. Mr. McAffee has many friends in this vicinity, all of whom wish him a happy issue from his illness.

VERITAS.

Mining Report.

OFFICE OF FRANK FITZGERALD,
MODOCK, Inyo Co., Cal.,
Sept. 18, 1891.

ED. INDEPENDENT:—South drift at main tunnel shows four feet of very rich ore and no doubt but that it is a bonanza. Since the 10th of December, 1890, this part of the mine has turned out $20,400 net ore sales, and the cost of mining etc. has been less than $10,000. During August two lots of ore were sold netting $5011. The only drawback is the scarcity of miners and laborers. Yours Truly,

F. FITZGERALD.

INDEPENDENCE
MEAT MARKET,

Notice.

All persons indebted to me are requested to come forward and settle before Oct. 17, 1891, as I intend to place all uncollected bills in the hands of my attorneys for collection on that day.

R. C. SPEAR.

Dated, Lone Pine, Sept. 17, 1891.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,
Chicago, Ill., U. S. A.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain,s Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. For sale by

A. K. EUGLEY,
Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by

A. K. EUGLEY,
Big Pine.

In the train

of diseases that follow a torpid liver and impure blood, nothing can take the place of Dr. Pierce's Golden Medical Discovery. Nothing will, after you have seen what it does. It prevents and cures by removing the cause. It invigorates the liver, purifies and enriches the blood, sharpens the appetite, improves digestion, and builds up both strength and flesh, when reduced below the standard of health. For Dyspepsia, "Liver Complaint," Scrofula, or any blood-taint it's a positive remedy. It acts as no other medicine does. For that reason, it's sold as no other medicine is. It's *guaranteed* to benefit or cure, or the money is refunded.

The Arabian year is a lunar one, and in the course of thirty-two years each month runs through all of the seasons.

J. B. Pace Tobacco Co., Richmond, Virginia

THE VIGIL OF ADAM.

Far in Asia, saith the legend,
On a peak whose nameless towers
Use the plains a hundred miles off
For their dial of the hours;

Where the tallest Himalaya
Rises sad because so lonely,
Whence the eagle swoops in terror,
And the stars of God are only;

Sitteth one of ancient visage,
One more strange than aught below him,
One who lived so near to God once,
That for man we scarce should know him;

Far above the busy world tribes,
Miles above the pine trees, bending,
Lonely as when God first made him,
There he keepeth watch unending.

—Dr. S. Weir Mitchell.

MR. MOUSER'S SAWBUCK.

Mr. Mouser and his merry little wife occupied a charming cottage in the suburbs of a large city in the "Fatherland." His business connections were of such a nature that he was usually at leisure after 4 o'clock in the afternoon.

Mr. Mouser prided himself on being a man of originality and brains. Mr. Mouser also liked a little joke, at other people's expense.

It was autumn. Mr. Mouser had just laid in a goodly supply of winter fuel. Wood was chiefly used for this purpose in the land of Mr. Mouser's birth.

Sitting by the window of his cozy living room, enjoying a royal smoke from the long stemmed porcelain pipe, Mr. Mouser watched the wood sawyer plying his trade, made easy by long habit of handling wood and saw. As Mr. Mouser gazed and pondered an idea crept into his head. It was grasped—as ideas quickly became captive there."

"Lizbeth," said he to his wife, "it is singular I never thought of it before—I generally think of such things—but it strikes me that I could saw that wood myself."

"Gracious! what an idea!"

"A bright one, isn't it? A big saving, too! Just see with what ease it is done—the man cuts through the sticks as if he were slicing bread and butter; besides, I require more exercise; my health is not what it has been."

"Why, dear, do you feel ill?"

"N-no, but a man needs to exert himself if he does not wish to run down in muscular power. My habits are too confining; a sense of this fact has been growing on me lately. But I have solved the difficulty while watching that man play in his sawjack."

A merry twinkle of the eyes and a laudable endeavor to maintain a serious expression would have convinced the beholder that Lizbeth also had ideas, but like a properly respectful wife she kept them to herself until called for.

"Do you think, Lizbeth, that a little gentle muscular activity is what I need to stimulate appetite?"

"You might paint the house or do some less tiresome work than woodsawing," replied Mrs. Mouser.

"Oh, you underrate my capacities, my dear. And sawing wood is not such hard work. Come and see how simply it is done, yet how every muscle is brought into play. I am enchanted with my idea, and shall carry it out. The man can finish this job, but it shall be the last I ever pay for."

Mr. Mouser meant business. He at once ordered the very best kind of a sawjack made. He purchased a splendid saw, with sharp teeth and a light frame. He pranced about, happy as a scoolboy, with dabs of yellow and green paint spattered all over his person, until finally the saw frame suited him in its bright yellow coat. The sawjack he painted a lovely light green.

Daily he promenaded impatiently around the sheds where the wood was stored, and grumbled because the fuel lasted so unusually long. At intervals he added another coat of green paint to the highly decorated sawing jack ("sawbuck" it is called sometimes), and bade all his acquaintances and friends come and inspect his patent calisthenic toys, until every one for miles around became familiar with Mr. Mouser's green sawing jack.

At last the longed for day arrived. A big load of fine hickory had been piled up in close proximity to the tools of decimation.

Mr. Mouser was all excitement. He passed by his amused wife with important disdain, and scarcely gave himself time to devour his dinner, he was so eager to be at work.

"Nothing more, thanks," he replied, as his wife wished to replenish his cup. Rising, he hastened to handle his pets with an ardor that caused Lizbeth to smile knowingly as she watched him pick out the very smallest and most slender cord sticks.

This was a great mistake on Mr. Mouser's part. He should have tackled the difficult ones first, on the simple but fruitful theory that custom would have sweetened his toil with the balm of greater ease.

My! how the saw rented and the abbreviated sticks tumbled to the ground! Still Lizbeth, who was peeping with laughter brimming eyes, noticed that at the third cord stick work seemed to slacken just a little, but seven were finished, and Mr. Mouser came in, declaring he felt glorious.

The second day Mr. Mouser remained at table a trifle longer. Four cord sticks in broken lengths licked the dust, however.

Third day—Mr. Mouser took time to glance over The Daily News after dinner. Record: Three cord sticks.

"Lizbeth," said he, "I think I've been cheated in the saw jack. It is not put together on as practical a plan as I was led to believe. It wriggles."

Fourth day—Mr. Mouser toyed over his dinner extensively. He smoked his pipe and read the paper. He glanced over his monthly magazine until dark, and then started up, exclaiming:

"Mercy! how short the days are!"

Mrs. Mouser enjoyed the situation intensely, but said never a word.

Fifth day—Mr. Mouser rose with a sense of injustice resting upon him. All day he was haunted by the outrageous fate that made him the owner of a sawing jack.

"My dear, we require more wood than usual today and to-morrow, washing and ironing days, you know," said Mrs. Mouser as soon as he got home.

"I never saw anything like the way you women manage to consume fuel!" and Mr. Mouser grabbed his hat and strode angrily toward the woodpile. A few sticks fell before the savage manipulation of the saw, while Mr. Mouser's snarling kept excellent time to the wild motions of the sawyer.

With a crash he sent the saw flying over the woodpile. This was too much. His wife was a brute to expect him to work like a slave during the few moments he could call his own free from business drudgery. But if he gave up he would never hear the last of it. Oh, if he could only get rid of that sawjack.

A long time he pondered, at last a smile of joy illuminated his face. That night, after his wife had retired, Mr. Mouser slipped out and carried that hated green object to the front gate. Presto, in the morning the corpus delicti would be gone. The highway was full of robbers, who would steal anything and everything.

He would make a big fuss about the loss, but take good care not to buy a second sawjack.

He slept the sleep of the just until about 4 o'clock in the morning. It was still dark, but his anxiety to assure himself of the loss of his trouble caused him to sneak out and reconnoiter. The sawjack was still there. Mr. Mouser whispered—not a prayer. "Oh, well, there is time enough still between this hour and daylight for a theft to be committed," he muttered. It was the voice of Mrs. Mouser that awakened him in time for breakfast. He glanced out of the window the first thing. Oh, how brightly the sun shone, and the sawjack gleamed up at him in all its verdant beauty. No robber hand had carried it away. A fearful sigh escaped the Mouser bosom.

"You must saw some wood for me before you go, dear," said his wife.

"What, more wood?"

"Yes, dear; recollect you only sawed one stick last evening," rejoined Mrs. Mouser meekly, but a wicked gleam of mischief played about her eyes and mouth.

Mr. Mouser ignored her reply, and hastened to town with his pretty tools with a vigor born of awful fury, but way down in his soul a voice groaned, that sawing jack must go!

Where? whence? how?

Mr. Mouser was a man of resources. Twelve o'clock, midnight. A burglarish darkness and silence brooded around as a man stole hence from his couch, and, grabbing his trousers, left a cozy bedroom. A little later the only other active creature about, a feline prima donna, might have witnessed a sorry sight: a solitary man marching townward, clutching in his strong right hand a beautifully painted green sawing jack.

Soon he returned. The sawing jack, where was it?

Mr. Mouser rose that morning in a most delightful frame of mind.

"Lizbeth, my dear little Lizbeth," he exclaimed, friskily, "I am going to work in earnest today. I am feeling fine, much better than I have for some time. Here, feel this arm. How's that for muscle, eh? That's what sawing wood has done!"

Lizbeth blinked sadly, but looked contented. Mr. Mouser hastened out to "flip off a stick or two before breakfast," but soon came in looking quite angry and puzzled.

"What in the world has become of that jack?" It was gone. "Such infamy—to steal one's very implements of toil!" he cried in a rage, as he sent for the old wood sawyer again.

Mr. Mouser, of course, grieved over his loss, but managed to conquer the regret sufficiently to display some of his old wit and mirth.

But this good feeling received a sudden check the morning after the burglary of the "jack."

He had just opened the daily paper, when his glance was arrested by a leading paragraph.

"Lizbeth, look at this!"

Mrs. Mouser became alarmed. Her husband was pale as death and trembling in every limb as he handed her the paper. She read:

"The residence of the Hon. Oliver was broken into night before last and a large sum of money and valuable plate and jewelry stolen. * * * The robbers entered by the garden window, from which they removed the iron grating, while standing on a singular looking wooden object, recognized by old fashioned country folks as a 'sawbuck.' It is painted a light green, and will doubtless prove a valuable clew toward tracing the miscreants. A thousand dollars reward is offered for return of jewelry or information leading to the arrest of the robbers."

"Why this is splendid! You can at once notify the authorities that the 'jack' is yours—the thieves who carried it off"——

"Oh, my—oh, my!" groaned Mr. Mouser; "don't talk to me about thieves—I may be arrested any moment when they discover"——

"Discover what? How can they arrest an innocent man because he owns an article stolen from him and used by wretches"——

"Oh, Lizbeth, I may not even be able to prove an alibi. Oh, what shall I do! I tell you wife, I am entirely innocent"——

"Ah! we nab you confessing, my fine bird," a rude voice here interrupted, followed by the entrance of the minions of justice.

Mrs. Mouser begged, cried, stormed and implored. Mr. Mouser was mute and totally crushed, but the bold minions of authority led him away to a dungeon, where he languished for three days before his friends could obtain a hearing for him. In the meantime the real culprits had been caught, but the law required an explanation of the language that appeared to the police like a question of complicity, notwithstanding Mr. Mouser's unquestionable social standing and perfect respectability.

The court room was crowded with his friends and neighbors. His wife gazed at him tearfully and lovingly, but Mr. Mouser was very much cast down. There was no escape. He had to tell how distasteful wood sawing had proved to him, how he feared the ridicule of wife and friends if after all the boasting he gave it up. But when he related his midnight elopement with his green sawing jack, even the court joined in the broad smile that ripened into a roar of laughter from the less dignified listeners. The crowning humiliation came, however, when he left the prison for the coach to be taken home. There he saw the green abomination resting at the driver's feet on the front of the carriage. His wife has not stopped laughing yet at his midnight adventure.—Adapted from the German, by Mrs. Miles H. McNamara in Boston Budget.

Meanest Man on Record.

The meanest man on record jumped aboard a Woodward avenue car the other afternoon. Every seat was occupied, and what did that man do but look out of a window and whisper something about a dog fight. Of course, no man could keep his seat under such a provocation. When Brown had looked in vain for the dog fight, he also looked in vain for his seat. It was completely hidden by that mean man, who was so deeply interested in his paper as to be wholly oblivious of everything else. But Brown had his revenge. A lady soon entered, and before any one could offer her a seat, he punched up the mean man and said:

"Will you please give this lady a seat, sir?"

Then they hung on to the straps and glowered at each other until their brows ached.—Detroit Free Press.

Europe's Coal Supply.

It appears that about 17,000,000 of tons of coal per year is the amount yielded by the chief coal districts of Great Britain—Newcastle, South Wales and the Clyde country—and, assuming this to represent the average annual consumption for many years to come, it is estimated that the British mines will not be exhausted in less than 600 to 800 years. It is further calculated that, drawing upon only one of her fields, the Westphalian, Germany will not be able to exhaust her coal supply in less than 1,000 years, and she has, in addition, the riches of the Bavarian, the Aachen and the Silesian coal districts. It is claimed, therefore, that, independent of the resources of other countries, Great Britain and Germany could supply Europe with coal for an unlimited period.—New York Sun.

One or the Other.

We see it stated that the Chinese have 378 holidays every year. Either the Chinese year has more days or else the Mongolian counts time by the fun he has and gives the calendar the go by.—Burlington Free Press.

There were lynched during the year 1887 in these United States no fewer than 122 persons.

An Ugly Elephant.

"Of all the ugly elephants I have known," said the trainer, "Albert was the worst. You could gain some idea of his disposition by looking into his eyes. He used to go out into the ring to carry me in on his tusks after the act was over. That was all it was possible to train him to do. One night at Nashua, N. H., as one of the keepers was getting Albert ready for the ring, the elephant suddenly turned on him and felled him to the earth with a blow from his trunk. An elephant in attacking a man curls up his trunk and then throws it out, like one striking straight from his shoulder. When Albert had knocked the keeper down, he coiled his trunk about him, raised him up in the air and then thrashed the earth with him, breaking every bone in his body.

"When it was learned that Albert had killed the keeper, the ring master requested members of the local militia company who were in the audience at the time to step forward. A squad of them were requested to appear in the morning and shoot Albert. I could always control him; indeed, he was perfectly docile to me when I captured him after he had killed the keeper and chained him up. I led him out on the morning of the execution and gave him some hay. I never saw him so docile. As he ate his breakfast I chalked a circle just back of his fore leg in the region of the heart. Then twenty-seven militiamen stood off a little distance and at the word of command fired into that circle. Five bullets pierced the elephant's heart, and he dropped dead, making the ground tremble as he fell. Success in handling elephants depends on letting them know that you are boss, and never for a moment relaxing your stern discipline."—New York Evening Sun.

Brass Signs Expensive.

It was the custom about five years ago to have brass signs on doors, and every merchant invested in bright sheet metal with name and business painted in indented letters. You don't see so many of them now, and most of those you do see are dingy and coated with a dirty oxidized covering. Merchants know what these changes in the styles are, but of all I am acquainted with this has been the most expensive. It is not like the sign one sets in his door and allows to remain there without further concern until it goes to pieces. It has been a cost of $25, and looked very attractive the first week or so. Then the variations of climate proved so great that I had to have it burnished very frequently in order to keep it in good condition. There was a man here who used to make a business of polishing these signs, and for $2 a month he used to come around and burnish the sign. This made the sign cost me over $100 before the style changed and merchants began to stick porcelain letters on their windows. Styles in signs seem to change every three or four years. You can observe that by making a survey of the business houses, some of which have signs five, ten and fifteen years old.—Merchant in Globe Democrat.

Paper From Tobacco Stems.

"What do you think that is?" inquired a wholesale stationer of the writer, at the same time handing the latter a sheet of note paper of excellent quality and the finest finish.

"Paper," answered the reporter. "Can't you give me something hard?"

"Oh, yes; of course it's paper, but what's it made from?"

"Linen rags."

"Just what I thought you'd say, but you see you don't know it all. No sir; that paper which appears to be, and is equal to paper manufactured from linen rags, was in its natural state nothing but the stems and waste of the tobacco plant. A use has thus been discovered for thousands of tons of material, that has heretofore been practically worthless. Another new paper making material is bamboo, which, after being crushed to a pulp, can be made into an excellent quality of paper. I shouldn't be very much surprised," added the stationer, ruminatively, "to hear that some genius had succeeded in manufacturing paper from pulverized cobble stones. Its a great country, and you can't most always tell what's going to happen."—Mail and Express.

Big African Enterprises.

Considerable amounts of American capital are being invested in some big African enterprises. The railroad from Delagoa bay, the best harbor on the east coast of Africa, which is now completed for a distance of fifty-four miles inland, was built by an American syndicate under a concession from the Portuguese government. It will connect with the line to be built from Pretoria, the capital of the Transvaal. The largest trading company on the Upper Congo, and the only one that has yet sent two steamers to the upper river, is the Sanford company, which was organized and until recently was managed by Americans. Considerable Belgian capital, however, is invested in the company. American engineers surveyed and are now building the railroad from Loanda to Ambaca, which is backed by the Portuguese government. Some American money also is finding its way into quartz crushing machinery for the new gold fields of South Africa.—Chicago News.

A Russian Merchant's Sign.

I passed through one of the principal thoroughfares of St. Petersburg, and observed that the upper fronts of many of the business houses were covered with coffee sacks. Inquiry revealed the fact that beneath those sacks were beautiful signs, and the covering was to protect them from the dust in summer time. I induced a merchant to show me one of these signs—six by eighteen feet, partially mosaic, a portion painting. He was a chemist, and there were pictures of bottles of ointment and perfumery; sick people and a doctor to represent medicine; paint brushes and samples of the paint; insects or animals, to represent flea and like powders, and pictures of fancy articles. The sign would be a valuable acquisition to the Corcoran art gallery at Washington, and must have cost several hundred roubles even to the cheap hands of a Russian artist.—Moscow Cor. Cleveland Leader.

Public Towels.

The public towel is also never safe to use, that is, the towel that the public wipes on. It not only removes the moisture that is its purpose to do, but it rubs off scales, pieces of dead skin, lymph from cuts and abrasions, perspiration from the pores, mucus from the nostrils, pus from sores and ulcers and any liquid that is excreted from the surface of the body. These impurities and disease germs are retained in the meshes of the towel and are ready to attach themselves upon subsequent users of the towel. A hundred or more persons use one of the towels in a day, and those who are among the last, especially, run unpleasant chances of catching some ill or other.—Good Housekeeping.

Emperor William at Waterloo.

The Emperor William, of Germany, commanded a regiment at the battle of Waterloo, and Gen. Simon Cameron, of Pennsylvania, had nearly reached man's estate when that battle was fought. And yet when we read of the first Napoleon and his deeds we think of it all as belonging to some far distant period—indeed, it reads almost like a fable. How many people, by the way, on the whole face of the earth, are now alive who were living when the Emperor William and Gen. Cameron were born? Can there be more than 1,000—or perhaps 2,000?—Philadelphia Times.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

The world's disjointed, very,
To the helpless one, we fear,
Who has a love for sherry
And a salary for beer.

CHAMPION HAMMER THROWER.

James Mitchell, Champion Hammer Thrower of America, and holder of the world's record at throwing hammer and fifty-six pound weight, says:

"I have used ALLCOCK'S POROUS PLASTERS and found them without an equal. In the early Spring when starting in to train for the field events, I have always found that stiffness in the joints and back set in. As soon, however, as I applied one of ALLCOCK'S POROUS PLASTERS, pains and stiffness departed like magic. When I am effected with pains, etc., the result of a cold contracted while in training, I always use ALLCOCK'S POROUS PLASTERS with good results. I can safely recommend them to anyone who is affected with pains or stiffness, the result of any kind of exercise."

No Mail.—Returned Tourist—Your uncle is not here, I see? Nephew—No. Tourist—Heard from him lately? Nephew—Not since he died

IN A PANTHER'S JAWS.

Terrible Adventure in a Texas Wood.

HOW A FATHER FOUGHT FOR HIS CHILD.

The Little One Torn From its Mother's Breast.—To the Rescue.

They still have good story-tellers in Texas. Some tell little lies and others tell lies of larger proportion, but a St. Louis paper vouches for the veracity of this one. He was one of a party at the McLeod house, Dallas, recently. Everybody opened their eyes wider when he said that he was no great story teller. "But," he continued, "I once did a pretty bit of shooting not very far from where we are talking now that just about saved my life, and possibly some other lives, too.'

The gentleman, who is old, but never prosy, immediately had an interested audience.

"I am a pretty quiet citizen now," "but about forty years ago I was lively enough. People had to be lively that lived in this country then. I hunted all up and down the Trinity for a good many miles, and never came back from one of my trips without game.

"But on one of these trips I came mighty near being game myself when I came home. Dallas wasn't anything but a little scattering hamlet then. I lived on a farm out here about ten miles on the other side of the river, and I used to come here to mill, leave my wagons over on the other side, where Oak Cliff now is, and bring my corn over in a boat. Sometimes it took us a week, for so many would be ahead of us, and we would have to wait till our turn came.

"One time I came with one wagon, and brought my wife and two babies with me. We camped over there, just about where the dummy line strikes the hills, and after the first day my wife got tired of town and stayed at the camp with the children. She never was much of a hand for town, anyway.

"I waited around th mill all the first day, and the second and third. On the evening of the third day I was pretty late getting off from town, and I could scarcely see my way to the camp after I got across the river.

"The moon had just risen and it made everything vague and indistinct. I was getting along, though, the best I could and was about 100 yards from the camp, I should judge, when I heard one long, wild scream in the direction of the camp and I knew that it was my wife. I had my gun with me, an old-fashioned, muzzle-loading, double-barreled shot gun, and I hit out as though the Old Nick were after me, shouting to her that I was coming. My only thought was that some ruffian had stolen into the camp and frightened her, and I cocked the gun as I ran. After her scream there was silence, and then directly I heard the loud, frightened cry of the baby. My, how I did run! My foot caught in a root and I fell fully ten feet, discharging one barrel of the gun, but I was up again like a flash, with one barrel still left to fight with.

"And there was the camp, with its fire smoking away, and everything was quiet in the wagon, where the family were sleeping, and off in a clump of bushes the baby was crying in a pitiful, frightened way. Of course I ran in that direction first. It was a tangle of undergrowth, and I had to go half bent. Stumbling blindly ahead, almost in total darkness, merely guided by the child's cries, I came suddenly upon something that stopped me as though I was shot. The largest panther I ever saw had the child! It had dragged the poor baby out into the bushes, and had faced around to meet me, holding the child by the dress. It stood for an instant with its head lowered and its tail waving wickedly, and then, before I knew I had seen it almost, it dropped the baby and sprang over its body upon me.

The attack was so sudden that I was wholly unprepared for it. I had my gun in my hands, but there had not been time to use it. I was thrown down with great violence, and I can feel yet the creature's teeth crunching into my shoulders. That's the sober truth, boys. That old wound has been my barometer for many a year.

"The panther had landed square on my breast when I fell, but his impetus was so great that it threw his body off to one side, though his teeth were fastened in my shoulder. With a mighty effort I rolled away from him and struggled up. A less active man would never have done it. He bounded away through the bushes a few feet, but without pausing an instant he turned and leaped again. This time my gun was ready for him. Only one shot and if that failed there was no chance of escape for any of us. But I fired that shot and it caught the animal in mid-air. The shot entered his breast and went straight through his heart. His body struck me and almost knocked me down again, but he fell dead at my feat.

"The baby had been screaming all this time, but I give you my word I was afraid to go and look at him. When I did go to him, I found not so much as a bruise on his pretty white skin. The panther had held him by his dress, and had lifted him clear of obstacles, even when he leaped from the wagon with him.

"As for my wife, I found her in a dead faint, and it was the longest time before I could bring her out of it. She had been awakened from a doze by a feeling of weight and oppression, and had found the panther standing over her, with his two fore paws upon her breast. She screamed and fainted, and the panther took the baby away from its place beside her. It was a Providence about that shot, boys. I couldn't do it again if I were to try a thousand times. But it was a Providence that came just when it was needed."

MISS WHITNEY, ASTRONOMER.

The Career of One of Vassar's Scientific Women.

Among the women who have risen to prominence in the field of science, Miss Mary W. Whitney, now the professor of astronomy at Vassar College, stands out most strikingly. Miss Whitney was called to the assistant's chair at Vassar in 1881, when Maria Mitchell of Nantucket, had the chair of astronomy, which she had held since 1865. Miss Whitney graduated from the institution in 1868, having studied under Miss Mitchell, with whom she observed the solar eclipse of 1869.

In 1872 she assisted her in determining the latitude of the Vassar observatory, after which she attended lectures by Prof. Pierce at Harvard, and, going to Europe in 1874, continued her studies in astronomy and mathematics at the University of Zurich. Another leading

Miss Mary W. Whitney.

woman astronomer is Miss Mary E. Byrd, director of the observatory at Smith college, who is a graduate of the University of Michigan. In 1888, with the aid of Miss Whitney, she determined the latitude of her observatory at Northampton, Mass. Other women astronomers are Miss Sarah F. Whiting of Wellesley college; Miss Margaretta Palmer of the Yale observatory: Miss Dorothea Klumpke of San Francisco; Mrs. Milton Updegraff of the University of Missouri; Miss C. R. Willard of Carlton College observatory, Northfield, Minn.; Miss Anna Winlock of Harvard observatory; Miss Coralnn Allen of the Bay City high school, Mich.; Mrs. Fleming of Harvard observatory and Miss Anna C. Maury.

HAIR GREW AFTER DEATH.

Heavy Braids Ten Feet Long Found in a Coffin Twenty Years Buried.

A prominent citizen of Warren Summit, N. H., recently caused the body of his mother to be disinterred for the purpose of burying it in another spot, when it was found that the coffin was completely enwrapped with the strands of the lady's hair, even the grave being filled with the silky masses, which had to be cut through before the coffin could be removed. Upon opening the coffin the remains, with the exception of the head, were found to have perished, but the skull was wonderfully preserved, and even the skin intact, and from this had grown a quantity of hair such as no living person could carry. The lady has been dead nearly twenty years, and at the time of her decease her magnificent suit of hair had been clipped short, so there is no doubt of all that was found in the coffin having grown after death.

Her son says, however, that his mother's hair was of a beautiful bright golden hue, whereas the the post-mortem growth is of a pale, colorless tinge, dingy and coarse, though retaining a sort of vitality. It had forced its way through the seams of the coffin and twined about it like the tendrils of a vine, and was so thick as to hide it completely, while it filled the coffin as entirely. It was calculated that there was nearly seventy-five pounds of it in all and that the strands were fully ten feet in length. The lady on whose head this grew died at the age of 27 and after an illness of only a few hours, consequently retaining her robust and full-habited figure, which may possibly account for the extraordinary growth. When it was removed from about the coffin the latter fell apart, showing that it had held together by the hair.

VISIBLE ONLY AT NIGHT.

The Singular Whim of a Well-to-Do Vermont Woman.

A singular character residing near Irasburgh, Vt., is said to have allowed no human being to look upon her during the day for nearly forty years. She goes by the name of Ann Dennis, and is said to have been the daughter of a well-to-do farmer, and that she lost her mind, or at any rate, took up her present singular mode of life after the death of her mother, whom she accidentally killed by an overdose of some opiate. She lives in a small, substantial one-room cabin about six miles from town, and remains tightly shut up during the day, and ventures out only on the darkest nights, when she will walk into town and transact such business as she may have, but cannot be induced to enter a room lighted up save dimly, and then only when thickly veiled.

As she has some little money left her by her father, the tradesmen all humor this singularity of hers, though several attempts have been made to get her to show herself in the light, but however well planned the strategy it has never succeeded. She converses intelligently enough when she wants to and many deny that her mind is at all affected beyond a little harmless eccentricity. Those who remember her in her youth say that she was an unusually pretty, attractive girl, and well educated. She lives quite alone with nothing living to keep her company.

The £5 and £2 pieces struck in the jubilee year have evidently not taken the public fancy, as no application was received for them during the whole of last year.

WHEN WE SLEEP.

Our Disposition to Assume Wearying Attitudes.

THE SCIENCE OF "DEVITALIZATION."

Nervous and Muscular Tension.—Superfluous Energy.

The most noiseless, quiet sleeper rarely lies in a perfectly relaxed state, body and limbs at ease. With an egotism that seems to be instinctive, most people endeavor to look out for themselves in sleep. They do not trust to the soft and willing support of the bed; they cling to it as if some sudden and malicious spring might toss them out upon the floor. They hold their heads down on the pillows as if the feathers might rise up and bounce them off. Or, and this is more common, they stiffen the muscles of the neck and hold their own heads as if the pillow could not be trusted for support.

They clutch the bedclothes, and cling with tightened grip. They brace their feet against the bed rail or, by dexterous twisting, use themselves as a point d'appui. They draw up as for a leap. They crouch as for a spring. They tie themselves into knots, clasp their knees in desperation, clench their hands, and writhe, wriggle and swim over the area of the bed. They set their jaws, grit their teeth, bury their heads. In brief, nerves and muscles are kept in such a state of unreasonable tension that waking becomes relaxation to overcome the fatigues of the night.

No one perhaps has a clear idea of absolutely what antics one performs in sleep, although drearily conscious of the effect on waking. But almost every one has some attitude essential to going to sleep. One would think that these, one may call them elective positions, would be of the easiest, if not the most graceful, for every one has not been trained as considerately as the children of a woman whom the writer once knew, who were taught to go to sleep in graceful positions, as the mother naively remarked, "in case of fire." On the contrary, the attitudes necessary to sleep, after long and minute inquiry among a large number of people, are found to be uneasy, unnatural, ungainly, distorted, painful.

If any number of readers undertake to discover their own peculiar habits of sleep they will doubtless be found uncomfortable. It is safe to say that this state of intense nervous and muscular tension is never relaxed during the night, even though the position be changed. The only exception is after excessive bodily fatigue. The body then suspends all effort, and lies such a dead heavy weight that it seems the bed must ache to sustain it. Sleep at last performs its gracious mission; and morning brings that repair and refreshment, that sense of rest and energy to begin the day again which makes life once more worth living. Chronic sufferers from insomnia know well the value of fatigue.

How much superfluous energy we expend in the performance of the most trifling act. Writing, for example, requires very little muscular exertion, but the pen is pinched until the fingers ache, and the muscles of the back of the head are as tired as the fingers. The seamstress sews with her back as surely as with her fingers. The school teacher rubs off the blackboard with one hand and mimics the movement with the other. Nine people out of ten cut with their mouths when holding the scissors. A woman with her hands in her muff clasps them with a grip that fatigues her and make them ache. Even in idle conversation people wiggle their fingers and wag their feet as an accompaniment to their tongues. A prominent divine once could not preach without jingling the keys in his trousers pocket. Few people can sit in an easy chair without clinging to the arms. Observe the passengers in a street car. They stiffen the muscles of the neck and hold on to their heads with grim earnestness, as if a sudden jolt might lose them, and in the confusion they would be difficult to readjust. This care soon imprints itself on our weary faces.

It is this habit of nervous exaggeration, so tyrannical and merciless to the muscles, that we take to bed with us, and that plays such mischief with divine sleep. How to conquer it! Plainly it is with the working hours we must begin. In Boston, where the supreme ego gets a completer development than within sound of the echo of the roar of Broadway, there has arisen the science of devitalization that is directed to this very end. Devitalization in its highest sense, to speak in the language of its disciples, is the spiritual side of physical culture. Its great principal is embodied completely and briefly in these words, "Mind active, body passive." Its methods are based on the union of the imagination with certain exercises of the body. The immediate physical result is the setting up of perfect independence among the various movements of the different members of the body—in detaching them, so to speak, from one another.

The results of these exercises are, first, the calling into activity all the muscles of the body, many of which are comparatively unused; second, rendering them perfectly independent of one another; third, making them immediately responsive to the call from the nerves; and, lastly and chiefly, rendering them indifferent to anything but their own business In this lies the great saving to the vitality, and that is what we are after.

Now, how does all this tend to better and more restful sleep? In the first place by having trained the nerves and muscles to keep still when they are not wanted. Surrender of yourself. Lay your burden down. God will take care of you, the bed will hold you, say the disciples of devitalization. But if the mind and body are not brought to this perfect state of obedience, the various exercises in devitalizing are gone through, beginning with the head. The different members are unlimbered, detached. These exercises should be done seriously. They are, in fact, awfully funny.

Then get into bed, and, sitting upright, conceive of the backbone as a strand of beads held upright. Then let yourself down slowly without tension, bead by bead, until the unlimbered head falls back inert on the pillow. Lie in that position, on the back, the arms helplessly lying on the bed, at the sides, each member divested of all responsibility, which has been assumed by the bed. If necessary, do this several times, and lie on the back if possible. If this is not possible, at least begin in this way and afterward turn over on to the side preferred.

Such is the Boston recipe for wholesome, restful slumber—it is worth trying.—New York Sun.

Proof of Pure Milk.

Guest—Waiter, there's a dead fish in this milk.

Waiter—Co's dey is, boss. Dat's a sho sign dar haint enough watah in dat milk fer him to live on.—Washington Star.

Cannibalism.

Sappy—Yaas, aw, doncherknow, if there, aw, is anything I, aw, love, it is, aw, calve's bwains!

Miss Pert—O, the cannibal!—Lawrence American.

READING THE HUMAN FACE.

The Character Generally Drawn Upon It in Unmistakable Lines.

Every one knows that men's passions, propensities and peculiarities, as well as their callings, are reflected in their faces, but it is only the few who have made the study of physiognomy an especial pursuit who are gifted with the power of reading those faces. Judges who have served long terms on the bench, lawyers in large practice and doctors of eminence possess the power of interpreting physiognomies more largely than other people. But any one can acquire the rudiments of the art by dint of study.

It is as impossible to disguise a face as a hand writing. When the expert comes the disguise is torn off and the face tells the true story of the spirit inside the body. One only needs to visit the penitentiary to realize how undeniably vice write its sign manual on the features. It is not the drunkard only whose red nose, flabby cheeks and rheumy eyes betray him; it is the sensualist whose vice is read in his lips, the knave whose propensity is revealed by the shape of his mouth, the man of violence who is surrendered by his eyes. An experienced detective or a trained jailor seldom needs to ask the crime of which his prisoner was guilty. He can tell it by his face.

It is quite evident that in the future the study of phsiognomy is going to be pursued more vigorously than it has been. As a means of preventing crime, it may prove invaluable. How constantly do we hear of men "falling from grace," as the phrase goes! Yet these men must have carried their crime in their face for a long time. If any one had been able to read their features the mischief might have been averted. How often are we assured that this or that criminal enjoyed the perfect confidence of his employers and the public till the very day of his detection; an expert physiognomist would probably have spotted him long before. Again, face reading might be turned to fine account in business. It is well known that every man's face is more or less stamped by the pursuit he follows. An experienced observer can generally detect a lawyer, or a doctor, or a merchant, or a clerk, or a mechanic, or a clergyman, by merely studying his face.

The study might be carried much further. The same rule which enables an observer to distinguish a lawyer from a merchant will, when followed out, enable keen eyes to separate able lawyers from lawyers who are incompetent, merchants who are going to make a fortune from merchants who are going to fail. Men often carry their destinies as well as their character in their faces. Indeed, the former depends so largely upon the latter that it would be singular if it were otherwise. Women, too, will be able to discriminate among their lovers, and to pick out the man who will make a good husband from one who will have to be dragged into a divorce court. All the advantages which Fowler mistakenly told us we were going to derive from the study of phrenology we may possibly gain from the older and more mysterious science of face reading.—San Francisco Call.

A Story of Jesse James.

"Now that I am on the subject of trotting," said Secretary Hall, of Detroit, in the rotunda of the Merchants', "I am reminded of an incident that took place in 1875 at the Kansas City meeting. There were several thousand people congregated in the vicinity of the ticket office, when suddenly a band of men rode into the inclosure and began discharging firearms apparently right into the crowd. As they expected, there was a general scattering, and ere the people collected their senses the ticket man had been overpowered and his cash box, containing about $1,200, taken away by the members of the shooting party, who turned out to be members of the Jesse James gang. Rewards were offered for the detection and arrest of the perpetrators, but nothing ever came of it.

"The next summer, one day while traveling along the road toward Independence Mission, I met a single horseman, and we soon became engaged in conversation. We did not exchange cards or names, but rode along into the town on pretty good terms, and a few moments after we separated I learned that my companion was none other than the notorious Jesse James himself. It was his crowd that had robbed my ticket seller a year before, but I did not recognize him as one of the participants. Among the people it was the general impression, and I have never heard it contradicted from a reliable source, that Jesse James scorned to enact the role of a highwayman when a single person was concerned, but took a delight in frightening large crowds when in search of booty. His men knew that shooting over the heads of the spectators would alarm them fully as much and create more of a panic than by killing people in cold blood, and hence their forays were always attended with a great deal of noise, but little violence toward their victims.—St. Paul Globe.

Divorces in Paris.

Chicago has a proverbial reputation here for the multiplicity of its divorces and the expedition with which they are obtained. Of course, a slow going old world people cannot be expected to compete with you on that score. But I doubt if ever divorces were granted for more grotesque reasons than here in Paris. Here, for example, is a divorce granted to a man for no other reason than that his wife would not let him read all the letters she wrote and received. A companion case is that of a woman who got a divorce from her husband because he objected to her having a lover, and made it unpleasant for the latter to visit her at her house. Apparently these are considered good and sufficient reasons, for they excite no comment on the part of the public. In Marseilles a man has just been allowed a divorce because his wife refused to give him the money she earned by taking in sewing. In Lyons a divorce was based on the inability of the couple to agree as to the training of their children. And so it goes on. The number of divorces granted and the frivolity of the grounds on which they are based increase daily.—Paris Cor. Chicago Tribune.

Intelligent Coroner's Juries.

"Death from delirium tremens resulting from accidental causes," was the remarkable verdict returned by a coroner's jury in this city the other day. This is not the only humorous specimen which Mr. Ashbridge can point to on the dockets of his office. A young man in the last stages of pulmonary disease killed himself with prussic acid. Dr. Formad remarked at the inquest:

"He only accelerated his death, which must surely have come from consumption in a very few weeks."

The intelligent six good men and true in the jury box astounded the coroner by arriving at this verdict: "Death from consumption, accelerated by prussic acid."—Philadelphia Press.

Large Birds Becoming Extinct.

The large birds, like the other large animals, are steadily going, and all may soon disappear from the earth. It is believed that the lammergeyer, or Alpine vulture, has just become completely extinct in Switzerland, a solitary female specimen, which has dwelt on the Biotchhorn during the last twenty-five years, having at last fallen a victim to poison.—Boston Budget.

AT AN ENGLISH MEET.

An Occasion of Excessive Sociability.

THE RIDERS AND THEIR COSTUMES.

An English Country Day in Midwinter.—The Hounds.

In the first place, the country is much more interesting than with us in the winter. It is rare for the mercury to go below 26 or 28 degs. Fahrenheit. The English people use the freezing point 32 as the indicator. They speak of 5 or 4 degs of frost meaning so many degrees below 32. They never have weather which approaches zero. The winters being comparatively mild the grass remains green throughout the year, and but little snow falls. The morning after Christmas I went over with a party of friends to a meet of the hounds. Lord Fitzhardinge is the master of the hounds for that district. It was the first English meet I had ever seen, and as the day was absolutely perfect the picture was a most delightful one to my unsportsmanlike vision.

The morning was crisp and clear. There was a light hoar frost on the ground which soon gave way, so that the ground became moderately soft under the rays of the sun. There was not a bit of wind. The course to be run was over a succession of green, grassy downs skirting hedgerows and thick clumps of woodland. These downs ran to a line of cliffs overlooking an arm of the sea, beyond which was a long line of blue hills—the Welsh mountains. A meet in England is one of the most democratic of gatherings. It was a new thing for me to learn that anybody in the neighborhood can come to a meet and be received if he can find a quadruped to carry him. The butcher, the baker, the candlestick maker can come and ride alongside of the gentry and keep up with them if they have as good horses and are as skillful riders.

AT THE MEET.

The meet took place on the broad lawn of a handsome country place of a private gentleman who has large coal interests at the Cape Verde islands. There were upward of a thousand people who came through his gates and up his walks without any invitation, driving in all sorts of carriages and carts and upon all sorts of horses. Several hundred came on foot. Another strange feature of this promiscuous gathering was the fact that every one who came was made welcome to the private hospitality of the house. The son of the host actively assisted the servants in passing out sandwiches and mulled claret to whoever rode up to the door. There was a constant procession of lunching horsemen in front of the door for at least two hours before the hounds arrived with Lord Fitzhardinge and the whippers in.

There were all sorts of riding costumes. The master of the hounds and the whippers in wore the traditional pink coats, as did a few of the other riders. The majority of the the riders, however, even among the regular members of the hunt, wore dark coats. Two army officers from the neighboring barracks came up on very smart horses, wearing hunting dresses which looked as neat as full dress uniforms. They wore high silk hats with small steel chains attached to the brim in the rear and passing around their necks. Their coats were four button cutaways with long skirts and broad flapped pockets. These coats were buttoned up tight to the throat, above which appeared a high white collar and a white cravat. Their knee breeches were white corduroy. Their boots were high patent leather, with steel spurs upon the lower part of the heel. They were handsome, trim looking men, and sat their horses with perfect ease. One of the most striking of the lady riders was a relative of the master of the hounds. She was not over 14 years of age. Her slim figure was set off by a dark blue close fitting riding suit. Her hair, a dazzling golden silver, floated in the wind unconfined from underneath a black derby hat. She was mounted on a thin skinned, high bred, iron gray horse, which seemed to be under the perfect control of his beautiful young mistress. But the good riders and the correct hunting dresses were the exception. This was owing in part to the fact that it was a holiday, and upon such occasions the regular members of the hunt are inclined to stay away. The trades people of Bristol came out in great numbers. They were very enthusiastic sportsmen, but they made up a motley gathering, coming as they did upon all sorts of horses and in all sorts of riding dresses.

THE HOUNDS.

The main interest culminated when the hounds arrived. They were such a smart, intelligent looking lot of animals. They all carried their heads and tails straight up. They appeared to be eager and anxious to be away, but were easily restrained by the whips of the servants in charge. They were moved about with the precision and rapidity of well drilled soldiers. When the hounds came into the inclosure about the house where the meet took place they smelled the food of the morning lunch and were at once going to press to the front, but a wave of the whippers-in stick sent them back in a compact mass to a corner of the inclosure, where they remained. The amount of lunching and drinking done by the people who arrived, and who must have just come from their breakfast, simply illustrated the ability of the English people to eat at any and all times as a preliminary to anything in the way of work or fun.

There was no great excitement about the start. The hunters went away at an easy pace and followed the road for several miles. Gates were opened for them all through the first part of the morning. It was only when a fox was started and the hounds were in full cry that anything like hard cross country riding was attempted. Few of the Bristol people ventured on jumping any of the hedges, so within a very few moments after the start the good riders had everything to themselves. Pedestrians, horsemen and people in wagons went about the country all the morning seeking to cross the trail of the hunters. I was told that the cost of keeping up a pack of fox hounds for ordinary hunting purposes is £6,000 a year. After once seeing an English meet it is easy to understand the interest in it. The fox is merely an excuse for sharp and brilliant riding across a lovely country in brilliant, sparkling weather. The meet is generally made up of congenial spirits, and, therefore, has the additional element and zest of sociability.—T. C. Crawford in New York World.

Formed by Circumstances.

Mrs. Hillaire—Your husband is the most uncomplaining man I ever saw.

Mrs. Bergen—Yes. He says that he never saw a lounge that was comfortable until he met with the accident that broke his back.—New York Sun.

His Principal Occupation.

Judge (to tramp)—What is your occupation? What do you do?

Tramp—Nothin', yer honor.

Judge—Well, what have you done most?

Tramp—Time, yer honor.—The Lawrence American.

LOUISIANA VETERANS.

Personal Notes of Delegates to the Convention.

At 7:30 this evening the delegates of the various camps of United Confederate Veterans will assemble at Memorial Hall to elect a major general to command the Louisiana Division for the ensuing year. The rumored candidates are the incumbent (who has served but the third of a full term) Major General W. J. Behan, of the Army of Northern Virginia, Gen. John Glynn, Jr., Army of Tennessee, Col. J. P. Richardson, Washington Artillery, and Col. Geo. Moorman, of the Cavalry. There may be, however, some "dark horses" from the country.

SKETCHES OF COMRADES.

Below will be found such personal notes concerning delegates as *The Item* reporters have been able to pick up, a number who promised memoranda not having sent it in, and others not being found:

Col. B. F. Eshleman, the present chief of the veteran corps, Washington Artillery Camp, went out with the famous battalion in 1861 as captain of the fourth company. He was the first officer wounded at the battle of Bull Run. After serving gallantly in several engagements he was promoted to majorship of the battalion, and was in command at the surrender at Appomattox.

Paul Conrad.—A true representative of "*le vieux temps*" is found in Paul Conrad, a delegate from Camp Henry, St. Paul. He is a purely typical Louisianian. With an ancestry as old as the country, he combines in himself every essential feature of the old time Creole, with the progressive characteristics of the present age.

Born in this city on December 31, 1840, of native parentage, he, with many whose names will ever live in the history of the State, attended the public school of this city.

At an early age the death of his father left him to buffet the world with but little help, save the encouraging and wise counsels of a brave mother, and determined his early embarkation in the varying and stern actualities of life.

He began a commercial career when barely fifteen years of age in the wholesale grocery business and afterwards engaged in the cotton business.

The war breaking out when he was about twenty years of age, he joined the Chasseurs a Pied, one of the first commands to leave this city for the then seat of war, Pensacola, in April, 1861.

His career as a soldier was conspicuous for his personal daring and bravery, not unmixed with a fair share of romance, and paying the penalty of his venturesome spirit, he was three times badly wounded, once in front of Richmond, at the battle of Frazier Farm, June 30, 1861, where he was appointed color bearer of his battalion on the field by the colonel commanding. The flag thus entrusted to him, which he carried to the end of the war, is the same battle-flag which was presented to St. Paul's Battalion by Gen. Longstreet to commemorate their desperate charge at Seven Pines, and which was, after the surrender at Appomattox, taken to a place of safety in Richmond.

About 1879 a meeting of the veterans of the old command delegated Mr. Conrad to go to Richmond and secure the battered war emblem, which he did, and after reporting to his old comrades in arms, he delivered the flag into the custody of the Association of the Army of Northern Virginia, which has unfurled it in Memorial Hall, where it now hangs, a silent and eloquent reminder of those troublous times which brought it into existence.

At Sharpsburg (or Antietam), September 19, 1861, he was a second time wounded and fell into the hands of the Federals. After being exchanged, and before thoroughly recuperated from his disabling wounds, we find him again in the field of active duty with his command in and about the historical Blackwater, Southampton County, Virginia, and at the battle of Bellefield he was again wounded.

Surrendering with the last forlorn hope, after four years and several months of actual active service, he resumed his duties of citizenship to his native State, relapsing into those peaceful pursuits in which he could serve his people most beneficially. In 1867 he was elected assistant secretary of the finance committee of the City Council, where his intelligent administration of the office soon promoted him to the secretaryship.

With varying successes to himself financially, he thereafter engaged in various commercial enterprises; until of late years, he acquired a home in the town of Waveland, adjoining Bay St. Louis, Miss., where his progressive spirit and enlightened enterprise were soon recognized and he was elected, and is still serving as a councilman of that corporation. His suggestions of progress were soon adopted by his new constituents and sometime ago he was called upon to serve as president of the Gulf Coast Ice and Manufacturing Company, which is now affording such material comforts to the denizens of that lively little town.

Many years ago he accepted a subaltern position with the Luisiana State Company, where his worth was soon recognized, and his promotion to the internal direction of his office affairs gradually followed, and which, upon the death of their late president, Dr. M. A. Dauphin, culminated in his being chosen president of that vast institution, which office he now holds with credit to himself and advantage to the company.

He is also a director in the Cherokee Iron Manufacturing Company of Rusk, Texas, which has sought the benefit of his advice and experience, and altogether he finds his time well taken up with the administration of the affairs of others.

Yet with his multifarious duties he remains what he ever was, a true and loyal friend and safe adviser, one upon whom none who know him, ever hesitate to entrust their most secret confidences.

His peculiar attributes are his unswerving devotion to duty, his undeviating punctuality, and his loyalty to any cause he may espouse.—*New Orleans (La.) City Item*, May 30.

Fresno vineyardists have been at last obliged to employ Chinese to pick their grapes. They tried to get Indians, and sent agents to the mountains to bring all who would work, but not enough could be had to pick the crop. The Celestials are at Fresno by thousands from all parts of the State, and have entered into a combination among themselves to strike for higher wages. Many have found employment at $1.75 a day.

In Ontario short weight bread is confiscated and given to charitable institutions.

RUSSIAN FANATICS.

Description of an Interesting Religious Sect.

THEIR SOCIAL AND FINANCIAL METHODS.

The Idea of Nihilism Pushed to the Extreme Limit.

The interesting sect of "Negators" offers to us the spectacle of a strange religious pessimism. The doctrines of this sect push the idea of nihilism and of negation to their extremest limit. The members lead a life of vagabondage, and pass the larger portion of their existence in prison. The government thinks their doctrines dangerous to public safety, and subjects them to the most rigorous punishments. Let us take as a type of this sect a certain merchant named Shishkin. In his search for truth he four times changed his sect, and finally became persuaded that all religion was error and lying. He addicted himself to the study of the sacred Scriptures, and thought he perceived that they were not in accord with human nature, and then he came to repudiate all ideas of God and religion, as well as all human institutions, all authority, government and society. He was promptly arrested and imprisoned, and all his property confiscated. He refused to justify himself or to avail himself of legal help for his defense, persisted in his opinions, and continued to preach in the prison. Here is a curious specimen of his answers to the judge d'instruction:

Judge—Who are you?

Prisoner—Don't you see I'm a man? Are you blind?

J.—What is your religion?

P.—I have none.

J.—What God do you believe in?

P.—I don't believe in any God. God belongs to you—to you people. It was you who invented him. I don't want him.

J.—Do you worship the devil, then? (with some irritation).

P.—I worship neither God nor devil, because I have no need of prayer. The devil is also an invention of yours. God and the devil are yours, as well as the czar, the priests, and government officials. You are all children of the same mother. I am not one of you, and I wish to know nothing of you.

Each for himself, say these sectaries; there is neither right, nor duty, nor social or political or religious hierarchy. Man, abandoned to his natural instincts, without hindrance from government, will be irresistibly impelled toward truth and equity. They deny, without exception, all rights of property, and recognize no form of social organization. For them, marriage, the family, social duties, do not exist; they live in a fantastic world of liberty without limit, and despise all that surrounds them.

For example, if any one asked Shishkin for anything whatever, he would give it them at once, only it absolutely must be something useful, food, clothes, or money for vital needs, etc. But he would not give a halfpenny for tobacco, wine, or such like things. "I should prefer to throw the money out of the window rather than help you to poison yourself with tobacco," he answers to those who ask him for money to indulge in that habit. If any one thanks him, he answers: "What a stupid word! You have received what you wanted; you have eaten; well now go."

These sectaries are advocates of all that is natural, they never shave or cut their hair, they drink no spirits and do not smoke, so as not to spoil the natural beauty of the intellectual faculties. They dream of a life in which each should work for himself, satisfying his wants with the productions of the earth, and making for himself all necessary articles. What is over ought to be given to those who are in want. They entertain a profound hatred for all compulsory work under all forms. They never go into service, even if threatened with death, and they employ no servants. When Shishkin was in prison they shaved him and tried to compel him to work; but he utterly refused, saying: "You have taken me by force. I did not ask you to shut me up. So now you ought to feed me and work for me." It was of no use to flog him, to chain him to a wheelbarrow, to shut him up in a dungeon, to give him only bread and water; it had no effect. He remained immovable.

These sectaries do not allow of the exchange of products or of trade. "If you want anything and I can give it you, take it. When I in my turn want anything, you will give it me." They preach free love and do not recognize marriage. They consider women to be independent beings, equal to men, free to choose lovers and occupations according to taste. They replace the word wife by friend.

A man, a woman and a child were brought before a judge, accused of belonging to the sect of Negators. "Is this your wife?" asked the judge. "No, she is not my wife." "But you live with her?" "Yes; but she is not mine. She is her own." "Is this your husband?" "No; he is not my husband," answered the woman. "But how is it, then?" asked the judge, astonished. "I need him and he needs me, that is all; but we each belong to ourselves," answered the woman. "And this little girl, is she yours?" continues the judge. "No. She is of our blood, but she does not belong to us, but to herself." "But are you mad, then?" cried the magistrate, out of patience. "This cloak that you are wearing, is that yours?" "No, it is not mine," answered the sectary. "Why do you wear it then?" "I wear it because you have not taken it from me. This cloak was on the back of some one else, now it is on mine; perhaps to-morrow it will be on yours. How can you expect me to know to whom it belongs? Nothing belongs to me but my thought and my reason." And so on.

The words "faith," "power," "law," "usage," inspire them with profound horror. Under no pretext do they have recourse to the protection of the magistrate, preferring to suffer with patience. To appeal to the law for protection would be to recognize it, to submit to social institutions; but to submit to law is to destroy one's individuality, which should rest for its support only on the individual conscience and personal convictions. It must be added that they do not believe in the life of the other world and the rewards of the future life. They hold that man is immortalized only in posterity, in behalf of which he spends his moral and physical force.—Nineteenth Century.

INDEPENDENCE, CAL.

FRIDAY, OCTOBER 2 1891

The public schools of the several States are invited to make an exhibit at the World's Fair Such an exhibition will be more interesting than any possible display of agricultural or manufactured products. A thoroughly good system of public schools is the best possible product of man's ingenuity. Of course it is expected that the old States will make a better showing than the newly settled ones. New England is the home of the system and is supposed to have carried it to the highest degree of perfection. It would be interesting to know what kind of a standard will be adopted. Will the school be declared the best which promises the widest range of studies? or will one that shows the best results in the common branches of study? Will the choice of study be one that may be fairly completed in the six or eight years the average child attends school? or will it be presumed that the average attendance is ten or twelve years? The school age in most of the States includes twelve years, but hardly a child in ten gets ten years' schooling. The New York Sun complains that the schools in that State are given over to the higher grades of studies. There is room and to spare in the higher-grade schools, but the primaries are crowded. In fact, there are this year 10,000 newcomers who cannot be accommodated

More than $4,000,000 is expended on the school system annually, and yet it fails to accomplish its purpose. Where does the money go? The major part of it goes for the support of colleges for a few boys and girls and for grammar schools to fit them for the advanced course. Room is lacking for the others because so much room at so great an expense has to be provided for these. There is room enough for the boys and girls who want to study Latin and Greek, algebra and geometry, but thousands of the children who want to learn to read and write are shut out because the accommodations are not enough. The essential is neglected in order that the luxurious may be provided.

If the World's Fair is to make a show of schools in which Latin, Greek, algebra and geometry are taught more harm than good will result from it. It is not desirable to bend the young mind in that direction. The best public school is one that in a six or eight years' course turns out the most thoroughly taught pupils in the common branches of study. Take a class of fifty, and the one which presented the largest number who could read, write, spell, cipher with such proficiency that errors in matter or style would not be noticeable should carry off the prize.

There seems to be no mitigation of the suffering in Russia caused by the scarcity of food, and the situation is certain to be worse instead of better. Winter is not far distant, and if to the horrors of famine are added the terrors of a Russian winter the condition of the people will be desperate indeed.

It is possible that the situation may impel Russia to war, even though she be not entirely ready. She may deem it safer to set her troops in motion, relying upon the patriotism which a foreign war would evoke, than to face several million starving peasants at home. She can feed an army, concentrated and with perfectly established communications, when she can not disperse food for her starving people over her immense territory.

The famine will be the best recruiting officer Russia could have. Hungry peasants would rather face the bullets of an enemy in the field than to die by inches at home from cold and starvation. The ranks could be kept filled to repletion all the time in the event of war, for the Russian soldier has at least food sufficient for his needs, clothing to cover him and a roof to shelter him.

But when one thinks of the women and children, of the old and decrepit who are unfit for military service, there must arise a feeling of sympathy and compassion. These people are not responsible for the cruelties and outrages which have been inflicted upon the Jews of Russia and which have enraged the whole civilized world against that country. Their lot will be quite as desperate as that of the exiles, and possibly even more so.

Russia is about two centuries behind the rest of Europe in her civilization. Outside of the great cities the people are, even to this day, little better than barbarians. They have no faculty of self-help, no adaptability to adverse conditions, and for this reason they must be doomed to a great intensity of suffering.

A CAVE IN THE WOODS.

A NEATLY CONSTRUCTED DWELLING WITHOUT A TENANT.

A Cave That Was Probably the Haunt of a Sneak Thief—Evidences That Show the Builder to Have Been a Skillful Mechanic—Contents of the Hut.

Saxton's swamp has its head in the woods between Islip and Brentwood. Whortleberries are plentiful in the vicinity. George L. Benjamin and Alexander Combs were roaming carelessly about in the vicinity and made a discovery that interested the town not a little. They saw smoke curling up as if out of the ground and began an investigation. They found a fire and a kettle over it in which beans, potatoes and chicken were simmering. There was no one visible in the vicinity.

The boys went to Bay Shore and spread the news, and a score or more of men went to the woods to see the surprising sight. They concluded in advance that the swamp was a thieves' den, and some of the men carried guns, others revolvers and a few hayforks. They found the simmering pot and the fire almost out. For the fun of the thing the men began playing robber, and several shots were fired as part of the pantomime. They had reason to conclude later that this was a mistake, for it served as a signal to the occupant of a cave in the woods to make himself scarce. A man with a pitchfork kept jabbing it into the earth and detected a hollow spot.

A little digging threw a large sheet iron tray up from under the leaves and left exposed a hole about two feet square. It had wooden sides leveled so that the tray set in snugly. Over the tray were leaves, grass and brush, in keeping with the surroundings. Through a hole in the tray was run a piece of telegraph wire, and at each end of the wire was fastened a nicely rounded stick which served as a handle to lift up the tray on the outside and pull it down on the inside. The hole in the earth was four feet deep and eight feet long under the ground, forming an alleyway.

CONTENTS OF THE CAVE.

The earth had been carefully cut out and must have been carted away, as no evidence of it could be found in the vicinity. There could not have been less than several wagon loads of it. At the end of the alleyway there was a depression of two feet, running a distance of six feet and being five feet wide. The roof was six feet high. This was the bedroom. It had a bunk on each side filled with leaves and grass and both had been slept in. The walls were lined with logs, and the ceiling, so to speak, was covered with muslin.

There were two closets and several brackets and a fireplace at one end, with a capped pipe running up to the top, which could be raised for use and lowered at will, to prevent detection. Five tin gutter pipes were so arranged as to admit light and air and enable the occupant to observe what was going on about him in the woods. On one side of the passage a post was driven down and into it a staple had been bolted, to which was attached a trace chain. It was a mystery what use could have been made of this, and the belief is that it was used to keep some person a prisoner at some time.

The cavern had undoubtedly been inhabited up to within a few hours, and if the men who went out to see a sight had not made fools of themselves instead of watching the hole in the ground they would undoubtedly have discovered the tenant of the queer abode and perhaps made an important discovery.

A tub in the farthest west corner of the cavern contained salt pork, and sliced chicken meat had been put into the brine to pickle. A silver spoon was found marked "The Austral." It was probably stolen from the Austral hotel, at Brentwood. Among other things were a muslin shirt, a flannel shirt and a pair of lawn tennis shoes, which are supposed to be the ones stolen from Mr. William M. Van Anden's house.

EVIDENCES OF ROBBERY.

No evidence was found that the cave dweller committed the robbery in the house of Mr. Gibb. A copy of the Bay Shore Journal was pinned up against the wall with a mark drawn around an advertisement offering $250 reward for the arrest of the butcher who killed John H. Vail's cow and carried away a part of the meat. Fastened to the paper was a slip giving an account of the robbery in Mr. Van Anden's house. Copies of city papers were strewn about. The cave, it could be seen, had been occupied for a considerable time. It was constructed by a good mechanic.

It may be interesting to state that soon after Mr. Vail's cow had been killed by a thief, who was in need of meat, a hog was killed in a pen on the premises of Mr. Marvin and the hams carried away. A few nights later a dozen chickens were stolen from Justice Clock. The thief cut their heads off and threw them on the justice's back stoop.

A colored man known as "Long Steve," otherwise Stephen Green, was arrested for stealing Mr. Marvin's hog and incidentally he was suspected of committing the other crimes. The proof against him did not positively establish his guilt, although a boy who lived with him accused him, but he had so bad a reputation that Justice Clock came to the conclusion that the public welfare required him to be incarcerated, and he was committed to the county jail at Riverhead.

Notwithstanding there have been no robberies since Green was deprived of his liberty—a circumstance which was thought pretty clearly to establish his guilt—the people are now wondering whether, after all, the dweller in the cave was not the real culprit. He was not Green, that is certain.—Brooklyn Eagle.

A Cold Day.

Gentleman (on railway train)—Pardon me, madam; is this seat beside you engaged?"

Lady (distantly)—I presume I can remove my satchel and bundles and make room; but the three seats behind me are entirely unoccupied.

Gentleman—Yes, madam. Your open window is in front of them.—New York Weekly.

A One Sided Contract.

The Hon. Benjamin H. Field was relating the other day how he induced his son to abstain from chewing tobacco. "When my boy was at college," said Mr. Field, "I agreed to pay for all of the cigars he might smoke, provided he would not chew tobacco. He entered into the agreement, and although that was several years ago he still holds me to the contract."—New York Times.

SO, MOON, DON'T TELL.

O Moon! did you see
My lover and me
In the valley beneath the sycamore tree?
Whatever befell
O Moon! don't tell;
'Twas nothing amiss, you know very well.

O Moon! you know,
Long years ago
You left the sky and descended below
Of a summer night
By your own sweet light;
You met your Endymion on Patmos' height—

And there, O Moon!
You gave him a boon
You wouldn't, I'm sure, have granted at noon.
'Twas nothing amiss,
Being only the bliss
Of giving—and taking—an innocent kiss!

Some churlish lout,
Who was spying about,
Went off and babbled, and so it got out;
But for all the gold
The sea could hold,
O Moon! I wouldn't have gone and told!

So, Moon, don't tell
Whatever befell
My lover and me in the leafy dell.
He is honest and true,
And, remember, too,
He only behaved like your lover and you!
—New York Truth.

Minneapolis Larger Than Paris.

The existing Paris covers 19,275 acres, or about thirty square miles, while metropolitan London, with 4,000,000 population, contains 118 square miles, and Chicago provides an area about as extensive for 1,100,000. The average distance from the center of Paris to the circumference is only three miles. Minneapolis, with only 165,000 people, has a municipal area more than twice as large as that of Paris. Almost the entire population of Paris is housed in the flats of tenement structures averaging from four to five stories in height.

According to the revised figures of the census of 1886 there were nearly 75,000 houses in Paris, and the average number of people in a house was about thirty. In the old arrondissements of the inner Paris there are probably about 30,000 houses, accommodating about 1,000,000 people.

For a total contrast in the plan of house construction we have only to cross the channel and to examine London, where we find an average of about eight persons to a house for the whole metropolis. But the people of Paris are better housed, all things considered, than those of London. A population of 2,500,000 within a circle whose radius is only three miles is certainly very dense, but it must be remembered that Paris is a many storied city.—Dr. Albert Shaw in Century.

Sighs on Bridges.

The front stoop offers facilities for courtship, and among the young people of Brooklyn the front stoop is a popular summer institution. The Brooklyn bridge is a bridge of sighs. It is the high bridges over the Central tracks in upper New York, however, that are most ardently worked for this purpose.

An evening stroll that takes the observer over one of these bridges will show dozens of couples leaning against the rails and apparently investigating the myriad tracks and colored signal lights and passing trains below. A manly arm will be withdrawn from a slender waist as you pass, to be stealthily slipped back again within the moment. The skirmish of hearts is going on there while you are asleep or at the theater. It is the engagement ground of the poor and lowly who live in tenements and have no front gate and no doorsteps. For them the bridge on these warm nights is a dish of ice cream with two spoons in it.—New York Herald.

All on Account of a Dog.

A devoted husband who was lately asked after the health of a dog by a friend who had presented it to his wife exclaimed: "De dog! De dog! You question me about dat dog! De dog is vell enoof! Mein vife, she vant to go to Saratoga, unt she take the dog mit her, unt ven she take him into de car de conductor he object! Unt vot my vife do? She ride in de baggage car all de way from New York to Saratoga mit dat dog! Unt ven ve go to de hotel de proprietaire he say, 'Ve take no dogs here!' but he make me pay for my room vot is engaged! Unt we go to some other hotel. De same vords, 'Ve take no dogs here!' Unt my vife, who like always de best, she go into a cheap boarding house and make herself so uncomfortable for dat dog! You tink somebody shoot him by mistake? I vill gif one huntert tollars to someboty if he shoot dat dog by mistake! Dat dog! You question me about dat dog!—New York Times.

How to Get Ink Out of Clothes.

Nearly every housekeeper has many garments spotted with ink. Here is a good way to get the ink out. Ink spots may be removed from linen with tartaric acid while wet. To remove ink from cotton, silk or woolen goods, saturate the spot with spirits of turpentine and let it remain several hours; then rub between the hands. It will crumble away without injuring the color or texture of the article.—New York Journal.

Velocity of Meteorites.

The singular fact has been demonstrated that, while the most rapid velocity of cannon balls scarcely ever attain a speed of 600 meters a second—about 1,500 miles per hour—meteorites are known to permeate the air with a velocity of 40,000 or even 60,000 meters per second. This unthinkable speed instantly raises the temperature of the air to 4,000 or 6,000 degrees centigrade.—St. Louis Republic.

A New Antiseptic Agent.

A new antiseptic agent called microcidine, which is composed of 75 per cent. of naphtholate of sodium and 25 per cent. of naphthol and phenyl compounds, has been tried in France. It is a white powder, soluble in three parts of water. The solution, which is cheap, is said to be a very effective antiseptic, without being poisonous or caustic or injurious to instruments or linen. Its antiseptic properties are inferior to those of corrosive sublimate or napthol, but surpass those of carbolic and boracic acids ten and twenty times respectively. The solution has given excellent results in dressing wounds.—St. Louis Globe-Democrat.

The prize fish liar of 1891 is a Dexter man who says the mosquitoes were so thick and so fierce that they ate all the worms off his hook before he could drop it into the water.

A tornado at Trenton, Ga., carried off the roof of a house, leaving a sick man in his bed unharmed but shelterless. His neighbors at once built a temporary shelter over him.

PROBATE NOTICE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of John A. Hannah deceased.

Notice for publication of time appointed for probate of will.

Notice is hereby given that Saturday, the 26th day of October, A. D. 1891, at 10 o'clock a. m. of said day, and the Court-room of said Court, at the town of Independence in the County of Inyo, State of California, have been appointed as the time and place for proving the will of said John A. Hannah, deceased, and for hearing the application of W. L. Hunter for the issuance to him of Letters of Administration with the will annexed thereon.

J. N. YANDELL, Clerk.

P. W. FORBES, Attorney for Petitioner.
Dated Sept. 25th, 1891.

DESERT LAND FINAL PROOF
D. E. No. 571.
LAND OFFICE AT INDEPENDENCE, CAL. September 9, 1891.

Notice is hereby given that Maggie S. Conklin, of Independence, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim, No. 571, for the N W ¼ of S W ¼ Sec. 14, Tp. 11 S., R. 34 E., M. D. M., before the Register and Receiver at Independence, Calif., on Thursday, the 22d day of October, 1891.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Hines and Norman F. Conklin, all of Independence, Inyo County, Calif.

C. W. CRAIG, Register.

ASSESSMENT NOTICE.
INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 137 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.
G. W. LUCE, Secretary.
Office, 137 Montgomery street, San Francisco, California.

DESERT LAND, FINAL PROOF.
D E No. 513.
LAND OFFICE AT INDEPENDENCE, CAL. Sept. 30, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intent on to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M. before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

NOTCE TO CREDITORS.
Estate of FRANCISCO PADERES, Deceased.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGANACIA ABECHUCO.
Administratrix of the estate of Francisco Paderes, deceased.
Dated at Independence, Cal., July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence, Cal.

NOTICE TO CREDITORS.
Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.
WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $25 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine. Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

For Pamphlet giving Indorsements, &c., address

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, September 26, 1891.

Filed affidavit of Blue Bellows—Certificate of 13 coyote scalps.

Who's going to the Benton Fair?

Dr. Louisa Woodin returned from a trip to Pasadena yesterday.

Mr. A. J. McAffee is lying very ill of brain congestion at Alvord.

J. C. Crocker, of Big Pine, has gone to Bakersfield, where he expects to remain three weeks.

The Milton District School will reopen on Monday, Oct. 5th, with Chas. E. Turner as teacher.

We are informed that Wednesday's races were postponed by the Fair Directors on account of bad weather.

Overcoats and mufflers are in order the past few days. The first ice of the season appeared Wednesday night.

The Sierras have donned their snowcaps, and their mantles will soon follow if the weather doesn't moderate.

A Carson paper states that a daily train may be run on the C. & C. before long between Belleville and Keeler.

Mr. and Mrs. P. H. Mack are expected to return home next week after a visit of some weeks in San Francisco and vicinity.

St. Patrick's Pills are carefully prepared from the best material and according to the most approved formula, and are the most perfect cathartic and liver pill that can be produced. We sell them

A. K. EUGLEY
Big Pine.

J. G. Bone, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhœa Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY,
Big Pine.

The California Game Law.

Quite frequently within the past three weeks we have been asked when the close season for quail expired and the open season for trout closed. Thinking that the matter was of general interest to our readers, we publish the game law as it now stands:

Every person who, in the State of California, between the 1st day of March and 1st day of October in each year, hunts, pursues, takes, kills, or destroys any quail, partridge, or grouse, or any kind of wild duck or rail, is guilty of a misdemeanor.

Every person who, in any of the counties of the state of California, at any time takes, gathers, or destroys the eggs of any quail, partridge, or grouse, or mallard duck, or any kind of summer duck, red head, teal, or any gray duck, or any other kind of wild duck, is guilty of a misdemeanor.

Every person who, in the state of California, between the 1st day of January and the 1st day of July in each year, hunts, pursues, takes, kills, or destroys doves is guilty of a misdemeanor.

Every person who, in any of the counties in the state of California, hunts, pursues, takes, kills, or destroys any male deer, antelope, mountain sheep, or buck, for the period of two years from the date of the passage of this Act, is guilty of a misdemeanor.

Every person in the state of California who has in his possession any green hides or any green skins of any deer, elk, antelope, or mountain sheep, or buck, for the period of two years from the date of the passage of this Act, is guilty of a misdemeanor.

Every person in the state of California who has in his possession any green hides or any green skins of any deer, elk, antelope, or mountain sheep killed after the passage of this Act, and before the expiration of two years from the date of the passage of this Act, is guilty of a misdemeanor.

Every person in the state of California who at any time hunts, pursues, kills, takes or destroys any female deer, antelope, elk, mountain sheep, doe, shall be guilty of a misdemeanor.

Every person who shall at any time hunt, pursue, take, kill or destroy any spotted fawn, is guilty of a misdemeanor.

Every person who shall take, kill, or destroy any of the animals or birds mentioned in this section at any time, unless the carcass of such animal or bird be used or preserved by the person taking or slaying it, or is sold food, is guilty of a misdemeanor,

Every person who shall buy, sell, offer, or expose for sale, transport or carry, or have in his possession any deer or deer skin, or any hide or pelt from which the evidence of sex has been removed, or any of the aforesaid game at a time when it is unlawful to kill the same, as provided by this and subsequent sections, is guilty of a misdemeanor.

Every person who takes, catches, or kills or exposes for sale, or has in his possession, any speckled trout, brook or salmon trout, or any variety of trout, between the 1st day of November and the 1st day of April in the following year, except salmon trout taken with rod and line in tide water, is guilty of a misdemeanor.

Fishing for salmon, shad etc., between six o'clock Saturday evening and sundown the succeeding Sunday, prohibited.

Fishing by explosives, or by pound, weir, cage, trap, or set net, prohibited.

RACES ! RACES !

BISHOP, Oct. 1, 1891.

Bronco won ½mile race. Trotting declared off on account of cold—everybody went home after running race.

Board of Equalization.

On Monday the Board of Supervisors met at Independence as a Board of Equalization. It was ordered that a tax of $5.75 on each $1,000 worth of taxable property be levied in Bishop School District and placed to the Building Fund of said District. Warm Springs School District was taxed $3 50; Big Pine, $2.00; Independence, $5.50; Union, $4 50.

The Board having considered the matter of tax levy for the fiscal year ending June 30, 1892, the following was adopted:

Ordered, That a tax of $2.30 upon each $100 of value of taxable property of Inyo County, State of California, as assessed, be and is hereby levied to be collected and apportioned to the various funds as follows:

State General Fund	$	.41 6
Salary "		.30
Bord "		.50
Expense "		.55
School "		.22
Road "		.20
Bridge "		.05
Special Building		.03 4
	$	2.30 00

Regular meeting of the Board of Supervisors next Monday.

Mr. Edmondson and family and Mr. Bacon and family returned to Tulare last Tuesday, going by way of Greenhorn mountain. Mr. Bacon expects to return and settle permanently at the 8-mile house in course of a few months.

A party from Tulare county consisting of ten people arrived at Independence this morning with a view of making a permanent settlement. Among those who came are Josh Burs, Wm. Calloway, Frank Fuller, (better known as Boston) Wm. Young, John Wilkes, Morgan O'Brien and others whose names we could not learn.

Over a hundred people from this end of the county have gone to Bishop this week, and the Fair this year has doubtless been a grand success. This is purely a matter of guess work however, as no news of the Fair has as yet reached Independence. The telegraph operator at Bishop had evidently gone to the races yesterday, for Independence wired to Bishop all day without response. We must cheer ourselves with the old adage "No news is good news."

On Tuesday a fire raged in the Sierras a little north of town, Government Canyon, which is used by the sheep men and wood choppers was set on fire by the carelessness of some of these campers, and in the fierce wind was soon in flames its entire length. The sight of the miles of flame and lurid smoke, when seen at night, was grand and inspiring. The fire burned itself out three miles above Mr. Bell's flour mill. No human lives were lost so far as heard from. A few sheep and some cordwood were consumed by the flames.

Notice.

All persons indebted to me are requested to come forward and settle before Oct. 17, 1891, as I intend to place all uncollected bills in the hands of my attorneys for collection on that day.

R. C. SPEAR.

Dated, Lone Pine, Sept. 17, 1891.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.
Chicago, Ill., U. S. A.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greatest part of the time for three years, until cured by Chamberlain's Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. For sale by

A. K. EUGLEY,
Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by

A. K. EUGLEY,
Big Pine.

The hand of time deals lightly with a woman in perfect health. But all functional derangements and disorders peculiar to women leave their mark. You needn't have them. Dr. Pierce's Favorite Prescription comes to your rescue as no other medicine can. It cures them. For periodical pains, prolapsus and other displacements, bearing-down sensations, and all "female complaints" and weaknesses, it is a positive remedy. It is a powerful, restorative tonic and nervine, imparting strength to the whole system in general, and to the uterine organs and appendages in particular. It keeps years from your face and figure—but adds years to your life. It's *guaranteed* to give satisfaction in every case. If it doesn't, your money is returned.

The most fascinating and restful summer sport is shooting the rapids.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

"German Syrup"

A Cough and Croup Medicine.

For children a medicine should be absolutely reliable. A mother must be able to pin her faith to it as to her Bible. It must contain nothing violent, uncertain, or dangerous. It must be standard in material and manufacture. It must be plain and simple to administer; easy and pleasant to take. The child must like it. It must be prompt in action, giving immediate relief, as childrens' troubles come quick, grow fast, and end fatally or otherwise in a very short time. It must not only relieve quick but bring them around quick, as children chafe and fret and spoil their constitutions under long confinement. It must do its work in moderate doses. A large quantity of medicine in a child is not desirable. It must not interfere with the child's spirits, appetite or general health. These things suit old as well as young folks, and make Boschee's German Syrup the favorite family medicine. ①

If you are willing to pay a few cents more for a strictly Pure Tobacco, try Mastiff Cut Plug. It is worth all the difference. Packed in patent canvas pouches.

J. R. Pace Tobacco Co., Richmond, Virginia.

THE RAG BUSINESS.

Classes of People Identified With the Industry.

SCENE IN A DEALER'S WAREHOUSE.

Young Girls Working in a Stifling Atmosphere.

There are five groups of classifications of labor and handling in connection with rags and their utilization:

1. The ragpickers, nearly all Italians, who gather the refuse of the street and the shops.

2. The dealers in rags, papers and old junk, of whom there are about 500 in the city. These are in the main small dealers, and employ individually but a few hands, the major portion of whom are girls and boys. It is difficult to ascertain the entire force, but a fair estimate will not exceed 2,500.

3. The rag cleaners form the next group. They are also small dealers, as a rule, who buy from the rag and junk shops the rudely assorted rags and go over them again, dividing them into woolen and cotton goods. These dealers are self employers, have from two to four men in their employ and some younger hands. The entire force so used may be estimated at about 1,000.

4. The wholesale or large buyers and contractors form this group. These houses employ from 50 to 200 hands, of whom three-fifths are girls, many being of tender years. There are some thirty large dealers in the city, about ten being handlers only of woolen rags, bought directly from tailors, clothiers, woolen and dry goods houses, etc. Probably there are 4,000 hands employed.

5. This group comprises the agents of the paper shoddy mills and the importers of rags, of which there are a considerable number in the city. The business to them is a profitable one.

A STIFLING ATMOSPHERE.

On Pike street, a little east side thoroughfare near the river and down town, which is probably not known to the great majority of New Yorkers, is a dealer in woolen rags almost entirely. He is a busy dealer, keeping four large trucks constantly moving and having a working force of about 100, of whom forty-nine are girls. The age of at least one-half of these may be questioned. They do not look, as a rule, over 12 years old, though in reply to questions they declared themselves to be 13 or more.

The premises are dirty in the extreme. How can they help being so in such a business? The two houses are occupied from basement to garret. The floors are cold and cheerless; the air is choking, full of dust and dirt of all kinds; it is thick enough to cut with a knife. Down there in the basement—ten dirty, slippery steps lead to it—there are fourteen girls at work amid a stifling atmosphere. The floor is boarded, but the walls are damp. Under the sidewalk is a stove, and this is the source of all the heat in the shop. The upper floors are a little better, but the place is unwholesome and filthy beyond, it would seem, what is unavoidable in such a business. The wages paid are: For the women and girls from $2.50 to $5 per week, the larger portion receiving from [illegible]. The hours of work are ten; a half hour is allowed for dinner, which the girls generally get at home, as they mostly live in the vicinity. The wages of the men average $1 per day, the truckmen and a few others receiving more.

In this place, which is typical, the rags are received direct from workshops and stores of all kinds engaged in the manufacture of clothing and handling of dress goods. They come in bags packed closely and weighing from 300 to 500 pounds each. The Pike street man's dealings range from Brooklyn to Newark. The men handle and empty the bags on large tables with heavy frames and stout network of wire, having orifices of half an inch or so. Over this network the rags are moved by hand so that the dirt, etc., falls to the floor in great clouds which fill the eyes, ears, mouth and lungs.

ON THE SORTING TABLES.

The rags are sorted on these tables and divided into woolen, mixed and cotton goods, each being placed in separate barrels. The colors and quality are also noted in sorting, and when again bagged are arranged thereby. The cotton and silk goods are sold for paper stock and the woolen and mixed to the woolen mills, chiefly in New England, where they are manufactured into shoddy. Mixed woolen and cotton goods are not in demand, but when used the cotton is burned out by some process.

It was not a pleasant place, this Pike street warehouse, with its squalor, dirt and dust. Even less inviting were the hands employed. The men naturally were rough, sturdy, ragged; the girls and women—the latter being mostly elderly—are generally Irish Americans of the poorest type, with a few Jews among them. The Italians keep out of the warehouses. They content themselves with the work of gathering and live while engaged in the open air. The dealers among them are controllers of labor—padrones in fact; or they have got into the city swim and contract to handle its refuse. But the little ones at the Pike street warehouse, begrimed, ragged, rough, hollow eyed, pinched of feature, dirty of course, all coughing more or less from the constant irritation of the lungs.

The cleansing shops are no more inviting to the eye or nostrils, but the dust is not as intolerable. The rags are bought from the junk and rag dealers, who buy direct from the Italians, or they are gathered direct from small shops and factories. The rags are placed in great pans and washed by stirring until the worst filth is removed, when they are sorted and divided roughly by material, colors and quality, and when dried are again disposed of to the wholesale dealers.—New York Graphic.

The Circus Rider's Tune.

"Why don't you change the tune in that organ once in a while? I should think 'twould get frightfully monotonous." Thus asked the casual visitor.

"That tune is one I have ridden to for years. I can keep time to it better than to any other. I've never had an accident while riding to it, and all of my horses are broken to step to it when I'm riding at this slow gait, just as they are to other specified tunes when I'm riding at a faster pace. It's the same with most riders. They learn to ride to some particular tune, and stick to it for years, solely because they are used to it and can trust themselves to ride to it. When you hear the same tunes ground out year after year in the circus don't blame the band master. It isn't his fault; it's that of the rider."—New York Times.

Capital Punishment in France.

"Capital punishment may be said to be virtually abolished in France at the present day," said the public executioner of France. "Paris alone last year tried 300 men for murder, and convicted only five of them. The leniency shown to criminals in M. Grevy's time led to a reduction of my salary from $1,500 to $1,200. This is my entire income, for I get no fees or perquisites—yet I am content."—Paris Cor. New York World.

An Unreliable Man.

"I never saw such a man as Quimby. You can't believe a word he says."

"I heard him say a thing yesterday I fully believe."

"What was that?"

"He claimed to be the champion liar of the state."—Nebraska State Journal.

Necklaces of colored stones, as the sapphire alternating with the ruby or the emerald with the turquoise, have lately driven out the diamond in Paris.

A Lesson in Natural History.

A city man who has gone to the country had his curiosity awakened the other day by the shrill and vociferous piping of some creatures in the neighborhood that the country folk said was tree toads. Probably everybody who has been in the country knows this high key chorus, formed of two notes incessantly repeated. The city man traced the noise to a grove of trees, and spent ten minutes standing beneath one tree after another and looking up along the trunks and branches to discover one of the loud choristers. He had no success whatever. The noise filled the air, and seemed as likely to proceed from one tree as another, and more likely to proceed from all. Just as he was about to give up the quest he came to a little dent or hollow in the ground, and his ears were smote by such a close and loud volume of the singing that he knew he was on the right trail. There was a little water in the hollow, full of leaves, black in the middle, and scummed with green at the edges. He took one step nearer to it, and the noise ceased. He stooped down and mimicked the frog chorus pretty closely by whistling. Instantly the air was filled anew with the strange melody.

The capture was an easy matter after that. Every time he advanced toward the water the noise ceased, and he stirred it up again by whistling. Finally he found himself bent directly over the pool and engaged in close and sympathetic conversation with its denizens. Under one leaf, by narrow scanning, he perceived a throbbing or palpitation of the water. The noise proceeding directly from that spot was so loud and acute that it pierced his ear. It seemed that the musician must be of large size. He plunged in his hand and drew out—what does everybody suppose? a frog, but as small a one as nature could well build—a little black object that would scarcely cover a quarter of a dollar. It was not one-twelfth the size of a canary bird, and yet in voice was quite as loud as any canary can boast.—New York Sun.

A Child Without a Name.

"It happened this way," continued Plunkett. "There never was but one locomotive made in Georgia up to the time that one was made in Atlanta during the war. They needed engines mighty bad then, and they went to work in the shops at Atlanta and turned out as good er looking little locomotive as I ever seed, and they named it 'Sunshine,' and the railroad men took on over it er heap and every engineer wanted it for his.

"Things was hustling outen Atlanta, for old Sherman was doing some of his swinging erround, and it was feared he'd get the control of the Macon and Western then, and this little engine was erbout to be shut off, so the engineer he fired up and folks piled onto it and out she started for Macon. She was er sailing er long as fast as ever an engine run them days, when, before you could wink your eye, she busted. That was the last of 'Sunshine,' and it was the last of er heap of folks, but it was war times and fifteen or twenty folks killed wasn't noticed worth talking erbout, but in the wreck among the dead and wounded was found a little baby that nobody has ever claimed, and the little thing was not scratched by the wreck, but just set there in er little place and laughed and crowed 'Mam, mam, mam,' and we knowed by that it was the little child of some poor refugeeing woman. They took good care of the little thing, and it lived eight months after that, and the strange thing is that it never heard an engine nor seed er car but what it would say them same words over: 'Mam, mam, mam.' But it's over yonder, with 'Child Without a Name' on its tombstone, and that ends it in this world, but it teaches the lesson that war's er bad, bad thing."—Atlanta Constitution.

Rats of the Sewers.

Mr. Webb, who has the largest fund of information as to the interior of sewers of any living man, tells some interesting facts about rats, some of which he estimates as being about two feet long and weighing about eight or ten pounds. The pure blooded thoroughbred stock of sewer rats are a distinct species. House and ground rats are smaller, leaner, sleeker, longer faced and less powerful; they run into the sewers through breaks, but return to their domiciles in the houses. Sewer rats have nests in nooks and corners of dry, abandoned or unused walls; their claws are long and have the strength of steel hooks, which they somewhat resemble. They can easily displace a brick anywhere where the mortar or cement is old or more or less crumbling. Usually they seek the old and decayed sewers, tear their way through and burrow and establish their "family residences" at their own sweet will, and do their marketing wherever it may be convenient and attractive for them.

They are naturally suspicious, coy and unsocial, although never belligerent unless cornered, in which case they will attack ferociously and bite and claw viciously. When the men are at work in the sewers the rats are quite tame, and one workman had the "knack" of calling them to him by a peculiar humming or singsong noise, which they seemed to be fascinated by, and would come almost near enough to be handled.—New York Star.

City Roofs as Health Resorts.

The proposition, ably discussed in Science, to utilize city roofs as health resorts is a suggestion deserving of careful and practical consideration. Why may this idea not be conjoined with the plan of having roof gardens? There is no reason why roofs, in large and crowded cities, may not be so built as to be converted into flower, and even vegetable, gardens. There are not a few roofs so used already. The amount of oxygen and ozone thus liberated, and of carbon gases utilized and substracted from the air, would be enormous. If sewer gases are to be carried to the roofs, and so disseminated into the air, the adoption of the garden system would be all the more desirable. Certainly the degeneration and devitalization attendant on living in crowded tenement houses must in some way be counteracted. Nothing could be more grateful to a sick or puny child than the fresh air and flowers that such a system as suggested might furnish.—Globe-Democrat.

Inwardness of Book Notices.

In nine cases out of ten the critical notices are carefully measured to accord with the size of the advertisement handed in at the business office. If a publisher advertises, his books receive notice; twenty lines secure a good review, forty a better one. If a play is ever so bad, the astute critic can find much good in it if he looks through the greenback lorgnette furnished by the business office of the mighty organ of public opinion by which he is employed. The book reviewer's judgment is warped in the same way; his favor is bought at the cashier's desk.—The Journalist.

Morphine Habit in Paris.

It is said that in Paris thousands of women are cutting short their careers by the use of morphine. Morphine disks are dissolved in a small bottle of water, and this is placed in a case which includes a tiny syringe. The whole apparatus is of a miniature description, and can be conveniently carried inside the smallest muff. The vice has become so fashionable that women actually fill their syringes before starting for the theatre, and thus have the means at their disposal, any moment, of injecting themselves with the drug while lounging in the fauteuils or in their boxes.—Science.

HONDURAS SOCIETY.

A Land Containing no Prying Maneuvering Class.

PEOPLE LIVE SIMPLY AND CONTENTEDLY.

President Bogran and his Wife.—Handsome Senoritas.

Here, at the capital, and, indeed, throughout all Honduras, the president's set constitutes the head and front of society proper. The coterie of "leaders" revolving around this gallant soldier and well beloved executive, though small, is eminently aristocratic. There is, despite the republican form of government, much that savors of royalty and suggests a court. As to precedence, the cabinet officers and their families very naturally follow the president. Without approaching in the least what is called "a ladies' man," Gen. Bogran is fitted to shine in social circles as well as to govern wisely. An educated, a traveled man, he is also of gentle birth. That is to say, he not only knows that he had a grandfather, but his great great-grandparents are a matter of actual knowledge. But then, all Honduranians are fortunate in this respect. There is no parvenu element in the country. There is no nouveau riche class to push, pry or otherwise maneuver to "get into society." There are only those who are socially qualified, and the poor—the peasantry, so to speak, who are happy enough in their own way.

There is no great wealth in the country, and in consequence no superb establishments are kept up. The best people live quite simply, though servants are kept to as great an extent as in the United States, if not to a greater. No matter how many children may be in a family each must have its own nurse or governess. But, on the whole, peace and comfort appear to be more sought after than pomp and show. There is little thought of striving for social supremacy. The Honduras girls are too well bred to display envy or jealousy, even though they—being but human—should at times feel the pangs of either. They are all fond enough of Paris dresses, but if any one of them has an especially sweet thing imported her dear 600 friends are not going to turn green with despair. They are far likelier to admire it in a well bred way, smile tenderly, consider carefully, and presently interest papa to do his part toward ordering something sweeter for themselves.

HANDSOME SENORITAS.

Some of the senoritas are very handsome. There is some difference naturally between the two types; the daughters of Spaniards, or descendents of Spaniards, and the great-great-great-granddaughters of the mighty Aztec warrior chiefs. A difference chiefly of externals, of height, complexion, figure. But all are alike in the gentleness of bearing, the quiet dignity that is so attractive.

The custom of chaperons exists of course, but less rigorously than in the United States. It is hardly necessary for mamma or mamma's representative to "glare" upon the young men, when the girls are so self-protected. Indeed at the very last ball at the palace I saw a young couple quite by themselves all through supper. They were not as yet betrothed, but the love making was a most interesting and tender little comedy for one watching it out of the corner of his eye, so to speak. The Honduranians—even those foremost in society—are essentially an innocent minded people. Immorality is hardly known. There are no scandals. The newspapers are clean sheets. Perhaps that is one reason. The young men are steady, as a rule. Dissipation is hardly known. The greatest horror was felt and expressed concerning an incident of a few nights since, when some one who had looked too often on the wine when it was red, created a slight disturbance at the theatre and was summarily ejected. He was a stranger, however.

The president sets the example of a true gentleman. He might in some respects be likened to the lamented Chester Arthur. It is a matter of regret to many that the lady of the palace, the Senora Bogran, is unable to spend more time at the capital. She is a very accomplished woman—speaking five languages. But she is also a most devoted mother, with several young children, and is not over strong physically. This charming woman spends the most of her time at the country seat of the family, at Santa Barbara not far from the shore of a beautiful lake.—Paul Rochester in New York Home Journal.

Prevention of Diphtheria.

Curative treatment of diphtheria is admittedly so unreliable that the medical profession listens with interest to every suggestion of preventing this terrible disease. At a recent meeting of the New York Academy of Medicine this subject formed the staple of the evening's discussion. Following is a resume of the principal recommendations: In a city with densely populated districts the supervision of plumbing and the erection of air shafts in tenements are useful supplementary sanitary measures against diphtheria, and physicians should instruct the people in such matters as often as opportunity presents. Overheating of school rooms and dwellings should be most emphatically denounced as dangerous.

Isolation of the sick should be explained and insisted upon. The management of isolation houses for the poor should be such as to readily gain their confidence. Enlarged tonsils should be reduced. Carious teeth should be removed or filled promptly; the fee of the poor therefor should be small, or nothing. Parents should inspect their children's mouths and throats each day before they go to school. Children should learn to gargle at an early age. Children suffering from apparently simple sore throat should not attend school until well. Kissing upon the lips should be forbidden. Children old enough to gargle should be taught to do so after each meal with a weak solution of an antiseptic chemical, and in young children a few drops should be dropped into the nostrils.—Chicago News.

Advantages of Industrial Education.

The great discovery of our age is industrial education. Its advantages prove large in all ways. It gives every child a chance to find out what it is fitted to do best. It enables every child to grow up able to earn a living. It relieves the professions of those utterly unfit by nature for a professional life. It destroys the unworthy prejudice against manual labor. It brings all grades of society nearer together. It develops a hand cunning or handicraft that relieves the brain from over use and exhaustion. It enables brain workers to secure easy reaction from brain toil. It encourages industry and saves many from falling into crime. Industry underlies moral behavior. Education of the brain can never be a perfect affair without hand skill.

It is reported that two men were some time ago arrested in New York state on the charge of violating the revenue law in selling wine without a license. They testified that they sold to saloons about 100 gallons of a drink made by this recipe: Put sixteen gallons of water into a common washboiler, add forty-eight pounds of sugar, one pound of tartaric acid and some aniline dye for coloring. After stirring with a stick until it is dissolved add a quantity of orris root, cut with a pint of alcohol, to give the flavor of raspberry wine. This stuff had been sold for more than a year as wine.—Boston Herald.

There will be divided among the superannuated preachers, and widows and orphans of preachers, of the Methodist Episcopal church, next year, $100,000 out of the profits of the Methodist Book Concern. The book concern will be a century old in 1889.

The oldest bearded woman has just died in the Pyrenees. She had exhibited herself in the village fairs for sixty years.

The Board of Supervisors of San Francisco have purchased 10,000 ft. of the "Eureka" Cotton Rubber Lined Fire Hose. Last month they also purchased 5,000 ft., and they will probably make another purchase of 5,000 ft. in a short time. This hose is of the same construction and manufacture as the well known "Paragon" Cotton Fire Hose, but is heavier and calculated for fire service in the business and manufacturing districts of large cities. W. T. Y. Schenck of San Francisco is the agent for the Pacific Coast.

Don't despise little things. Even the pin in the hand of a small boy will turn and torment its traducer.

THINGS WORTH KNOWING.

That dyspepsia comes from torpid liver and costiveness.

That you cannot digest your food well unless your bowels and liver act properly.

That your bowels require thorough cleansing when they do not do their duty by your digestion.

That your torpid liver needs stimulating in order that it may act as nature intended it should.

That BRANDRETH'S PILLS taken in doses of one or two at night for, say, ten days, will regulate the bowels, stimulate the liver, improve the digestion and drive away dyspepsia.

That BRANDRETH'S PILLS are purely vegetable, absolutely harmless and safe to take at any time.

That they can be obtained in every drug and medicine store, either plain or sugar coated.

The night is soon to wed the day,
And for the virgin pale
Hath wrought a multitude of stars
Into a bridal veil.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON, *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

Sometimes there is a good deal of pride in telling how big a sinner you used to be.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

One way to commit suicide is to eat canned lobster in hot weather.

DOWN IN A CAVERN.

Surveying the Mammoth Cave of Indiana.

MILES OF LAKES, RIVERS, AND ROOMS

First Complete Description of the Underground Passage.

Rummaging lately among the rare and curious books in the library of Col. Durrett was found proof that while Gen. W. H. Harrison was territorial governor he visited, in 1806, a remarkable excavation which he styled "The Mammoth Cave of Indiana." Later in the same year was discovered its famous and only rival, "The Mammoth Cave of Kentucky." But the Hoosier cave has plainly the prior right to the unique title, only it is now too late to make the assertion except as a matter of curious interest. The earliest published account appears in Martin's "Sketches of Louisville and its Environs" (1819), under the heading "The Mammoth Cave of Indiana." In Flint's Geography (1831), it is called the "Epsom Salts cave" and in legal enactments in 1843 it is designated "The Indiana Saltpeter cave," a name now given to a smaller cave near by. The name "Wyandotte cave" does not seem to have been adopted until about 1848, being taken from the adjacent Wyandotte river, now known as the Blue river. At an early day the ground was pre-empted by Dr. B. Adams, who had saltpeter works here from 1812 to 1819, when, by his failure to pay the purchase money, it reverted to the United States. It was bought in 1820 by Mr. Henry P. Rothrock, who at a later date perfected his title, and by whose will it becomes, under certain conditions, the heritage of Mr. Frank Rothrock, his favorite grandson.

Rothrock, with a commendable desire to know as much as possible about his prospective domain, recently organized an exploring party, including with himself three other sturdy lads named Ben Hains, Henry McClintick and Ira Rainbolt. What they style, in their narration placed at my disposal, "the unexplored regions," are not properly such, having been visited in 1860 by Messrs. Andrew and Washington Rothrock, together with two men named Miller and Langsdale. Miller gave out at a place called for that reason Miller's reach. Andrew stopped at a spot known as Andrew's retreat. Washington Rothrock and Mr. Langsdale went as far as Langsdale basin. But such are the difficulties and perils of the labyrinth that no one has ventured there since, until now.

The general plan of the cave resembles a gigantic letter K, including the main cave and the north and south arms. Twelve hours are required to traverse the sixteen miles ordinarily on exhibition. The so-called "unexplored regions" cover at least seven miles additional. They are entered from a place called the Ice House, because the gypsum-coated blocks of limestone resemble so many masses of ice. This is near the termination of the northern arm. The boys dived under a ledge but two feet above the floor and burrowed through what resembled a great snow bank, though really a mass of sparkling crystals. In fifteen minutes they came to the Round room, out from which ran several short branches, each ending in a mud bank. But through an orifice eight feet overhead, they entered a sort of second story, or in other words a cross cave. For it should be understood that Wyandot cave, instead of being a single excavation, is made up of numerous different caverns connected with each other by large or small openings. Going northward over cliffs, through crevices, and sliding along sharp ridges, the boys halted on the edge of a pit, which they contrived to cross by a kind of natural bridge, and went 300 yards further, finding many oulophol ites and other ornate forms of alabaster. In a circular room, 10 feet high and 60 wide, were remarkably fine helicitites, as well as straight stalactites. Their explorations in this direction came to an end at a deep pit, beyond which it seemed impossible for them to go without appliances with which they were not furnished at the time.

On a subsequent trip they took along a rude ladder made from a cedar tree, the trunk of which was about three inches in diameter, the boughs being cut at a convenient length for climbing. This they dragged in by a rope as far as the Round room, and used it as an easy means of gaining the "second story," where they left it with one end sticking through the hole in the floor, to play an important part in their subsequent adventures.

Wriggling through an orifice, yet above them, and through narrow crevices in a rocky pile, they emerged into still a third story above the Round Room, where the floor sloped up to the roof on every side. Thence, pursuing a remarkable winding passage, about five feet wide, twenty-five feet high, and a mile long, the walls of which were coated with pure white alabaster, they came to a modification of the labyrinth, a section of which would resemble an hour glass. They were now directly under the main cave. Shortly they came to a long, sharp edged rock, filling entirely the passage for fifty feet, along which they had to stride as if on horseback. This was "Rode rock, No. 1." Then there was good walking for 200 yards, that took them to a small orifice opening into yet another cross cave, called the Wild Cat avenue, a large, low room, with a very muddy floor, on perhaps as low a level as any other spot in the whole cave. Beyond it is Maggie's grotto, about thirty feet wide. From this they made their way again into the main avenue they had left for this traverse cave, and which bears the name of the Little Giant avenue.

And now they met with a novel difficulty, for the floor was cut with a series of pits that could be crossed only by bracing themselves against the opposite walls. Coming to a pit too wide to be managed in this way, the boys climbed to the top of the passage, and striding the chasm for half an hour, they finally descended from a rocky shelf to a beautiful stream flowing between snowy banks called the Marble rivulet. Along its banks grew many spongoidal forms, with slender necks, but that the explorers found too tough to be broken off by anything at hand. Ascending the Marble hill they enjoyed a smooth sandy floor for 600 feet, where they walked between creamy walls, curving in and out in rounded lines. Then came a tiresome crawl, varied occasionally by the cavern's suddenly folding in upon itself in such a manner as to compel the poor boys to lie sideways and drag themselves around the sharpest kind of "devil's elbows," as they called them. Striding Rode rock, No. 2, they came to Langsdale's basin, a small pool in a room ten feet in diameter. This pool is very shallow and its bottom covered with a fine yellow sediment. Imagine their emotions on seeing written there by the finger, and seeming as fresh as if inscribed yesterday, the names of Rothrock and Langsdale, written in 1860, long before those now gazing on the inscriptions were born.

By an opening through the left hand wall, and down a steep clay bank, they next entered a spacious cave, distinct from those they had been exploring. Taking its right hand branch, they crawled over a floor resembling frozen waves coated with bluish slime, while the roof, instead of rock, was crumbling clay, by which they feared that they might be buried alive unless they were very careful. On reaching a cross trench whose slimy walls threatened to allow no escape for those who should get within their grasp, they were disgusted and turned back, although tempted to search for the locality of an invisible cascade whose mournful music filled the air.

By this time it was one o'clock a. m., the stock of candles was getting low, and the boys were weary. They thought themselves near Maggie's grotto, and spent an hour and a half hunting the opening into it, not aware that they had really passed far above and beyond it. On they went painfully and by a most dangerous path, if a way could be called a path where their feet never touched ground for 400 yards. Presently the passage sank to a width of six inches, and they could neither go forward nor backward nor upward.

In five minutes more they were creeping through to the Ice house, whence, husbanding their candles, they hurried down the Northern arm, and emerged from the cave at 6 a. m., just in time for an early breakfast, for which their long fast gave them a keen appetite. Like brave explorers they announce their intention of taking the same trip again, with a better equipment, rope ladders, plenty of food, and a large supply of candles, in hope of reaching regions far beyond those already visited.

Big Things.

The largest railway depot in the world is at Birmingham, Eng. It covers eleven acres.

The highest trestle on the line of the Northern Pacific railroad is that across the Corsican defile, about twelve miles west of Missoula, Mont. The track level is exactly 300 feet 9 inches above rocks in the gorge below.

The British debt is so large that if it were divided into £1 notes they would completely cover the State of Ohio three times over. If paid in penny pieces, and each penny piled one above the other, it would make seven columns of copper reaching to the moon.

A gigantic earth worm, which seems to be closely related to the common angle worm, has just been sent from Cape Colony, Africa, to the Royal Zoological society of England. It is six feet five inches in length and thick accordingly.

An English firm of potters have produced the largest vase in the world. It is of china, its chief feature being a globe representing the world, which is supported on a pedestal and surrounded by mythological figures. The vase is eleven feet high and six feet four inches in diameter. Its cost is $17,500.

Gladwin county, Michigan, boasts of having the largest frame barn in the world. It is 156 feet long, 50 feet wide; the structure is three stories high and is 73 feet from the base to the apex of the roof. In its construction 500,000 feet of lumber, 80,000 shingles, 800 braces and 650 beams and posts were used.

The largest lighthouse lens in this country was made by a Paris firm and shipped to the United States board of lighthouse directors in August, 1888. It was intended for a lantern as big as a small church, the lens proper measuring fifteen feet in height and eleven and a half in width, the internal diameter, or "bull's-eye," being eight feet eight inches.

Grace's Hunting Horses.

Ex-Mayor W. R. Grace of New York has placed on his Long Island farm a number of Irish hunting horses. The Irish hunter is about the toughest and soundest animal that ever wore shoes It must be added, however, that, as a general rule, his temper is as bad as bad can be.

The Buddhist religion has more adherents than any other form of divine worship.

KNOTT'S FUNNY SPEECH.

He Tells the Story of His Inspiration.

WANTED TO BE SERIOUS BUT COULDN'T.

A Lobbyist's Wonderful Map.—Congressional Humor.

The red hardie which runs from the Capitol to the White House was full the other day, and a stocky, portly, short man hung on by the strap. He was cold and his round head was well wrapped in a green woolen comforter and his plug hat was pulled well down over his brow. His face only shone, but it looked like a piece of rare china. The color was as rosy as the most florid of Rubens' paintings, and the eyes shone out through white winkers as blue as a midsummer sky. A short moustache of silver was the only sign of whiskers, and the face was as round and as full as that of the moon. He smiled as I asked him whether the day was as cold as those of Duluth. It was Proctor Knott, of Kentucky, whose funny speech on Duluth some fifteen years ago made him famous, and who is now visiting Washington and hobnobbing with his old congressional friends. I am told his speech still sells, and I saw some of these Duluth speeches recently at a second hand book store, and was told they were worth a quarter apiece.

Proctor Knott had no idea at the time that this speech was going to make his reputation, and it was an inspiration which comes only once in a life time. He told me the story. He said: "It was near the close of the session, and I was asked to speak on the land subsidy bill in the house. I prepared a sober oration, with no more fun in its points than in the moral law, and it was nearly as long. I tried to get the speaker's eye, and when the bill was about passing Holman was preferred before me. I asked him to give me his right to the floor, or a part of his time. He told me he could not do it. At last I spoke to the speaker and he said he thought he could arrange to give me a hearing.

NO IDEA OF HUMOR.

"This was several days before the speech was made, and I had no idea of humor as yet. A day or so later a lobbyist called upon me and told me that a bill would soon come up to improve the harbor of Duluth. I asked him to tell me where Duluth was. I knew, of course, its situation, but I wanted him to understand that I thought but little of his bill and be thus able to refuse his request. He did not see my irony, but he put his hand in his breast pocket and pulled out a map. Here was the whole civilized world drawn in circles, and these circles grew smaller and smaller until at last they terminated in a dot at the center, and on that dot was printed the word 'Duluth.' These were hundred mile circles, and the distances of all the great cities of the country were noticed, and their small dots looked like hamlets compared with Duluth. To look at that map you would suppose that if you wanted to go to Liverpool, London or Constantinople you'd have first to go to Duluth for your start, and on the map were printed statistics showing that there were 2,000,000 square miles about that point all tributary to Duluth. The bland young man delivered his eulogy of this mighty embryonic city, and I saw as he did so the chance for some fun in the house. I asked him to leave the map, and said that I lived on a little creek in Kentucky, and that most of my people had never seen a ship. He did this, and he suspected nothing, saying: 'Mr. Knott, I hope you will study that map, and go for our bill.'

"I replied, 'I will go it,' but I never saw him again. As I thought more over the matter the fun grew upon me, and I found that I could make my speech on the land bill and bring in Duluth. I went to the library and prepared some of the best parts of the humor, and I intended it only as an introduction to my more sober speech. When I got the floor I found the house with me, and when my time was extended I could not go up from the ridiculous to the sublime. I went on with the humor and dropped the serious oration, and the speech over which I had spent days of labor was never delivered. The greater part of the humorous speech was the result of the inspiration of the moment, and while I made it I never thought that it would put the country upon a broad grin. I was astonished the next day to find every one talking about it and that all my friends at the Capitol congratulated me upon it."—Frank G. Carpenter in New York World.

Swiss House and Stable.

Samaden is a splendid place to study the type of the Engadine house, with its green eaves, iron balconies and profusion of interior woodwork. Most houses are built of stone, with walls as thick as those of a fortress, and narrow windows that resemble the portholes of old Fort Lafayette, in New York harbor. The home, stable and barn form the same building, and all the folks and animals live under the same roof in winter time. A large door opens on a spacious vestibule, big enough for a wagon loaded with hay to pass into the barn at the back. The main room is generally paneled with wood which acquires a rich, dark color with age, and in this room are the two most valuable pieces of furniture, an enormous stone or tiled stove and a colossal wardrobe. Behind the stove a narrow stairway leads to the sleeping room above. In winter the stable is, of course, for cows and horses, but in summer time it forms a spare room where visitors are received and bedded. The kitchen is small, but has a large, open fireplace, over which hang links of sausages and sides of bacon. The modern houses in Samaden are built on quite a different plan, and have no such fortesslike appearance as those of more ancient architecture. I should say, though, that even they lack fresh air and ventilation.—Cor. New York Times.

A Curious Funeral Ceremony.

One curious ceremony still survives, and has puzzled the learned. When a Parsee dies, a dog (originally a fox eyed dog was demanded, but now a yellow dog with white ears is orthodox) is brought in and made to look upon the body. What the significance of this is the modern Parsis cannot explain, or rather they offer contradictory explanations.

Perhaps it is connected with the Parsee tradition of the dogs of Yima, the lord of death, who has two hounds which go through the earth scenting out those who are marked for the grave, and afterward escort their souls to the place of judgment, guarding them on the way from the evil spirits. Possibly the bringing in of the dog to look at the corpse had its origin in the idea of securing the attention of the dogs of Yima to the just departed spirit and so insuring the due protection of the latter on its last perilous journey.

SEEN ON A TRAIN.

Peculiar Phases of Life Noted by an Old Railroad Conductor.

"Yes," said an old conductor on one of our trunk lines recently, "we see all manifestations of human happiness and sorrow here in the course of a few months. Sometimes we carry a funeral party in one part of the train and a lot of roistering pleasure seekers on another. We become accustomed to such scenes, and the hurry and worry of our work prevents our sympathizing or rejoicing with them, no matter how much we might feel so disposed. And did you ever observe how few people there are who manifest any breeding when traveling? People who would be called cultured at home will sometimes act in the most shocking manner aboard a train. How frequently we see men, and even women, with their feet upon the velvet cushions in front of them. Men who would be ashamed to have it known that they use the weed will spit tobacco juice over the foot rests and floor until they render the place they occupy useless for decent people. These coaches are scrubbed, dusted and polished every trip, but people don't seem to appreciate it.

"It's a fine place to study human nature. For instance, look at that man curled up in the space usually occupied by four passengers. He thinks that because he takes his boots off he has the right to project his big dirty feet into the aisle as far as he pleases. But no matter; I can squeeze by them when necessary, and perhaps give his legs a tweak now and then that will make him think we have been telescoped.

"But all people are not boors. You can distinguish the true lady or gentleman here as elsewhere. They are never impertinent, drunk, nor sprawling dead asleep over the seats. They seem to take it for granted that all is being done for their speed and comfort that is possible, and are satisfied. Course men, women, and old people make us the most trouble. They seldom know exactly what they want, and so are never at ease. The latter class we can tolerate for humanity's sake—but the men! Why, I feel like pitching them from the train sometimes. They imagine their little slip of pasteboard entitles them to all the room they can occupy and a voice in the train management besides.

"We see all sorts of partings, of course, but there is one kind I shall never get used to, and that is a square, manly young fellow leaving his old father or mother or sweetheart. I tell you the 'God bless you!' and 'Be a good boy!' and the tears mean something then, and don't you forget it. When he takes his seat he has plenty to think about, and you can tell by a glance at his face that life for him has begun in dead earnest. May be you have been there yourself? I have," and seizing his lantern he left me to my meditations.—Chicago News.

The Upas Tree of Civilization.

The continent is an armed camp. The nations labor, as the Jews rebuilt Jerusalem, with a sword in one hand and their industrial tools in the other. Restless, suspicious armies are encamped side by side where formerly nations lived and labored. Every year some one or other of these armies invents some more deadly weapon than its rival, some more terrific explosive, some more expeditious mode of slaughter. No sooner does this happen than all the others hasten to adopt it, piling on with desperate energy the panoply of armor beneath which humanity is crushed. Amid the ceaseless ebb and flow of human affairs, one phenomenon never varies. The sum total expended on making ready for slaughter constantly increases. Every year more and more is drained from the soil in order to feed the magazines. Every year the barrack gains on the cottage, and preparation for war becomes the absorbing preoccupation of a great proportion of the flower of our youth.

From every able bodied man this armed peace exacts three, four or five years of life when it is at its richest and brightest. When the youth steps into manhood and begins to dream of love and labor and of the sweet joys of home and family, there swoops down upon him the kidnaper of Mars and carries him off to the barracks and the camp. This vast organization for murder is the upas tree of civilization, and all the continent is sickening under its fatal shade. The first cost is the cost in actual cash paid down, the second in life wasted at its prime, the third in the condition of unrest which saps the sense of security necessary for the prosecution of business. Business is difficult when peace is not worth three months' purchase. Every year commerce becomes more and more international. Every year, therefore, any disturbance of peace becomes more dangerous to the trader. Even the shadow of war now produces far more serious dislocation of industry than in old times was caused by the actual progress of a campaign. For in old times every parish was a little world in itself, a microcosm capable of independent existence, and able to carry on its own business and grow its own crop if all the rest of the world was in measureless confusion Today all this has changed. A network of rail arteries and telegraph nerves now knits all Europe into one organism.—Pall Mall Gazette.

Fishes of the Sea.

Though no sharp line of separation can be drawn, marine fishes are roughly divided, for convenience, into three categories—shore fishes, which habitually frequent coast lines, and rarely descend to a greater depth than 300 fathoms; pelagic fishes, which inhabit the open sea, most of them spawning there also, and the deep sea fishes, which live where the influence of light and surface temperature is but little felt. The shore fishes, according to Heilprin, number upward of 3,500 species. Their northern range extends to or beyond the eighty-third parallel of latitude, but in the southern hemisphere they are not known to go beyond the sixtieth parallel. In the different zones these fishes are largely identical in both the Atlantic and Pacific basins, as well as on the opposite side of these basins.

Tropical waters, however, produce a greater abundance and diversity of forms than those of temperate regions, while the reefs give to the Pacific and Indian oceans more species than the Atlantic. Our still very meager knowledge of the pelagic fishes is sufficient to indicate that the number of such types is very limited. They diminish rapidly from the equator, and become rare beyond the fortieth parallel. Of the deep sea fishes, Gunther enumerated upward of fifty forms supposed to have been obtained from depths exceeding 1,000 fathoms, twenty-six from depths exceeding 2,000 fathoms, and nine from 2,500 fathoms. Other species have since been obtained, one from the extreme depth of 2,900 fathoms.—Land and Water.

Not the Right Temperament.

Summer Resort Hotel Man—I am very sorry, sir, but you won't do here and I must dispense with your services.

New Clerk—Eh? What's the matter?

"You are too thin skinned."

"Sir?"

"Oh, I mean no offense, none at all; it's your misfortunes, not your fault. You see your skin is to thin that the blood shows through. You blush up easily and when the thermometer is over 150 in the shade your face gets so red and you look so uncomfortable that it drives away custom."—Omaha World.

THE HOWLING DERVISHES.

Ceremonies Witnessed by a Traveller in Turkey.

SCENES VERY TRYING TO THE NERVES.

A Frenzied Child of 3 Years.—A Human Corduroy Road.

We set out after an early lunch to witness some of the religious rites of the Refaee, or the howling dervishes. These are but one of the numerous orders of dervishes who wield an irresistible influence over the public mind in Turkey. Their notable Take is a low, weather beaten old building, standing on the edge of the great cypress shaded Turkish cemetery that crowns the heights of Sentorie, and is almost as dilapidated as most of the monuments and gravestones that surround it. When we entered we found the best seats for observation nearly all appropriated by a large party of American tourists with guide books in hand, fully determined to "take it all in."

The space allotted to the "howlers" was also well filled, yet a good many, both of young and old, were still coming, and after going forward to where the high priest sat, they reverentially bowed to the dust, then taking the priest's hand, gently kissed it and retired. Directly behind the priest was a small alcove, painted a bright green, and filled with a variety of antique small arms, swords, daggers, battle axes, etc. On the walls were many mottoes or sentences in frames, and some prayer rugs. A small brazen censer containing burning frankincense and spices, filled the room with aromatic fragrance.

ROWS OF SPECTATORS.

Around three sides of the low room were galleries, some closely latticed and occupied by Turkish women; others open and filled with curious spectators like ourselves. The best location was reserved for Turkish gentlemen and soldiers. Beneath these galleries was still another, elevated a step or two above the main floor, and separated from it by a low railing, and furnished with seats for spectators. On the main floor were spread many rugs of Angora goatskin, on which were seated old men, regular patriarchs in appearance, while two groups of little children were ranged behind them. Seated close to the low railing were rows of men clothed in the flowing Dervish mantle and tan colored "galuph," a tall, brimless felt hat, strongly resembling an inverted flower pot, bound round the head by a long black scarf, with ends left flowing. These ends were at intervals in the course of the service tenderly pressed to the lips. At other times the eyes were carefully wiped with these mourning badges.

Conspicuous before the high priest stood a lithe figure, with a pale, cadaverous countenance, but a keen, penetrating eye, who was slowly manipulating a long, white scarf. He first threw it around his shoulders, thus symbolizing the all embracing love of Allah; then, binding it tightly about his waist, he began tying and untying it, each knot having a particular significance. His whispered words will bear this interpretation: "I tie up greed; I untie charity. I tie up hate; I untie love. I tie up pride; I untie humility." And so on through a long list. Then began a monotonous chant that soon swelled to a tremendous howl. All rose to their feet and kept time with swaying body and jerking head in a frantic manner.

The old and feeble among them gradually dropped out of the circle and took seats on the rugs near the center of the room, beside the rows of standing children. At length the eyes of the spectators became riveted upon the face and figure of a little 3-year-old baby, who stood for two long hours swaying its frail body in perfect unison with the dervishes, and with his rosy, cherub mouth uttering the same indescribably impressive cry of Allah! When the rude throng had at length worked themselves up to a state of religious frenzy the little boy also rolled his bright eyes about as if beholding a heavenly vision.

ENDURANCE OF INFANTS.

I can compare this worship to nothing I have ever witnessed, except it be the intense excitement exhibited at meetings among the "colored brethren" on a southern plantation in the old "slave times" in our own country. One who has seen those impressionable people jumping, shouting and falling down with "the power" can imagine something of the harrowing spectacle before us today.

To my mind nothing was so impressive as the power of endurance shown by the infants on exhibition. I shudder when I think of the torture they must have been subjected to in the private drill necessary to prepare them for such a performance in public. Some of the children seemed free to pass in and out at will, but the tiny boy spoken of above and a little girl (a hunchback) never left their posts a minute nor ceased to sway their bodies and shout until the performance was concluded by a louder clapping and howling, more violent jerking of the head and wilder tumult than before. Then a sudden hush, when, without a signal or look from any one, this lovely little baby demurely marched up to the high priest to receive his blessing, then laid him down, his face to the ground before the venerable man. Another, who appeared to be a high chief of the order, now took the stalwart priest by the hand while he placed both feet on the body of this frail infant and stood with his face turned upward, while he muttered what appeared to be a prayer. Then other children followed. First came the little hunchback, then three or four at a time, finally ten or twelve laid down, forming a human "corduroy road" for the high priest to walk over, until at least twenty children had thus received his blessing and had the evil spirit driven out of them. This ceremony is supposed to be a panacea, and there are always invalids brought to the Take during services to be cured of real or imaginary ills. One aged man laid down to be walked upon today, and one little boy, who was brought in by his devout and devoted father, refused utterly to be comforted in this manner, and was carried out most boisterously victorious.

If you are a novice you leave this scene with nerves so strained and brain so confused that you are ready to question your own identity, and are almost persuaded you have been witnessing the demoniacal incantations of wizards, instead of reasonable beings worshiping their creator.—J. A. Ledyard in San Francisco Chronicle.

This Little World.

This world is very small, and this was never better illustrated than in a little story a sea captain told me recently.

"I got a letter from a friend of mine the other day," he said, "who has charge of an English ship. The letter is written from Departure Bay, B. C. While on shore one day he became acquainted with several gentlemen from all parts of the world. During the course of conversation he asked if any one present knew old Capt. Masson, from New York. One man sprang forward and grasped him by the hand. 'I ought to,' said he. 'I married his daughter.'"—New York Letter.

JUMPING FROM THE SKY.

Sensations Experienced by a Female Parachute Flyer.

"I suppose a brief story on the way I jump would be interesting to you," said a female aeronaut. "It's all so simple to me, though, that I can't understand why it should excite people as it does, for I have actually seen women faint away and men turn deathly pale after I had cut the ropes and started heavenward. You see, I always take a look downward when I am up a few hundred feet—just why, I am sure I can't say. And right here let me tell you that I have sometimes singled out from the sea of upturned faces just the ones I knew were going to be shaded with disappointment should I fail to fall and be smashed to pieces. You may think the notion is all in my brain, but I have it firmly fixed there, at any rate, and I know there are such people in the world.

"Where are we? Oh, yes, going up—or rather, the earth is dropping away beneath our feet—you know that is always the sensation. The parachute which we are to cut loose at the proper time hangs listlessly downward. The rope which holds it to the balloon passes through a steel ring. A sharp knife blade, worked by a cord, is so arranged that at the proper time a little jerk—and we are free.

"Now comes the exciting moment, even to the veteran. Above you the balloon, freed of the weight which gave it steadiness, is rocking and reeling, while the parachute is whizzing downward. You did not feel that you were ascending, but as you shut your eyes and draw in your breath in little gasps—a long drawn inspiration would be impossible—you are fully aware that you are descending—that you are going with such frightful velocity, too, that unless there comes an end, and that end soon, the end of all things will be at hand. Prickly sensations shoot over your frame; and as you gasp for breath it seems as if a knife had been thrust into your vitals. Your thoughts are racing along with as great speed as your downward momentum; your courage, too, commences to leave you, and you are threatened with a total collapse—death!

"Suddenly the mad rush is checked. The parachute 'has grasped the situation,' so to speak. At least it has 'grasped' sufficient air to open it out, and as it gradually expands the motion becomes steadier, until you are descending so slowly and gently that you actually have a sleepy sensation. And after the thrill, the shock of the moment before, the feeling is so dreamily delicious that really you are in danger from it unless you brace up and fight it off, for Mother Earth is shoving her smiling but rugged face close at you again—it really appears as if the earth came back to you, just as it seemed to recede—and you must remember that you must be on the lookout for a safe landing place, and that more agility is required in this part of the feat than in any other.—Chicago Tribune."

One of Gotham's Bohemians.

One striking looking man has quite a history. Over six feet tall, of fine physique, with a round, full face, the lines of which indicate a broad, genial nature as against the rigors of hard luck, he is a type of that peculiar Bohemian class which flourishes in no place so well as New York. He is in continual good humor, and people who pass daily are as accustomed to his bright, sunny smile as they are to the magnificent portico of the house. This man has been a figure in city life for ten years past. He is a bright lawyer, a brilliant speaker and a man of wonderful ability; yet no one has ever known him to turn these talents to advantage. He has no income. When he came here from the south, where he was born and bred, he was not overburdened with wealth, and at no time in his life has he been the possessor of $1,000 that he could call his own. Yet this man dines at Delmonico's or the Hoffman, has elegant apartments at a well known hotel, and to many is looked upon as a prosperous citizen. He is to be seen at all the swell dinners, at the theatres and at the clubs. Bubbling over with good humor, a reservoir of epigrams, one of the most companionable of beings, he flits about from place to place.

To those who do not know him intimately it is a mystery how he manages to exist. One of his friends explained that this gay fellow has lived in this precarious way since he reached the age of manhood. He is a most insinuating talker, and can borrow money from a casual acquaintance with the grace of a Bentinck. Many who have been "touched" by this talker have never been able to understand what possessed them to loan him money. Light hearted, free of care, he sails through the sea of life a magnificent craft with a defective rudder.—New York Star.

A Caution to Consumers.

Ice cream, cream cake or lemon pie should be eaten within twelve hours after they are made. In the case of a party or picnic where the ice cream is purchased from the confectioner particular inquiry should be made as to its freshness, and if it is more than twelve hours old it should be unhesitatingly rejected. Canned meats, and in fact all canned goods, should be eaten or cooked as soon as opened, and under no circumstances should they be placed in the refrigerator to be kept. They are cheap enough and can be bought in packages of any size, so that there is no necessity for opening more than can be used in one day by a family of ordinary numbers. In regard to canned fruits and jams, if left for any length of time after being opened, fermentation sets in, and it continues in the stomach after they have been eaten. The practice of reboiling home made preserves, which have begun to ferment, or "work," as it is popularly expressed, cannot be recommended, for, although frequently this may destroy the organism which causes the ferment, it is by no means invariably the case. The cheap jellies which come put up in glass tumblers should never be used. They are made from a very poor quality of gelatine, colored and flavored artificially. The color and flavor are harmless in the majority of cases, but the jelly itself is indigestible, and generally has begun to decompose, as shown by the layer of "mold" on top.—Boston Herald.

The Ugly British Bulldog.

Talking of "handy" weapons, what a frightfully convenient weapon, cheap enough to be within the reach of all, and carrying a ball big enough to make a hole like a gas pipe, is the British bulldog revolver. It has taken more lives in its brief space of existence than any other form of translation known to inventive genius. You don't need to cock it; it does that for you. Just pull on the trigger, up goes the hammer and down it comes again and the deed is done; that slight finger pull has made a corpse and a murderer. Think of it and leave your gun at home. Teach the boys to use their fists, and give the women and old men clubs to hit with, but put up the self cocking revolver except for mad dogs.—Buffalo News "Man about Town."

Gastronomical and Mental Sympathy.

Vassar Girl (looking over chum's graduating essay)—I think, Cicely, that the tone is a trifle morbid and pessimistic.

Cicely—Do you think so, dear? It must be the pickles I ate when writing it.—The Epoch.

A TIME OF REJOICING.

When the Last Stalk of Cane is Cut.

A LONG PROCESSION OF HAPPY DARKEYS.

Banners of all Sorts.—Negro Oratory.—A Louisiana Custom.

A time honored custom among the hands on a sugar plantation is the celebration of the day when the last load of cane is hauled from the fields to the sugar house. There are few planters who object to this festival, and there are not many who assist personally in its observance. An account of one of these celebrations will be an almost faithful picture of all, for there is little variety about them.

It is a clear, sunny, winter day, and the hands work vigorously at the last acre of cane. Cane knives glitter in and out of the rustling green tops, there is a swift gleam of bright steel along the stalks, a quick stroke near the ground and the pilers lift the clean stalks in piles ready for the leaders to toss in great armfuls to the men waiting in the carts. Cane is heavy, and it requires a marvelous sleight of hand and some muscular power to send a bundle of cane flying into the grasp of another person. Mingled with crackling of stalks and the rushing sound of falling cane tops, comes the even melody of the negroes as they chant jubilee songs. There is only a little cane left. The men hold back, making a desperate appearance of haste; but not cutting more than they can help. Each man tries to deceive his neighbor, but the overseer is looking on and the cane must be cut. Swish, crack—the last stalk is almost reached, and who will have the glory of cutting it? The men are eager and excited; the overseer hurries them up; one after another the stalks fall—and, hurrah! the envied man cuts the last, and waves it triumphantly above his head. As the last load is piled on a cart, cheers loud and long announce the beginning of the celebration.

BANNERS OF ALL SORTS.

The planter has supplied the negroes with banners of all sizes. The cane carts are decorated with these, and the three or four mules in every cart have a bright rosette, surmounted by a small United States flag, placed above each long ear.

Besides these there are from one to three great flags supported in every wagon by a proud darkey, Malay or white man, as the case may be. When the line is formed it has a very imposing look. First comes the leader's cart, in which stands the man with the last stalk held upright, and one or two big flags which the ladies of the planter's household are solicited each year to manufacture; and much envied is the man to whom they are presented, for they are as attractive as yards of tri-colored flannel, ribbons and gilt devices can make them. There are also banners made by the colored women—marvels in the way of streamers and gaudy patchwork.

The long procession forms behind the last load of cane, surmounted by its gay decorations, and moves toward the sugar mill amid loud songs and deafening cheers for the planter, manager and overseer. All the mill whistles are blowing, and the much respected plantation bells are left in the power of the people, to be rung until the arms of the ringers are worn out. The procession is greeted at the sugar house with great rejoicing, speeches are indulged in, and the women and children stream from the quarters and clamber into the carts.

There is a great shrieking of whistles, roaring of machinery, crashing of cane mingled with the sounds of song and cheering, while toasts are drunk in every variety of whisky but the best. Amid all this din minor noises are unheard. After leaving the sugar house the troop of darkeys files around the mansion of the planter, cheering the family, who are expected to make their appearance and be looked at. Addresses are made to the planter, who, of course, has to return thanks; for if there is anything dear to the soul of the darkey it is speechmaking, and the father and brothers of the planter, if he has any, come in for their full share of negro oratory.

TREATING THE CROWD.

Money is given to the leaders to treat the crowd, and the planter has to use every excuse in his power to prevent himself being hoisted upon the shoulders of the joyous negroes. This ceremony being over, oranges are thrown into the carts, the leaders return to their wagons, and rattle around the grounds two or three times, with beating of drums, squeaking of fifes, cheering and other demonstrations. Then off they go to get their second installment of whisky at "de sto'," where the plantation storekeepers receive their share of attention. The procession goes to as many plantations as possible, and in the dusk, as the fog comes rolling in from the river, sweeping across the empty fields and winding in and out of the border of the woods, almost a mile away, one hears the sound of a beautiful negro melody,

We are waiting on de Lord,

rising and falling sweet and clear on the night air. And then the carts come lumbering home holding a half intoxicated, wholly happy crowd. There is a grand supper waiting for them, and nobody thinks of the depredations committed beforehand upon other men's goods in the way of pigs and poultry. More liquor is drunk, more speeches made, and the planter's entire fence is serenaded by the untiring crowd until a late hour.

Before the rising bell rings the fog sweeps in eddying folds, white and pale golden, into the blue oak woods, and discloses the quarters silent, for the very dogs are sleeping. Here and there gray smoke curls up above the cabins; the bell quavers its summons. There is a long, waking howl from the dogs, and sharp calls of negro women. Soon a large part of the previous day's proceedings will be enacted with unabated enthusiasm.—Ruth Ramay in New Orleans Times-Democrat.

The Pennsylvania Democrats have adopted as a motto the commandment, "Thou shalt not steal." In view of the way in which the public funds have been stolen in that state by Republican officials, the Democratic motto ought to have a catching influence for the average voter.

So many ships are coming to San Francisco for wheat cargoes that freight charges from British ports have been reduced to a low notch. Ships bring coal or cement at nominal rates rather than come in ballast. The best grades of Portland cement are now selling in San Francisco at about $2.50 a barrel, and Scotch coal of the best quality may be had there at $8 or $9 a ton.

The Immigration Convention of California at its recent session, resolved in favor of competing transcontinental railroads and the Nicaragua canal and the members have gone to work to see that their plans shall be carried out. They are to confer with the several roads that might enter tide water at San Francisco and are to inquire what inducements they require to start to complete their through lines.

France, Germany and Austria are afield these fine autumn days and tremulous with the tramp of vast armies engaged in maneuvers, designed not so much to test their own proficiency as to over-awe each other and dazzle the on-looking world with the glitter of the spectacle. 'T is a very fine show no doubt; perhaps the finest that ever was on earth; yet the thought will obtrude itself on practical minds that if half these armies had devoted themselves to the less showy pageant of the harvest field, there might have been no cry of a grain famine in Europe on the very threshold of Winter.

The city of San Francisco seems to be thoroughly aroused at the extraordinary action of Judge Murphy sitting in judgment upon the finalities of Judge Wallace, and overruling them. The issues raised in the Chute case will now be reviewed by the supreme court in the parallel case of Steve Gage, which the attorney-general will bring before that tribunal at once. If Judge Murphy's interpretation of the law should be sustained, it will vindicate that gentleman's acumen as a jurist; but it will not restore him the confidence of the public; for the latter believe that his decision was exacted from him by the boodlers and and bosses in requital for having placed him where he is.

A meeting of the State Association of Irrigation Districts is to be held in Los Angeles on Tuesday, Oct. 20th. The objects are to effect a more perfect organization, to bring about co-operative action looking to the sale of irrigation bonds, and to consider the need of legislation; also to provide against efforts to obtain laws hostile to irrigation interests. All friends of irrigation are invited to attend the meeting. The officers of the organization hope to have a large convention. This gathering should result in something of benefit for the important interests involved. It is only through organization and co-operation that the best results of the district system are to be obtained. California has reason to be proud of this system, which has already accomplished great benefits for the State. It is a California creation, and its success so far is beyond the most sanguine hopes of its originators.

The suicide of General Boulanger ends a career that might have been creditable to himself and useful to France. Never has the maxim that forbids military men from meddling with politics been more forcibly illustrated in its disastrous effects than in the downfall of General Boulanger. A week, vain man, he permitted designing politicians to work upon his ambition, and contemplated, through his position in the army at the head of a faction, the overthrow of the republic. He was not deep enough, nor cunning enough to cover up his designs. He had ventured into the black pool of intrigue far beyond his depth, and was left to flounder helplessly by those who had egged him on. Had France been in the grasp of less firm, resolute and keen-sighted men than she was, this vain general might have plunged her into fatal troubles at a time when she needed all her care, conservatism and containment to keep steadily on the course which will lead her to a position of commanding strength to meet the ravenous enemies with which she is surrounded.

A KENTUCKY OUTLAW'S DEATH.

The night had took possession at the closin out o' day,
When ole Bill Capfield on his bed o' straw an death did lay:
The candle slowly wagged its tail o' red an yaller flame,
Which made the shadders climb the wall, then flutter down again.
An o'er the features of ole Bill the lights an shadders ran
Like life an death, thet, then an thar, contended for the man.
The kinfolks stood around, with features warped an eyes a-leakin,
To ketch the words thet, on this earth, the last he would be speakin.
Now, punctuated by his gasps an feeble coughs, he spoke:
"I am a big wild hoss," he said, "tamed when its neck is broke!
I'm hancuffed now, 'n helpless lay beneath the very one—
The fiend o' Death—thet I so oft hev stuffed into my gun!
No more the ramrod will I shove into my rifle's throat;
No more I'll hear my shotgun yell, with death cries in each note;
No more my seven shooter flames to light some foeman home
To that dark region where ole Bill will, in short meter, roam,
No more my knife will leap aloft just like a strip o' flame,
Nor will it cut another notch into my stick o' fame.
For feeble is the arm o' strength, and failing is the eye—
The arm thet let the foeman down, the eye thet saw him die.
My brothers, I kin plow no more; my instruments I yield
Into your han's—be sure, dear ones, you don't neglect the field;
Take up your march where I lay down, keep all your foes in sight;
Be watchful, keep my memory an my guns an pistols bright."
The speaker stopped. A while he tried the rattle out to cough,
But Death's fist closed upon his neck—cut the air pump off.

—James Noel Johnson in New York Herald.

THE PRODIGAL UNCLE.

My family, at the time when this story begins, lived in Havre. They were not rich, and were always hard up. Father worked in an office, and the wages were not the highest.

I had two sisters.

My mother fretted under our poverty, and she often addressed harsh words to my father—perfidious, veiled reproaches. The expression of the poor man's face always distressed me, he passed his hand over it as if to wipe away a perspiration that was not there, and said nothing. I felt his powerless sadness.

My parents economized with everything, they often ate dinners unfit to be served, they bought provisions at the lowest prices, and yet even at that they had often to ask for credit.

My sisters made their own dresses, and had long discussions about the price of a kind of lace costing fifteen centimes a yard.

I well remember many scenes about lost buttons and torn trousers.

But every Sunday we took a walk to the docks in great style. My father, in a long coat, a high hat, and wearing gloves, offered his arm to my mother, who was dressed as gayly as a ship on a holiday. My sisters, always the last to be ready, awaited the signal of departure, but at the last moment a forgotten spot would be discovered on the coat of paterfamilias, and it had to be quickly effaced with a rag dipped in benzine. My father, keeping his hat on his head, waited in his shirt sleeves until the operation was done, while my mother, having adjusted her glasses—she was near-sighted—hurriedly put on her gloves.

Finally we started with great ceremony, my sisters, with linked arms, going before. They had attained a marriageable age, and made quite a respectable appearance in the city.

I walked at the left of my mother, my father at the right. And I remember the pompous air of my poor parents in these Sunday excursions, the rigidity of their features, the severity of their aspect. They advanced with a grave step, as if an affair of the greatest importance depended upon their carriage.

And every Sunday, seeing the great vessels that had returned from unknown and distant countries, my father invariably repeated the same words:

"Ah! if Jules were on one of these, what a suprise it would be!"

My Uncle Jules, my father's brother, was the only hope of the family, after having been its terror.

I did not speak of him, but since my infancy my thoughts were with him, and his first culpable act was always present in my mind. I knew all the details of his life up to the day of his departure for America. He had, it appears, misconducted himself—that is to say, he had squandered some money, which is a great crime if it happens in poor families. A rich man who amuses himself is simply guilty of follies. He is called "nobody's enemy but his own." With the poor and needy, a man who forces his parents to curtail their capital or income becomes a rascal, a knave.

In short, Uncle Jules had considerably lessened the inheritance of my father, after spending his own share to the last sou. Then he had sailed for America, as they afterward learned, on board a merchantman bound for New York.

After having been there some time my Uncle Jules established himself as a merchant; and he soon wrote that he was saving a little money, and hoped that he would be enabled shortly to indemnify my father for the losses he had caused him.

This letter created a profound emotion in the family. Jules, instead of being a worthless fellow, they said, was an honest man, a tender hearted man, a true Davranche, upright as all the Davranches.

In a second letter, sent two years later, he said:

MY DEAR PHILLIPE—I write you so that you need have no fears regarding my health, which is all that can be desired. My business also goes well. I start tomorrow on a long voyage to South America; several years may pass, perhaps, before you will hear from me. But if I do not write do not be alarmed. I shall return to Havre with a fair fortune. I hope it will not take too long, and then we shall all be happy.

This letter became the gospel of the family. It was read at every opportunity, it was shown to every one.

During ten years, perhaps, we did not hear from Uncle Jules; but, as the time lengthened, my father's hopes also grew in proportion, and my mother often said:

"When Jules is here our situation will be entirely changed."

And every Sunday, when regarding the huge black masses of smoke on the horizon that ascended to the sky like an immense serpent, my father repeated his eternal phrase:

"Ah, if Jules ware on one of these, what a surprise it would be!"

And then he rubbed his eyes briskly with a handkerchief.

They made a thousand projects when the return was assured; they would buy, with uncle's money, a small house in the country. I do not know but that my father had already commenced negotiations in reference to that affair.

The eldest of my sisters was twenty-eight years old, the other twenty-six. They had never married, which was a cause of great sorrow to all. A wooer finally presented himself for my youngest sister. He was a clerk, not wealthy but honorable.

I have always had the conviction that the letter of my uncle Jules, shown again one evening, had ended the hesitation and streagthened the resolution of this young man.

He was accepted eagerly, and it was decided that after the wedding the whole family should take a little trip to Jersey.

Jersey is the ideal of a journey for poor people. It is not far, one traverses the sea in a packet and finds one's self in a strange land, an island belonging to the English. Thus a Frenchman, after two hours' sailing, can see his neighbors and can study their strange manners and deplorable circumstances. This trip to Jersey occupied all our thoughts, our entire attention, and we dreamed of it constantly.

Finally we started. I remember it as if it happened yesterday—the smoke blowing over the dock; my father, very much perturbed, watching the transporting of our luggage, my mother, also disquieted, had taken the arm of my unmarried sister, who appeared lost since the other sister had gone from her, like a chicken sitting alone in its coop, and behind us came the young married pair, always lagging, which compelled me to turn my head often.

The whistle sounded. We went on board, and the ship, leaving its dock, glided out upon a sea as smooth as glass. We watched the receding shores, happy and joyous, a feeling doubtless experienced by all who have traveled.

My father wore his long coat, from which all the spots had been washed with benzine, and consequently he strongly suggested that valuable cleansing agent, and recalled to my mind our Sunday outings.

Suddenly he espied two elegant ladies, to whom two gentlemen were offering oysters. An old ragged seaman opened the bivalves with one blow of a knife and passed them to the gentlemen, who immediately carried them to the ladies, who ate them in a most genteel manner, holding the shells in a cambric handkerchief, and conveying them to their mouths without dropping any juice or staining their toilets. Then they drank the liquid with a pretty, rapid movement, and threw the shells into the sea.

Undoubtedly my father was captivated by this distinguished act of eating oysters on a vessel while it was under sail. He thought it was good taste, refined, superior, and approached my mother and sisters, saying:

"What would you say if I should offer you some oysters?"

My mother hesitated on account of the expense, but my sisters accepted immediately.

My mother said in a querulous tone:

"I am afraid they will not agree with me. Give some to the children, but not many, as the oysters will make them sick." Then turning toward me, she remarked, "As to Joseph, he needs none; it is best not to spoil the boy."

I remained beside my mother and thought her very unjust. I followed my father with my eyes and watched him as he pomposly conducted his two daughters and his son-in-law toward the old seaman.

The two ladies started to go, and my father indicated to my two sisters that they were to eat the oysters without spilling any juice. In order that they might understand better, he took an oyster, and, in endeavoring to imitate the ladies, poured the whole liquid down the front of his coat.

Suddenly my father appeared to become uneasy. He recoiled a few steps, regarded his family fixedly, then the old seaman, and quickly returned to us. He seemed pale, and his eyes had a singular look. He said to my mother:

"It is strange how that man opening the oysters resembles Jules."

Mother asked:

"What Jules?"

My father returned:

"Why, my brother Jules. If I did not know that he had a good position in America I should believe it was he."

My mother ejaculated angrily:

"You are a lunatic! You know very well that it is not Jules. Why do you talk such nonsense?"

But father said persistently: "Go and see for yourself, Clarisse. I should like very much to have your opinion."

She arose and joined her two daughters, and I also went and looked at the old man. He was dirty, wrinkled and did not turn his attention from his work.

My mother returned, and I saw that she trembled. She said very quickly:

"I believe it is he. Go and pump the captain. It will be prudent, for we certainly cannot claim this worthless fellow as our relative."

My father went and I followed, feeling strangely agitated. The captain, a tall man, very thin, but with immense whiskers, walked the bridge with an important air, as if he were commanding an India mail steamer. My father mounted the steps with ceremony, and spoke of his calling with compliments, asked him of the importance of Jersey, its inhabitants, their manners, their dress, the nature of the soil, etc. He thought the captain would perhaps speak of the United States of America, but he spoke only of the vessel in which we were sailing, how it was equipped, etc.

Finally my father said, in a troubled voice:

"You have a very interesting old man opening oysters. Do you know any particulars of this good man?"

The captain, beginning to be bored by the conversation, replied carelessly:

"He is an old French vagabond whom I found in America last year. He has relatives in Havre, it appears, but does not want to return to them, as he owes them some money. His name is Jules—Jules Darmanche or Jules Davranche, it is immaterial which. It appears that he was well to do at one time, but you see yourself that he is much reduced at present."

My father turned a livid hue, his eyes grew haggard, and, in an articulate voice, he said:

"Ah! yes, very true. I thank you very much, captain."

And he walked away. He approached my mother, who said to him, in an agitated voice:

"Sit down; did you find out anything?"

He sank upon the seat and exclaimed:

"It is he! It is he! What are we to do now?"

She replied quickly:

"We must take care that our son-in-law suspects nothing of this."

My father seemed paralyzed. He murmured:

"What a catastrophe!"

My mother ejaculated furiously:

"I have always thought it would amount to nothing, and now he returns in this state? As if one did not know how deep a Davranche could sink!"

And my father passed his hand across his face as if he would brush away mother's reproaches.

My mother exclaimed:

"Give money to Joseph immediately and let him pay for the oysters. But he is not to recognize that man nor to say anything that will cause him to be recognized, and let us go to another part of the ship where that man cannot approach us!"

With these words she rose, and my father gave me a five franc piece.

My sisters regarded our parents with a surprised stare, and I said the sea had made mamma a little uneasy, and departed on my errand.

I asked the old man:

"How much do we owe you for the oysters, sir!"

I so longed to say, "My uncle!"

He replied:

"Two and a half francs."

I gave him my five franc piece and he returned me the change.

I looked at his hand, a poor, wrinkled, horny hand, and I looked into his face, so old and wrinkled and filled with deepest sadness, and I said to myself:

"This is my uncle—papa's brother—my uncle!"

I gave him ten sous as a pourboire.

He thanked me profusely, and said, "God bless you, my young sir!" in the tone of one receiving alms.

My sisters looked at me, amazed at my generosity.

When I returned the two francs to my father, mother said, in a surprised voice:

"Did they cost three francs? That is impossible!"

I declared in a firm voice:

"I gave ten sous as pourboire."

My mother started and looked at me, exclaiming:

"You are crazy! To give ten sous to that man—that wretch!"

She stopped, looking at my father, who pointed to his son-in-law.

Before us, on the horizon, as if growing from the sea, a violet strip was visible.

It was Jersey.

We returned on another vessel, in order not to encounter him. My mother could not conceal her uneasiness.

I never saw my father's brother again.

—Translated from the French of Guy de Maupassant for Argonaut.

A Generous Tipster.

Some time ago, when the new Japanese minister to the United States passed through San Francisco on his way to Washington, he staid a day or two in the Palace hotel. One night he gave a way up banquet up stairs to a select party of wealthy and prominent citizens of the town, entertaining them lavishly. The service was, of course, furnished by half a dozen of the colored gentlemen of the house, who, stimulated by a promise of liberal tips, did their level best to make everything pleasant. The minister was delighted, and when his guests had gone he ordered his secretary to fetch him a purse. To each man and brother he handed three coins. They thanked him profusely, and got out without delay.

Next day there was a great uproar in the Japanese quarter of the hotel. The minister, ignorant of our coinage, had given each of the waiters three twenty dollar gold pieces, and on finding out his mistake he wanted to undo it. After much searching the lucky Africans were found, and under threats of summary discharge they were compelled to give back what they had not spent, with a drawback of three silver dollars apiece. —Cor. St. Louis Globe-Democrat.

Why It Must Be a Raphael.

The tenacity with which old country families cling to the time honored, however fabulous, attribution of a picture, which has descended from father to son for generations, is an innocent form of conservatism entitled to all indulgence. We remember a short passage between an old baronet and his excellent lady. He came back from hunting just as she was showing to a new arrival a "Raphael" which hung in the dining room. The baronet's ideas were rather more advanced than his lady's. "No, no, my dear, who knows whether it's a Raphael, after all?" "Well, Sir George, all I can say is that it always has been!"—Quarterly Review.

Fifty Answered.

Father—They are just the size of hailstones. Why don't you read the papers? —Pittsburg Bulletin.

Arabia's Contribution to Science.

Rome boasted that she dispensed with native physicians for the first 600 years of her existence. Whether this was the result of her unusual vigor is not recorded. In the days of her prosperity and success she developed considerable ability in the medical line and gave to the world the distinguished physician Galenus. For some time after the fall of Rome the treatment of disease was chiefly in the hands of monks. In connection with the monastery there were frequently the well managed hospital and garden filled with plants noted for their healing virtues.

The Arabs of the Middle Ages were devoted students of science and particularly of medicine. When they came in contact with Christendom they made two important contributions. They gave to the church the writings of Aristotle, which, in the hands of St. Thomas Aquinas, saved the church from a crude materialism.

They gave to the medical world the wealth of their scientific researches, especially in the line of chemistry, and substituted milder remedies in place of the terrible hellebore and other drugs of Hippocrates. Averrors and Avicenna were the leading Arabian scientists, and Dante has given them a place in that honorable circle of the "Inferno" which contains the leading physicians of heathen times.—Chicago Herald.

Answered.

"What would you do if you had a voice like mine?" said Binks, who is rather proud of his basso profundo.

"I'd take it out into the woods and yell with it till it bu'st," said De Garry, who prefers his own tenor.—Harper's Bazar.

PROBATE NOTICE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of John A. Hannah deceased.

Notice for publication of time appointed for probate of will.

Notice is hereby given that Saturday, the 26th day of October, A. D. 1891, at 10 o'clock a. m. of said day, and the Court-room of said Court, at the town of Independence in the County of Inyo, State of California, have been appointed as the time and place for proving the will of said John A Hannah, deceased, and for hearing the application of W. L. Hunter for the issuance to him of Letters of Administration with the will annexed thereon.

J. N. YANDELL, Clerk.
P. W. FORBES, Attorney for Petitioner.
Dated Sept. 25th, 1891.

DESERT LAND FINAL PROOF

D. E. No. 571.

LAND OFFICE AT INDEPENDENCE, CAL. September 9, 1891.

Notice is hereby given that Maggie S. Cook In, of Independence, Inyo Co., Cal for ..., has filed notice of intention to make proof on her desert land claim No. 571, for the N W ¼ of S W ¼ Sec. 14, Tp. 11 S., R. 34 E., M. D. M., before the Register and Receiver at Independence, Cal., on Thursday, the 22d day of October, 1891.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Innes and Norman F. Conklin, all of Independence, Inyo County, Cal.

C. W. CRAIG, Register.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 13, Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.
G. W. LUCE, Secretary.
Office, 137 Montgomery street, San Francisco, California.

DESERT LAND FINAL PROOF.

D. E. No. 513.

LAND OFFICE AT INDEPENDENCE, CAL. Sept. 3d, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, Cal., if rnia, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGNACIA ABE BUCO,
Administratrix of the estate of Francisco Paderes, deceased.

Dated at Independence, Cal. July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence, Cal.

NOTICE TO CREDITORS.

Estate of PAULINO DE LEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of Paulino Pelegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo State of California.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER Defendant.

Action brought in the Superior Court of County of Inyo, State of California and Complaint filed in said County of Inyo the office of the Clerk of said Superior Court.

The people of the State of California greeting to Stephen Decker, Defendant:

You are hereby required to appear in action brought against you by the above named Plaintiff in the Superior Court of County of Inyo, State of California, and answer the Complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this Summons—if served within this County; or if served elsewhere within thirty days.

The action is brought to obtain a decree dissolving the bonds of matrimony before and now existing between the Plaintiff and Defendant; that the plaintiff be adjudged and decreed to resume her former name, and for general relief as may be fully appear by reference to the complaint herein.

And you are hereby notified that if you fail to appear and answer the said complaint as above required, said plaintiff will take Court for the relief demanded therein.

Witness my hand and the Seal of the Court of the County of Inyo, California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODEL TYPE WRITER

$20 will buy the ODELL Typewriter with 78 characters, as good as the Single Case Odell, warranted to do more and better work than any machine made.

It combines SIMPLICITY, DURABILITY, SPEED, EASE OF OPERATION, and is about one-third the cost of repairs than any other machine. Has no ink or ribbon to bother with. It is NEAT, SUBSTANTIAL, nickel plated and adapted to all kinds of type writing. With a printing press, it produces sharp, legible manuscripts. Two or ten copies made at one writing. Any intelligent person can become a operator in two days. $1,000 to any operator who can equal work of the Double Case Odell.

Reliable Agents and Salesmen and liberal inducements to Dealers.

For Pamphlet giving Indorsements, address

Religious Services.

Sunday School at Lone Pine at 10 a. m.; Independence 2:00 p. m.

Rev. H. J. Winsor will preach at Lone Pine on Sunday at 11 o'clock a. m.; at Independence, 7 p. m. Mr. Oman will preach at Georges Creek, 2:30 p. m.

On Wednesday evening, October 14th, Rev. H. J. Winsor will preach at Keeler in the dining room of the Lake View hotel at 7:30 o'clock.

BORN.

McIVER—At Georges Creek Oct. 9th to Mr. and Mrs. F. McIver, a son.

MARRIED.

TURNER—HARVEY—At Independence, October 5 h, by Rev. H. J. Winsor, Joseph S. Turner and Ethel C. Harvey, both of Bishop.

SMITH—McMURRY—At Big Pine, Sept. 25, by the Rev. Andrew Clark, A. P. Smith and Laura McMurry, both of Big Pine.

It has been raining during the day but the storm is not cold.

Supervisor Fitzgerald and wife visited Big Pine yesterday.

Mrs. John Barnes of Keeler visited Independence last Tuesday.

Tom Webb and H. Giles started for Long Valley on Wednesday to move their cattle out for the winter.

Rev. Father Pannon will say mass in the school house at Independence on Sunday at 10 o'clock a. m.

The Supervisors finished up their business and adjourned on Wednesday. The session was very short.

The corn crop in the valley this season will be very light. The early frost did a great deal of damage.

Capitol must have been in league with the Fair Directors. The County Clerk issued three marriage licenses in one day this week.

Nancy Hanks has trotted on an oval track within a quarter of a second of Maud S.'s time, namely 2:09. It is dollars to doughnuts that she beats the record.

Mrs. A. R. Conklin and daughters, Misses M. S. and Emily Conklin arrived from Bakersfield on Thursday's train and will visit in the valley for a month or six weeks.

Mrs. J. S. Gorman has been very ill during the past week and Dr. Louise L. Woodin has been in constant attendance. Mr. Gorman reports that her condition has improved this morning.

El Crocker is the owner of a phenomenal yearling by the Patchen horse brought here by the Crocker brothers. He has been broken to lead and trots as fast as a saddle horse can gallop and hangs to a trot like a puppy to a root.

Mrs. H. Jiggins, mother of the late Harry Jiggins, arrived at Independence on Wednesday and will make an extended visit with her daughter-in-law, Mrs. Emma Jiggins. The lady is a cousin of the Mairs brothers.

The Directors of the Eastern Slope Association will to-morrow consider the question of giving purses for a two-year-old and three-year-old trot at Bishop on Thanksgiving. If they conclude to do so this end of the Valley will be represented.

J. E. Dunlap had a fine display of harness and saddles at the pavilion during the fair. The exhibit comprised both home and imported manufacture and shows that Mr. Dunlap carries an extensive and varied stock of goods. By directing an order to him at Bishop you can obtain anything in the harness line you want.

Norman Mairs expects to return to Los Angeles in a few days to attend school, and on Wednesday evening his fellow members of the Independence S. C. B. tendered him a farewell party. The affair was well attended and highly enjoyed. O. I. Mairs set up a neat lunch at the Norman House at midnight to which all were invited and did ample justice.

On Thursday morning Under-Sheriff Holland started for Bishop having in charge Lem Baxter, arrested on a charge of selling whisky to an Indian. While in Bishop last week Sheriff Gorman secured evidence against a man named Maxwell on the same charge and it is expected that both men will be tried and convicted to-day. Nothing but untiring vigilance on the part of the officers will break up this nefarious traffic.

The Fair.

On Saturday last the Fifth Annual Fair of the 18th District Agricultural Association came to a close at Bishop. Taken as a whole the meeting was a success. The pavilion was filled with products of the district and the display was most creditable. The exhibition was so large and variable that special mention cannot in fairness be made.

The races furnished very good sport and considerable "guessing" was done on some of the contests. One thing is very evident, that Inyo County is raising a fine class of horses, and in another year trotters of our own raising will enter the 2:30 list.

The stock parade was extensive and as fine a lot of horses were exhibited as could be found anywhere.

The evening amusements of the week consisted of the dramas "Rebecca's Triumph" on Tuesday and Wednesday evenings, "Meg's Diversion" on Thursday evening and the Fair ball on Friday evening. The ball was crowded on each occasion and the entertainment furnished could not fail to please all.

The entire district was well represented at Bishop and we look forward to a successful repetition at Independence next year.

SUPERVISORS' PROCEEDINGS.

MONDAY, October 5, 1891.

Board met in regular session on the above day, all the members present. Minutes of preceding session read and approved and Board adjourned until 9:30 a. m. of next day.

TUESDAY, October 6, 1891.

Board met pursuant to adjournment, the same members present. The following claims were allowed and ordered paid:

D Stubbefield	$ 72 00
C W Rathbun	29 80
A E Janvier	28 00
P W Forbes	16 00
H Levy	59 60
Mrs Keppler	30 90
T B Scovil	20 00
W A Chalfant	18 50
J N Yandell	4 05
H H Howell	37 30
J H Shannon	39 50
A W Eibeshutz	73 63
N Rhine	7 26
Independence Water Co	13 00
Irv H Mulholland	16 50
L Wood	92 26
W F Matlack	3 00
J S Gorman	4 30
G H Hardy	6 00
G L Drake	21 50
C W Craig	73 75
John Wilson	32 40
J D Blair	125 00
Mrs Lewis	125 00
L L Woodin	5 00
A W Eibeshutz	1 00

On petition Irv. H. Mulholland was appointed Justice of the Peace for the Third Township.

Board adjourned until 1 o'clock p. m., when it reconvened, same members present

Board proceeded to count coyote scalps and certificates were issued as follows:

Dave Lester	$ 55 00
W H Walker	30 00
James Wilson	135 00
Joseph Rebail	5 00
W F Matlack	5 00
Clifford Baxter	15 00
S Kripps	40 00
W J Lake	10 00
B Behows	65 00

Various sums were transferred in the several road funds, reports were accepted and claims allowed as follows:

James Nevins,	Dist. No. 1		$ 6 90
W H Powers,	" "	2	43 00
M S McLeod	" "	3	42 00
S J McMurry	" "	4	27 00
John Keegan	" "	5	186 81
John Shepherd	" "	5½	60 50
G H Palmer	" "	6	61 00
Max Skinner	" "	7	74 00

Ordered that a warrant be drawn in favor of S. J. Murry on the Bridge Fund in sum of $51.67 for labor and material on the Big Pine bridge.

Claim of Antonio Costello for $48.16 for building bridge across McNally ditch allowed in sum of $25.

Resignation of R. R. Love as constable in First Township accepted.

Claim of Charles Anthony for conveying indigent sick person to Independence allowed in sum of $35.

W. F. Matlack allowed $15, cash advanced for funeral expenses.

Claim of W. A. Chalfant for $8.40 returned for approval.

Claim of J. E. Dunlap for $33 allowed in sum of $22.

Bond of J. H. Bulpitt et als. relative to floating logs on Owens River accepted.

Claim of I. J. Woodin for repairs on buggy broken on account of defective culvert, on county road, rejected.

Board adjourned until 9:30 a. m. of Wednesday.

WEDNESDAY, October 7, 1891.

Board met at 9:30 a. m., same members present.

Quarterly reports of Auditor and Treasurer accepted and approved.

Ordered that bonds be issued for Fish Springs school district.

Ordered that the Sheriff enforce Section 462 of Harlow's "Sheriffs and Constables," relative to working prisoners.

Ordered that the Sheriff procure a reel and shelter for large hose.

Ordered that J. W. Murphy be employed to straighten out old iron belonging to the county and deliver same at the depot to be shipped to Bishop for use in the branch jail there

Board allowed claims for salaries and adjourned.

Wanton Destruction.

The recent mountain fire near Independence was a piece of vandalism that should be met with the most severe punishment that could be meted out to the offenders. The complaint is an old one that the sheep men are criminally careless in starting fires. On this occasion a fire was started in a large pile of chips that was left in Government Canyon years ago. No care was taken to prevent the spreading of the conflagration, and the result is that a vast amount of valuable fuel timber, covering several square miles of country, is entirely destroyed. The time is coming, and very soon, when this loss will be a matter of grave moment to the citizens of Inyo county. Fire wood is now growing so scarce as to be a matter of serious consideration, and to have this large amount of wood in an accessible place wantonly destroyed, merits the most severe censure and punishment to the offender. The fire swept down the canyon and burned a large amount of cord wood cut and ranked, a dwelling and a field of corn belonging to Peter McGann. He and his sons fought the fire but were unable to save the house or crops. McGann came to town to procure the arrest of the offender, but there was not a magistrate in the town and no warrant could be procured. The miscreant has escaped to another county but a long rope and a short shift will be his fate if caught here again, or that of any man who similarly offends.

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of September, 1891.

Mean barometer	29.834
Highest barometer	30.044
Lowest barometer	29.273

Weather Bureau, Observer.

Notice.

All persons indebted to me are requested to come forward and settle before Oct. 17, 1891, as I intend to place all uncollected bills in the hands of my attorneys for collection on that day.

R. C. SPEAR.

Dated, Lone Pine, Sept. 17, 1891.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.
Chicago, Ill. U. S. A.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain's Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. For sale by A. K. EUGLEY, Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Goldberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by A. K. EUGLEY, Big Pine.

A telegram received from San Francisco this morning states that P. H. Mack Esq. is recovering from his recent illness and that himself and family will be home next Friday.

MISCELLANEOUS.

NOTICE.

All persons indebted to the undersigned are requested to settle on or before October 25th, as after that date I will enforce payment.

On the move

—Liver, Stomach, and Bowels, after Dr. Pierce's Pleasant Pellets have done their work. It's a healthy movement, too—a *natural* one. The organs are not forced into activity one day, to sink back into a worse state the next. They're cleansed and regulated—mildly and quietly, without wrenching or griping. One tiny, sugar-coated Pellet is all that's needed as a gentle laxative; three to four act as a cathartic. They're the smallest, cheapest, the easiest to take. Sick Headache, Bilious Headache, Constipation, Indigestion, Bilious Attacks, and all derangements of the Liver, Stomach and Bowels are promptly relieved and cured.

Ladies are putting up preserves now and there is a great deal of jam and confusion.

The Electric Alarm Clock will ring until you get up and stop it. People who over-sleep should have one. For particulars address Imperial Jewelry Co., 26 O'Farrell St., San Francisco.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Rheumatism —IS— PROMPTLY CURED BY

Cures Also: Neuralgia, Lumbago, Sciatica, Sprains, Bruises, Burns, Wounds, Swellings, Soreness, Frost-bites, Stiffness, All Aches.

THE Chas. A. Vogeler Co., Baltimore, Md.

Old Gold and Silver Bought; send your old Gold and Silver by mail to the old and reliable house of A. Coleman, 41 Third street, San Francisco; I will send by return mail the cash, according to assay; if the amount is not satisfactory will return gold.

"August Flower"

Mrs. Sarah M. Black of Seneca, Mo., during the past two years has been affected with Neuralgia of the Head, Stomach and Womb, and writes: "My food did not seem to strengthen me at all and my appetite was very variable. My face was yellow, my head dull, and I had such pains in my left side. In the morning when I got up I would have a flow of mucus in the mouth, and a bad, bitter taste. Sometimes my breath became short, and I had such queer, tumbling, palpitating sensations around the heart. I ached all day under the shoulder blades, in the left side, and down the back of my limbs. It seemed to be worse in the wet, cold weather of Winter and Spring; and whenever the spells came on, my feet and hands would turn cold, and I could get no sleep at all. I tried everywhere, and got no relief before using August Flower. Then the change came. It has done me a wonderful deal of good during the time I have taken it and is working a complete cure."

G. G. GREEN, Sole Man'f'r, Woodbury, N. J.

Mildest, purest and best smoking tobacco made. Does not bite the tongue. Mastiff gives more solid comfort in one package than you can get out of a dozen others. Packed in canvas pouches.

J. B. Pace Tobacco Co., Richmond, Virginia.

A FAMOUS OLD PRISON.

Pen Pictures of the Interior of Newgate.

EXECUTION SHED AND WHIPPING POST.

England's Once Noted Prison Now Merely a House of Detention.

Newgate is the most notorious prison in England. Its history is connected with the story of the crimes of this kingdom for the last 800 years. The present prison, was built toward the close of the last century, but it is upon the site of the original prison where a Newgate has stood since 1070. Newgate has held in its long history every kind of victim of the law. It is at the end of the Old Bailey, very near Smithfield, where the martyrs to fanaticism were publicly burned.

The exterior of Newgate resembles an old fashioned fortress. Its walls are of a rough gray stone. They have become nearly black by exposure to the sooty atmosphere of London. There are but few windows in the outside walls. The main buildings of the prison are in an interior court not visible to the public. The principal entrance is most forbidding. The lower half of the door is a locked and barred square of wood surmounted by sharp iron spikes. Just above this is a network of iron. Over the door hung chains and balls, symbols of the old Newgate. There is a blackened board at the right of this door upon which is now placed the official record of an execution when it takes place within this prison.

Newgate has been the scene of every form of execution. The breaking on the wheel, the drawing and quartering, and every kind of old fashioned torture has been tested to the full extremity of barbarous law within these blackened walls. Today Newgate is used as a prison of detention for criminals who are to be tried at the Old Bailey. If they are sentenced to death they are kept at Newgate and executed there. If they are sentenced to penal servitude they are transferred elsewhere.

The other day, through permission from the home secretary, I visited Newgate. I was turned over to one of the chief warders, a man who has been in Newgate for thirty years, and who has assisted at thirty-five executions. He was tall, broad shouldered, with regular features and a full, long brown beard and flowing mustache. He looked as dignified as a colonel in the Horse Guards. He spoke good English, without the slightest Cockney accent, and did not drop one of his h's, which is more than can be said for the attendants at Windsor castle.

Common report describes Newgate as damp, unwholesome and badly lighted. This is incorrect. It is a model prison so far as ventilation, light and dryness are concerned. The cells are large and high. They are heated by hot water pipes, and are as comfortable as a prison should be. Prisoners in Newgate who conduct themselves well are entitled to an hour's daily exercise in the court yard. Refractory prisoners who refuse to submit to ordinary punishment are given twenty-four hours in the dark cell, with a diet of bread and water. The warder showed me one of these dark cells, and kindly closed me in it for a moment to give me an idea of this kind of punishment. The cell was so closed out from the light that I could not see my hand directly in front of my eyes. The warder said that this form of punishment was not at all appreciated by prisoners who had never undergone it. He never saw a prisoner who dreaded this punishment for the first time, and in the history of Newgate punishment no prisoner, however bad, had ever placed himself in a position to receive this punishment a second time. Twenty-four hours alone in absolute silence and darkness breaks and cows the most stubborn spirit, and if continued much beyond this limit would inevitably lead to madness.

The cell of the condemned prisoner is near the dark cells. It is a large room, double the ordinary size. It contains a plank bed, upon which a light mattress is laid. There are two or three religious inscriptions upon the wall. A table, a stool for the prisoner, and two for the warders, who are always with him day and night from the time he is condemned, compose the furniture. Execution follows a sentence very swiftly in England. The utmost period of delay does not go beyond a month, and often execution takes place within ten days after a sentence. There is no appeal to any one except the home secretary. He alone has the power to stay the execution or to commute a sentence. It is very rare that he interferes. The odds are ninety-nine to one that a man sentenced to death in England will be executed.

From the cell I walked with the warder to the chapel of the prison upon the first floor. This is a handsome, old fashioned chamber, high, well lighted, and finished in dark woods. In the center is a lofty pulpit. Upon the left of this is a gallery box for visiting justices. Around the room upon the right and left are cages or subdivisions behind strong iron bars, where convicts used to sit. Those who are on trial sit in front of these bars. There is an upper gallery arranged with slats for female prisoners. These great wooden slats are so turned that the women can see only the preacher, and not one of the prisoners. At the right of the pulpit is a little black chair, the seat of honor in the chapel. This is reserved exclusively for prisoners under sentence of death. Formerly there was a pew for this class.

After leaving the chapel I walked with the warder around to the place of execution. The prisoner marches from his cell through the prison wing into a narrow court and around this court, not one moment's walk, to a wooden shed made of unpainted pine, which is built in a corner of the court against the prison walls. This shed has a cement floor with a wooden trap in the centre. Over that is a simple beam across, from which hangs a rope. The only furniture in the place is connected with the trap, which is worked by a black iron lever. There is a commission now experimenting in Newgate as to the best methods of hanging, so as to secure a breaking of the neck when the trap drops. In one of the large rooms looking on to the court where the execution shed is there is kept the whipping post. Under the English law any attempt to rob a person accompanied by personal violence constitutes the technical offence of "garroting." This is punished by from twenty-five to fifty lashes. The men under sentence for garroting are seated upon the black box with their legs fastened upon what was an old pillory post. Their arms are fastened above their heads. Then the lashing is well laid on until their backs are completely cut to pieces. The warder said that there was no object in giving more than twenty-five lashes. After twenty-five lashes the men were numb and felt no more pain. He said that it was a most effectual form of punishment, and reached a class of street ruffians who cared nothing for imprisonment. London swarms with this class of criminals, who are now pretty thoroughly restrained by the whipping post. There is no form of punishment so much dreaded by these men as the lash. This room where the whipping post now is was formerly used for prisoners when they were kept together in numbers instead of being given separate cells. People imprisoned for debt used to be kept here.—T. C. Crawford in New York World.

A Lesson in Fractions.

Anna C. Brooks, the 9-year-old daughter of Professor Brooks, of the Red House observatory at Phelps, N. Y., and who, by the way, is said to evince already much of the astronomical taste of her father, put the following original mathematical puzzle to him the other morning before she was out of bed: "Papa," said she, "can you write nineteen so as to make it 1888?" It was a poser for the professor, and he gave it up. "Well, here it is," said Anna, "18 8-8; don't you see?"—New York Tribune.

Stories of Confederate Money.

Congressman Grimes, who represents the Fourth Georgia district, told a couple of stories very pertinent to the subject and which greatly amused his auditors: "In the latter part of 1863," said Mr. Grimes, "a young man who lived in La Grange, Ga., became possessed of the sum of $500 in Confederate money. He was of a thrifty turn and wanted to add to it. With that purpose in view he invested his money in a bar'l of whisky. This he sold by the drink, and at the end of the week had disposed of the whole barrel and had $1,200 in hand, a net profit of $700. The young man was highly elated. He saw his way clear to a fortune in a short time.

"Of course he decided to buy more whisky at wholesale and sell it by the small measure, but he had not taken into account the wear and tear which the credit of the Confederacy had suffered during the week which it had taken him to sell out his barrel. When he went to invest in another supply he found that he could not make a purchase similar to his first one for less than $1,500. The financial fluctuations involved in the transaction knocked him so completely out that he retired permanently from commercial life and hired himself out as an agriculturist." When his hearers had finished laughing at this story, Mr. Grimes gave them the other one. "It was in the same town—La Grange—and in the latter part of 1864," he said. "One old gentleman there who had persistently predicted the failure of the Confederacy was one day deriding the currency that was then so plentiful and of such little value. He said that it was so worthless that nobody would even steal it or pick it up if found on the street. He pulled out a $1,000 bill—Confederate money, of course—and declared that he could tack it with a pin to the fence around the court house, leave it there five hours, and that nobody would think enough of it to put it in his pocket. His offer was accepted. The note was pinned to the fence and at the end of five hours he and the man to whom he had been talking went out to see what there was to be seen." Mr. Grimes here paused.

"Well?" inquired Mr. Allen, of Mississippi.

"The $1,000 note was there," replied Mr. Grimes, "and pinned beside it was another Confederate bill, the denomination of which was $2,000."—Atlanta Constitution.

Visit to a Repairing Factory.

The place looked like a ghastly caricature of a butcher shop in the land of the cannibals, but it was only the inner sanctum of a manufacturer of artificial limbs. Arms, legs, hands, feet—what you will—hung on walls, screened in glass cases or laid about in heaps, greeted the eye wherever it rested. There were audacious pictures of gentlemen in various active employments, who, having "tried your valuable leg would have no other." One of those graceful men was pictured in the act of riding a bicycle. Another bore his whole weight on an artificial leg while plying a miner's pick at a mass of rock over his head. Still another stood on his sound leg and with the artificial leg drove a spade deep into the soil of a garden plot. Three were farmers following the plow, blacksmiths shoeing horses and a pedestrian without a nose—all with at least one artificial leg.

"Do they really do all that?" inquired the reporter.

"Perhaps not quite as well as you'd suppose from the cut, but it is true that there are a good many thousand men with artificial legs doing work that one would think likely to require the aid of sound limbs."

"Then you come pretty nearly supplying any natural loss?"

"Pretty nearly. The war gave a great impetus to the manufacture of artificial limbs, and we are still making limbs for the veterans."

"How long does an artificial limb last?"

"That depends upon whether it is an arm or a leg and upon various other considerations. I've known an artificial leg to be in use twenty-five years. The more elaborate attempts to counterfeit nature, the more liable the member to get out of order and require renewal. We make arms and hands with which the wearer writes, uses knife and fork at table and performs many operations that one might think impossible."—New York Telegram.

Lower the Meat Bills.

Everybody has his or her way of living, and, if they would tell, the whole race might be benefited by it. But whatever the theories may be, whether one reader believes in a meat diet and another does not, it would be interesting to know how each succeeded. The writer has often heard the remark: "I wonder how a man on $10 manages to live?" Yes, it may be a wonder, but hundreds of men do it, and the writer knows, within the range of his own experience at least, half a dozen men who do it, and do it seemingly very nicely. Their wives wear inexpensive but neat and attractive looking clothes, the children who go to school look as clean and as well dressed as the children of some other men who earn more, and the presumption is that each of these families get enough to eat. At all events they certainly look as if they did.

Now, with a little study, the writer does not hesitate to say many families could save money.

"Where?"

Right in the house, right on top of the table. If a man can afford certain dishes and doesn't care whether he will later be troubled with dyspepsia, all right; but if he has not the very necessary "wherewith" he ought to knock off on some of his meat bills. By this means he would have more money to expend for clothing and for a few of the things he cannot now enjoy and which he is forced to consider as luxuries.—Boston Globe.

Leader of a Monkey Tribe.

When they get ready to start on their expedition an old monkey, the leader of the tribe, with a staff in his hand, so as to stand upright more easily, marches ahead on two legs, thus being more elevated than the others, so as to see signs of danger more readily. The rest follow him on all fours. The leader advances slowly and cautiously, carefully reconnoitering in all directions, till the party arrives at the corn field. He then assigns the sentinels to their respective posts. All being now in readiness, the rest of the tribe ravage and eat to their heart's content. When they retire each one carries two or three ears of corn along, and from this provision the sentinels are regaled on their arrival at their lair.

Here we see ability to rule and a willingness to submit to rule; a thoughtful preparation of means to the end in view and a recognition of the rights of the sentinels to be suitably rewarded at the close of the expedition. Wherein does all this differ from a similar foray of a tribe of savage men? The only difference is in degree; otherwise it is much the same.—Professor Edwin Emerson in Popular Science Monthly.

Very Unhealthy to Drink.

At a summer resort the other day, a bright little 4-year old child amused the company by his continual cute questions and answers. One of his sayings is worthy of repeating. Looking out of the window into a rain storm, little Willie inquired, "Mamma, where does all the rain come from?" "From the heavens." "And do people drink all that water?" continued the little fellow. "Yes," was the reply. "Well," rejoined the small wit, "I should think it would be very unhealthy to drink, there are so many dead people up there!"—Boston Budget.

THE CAMERA'S MAGIC.

Ingenious Use of Photography in Kindred Arts.

MODERN WAY OF MAKING WATCH DIALS.

The Sand Blast.—A Costly Experiment—Enlarged Pictures.

Mr. T. C. Roach, familiarly known by photographers all over the United States and even in Europe as "the old man," is recognized by them as a sort of mahatma, one who, if he does not quite "know it all," is very liable to find out anything more that is to be discovered. He has taken out a greater number of patents in photography than anybody else in this country. Speaking recently of the practical applications of photography in late years, he said to a reporter:

"Do you know that watch dials are now made by photography at a mere fraction of their former cost? They all used to be painted by hand. Now a hundred are made in the time formerly required to produce one, and each of the hundred is better than the one would have been. The dial is of copper covered with enamel. Upon that they lay a sensitized coating of albumen and bichromate of potash. A large drawing, say twelve inches in diameter, of the design, figures, and dots that it is desired to put upon the dial is photographed down to the required size, which makes it so very fine that whatever inaccuracies may have been in the drawing are almost beyond discovery by the microscope. The negative thus made is exposed to the light in contact with the gelatine coated watch dial for from three to five minutes. Electric light is just as good as sun light. Where the light has acted the gelatine is made insoluble. The dial is now inked over with common lithographic transfer ink. Next, with a clean sponge moistened with a little gum water, the ink and gelatine are wiped off the dial from all parts except where the light has acted, and to those it adheres, leaving the design in clear black upon the enameled plate. But that design would easily blur and rub off by wear. Another process is necessary to make it permanent. A metallic enamel powder of any color desired—black, blue, red, green, or purple—is dusted upon the dial. It sticks to the inked portions, but nowhere else. Then the dial is put in the muffle and fired. The enamel powder melts into the white enamel base, and the work is complete. The Waltham Watch company paid $2,000 for that process. By it they can turn out, for ten cents each, dials that in the old way of making would have cost $1 apiece.

"Speaking of that necessity recalls to me the effort now making for the production, for purpose of magazine and book illustration, printed with type, of photographs from nature or paintings, by means of what are now called tint glasses. About that I am going to tell you a page of history that has not before been published, and that will make no small stir among a number of persons who are claiming to be the inventors of processes in that direction at the present time. The real inventor of tint glasses or, as he called them, ruled spectrums was Baron von Egloffstein, who patented his processes in the United States and England as long ago as 1865. He was a brilliant, highly educated man, who did a great deal of fine engineering work for our government, and who went away to Europe several years ago. There was a rumor that he had died, but only recently I heard that he had retired to a monastery somewhere and was still living.

"Well, a big company, mainly of United States officials, was formed for the development of Baron von Egloffstein's discovery and its utilization for the printing of greenbacks and other paper money in such wise as to defy counterfeiting. Secretary Chase was in that company, as were also Baron Perault, Capt. Eads, Governor Sprague, of Rhode Island; Mr. Knapp, the Pittsburg gun founder; Mr. Schoonmaker, the A. T. Stewart of Baltimore; Representative Laflin, Mr. Clark, of the bureau of printing; a Massachusetts senator, whose name I do not now recall, and several other prominent men. Jay Cooke & Co. were the company's bankers. They had any quantity of money. In one year they spent over $120,000 in working the process on steel, and they used to say that they had $20,000,000 ready to put in it as soon as it was a proved success. Every Saturday they used to have a meeting at the Fifth Avenue hotel, square up all the bills, have a big dinner, and drink champagne by the basketful.

"But their expectations were not realized. Baron von Egloffstein used a fine plate glass, covered with a very opaque etching ground, which was cross hatched by the finest possible lines, 500 to the inch, which was interposed between the light and the object, or the glass negative or positive, to be photographed. You can see that the effect would be that instead of producing a picture in smooth half tones, like an ordinary photograph, one would be made that was all broken up into fine cross hatched lines and dots. From this resulting negative transfers could be made to stone, steel, or copper, or could be printed directly by contact upon a metal plate for etching. Of course, for intaglio work, as for printing from steel a positive picture would be used and a negative for type press printing. The principle of the thing was all right, beautiful; but in practice it was found that the closeness together of the fine lines prevented getting sufficient depth. If the plates were bitten down deep enough for printing, there was no body to bear repeated and heavy pressure and a few impressions would break them down. The few impressions obtained were superb, but the plates would not last. More practical results are now attained by a coarser ruling, of about 100 lines to the inch, for the production of relief plates for type press printing. The old patents have now run out, and the process belongs to anybody who choses to employ it.

"One of the late and possibly rather surprising discoveries in photography, which also is a patent of mine, is the enlargement of photographs to any required size without the aid of a solar camera, merely by the light of an ordinary oil lamp, or even by a flash of gun cotton. In the old way a costly solar camera was necessary, a machine costing $250 or $300; much time and clear sunlight, and a very expensive prepared paper were also all requisites to the process. Now I, or rather the firm to whom I have transferred my rights, make a comparatively cheap paper, in a roll of any desired length and as much as forty-two inches wide, coated by the gelatine-bromide of silver process, and, with the aid of a little apparatus like a magic lantern, costing $20, and which can be operated day or night, in a cellar or a bedroom, if necessary, can produce an enlargement of a picture to any required size, say from a tintype as big as your thumb nail up to life dimensions. The development of the enlarged picture is made in the usual manner, and then it is ready for finishing in crayon, pastel or in any other way desired. Pictures of actors and actresses, full length, life size, have in this way been enlarged from cards de visite and finished up for photographing again, in reduction, for plates produced by process for printing on a type press, a method that is very convenient for the artist, and enables the making at small expense of a very fine and certainly accurate picture for practical use.—New York Sun Interview.

Experiments in Signaling.

Partially successful experiments in signaling by means of electric lights flashed on clouds have been made by British officers at Singapore. A message of four words was read from an outgoing vessel at a distance of sixty knots, but the reply escaped notice.—Arkansaw Traveler.

The British postoffice service employs 3,000 women. Competitors for places have to be over 18 and under 20 years of age.

"That picture by Miss Virginia Oledominion of a slave is a great work, isn't it?" "Yes, and it ought to be. Her father was one of the old masters."

A MYSTERY.

How the human system ever recovers from the bad effects of the nauseous medicines often literally poured into it for the suppositive relief of dyspepsia, liver complaint, constipation, rheumatism and other ailments, is a mystery. The mischief done by bad medicines is scarcely less than that caused by disease. If they who are weak, bilious, dyspeptic, constipated or rheumatic, would oftener be guided by the experience of invalids who have thoroughly tested Hostetter's Stomach Bitters, they would in every instance obtain the speediest aid derivable from rational medication. This medicine is a searching and at the same time a thoroughly safe remedy, derived from vegetable sources, and possessing, in consequence of its basis of pure spirits, properties as a medicinal stimulant not to be found in the fiery local bitters and stimulants often resorted to by the debilitated, dyspeptic and languid.

Little drops of water
Tumbling in the sand
Make hotel expenses
Very hard to stand.

GEO. AUGUSTUS SALA.

Geo. Augustus Sala, the well known English writer, on his Australian trip, wrote as follows to *The London Daily Telegraph:*

"I especially have a pleasant remembrance of the ship's doctor—a very experienced maritime medico indeed, who tended me most kindly during a horrible spell of bronchitis and spasmodic asthma, provoked by the sea fog which had swooped down on us just after we left San Francisco. But the doctor's prescriptions and the increasing warmth of the temperature as we neared the Tropics, and, in particular, a couple of ALLCOCK'S POROUS PLASTERS clapped on—one on the chest and another between the shoulder blades—soon set me right."

She—Are you fond of Meyerbeer? He—Oh, I ain't particular! Any kind's good enough if it's only cold.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON, *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

PISO'S CURE FOR CONSUMPTION

25 CTS. Best Cough Medicine. Recommended by Physicians. Cures where all else fails. Pleasant and agreeable to the taste. Children take it without objection. By druggists. 25 CTS.

CHICHESTER'S ENGLISH, RED CROSS PENNYROYAL PILLS DIAMOND BRAND

THE ORIGINAL AND GENUINE. The only Safe, Sure, and reliable Pill for sale. Ladies, ask Druggist for Chichester's English Diamond Brand in Red and Gold metallic boxes sealed with blue ribbon. Take no other kind. Refuse Substitutions and Imitations. All pills in pasteboard boxes, pink wrappers, are dangerous counterfeits. At Druggists, or send 4c. in stamps for particulars, testimonials, and "Relief for Ladies," in letter, by return Mail. 10,000 Testimonials. Name Paper. Sold by all Local Druggists. CHICHESTER CHEMICAL CO., Madison Square, PHILADELPHIA, PA.

CUMBERLAND COAL. H & B BRAND.

From Maryland. Highly recommended by Carriage-Makers, Blacksmiths and Horse-Shoers.

Sole agents for "DUCKENFIELD" SYDNEY, from Newcastle, Australia; the greatest gas and steam producing coal ever brought to the Coast. "PLEASANT VALLEY" and "CASTLE GATE" from Utah; the best of Rocky Mountain coals; superior to all other coals for domestic use. "NEW SEATTLE" from Seattle, Washington; a popular domestic and steam coal.

HUSBAND & BROOKS, Main office, 14 and 16 SPEAR ST., San Francisco, Cal. YARDS: Main and Folsom, 14 and 16 Spear St., 132 and 134 Spear St.

"IGNORANCE of the law excuses no man," and ignorance is no excuse for a dirty house or greasy kitchen. Better clean them in the old way than not at all; but the modern and sensible way is to use SAPOLIO on paint, on floors, on windows, on pots and pans, and even on statuary. To be ignorant of the uses of SAPOLIO is to be behind the age.

Granger Gangs.

With or without Lifting Lever.

Best bench Plow
3 to 7 Gang
$50.00 to $100.00
According to size.
Easy Running
Have Seed Attachments
Best for Sandy Soil
Perfect for Dry Plowing.

Made by BENICIA AG'L WORKS

For sale by all dealers and S. F. Baker & Hamilton Sac'to.

CRAGIN, VALE & BICKFORD, ATTORNEYS, 914 F STREET, WASHINGTON, D. C. SPECIAL ATTENTION GIVEN TO LAND, MINING AND INDIAN DEPREDATION CLAIMS.

TELL YOUR HUSBAND

That you want some handsome indestructible Judson Fence around your yard and garden. It is painted *red* and put up in rolls for shipping. It is proof against chickens, horses, rabbits and cattle. The best and cheapest FARM and VINEYARD Fence in the world. Write a postal card for circulars and price list to JUDSON MFG. CO., 14 Fremont St.

A PEDDLER'S METHODS.

Ways That are Dark and Tricks That are Vain.

PLENTY OF SELF CONFIDENCE REQUIRED.

One of the Fraternity Explains the Business.—Hard Work.

"Good peddlers, like successful men in the higher walks of life, are born, not made," said the particular member of the fraternity whom a reporter questioned on the subject. He was loaded down with rugs, door mats, feather dusters and other articles until he looked like a perambulating house furnishing store. Any or all of the articles under which he struggled he offered to sell on "time payments of fifty cents a week," and when the reporter gently but unhesitatingly declined the offer, the peddler looked so unutterably disgusted that the reporter offered him a chair and some refreshments. Soon the two were engaged in a conversation which brought forth the observation made above.

"No," he continued, "a peddler is naturally a good peddler, and no amount of training or trying will make a good one of a man who hasn't it in him. On the other hand, a good peddler is generally good for nothing else on earth. Let him try to stop peddling for any other business and the chances are ten to one that he'll make a fizzle of it."

MADE A SUCCESS.

"Now, I am a born peddler, and at peddling I have at last made a success, where in all things that I tried before I failed. I went to school until I was 18, and since then—that's twelve years ago—I have been successively a lawyer's clerk, bookkeeper in an importing house, clerk in a dry goods store, driver of a delivery wagon, car driver, elevated railroad guard, waiter and peddler. It's four years since I found my true vocation, and I've done pretty well."

"Does a good peddler make much money?" the reporter asked guardedly.

"Well, that depends. Now, I average $30 a week. Some, a few, make more, but the majority make less. Anybody that's a good peddler, though, should be able to make $25 a week without any trouble and be able to go out on Sunday for a good time."

"What characteristics must a good peddler possess?"

"Oh, a great many. Self-confidence, or 'cheek,' as it is called, is the most essential. Without it no peddler ever peddled with success. But too much of it is even more fatal for his prosperity, for in addition to failure he often gets a broken head. No, he must have self-confidence, but not too much—just enough, you know. Then he must be a character reader—know just to whom he can sell and whom not, who will stand a stiff price and who must be offered the goods at cut rates.

"To be a good peddler you must also have a firm, yet gentle disposition. You must allow nothing to deter you when you see a person to whom you feel you can sell. No matter what he or she says, you must persevere. This is where the firmness comes in. The gentleness is necessary, so that you may, under no circumstances, lose your temper. It doesn't pay. If the door is slammed in your face, swearing will only make matters worse. The people next door will only laugh at you. No, you must preserve a dignified silence and smile indulgently as you turn away. Then you can sell to the neighbor. Her sympathy will be aroused, and by patronizing you she thinks she can administer a rebuke to the unmannerly woman next door and shine by comparison."

UP STAIRS AND DOWN.

"Is peddling hard work?"

"Trudging up stairs and down with this assortment of goods isn't as much fun as playing poker, but there is more money in it for the average person; and, besides, it's no harder than many other things—selling dry goods, for instance. I can pick my customers in this business, but when I was a counter jumper I was entirely at the mercy of any woman who happened along."

"What becomes of all the peddlers?"

"That question has often puzzled me. There are two things I never saw in my life—a dead mule and a dead peddler. Sometimes I think that when mules and peddlers die Old Nick carries 'em off bodily as choice bits of 'cussedness.'"

"Are all peddlers full of ways that lead to Old Nick?"

This was rather a leading question, but the peddler met it unblushingly.

"Well, generally," he replied, nonchalantly. "Some save their money, but very few. I generally turn up with a big head and empty pockets on Monday morning."

"Then how do you manage to buy your goods? On time?"

"We don't buy our goods. We get them from houses around town that are only too willing to let us have them to sell on commission. When a new hand starts in he has to deposit the value of the goods he takes out, but after awhile, when he gets better acquainted, he can get all the goods he wants to take out.

"I must go now. I just saw the red headed woman who lives across the street return. I knew she was out, and I've been waiting for her all this time. I can always sell to a red headed woman. I don't know why, but I can. A red headed man, though, is a useless being as far as peddlers are concerned."

With this parting shot (the reporter's hair takes on a russet tinge at sunset) the ungrateful vender of rugs took his departure.—New York Press.

How College Graduates Succeed.

Of some 1,000 graduates from collegiate institutions, seventy-five only make for themselves a name and prominence in their calling. About 200, having business qualifications, become rich by their practice and by judicious investments. Four hundred abandon, in whole or in part, their profession for some more lucrative business; and the balance struggle with mediocre ability for a bare subsistence and a wearying effort to keep up an appearance before the people.—Pacific Record.

Photographs to Supplant Etchings.

In the opinion of some competent judges photograpic processes are to supplant etchings as a means of reproduction. This has already gone so far that in Paris several clever etchers have taken up work upon photogravure or similar plates, and in London the Print Sellers' association, which has formally recognized photogravures, despite the complaints of Professor Herkomer, reports a rapid increase in the sale of photographic prints.—New York Tribune.

Had His Wages Raised.

A well known showman, who once ran a newspaper in a Pennsylvania town, hired a big colored man to do chores about the office, and on one occasion he directed him to move a form from one place to another. The darky promptly put it on his head, and just as promptly his head went through, and there was a terrible mess of pi. To his employer he thus reported: "Boss, I done spilled that type, but I saved the frame."—The Journalist.

Story of Barbara Frietchie.

That modern tendency to iconoclasm, which has already destroyed the story of William Tell and the apple, and has vulgarized so many touching and pathetic legends of our childhood's days, is disposed to lay violent hands on Whittier's heroine, Barbara Frietchie, and to question not only the reality of the incident upon which the poem is founded, but the very existence of such a person as Barbara Frietchie.

Protesting that a poet is not bound by the same rules of veracity which circumscribe a historian, and that it would have been entirely legitimate for Whittier to have invented both his incident and his heroine, had he seen fit, it must be conceded that the weight of evidence is still in favor of the story as the poet told it. Last June The Chronicle contained a letter in reference to the matter, and a portrait of the genuine Barbara Frietchie, but the author of that letter was skeptical on the subject of the flag incident, for the reason that the old woman lived two or three blocks away from the main street of Frederick, and out of the direct line of march of Jackson's army. Our correspondent at that time gave some incidents in the life of Barbara Frietchie, which showed that the waving of an American flag in the faces of Stonewall Jackson and his troops might well have been expected from her, and that the only apparent difficulty was her not residing on the main street of Frederick.

But now comes Judge Jordan of Indianapolis, and says that Barbara Frietchie did live on the main street in Frederick, the street through which Gen. Jackson must have passed with his army; and further, that he had been told that a rebel soldier who now lives in Maryland had said that the incident made memorable by the poem did occur, and that he was a witness to it.

If it were worth while, there could doubtless be found many of Jackson's men who were on the march through Frederick, and who could verify Whittier's account in the main. Such an incident would not be easily or quickly forgotten, and is certainly susceptible of verification, even at this late day.—San Francisco Chronicle.

A Story of Phil Sheridan.

Gen. Sheridan is a conspicuous figure anywhere. He would attract attention in any company. It is not surprising that he is a favorite guest at all social distinguished gatherings at the capital. There is hardly a great dinner given at which he is not present to lend the glitter of his successful name to the company. Gen. Vandever, of California, who was a distinguished soldier in the western army, once had an encounter with Sheridan, before the latter had achieved fame, which is worth relating. It was in the early days of the war. Sheridan was then a captain and chief quartermaster in Gen. Curtis' army, in Missouri. Sheridan was disgusted with his position, and was known as a great fault finder and a recalcitrant generally. Vandever was commander of a regiment and had been instructed by Curtis to move forward at daylight. He sent a messenger to Sheridan asking him for wagons to be used to carry the baggage on the march. Sheridan sent back word that he had no wagons to spare, and Vandever replied that if he did not send the wagons at once he would go and take them. Sheridan said, laughingly: "Well, there is no telling what these volunteer fellows won't do, so I guess I will send Vandever the wagons."

Sheridan did not look much like a hero in those days; he went about in an old buggy, drawn by a mule, unnoticed and unsuspected of possessing military qualities of the very highest order. His relations with Gen. Curtis were unpleasant, and he finally resigned, and was afterward assigned to recruit duty. While thus engaged he was sent to Detroit, where he was given command of a regiment of cavalry, which was soon sent to the front, and that gave him the opportunity to display his wonderful faculty for rapidity of action, skill in combination, and the power of making his men move as one man, inspired by enthusiasm to the highest degree of reckless bravery and daring.—Washington Cor. San Francisco Chronicle.

Fanned by a Punkah.

The punkah of India is a long, narrow fan, suspended by cords from the ceiling; attached to it is another cord which finds its way outside through a convenient hole in the wall or window frame. For the magnificent sum of three annas (six cents) the hopeful punkah-wallah sits outside and fills the room with soothing, sleep producing breezes for the space of a day or night by a constant see-sawing motion of the string.

Few Europeans are able to sleep at night or exist during the day without the punkah-wallah's services for at least nine months in the year. The slightest negligence on his part at night is sufficient to summon the sleeper instanter from the land of dreams to the stern reality that the dusky imp outside has himself dropped off to sleep. A pardonable imprecation, delivered in loud, threatening tones; or in the case of a person vengefully inclined, or once too often made a victim, a stealthy visit to the open door, a well aimed boot, and the pendulous punkah again swings to and fro, banishing the newly awakened prickly heat and fanning the recumbent figure on the charpoy with grateful breezes that quickly send him off to sleep again.—Thomas Stevens in Outing.

Hereditary Tradesmen in Japan.

The boys seen in nearly all the places of skilled labor suggests what is the fact, that apprentices begin to learn their trades usually much earlier than in our country, so that when majority is attained the mastery of the crafts is thorough. Another striking feature of the Japanese system is that of heredity. Skill runs in family lines. Not a few of the famous artisans of the present decade are descendants in the ninth, tenth and even twentieth generation of the founder of the establishment. I once employed a carpenter in Fukui, who was proud of his ancestry of wood workers through twenty-seven generations; and the temple records show such boasting to be true, though often adoption interrupts the actual blood line. At a papermaker's establishment in Awotabi, in Echizen, I dined with the proprietor, whose fathers first established the industry a millennium ago, the national history showing also that the Coreans, before the Ninth century of our era, visited the place.—Scribner's Magazine.

Uses of Paper.

There appears to be no limit to the uses to which paper can be put in science. The compressed blocks of it have even been used for the building of the sides of chimneys, the blocks being joined together by a silicious cement. Its use in the manufacture of a great number of articles to supply our domestic wants, including clothing even, is well known.—Chicago News.

SELLING BY PHOTO.

Bulky Samples Have Given Way to Photographs.

THE DECLINE OF THE DRUMMER'S GRIP.

Colored Presentments of Delicate Wares and Mechanisms.

The commercial tourist is being divorced from his traveling bags, or, to speak more tersely, the drummer is dropping his "grips." The only infallible mark of the drummer will now be the pockets which bulge with paper covered novels. The cause of the decline of the gripsack is the colored photograph. The bulky samples that the traveling man used to bear from place to place, and which were, so to speak, his badge of office, he has replaced with counterfeit presentments of the same.

Delicate, true, light and compact, these pictures, carried about in the pocket, can represent an immense quantity of goods in such a manner that there is no mistaking tint, quality, texture or size. They represent everything from machinery to bric-a-brac and from kitchen stoves to ladies' slippers. Those which need no coloring—like the stoves and machinery—are simply photographed in black and white. But the photographs are the very best of their kind, and set forth each part with a faithfulness that is remarkable. In the most intricate machinery every bit of belting, every wheel, cog, arm and elbow is most understandably produced from every point of view.

But the inviting albums are those which contain the colored photographs. These are used in particularly large quantities by the crockery and the furniture houses. The former find use for them because their wares are so fragile; the latter because they are so cumbersome. The pictures of the bric-a-brac and the fine china are wonderfully delicate, and it is a surprise to learn that the microscope is never used in the painting of them. The work is done entirely by young women. One photographer keeps eight or ten quite steadily employed. The work is taken to the houses of the artists, and done there as a usual thing. It requires much more art than the ordinary painter of photographs uses in putting a touch of carmine on the cheeks or a dash of azure on the eyes of a portrait. The painting of texture is several degrees above this, and this must be thoroughly understood. The soft satin wear, the Worcester and royal Dresden, the queen and Bohemian, the clays and porcelains, all have a very different finish, which must be preserved in the photograph if it is to be of any value. It needs not only accurate but strong eyes, a steady and delicate touch, and a most painstaking patience.

Young women are the very ones out of all the world in whom all of these qualities are combined, and that is the reason that this pretty toil is given them so universally.

But there is another reason—an old, familiar reason. A man could not make enough to keep him. The work must be done by girls who have homes. To be sure, one can make $2.50 a day at the coloring of the photographs of china or bric-a-brac, and now and then by working over hours and very steadily it might be possible to make $4. Such arduous work could hardly be repeated on two successive days, however. But, though this wage is not bad, it has the drawback of being fluctuating and unreliable. One week there may be quantities of work, the next week none at all.

One of the conditions of successful photograph painting of this fine nature is absolute silence. A positive concentration of the faculties is needed, and most of the girls who do the work have little studios where they can quietly work by themselves. Here, with big aprons protecting their dresses, their photographs set on a little inclined board before them, and their case of liquid paints close at hand, they patiently strain their young eyes over the almost infinitesimal figures which they are coloring. It is very confining, and no doubt the spasmodic demands are blessings in disguise, for continued application to it would be apt to tell seriously upon the nervous system.

The tinting of the photographs of furniture is simpler on the whole, although many wholesale houses have their furniture upholstered in cretonne before it is photographed. Cretonne, of course, admits of coloring, which plush does not.

The business is one which is likely to increase steadily and to extend to many branches of commerce which have not yet investigated it.

This fact has been recognized by the deaf mute school on the west side, and the art of coloring commercial photographs is among the industries in which the pupils are being instructed. The abnormal development of sight and touch which all deaf mutes possess makes them especially fitted for this work.

A woman who was one of the first to advise teaching artistic branches in this school said the other day: "No one who has not watched the development of these children can imagine what a difference the introduction of the light arts has made in their lives. They have gained in self-respect, as well as in enjoyment of life. Many of them had been regarded as little less than imbecile in their own homes, and some had been the recipients of all the cuffs and kicks that that an ill-natured household chose to bestow upon them. At the very best they were considered a great cross.

"In the school, after a thorough system of communication had been established, we instructed them in the common branches and then gave them an industrial course. The girls were taught dressmaking, the boys carpentering. But it seemed to us finally that we were making a mistake in putting them in competition with such a great number as overcrowd these trades. As an experiment, we put a teacher in modeling in the school. You can imagine nothing more touching than the scene the first morning we gave them the clay. They took to it as ducks do to water. There was nothing of the awkwardness in handling it which most children show at first. Why, they began making things of their own accord immediately, and some of the faces which had always been as blank as a wall previously were lit up with a sudden vivacity. It was the same with drawing, for which we engaged a teacher from the Art institute. From these experiments we gathered courage. We perceived that we could make engravers, designers, wood carvers, architects and decorators out of our poor unfortunate children, and in time we shall try to do all that."—Chicago Times.

Seeds of Great Age.

It has been claimed that the seeds taken from ancient Egyptian tombs are capable of growth, but proof of the claim is lacking. It has been demonstrated, however, that seeds of a very great age are still capable of development. Raspberries have been raised from the seed taken from the stomach of a man who was buried near the time of the Emperor Hadrian, and seeds taken from the foundations of one of the oldest houses in Paris germinated and proved to be the seeds of a plant indigenous to that soil.—San Francisco Chronicle.

A QUEER INCENDIARY SCHEME.

Using a Mouse, a Piece of Cheese and Some Matches to Start a Fire.

"I have a plan that will help us out. It is a last resort, and desperate, I know, but it is safe."

The speaker was a well dressed, fine looking man, apparently not older than 30. His cold, gray eyes, aquiline and rather prominent nose and heavy chin were the unmistakable indices of a calculating, bold and resolute character. He spoke to a man of at least 50 years, neat in appearance, but whose face betrayed anxiety and discouragement.

The words were spoken in a down town Broadway restaurant, near midnight, as the men described took seats at a table toward the rear of the room, in front of a mirror in which a reporter saw them. The newspaper man had lunched and was reading a novel. A partition concealed him from the strangers' vision.

"Well, what is it?" asked the older man, after drinks had been set before them.

"It is, as I said, a desperate scheme, but it will put us on our feet again. I do not see any other way for us to avoid a failure from which we cannot recover."

"What is the plan?"

"There is an insurance of $14,000 on the stock and building."

The speaker paused, but his companion did not speak. They eyed each other intently and the younger man continued in a subdued voice:

"We have stood by each other in hard times before this. You have paid for insurance policies for many years. If the store should happen to burn and there were no evidences the fire was not accidental, we would not have much difficulty in getting the $14,000, and we could start out anew in splendid shape. But accidental fires do not come when they ought, and"——

"I will not consent to any such thing as you are driving at."

"But think of it. You are on the verge of ruin. You need not do a thing to incur risk. Your part will be to keep silent, and not to interfere. Intrust the business wholly to me. On a certain night a small box would be placed in the cellar among the oils and paint stuffs, and where it would not be seen. You might be out of town. You would be summoned home to find the store in ashes or badly damaged. We could then meet our notes and have fair sailing."

"If the attempt should be detected we would be disgraced, even if we escaped state prison. I would rather assign than try your scheme."

"Put confidence in me," persuasively urged the younger man, "and you will be in no peril and you will not regret your trust."

"What would be in the box?"

"A mouse, a piece of cheese stuck nearly full of matches, the heads appearing, and some oil soaked combustibles. The mouse will not be able to gnaw out, and, getting hungry, will attack the cheese and ignite a match. The box will quickly be on fire and the flames will spread like a flash, and before the burning is discovered the box will have been consumed. Then there will be no evidence. The fire would get such a start the store would be very likely to go. It would undoubtedly burn the night the box was hidden."

"A novel idea," said the older man, evidently relenting, yet looking very grave; "we'll think it over well before we take such a step."

"It's perfectly safe, I tell you," rejoined the schemer. "You stay in New York a few days and let me go back and do the job. Then you will be safe from suspicion. I would not have mentioned it to you if I had not feared you might discover the box and give the thing away."

After a few minutes of silence the men drained their glasses and left the place.—New York Press.

An Incident of the War.

There's no more earnest Democrat in New York than Gen. Averill, the dashing trooper who raided up the valley with Sheridan and endeared himself to two generations of Virginians by the homesteads he saved from the torch. As he swings down Broadway to his office on a frosty morning, he is a soldier every inch of him, barring gray hairs. Gen. Averill was introduced to a young man named Rudd a day or two ago, and it reminded him of a curious incident in his military career. He was at West Point with a Jack Rudd, who afterward became a major in the Confederate army. On a raid into West Virginia some cavalrymen were about to pillage a farm which proved to be no other than Jack Rudd's. It was a tight little patch of arable land right under the mountains. As soon as Averill heard the name of his old classmate he set a guard over the place, and not a straw was touched.

That was in August, '63. Just a year afterward, at a noted mountain pass called Callahan's, just twelve miles from the White Sulphur springs, a Confederate prisoner was brought into Gen. Averill's headquarters, which were in the ambulance, where he slept and read dispatches. Captor and captive looked long and hard at each other, and knew each other once more as "Rudd" and "Averill." And, afterward, when a friendly nip had thawed out twelve years of absence and Averill had told Rudd how he saved his farm from being pillaged, Rudd exclaimed: "M ——, man! why, I came within an ace of shooting you dead! I was in ambush on the mountain side, and drew a bead on the officer who rode into my front gate, as I thought, to fire the house. I soon saw his kindly intentions though, and am now doubly thankful for what we both escaped."—New York Sun.

Testing Colored Candy.

To test candy with respect to poisonous colors one needs a few ounces of alcohol, about an ounce of bleaching powder in solution (hypochloride of calcium), a little white woolen yarn and a small bottle of aqua ammonia. See first whether the color can be dissolved out by alcohol. If it can, immerse the woolen yarn in the solution, and should the color adhere to the yarn and dye it, the probabilities are that it is a coal tar color; if a red, it may contain arsenic. If the alcohol produces no effect apply a drop of the bleaching powder solution to the surface of the sweetmeat. If the color fades out, it is probably of vegetable origin and harmless.—New York Tribune.

The Brain of a Murderer.

A professional murderer was lately executed in Moravia, and his brain was dissected and closely examined by Professor Moriz Benedict. The convolutions of the brain are, says the professor, closely resembling those found in beasts of prey—another proof of the theory that retrogression is as possible as progress with mankind.—Chicago News.

"Holy smoke!" exclaimed a deacon, when his wife told him the Pilgrim church was on fire.—Paragrapher.

THE RUSSIAN BEAR.

Inferiority of the Muscovite as an Ally.

DEFENSIVE STRENGTH OF THE COUNTRY.

Risks of a Franco-Russian Alliance. A Military Point of View.

So much for France and her army; what is the Russian situation? It was not the French, but our deplorable military administration that beat us in the Crimea, say the Russian generals. And the scandals revealed during the Turco-Russian war of 1877-8 show that not much improvement in that quarter had been made in the 21 years which separate Sebastopol from Plevna. The czar is the sworn enemy of peculation and corruption, but, alone at the summit of the bureaucratic pyramid, Alexander cannot reach the legions of filibusters who swarm around its base. He may make examples of colonels and some of generals, but abuses continue in spite of imperial efforts at their suppression. It was ascertained very recently that in some of the cavalry regiments neither the men nor the horses received their proper rations; the guilty parties are meditating in the Oural over their misdemeanors, but there is no assurance and there can be none that, with the same maladministration, the imperial troops will not suffer from the same shortcomings of quartermasters and commissaries that disgraced the last campaign in Bulgaria. It is a woful pity, too, for otherwise Russia would be the first of all military powers. She has numbers and she has quality; her infantry soldier is unequaled; to the steadiness of the German and the dash of the Gaul he unites the sobriety of the Spaniard and the resignation of the Turk; he is enduring and he is ingenious; and to these splendid footmen Russia can add an indefatigable and innumerable cavalry, her sotnias of Cossacks, these centaurs of the steppes which, like the hordes of Attila, can inundate the territory of her enemies, although the thickly wooded and marshy frontiers of European Russia are less appropriate than is commonly imagined to the movements and deployment of mounted troops.

But Russian generals know not the value of their men. Many of them learned the practice of the art of war in Bulgaria. All are educated officers, bold and brave. Their officers are confident, and inspire confidence, and yet it must be admitted that neither Russian generals, nor Russian officers, nor the Russian staff possess the same cohesion, the same science or the same experience as those of Germany. And supposing them to be their equals, supposing an analogous unity of command, there would still always exist a double inferiority—that arising from defective administration and defective or insufficient means of concentration. This last point, given a general European war, is of capital importance, especially for Russia's eventual allies.

In France and in Germany the time necessary for the mobilization of 1,000,000 of men can be estimated to within four and twenty hours. In Russia that time is the unknown quantity of the redoubtable problem, and without that unknown quantity it is impossible to calculate the real value of Russian co-operation. How many days may be required or how many weeks or even months; how many hundred thousand soldiers can be mustered in the first line, how many in the second, how many in reserve, nobody can answer, for nobody knows how to answer, and only one thing is absolutely certain, and this the Russian newspapers confess, Russia's mobilization must be incomparably and vastly slower than that of either of her neighbors. Nor could it be otherwise, with distance infinitely greater, with railways less numerous, less well appointed and managed, of which the majority have only a single track, and very few have special platforms for the embarkation and landing of horses, troops and material. These disadvantages cannot be contested, and they alone are sufficient to explain why, in provision of events, the imperial government should have taken those precautions along the frontiers which have so exercised the susceptibilities of Austria-Hungary.

This undeniable inferiority of Russia is especially dangerous to her future allies. At home Russia is safe; she may be invaded, as she was by Charles VII and by Napoleon, but Russia's invaders generally fare badly, and to get out of her vast territory is easier than to get into it, and what would be the fate of a western ally not prudent enough to adjourn its action until Russian mobilization be entirely completed? True. Russia's enemies will scarcely allow her allies to select their moment.

In a Franco-Russian alliance the risks are not equally shared by both powers. Russia can bide her time, but France must bear all the brunt from the outset. The gain of the first battle would bring the Germans into the heart of Champagne; with a second victory they might surge on to Paris, while the northern colossus would scarcely feel the blows received by her provinces of Lithuania, Esthonia and Poland. Every invasion of Russia has always ended in disaster to the enemy; every invasion of France has been successful. Perhaps railways may have deprived Russia of that invulnerability which was secured to her in former days by distances, and, perhaps, with a railroad at his disposal, Napoleon might not have been forced to evacuate Moscow. But there is something about Russia which cannot be seized upon. She is, as one might say, a species of inorganic being without either heart or head at which a fatal blow could be dealt. She is not possessed of one capital of which the capture would conquer a peace, and with her climate campaigns cannot be indefinitely prolonged. Supposing the czar's armies to be always defeated, the victor would be troubled in gleaning the fruits of his triumphs. And to what point must an enemy advance before he can force Russia to ask for terms? Russia has a power of resistance resulting from her size and from her structure, but this power of resistance cannot be communicated to her allies. The czar may continue his struggle on the banks of the Don and the Volga for months after any western ally has been obliged to cry enough.

Spite of her millions of soldiers, Russia's strength is, above all, defensive. Her advantages, which in the course of another century must make her the mistress of Europe, is in her mass, but in that mass, the cause of her great superiority in the defense of her soil, is an obstacle to offense. And so it has been proved by the last great war in which Russia took part, when three campaigns were needed to crush the Turks in Armenia and Bulgaria. Without any doubt, united France and Russia, well commanded, could hold their own against all the rest of Europe; but Frace, by her situation, would be the most exposed, because she is the most vulnerable. She must face an enemy on every side, on every frontier, on sea and on land, in Europe and in Africa, and without any certainty that her distant ally would have time or means to come to her assistance. From a military point of view, all the advantages of a Franco-Russian alliance will be for Russia; all the dangers would be for France.—Paris Cor. New York Times.

Secrets of the Dressmaker.

"I assure you no one learns dressmaking for fun. Sometimes ladies learn it in order to understand better the fitting of their own gowns, but one usually learns because she expects to make a living by the trade."

The speaker was a fashionable uptown modiste, and she was telling a reporter some of the secrets of her profession. About the room were seated a number of quiet, neat looking girls, all sewing.

"Are there any schools where dressmaking is taught?" was asked.

"I never heard of any. When a girl desires to learn the business, she usually goes as an apprentice, as at any other trade."

"How long does it take to learn the trade?"

"That greatly depends upon the student. Usually a girl should master the trade in one season. A good dressmaker should have a quick eye for form and color. She should be something of an artist in addition to having mere mechanical skill. Most women know something about sewing, and have little difficulty, but when it comes to fitting, trimming and finishing dresses, where real taste and judgment are required, the novice is almost helpless."

"What can a dressmaker earn after she has learned the trade?"

"It all depends upon her skill and ability. If she is smart she can get $2.50 a day, but she may not get more than $1.50. That is after she has taken lessons for one season. Forewomen who superintend the work earn about $25 a week. They are women of long experience in the trade. So far as dressmaking at home is concerned, the paper patterns have simplified matters a great deal. Male dressmakers earn from $3 to $6 a week more than women at the same business. Men are better than women at making waists, which are in some particulars like the coat you wear, but I never yet saw a man who could drape a skirt properly."—New York Mail and Express.

Balloons for Military Use.

Balloons for military service in the Italian campaign in Abyssinia have been constructed at Paris, and were experimented with upon the Champs de Mars recently. A great many scientists and military men were present, among them the Duke de Leuchtenberg and Gen. Federoff—who will, no doubt, have opportunity for using similar balloons in central Asia—and the manager of the balloon brigade of the Italian army, Count Pecori. Each balloon inflated contains 250 to 300 cubic meters of gas, and can be folded up to fill only one cubic meter. Thus folded, it is placed in a box of a wagon, which holds the windlass with the cable to which the balloon will be attached. The cable has a length of 150 to 350 yards. Attached to the balloon wagon is another wagon containing the hydrogen gas for inflating the balloon.

Water being scarce in Abyssinia, the gas will be prepared in Naples and transported in tubes of about eight feet in length and five inches in circumference, in which it will be compressed by a force of 135 atmospheres. Each wagon will carry forty tubes, to be discharged into the balloon at the place where it shall ascend. The cable holding the balloon captive is supplied with two telephone threads by which the aeronaut can communicate his observations to the men on the ground. Several trial ascents made proved entirely satisfactory.—Foreign Letter.

Drinking Russian Tea.

A fine looking gentleman holding a whispered conference with a restaurant waiter attracted the attention of a neighbor at the same table the other day. With the gentleman's dinner the waiter brought to him a cup of tea and half a lemon. The gentleman squeezed the lemon juice into his tea and followed it with three lumps of sugar. "Do you drink that because you like it," asked the neighbor, "or because you have to?" "It is Russian tea," was the answer. "I began drinking it because my doctor, who is a Russian, recommended it, and now I have become as much a slave to it as a drunkard is to liquor. I was ill last spring. The doctor would not let me have champagne when I was getting well and I would not drink water. I take the Russian tea three times a day with my meals, and after supper I have it brought to my room. I drink from six to twelve cups of it during the evening. I have gained fifty pounds since I began drinking it, but it is a dangerous drink," he said, buttoning his overcoat up close. "It opens all the pores, and I am tingling from finger to toe. I should catch cold now very easily, but it is the best thing with which to throw off a cold if you take it at night."—New York Sun.

Craze Among Chicago Boys.

The latest craze among the boys in some parts of the city, particularly in Hyde park, is to make collections of the names of sleeping cars. The weather is rather unpleasant for standing out watching trains go by, but all of the boys who are in the contest in earnest have no difficulty in finding places to sit in comfort, where passing trains may be seen. If necessary a boy in pursuit of an object as instructive and valuable to him as this would build a house on purpose and put an old stove in it and agree not to burn down more than $10,000 worth of property at one time. Sleeping cars, by the way, are fearfully and wonderfully named. There is an impression abroad that these cars were named by the various men who have risen from the sleeping car employ to a residence in the Illinois penitentiary, and that they selected such wonderful names out of a feeling of sentiment toward society. For horrible example: Octorara, Oecheyedan, Kiskiminetas, Ishgonish, Pen-twyn, Petitcodiac, Syosset, Twohig, Wakarusa, Wegree, Winconisco, Apopka, Escatawpa, Eutobicoke, Gnadenhutten, Rusiagonish and Tiadaghton.—Chicago Herald.

The Old Time Hams.

Judge Samuel Lumpkin lately sent to the writer a half dozen from his private smokehouse, of the vintage of 1884, that are simply poems in ashes. Any self respecting pig would have died gladly to have been so idealized. In these hams you catch the flavor of the smoke of the half smothered oak chips above which they drifted with the seasons into perfection. And the red gravy (excuse these drooling lips), clear, consistent, flavorous—it is such gravy as you used to find on your mother's table when you came home from a long day's hunt in the December wind. I had rather have a smoke house with its loamy floor, its darkened rafters, its red pepper pods, its festoons of sausage odorous of sage and 100 such hams suspended between earth and roof, like small Mahomets, than a cellar of dust begrimed bottles of Madeira of 1823. Has the art of curing hams in the Georgia smoke house become a lost one? Shall red gravy go, with Tyrian purple, into the realms of the impossible?—Atlanta Constitution.

IN NEW GUINEA.

Customs of Victoria's Cannibal Subjects.

WORK OF THE ENGLISH MISSIONARIES.

Houses in High Trees.—The Sago Industry.—Birds of Paradise.

And now what is the character of this land which, after so many abortive attempts, has at last come to the birth of annexation? Along the coast of a considerable part of it missionaries have been established for some seventeen years now. There are three English missionaries and many Polynesian converts who act as teachers and preachers. And, whatever opinion may be held of the work of missionaries in general, there are no two opinions held by those who know the place about the good that has been done by those New Guinea men.

Their aim has not been to add a number of baptisms to their record, as savages hang scalps to their girdle for an evidence of their success; nor have they measured the Christianity of their converts by the amount of clothing which they wear. But they have instilled confidence in the goodness of human nature where there was none before; they have taught the advantages of peace and industry where before there was only unceasing bloodshed and warfare.

Thus a tolerably accurate knowledge has been gained of the habits of such of the natives as inhabit the southern coast line. But of the many thousands who live in the interior very little has been discovered.

Among such of the natives as have been visited, one of the most peculiar characteristics is the inaccessible position in which they frequently place their houses. This, no doubt, is the direct outcome of the state of constant intertribal warfare in which they have so long existed, and which even now is not altogether stamped out. Some of their houses are built in high trees up on the narrowest and most inaccessible ridges of the mountains. To these bamboo ladders are the only means of approach, and vines are often cultivated to run up the ladders to give them strength and make the ascent and descent easier. Other tribes—and there are many of those living along the coast—build their villages some distance out at sea, on piles of mangrove wood, standing eight or ten feet out of the water. There are villages of this kind built altogether away from the shore, in the shallow waters of the southern coast, containing as many as 400 or 500 people and perhaps forty or fifty houses.

It is commonly said, and no doubt is often the case, that savages eat their vanquished foes in faith that by so doing they inherit from them their noblest qualities; but it appears to be peculiar to the New Guinea natives to eat their kindred as a token of affection. A New Guinea boy was seized and half eaten by one of the many crocodiles that prey upon the coasts of the island. His sorrowing parents slew the offending monster, and rescuing the half of their beloved son which was still uneaten, they greedily devoured it in their grief. When their kindred die they hang them up, or lay them on a framework of bamboos, for the sun to cleanse the bones of flesh. While this is going on they keep watch near the corpse, and at intervals, when their grief becomes too much for them, they visit it and smear their bodies all over with the juices that are dropping from the dead body. When decay has done its work the bones are cleaned, and some of them are buried, while others are worn as ornaments by the survivors, and the skulls decorate their houses. In other tribes the bodies are buried in a sitting posture up to the neck, and a vessel is placed over the head. In these cases the skull alone is preserved for ornament, the rest of the body being left beneath the soil.

But though so barbarous in some of their habits, the natives of this place are far superior to those of Australia in most ways. Many of them cultivate plants for food. Some of them make pottery which they exchange for sago with those situated in more fertile districts than themselves. Others devote all their time to catching fish, and these, too, they barter for cocoanuts or yams or bananas, while most are clever at fashioning and carving weapons of offense and shields, and many can make a tolerable kind of cloth from the bark of trees, good canoes or serviceable bows and arrows.

The sago industry, especially, is a valuable one. So much food can be produced with so little labor, and the tree grows well and abundantly in New Guinea. The method of obtaining the sago is to cut down the tree and remove a slice of bark from the upper surface of the felled trunk. The inner wood of the tree, which is throughout a kind of pith, is then pounded down with rough instruments made for the purpose into the trough formed by the firm outer bark of the tree.

As this pith is pounded down it is taken out in vessels formed of the sheathing leaves of the sago palm and carried to another trough near by, formed, like the first, of the bark of another sago palm. Here it is pressed through a rough sieve, formed again of fibers from the sago palm, into water, where the starchy part dissolves and settles in the bottom as a sediment. This sediment, though not the granulated sago of commerce, is the form in which the natives eat the food, and it makes excellent cakes or mush.

Another well known production of New Guinea is the bird of paradise, the most beautiful and gorgeous perhaps, except the peacock, of all known birds. There are many different kinds of them, but all are beautiful to the eye, though the noises that they make are somewhat trying to the ear. They are very shy and difficult to obtain, but by caution, cleverness and exceeding great patience the natives succeed in killing them in snares or with blunted arrows, so as not to injure their plumage.—Cor. San Francisco Chronicle.

A bill is to be introduced in Parliament to limit the personal caricatures of the royal family in comic papers.

INDEPENDENCE, CAL.
FRIDAY, OCTOBER 16 .....1891.

The cradle in which McKinley was rocked, with new American tin plate rockers on it, is being carried all over Ohio as a political "argument". And the grand old party claims a monopoly of all the morality and four-fifths of the intelligence of the country.

The lot which the United States government has agreed to purchase for a postoffice site in San Francisco at the genteel figure of $1,040,000, was assessed this year at $189,295, including improvements. That was either a very low assessment or the United States government has been cinched to an abominable extent by the boodlers who have its ear in this matter.

The Irish National League got through its business at Chicago in a creditable fashion. There were a number of delicate and exciting questions to be disposed of, and the gathering was cleverly steered clear of dangerous dissensions. Consummate parliamentary skill was exhibited in getting rid of the "Donnelly supplement." The League showed that it had much more the interests of Ireland at heart than the personal triumph of any leader.

It looks as if Prince Albert Victor has really been causelessly suspected of having had any thing to do with driving Lydia Manton, the actress, to suicide. Lord Charles Montague is the guilty party The prospective king of England, however, has made for himself so profligate a reputation that the public is ready to believe anything vile of him. The royal and blue-blooded rakes of England are living in the wrong age to practice their indecencies with impunity.

The new tax on importations of tin plate went into effect on the 1st of July. Before that time the stock of plate on hand was increased 300,000,000 pounds. It was supposed that so enormous a stock on hand and the duty raised to 2 2 cents per pound, besides the promised starting of tin plate mills all over the country, would have the effect to stop importation. But we find that the importations for the month of July, notwithstanding the increased duty, amounted to 12,561,141 pounds. By this fine piece of legislation the people of the United States have had the tax item in tin plate doubled on this enormous stock and the importations that continue. It is now estimated that the taxes on this article will reach from fifteen to twenty million dollars a year In the meantime the tin-plate liars will continue to delude the country, and to claim that the occasional manufacture of enough tin-plate to make a few toy dishes and Republican badges represents the wonderful growth of a new industry, thanks to the McKinley humbug. Verily the people of this country are well handled in the interest of monopolies and to the multiplication of millionaires made so directly from the pockets of the producers and consumers.

The death of Parnell puts a sudden and untimely end to a career of remarkble brilliancy. Though the great parliamentarian passed the last year of his life under a cloud of misfortune, no degree of failure or discomfiture can efface the memory of his distinguished services in behalf of Ireland. Seldom has there been an example of such tact and judgment in public life as the late leader for years exhibited in the British Parliament. He won his way to prominence by dint of his own merits and despite a host of disadvantages. Through his masterly ability as a tactician the Irish members were organized into an effective parliamentary force, either for aggressive action or for construction. It was Parnell who made the aspiration of home rule, which for generations had been nothing more than a hope, a bright prospect for the Irish people. Nothing can delay for more than a few years a reasonable measure of self-government for Ireland. It is a pity that anything occurred to dim the lustre of Parnell's career, or to weaken the esteem in which he was held by the Irish people and the Liberal party in England. But his errors will henceforth be regarded with charity. His services to his country far outweigh whatever mischief may have been done through his indiscretions and his desperate effort to retain the leadership of the Nationalists, at a time when it was the part of wisdom to withdraw for a season from active participation in public affairs

AND NOW SHE IS COMFORTABLE.

Devices of a Typewriter Girl for Making Life Better Worth Living.

She is a brisk little typewriter in a down town office. Her hours are long and she is far from strong, yet she seems to stand her work much better than many more robust girls. The other day a woman asked her how she managed to keep so rosy and cheerful.

"Why, I think," she said, "the secret of it is that I humor my little wants. I keep a regular storeroom of things in the office to coddle myself with. I find it is the trifles of life that tell on me, so I am particularly careful about trifles. If it is winter time, I keep a soft woolen cape to throw about my shoulders if I feel chilly. I wear thick soled, common sense shoes in the street, but it takes too much vitality to wear them in the house all day, so I change them for slippers as soon as I reach my desk. I never take cold, for I am used to the change. If it is summer, I keep a comfortable house waist to wear at my work instead of a tight fitting sack.

"I like to wear a nice dress, and I dislike to see the elbows look threadbare, so I wear some black silk sleeves that reach to the elbows. A black alpaca apron protects the front of my gown.

"I am never worried if a sudden storm comes up, for it cannot take me unprepared. I always keep a rubber cloak, umbrella and rubbers on hand. It doesn't cost a great deal to buy the two sets, and I can't express the peace of mind it gives to have them ready.

"For toilet purposes I have a couple of clean towels, comb, soap, nailbrush, little mirror and a whisk broom. Besides these, I have a bottle of witch hazel and a pot of vaseline for an accident.

"One is always liable to tear or rip one's clothes, so I keep a little basket with thimble, needle and several colors of thread, if I want to take a 'stitch in time,' and so save taking nine at home at night.

"There is one thing more, and don't you laugh at it. I have a wee alcohol lamp and a jar of beef extract. I get faint sometimes in the middle of the forenoon, and then it takes only a minute to make a cup of hot beef tea, and I am fresh and ready for work again."

"But where do you keep all these things—the work basket and the beef extract and the looking glass?" asked the woman.

"There is a little closet in the office where I hang my coat and hat. I bought two iron brackets and coaxed the office boy to put up a shelf for me. I hung my mirror on the inside of the door, put my traps on the shelf, and am 'as snug as a bug in a rug.' The closet is just big enough to hold a chair for me to sit on while I take off or put on my shoes. There was only a little forethought needed, and now I am altogether comfortable," the little typewriter added as she waved her parasol at a down town car.—Chicago Tribune.

Malay Monkeys.

I only once saw a specimen of the siamang in captivity, at the house of a Malay chief at Sirdang. It was about three feet high, but the stretch of its arms was over five feet. A sad looking, depressed creature it seemed as it moved awkwardly about the floor, tripping itself up with its own arms; but once among the rafters of the roof it moved with the agility of a spider. Of its gigantic relative, the orang-utan, I am able to give but few particulars.

But I may at least observe that it is rather ludicrous to any one who has a smattering of the Malay tongue to see him so frequently styled orang-utang, which signifies literally "a man in debt," utang being in Malay "debt," while "utan" is "forest" or jungle. But I always found this name incomprehensible to the Deli Malays, whose name for the animal is "mowas." The Sumatran species appears to be totally different in its habits from that of Borneo, which approaches human dwellings, and even plunders gardens. In Deli, at all events, it inhabits only the densest rattan swamps, of such a nature that any attempt at observation of its habits would be impossible, and it makes off instantly at the approach of man.—Chambers' Journal.

Auk Remains on the Funk Islands.

While studying the cod fisheries off the Newfoundland coast, opportunity was taken to visit Funk islands. Here were discovered the remains of that lost bird, the great auk. The delights of the ornithologist who first grubbed up the skeletons and the eggs of defunct auks on Funk islands could have been equaled only by that of the miners who find a bonanza.

No bird, perhaps no animal, held a more important relation in this respect to the early American fisheries than the great auk. Indiscriminately slaughtered by thousands, it made an important addition to the fisherman's larder, until at last it yielded to the rapacious and destructive agencies it was not fitted to withstand, and a most interesting species was totally wiped out of existence. All that remains today in America of a once immensely abundant gigantic sea fowl is its burial place and a few specimens of the eggs and mounted skins naturalists obtained before its annihilation. —New York Times.

A Lake Is a Sort of Furnace.

A lake has a wonderfully tempering effect on the climate. Thus, according to M. Forel, the quantity of heat accumulated in the Lake of Geneva during the summer of 1889 was equal to that given off by the combustion of 31,000,000 tons of coal, or the amount carried by a coal train 1,120 miles in length. The greater part of the heat is discharged into the air of the valley during the cold season, thus producing a milder temperature in autumn and winter.—New York Journal.

A Mystery About Bluefish.

Although the bluefish is familiar to everybody, exactly where Pomatomus saltatrix comes from or where he is born few know about. He has the widest kind of a distribution, for Professor G. Brown Goode tells us bluefish are found in the Malay archipelago, Australia, Cape of Good Hope, in the Mediterranean, and ranges along our coast from Brazil to Nova Scotia, but no one has yet established the facts as to its places of reproduction, or is it known where bluefish spawn.—New York Times.

Don't Know, Can't Say.

Horace—Will you be my wife?

Minnie—I can't say.

Horace—Don't you know your own mind?

Minnie—Yes, but I don't know what you think of diamonds.—Jewelers' Circular.

How Sure It Was.

Hank Yates was a born horse trader. His father and his mother's father were horse traders, too, and spent almost as much time riding over the Illinois prairies to get or to make bargains in horseflesh as in attending to their corn and pig raising on their farms. Hank had traded horses from the time he was ten years old, when his grandfather bought him a Texas mustang from a herd.

Hank swapped the mustang within twenty-four hours for a Kentucky colt, which he traded to his father for a coveted mare, whose next colt he sold to his grandfather at an advance of seventy-five dollars over the price of the mustang.

Hank was only nineteen years old when he begin his attentions to Lizzie Dodd in the next county, and scarcely twenty when he rode over on a fine young horse to ask her to marry him.

They were sitting out in front of the house in the starlight, and Hank was getting on well with what he had to say, when he saw Lizzie's father critically examining his horse hitched down at the front gate.

"I think everything in the world of you, Lizzie," Hank was saying. "That's as sure as——"

But then he saw her father feeling of his horse's feet and the instinct of the horse trader mingled with the spirit of his wooing, and he sprang to his feet and yelled. "That's as sure as that bay gelding of mine is worth forty dollars more than them little gray mares of yourn both put together!"—Youth's Companion.

Driver Ants.

There are certain ants that show wonderful intelligence, and the "driver ants" not only build boats, but launch them, too, only these boats are formed of their own bodies. They are called "drivers" because of their ferocity. Nothing can stand before the attacks of these little creatures. Large pythons have been killed by them in a single night, while chickens, lizards and other animals in western Africa flee from them in terror. To protect themselves from the heat they erect arches, under which numerous armies of them pass in safety. Sometimes the arch is made of grass and earth gummed together by some secretion, and again it is formed by the bodies of the larger ants, which hold themselves together by their strong nippers, while the workers pass under them.

At certain times of the year freshets overflow the country inhabited by the "drivers," and it is then that these ants go to sea. The rain comes suddenly, and the walls of their houses are broken in by the flood, but instead of coming to the surface in scattered hundreds and being swept off to destruction, out of the ruins rises a black ball that rides safely on the water and drifts away. At the first warning of danger the little creatures run together and form a solid ball of ants, the weaker in the center. Often this ball is larger than a common baseball, and in this way they float about until they lodge against some tree, upon the branches of which they are soon safe and sound.—St. Nicholas.

Making Wood Incombustible.

The weight of testimony, thus far, in regard to the various methods proposed for rendering wood incombustible, or nonalterable by heat, appears to be against the claim that a building encumbered with inflammable substances can pass through such a test uninjured. It is known that the methods resorted to for preserving wood against fire are principally two, viz., the injections of saline solutions and the application of a paint or coating. The former has been found practically ineffective, and has even been pronounced by some as of dangerous tendency in the case of wood of large dimensions, though the treatment may be applicable to pieces of wood of small size.

It is remarked that of all the various substances which have been brought forward for this purpose, the concentrated solution of phosphate of ammonia has proved the most valuable, the use of this substance, in fact, notwithstanding its high cost, possessing such peculiar advantages as to have recommended its employment in all cases where the matter of expense is not important.

In the majority of cases coating with a brush is the really practical solution of this question, and, according to Professors Bondin and Denny, of Ghent, the substance most suitable for use in this manner is the cyanide of potassium and asbestos paint.—New York Sun.

There Are No Storks in England.

England is beyond the ordinary range of the stork, though hardly a year passes without one or two being seen on the east coast and generally, alas! shot. Unlike the bittern and ruff, it was no more common before the fens and swamps of Cambridge and Lincolnshire were drained than it is at the present day. "Mine honored friend, Sir Thomas Brown, of Norwich," wrote Willughby, 200 years ago, "says that it is but rarely seen on our coasts." There is, we believe, no record of its nesting in England, and the impossibility of protecting a migratory bird precludes the hope of its being introduced into the country.—Chambers' Journal.

Ancient Milling.

For ages various cereals used in bread-making were ground with very uncouth contrivances hardly deserving the name of mill, as we understand it. They consisted of two portable circular stones, the upper being the smaller and turned upon the lower and concave one by means of an iron or wooden handle, the grain being placed between them. These stones were usually obtained from a quarry in the vicinity of Babylon, from which sufficient were taken to supply all the eastern countries.

The grinding was usually performed by two females, who sat opposite each other with the millstones placed between them, the upper stone being kept in motion by the hands of the operators. Very often this tedious work was assigned to prisoners, who considered it a most degrading task. This fact is recorded in Holy Writ, in whith we are told that Samson "did grind in the prison house of the Philistines," and Jeremiah bewails the fact that the Babylonians "took our young men to grind."—Detroit Free Press.

Belgian railway officials, after three years of investigation, report that under ordinary circumstances the average railway train in passing over one mile of track wears from it two and one-fifth pounds. This natural destruction of track amounts for the whole world to about 1,830,000 pounds daily.

MEN BUY TROUSSEAUS.

IN MEXICO BRIDEGROOMS SELECT THE WEDDING OUTFIT.

A Curious Custom That Must Be Both Amusing and Provoking—Americans in the City of Mexico and What They May See There—Houses of Some.

Senor Manuel del Rosaros is a gay cavalier from Mexico city who has made several visits to New York.

"But how is it you come here in the summer, senor?" he was asked.

"Business, sir, business. My uncle is about to get married. Great boy, my uncle. Only about the same age as myself. I shall get married, too, but not yet for some years. Well, my uncle wants some things, you know, for the marriage, and he sent me north to buy him a regular trousseau. I am buying it, and having a good time."

"But we do not say trousseau when referring to men's wedding garments; we only"——

"I know, I know," he rapidly interrupted. "I speak English very well now, thank you. It is you who do not know. My uncle sent me, not to buy things for himself, but for his bride. Trousseau is therefore right, is it not? It is you who do not know. Our custom in Mexico is for the young man to buy the trousseau, therefore I am here in the summer.

A DARING YOUNG MAN.

"So the bridegroom has to buy all the wedding toggery?"

"He is supposed to do so, but it is not always permitted. Sometimes the bride's parents only allow him to purchase the slippers, the fan and things of that sort, and on those occasions the young man tries to the utmost to show his liberality by the most lavish expenditure possible. There was a young man from Boston, though, took unto himself a Mexican wife, and he determined to outdo everybody. He was a real Yankee prince. He had his future wife's measurements down to dots, as you say, and purchased thousands of dollars worth of wedding finery. Nothing so splendid in the shape of a wedding was ever seen with us before. Among other things he bought a barouche and four splendid horses (that is what I am going to purchase in New York for my uncle).

"The newly wedded pair drove off in this barouche amid cheers and music and great rejoicing. They had a journey of 150 miles to make to the young fellow's plantation. On the way the new barouche broke down, and the loving pair had to ride the carriage horses something like fifty miles without saddles."

"Are there no good horses in Mexico?"

"Yes; but for style we get our carriage horses here, and carriages also. Black teams are the favorite, or dark bays with black points. The president drives four spotted horses on state occasions, just as the viceroy used to. There used to be a law in Mexico providing that no one except the viceroy should drive spotted horses. I don't know whether it is still a law or not.

"During the times when we had a viceroy—and they all clung tenaciously to this exclusive use of spotted horses—a wealthy young fellow made a bet that he would drive a spotted double team through the public streets in defiance of this law. He was readily taken up to the tune of $20,000, and he won the bet. He procured the horses, and as he drove through the streets the soldiers presented arms and all the honors due to the viceroy were paid to the young man.

"The viceroy came out on the veranda of his palace to learn the cause of the wild acclaim. When he learned it he was furious. But the young fellow drove right into the palace yard, and when his excellency stepped down to expostulate with him he said that he had brought the turnout as a present. The gift was accepted perforce and the bet was won. The turnout cost $3,000—a clear gain of $17,000."

AMERICANS IN MEXICO.

"Do many Americans visit Mexico city now?"

"More and more every year, and they enter eagerly into our society, and several of them, wealthy people, have enjoyed it so much that they have built residences near the city. An American has leased one of the most historical houses we have and at the same time dealt a blow to popular superstition—our people are very superstitious—for the house has long been supposed to be haunted. It is the great stone house which tourists pass on their way to the Central or Vera Cruz stations. A most gloomy house, with windows closed and walled up, no wonder that people come to regard it as in some way accursed. The Emperor Maximilian, a generous sort of monarch, took a fancy to the house, owned at that time by Senora Dona Victoria Rui de Perez Galvez, and bought it, and the house was transferred to Marshal Bazaine when that officer married a lovely Mexican woman, as a wedding gift from Maximilian and the Empress Carlotta. Marshal Bazaine and his bride went to live in the house, and there daily paced in front of it guards of Mexican, French and Austrian nationalities.

"In those days the huge garden to the rear of the house, extending almost across to the Paseo de la Reforma, was kept in a fine state of cultivation. When Bazaine left the city with his troops, going back to France and to a career which was to end in exile and in sorrow, the house was left without inhabitants, and so it has remained ever since that day, about a quarter of a century ago. When Juarez, the iron handed president, entered the city to resume republican rule, he confiscated the Bazaine mansion, and later on, it was bought by the Iturbide family, the largest real estate owners there—the Astors of the City of Mexico."—New York Advertiser.

The use of oil to smooth the sea in rough weather has been applied to a life buoy. Valves are opened automatically, releasing the oil gradually and preventing the heavy waves from breaking over the buoy and suffocating the person in it.

Impervious to Cold.

A professor of the Paris Academy de Sciences has been making experiments, which have resulted in convincing him that the rabbit is, of all living things, the most capable of withstanding a very low temperature. Inclosed all night in a block of ice, a rabbit was found next day getting on very comfortably and evidently not aware of anything very peculiar in his circumstances.—New York Journal.

PROBATE NOTICE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of John A. Hannah deceased.

Notice for publication of time appointed for probate of will.

Notice is hereby given that Saturday, the 26th day of October, A. D. 1891, at 10 o'clock a. m. of said day, and the Court-room of said Court, at the town of Independence in the County of Inyo, State of California, have been appointed as the time and place for proving the will of said John A. Hannah, deceased, and for hearing the application of W. L. Hunter for the issuance to him of Letters of Administration with the will annexed thereon.

J. N. YANDELL, Clerk.

P. W. FORBES, Attorney for Petitioner.
Dated Sept. 25th, 1891.

DESERT LAND FINAL PROOF

D. E. No. 571.

LAND OFFICE AT INDEPENDENCE, CAL. September 9, 1891.

Notice is hereby given that Maggie S. Conklin, of Independence, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim, No. 571, for the N W ¼ of S W ¼ Sec. 14, Tp. 11 S., R. 34 E., M. D. M., before the Register and Receiver at Independence, Calif., on Thursday, the 22d day of October, 1891.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Hines and Norman E. Conklin, all of Independence, Inyo County, Cal f.

C. W. CRAIG, Register.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 137 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 137 Montgomery street, San Francisco, California.

DESERT LAND, FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL. Sept. 3d, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G Singer, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG Register.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer with out cost of repairs than any other machine. Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Reliable Agents and Salesmen wanted. Special inducements to Dealers.

MARRIED.

ANTON—JOHNSON—At Lone Pine, October 11th, by Rev. H. J. Winsor, John C. Anton and Cordelia M. Johnson.

INMAN—VAN FLEET—At Bishop, Cal., October 7th, Claude C. Inman and Ella M. Van Fleet.

Thermometer stood at 82° to-day.

Alfalfa hay is selling in the stack for $3 per ton.

Inyo Lodge No. 221, F. and A. M, meets to-morrow evening.

F. Fitzgerald and family have returned to Modock.

Fin. Bedford is erecting a new residence on a lot owned by him in Robinson's Addition.

Mrs. A. R. Conklin and Miss M. S. Conklin have been visiting in town during the week.

Mrs. John Barnes returned to Keeler on Monday after a week's pleasant visit at Independence.

Miss Allie Zink returned home on Tuesday's train from Santa Paula, coming by way of Mojave.

Under-Sheriff Holland visited Keeler last Monday on business connected with the post-office there.

Receiver Clark of the local Land Office, accompanied by his family, went to Bishop last Tuesday on a short visit.

Ben. Williams has been visiting at Independence for a week past. He expects to return to Modock in a few days.

The company's big team is kept constantly busy hauling ore from the Newtown mine at Cerro Gordo to Keeler.

The Los Angeles fair begins next Monday. It will be the greatest race meeting yet held in Southern California.

A telegram received from San Francisco this morning states that P. H. Mack and family will arrive on Monday evening.

Because of painting and repairing there will be no religious services in the M. E. church at Independence Sunday evening.

The fair Directors will meet in the Secretary's office at Independence to-morrow for the purpose of settling up business matters pertaining to the late fair.

Jerry Mairs, accompanied by his nephew Norman Mairs, started for Los Angeles last Sunday via Mojave. The latter will remain there and attend public school.

W. C. Boutelle, United States Postoffice Inspector, visited Independence on Wednesday. He reports the local office as being conducted in a highly creditable manner.

The various cattle owners are expected to arrive with their stock from Long Valley in a few days. There is plenty of feed on the flats and range cattle should winter in good shape.

John Black of Bishop, who gave the information upon which Baxter was convicted of selling whisky to an Indian, has notified the Sheriff that he will not accept the reward offered.

J. W. Murphy is straightening out the old iron formerly used for lining the jail that was burned. It will be shipped to Bishop and used on the interior of the branch jail there.

Superior Judge Geo. M. Gill is expected to return to Independence within the next ten days. A surgical operation was performed upon him but with what result is not yet known.

Rev. Father Bannon will celebrate mass in the school house at Bishop on Sunday at 10 o'clock a. m. He has purchased a property in Lone Pine and expects to establish a Catholic church there.

T. C. Boland of Keeler started for San Francisco last Saturday to attend the convocation of the Grand Lodge, F. & A. M., as representative of the local lodge. He is expected to return in a few days.

The borax works in Saline Valley is probably the best paying business in Inyo county to-day. Three teams are kept constantly busy hauling to the railroad and work could be found for more yet. The product finds a ready sale in the markets.

Reports from Nevada show that the price of stock cattle is constantly increasing. At a recent round-up a large band of common range cattle was sold for fifteen dollars a head. This is an increase of 33 per cent in the last two years.

Constable Drake came down from Bishop on Wednesday, having in charge W. H. Sherman, who plead guilty to a charge of selling whisky to an Indian and was sentenced to a fine of $100 or 100 days in the county jail. Information was laid by Walter Ober, who received the reward.

At Stockton on October 6th Mt. Vernon, by Nutwood, sire of Mt. Vernon Prince, the fine young stallion owned by the Conklin Brothers, reduced his record from 2:21½ to 2:18¾. On the same day Arion set a new mark for 2-year-olds, 2:15¾, and Bell Bird, a yearling, trotted in 2:27¾.

J. G. Bone, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhoea Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY, Big Pine.

Instinct or Reason.

A lively demonstration of canine reasoning occurred at Keeter last week. A small brown dog with a most intelligent head, familiarly known to the lower country residents as "Barney," has been in the habit for long time past of following the Darwin stage, never missing a trip. Changing the drivers makes no difference; he clings to the route and not the man. On off days he occasionally makes a visit to Cerro Gordo and doing so recently was set upon and whipped by a dog there. Attached to Boland's store at Keeler is a big strong dog that has quite a reputation as a scrapper. On the morning of the next Cerro Gordo trip Barney was noticed playing with the big dog. When the stage started Barney followed, and as his companion seemed averse to going he would run back and play, then forward, and finally persuaded the John L. Sullivan dog into going too. Arriving at Cerro Gordo the little dog made a dash at his former vanquisher, John L. "stood in," and the bully was soundly thrashed, Barney wore a broad grin of satisfaction when he returned to Keeler, but he does not visit Cerro Gordo any more.

Contemptible Meanness.

It will be remembered that some time ago Tom McDonough and the two Indians, Caesar and Jack Wilson, brought in the slayer of Powers and McCoy. It was generally understood at the time that a reward was offered for the murderer, but this was found to be a mistake. McDonough then filed a claim with the Supervisors of Kern county amounting to $124, for actual expense incurred in making the arrest and bringing in the prisoner. After several months of weary dragging along the bill was allowed in sum of $100, and a check forwarded for that amount. The Sheriff of Kern County endeavored to secure a suitable reward for McDonough, but the niggardly spirit of the Board of Supervisors prevailed.

B. M. Lelong, Secretary of the State Board of Horticulture, has prepared in pamphlet form statistics relative to a disease in peach orchards known as "yellows." In the Eastern States during the past few years the disease has prevailed with fatal effect. Thousands of extensive orchards have been utterly ruined. It is a matter of the utmost consequence that the disease should be kept out of this Valley, which is destined to become one of the leading peach countries of the State. A copy of the pamphlet can be seen at this office, and all interested in peach growing should not fail to read it.

Constable Drake came down from Bishop last Monday having in charge Lem. Baxter who was sentenced in Justice Dunlap's Court to a fine of $200 for selling whisky to an Indian. He is still confined in jail but it is reported that he will pay his fine. In the case of Maxwell, who was tried on a similar charge, the jury disagreed and he will be tried again to-morrow. If found guilty he should be punished to the extent of the law. The public safety demands that the practice be broken up, and that end seems now in a fair way to be consummated.

A very pleasant social affair occurred at Keeler last Monday evening, the occasion being a reception Mr. and Mrs. John Anton at the Lake View Hotel. The dining room was cleared for dancing, good music provided, and the many friends of the happy couple wore made cordially welcome. The hostess provided lunch at 11 o'clock, after which dancing was resumed. The bride and groom received many hearty congratulations, and we join in wishing them success and a happy life.

A large quantity of soda is being produced by the works at Keeler. On Tuesday three car-loads were shipped and two or three cars are forwarded every trip. It is rumored at Keeler that the property has changed hands, that an English company has purchased the works and locations and that the works will be greatly extended. If this is done it will mean added prosperity for the farmers of this section.

Recent reports from Modock indicate that the largest and most valuable body of ore ever struck in Inyo county is in sight there. An expert miner who came in from there early in the week says that the ledge is very large and has every indication of being permanent. We earnestly hope and believe that the report is correct, for to the mines do we owe whatever hope of prosperity we may have.

St. Patrick's Pills are carefully prepared from the best material and according to the most approved formula, and are the most perfect cathartic and liver pill that can be produced. We sell them

A. K. EUGLEY
Big Pine.

A Hop Picker.

The record of the fertility of American ingenuity has been increased by the addition of the invention of a machine for picking hops. It is claimed this machine will do the work as clean and much more rapidly than it can be done by hand. The apparatus is mounted on a wooden frame, heavy enough to insure stability, and is about 7 feet long by 5 feet wide and 4 feet high.

The branches of the hop bine are fed into a receiver and are seized between two rollers and gradually pulled through. The hops fall into an inclined screen, and by their own weight fall into the box prepared to receive them. The leaves and bines fall on the same screen, but are carried back by the returning motion and thrown into a separate pile. It requires only one man to turn the wheel and another to feed bines into the rollers.—Boston Transcript.

It Fixes Mosquitoes.

To clear the room of mosquitoes take a piece of paper rolled around a lead pencil to form a case, and fill this with very dry Persian insect powder, putting in a little at a time, and pressing it down with a pencil. Set this cigarette in a cup of sand to hold it erect. An hour before going to bed close the room and set the cigarette on fire. One will be sufficient for a small room, but for a large room two will be required.—Detroit Free Press.

Menthol for Mosquito Bites.

Those who have tried ammonia and pennyroyal as a remedy against mosquito blood poisoning should try menthol, pencils of which cost from ten to twenty-five cents. If the bite is wetted with the tongue immediately after puncture, and well rubbed with the menthol until the peppermint action is felt, the inflammation will entirely disappear and no irritation ensue after the first minute or two. It is a real panacea and very little known.—New York Truth.

Notice.

All persons indebted to me are requested to come forward and settle before Oct. 17, 1891, as I intend to place all uncollected bills in the hands of my attorneys for collection on that day.

R. C. SPEAR.

Dated, Lone Pine, Sept. 17, 1891.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,
Chicago, Ill., U. S. A.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain,s Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. For sale by

A. K. EUGLEY,
Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by

A. K. EUGLEY,
Big Pine.

STEVENS DITCH COMPANY.

Location of principal place of business, Independence, California. Location of Ditch, near Independence.

NOTICE IS HEREBY GIVEN THAT AT a meeting of the Board of Directors, held the 26th day of Sept. 1891, an assessment (No. 7) of Thirty (30) Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company in Independence, Cal.

Any stock upon which this assessment shall remain unpaid on Saturday the 28th day of Nov. will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on SATURDAY, the 26th day December, 1891, to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.
P. H. MACK, Secretary.

BOOTS AND SHOES
MADE AND REPAIRED.
THE BEST MATERIAL.
FIRST-CLASS WORK.

Repairs done Promptly.
Prices Reasonable.

A. J. DAVIS,
nov 30-tf Independence.

$3000 A YEAR! I undertake to briefly teach any fairly intelligent person of either sex, who can read and write, and who, after instruction, will work industriously, how to earn Three Thousand Dollars a Year in their own localities, wherever they live. I will also furnish the situation or employment, at which you can earn that amount. No money for me unless successful as above. Easily and quickly learned. I desire but one worker from each district or county. I have already taught and provided with employment a large number, who are making over $3000 a year each. It's NEW and SOLID. Full particulars FREE. Address at once, E. C. ALLEN, Box 420, AUGUSTA, MAINE.

For Sale!

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

A prompt return of your money, if you get neither benefit nor cure. Risky terms for the doctor, but safe and sure for the patient. Everything to gain, nothing to lose. There's just one medicine of its class that's sold on these conditions—just one that *could* be—Dr. Pierce's Golden Medical Discovery. It's a *peculiar* way to sell it—but it's a *peculiar* medicine. It's the *guaranteed* remedy for all Blood, Skin and Scalp Diseases, from a common blotch or eruption to the worst Scrofula. It cleanses, purifies and enriches the blood, and cures Salt-rheum, Tetter, Eczema, Erysipelas, and all manner of blood-taints, from whatever cause. It costs you nothing if it doesn't help you. The only question is, whether you want to be helped.

"Golden Medical Discovery" is the *cheapest* blood-purifier sold, through druggists, because you only pay for *the good* you get.

Can you ask more?

The "Discovery" acts equally well *all the year* round. Made by the World's Dispensary Medical Association, at 663 Main Street, Buffalo, N. Y.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

An Ann-street bookseller was asked to describe an *edition de luxe*. He said: "You know what a rabbit is? well, a donkey is an *edition de luxe* of a rabbit."

For Coughs, Asthma, and Throat Disorders, use "*Brown's Bronchial Troches.*" 25 cts. a box.

A great many of the European peasants think that it's pretty rocky for them to be cut off from their rye.

THE GREAT REMEDY FOR PAIN

"German Syrup"

For Coughs & Colds.

John F. Jones, Edom, Tex., writes: I have used German Syrup for the past six years, for Sore Throat, Cough, Colds, Pains in the Chest and Lungs, and let me say to anyone wanting such a medicine—German Syrup is the best.

B. W. Baldwin, Carnesville, Tenn., writes: I have used your German Syrup in my family, and find it the best medicine I ever tried for coughs and colds. I recommend it to everyone for these troubles.

R. Schmalhausen, Druggist, of Charleston, Ill., writes: After trying scores of prescriptions and preparations I had on my files and shelves, without relief for a very severe cold, which had settled on my lungs, I tried your German Syrup. It gave me immediate relief and a permanent cure. (8)

G. G. GREEN, Sole Manufacturer, Woodbury, New Jersey, U. S. A.

There is always a best even among a score of good things, and every pipe smoker who has tried the Mastiff brand acknowledges it to be the sweetest, coolest smoking tobacco made. It does not bite the tongue, and is positively free from any foreign mixture.

J. B. Pace Tobacco Co., Richmond, Virginia.

WOMAN'S WORLD.

A Few Items of Interest to the Fair Sex.

A WARNING AGAINST FACE POWDERS.

A Middle-Aged Wife's Pathetic, Unequal Struggle.

Most finely organized women are so susceptible to the quality of the moral atmosphere that their very personality alters with their conditions. They are eloquent in one presence and dumb in another, quite irrespective of their likings or dislikings. In the warmth of sympathy, of interest and approval, even in the comfortable medium of a decent civility, they flower out into variety and a gracious agreeableness. In the chill of indifference or a tolerant silence, their mental powers shrink into torpor; they have nothing to say, and if, from a sense of loyalty to the domestic idea, they try to make talk, they are tacitly informed that they succeed in being tiresome.

No unequal struggle is more courageous or more pathetic than the effort of a middle aged wife to conceal from herself that the debonair lover of her prime, her Gratiano, so gay, so airy, speaking his infinite deal of nothing, is converted into the silent boor of her meridian. The tenderer and more conscientious the woman, the more ready is she to excuse, but the more she suffers. When Gratiano comes home at night with heavy step and heavier countenance, bidding her a scant good evening, sitting silent through dinner, and, by way of post-prandial entertainment, falling asleep in his chair, burying himself in the magazines or spreading out his business papers and working at them with a conscious "See how I am ready to slave myself to death for you!" in every flirt of the pen, she says to herself (and to the world, where he needs defense) that he is worn out with work and anxiety, that he is absorbed in the pious task of providing for her future and the children's, in case he should fall a martyr to his domestic devotion, and that she must not mind his moroseness, which is simply nervous exhaustion for which he is not responsible.

But she is not deceived. She knows that he owes her something more and higher than the "heaping up dust from year to year." She knows that the evenings and Sundays and the holidays ought to belong to them together, to be used in the building up of the home, which is so much more than the house. She knows that no matter how hard he may have worked, and how much he may have worried, he has met pleasant experiences, seen pleasant faces, had some variety of feeling in every day's round to relieve its monotony, and leave him fresher than any twilight hour finds her. The difference is that he makes of his weariness a fortress, intrenched behind which he may comfortably and safely defy all conjugal and social claims, while she turns her fatigue into a means of grace, reproves herself for self indulgence in longing to yield to it, and goes out to do the social duty that cannot be shirked, or sits reading or working in the room with her oppressor, infinitely lonely in either case.

It is right that a man should secure a competence for wife and child, who without him might eat the bitter bread of poverty. But if he cheats their present of all that makes it worth having, for the sake of a future that may never come, he is guilty of a folly that is cruelty. They are dependent on him for their daily joy as much as for their daily bread. To supply the one, he has no right to pretend to himself that he may stint the other. The police reports of wife beatings and wife tormentings are too horrible to be read. But that brutality, born of thoughtlessness and selfishness, which deprives the wife of the moral oxygen that is her right, which keeps her in the devitalized air of indifference, is a greater wrong, because the victim is more sensitive and the tyrant more enlightened.—Harper's Bazar.

Keeping Up Appearances.

Some hypocrisy there may be in keeping up appearances. The last sacrifices may be made to keep up the parlor with a show of well doing, while the kitchen may be a pig pen. A tasteful, rather expensive, cloak or gown may hide unclean and tattered clothing beneath. An improvident family manages to maintain a carriage with some show before the community, while the debts of the family would more than eat up its possessions if some way were not devised to evade the sheriff. Grocers and other merchants are laid under contribution to help maintain families beyond their actual means. The man who piles up firewood will take pains to place the sticks with the sawed edges outward, that the front surface of the pile may appear well. And so it goes throughout life.

This may all be hypocrisy, in great or small degree; but, after all, it means something deeper. People do not love to be hypocrites, unless we except the few Uriah Heeps. There is no amusement in deceiving anybody but yourself for the sake of deceit alone. Beneath all this are more ultimate actuating motives. Respectability is aimed at, because it is a good thing; well doing is assumed because it is desirable. The handsomest garment is placed in sight because beauty is one of the great additions to modern life. "Assume a virtue if you have it not," said Hamlet. So, in our age, when well doing is not universal, when elegance and beauty and luxury are not common to all, their ownership is pretended; and they will continue to be assumed until that day when we shall all give up the pursuit of ideals, or be honestly satisfied with our efforts to attain them.—Good Housekeeping.

Penny Wisdom and Pound Foolishness.

Economy only ceases to be admirable when it goes too far and verges on stinginess, and then it is very apt to defeat its own desires. The boarding house keeper who doles out two towels and two napkins a week spends more than she economizes. The linen loses more by the hard scrubbing it must sustain to be made clean than is saved in laundry work by the reduction of the number of pieces.

Common sense is the measure by which economy must be conducted. The guarding against unnecessary wear and tear, the mending of tiny holes and worn places as soon as they are perceptible, the stitch in time that saves nine, the changing about of rugs that they may wear evenly, the making over of old clothes, the skillful disposition of remnants, the watching for such little leaks as the throwing away of soup stock or the neglect to sift the ashes—all this attention to apparent trivialities only becomes misplaced when it withdraws the mind from higher objects, and binds it down to a mechanical round that leaves room for nothing but petty details. Economy must appear in not wasting nerve force and brain tissue for inadequate cause as well as in the avoidance of material extravagance.—Christine Terhune Herrick in Harper's Bazar.

Warning Against Face Powders.

Use no face powders that are not starch or rice powders, and second, use no face powders that contain lead, zinc, bismuth, arsenic or mercury. Of the numerous "face masks," "beauty masks," "complexion balms," "medicated pastes," blooms of youth, beauty or loveliness, "Lola Montez secrets," not one is good in any respect. The very best is without value. From this they range down to the depths of injurious and ghoulish action. The best consist of an oil, fat or glycerine, with some perfume and a trifle of gum benzoin, camphor or other drying substances. These are simply nasty. Their action is the same as of lard or butter smeared thickly over the face of the user. The rest are dangerous as well as disgusting. They contain the same ingredients as the face powders denounced and are even more pernicious in their action. Lead colic, lead paralysis, mercurial ulcers, arsenic sores, boils, carbuncles, abscesses, putrid glands, salivation, sudden baldness and even more serious ills can be traced to their use, and will invariably accompany that use as long as the human body remains as it is today.

Of the rouge preparations, those made from cochineal and madder are harmless. All others are bad, very bad, and horrible. The "eau de vinaigre," "rouge vinaigre," "camphor wine," "red pepper wash," "capsicum elixir" and the like, which depend for their effect upon irritating the nerve corpuscles, are unobjectional to the physician and chemist. The new preparations, which are solutions of aniline and other coal tar colors, are poisonous and should be prohibited by law.—American Analyst.

Social America in 1850.

The furniture, of city houses especially, often costly enough, was almost without exception dreadful. The carpets, of enormous patterns and discordant colors and the furniture of excessively varnished rosewood, or some like material, and always in "sets," were things to shudder at. The costumes of the women were in keeping with the houses. Not only did the ladies wear long trousers of some white material, that came so low that it was impossible for the wearers to walk without getting them in dust or mire, but the smallest girl child was rigged out in the same preposterous garments, it being thoughtfully immoral for a tot of 6 to expose her ankles.

The ladies' boots, made usually of cloth, were heelless, laced at the side, and came not quite to the ankle bone; while the one button gloves left the wrist entirely bare. The nearer the female forehead reached to the back of the head the lovelier, many even shaving the central portion to enhance their "beauty." Any hair that was golden or yellow was thought almost a deformity, and a girl with sunny tresses was looked upon as hideous, was taunted as a "red head," and generally used a lead comb or some wash to make her golden tresses conform as nearly as possible to the prevailing standard.

All women plastered their hair in a hard, flat mass tight to the skull, with bandoline or some other mucilaginous substance, as low down as the ears, and then had it twisted in stiff, wire like spirals, or puffed out like blinders.—Boston Herald.

Nightcaps Injurious.

Nightcaps as an article of dress, except in antiquated farces and amateur theatricals, have gone out of fashion. Their universal use by our forefathers and foremothers may, perhaps, be safely attributed to the fact that in the good old times sleeping apartments were uncommonly draughty. Ill fitting window sashes, large chimneys and antediluvian doors let in so much air that there was very good reason for protecting the head from the consequences of too much ventilation. Nowadays the headgear appropriate for night use has become obsolute, so that it will cause no painful shock when the public are informed by the voice of medical authority that the use of nightcaps is actually injurious. "A man," we are told, "might as well sleep in his boots as in a cap." We are not aware that even if a person did commit the former enormity any dreadful effects on his health would infallibly follow, whatever might be the results to his bed linen. Still, medical science is pretty safe in running a tilt against nightcaps, for the simple reason that it is hardly anybody's interest to defend them.—London News.

A Girl's Education.

I think a girl's education begins in the cradle. Who can say how early she discerns what she has no speech to utter—sees, for instance, whether the people around her are self controlled, patient and sweet, or the sad reverse? I wonder how many months old a girl must be before she would know whether or not she was treated capriciously—whether she was refused a thing when mamma was in one humor and granted the same thing when mamma was in another humor. And do you think your little maid of 3 or 4 fails to notice what are your chief interests in life, whether you are most eager about your clothes or your books or your housekeeping? Does she not perceive whether the poor relation who comes to visit you is welcomed as warmly as is Mrs. Cœsus, who drives to your door with her well appointed carriage? In short, though the little damsel has no power to reason, she has keen eyes to see, and your own attitude toward life and life's demands will be educating her, whether you are aware of it or not, even from her cradle.—Louise Chandler Moulton in Chicago Journal.

From Shoulder to Elbow.

"I wonder," writes a fashionable milliner, "whether the confirmed wearer of the conventional sleeveless ball dress ever reflects on the fact that arms which look white early in the evening get crimson with exercise? From the shoulder to the elbow is a most treacherous part of a woman's arm. With heat it sometimes turns as crimson as her cheeks. It is not beautiful then, particularly when she is dressed in white. This only happens with plump beauties; with a slender woman that part of the arm is generally much too thin. I am sure we must be a decaying race, for except in rare cases dress is now a means of hiding defects rather than of setting off beauty."—London World.

Woman as an Employe.

When a woman asserts that she does exactly as much as a man, and does it just as well, that is her side of the case. Perhaps the employer, who knows just what the man does, and what the woman does, would be of a different opinion. The trouble seems to be in this, that a woman will do just what she is expected to do, in the regular routine of her employment, and do it well, but that she is not willing to be called on for extra services outside of her regular employment, whereas a man expects to do as he is told, whether it agrees with his preconceived notions of what his duties were to be or not.—San Francisco Chronicle.

Grain Soup Without Meat.

Here is a grain soup without meat that is recommended. Fry in clarified dripping, or in butter, some carrots, turnips and onions, which are cut in small dice, taking care not to burn them. To two heaping tablespoonfuls of the butter or dripping and each kind of vegetable allow a scant quart of boiling water, a heaping tablespoonful of rice and a bunch of sweet herbs. Boil all the ingredients together for an hour and a half, then add salt and pepper to taste, skim off the fat, add toasted bread cut in dice and serve. This may be made with vermicelli instead of rice.—"Invalid's Own Book."

Recipe for Snaps.

This is an excellent recipe for ginger snaps, the "snappishness" being produced by boiling the molasses and then allowing it to cool. Snaps—Boil one pint of molasses, and when it has cooled to about milk warm beat into it one egg and one teacup of butter and lard, mixed and melted, and two tablespoonfuls of ginger. Work in floor enough to make it roll easily, with one teaspoonful of soda dissolved in a spoonful of warm water. Roll very thin and bake quickly. Remove from pan carefully. When cold they will snap.—Cor. Atlanta Constitution.

Now that the gardening season is approaching, you will do well to remember that an old can with a small hole punched in the bottom and sunk in the earth beside your pet plant, if filled daily with water and weekly with liquid manure, will help it to a wonderful and delightful growth.

Three Russian women, graduates of medicine, have established a hospital for diseases of women at Koschan, Persia. Their experiment has proved completely successful. They are reported to have been consulted by 1,500 patients in the last ten months.

If you would keep your face and hands unwrinkled, use tepid water; very hot or cold water is injurious. Also avoid burying the face in a soft pillow at night, which always produces wrinkles around the eyes.

Basements should never be constructed without an air space between the floor and the earth. If the floor is laid directly on the ground it is sure to be damp. Sub-cellars for this reason alone are very desirable.

Type rubbing is one of the best paying industries for women. The work consists of rubbing the type after it is cast and to the point of polishing, which is done by men.

The sun bath is the latest beautifier, and is recommended as the best means of attaining the Irishman's "middle extreme," wherein a woman is neither too fat nor too lean.

A slice of raw onion well rubbed over the roots of the hair upon going to bed is one of the very best things for any unwholesome condition of it.

Women desiring to enter the London Society of Lady Dressmakers have to furnish testimonials of their "social position" as well as of character.

The air of a sick chamber should always be kept so fresh that there will be no perceptible difference upon coming into it from the outer air.

It rests with our own hearts whether the four walls of a cottage shall not enshrine as much of bliss as the gorgeous precincts of a palace.

Rubbing the scalp for ten minutes every day with the tips of the fingers is both a preventive and remedy of baldness.

Put meat into a hot oven to roast. If the meat and oven get hot together the meat will be tough and the gravy gray.

There is one instrument that no clever woman ever learned to play on, and that is a second fiddle.—Uncle Esek.

To remove black grease stains from clothing use cold water and soap. Hot water sets the stain.

Some of the women of Paris have formed a league for the suppression of impure literature.

Don't allow ashes to be put in a wooden box or barrel. Always have an iron ash can.

Divorces would be unknown if there was as much courting after marriage as before.

An old man in love is as helpless as a blind kitten.

Sift flour just before you wish to use it.

She Saw the Point.

"That lady," said a Woodward avenue merchant, pointing to a woman who had traded about $12 worth in ten minutes and was going out, "used to be one of my worst callers. She'd come in almost daily, bother four or five clerks for two hours, and go out without buying a cent's worth."

"How did you cure her?"

"Well, I spoke to her in an off hand way one day, and she fired up and said that as long as I kept clerks it was my business to be bothered. Next day I selected ten of the girl clerks, posted 'em as to what to say, and they rung her door bell at intervals of an hour all day and inquired if she wanted a nurse girl. She didn't, and told them so pleasantly enough until the tenth one came. Then she said:

"'I'd like to know why on earth all you girls come here bothering me when I don't want to hire!'

"'Because, ma'am, so long as you keep servants it is your business to be bothered!' was the prompt reply.

"I think she reasoned out the analogy, for she now sits down and buys what she wants and every clerk likes to wait on her."—Detroit Free Press.

Wanted an Easy Chair.

A Nashville furniture dealer tells a little story that shows how some people are constituted. A lady ordered an elegant easy chair of a peculiar kind. It was made and sent to her house. She examined it carefully and critically, finally remarking that it suited her exactly, with one exception—it was too soft. She had the man take the chair back to be made a trifle harder. The chair was returned to the store and put aside. Nothing was done to it. After the lapse of about a week the chair was sent out again. The woman again examined it, and this time the chair was too hard. She was sorry, but when she paid so much to get an article for her own comfort she wanted it about right, so she sent it back to the store for another change. The chair was again put aside for a week or ten days and sent out for the third time without having a particle of change made. This time it was just right. She took the chair, paid for it, and was sorry it had not suited her at first. The poor woman never knew that the chair had not been changed a particle.—Chicago News.

A Pretty Girl's Eyes.

Although nonsense may be common in ultra fashionable circles, it is nevertheless often unique. At a recent reception one fair maiden remained persistently seated while the other girls walked about a great deal and struck pretty poses while in conversation with the gentlemen. Somebody asked why this attractive creature remained in her chair.

"Because she doesn't feel like standing," was the reply.

"Oh, then she is lame."

"No, no. She has upward eyes."

"And what are they?"

"Why, she has discovered that her eyes are exceedingly handsome when wide open and looked down into, but when the observer is on a level with them they are not half so charming. It seems to be a peculiarity of her orbs. So she sits down all the while when on exhibition, so that the fellows as they stand before her in conversation must gaze down into her face, and in so doing encounter her eyes at their best."—New York Sun.

The Objection Easily Obviated.

A gentleman of fastidious habits was lunching at his restaurant the other day, when a stranger came in and sat down at the same table.

While eating the slim meal he ordered, the stranger looked across at his well dressed vis-a-vis and remarked:

"I see you have had celery; will you oblige me with ten cents to pay for some celery, sir?"

"I don't know why I should pay for celery for you, sir," answered the gentleman haughtily; "you are a perfect stranger to me."

"Allow me to introduce myself," cheerfully responded the other, presenting a card. "Now, sir, shall I order the celery, or will you?"

He got it.—Detroit Free Press.

Annual Output of Beer.

It has been calculated that the quantity of beer brewed yearly in the undermentioned countries is about as follows: Great Britain, 1,050,000,000 gallons; Germany, 900,000,000; Austria, 270,000,000; Belgium, 180,000,000; France, 150,000,000; Russia, 50,000,000; Holland, 33,000,000; Denmark, 30,000,000; Sweden, 30,000,000; Switzerland, 17,000,000; Norway, 16,500,000.

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

THE PHILOSOPHY OF LIFE.

The philosophy of Francis Bacon in the philosophy of life. "Despise no new accident in the body," said he, "but ask opinion of it; in sickness principally respect health, and in health action." There are many so-called slight affections which men think it brave not to notice. It is not bravery; it is folly. As Bacon says, "despise no new accident in the body." BRANDRETH'S PILLS will remove effectually and at once a thousand and one of the little ills of life that often, if neglected, take years to cure. Be sure to have with you always a box o BRANDRETH'S PILLS.

They can be obtained in every drug and medicine store, either plain or sugar coated.

There are two things needed in these days: First, for rich men to find out how poor men live; second, for poor men to find out how rich men work.

A MYSTERY.

How the human system ever recovers from the bad effects of the nauseous medicines often literally poured into it for the suppositive relief of dyspepsia, liver complaint, constipation, rheumatism and other ailments, is a mystery. The mischief done by bad medicines is scarcely less than that caused by disease. If they who are weak, bilious, dyspeptic, constipated or rheumatic, would oftener be guided by the experience of invalids who have thoroughly tested Hostetter's Stomach Bitters, they would in every instance obtain the speediest aid derivable from rational medication. This medicine is a searching and at the same time a thoroughly safe remedy, derived from vegetable sources, and possessing, in consequence of its basis of pure spirits, properties as a medicinal stimulant not to be found in the fiery local bitters and stimulants often resorted to by the debilitated, dyspeptic and languid.

An old sad sea dog is probably a dismantled ocean greyhound.

WELL KNOWN WOMEN

Who Have Won Fame in Different Lines.

MISS THEO RUGGLES, THE SCULPTRESS.

The Rare Beauty of Miss Lily Robinson of Kentucky.

Miss Theo Ruggles, the young Boston sculptress who is just rising into fame, is the daughter of Mr. C. W. Ruggles, a well-known business man of that city. Her first ventures in her art were when she was a very little girl and her models in clay and snow attracted the attention of her friends to her great talent and appreciation for form and beauty. When she was 14, now six years ago, she modeled in snow a reclining horse and all Boston trooped to see the

marvel wrought by her childish fingers. She was then placed in the studio of Mr H. H. Kitson, the sculptor, who directed her studies for two years when her mother took her to Paris. In the spring of '88 Miss Ruggles sent two pieces of sculpture to the Paris Salon and both were accepted. One, "The Shepherd Lad," was highly complimented by the critics, who spoke of it as the work of Mr. Theo. Ruggles. When their error was pointed out they made the correction and repeated their compliments. To the Salon of '89 Miss Ruggles sent "On the Banks of the Olse," representing a nude boy gazing into a stream. This received "honorable mention," the first time the honor was ever conferred by the Salon upon a woman sculptor.

Miss Ruggles is one of the competitors for the statue of Shakespeare to be erected by the City of Paovidence. She has submitted her model and the

competition is closed, but the award has not yet been made.

The young sculptress is a beautiful girl, dark skinned and graceful, and refuses to be trammeled by inartistic and uncomfortable frocks. She is studious, fond of outdoor sports and devoted to her greyhound, Glaucus, who accompanies her on all her excursions. Her friends say she is "unspoilable," and pronounces her sweet and gracious of disposition, full of womanly character.

Among the women of the South whose fame for beauty has passed the boundaries of the States wherein they have their homes is Miss Lily Robinson, whose portrait is included in Frank Leslie's Illustrated Newspaper's gallery of Southern belles and beauties. Miss Robinson is a granddaughter of the late Gov. Robinson, one of the pillars of the commonwealth of Kentucky, and daughter of Gen. James F. Robinson, brigadier general in the late war, and a man always prominently identified

with the public affairs of his State. He is the most conspicuous turfman in Kentucky, and is president of the Kentucky association. He was also predecessor of the late Col. William Cassius Goodloe as internal revenue collector of the Seventh district of Kentucky. His daughter is a veritable "nut-brown maid," with piquant features and dark hair, full of golden gleams, and the sumptuous proportioning of the typical blue grass girl. In her manner there lurks a coquettish insouciance, a half defiance, which adds spirit to her riant loveliness and makes her irresistible with the sterner sex.

Among the modern Spanish women who are making a name in literature is Senoretta Emilia Pardo-Bazan. Senoretta Bazan was born in 1852 (they don't conceal the ages of women authors in Spain); her birthplace was Corunna and she is said to have descended "on both sides" from Galician nobility. As a girl she was one of those omnivorous readers who worry their guardians. She was educated at a French boarding school in Madrid. During the revolution of 1868 she traveled a good deal with her father. It was in this year that she married Don Jose Quiroga. Her first writings were in history and philosophy, in which branches she studied extensively. "Pascual Lopez" was her first novel. While devoting herself very closely to novel writing she has found time during the last ten years to do a good deal of lecturing and has found the "woman question" a congenial subject of study and propaganda. Her latest novel, just now in the hands of both Spanish and English readers, is "A Christian Woman," in which social and domestic life are considered with great candor.

EX-MINISTES DOUGLASS.

The Most Talented Man of His Race Ever Produced.

Frederick Douglass, the well-known colored orator who has just resigned his post as minister to Havti, is without doubt one of the most talented men his race has ever produced. He stands by universal consent the head and representative of his race in America. With a splendid physique, tall and powerfully built, the swarthy complexion of the mulatto, an abundant crop of negro hair, white as snow, and features while of the negro type, are nevertheless full of emotional fire and intellectual force, he looks every inch a man born for distinction.

His father he never knew. His mother was a black slave, and he was born on a remote plantation lying on the banks of the Choptauk river, in Maryland, February, 1817, "amid the laziest and muddiest of streams, surrounded by a white population of the lowest order and among slaves who in point of ignorance and indolence were fully in accord with their surroundings." It is a remarkable fact that there was one, and apparently only one, exception to the general laziness and ignorance of the black population in the midst of which he was born, and that one exception was his mother. She could read, though how she could have learned has ever been a mystery to her son.

All the world is more or less familiar with the slave life of America, and the only exceptional feature of Frederick Douglass' career was the fact of his being a high-spirited, bright and intelligent mulatto, with a consuming desire for knowledge and freedom. A lady incautiously taught him his alphabet, and although the peril to it was speedily discovered and every effort made to extinguish the light thus kindled the efforts were in vain. Douglass learned to read and write and by and by he resolved to be free. It is difficult to realize the desperate character of such a resolution.

He knew something of theology but nothing of geography, and did not know whether there was a spot on this side the Atlantic where he could be safe. However, he and four or five others made their plans, were betrayed and were plunged into mere hopeless depths of slavery. At 23 years of age he succeeded in escaping, and afterward went to England a fugitive slave. Two quaker ladies of Newcastle raised $750 for the purchase of his freedom, and, as he himself pithily puts it, provided with this title to his own body he went back to fight the battles of his race.

In 1847 he began in Rochester, N. Y., the publication of "Frederick Douglass' Paper," whose title was afterward changed to "The North Star." In 1859 he again fled to England to escape arrest for supposed implication in the John Brown raid. He assisted in organizing colored regiments during the war, and in 1871 was

FREDERICK DOUGLASS.

appointed assistant secretary to the commission of San Domingo. In 1876 he was made United States marshal for the District of Columbia, where he remained until 1881.

Subsequently he filled the office of recorder of deeds in the district, but was removed by President Cleveland in 1886. His commission to Hayti has been held by the eminent orator since his appointment by President Harrison. Through what other vicissitudes his wonderfully varied career will take him is a matter of interesting speculation.

COURAGE OF THE TIGER.

He is Made of Better Stuff Than the King of Beasts.

The Bengal tiger has more courage than the lion according to a showman, who states that the matter was tested in this manner: "We placed a shooting cracker in the respective cages and fired the fuses. As soon as the fuses began to burn they attracted the attention of both animals, but in a widely different manner. The lion drew into a corner and watched the proceedings with a distrustful and uneasy eye. The tiger, on the contrary advanced to the burning fuse with a firm step and unflinching gaze. On reaching the cracker he took his paw and began to roll it over the floor, and when it exploded beneath his very nose he did not flinch but continued his examination until perfectly satisfied. The lion betrayed great fear when he heard the report of the explosion and for quite a time could not be coaxed out of his den."

Important Revision.

De Art—"I understand that Ward McAllister intends to revise his book—make some additions to it."

De Science—"Ah, indeed! New dishes or new drinks?"

SOME ROYAL ROMANCES

Among the Great European Houses.

PRINCE FERDINAND AND MLLE. VACARESCU

Princess Sophia's Love Remained Ever True.

IT IS NOT GENerally known that ex-King Milan had a love affair long before the beautiful Natalie became his wife. The woman was from the people. Her name was Madame Visprat. She was very pretty and matchless in the art of making up. They met in private many times after the marriage with Natalie. Now they are together in Paris. Both lead lives of abject misery, always fearful of assassination at the hands of friends of the wronged one.

The visit of one royal visitor to Bayreuth, the Duchess d'Alencon, who was accompanied by her son, Prince Emmanuel of Orleans, has called up many strange memories. The Duchess is now aged and very much broken down, but many Wagnerians could well remember the time, over twenty years ago, when she was beautiful and the affianced bride of the late King Ludwig of Bavaria, the monarch whose munificence alone made the Bayreuth festivities possible. The Duchess d'Alencon was then known as the Princess Sophia of Bavaria, one of the five daughters of Duke Max of Bavaria. Her other sisters became the empress of Austria, the Queen of the Two Sicilies and the Princess f Thurn and Taxis. They were all beautiful girls, but were brought up as amazons and loved horses and roving across country better than music and the ways of courts. King Ludwig wooed Princess Sophia. He had purchased magnificent presents for her, when one day the poison of suspicion was poured into his ear. He went to Possenhofen disguised and fancied that he discovered grounds for breaking off the engagement. Her sisters have repeatedly said that the King had no reasons for his suspicions. At any rate he never saw her again, and from that time he became a woman-hater, and finally landed in insanity. The Princess, though she afterward married the Prince Ferdinand of Orleans, Duke d'Alencon, and became the mother of two children, never forgot the King, in spite of his cruel treatment of her, and when Ludwig drowned himself in Lake Starnberg five years ago she became insane and was for over a year in the insane asylum at Gratz.

EX-KING MILAN

Mlle Vacarescu.

The love drama at Bucharest in which the heir apparent to the Servian throne and Mlle. Helene Vacarescu, daughter of the Servian minister at Vienna, were the principal actors is virtually at an end. Prince Ferdinand having been persuaded that it is for his best interest to marry a lady of royal blood. His engagement with an Austrian archduchess will be officially announced next month. Helene Vacarescu was raised in the romantic valley of the Dimbowitza on an estate belonging to her father. From her earliest childhood she was identified with the gypsy life and customs that prevail in this picturesque spot, which is inhabited by many gypsy tribes. These people do not suffer their weird songs to be written down, but, despite this prohibition, Helene Vacarescu succeeded in committing to print many of them. Queen Elizabeth of Roumania conceived an ardent admiration for the young poetess and recognized the great value which these gypsy romances would have for the world of poetry. They rank with the best produced by Inda, Arabia and the Occident. The learned circles of Bucharest had no idea that such a wealth of popular songs and poems, full of pathos and quaintness, was hidden in the gypsy camps of their native land until this volume of poems was published. Many of them have been set to music and are full of rare beauty. Helene is a very handsome woman of the business type, with regular features and beautiful brown eyes. A little volume of poems, "Chants d'Aurore," of which this young lady is the author, has been honored with a prize by the Paris Academy.

NATALIE.

DUCHESS D'ALENCON.

PRINCE FERDINAND.

But these are only a few of the royal romances of Europe.

Bayard and His Daughter.

Secretary Bayard, by the way, is looking remarkably well, and his daughter Mamie will, I understand, be the head of his household this winter. There is nothing in the story, I am assured at the state department, of his engagement to Miss Markoe, and he was too ardent and loving a husband to so soon take unto himself a new wife.—Carpenter's Washington Letter.

Field for Literary Beginners.

"What field is there in literary work for a young man or young woman who has some ability and yet has no knowledge of how to begin?" was asked of Richard Watson Gilder, editor of The Century.

"The only way for a beginner to do is to begin. To become a professional writer practice is necessary."

"I want to know what field there is today for magazine writing."

"For people without literary reputations?"

"Yes, people who want to make a reputation—who want to rise in the profession; it is fast becoming a profession in itself."

"Well, the most constant demand is for fiction. A beginner always has the opportunity for practice in the field of short stories, and out of this he can graduate into a serial writer, a novelist, publishing either in the magazines or in book form, or both. In this way the writer of stories has an advantage over the dramatic writer, in that he can (as Mr. Brander Matthews says) make his brief essays and try them on the editors and on the public, whereas in the dramatic art in this country he does not get the chance that he does abroad, where they take one act plays from beginners. That is one reason why there are so many good writers of fiction coming up all over the country and why there are so few dramatists, because the former have a chance to practice—to try their experiments upon the public—and the latter have small chance."

"Has not that been the case with almost all of our fiction writers of the present generation; they began with short stories and then blossomed out as the rose?"

"That has been the rule. Some of them have never got fairly beyond the short story stage, but if they write good short stories they have gained the rewards of fame."—New York Mail and Express Interview.

Parisian Dudes in Doubt.

Parisian dandies are greatly exercised in their minds just now as to what style of stick they ought to adopt during the season. They are tired of the gold knobbed canes, the crutch canes and the canes with ducks' beaks, which were once the rage. An energetic inventor has therefore started a thick stick which almost aspires to the dignity and dimensions of a cudgel, and the pomme, or pommel, of which is the claw of a crayfish. The article is already in the hands of many of the gandens, and promises to be a fashionable success. While the members of metropolitan "masherdom" are thus busy about the "nice conduct" of a crayfish cane their female counterparts are puzzled as to the style of walking which they shall adopt for the season. As furs are worn at this period of the year the carriage prescribed is that of short steps with the "waggle" of the little bird known as the bergeronnette, or water wagtail. This "waggle" should, of course, be as graceful as possible, the undulating sweep of the hips being well accentuated. The Parisienne looks, as a rule, adorable in furs, but she is sometimes tempted to put in too much "waggle." The best dancing masters and professors of calisthenics in convents, boarding schools, lyceums for sweet girl graduates and similar establishments, are, therefore, engaged at the present moment in instructing their pupils in what may be called the art of "waggling."—Paris Cor. London Telegraph.

The Other Side of the Gold.

I, for one, have always innocently supposed that gold table utensils were what they pretended to be, all gold; but lately an expert and a dealer in old silver has informed me to the contrary. Even Victoria's royal gold plate is no better than it should be. For such a thing as "solid gold" is totally unknown. I must say this knowledge is a vast relief to me. Burglars may labor under a like delusion, and fancy any piece of gold plate is better worth burgling than the best silverware in the market. But we have all made a mistake. The finest gold service in existence is but silver, washed with that precious metal. It seems no less a person than Mr. James Keene, when he returned from England with the famous Ascot cup, won by his horse Foxhall, also believed in the solid business, for the trophy was valued at $5,000 by the custom house officials. Mr. Keene paid the duties on those figures and his cup was deposited in a place of safety. Shortly after came the financial crash in Mr. Keene's fortunes, and he found it necessary to raise money on the Ascot cup. The first jeweler and expert in New York was dispatched to the bank to examine, or rather to assay, its intrinsic value. He found, to his own entire satisfaction, that the 1,000 guinea cup was worth precisely $600, including metals and the price of artistic workmanship! Whether the United States customs ever reimbursed Mr. Keene my informant did not know.—Boston Herald.

A Judicial Jester's Latest.

Judge Gary, the judicial jester, has been making his friends laugh with a new joke. Have you heard of the latest abstract scheme? Of course you have not, and your curiosity concerning it is stimulated to an extraordinary degree by the solemn, almost mysterious air of the judge, who asks you the question. "Well," he says, after you have pressed him to tell you, "we are getting up a company that will prepare a complete set of books from the records of the courts, and be ready to furnish abstracts of titles to men and women. Say a woman wants to marry a man whom she has not known very long, and she wants to make sure that he has no wife living in Wisconsin or Indiana, she comes to our company and gets an abstract of title on him that will show her just how many times he has been married, how many times divorced, how many wives he has had die, what they died of, and all about his matrimonial career, if he has had one. The abstracts, of course, will be quite as useful to the man who wants to know what sort of a title he can get to the woman he is about to marry, and in every way the scheme will be a good one. There is a great and an increasing demand for just such an enterprise right here in Chicago."—Chicago Herald.

Insurance Against Epidemics.

Mutual organizations to insure against epidemics are being established in some of the large manufactories of Sheffield, England. Each workman contributes 2 or 2 1-2 per cent. of his wages, and in return is guaranteed a payment equal to his average wages should he be obliged to quit work on account of any epidemic in his family. The proprietors of the manufactories have charge of the funds.—New York Sun.

Dehorning Cattle.

A manufacturer who makes tools for dehorning cattle can not produce them fast enough to meet the demand. One large stockman has been dehorning at the rate of 2,000 per week.—Chicago Times.

THE ZOAR COMMUNITY.

Ohio's Settlement of Mystics and Communists.

MANUFACTURING BY WATER POWER.

Cattle Breeding.—"Airing" the Babies.—Amusements.

This settlement of German mystics and communists is a complete little kingdom in itself, and not such a very little kingdom, either. The Zoarites own 7,000 acres of land in one tract, of which half is under cultivation, while the remainder is heavily timbered with valuable walnut, oak and pine trees. Their original purchase here was 10,000 acres, but 3,000 have been sold from time to time at a great advance over first cost.

Every article, implement or machine that is used, wrought with, eaten, drank or worn by the Zoarites is produced in Zoar, as are also the materials of which it is composed. The only exceptions to this rule are coffee, tea, sugar and spices. The shoes the Zoarites wear are made by their own shoemakers from leather prepared by their own tanners from hides taken from their own cattle. The coal that warms them and cooks their food is dug in their own mines and is burned in stoves cast in their own foundry from iron smelted in their own furnaces from ore found in abundance on their own lands. The clothing that covers them is made by their own tailors from cloth woven in their own mill from wool sheared from their own sheep. The beer they drink is brewed in their own brewery from malt made by their own maltsters and hops grown on their own lands.

All manufacturing in Zoar is done by water power. Steam is scarcely used at all. The Tuscarawas river, by means of dams, is made to flow with sufficient swiftness and volume to supply thirty or forty horse power to each of the Zoarite manufactories. Nearly all the machinery used was made in Zoar by Zoarite mechanics. One of their principal products is flour, of which, after supplying their own wants, they ship large quantities to Pittsburg, Cleveland, Washington and Baltimore.

THE COW STABLES.

One of the chief places of interest in Zoar is the great collection of immense barns, in which the milch cattle are kept. A considerable portion of the Zoarites' wealth is invested in their live stock, and they have devoted much attention to determining what are really the best breeds. They have experimented largely with the Holstein, the Jersey, the Alderney and the Durham, and are now inclined to favor the last named, though all four varieties are well represented in their herds.

Every sanitary and convenient device that modern ingenuity has been able to suggest is utilized in the construction of these cow stables. The stalls extend in long rows on either side of a broad aisle, and the conditions for light and ventilation are of the most favorable kind. Already the cows are out at pasture, and it is a rare sight to see the mild faced, patient creatures come filing in at eventide in a seemingly interminable procession, each one knowing her accustomed place and going voluntarily to it without the slightest disturbance or confusion.

On the morning and evening of each day all the young women in Zoar repair in merry procession to these barns and milk the cows. As members of congress sometimes are for a much less useful purpose, the girls are "paired," and each two are assigned eight cows, which they must always milk. Fancy more than thirty buxom young milkmaids, with the good looks which are the offspring of good health, outdoor exercise and good diet sparkling in their eyes, lips and cheeks. Each one is tastefully dressed in well fitting chintz or calico, and wears a white apron, which, like everything else about these most attractive young women, is scrupulously neat and clean.

Another place in which to see the Zoarite young women to advantage is the bakery, where all the bread and pies for the entire community are baked fresh every morning. From 75 to 100 loaves comprise the average daily consumption of the town. The baking is done by men, but each household sends its young women to the bakery to procure its supply of daily bread and carry it home, wrapped in a large, spotless white cloth, which each damsel carries with her.

Besides these quaint processions of young women to the cow stables and the bakery there is another similar one to be seen in Zoar on every pleasant day. That is, a procession of girls ranging from 8 to 13 years, each drawing in an old fashioned baby carriage a younger brother or sister for an airing. As all property in Zoar is held in common, so the Zoarites share equally and participate together in all their pleasures and duties. Thus even the babies of the society are "aired" simultaneously in a long drawn out procession.

For the pleasure of the members of the society and their visitors a public garden and a greenhouse are maintained in Zoar. Both are of considerable extent and would be highly creditable to any large city. The garden is tastefully laid out, and contains some noble trees and elegant shrubbery. A large and delightfully cool arbor in the center is entirely concealed by the latter. The greenhouse boasts a fine collection of choice plants and flowers. There is no prohibitory "No admittance" or "Hands off" on anything, and every one is free to enter at all times and roam about at will.

From the garden and greenhouse it is but a few steps to the picnic ground, a grove of grand old forest trees, in which the Zoarites have placed swings and a covered dancing platform for the enjoyment of their younger visitors, who in summer time come in large numbers from surrounding cities and towns as well as from the adjacent country and picnic here on two or three days of almost every week. But swinging and dancing are not the only amusements provided for these young people by their good friends the Zoars, who find their chief happiness in making others happy. Many beautiful pleasure boats are maintained here, and no stream could be better adapted for boating than the Tuscarawas river.

If any people in the world practically indorse, in every possible way, old John Wesley's saying that cleanliness is next to godliness, that people are the Zoarites. In the brewing of their beer, the making of their wine, the milking of their cows, the baking of their bread, and the slaughtering of their cattle, their chief object seems to be the attainment of the highest possible degree of cleanliness. Their slaughter house, where some magnificent beeves are killed daily, is a model in that particular. They are very fond of the pleasures of the table, and there are few city hotels whose bill of fare presents a greater variety than that of the Zoarite village inn, while none surpass it in excellence of cookery.—Zoar (O.) Cor. Chicago Times.

Pensioning School Teachers.

Some of the western cities pension their public school teachers after certain years of service. In Wisconsin twenty-one years of faithful work entitles a teacher to a pension.

THE PRISON GRAVEYARD.

Sing Sing's Burying Ground for Convicts. Death of a Prisoner.

On the side of a steep hill whose peak is many hundred feet high, and whose base is at the granite walls of Sing Sing, are two graveyards divided by a winding country road. The one nearer the prison is the old plot that was used for burying dead convicts until the small stretch of level ground was thickly sprinkled with rough wooden crosses and small roughly carved stones, and then a much larger place further up the hill was set apart for this use.

The big prison has stood on its present site for more than fifty years, and although the number of convicts there has increased proportionately with the growth of the population, the average number of deaths within its walls has not increased. Humanity and science have cut down the death rate. On an average ten persons a year die in the prison, and nearly all of those who have died have been buried in the prison graveyard and left there undisturbed. A few have died by accident in the work shops, but the percentage of deaths by accident is so small as to be scarcely worthy of note. A large majority of deaths has been caused by consumption, which, however, is rarely contracted within the prison walls. A prisoner suffering from consumption is shown every consideration possible with prison discipline. His work is made light, and as soon as he shows the symptoms of breaking down he is sent to the hospital.

In the prison graveyards repose the bones of about 500 convicts. This makes the number of deaths average nearly ten a year. The old graveyard on the slope nearest the river looks like a deserted God's acre of olden times. A dozen years ago, when the burying ground was moved further up the slope, the fence of the old place was left to take care of itself, which it has failed to do. The mounds have been beaten down until they are level with the ground. The rough wooden crosses that bear a number corresponding to one in a big ledger in the prison, in which a record of the dead is kept, stand in straggling fashion. These were originally unpainted pieces of wood nailed together in the form of a cross, and driven into the earth. A few of them have been kicked over, but even on those that are still standing the numbers that were on them once have been so defaced by the weather that they are scarcely legible.

The newer graveyard is in a much better condition. The wooden crosses are comparatively new, and the numbers that are on them can be plainly seen. At the head of a few of the mounds stand rough stones, crudely cut. Every one of these stones tells a story more pathetic than do many of the pretentious monuments in big and finely kept cemeteries. These stones are all the work of prisoners, who labor during hours of leisure as acts of friendship.

When a prisoner is very ill and there seems to be danger that he will die, his friends are notified, and the iron rule of the prison is for the time unnoticed. He is allowed to settle up in the presence of his friends all of his worldly affairs, and to have them about his bedside until the end comes. There are occasions, of course, and many of them, when the prisoner is either absolutely friendless or is only anxious to die without making his shame known to his friends. When the end comes the body is then free, and to the friends of the dead man is given the melancholy privilege of bearing the body outside of the prison walls. A prison funeral is usually a solemn affair. The big bells that are used in the prison are always clanging out some kind of an order to the prisoners or a summons to the keepers, and they always stir a world of echoes in the silent corridors. When a prisoner is dead the fact is generally well known, and an unusual silence is preserved, even for this dreary place. Then the whisper is heard that the dead man is to be buried in the convict ground. The coffin is brought forth, the body placed in it, the chaplain reads a service and then it is interred.—New York Sun.

The Criminal Law.

"How about the criminal law—does it not pay the young, eloquent counsel better than civil law?"

"The criminal law has lost its importance to the practitioner. Very few men of ability now follow it, and decline to accept retainers, unless, perhaps, for some client for whom they have civil business and whom they desire to oblige. There are but few cases of the kind that are attractive to a man of ability. Once in a while a highly important case, having some great question at its root, will attract the most distinguished counsel, but these cases are rare. Most of the criminal business, in large cities particularly, is both commonplace and disgusting. No young man with character and mental force should seek to follow it as a business in such a city. The name of being a criminal lawyer is injurious; it has unsavory associations. It is not attractive, pecuniarily, as a rule, for the criminal classes do not abound in wealth, and have little means to pay their advocates.—New York Mail and Express Interview with Professor Dwight.

A Canal in Crimea.

Another internal improvement scheme of great importance, and involving some masterly engineering methods and plans, has for some time been in contemplation by the Russian government, and, in view of its political and commercial bearings on the interests of that country, its accomplishment, in due course of time, is no longer a matter of doubt. This work is the Perecop canal in the Crimea, which will establish a direct route between the Don, the Black sea, and the Sea of Azof, and three lines of rail, namely, the Knosnoff Veronej, the Kursk Charkoff, Azof Don or Maripol line, and the Losoff Sebastopol. Charkoff Niolaieff line will be brought into junction with it. Besides other considerations, such a canal will enable the Russians to bring the coal and coke of the Don collieries to the Black sea ports.—New York Sun.

The Truly Gentlemanly Laugh.

"There is always one sure sign by which you may know a well bred man," says a cosmopolitan who is just now in Philadelphia.

"And, pray, what is that sign?" he was asked.

"It is his laugh. The butcher and the baker and the candlestick maker, not to speak of the tailor, may do a good deal for man. But only thorough refinement can make him laugh like a gentleman."

"And, now, what is that laugh like?"

"As with the quality we call style it cannot be defined; but, just the same, there is no mistaking the laugh of a gentleman. Listen and note the next time you go to a reception or dinner party."—Philadelphia Press.

When men begin to glory in wickedness their punishment is not far off.

AMATEURS' CAMERAS.

Photography a Rage With the Artistically Inclined.

AMUSEMENT FOR ONE'S GUESTS.

A Curious Collection of Picures Obtained in the Slums.

Amateur photograpny has become a genuine rage. Every self respecting young person who would keep abreast of the times is the owner of some sort of instrument which produces more or less speaking likenesses of their friends and family, of everything that lives and moves or has its being within lense range of their domicile, not to mention every nook and corner of the house. There is scarcely a library table throughout the length and breadth of this city which is not laden with dim and wierd amateur likenesses of the family—pictures the amateur regards with blissful pride and the family with indulgent toleration. But even this joy of caricature begins to pall on the bolder spirits, and their very latest achievement and delight is the flash light photograph.

For those who are unfamiliar with this method of melancholy perpetuation it may be necessary to explain that it includes an instantaneous lense, a detective camera, and cartridges loaded with magnesium. These cartridges are either fired off with a match or exploded in a pistol made for the purpose. With these implements an instantaneous picture can be taken in the pitch dark, and the favorite fad is to—under the guidance and protection of a policeman—visit the slums at midnight and by the use of the sudden blinding flash of magnesium cartridge procure strange incidents of that quarter taken as they occurred.

A CURIOUS COLLECTION.

A physician here—well known, too, but who objects to any publicity concerning his little amusement—has a curious collection of pictures obtained in this way. He is a friend of Inspector Byrnes, and by special indulgence and under the personal conduct of the great detective was enabled to procure some negatives that could not be duplicated in this country. He and the inpector visited the vilest dives and, without the inmates being aware of his purpose, he would get his camera focused, and without warning, a lightning flash from his pistol would fix the scene of the plate. One of the scenes in an opium den is peculiarly effective, as he stood in the doorway unnoticed until the magnesium light flashed out and caught the whole picture, with every inmate of the place in his natural, unrestrained attitude. There are fan tan players in the full fury of the game on some of his plates; dance halls, filled with half drunken and wholly drunken brutes knocking their glasses on the table in applause of some salacious ditty chanted by a bedizened creature whom it is flattery to call a woman. Without going down into the haunts of the criminal classes, it is possile, through this large collection of proofs, to get a clear idea of them in their unconscious hideousness.

One of the most remarkable pictures in this collection is one taken, not by the quick glare of incandescent mineral, but imprinted on the sensitive gelitine by heaven's own fire. When Dr. —— first began his experiments at the seashore last summer there came a night of pitchy blackness, with a prodigious wind and great electrical disturbances, but no rain. Carrying the camera out upon the beach and drawing the slide he waited for a flash of the lightning, which was blinding in its intensity. A sudden gleam lit the world and as suddenly expired in blackness. He closed the slide and carried the plate away for development. Such a picture as that raging ocean, photographed by lightning, presents was never equaled. It is like one of Dore's ghastly phantasies.

AMUSING ONE'S GUESTS.

Another use of this flash photography is to afford amusement to one's guests. It has superseded for the moment the amateur recitationist and the parlor warbler. At breakfast, luncheon and dinner parties the camera man is introduced and catches a picture of the entire scene, the results being distributed by mail among the guests a few days later. It used to be the fashion, when attending a meal notable in any way, to secure the autographs of the whole party on the back of the menu, but now it is held far more desirable to have the likeness of the famous or beautiful participants, and that in their natural attitudes, engrossed in conversation, and not primly arranged for perpetuation.

The other night a lot of actors and artists—Blum, Howard Pyle, Bacher the etcher, young Sothern, Bob Hilliard, and more than I can recall at the moment—were frolicking in a studio at 3 o'clock in the morning when Bacher suddenly flashed his camera on them and they are fixed forever in the full tide of a lark. The bottles are like leaves in Valambrosa, the air is thick with smoke wreathes, Hilliard is in the midst of a good story and the auditors all roaring with laughter. It's the most life like and picturesque photograph of all of the many instantaneous pictures I've seen. Another was taken at a luncheon given by Mrs. Stevens to Miss Paget just before she set sail for England, and the young English beauty was caught by the camera with her mouth wide open in a yawn, which she took advantage of the momentary darkening of the room to indulge in. It displays, does that rosy opening, a good double row of sound white teeth, but the effect is very funny, and her friends say that her countenance is even more open than candid.—New York Cor. Brooklyn Eagle.

Venison for New York.

The New York market is supplied with venison mainly from the Susquehanna ranges or the Adriondacks. Of course carcasses of deer come also from New Hampshire and the wilds of New Jersey, and even the forests of Virginia furnish their quota. In selecting your venison for the table avoid the antlered carcasses of old bucks and prefer the smaller and more delicate yearling or young doe.—New York Press.

The venerable John G. Whittier, the Quaker poet has a lingering fondness for the trade he learned as a boy, that of shoemaking.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.
FRIDAY, OCTOBER 23 1891

Boss Buckly has concluded that the climate of Canada will have a better effect upon his health than the atmosphere of San Francisco. He has rented a house in the "Boodler's Retreat" and will spend the winter there.

The latest reports from Great Britain indicate that the crops are even worse than was expected earlier in the season. In many districts the prospect is poorer than it has been in forty years.

The tin plate issue sought to be made by the Republican party has fallen still-born. Even the leaders of the grand old party are beginning to recognize the bon mot of the Chicago Tribune, itself a stannch Republican journal, that it "is time to stop lying about tin plate

The rumor reaches us from San Francisco that Blaine will not resume his place at the head of the State Department, and that after the November elections there will be a reconstruction of Harrison's cabinet, with, in all likelihood, Foster as the successor of the Plumed Knight. This indicates either that Blaine is sick unto death, or is sheering off to accept the Republicnn nomination for President. And great will be the popular curiosity to know which is the true solution of the enigma.

The gold monometallists, who are felicitating themselves that the crop failures of Europe have so enhanced prices that the attention of the farmer will be diverted from the depression caused by the fall in silver, have overlooked the fact that the decline in cotton is still going on, and that the planters will be in worse case than ever this year on that account. It is therefore possible that while the efforts of the farmers of the North to restore bimetallism may be abated, those of the South will be redoubled. In the latter event, should Congress in the mean time fail to settle the question, the pressure upon the Democratic party to insert a free coinage plank in its platform in 1892 will become so strong as to be irresistable. That is the outlook at present.

The shaking up which San Francisco felt the other day was a mere tremble compared to the shock experienced there October 21, 1871, when four men were killed and numerous buildings badly shattered. It used to be thought that California had special liability to earthquakos, but experience has shown that this State is in no more danger than the States of the Atlantic. No great loss of life or destruction of property was ever known in California on account of earthquakes, and no apprehension of them exists among our people. The great disaster at Charleston a few years ago indicated that the Atlantic Coast has much more to fear from earthquakes than the Pacific Coast of the United States. Farther south on the Pacific, as in Central America, the case is different, as there is undoubtedly liability to frequent and severe earthquake disturbances in that region.

The Epoch believes that the Democratic ticket in New York will have the full support of the party. There is now perceptible clearing of the political atmosphere, due to the retiracy of the shadow of Hillism and the sharp definition of issues. The Epoch believes that the result of the election, no matter which way it is determined, will be to end Mr. Hill politically. The journal we quote deservedly enjoys the reputation of far-seeing, and has generally forecast New York politics accurately. On the other hand the Republican press of the State is sanguine of success, and points to the superior capabilities of the party candidate for governor and his freedom from entangling alliances. But neither he nor Mr. Flower are novices in political life; both are generous men, public spirited, and the estimation in which they are held by the people is flattering to their personal character. Fassett is the more scholarly and attractive, Flower the man of greatest administrative experience. It cannot be disguised that the candidates are so evenly matched that so far as personality is concerned they are before the people on a level. This leaves as the issues to be debated the silver and tariff questions, and the outcome must have an important influence in the National campaign to follow a year later, and will operate upon the course both of the National parties will adopt for the contest of 1892.

The Burns Holographs.

An interesting MS. volume of what is known as the "Glenriddel Collection" has just been picked up at a sale by a private collector. It contains three holograph poems by Burns. Two of these—a "bucolic" on a Nithsdale dame, and a satire on the then Duke of Queensberry—have never been published. The humor of the former is said to be decidedly "broad," and it is accompanied by a cartoon believed to be the work of Riddel, who had received the manuscripts from Burns, and the poet's friend, Grose.

Captain Riddel, of Glenriddel, was a great friend of the poet. His residence was within a mile of the farm of Ellisland, and for several years he extended toward the poet much attention. But their amicable relations were afterward disturbed through some indiscretion on Burns' part, and though he expressed much regret, Captain Riddel never had an opportunity of indicating his forgiveness. Nevertheless, Burns did not overlook his friend's kindness, and honored his memory with an elegy.

It was at Riddel's that Grose, the antiquary, became acquainted with Burns. Grose was an Englishman, and had gone north for material for a work on the antiquities of Scotland. Burns had frequent meetings with him, and entered with enthusiasm into his plans. It was to Grose that the poet addressed the lines about "the chiel amang you takin notes," and it was to gratify his English friend that the greater part of the famous "Tam o' Shanter" was written.—Pall Mall Gazette.

Captain Maguire's Devotion to Duty.

Captain Maguire, for years keeper of the Marquette light, is one of the oldest and most valued light keepers on the Great lakes. His record is such that in his old age the lighthouse inspectors have winked at an arrangement by which Mrs. Maguire has been his assistant, though this is a fog signal station, and woman assistants are forbidden by the regulations. The captain did the work, and two checks were regularly made out by the department.

In March, without giving previous notice, Mrs. Maguire decided to visit her sisters in Chicago, and on the next visit of the inspector the captain reported her for absence from the light without permission. Since her return she has regularly secured at the postoffice the check bearing her name and used the money. Mrs. Maguire's official head has now been taken off. Captain Maguire's action in promptly reporting his better half for absence from duty without permission is characteristic of the old keeper, who is one of the oldest sailors on the great lakes, and whose strict attention to his charge has made his record as a light keeper irreproachable. — Cor. Chicago Tribune.

A Skipper's Slow Trip.

"Skipper Norton" is a character indigenous to the rocky soil of the Maine coast. He is well known to the housewives along the shore as a peddler of small wares, and travels about from port to port in a little schooner, acting in the double capacity of captain and crew, despite his age—upward of eighty years. In a recent trip from Bristol, Me., to Portland harbor (where he now lies) Skipper Norton had a hard experience. Soon after leaving Bristol he encountered a heavy gale, and a sea swept the deck of the vessel, carrying overboard both anchors from the bows with hawser attached.

He was unable to draw them in again, and came all the way from Portland with both dragging. It has become a fashion to visit this quaint old sea dog, and visitors nearly always leave some substantial tokens of their appreciation of his efforts to entertain them by song, dance and yarn. He says when in port his income thus derived is from fifty cents to a dollar a day, besides what he makes from his buttons and pins.—Lewiston Journal.

Snake Bite Cured by Snakeweed.

A small negro boy, who was playing in the woods with some companions near Pine Forest, was bitten by a rattlesnake. The poison spread rapidly through the system of the boy, his body began to swell, he lost the power of sight and death was evidently approaching. Mr. Levi Dunn, who happened to be near, was attracted by the cries of the negro's companions, and ran over.

The boy by this time was in the last stages. Mr. Dunn, having heard of the curative powers of a small weed that he observed growing near, gathered a handful, and forcing it into the mouth of the negro, ordered him to chew it. Consciousness had not entirely left him, and he obeyed. The effect was almost instantaneous, the swelling disappeared and in a short time the boy was out of danger. He is now at work and all right.

The name of the weed used is "snakeweed," or "rattlesnake master."—Cor. Atlanta Constitution.

Imitation Gold.

Imitation gold is a new compound which was recently discovered and which puzzles the best jewelers to detect. Its weight is that of gold and the acid tests are the same, except that the acid boils a trifle when applied to it, although when it is wiped off no spot is left. It is cheap and is easily worked. Its chief factor is aluminium composite, from 5 to 8 per cent.—Exchange.

A peddler arrested in Shenandoah, Pa., for not having a license said that he had no faith in banks, and therefore carried all his money in his clothes. His pockets were searched before he was sent to a cell, and exactly $4,646.40 in cash was found in them.

By means of a new process devised by M. Raoul Pictet, the eminent French chemist and physicist, the manufacture of absolutely pure chloroform is now for the first time made practicable.

Calming the Waves by Prayer.

An old traveler tells me that in a voyage from Messina to Malta he saw the captain, an experienced sailor, standing at the bow muttering and pointing with his finger. On being asked what he was doing he replied that he was breaking the force of a fatal wave by making the sign of the cross and saying prayers proper for such an occasion.—St. Louis Republic.

The Visitor Was Impressed.

Dibbs (anxious to impress his visitor, to Mrs. Dibbs)—My dear, when you go to the country, shall you leave your diamonds with the safe deposit company?

Mrs. Dibbs (candid)—Oh, no; I'll carry them in a pillbox in my trunk.—Harper's Bazar.

That New Salt Lake.

Howard J. Cone, who for the past year has been the agent of the Southern Pacific Railroad company at Salton, is at home in South Pasadena on a leave of absence for a few weeks. A reporter enjoyed a talk with him about the Salton sea, or lake, that has caused so much interest throughout the country.

Mr. Cone says a temperature of 118 and 120 degs. in the shade is quite a regular and common thing at Salton, but that the few white people about the station and salt works manage to stand it pretty well. They prespire profusely and drink enormously all the water used at the station being brought from up the road by rail. They find that mixing oatmeal with the water is nourishing and that it prevents illness. Despite the great heat, sectionmen work out in the hot sun regularly, but, with the exception of the boss, they are Mexicans.

Mr. Cone brought up some excellent photographs of the lake, the station and the submerged salt works, from different points of view. He says the inflow and the evaporation of the water about counterbalance each other, and that therefore the level of the lake remains about the same, although the wind sometimes carries floating debris back and forth in a way to lead to the belief that the water is rising or falling. He believes it likely that the basin will continue to fill up from the Colorado river to a level with the gulf, and that it will be a permanent body of water, with the Colorado flowing through it to the gulf.

The salt deposits are entirely under water, and that industry is ruined. The warehouse and a small portion of the Southern Pacific's track running beyond the salt beds are still above the level of the lake, but the main track is still 1,000 feet or more from its banks.—Pasadena (Cal.) Star.

The Waif of Wounded Knee.

On the through train which arrived over the Rock Island route was a party of editors from Des Moines, Council Bluffs, Omaha, Lincoln, Beatrice and Fairbury. They breakfasted at the Albany and were entertained by the governor and mayor.

In the party was a fifteen-months-old Indian baby, which was found upon the battlefield of Wounded Knee after the defeat of the Sioux by United States troops. It has been adopted by Mrs. Colby and was christened Zintke Lanuni, which means in the Sioux tongue the waif of the field of Wounded Knee. It was on the fourth day after the battle that the child was found beside its dead mother. Its feet and one side of its face were frozen.

It was given in care of an Indian woman to nurse and soon showed no trace of its exposure and suffering. Mrs. Colby obtained permission to adopt the child, but she was hidden by the Indians and it was only by dint of bribery that its whereabouts was discovered. The Indians were given orders on the post trader, and while they were making purchases she was smuggled out of camp and driven to the nearest railway station, and thence taken to Beatrice, Neb.

Mrs. Colby has legally adopted the child, and proposes to educate her and train her to a useful life.—Denver Republican.

Saving Rent in the City.

"To Let" signs on flats and houses all over the city are coming down with the returning rush from mountain and seashore. The number of returning families who are hiring new dwelling places calls attention to a way of saving summer rents which is increasing in popularity each year as the summer vacations lengthen. Families which expect to be out of the city from two to three months now surrender their leases on May 1, put their furniture in storage, go to a boarding house for the four or six weeks before the country pilgrimage begins, then return in September or October and hire a new dwelling place. In this way they save at least four, and in some cases five months' rent, $125 to $200, toward their summer outing.

Real estate men will tell you that it is almost impossible to rent flats or houses in the summer at any price. I know one man who gave up an attractive flat on May 1 for an outing in the mountains, who will find the same home swept and garnished for him at the landlord's expense on his return in October.—Brooklyn Eagle.

Globular Lightning.

A curious thunderbolt fell at Berga, near Schlieben, in Germany, recently. It appeared to be a ball of fire and came down the chimney of a bedroom in which a man, his wife and three children were sleeping. On emerging from the fireplace it broke into two parts, each of which assumed a globular form. One of these globes ran along the rafters and disappeared, while the other traveled slowly toward the bed, on which it afterward jumped. Thence the man watched it roam around the room and finally disappear through the wall with a loud crash. None of the occupants was injured further than being temporarily deafened.—New York Recorder.

A Mine in Ancient Greece.

At Laurium are found 2,000 ancient shafts, with their connected galleries. These shafts average about two meters square (the round shaft is almost unknown) and are sunk from 20 to 120 meters in depth, but never below sea level. The galleries open into ancient chambers, sometimes 30 feet high and 150 feet wide. According to M. Cordella's estimate the ancients extracted from these mines a mass of mineral amounting to 105,000,000 cubic meters and yielding 2,100,084 tons of lead and 8,400 tons of silver, or a value of 4,171,378,600 drachmas.

The work employed steadily about 15,000 laborers—3,000 in the mines themselves—almost exclusively slaves. The earthern lamps, water jugs and picks found in our day in some of the low, tortuous passages through which a man must work his way on hands and knees have a pathos of their own. Slaves were cheap and the labor problem easy at first. Proprietors worked their own slaves or hired other people's at an obol per day—say 55 drachmas a year (a saddle horse in Athens now brings 200 drachmas per month)—and the price of slaves ranged from 45 drachmas upward, according to quality.—Engineering Record.

Headache may be due to defective action of the liver, constipation, inactive condition of the skin, poor blood, excessive mental exertion, exhaustion from fatigue, the condition of the stomach, eye strain or rheumatism of the scalp. Some headaches are purely neuralgic.

A Cargo of Serpents.

For two years agents of Mr. William Cross, the naturalist of Earle street, Liverpool, have been engaged in India in the collection of serpents, the result being that a cargo of reptiles has just arrived in Liverpool. After traversing the jungle districts, the collectors succeeded in capturing or purchasing from the natives who joined in the hunt about 300 pythons, some of them fourteen feet in length being secured. About fifty died on the journey through the country or failed to survive the passage home, when for the purpose of transit they were placed in long coffinlike cases, through which, of course, holes were bored for ventilation and feeding.

The surviving reptiles to the number of about 250 were unpacked at Mr. Cross' premises, Earle street, but so excited were they on escaping from their long confinement that they gave considerable trouble. Some of the assistants, in endeavoring to recapture them, as they wound themselves with remarkable alacrity around posts, stair bannisters, and the legs and bodies of those who happened to be in the way, sustained bites, which happily, have not proved serious. Some of the larger ones also took to swallowing the smaller fry.

To place some of the large fellows in the cases reserved for them required the united strength of three men, and Mr. Cross himself had several times to be delivered from the coils of the creatures. The serpents have now commenced to lay eggs, of which there is already a small collection. So large a number of snakes has not been seen before in this country, but the demand for them from zoological societies, snake charmers and others appears to be larger than would be readily imagined.—St. James' Gazette.

A Stern Host.

There was a society wedding recently duly assisted at by the satisfied and admiring relatives of the very youthful bride and groom which had denouement too amusing to be carefully kept from gossip's keen ears. It seems that on accomplishing the first stage of the wedding journey a halt was made at a mountain hotel, the only one in the small summer resort which it adorned. The pair descended from their carriage, but instead of a smiling landlord, eager and hospitable, the host was serious and stern eyed.

"I'm a father myself," he commented to the astonished groom, when, after leaving his bride in the reception room he had followed the landlord to the office to secure apartments, "and no runaway couples can be accommodated here. I advise you, my boy, to take that young girl home at once without an instant's loss of time."

Indignant, the young husband protested, showing his card and giving his home and credentials. But the landlord was not to be duped by such manufactured proof, and the newly made benedict had to submit to the humiliation of permitting a dispatch to be sent to his father asking for indorsement. Of course the reply was prompt and equal to the emergency, but, pending its arrival, the unhappy couple were kept under surveillance in the public parlors.—Her Point of View in New York Times.

The Hole Shuts Up.

The Danish government, which is active in perfecting its small but powerful fleet, has given a practical demonstration of the value of cellulose as a defense against the entrance of water, following the piercing of a ship of war by a projectile. The vessel upon which the experiment was tried was the Hecla, the latest addition to the fleet. While at anchor another cruiser, the Absalon, took position about forty-five yards from the Hecla, which is protected with an inside lining of cellulose three feet thick. The Absalon discharged a projectile from a 5-inch gun, which pierced the Hecla at a point near the bow and at the water line. The latter immediately got under way and cruised about for three hours, the water in the meantime flowing freely above the holes caused by the shot. The cellulose, which dilated upon contact with the water, gave results apparently efficient, inasmuch as the compartment which had been pierced, at the conclusion of the three hours' cruise, contained but a trifling quantity of water.—New Orleans Picayune.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of John A. Hannah deceased.

Notice for publication of time appointed for probate of will.

Notice is hereby given that Saturday, the 26th day of October, A. D. 1891, at 10 o'clock a. m. of said day, and the Court-room of said Court, at the town of Independence in the County of Inyo, State of California, have been appointed as the time and place for proving the will of said John A. Hannah, deceased, and for hearing the application of W. L. Hunter for the issuance to him of Letters of Administration with the will annexed thereon.

J. N. YANDELL, Clerk.
P. W. FORBES, Attorney for Petitioner.
Dated Sept. 25th, 1891.

DESERT LAND FINAL PROOF

D. E. No. 571.

LAND OFFICE AT INDEPENDENCE, CAL. September 9, 1891.

Notice is hereby given that Maurice S. Conklin, of Independence, Inyo Co., Cal. for has filed notice of intention to make proof on her desert-land claim, No. 571, for the N W ¼ of S W ¼ Sec. 14, Tp. 11 S., R. 34 E., M. D. M. before the Register and Receiver at Independence, Calif., on Thursday, the 22d day of October, 1891.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Joseph Seeley, Michael McSweeney, James Hines and Norman E. Conklin, all of Independence, Inyo County, Calif.

C. W. CRAIG, Register.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Two (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 327 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 8th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 27th day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

G. W. LUCE, Secretary.
Office, 137 Montgomery street, San Francisco, California.

DESERT LAND, FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL. Sept. 30, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G. Singer, W. Singer, A. F. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four month after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff, in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere within thirty days.

The action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be awarded and decreed to resume her former name of Ida Adams, and for general relief as may more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the seal of said Superior Court of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

BORN.

ANGER—At Camp Independence, October 14, to Mr. and Mrs. L. A. Anger, a daughter.

JIGGENS—At Independence, Oct. 23, 1891, to Mr. and Mrs. H. E. Jiggens, a son.

Marks, the drummer, is in town.

T. C. Boland returned from San Francisco on Wednesday.

Herb. Hartshorne and wife, of Bishop, are visiting at Independence.

Miss Debbie Jones of Round Valley is visiting at Camp Independence.

Mrs. W. F. Matlack received a handsome piano from San Francisco on Monday.

There was a light shower of rain yesterday, lasting but a few minutes however.

E. T. Crocker Jr. returned to Big Pine on Wednesday, after an absence of several months.

Webb & Whitmore and H. Giles arrived from Long Valley with their cattle last Tuesday.

Jake Miller has been on a visit to Big Pine and Bishop. He returned home on Wednesday.

Ed. Ober left Big Pine on Tuesday for the lower country, taking with him his little half-brother, Blaine.

Miss Maggie Conklin proved up on her desert land claim situated at Blackrock in the Land Office yesterday.

P. W. Forbes Esq. returned yesterday morning from an extended visit through the Southern counties.

Independence is receiving its winter supply of wood. Several teams are busy hauling from the Inyo mountains.

Quite a number of Bishop people have been in town during the week, most of them having business in the Land Office.

P. H. Mack has purchased three fine bred jacks in Yuba county and expects to have them shipped here in about three weeks.

Sam. Spratt has purchased the big team owned by Thomas & Hill and is engaged in hauling borax from Saline Valley to the railroad.

A letter received from Fresno last week states that the little daughter of Mr. and Mrs. R. L. Peeler had just died there quite unexpectedly.

The school children propose giving an entertainment in the near future, the proceeds to go toward the purchase of an organ for the school.

Mr. and Mrs. John Black and John Underwood came down from Bishop on Tuesday and have been visiting at Independence during the week.

P. Labarge says he is making a trip every week to Darwin with a four-horse team loaded with vegetables and other supplies for the market there.

The Kern county *Gazette*, Bakersfield, says: "Mr. J. C. Crocker informs us that he has disposed of his property interests and expects to remove to Arizona."

Mrs. T. B. Rickey died in San Francisco on Monday morning of last week, after a long illness. Besides her husband she leaves three daughters and one son, all grown.

Mr. and Mrs. P. H. Mack and Mrs. C. Mulholland returned on Wednesday's train from a visit to San Francisco, Woodland and other points of interest in the lower country.

Rev. Mr. Winsor informs us that the M. E. Church has been newly painted and repaired and is in good condition. Religious services will be held on Sunday evening at 7 o'clock.

Mrs. J. D. Blair returned on Wednesday from Hawthorne where she has been visiting with her daughter, Mrs. Julia Church, Her little grand-daughter, Rita, accompanied her.

It is quite likely that the Seely ditch will be completed within the next two years. Parties in San Francisco are actively engaged in securing funds necessary to build the canal. Should this work be accomplished a large quantity of fine land will be rendered available for agricultural purposes.

LADIES—who will do writing for me at home will make good wages. Address with self-addressed stamped envelope, Miss Flora D. Jones, South Bend, Ind., Proprietor of the Famous "Blush of Roses" for the Complexion. Beware of imitators.

W. S. Morton and A. W. McKillips passed through town last Tuesday with about eighty head of horses which they are driving to the southern country to sell. The animals are mostly small many of them having been brought here from Nevada.

J. G. Bong, a druggist at Dunmore, Pa., says he has never sold a medicine that gave such universal satisfaction as Chamberlain's Colic, Cholera and Diarrhoea Remedy, and that the large demand for it has been a great surprise to him. It is sold here by A. K. EUGLEY, Big Pine.

The Kern Valley *Democrat* says: "Rev. Father Bannon recently visited Inyo County. He says no language is adequate to describe the wonderful production of fruit in that region. He says that all other crops around Independence, Lone Pine and Bishop Creek are abundant and of the finest quality."

It is proposed to hold a meeting at the Norman House to-morrow evening for the purpose of considering ways and means for raising a fund for race purses next year. Would it not be well to wait until the location of the next fair is definitely decided before this is done? While it may be generally conceded that Independence is entitled to the fair next year, that does not insure the fact of its being held here. Under a law passed by the last Legislature the Governor must appoint an equal number of Directors from each county comprising one Agricultural District. Neither Mono nor Alpine counties have at present a representation on the Board and it is to be inferred that the Governor will appoint one new member from each county to succeed the two retiring members. This will render a tie vote possible on the question of the location of the next fair, and it is not impossible that the fair will never again be held at Independence from the fact that when the members of the Board shall be appointed next year Alpine will have two, Mono three and Inyo three. It is to be supposed that Mono would not object to having the fair herself if the balance of power should render it possible. Should the two Bishop members agree to holding the fair here next year of course that will decide the matter. But would it not be well to give the gentlemen a chance to speak for themselves and not take too much for granted?

The Supervisors, according to the requirements of law, will undoubtedly at their next regular meeting order the cancellation of the present Great Register. Every citizen of the county who desires to vote at the next general election must re-register. The new system of registration is much superior to the old one for the prevention of fraud. The new register must show the following facts, to be accurately ascertained by the registering officer, to wit: The name, age, height, complexion, color of eyes, color of hair, visible marks or scars and their locality, occupation, county of nativity, residence and the postoffice address of the person registered. The new law was passed at the last session of the Legislature.

The Sheriff's office is hard at work making out the tax receipts. From the fact that the assessment roll was made out in the form prescribed by the old law the Auditor did not segregate the payments into first and second installments. In sending out the postal notifications to taxpayers the Sheriff was compelled to give only the total amount of taxes due. All receipts, however, are made out in two installments, which may be paid at once or separately. The Sheriff will give any information in his power to parties who may not understand the requirements if they will write or consult him on the subject. Taxes on all personal property and one-half the real estate will be delinquent after November.

George Lewis went to Darwin on Wednesday to see how matters are progressing in the mine being operated there by himself and P. H. Mack. He took with him supplies of all kinds, including implements needed in mining. H. Hamilton also went down and will work there during the winter. At last reports the mine was looking very well and a considerable quantity of ore was being taken out.

Constable Drake came down from Bishop last Monday, bringing with him J. J. Maxwell who was convicted in Justice Dunlap's Court of furnishing an Indian with liquor, and who will spend six months in the county jail in default of paying a fine of $300. Levy now has three steady boarders that he does not have to provide lodging for. Let the good work continue.

St. Blaise, the imported thoroughbred stallion by The Hermit, was sold at auction last week in New York for $100,000. This is the highest price ever paid at public auction for a horse. He was purchased by Charles Read and will be taken to Kentucky.

John McSweeney, John Baxter and Jack Willett have returned from the Springs and report themselves to be much improved by the trip. Martin Mee will remain there some time longer. His condition is said to be much improved.

Superior Judge George M. Gill is expected to return home next Monday. He has been undergoing surgical and medical treatment in San Francisco for the past two months.

St. Patrick's Pills are carefully prepared from the best material and according to the most approved formula, and are the most perfect cathartic and liver pill that can be produced. We sell them

A. K. EUGLEY
Big Pine.

"We know from experience in the use of Chamberlain's Cough Remedy that it will prevent croup," says Messrs. Gadberry & Worley, Percy, Iowa. They also add that the Remedy has given great satisfaction in that vicinity, and that they believe it to be the best in the market for throat and lung diseases. For sale by

A. K. EUGLEY,
Big Pine.

There is little doubt but that many persons suffer for years with ailments that could easily be cured by the use of some simple remedy. The following incident is an illustration of this fact: My wife was troubled with a pain in her side the greater part of the time for three years, until cured by Chamberlain's Pain Balm. It has, I think permanently cured her. We have also used Chamberlain's Cough Remedy whenever needed and believe it to be the best in the world. P. M. Boston, Pennville, Sullivan Co., Missouri. For sale by

A. K. EUGLEY,
Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier-Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,
Chicago, Ill., U. S. A.

OUR GOODS ARE APPRECIATED.

The above sketch was made from a photograph taken in the stores of Weinstock, Lubin, & Co., Sacramento, one morning last May. At that time some of the other departments were equally crowded, as is the case on many days in the year.

Our goods are best appreciated by those who are here to see and feel them, and to compare with the goods of other houses.

If we simply had low prices, without right qualities and right styles, there would be little to gain in dealing here, and we should not be able to hold for a day the great trade that does come from Sacramento and through the mails.

In the very throng shown in the sketch are doubtless several "Mail Order Selectors." These people are carefully chosen for their intelligence and taste, and go about the store making purchases for those who send in their orders by post. They are held responsible for the satisfactory filling of every order, and dare not risk sending anything but the very best the house affords. Before the goods on any order are packed for shipment, they are carefully gone over by a staff of very competent people, called "Examiners." Thus two sets of people view critically every item, and as nearly as possible from the stand-point of the customer, whom they represent. Serious complaints are rarely received, although hundreds of orders are dispatched daily.

In many respects, mail-order shopping is more satisfactory than buying in person. The fine illustrations in the catalogue (a copy is sent free to any address), and the clear and impartial descriptions, enable one to sit at home and decide at their leisure just what goods will best suit their purpose. In an hour spent in looking over the catalogue, they can really see a larger variety of goods and get more useful information than they can in a day spent in shopping through a crowded store.

It is to the interest of the house to fill every order so well that other orders will be sure to follow. Small orders are often sent in as the forerunners of large ones. They are intended as "tests." This one fact, if nothing else, prompts us to fill every order, no matter how small, to the very best of our ability.

Samples of dress goods, prints, muslins, etc., are sent free on application. Those who order samples will oblige by stating as nearly as possible the colors desired, and about the prices they wish to pay. In this way much larger selections bordering on their wants can be sent.

WEINSTOCK, LUBIN, & CO.,
400 to 412 K Street,
SACRAMENTO, CAL.

P. S.—This is the largest general retail house on the Coast, employing between 275 and 350 people and carrying complete lines of Clothing, Cloaks, Dress Goods, Domestics, Hats, Shoes, Millinery, Notions, Household Supplies, Toys, Books, etc. Large illustrated catalogue free to any address. 2

Army Orders in Germany.

In the new regulations for the conduct of field operations of the German army, the careful observation and mathematical precision of the German mind is clearly discernible. The composition of the advance guard and the rear guard of a marching army has been variously formulated by military writers, with a general tendency to strengthen the van and neglect the rear. In the new German orders this is reversed; the rear guard being made by far the strongest, because it cannot look for any support, while the advanced guard, if in need of any re-enforcements, has only to fall back or wait for the main body to come up. It is, however, where directions are given as to keeping a portion of the road clear on the line of march and the treatment of troops while en route that these orders are most original and interesting, and, with no intention of giving an opinion as to their efficacy, their reasonableness is obvious.

Students of military history will remember how often armies with everything favoring their success have been detained or even demoralized by long marching without food. It is the footsore infantry and the lame horses of the cavalry that give the trouble, for, as the strength of a chain is not greater than that of its weakest link, so an army cannot move faster than its slowest sections. Napier, in his admirable history of the Peninsular war, describes the disastrous effects of that penny wise, pound foolish policy of saving an hour that should be given to rest, and then losing six because of premature fatigue of the soldier, and there have been many modern instances of this.—Scientific American.

PROVED TO BE THE BEST.

Tested and proved by over thirty years' use in all parts of the world, ALLCOCK'S POROUS PLASTERS have the endorsement of the highest medical and chemical authorities and millions of grateful patients who have been cured of distressing ailments voluntarily testify to their merits.

ALLCOCK'S POROUS PLASTERS are purely vegetable. They are mild but effective, sure and quick in their action, and absolutely harmless.

Beware of imitations, and do not be deceived by misrepresentation. Ask for ALLCOCK'S, and let no solicitation or explanation induce you to accept a substitute.

THE BEAUTIFUL LAND.

There's a beautiful land that lies to the west
Of the far famed valley of tears,
Where the griefs that are born are jealously prest
To the hearts of sorrowful years.
And are borne with a noiseless, measureless tread
Down the valley, across the strand,
Straight on to the sea, where the barks of the dead
Float by to the Beautiful Land.

The dip of the water is heard in the night,
And the griefs that lie on the sands
In their naked woe, through the shimmering light,
Reach out their weird shadowy hands,
And beckon the vessels to come to them there,
And call to the mystical band
And drifts o'er the sea, to a welcoming air
Blown soft from the Beautiful Land.

They glide in the wonderful silence of death,
With faces, snow white, to the west,
And lily hands kissed by the spice laden breath
That strays from the sweet land of rest.
They heed not a moan from the gray, misty vale;
They see not a beckoning hand,
But sweetly they sleep in the barges a-sail
For the beautiful, rest filled land.

—Indianapolis News.

ON THE WARPATH.

On the morning of Aug. 18, 1862, as I was carrying a pail of milk from the cow yard to the house, on the farm of William Miller, seventeen miles from New Ulm, Minn., I saw a covered wagon coming across the prairie as fast as two horses could pull it. I handed the pail into the house, called to Miller and his wife and by the time we were out doors the wagon had stopped at the gate. It was a vehicle belonging to a man named Saunders, living about nine miles away, and he and his family were inside. We had not yet reached the gate when he shouted:

"Fly for your lives, the Indians are on the warpath!"

He would have driven off with that, but one of his horses fell down in the harness from exhaustion. There was Saunders, his wife, and four children, and I never saw people so broken up. It was fully ten minutes before we could get their story in a shape to understand it. The Sioux rebellion, which many pioneers had predicted, had broken out at last. For the past three months we had noticed a change in the demeanor of the Indians, some of whom called at the house almost daily. They had become impudent and threatening, and many of the older settlers were becoming alarmed. Some would have given up their farms, but there were a few smart Alecks who rode about the country saying there was no danger, and that there were enough soldiers in the forts in the state to thrash all the Indians in the whole west. These men were, as we afterward found out, interested in the sale of real estate, and of course they did not want any sensational reports sent east. But for the civil war then raging there would have been no uprising of the Indians. Uncle Sam had his hands full in the south, and hundreds of our young men had enlisted to fight the Confederates.

Saunders had received warning at daylight from a settler on horseback, whose whole family had been butchered. He was a teamster, and his wagon then contained a part of a load of stores which he was hauling out to a storekeeper in a new settlement. He had unloaded some of the stuff and flung in household goods and provisions, and had driven at such a pace as to exhaust one of his horses. Miller and his wife were Germans, cool and phlegmatic. Their all was invested right there. While they knew that trouble was at hand, they did not want to abandon everything at a mere alarm. We had three horses in the stable, and Saunders begged hard for one to take the place of his exhausted beast. He was bound and determined to get on, even if he had to go on foot, and Miller consented to let the horse go. While he was being harnessed in Saunders asked us to throw out some of the merchandise and lighten the vehicle. We took out four kegs of powder, about 100 pounds of lead, fifty pounds of shot, three double barreled shotguns, and some groceries, and the horse was no sooner in the traces than Saunders drove off at a gallop.

"Well, what shall we do?" asked Mrs. Miller, as we stood looking after the wagon.

"Stay and fight," replied the husband.

I was then a boy of 16, and had been with the Millers over a year. There was never a day but that some of the Sioux came along, and in many instances they had eaten of our food. Miller did not question the uprising, but he did not think it as serious a matter as it turned out to be, and with true Dutch grit he proposed to stick. We went into breakfast, ate as heartily as usual, and when we were through my employer said:

"Now we will get ready for the Indians."

As we went out of doors we saw three columns of smoke in different directions, showing that the murderous redskins were at work. Miller had 160 acres of land, almost every acre as level as a floor We had just finished building a mill house over a spring, about 300 feet from the house. Around the spring was about two acres of broken ground, underlaid with rock, and we had blasted out sufficient of this to lay up the walls of the mill house. Miller was a stone mason by trade, and his work had been well done. The house was pretty large, being eighteen by twenty-four inside the walls, and the walls were perhaps a foot thick. The roof had been planked and then sodded, and the door was of heavy plank. The place would make a capital fort, and while I was carrying into it such things as Mrs. Miller directed, the husband used a crowbar to make loopholes in the walls. In the course of an hour he drove five or six, and then he bored two in the door with a big auger.

We carried in all the provisions in the house, followed by the clothing and the bedding. While we worked we kept our eyes open for sight of Indians, but it was 11 o'clock before we saw them coming. They were not more than a mile away when we retired to our fort and barricaded the door. All the live stock had been turned loose and driven away, while the fowls were flying about on the prairie. There was very little left in the house, and the worst they could do was to burn it. When we shut ourselves up I missed two of the kegs of powder, but to my query as to what had become of them Miller made no reply, except by a laugh. He had been working by himself all the forenoon, digging holes and running trenches, but I had been too busy to notice just what he was up to.

There were thirty-two mounted Indians in the band which came up, and among them they had five fresh scalps. Every one had plunder of some sort from the settlers' cabins, and two or three appeared much the worse for liquor. They had probably seen us enter the milk house, for they rode right up to the cabin without fear. We could see them plainly, and among the gang we picked out several who had often been supplied with food and ammunition. There were yells of rage from those who dismounted and entered the house to find it stripped, but presently a council was held in the one big room. After a few minutes an Indian appeared around the corner of the house with a white rag tied to a stick, and when he had waved it a few times he called out that he wanted a "talk." Miller shouted to him to come on, and he advanced to within fifty feet of the fort before he stopped and called out:

"All come out. Indians no hurt Dutchman."

"Is there war?" shouted Miller.

"No war—no war! Young men get drunk and ride around, but no war. Indians all like Dutchman."

"If you like us, then go away and leave us alone!" shouted Miller.

"Will you come out?"

"No."

"Then we burn house and kill all cattle!"

The Indians were too anxious to get at their bloody work to waste much time in parleying. The messenger was no sooner under shelter than the gang began to howl and whoop, and while some opened fire on us from the windows, others made preparations for a bonfire. In about ten minutes the house was on fire, and the Indians crowded together on the far side. It was a log house, and the roof fell in before the sides were hardly ablaze. The slight wind blew the smoke and sparks directly over us, so that we could not see five feet. The Indians continued to yell and dance for a time, but suddenly there was a terrific explosion and a dozen screams of terror. I was looking into the smoke cloud, which now and then lifted for an instant, and I saw the burning logs of the house scattered to the four winds by the explosion. Miller knew the reds would set the building on fire, and he had placed one of the kegs of powder where it would do the most good. We counted five warriors killed or disabled by the explosion, and Miller killed two others before the crowd got out of range. The house was the best shelter from which to worry us, and they had lost by destroying it.

The strength of our fort could be seen at a glance. The Indians were wise enough not to attempt a rush, and the whole party was also impatient to push on to other scenes. Six or eight more arrived soon after the explosion, and presently we saw them making ready to move off. A general volley was fired at us, the war whoop was sounded, and the brief siege was raised. It was half an hour before we ventured out, and not an Indian was in sight. We could, however, see tall columns of black smoke whichever way we looked, and it was plain that the whole section was in the hands of the Indians. We could not at first make out why they had left us, but Miller soon concluded that they knew what they were about. We had no means of escape left to us. The savages were on every side, and if we attempted to leave the neighborhood we should fall into the hands of some of them. It was quite safe to leave us there while they pushed on to butcher the defenseless ones.

An hour after dinner we were joined by three young men, who had been hiding, dodging and traveling since the evening before, and who had come a distance of twenty miles. They were bachelor homesteaders, and all had rifles, revolvers and plenty of ammunition. It was a welcome addition to our party, for we now felt that we would have to stand a siege. Mrs. Miller brought out the pots and kettles and cooked dinner on a fire in the open air, and after it was eaten she began to prepare food for the siege. Pork was boiled, flour stirred into cakes, coffee made and put into jugs, and before night she had food enough to last a dozen men a week. Meanwhile the rest of us had not been idle. Some large posts were sunk in the earth before the door, leaving space enough for only one person to come at us at a time that way. Four more loopholes were made in the walls, and then the planking of the roof was loopholed by means of the auger in at least twenty places. I now saw what Miller had been up to the day before. He had put in no less than three powder mines in the vicinity, running a slow match to each one. The only cover the Indians could have in the neighborhood was in the rear of the fort, where we had mined the rock. We had left a big hole, which was a natural rifle pit, and our loopholes did not command it. They would be sure to occupy this place, and the men prepared a torpedo, holding fifteen pounds of powder, and hid it under the rocks and dirt on the brink of the pit. A trench was then dug to and under the wall of the milk house, and by means of boards a train of powder was laid. When the earth had been filled in again no one could have told it had been disturbed.

We were as ready as we could be at 6 o'clock, but the sun was just going down when we saw the Indians approaching. By that time more than 3,000 settlers had been butchered or driven from their homes, and the war which was to sweep over an extent of country 200 miles long and sixty broad, and alarm 30,000 settlers, had opened in all its fierceness. The band which now approached numbered only sixteen warriors, and as soon as they saw our strength they fired a few shots at long range and passed on to the east. At dark we entered the fort, arranged the goods and provisions to give us all the room possible, and by and by turned in to sleep while one man was left on watch. This was Miller. He was to watch until midnight, and then call one of the young men, but at 11 o'clock he quietly aroused the garrison and whispered the news that a large number of Indians had arrived. We were scarcely awake before being made aware that our fort was being closely inspected by spies. When we had carefully pulled the plugs from the loopholes we could see and hear them moving about in large numbers. By and by we heard a number of them on the roof. They were probably investigating to see how to burn us out. At a signal from Miller we took up our guns, carefully poked the muzzles through the loopholes in the planks, and at another signal all fired. We killed or wounded two Indians by the volley, and the others hastily departed. Half an hour later two or three of the reds crept up to the barricade in front of our door with arms full of light wood and started a fire. The posts were only half seasoned, and all that afternoon I had kept them wet with water. They charred a little under the flames, but the fire would not take hold. From the number of Indians we could see, and to judge by the yells of those out of sight, our enemies numbered at least fifty. After trying us with fire they drew off to wait for daylight, and the most of them probably went to sleep.

When daylight came our enemies were re-enforced by a band of twelve, and these newcomers brought with them two settlers' teams and wagons and three prisoners. Two of the prisoners, a man and woman, were killed soon after coming up. I knew the man. He lived about eight miles away, and had frequently called at our house. The third prisoner was a settler none of us knew. About an hour after daylight the Indians sent him forward with a white flag to demand our surrender. He came up within thirty feet of our barricade, and then halted and told us what he had been commanded to do. A dozen or more Indians had their rifles on him, ready to shoot in case he attempted to play them false. He was a big, powerful fellow, and I never saw such grief and anxiety in a human countenance. In a voice loud enough for the Indians to hear, he demanded our surrender, but in whispers he warned us not to, as every one of us would be butchered. Miller replied to him from a loophole, telling him to go back to the Indians and ask their best terms. When he returned he was to come as close as possible, and at a signal he was to spring forward, and the door would be open for him. He was a pretty cool fellow, in spite of all his sufferings. He returned to the Indians, consulted for a few minutes, and when he came back to us he approached within twenty-five feet before they shouted to him to halt. Then he told us that we would be permitted to take one of the teams and leave the country; that the Indians all loved us; that all they wanted was their land. We had our guns ready to cover him, and I saw him draw a long breath just before the signal came. As Miller uttered a whistle one of the men pulled open the door, and at the same instant the stranger made a spring for shelter. It was a veritable spring for life. The Indians fired at him, but too late, and he pitched in among us without a scratch.

Then began a siege which lasted nine days, and in which over forty Indians were killed or wounded. They gathered in the quarry, as expected, and Miller exploded the torpedo and killed four and badly wounded a dozen. They tried every possible way to burn us out, and on one of these occasions, while they were congregated together, Miller sprang another of his mines and killed several of them. Five or six different times they displayed a flag of truce and thought to coax or threaten us into surrender, but Miller was wise enough to refuse to trust them. From first to last they fired about 4,000 bullets at our fort, over a hundred of which lodged in the door, but none of us was wounded. The besieging force never numbered less than thirty-five, and one day the number was over 100. On the ninth day troops came and drove the fiends off, and it was only then we learned of the widespread devastation. Not a house nor barn had been left standing for miles and miles in any direction. Crops had been destroyed, stock shot down and settlers butchered or driven off all over a great section of the state. We had been the only ones outside of the towns to make a fight, and by our standing a siege we kept a large force of the savages from going against the settlers.—New York Sun.

The Counting Machine in Russia.

I have been in four or five of the largest banks in Russia and many of the most extensive commercial and railroad houses, and nowhere have I seen figuring done by pen or pencil, like they do in America and England. The Chinese counting machine, seen occasionally in the hands of John and Jap in the United States, is everywhere. If you buy a pair of socks for fifty kopecks and a handkerchief for seventy-five kopecks, the shopkeeper, even the brightest and oldest and most experienced, has to go to his machine to learn the result—one rouble, twenty-five kopecks. I venture that there are not a dozen bankers in Russia who would attempt to discount any draft, or issue a letter of credit, or change a ten rouble note into kopecks, without pushing back and forward for some time the strings of colored buttons in his machine, indicating numerals. But it is wonderful how adept some of them are in the use of the counting machine. You may buy a bill of goods ever so large. The salesman keeps the machine beside him, pushing out the numerals as the purchases are made, and the instant you call for your bill he repeats the total. The Russians were taught most of their business knowledge by the Chinese and Turks, and these counting machines are yet indispensable in all Oriental places of business.—Moscow Cor. New Orleans Times-Democrat.

The Seal's Domestic Discipline.

Travelers have often said that there seemed to be something human about the seal, and one story told here seems to give it confirmation. It is about the breeding rookery, where the seal pups are in the nursery, so to speak. "It is certain," says Tingle, "that half the pups are born mates, and that pups equal to 90 per cent. of cows on the rookeries go into the water—that is, exclusive of the young cows which come upon the rookeries for the first time to meet the males. The estimate loss of 10 per cent. is caused by bulls in preserving rigid discipline and administering necessary correction in the management of their domestic affairs. Their idea of a female's duty does not admit of any little indiscretions, and at the slightest sign of deviation, regardless of consequences, they quickly pounce upon the offending female and shake her by the neck. A number of pups are also lost by being washed off the rocks by the surf and drowned, before they have learned to swim. Fully one-half the pups which go to sea in the fall return as yearlings the following spring, the absent ones having furnished food for their natural enemies in the water.—Boston Advertiser.

As It Happened.

A clock ticked merrily among the passengers on a Cass avenue car the other day, and one passenger after another looked up cheerfully and said:

"That sounds good! Where is the ticker?"

No one seemed to know. One little woman with her arms full of packages fidgeted and looked uncomfortable.

"That isn't a clock you hear," said a distraught, wild looking man who sat near the door; "it's my heart you hear beating, gentlemen!"

Everybody looked at him sympathetically, when a man in the corner who had been reading a paper suddenly jumped up.

"What's that drip, drip, over there? Be keerful, ma'am, that lamp's leakin'! I kin smell kerosene!"

At this moment the alarm in the clock went off, and the man who had heart disease rushed out of the car and was seen running wildly down the sidewalk, while the little woman with the clock rang the bell and carried off the cause of the disturbance.—Detroit Free Press.

The Best Shot in England.

Earl de Grey, who was shooting with Col. Tomaline at Stratton hall recently, is reputed to be the best shot in England. It is a curious thing that our crack shots are both Greys, the second Grey being Lord Walsingham, who is very little behind his namesake with the prefix "de." Perhaps the story is not true that Lord de Gray tried to drop a driven partridge down the chimney of his keeper's cottage, and at last succeeded, but a really true and still better anecdote of him is related. The writer of it was grouse driving in Yorkshire, and Lord de Grey, past master of the gunnery, was in the next butt. He had three guns ready for use, and toward him a small covey of five birds came flying. How to kill the lot was the problem. A brace coming and a brace going would be easy to such an adept, but the fifth bird would get away. One of the grouse was a bit in advance, and, taking a long shot at it, Lord de Grey killed it, and, without using the second barrel, dropped gun No. 1, took up gun No. 2, killed two birds coming, then took up gun No. 3 and killed two birds going. Probably there is no other man in England who would have done it.

The Russian Soldier's Tea.

That a soldier, and especially a Russian, is fond of his whisky, is a fact that is very well known, yet if the latter had his choice which of the two to dispense with—whisky or tea—I firmly believe he would prefer the tea. Every company is supplied with an immense tea urn holding hundreds of cups of boiling water, and at evening each soldier can swallow his ten cups—less than that won't do—of hot tea. If he is on guard the vivandiere takes pity on him and brings the delightful beverage to the guard house, where, for a few coppers, he can drink with comfort the bright yellow fluid, one-tenth of which surely does not deserve the name of tea. Hebe, enveloped in a sheepskin, is the friend of the company, and the severest weather will not prevent her journey to the guard house in order to solace her children with their precious tea.—Capt. John J. O'Connell in Cincinnati Commercial Gazette.

Barrels are made in Jersey for the use of the channel island farmers which will fold up when empty, and thus, having been sent to market, can be packed into a small space on the return. The staves are fixed upon the hoops so that, the heads being removed, they may be rolled up. They are made perfect cylinders, and therefore occupy less space for the same capacity than ordinary barrels.—Dress.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

The "advance of civilization" westward has been an excellent thing for the Winchester rifle trade.

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

F. J. CHENEY & CO., Props., Toledo, O.
Sold by druggists, price 75c.

"I don't see," said Aunt Sary, "why they should want a divorce; their tempers are entirely combatible."

A MYSTERY.

How the human system ever recovers from the bad effects of the nauseous medicines often literally poured into it for the suppositive relief of dyspepsia, liver complaint, constipation, rheumatism and other ailments, is a mystery. The mischief done by bad medicines is scarcely less than that caused by disease. If they who are weak, bilious, dyspeptic, constipated or rheumatic, would oftener be guided by the experience of invalids who have thoroughly tested Hostetter's Stomach Bitters, they would in every instance obtain the speediest aid derivable from rational medication. This medicine is a searching and at the same time a thoroughly safe remedy, derived from vegetable sources, and possessing, in consequence of its basis of pure spirits, properties as a medicinal stimulant not to be found in the fiery local bitters and stimulants often resorted to by the debilitated, dyspeptic and languid.

"Miss Antique is aging very rapidly." "You must be wrong. She is only a year older now than she was five years ago. She says so herself."

The Electric Alarm Clock will ring until you get up and stop it. People who over-sleep should have one. For particulars address Imperial Jewelry Co., 26 O'Farrell St., San Francisco.

Use Enameline Stove Polish; no dust, no smell

THREE NOTABLE MEN.

One of Whom has Recently Passed Away.

BRIEF SKETCHES OF THEIR LIVES.

The Reformer of Japan.—Arrival of the Chief of the Capuchins.

Father Bernard d'Andermott, the present Superior-General of the order of Capuchin monks, arrived in New York several days ago. The head of the other has never before visited the United States.

The Superior-General will remain in this country several months. He will visit every Capuchin monastery here, and will preside at the chapter of the order to be held in Detroit in September. It is expected that several important changes will be made by him.

Father Bernard was born in Switzerland in 1837. He joined the Capuchin

Father Bernard d'Andermott.

order in 1855, and was ordained in 1860. He did missionary work in Switzerland, and occupied many important positions before he was elected superior-general of the order on May 9, 1884. For the last two years he has been visiting Capuchin monasteries in all parts of the world. He spent a year in Africa, and was several months in the Orient. He had completed the visitation of the French and English houses when he sailed on the Gallia for this country.

Ja Ja is dead. He was once the chief of Opobo was Ja Ja, but he was deposed by the English government some years ago. His case attracted a good deal of attention in the house of commons and in the English press. The work of deportation from Opobo was intrusted to H. H. Johnson. Ja Ja, he said, was a runaway slave from Bonny, who found a refuge and a stronghold in the marshes of the lower Opobo river, and became the head and forefront of the middlemen, the champion of the reactionaries. He identified himself with the last rec il of fetishism before the spread of Christianity and clean living. He alone, among all the Oil River chiefs, actually opposed the introduction of Christianity into his country, and he actually forbade, and forcibly prevented, the landing of agents of the Church Missionary and other evan-

Prince Sanjo.

gelizing societies in Opobo. So soon as he departed, these agents were (according to Mr. Johnson) well received, and the opposition of the middlemen to the exploration and exposition of the interior entirely and quietly ceased. According to his friends and champions, however, Ja Ja was everything that could well be desired. They said he was arrested because he would not allow the traders in oil to break a treaty which England had concluded with him. He refused to separate his interests from those of his subjects and insisted upon the maintenance of the agreement which had been entered into. For this he was punished by fine and deposition. The cry of "Justice for Ja Ja!" was vigorously raised, but it fell on deaf ears. He was carried first to Accra, on the Gold coast, and finally to the island of Teneriffe, where he recently died.

Prince Sanjo, one of the brainiest men Japan ever knew, has recently finished his highly commendable career on the little island and gone to the land of his gods. His funeral was one of

the most impressive that has ever taken place in Tokio.

Prince Sanjo was the reformer of Japan. It is to him that is due most of the credit for the modern civilization that exists in Japan to-day.

He was born in 1837, and grew up during the revolution against the dictatorship of the Tycoon. This difficulty was settled by a treaty with the American representative, Commodore Perry, in 1855.

In 1853 Prince Sanjo was one of those who carried negotiations from the Mikado to the Tycoon and was put in the awkward position of being condemned to death, with the Mikado's consent, when the other policy prevailed. He escaped, however, and did not appear again until the present Mikado ascended the throne. When the progressive party was successful, in 1889, and the Tycoon deposed, Sanjo came out in strong effect. The government was revised and modern education and trade ideas adopted. For a long time he was Governor of an important province and commander of the Imperial Guard. Shortly before his retirement Premier Sanjo was Prime Minister to the Mikado, and even after his honorable retirement he was a confidential adviser. Just before his death the Mikado gave him the highest titles attainable by Japanese subjects.

A DEADLY INFLUENCE.

Mesmerism Described as a Most Dangerous Science.

Talking of mesmerism (says a recent writer), I know of a case—and I can vouch for its truth—that borders on the marvelous. It occurred in the gardens of Count Pallavicini, near Rome, and the actors were a French journalist and an individual named Salvator. They were the principals in a duel. The quarrel was of long standing, Salvator having killed a friend of the journalist. The men fought with rapiers, and were both experts. I will quote the journalist's own words: "The moment I faced Salvator and crossed swords with him he gazed steadily into my eyes. I do not know what possessed me, but the idea that the man was trying to mesmerize me flashed across my mind, and, as you may imagine, made me feel rather uncomfortable.

"I was, at the time, considered one of the best fencers in France, and, relying on my skill, took matters rather easy. I am unable to describe the peculiar feeling that had taken possession of me. Although possessed of an extra degree of strength, I felt my arm growing more tired at every moment. Again I looked into my opponent's face; his coal-black eyes were still glaring at me. Then I knew that he had formed the diabolical plan of deadening my muscles by his devilish power, in order to assassinate me.

"I roused all my latent energies, knowing that I was fighting for my life. I fought as I had never fought before. Three times in as many seconds I touched him, but all this time his power was overcoming me. I could feel a heavy weight pressing on my chest; my wrist was almost powerless. With one despairing effort I threw myself on him, and then I knew no more."

His opponent's weapon had pierced his chest, a wound from which he however recovered. Salvator met a well-deserved fate in a gambling den in Florence, being brained with a chair.

Some Novel Things.

An Amager farmer has been arrested and fined for assault upon the Danish army. While entering town with a load of cabbage the war horse of the artillery took fright at his outfit and broke up the whole army.

The old-fashioned Russian wagon driver who carried passengers and freight long distances in his rude, self-contrived vehicle is still competing successfully with the steam horse in the land of the white czar.

The largest grapevine in the world is that growing at Oys Portugal, which has been bearing since 1802. Its maximum yield was in 1884, in which year it produced a sufficient quantity of grapes to make 165 gallons of wine.

A fly caused the death of a man at Vienna. He was walking the street when the insect suddenly took a position on his forehead. As soon as it left a swelling appeared and the man soon afterward died of blood poisoning.

Divers in the clear waters of the tropical seas find that fish of different colors when frightened do not all dart in the same direction, but that each different kind takes shelter in that portion of the submarine growth nearest in color to that of the fish.

Ohio claims to have the largest oil well in this country if not in the world It is located near North Baltimore, in Hancock county, and if permitted to flow its full capacity would more than fill two of the 35,000-barrel tanks every twenty four hours.

The Salton Sea has now received its vindication and letters patent. The sea serpent has visited its waters and disported therein. The creature is described as being about fifty feet in length with the conventional yellow scales, yawning mouth and great flippers.

The biggest doctor's fee of the age is the 2,000,000 marks paid by Herr von Donner, a Hamburg merchant, for Dr. Michelsen's cure of his wife. The money wasn't given to the famous Wiesbaden practitioner, however, but, at his wish, to found a hospital in Hamburg.

Vergennes, Vt., is the third oldest city in the United States, having been chartered in 1788. Hartford and New Haven, Conn., were chartered in 1784. Vergennes is probably the smallest and most quiet city in the country, having a population of 1,573 and covering only 1,200 acres of ground.

Wild horses are sociable in character and protect themselves against carnivorous beasts by herding together in large numbers. In face of any great danger, such as storms and fires, they unite in still larger bodies, probably from a sentiment akin to the human one at similar crises.

The hide of a former Cincinnati elephant, Old Chief, which was shot in February, has been stuffed, and with the mounted skeleton of the brute will be housed in a special building at the Cincinnati Zoological Garden. The hide weighs 1,100 pounds, and it has been stuffed with oakum.

The Great Russian Railway.

Work on the Trans-Caucasian railroad is progressing satisfactorily. The contingent of laborers consists of 2,500 soldiers, 900 convicts at hard labor, 300 Siberian exiles, 400 freemen, and 1,700 Chinamen and Coreans. Besides this 125 Russians and 300 Chinamen are employed in the stone works. This army of laborers does not include the higher officials, such as engineers, architects, inspectors, etc.

HOSPITAL HORRORS.

Stories of Surgical Recklessness Told in a Book.

WHAT AN OBSERVING ENGLISHMAN SAYS.

Terrible Things That are Done in the Teaching Hospitals of London.

At second and third hand we may imagine our author to have gathered the account he gives us of the terrible things that are done in the teaching hospitals. Here are two of his illustrations of the treatment of moribund patients. A nurse calls a house surgeon:

"'Sister says she thinks he is dying fast, and are you going to operate?' 'Going to operate? Rather think I was. Don't you know, nurse, this is my first capital operation? Do you think I am going to lose the chance?' 'Then, sir, sister told me to ask you if I had better let the chaplain know.' 'Chaplain be hanged!' he cried. 'Certainly not! It would only depress the poor devil. No, no! Plenty of brandy! Keep him up! Cheer him all you can; tell him it is only a trifling, every day sort of affair, and he will be well in a jiffy. You may send for his wife.' 'Oh, sir, she has been waiting about the hospital all day.' 'All right, then! Now, gentlemen, to business. You shall see me do something pretty.' The bell rang for the operation to assemble the students, some of whom said 'it was a beastly shame to torture a poor wretch who hadn't a chance of getting over it.' 'Ah, you won't talk like that when you are house surgeon (H. S. they always termed it) yourself. You will be glad to operate on your father, if you can't get anybody else. Besides, what are hospitals for, if not to qualify us for our work? If people don't want us to learn all we can from them, why don't they stay at home and die? The parish doctor won't disturb their latter moments with operations.'"

And again:

"Here is a middle aged woman, evidently having but a short time to live, yet this afternoon Dr. Wilson says his chief proposes to perform upon her a capital operation. He has not the least hope it can save her life, but the chance of performing such an operation arises but seldom, and it is but just and kind to the house surgeon, who wants all the practical work he can get, to let him assist. So the woman and her friends are duly pressed to consent that this—'the only means of saving her life'—shall forthwith be done. To this end all the nurses are instructed to urge her. At last she submits. She will be carried to the operating theatre, and this chance of instruction will fall to Dr. Wilson's hands; for as soon as the chloroform has effected its work he will take the place of the chief and 'do his first strangulated hernia.'"

Among the cases of heartless experimenting we have the following:

"'Would you like to do a gastrotomy? You ought to do one or two before you leave; it's a very pretty operation. I never knew a case survive more than a week; but there's nothing like trying, and if you pick out a case that must die any way you are welcome to use any of my cases that we can get to consent, and with Sister Agnes' consent—sister is capital at getting consent in anything, aren't you, sister?—it can generally be managed.' * * * 'I wish to investigate,' said one of his dressers, 'the presence of lithic acid in the blood of rheumatic patients. May I blister one or two of your patients, Mr. Crowe?' 'Oh, certainly,' said the obliging physiologist; 'only you must take precautions to let he patient imagine you are doing it for his benefit, and be careful the nurses don't see what you are about—nurses are getting 'cute nowadays. With these provisos, you are free to roam at large, my friend, over the bodies of any of my clinics.'"

Almost inconceivable cases of carelessness and recklessness are charged against the operators.

"Visions of similar cases crowded in upon the good Sister's recollections—of eviscerated creatures in which no tumor was discovered to remove; of cases where, on the post mortem table, sponges, and even instruments had been discovered carelessly sewn up in the patients after operation, and had caused their deaths. * * * One day an old pavior smashed his hand. The surgeons at St. Bernard wanted to remove three fingers. Not before he had been to see Sister Agnes, he thought. Sister Agnes went in for conservative surgery, and told him to refuse his consent. How often had she known a simple method of dressing to save the digits in such a case. In three months the man had the complete use of his hand as before the accident, but that didn't console the house surgeon, whose fingers had itched to make a neat little job of it."—London Spectator Book Review.

Oyster Shells in Medicine.

Dr. Peter Hood, of London, in a communication to The Lancet, calls attention to an article published by him in the same journal some twenty years ago, on the value of calcium carbonate in the form of calcined oyster shells, as the means of arresting the growth of cancerous tumors. In the case which he then reported, that of a lady nearly 80 years old, the growth sloughed away and left a healthy surface after a course of the remedy in question, as much as would lie on a shilling being taken once or twice a day in a little warm water or tea. He now reports another case of schirrus of the breast, in the wife of a physician, in which the treatment was followed by an arrest of the growth and a cessation of the pain, the improvement having now lasted for years, and no excrudescence having thus far occurred. Dr. Hood says that the remedy can do no harm, and that the prima facie evidence in its favor is certainly stronger than that on which rests the use of chian turpentine, so eagerly resorted to by the profession. He would restrict the trials to well marked cases of schirrus, and no benefit should be looked for in less than three months.—New York Tribune.

Quietness of Italian Resorts.

The Italians, as a class, are most polite and good natured. They are very curious, but their curiosity is never annoying. I do not think there is any country on the continent where the visiting royalties could be as free as they are here at San Remo. When the young princesses here go out to walk they are never followed about, nor are they ever stared at by even the peasants. They look at them with kindly interest and politely touch their hats, but they are never obtrusive. The watering place manners of England will bear no comparison with the quietness and gentleness of the people in the neighborhood of Italian resorts. The royal princesses of England cannot visit any of the sea places of England and attempt to walk in public without being followed by such a mob as to force them at once into retirement.—T. C. Crawford in New York World.

Cook oatmeal in a double boiler or in a covered pail set in a kettle of water. Be sure to salt it.

SOME CURIOUS TABLE MANNERS.

The Good Old Days When Knives and Forks Were Scarce—The Saltcellar.

It was late in the Fourteenth century when the first evidences of art in the shape of silver cups were noticeable on the buffet. The dishes were made of pewter or wood and spoons of bone, wood or silver. Knives were rare, and on that account guests invited to feasts carried their own knives. Forks came in general use still later, and for long years after their introduction they were considered ridiculous affectation and foppery, and not nearly so convenient as one's own fingers. The lord and his lady dipped their fingers into the same plate and sipped their wine from the same cup. Even the queenly Elizabeth, with all her elaborate ideas of etiquette, was content to carry her food to her mouth with her fingers, and at first despised the newly invented forks as unseemly and awkward.

Very gradually the dining hall grew in comfort and splendor. Dishes of gold and silver were made, and so eager were the nobles for them that they would sacrifice anything to possess them. The saltcellar was for a long time the article of highest importance on the board. It was a great affair, and it stood directly in the center of the table; it was the dividing line; the nobles were seated above the salt, the commoners below; hence grew the proverb, "Below the salt." The passing of salt was a ceremonious custom, the guest throwing a pinch over his left shoulder and murmuring a blessing.

The saltcellars were of the most curious device. Sometimes they represented huge animals, sometimes a great, full blown flower, or a long, slender stem, and again they were in shape of a chariot, mounted on four wheels, on which they were easily run down the table.

The first glass cups came from Venice during the Sixteenth century, and from that time on society began to lose many of its primitive ways, and became, in a sense, more refined.

Henry VIII was born with luxurious tastes. He had his banquet chairs supplied with velvet cushions, and about this time the parlor or "talking room," as it was called, was introduced, and here it was that the dames took refuge when the dinner had advanced beyond prudent limits, as it invariably did before the finish.

The cook that presided over the kitchen in those days was not the counterpart of our Nineteenth century Bridget, but he was an artist, and generally a man of quality. The ladies of the household, even those of noble birth, attended to many domestic duties, making the bread, preserving the fruits, while to understand the proper use of starch was considered a great accomplishment.—Tillie May Forney in Woman.

The Fat Man Trick.

Stage tricks and illusions have an undying charm even when the veil of mystery is raised. It was the celebrated family of Ravels that invented the fat man trick, and now we have an exposition of the manner in which that seeming marvel was accomplished. One of the actors in the pantomime sits at a table and ravenously eats dish after dish of food that a servant brings on to him. Presently the man, who like most ravenous eaters was rather thin and scrawny, begins to grow plump. His clothes fit him snugly. His waistcoat steadily swells out under the very eyes of the audience.

All the while he is eating like a sausage machine. In a few minutes he has grown to be a giant eight or nine feet tall, and with the proportions of an inflated balloon. The food eaten is all "property food," made of tissue paper, that the actor chews up into little balls and takes out of his mouth when occasion offers. His clothes are all of rubber and made to fit air tight around the wrists and neck. In sitting down he puts the heel of one boot over a little trap in the stage. An assistant below immediately couples a tube running from a bellows to a hole in the boot heel. Then he blows him up. By the time that the suit has grown so big that the inhabitant has to have a lantern to move around in it, the wind supply is cut off and the boot heel is plugged up. Then, by an ingenious arrangement of springs under the actor's feet the height is acquired.—Detroit Free Press.

The Legion's Iron Discipline.

Many desertions continue to take place from the French army in Tonkin. All the deserters who are recaptured are shot without compunction. Lately eighteen soldiers of the Foreign legion ran away from Southay with a lot of arms and accouterments. They were caught in the mountain defiles after a chase which lasted a considerable time, and the eighteen were condemned to be shot at once. It is said that when the men were drawn up in single file in front of their graves the adjutant who was in charge of the firing party cried out with an oath, on seeing some of the doomed men fall slightly out of their alignment, "Can't you fellows keep your dressing better than that? Eyes right! Dress!" No sooner was the command given than the prisoners with parade like punctuality straightened themselves up and obeyed as if they were on the drill ground or at a review. Then the fatal command was given, and the eighteen men went down before the terrible volley. The adjutant's words—if they were ever uttered, and it is probable that they were—show that an iron discipline still prevails in the French Foreign legion.—London Telegraph.

Watering the Bivalves.

"Always have your oysters opened while you wait," said a Brooklyn dealer. "Why? Because, although you pay five cents a quart more for them, you will save money. It is the custom of oyster dealers who open oysters the night before they are sold to throw them into water. An oyster will absorb about one-third its weight in water, and so the purchaser pays one-third of his money for water, which he can add to the oysters himself if he wants his bivalves watered."—New York Evening Sun.

Utilizing Apple Pomace.

Apple pomace was once thrown away at all the great cider mills, as it was thought to possess no value as food or manure. It is now sold to be used for both purposes. Not a few dairymen pay good prices for it to feed to milk cows.—Chicago Times.

GRASSHOPPER TELEGRAPH.

Sending Messages From a Moving Train.

THE ADVANTAGES OF THE NEW SYSTEM.

How an Expensive Accident Could Have Been Avoided.

A reporter was comfortably seated in the smoking car of an afternoon train on the Lehigh Valley road, when his attention was attracted by a peculiar sound proceeding from one corner of the car. It was interrupted at irregular short intervals, and had the sound been metallic it would undoubtedly have been recognized as the "click" of a telegraph instrument. But it was not metallic; it was more like a mosquito's "ping," emphasized and cut up into short fragments.

Upon looking around for the origin of this peculiar sound the reporter noticed a young man occupying a back seat. Around his head passed a broad band which fastened a peculiar black affair against his ear. A moment later the reporter was seated beside him and learning about "telegraphing by induction."

The operator held on his lap a board about three feet long and two and a half feet wide. At one end of it was a pad of message blanks. Near the center of the board was the key, and on the right was the "induction coil" with a steel case. When the reporter sat down, the operator was sending a message, and the vibrations of the armature were what caused the sound that had first attracted attention.

"Why does your instrument sound so different from other ones?" the reporter asked when the message was ended."

"Oh, we make it sound that way so that the office operator can distinguish it from the regular line. We can, by changing the sounder, make it any note that we please, but this is found very satisfactory."

"Where is your line? Under the cars?"

"Oh, no. That's it, out on those poles, beside the track."

"But how do you make connections?"

"We don't. That is, no direct connection. We telegraph by induction. This," placing his hand on a box about the size of an ordinary valise, "is our battery. We send a current through the tin roof of the car, and down to the ground through the axle box and wheels. Now, there is also a current passing along the line on the poles. The presence of one of these currents affects the other, and when, by using the key, I break and again make the current through the car roof, it produces a corresponding effect upon the line current, and that effect is felt in the office. Now, some people can't understand why this should work at such a great distance from the line when the currents through the wires on the same pole do not affect each other in the same way. But, I reply, they do affect each other to a certain degree. Often, when you are using the telephone, you can hear the conversation of persons using a wire near yours. The only reason that it works better with us is that we use a different kind of electricity—a stronger current, if you will—and our instruments are made especially to be influenced by the currents so affected. I can show you the difference by taking something entirely disconnected. Suppose you heat a quart of water to boiling point, you do not feel the heat from it until your hand comes almost in contact with it or the vessel that contains it. Now heat a piece of iron that hot and you can feel the heat from it for some distance. Our current differs from the ordinary current in a similar way."

"What is the affair strapped to your ear?"

"That is my telephone. We have to use the telephone to receive the message, and I have it strapped in place so that both hands will be left free. Although our system has been working beautifully upon this road ever since last October, the company is constantly experimenting, in order to improve upon it if possible. Of course any one could see after a moment's thought how many advantages, both to the road and the passengers, arise from a system of telegraphy by means of which every two trains on a division of the road are in constant telegraphic communication with each other and with the train dispatcher. Why, just before our system was introduced on this road there was an accident on the Pennsylvania road that cost the company $25,000 and the lives of two employes. It resulted from the carelessness of a station operator, and could never have happened if both trains had been in communication with the dispatcher. Of course, too, this system obviates the great loss of time entailed upon the freight and gravel and construction trains by the old system.

"Then the advantages to the passengers are very great. Every trip numerous passengers send messages by me. Some of them are of such a nature that it would be quite a serious matter for the sender to have to wait until the next stop to send them. Of course, on some of the fast trains, that do not make any stop at all for hours, the importance is increased. Passengers may send messages from the car to any point reached by the Western Union, and can similarly receive messages from any such point. A lady was taken sick on this train going out to Easton the other day. I used my instrument, and when the train stopped there was an ambulance and a physician waiting for her. We had hardly pulled out of Newark yesterday when the conductor received a message from a lady who had got off there, asking him to look out for her satchel, which she had forgotten to take with her."—New York Sun.

Progress of Yucatan.

An out of the way quarter of the world is the Mexican state of Yucatan, to most travelers, but it appears to have caught the spirit of progress. A recent traveler writes that taxable property of the state is now valued at $3,657,683. The public schools supported by the state number 202, and are attended by upward of 11,000 pupils. Colleges are located at Merida for the study of law and medicine, and Valladolid has an institute, a conservatory of music, and academies. The postal service of the country is good, and telegraph and telephone offices are being rapidly multiplied.—New Orleans Times-Democrat.

Legends of Serpent Women.

In the early Egyptian hieroglyphics we find representations of snakes' bodies crowned by female heads; and, indeed, this class of serpents seems to have proved equally attractive to all nations, an evidence of which subtle fascination is that the legends of the "snake maidens" still live in the nursery tales of today, perennially young and beautiful as though their birth were not wrapped in the mysteries of a prehistoric age. Of this family came Larnia, the witch of Crete, whose woman's heart rendered her doubly sensitive to the degradation she suffered during her incarceration within her scaly prison; nor did she, on renewing the pristine glory of her human form, completely lose the essence of her serpent nature. Harmonia, the wife of Cadmus, to be a companion in her husband's misfortunes, also took upon herself the serpent's shape, but being devoid of evil intent, never, it is said, shunned, but rather sought man's presence.

Perhaps it is but another form of the classic Harmonia which has become familiar to us under the name of the fairy Gentilla, who, in an adder's shape, sought refuge with Prince Leander from the vengeance of the irate gardeners, but at the end of several days dropped her scaly mantle, and, arrayed in supernatural charms, munificently rewarded her protector. In some of the later accounts of Melusina she is cited as a member of this sisterhood. Jean D'Arras represents her as a serpent "enameled blue and white;" thus also did she present herself to the commander of Lusignan, a fortress which she erected in the early days of her wedded happiness. If there be any who wonder that this union of serpent and woman should have proved attractive to our ancestors, might not the sinuous grace and enigmatical character of our own Elsie Venner plead eloquently for the charms of her myth born sisters?—North American Review.

Colors of the Alpine Sky.

When the Alpine sun is setting, or, better still, some time after it has set, leaving the limbs and shoulders of the mountains in shadow, while their snowy crests are bathed by the retreating light, the snow glows with a beauty and solemnity hardly equaled by any other natural phenomenon. So, also, when first illumined by the rays of the unrisen sun, the mountain heads, under favorable atmospheric conditions, shine like rubies. And all this splendor is evoked by the simple mechanism of minute particles, themselves without color, suspended in the air. Those who referred the extraordinary succession of atmospheric glows, witnessed some years ago, to a vast and violent discharge of volcanic ashes, were dealing with "a true cause." The fine floating residue of such ashes would undoubtedly be able to produce the effects ascribed to it. Still the mechanism to produce the morning and evening red, though of variable efficiency, is always present in the atmosphere. I have seen displays, equal in magnificence to the finest of those above referred to, when when there was no special volcanic outburst to which they could be referred. It was the long continued repetition of the glows which rendered the volcanic theory highly probable.—Professor John Tyndall in The Forum.

The American Club in London.

Among the many burning questions which yet remain to be settled between the United States and Great Britain, none have caused more dissatisfaction in social circles on the other side of the Atlantic than the lack of reciprocity shown by us in the matter of club hospitality. To the English gentleman every club in New York is open; but the citizen of the United States, on arrival in London, finds the portals of the leading clubs in Pall Mall sealed doors. Distinguished men, it is true, are made honorary members of the Athenæum; but it is not every one who can find exuberant joviality within its walls. Our countrymen who have resided in America, struck by the very one sided nature of the club treaty existing between the two countries, have recently started a fresh addition to the many London clubs. The American club aims at affording a meeting place in London for all men interested in the western hemisphere. Here members of the Pacific club at San Francisco, of the Manitoba club at Winnipeg, of the Cercle des Etrangers at Rio, the Knickerbocker at New York and the Turf in Piccadilly meet on terms of perfect equality.—St. James' Gazette.

Preservation of Negatives.

The best way to hold a person or keep track of him is in the possession of a good negative. Or her would do better, as there are more illustrations of the truth of this remark in the case of women. I have had a great deal of experience in this line and have never known it to fail, and for that reason I am always very particular to preserve negatives. They are better than bail bonds. I have negatives of a number of people now who have left the city and who want their friends to forget them, and to that end have very carefully avoided allowing those friends to know where they are or which way they had gone. Yet I hear from them frequently by means of orders for pictures printed off of such and such a negative. I have know of people missing for months, and even for years, and whose friends had given up the search for them, to write to their photographers for pictures off of an old negative.—Photographer in Globe-Democrat.

The Eskimo's Dogs.

Next to his children, the most important members of an Eskimo's household are his dogs, they being essential to his hunting in summer and his traveling in winter. They are very wild, wolfish animals, only half domesticated, and possessing marvelous digestive powers. A pup that Mr. Ashe was rearing, being left to amuse himself in the house one day, did so, very effectually, by devouring stockings, gloves, the greater part of a top boot, and many smaller articles of a similar nature, none of which, apparently, disagreed with him.—J. Macdonald Oxley in American Magazine.

Strictly Anti-Sedentary.

Friend (to congressman's wife)—Is your husband a man of sedentary habits?

Wife—Of course not. He hasn't touched a drop in fifteen years.

IN A SAFETY VAULT.

The Place Where People Keep Their Valuables.

BUILT OF STEEL, IRON AND COPPER.

Guarding Against Fire and Burglars.—Complicated Locks.

What looks like the iron railed door of a cell may be seen just beyond the entrance to the Lincoln bank. It is the passage way to the vault for money and valuables. The cell door is always locked, and in the daytime a man is always in the vault. Besides the open iron railing door, there is a set of others of steel plates, which close in the passage way. The vault is lighted by gas, and except for a small desk, there is nothing to be seen in it besides steel and iron and copper. The floors and walls and ceiling are of steel four and a half inches thick. The vault is on the ground floor, and it is believed that if the building should fall or be burned down by fire, the vault room would remain unharmed and intact. Debris as thick as the layers at Pompeii might fall upon it, but the vault would still be there all right. And the bank people think that with a little defense by guns the place would be mob proof, too.

The room is not much more than twenty feet square, and a tall man can touch its ceiling with his hand. There are 2,500 large and small safes built in its walls. They rent for from $8 to $1,000 a year. People keep bonds, stocks, mortgages, deeds, other valuable papers and jewels and money in them. When a man calls to cut off his coupons or look at his papers, he is identified by the keeper of the vault, who stands by him while he unlocks his compartment. The man takes out the tin box, and is ushered into one of a series of little rooms off the vault. They are about as big as a Turkish bath disrobing closet, and contain a desk and one or more chairs. The minute of the arrival of the man, his name, the box number he opened, and a few other things are recorded in a book kept by the vault keeper. The little closet he is shown to is examined to see that there is nothing in it except the desk and writing materials and chairs. When the man has clipped his coupons and brings back his tin box to put it in his safe, the time of his departure is recorded, and the closet he occupied is inspected to see that he left nothing valuable behind.

Some of the rich men come to look at their papers only once in a month or two. Others go there once in the morning, when they are going down town to their offices, and then stop there again in the afternoon, when returning home. These are the men who leave there whatever extra actual money they have from day to day. But gold and silver and treasury notes are not largely left in the vault. The contents of the boxes are chiefly the papers representing money. However, at the time of the Grant & Ward failure plenty of people got frightened and brought big rolls of bills from down town banks and stuffed them into their compartments. Lots of men who don't rent boxes permanently did hire them then for short periods.

Many of the safes are used by trustees of estates. These safes cannot be opened by one person. For as many trustees as there are there are as many keys, and whenever the safe has to be unlocked all the trustees have to come. Each key performs a different service in opening the lock. The keeper will insert his key, twist it and thus prepare the lock for the insertion of Trustee A's key. Trustee A's key is put in by him and turned, and this makes the lock ready for the key of Trustee B. At last the bolts are turned and the door may be opened. This mechanical device has to be resorted to in order that no single trustee may get access by himself alone to the papers of the estate.—New York Sun.

Hard Work in a Mail Car.

The German makes the best mail route agent, but you very seldom find an Irishman or American who will submit to the severe discipline that is necessary to perfect him in distributing. I have seen beginners, on the run from St. Louis, enter Kansas City with the blood streaming from their hands and the fingernails torn off. The injuries are regularly incurred in working the newspaper mail. The sacks become filled with all kinds of refuse from the floors over which they are dragged. After standing the motion of the cars for fifty miles the papers are frequently coated with particles of iron, steel, glass and splinters, and tear a man's hand to pieces as he dives blindly into the sack for the packages. A few days are always necessary to cure a novice of sore hands. The second day he is crippled, as his fingers are drawn up, and he cannot open his hands without the most excruciating pain.—St. Louis Globe-Democrat.

He Knew the Sex.

Wife—What do you mean by coming home at this time of night, George?

Husband—'S all your fault, my dear—hic—'s all your fault.

W. (with a dark frown)—All my fault, sir? All my fault?

H.—Yes. F'lers wanted me to stay longer. Wouldn't do it. Said a man with a wife 's pretty 'n amiable 's mine had no s'cuse for staying out any longer. That's reason why er I come home so soon.

W. (smiling)—Well, you're a great trial to me, George, but I suppose I'll have to forgive you.—Boston Courier.

The house at Appomattox, Va., in which General Lee surrendered to General Grant has been sold for $10,000.

EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.
FRIDAY, OCTOBER 30 .....1891.

Any one who has any doubt about the prosperity of the State will be set right by taking note of the pressure upon the railroads to haul our products to the East. Solid train loads of beans and raisins mean the incoming of a great deal of money into the State.

When Commisioner Geberding said in the Bankers' Convention that "immigration, irrigation and the Nicaragua canal" are the chief needs of California, and have not received the attention they deserve, he condensed much fact and good sense into small compass.

Much as we may dislike the Russian system of government, we must confess that at this juncture it is precisely the kind of power for the day, so far as the European situation is concerned. For that Russia is the great peace conservator of the times is undeniable. Alexander III. has foregone none of the ambition of his nation to extend the borders of its garment, but he is also a firm believer in the doctrine that to the Russian Czar God has committed the office of peacemaker in Europe. He can command or he can forbid war at this time, and either edict must be obeyed.

The encounter between Chilean and American sailors in the streets of Valparaiso, which resulted in the killing of three of the crew of the Baltimore, shows that the feeling against the United States is intense. It is not a new development, however, as the threat of bombarding some of our cities so freely made some years ago amply testifies. The Chileans are unfortunately troubled with the big head. Some of these days something will happen to them which will convince the most ignorant that Chile cannot run the universe.

A short time ago Mr. Herman Leibes of San Francisco returned from Europe and told a Chronicle reporter of the sufferings he had seen in famine-stricken Europe. He ascribed those sufferings as well as our own prosperity to the McKinley bill which he praised as the choicest blessing of Heaven. A few days after that Mr. Leibes was detected trying to defraud the government of $100,000 import duty on a large shipment of tobacco. Naturally as the McKinley bill made other importers pay a heavy duty which he could evade Mr. Leibes regarded it as an unmixed blessing.

The beekeepers have perceived the need of organization for the protection and promotion of their interests. Hence their convention held in Los Angeles last week. The honey product is one of much value in this state, and there are many persons interested in the industry of the bees. Southern California is the great honey-producing section, shipping each year at least four-fifths of the entire honey output of the state. Last year the two counties of Los Angeles and San Diego shipped more than 250 carloads of honey. These stand at the head of the list of honey-producing counties. The total honey product of the state last year was upwards of 300 carloads or more than 3,000 tons. This product represents a large sum of money. California is first among the honey-producing States.

While the second and third rate politicians are insisting that the free coinage question is not, and will not be the real issue in the near future, Henry Cabot Lodge, who forecasts with extreme caution, says in the Forum that "it will be the issue" in 1892. He holds that before the election of 1892 the Democracy will have formulated its tariff views in a platform which the Republicans will assail, putting the Democrats on the defensive. But the silver or money question, he holds, will thrust the tariff issue into the background because of the cry for cheaper money; because it has become a test question of a large number of voters of varied views and interests, and who are "discontented with existing social and financial conditions." The Alliance has declared, not uncertainly, upon the silver question, and the Republicun party, contending that the Alliance is an ally of its enemy, will contest with it openly. Finally, he thinks Congress will pass a free coinage act, but the President will certainly veto it. On that the two parties will go to the country, and free coinage will be the dominant issue, concludes Mr. Lodge.

Stone Coffins.

A discovery of great interest to archæologists has just been made at Malmesbury. In order to enlarge his premises, Mr. J. Moore, of the Bell hotel, has pulled down two adjoining cottages, and the laborers in the employ of the builders while excavating underneath the foundation discovered two stone coffins, the lid of each of which weighed from seven to nine hundred weight. In these were found from sixteen to seventeen perfect skeletons with remarkably fine sets of teeth, scarcely one being missing, although it is supposed the bodies must have been buried over a thousand years.

The dividing wall between the hotel and the cottages was six feet thick, and, on this being removed, underneath the center of it was found a shaft, 14 inches by twelve, beautifully walled up, leading, it is supposed, to a chamber or subterranean passage. We understand that the vicar, who is very interested in the discovery, has expressed his opinion that this is the site of the Malmesbury castle which was built by Roger, bishop of Salisbury, for the purpose of defending the abbey, and that it will help the Archæological society to trace a more correct history of the western part of that grand old building.

On the skeletons being found they were carefully collected by Mr. Moore, and the Rev. G. Windsor Tucker at once visited the spot and gave orders for a grave to be dug near the Russian gun in the churchyard for their interment. Subsequently more skeletons were found and a second grave had to be dug. The discovery altogether has excited great interest.—Wilts and Gloucester Standard.

Voyage of a Bottle.

A few weeks ago a bottle went ashore in Stage harbor, Chatham, near the old wharf, containing a business card of Mr. Ring, a wholesale jeweler, Detroit, Mich., with a statement, in pencil on the blank side, of disaster to the boat and probable loss of the crew, and signed by Mr. Ring, Mr. J. H. Howell of the Standard Oil company, Jersey City, was in the Chatham Monitor office, where the bottle was deposited, and as he was going direct to Detroit opened the bottle and took the card to Mr. Ring to see if there was any meaning in the writing. Mr. Ring was found to be still alive. He was slow to believe that this card came from Cape Cod until convinced that it was the truth.

Mr. Ring says that on the 25th of May he and others were out fishing on the Detroit river, and in a spirit of fun wrote the message, inclosed it in a bottle and cast it to the waves. To get to Chatham it had to travel the length of Lake Erie, over Niagara Falls, the whole length of Lake Ontario, down the St. Lawrence river, through the Gulf of St. Lawrence, into the Atlantic ocean and thence to Chatham, a distance of 2,500 miles, and all in less than sixty days.—New Bedford Mercury.

An Organ Grinder's Sparring Combination

An organ grinder who has been in this city for a month has a scheme which is making him a small fortune.

Instead of the customary one monkey this industrious son of Italy carries two. When he stops the ordinary tricks of climbing and begging are dispensed with, the monkeys are set to fighting and bets are made by the owner with any of the spectators who are so inclined as to which monkey will win.

The owner's bets are freely taken, and they rarely go against him. The result is that where, under the old method, he would probably receive a few nickels he now receives dollars.

A reporter watched the man with the monkeys for nearly an hour in front of the new city hall, where he was surrounded by a large crowd, who were freely contributing their quarters, halfs and dollars to the coffers of the musician.—San Francisco Chronicle.

May Yet Have a Monument.

Interest has recently been revived in the proposed Garfield monument, a fund for which was started in the fall of 1881, shortly after President Garfield's death. The fund was limited to dollar subscriptions, and 604 persons subscribed. Then the affair collapsed, as far as public interest was concerned, and Dec. 11, 1883, H. B. Duncan, treasurer of the fund, placed the $604 on deposit in the Wilmington Savings fund. The interest increments since that time have increased the principal to the sum of $837.05. There is talk now of making an effort to increase the fund to a limit sufficient to admit of the erection of a suitable statue of the dead president in one of the city's public parks.—Wilmington Every Evening.

What One Cow Did.

That a cow has a wonderful appetite when she gets into a neighbor's field was clearly shown in Indiana, where the injured owner proved in court that one ordinary brindle cow destroyed in one afternoon the following property: Two 4-year-old cherry trees, 7 apple trees, 5 pear trees, 1 plum tree, 100 heads of cabbage, 12 rows of beans 5 rods long, 1 row of beets 1¼ rods long, 50 to 150 sweet potato plants, 1 bed of onions, 3 grapevines and 14 blackberry bushes.—Boston News.

Green Soldiers on Sentry Duty.

Early one morning when in camp two Seventh regiment men had adjoining posts. Instead of walking in the same direction, as they should have done, they were plodding toward and from each other. Suddenly the sentry on post No. 5 bawled out as he saw some one approaching from post No. 6:

"Who comes there? Halt?"

The response was quickly given. "Get out, you darned idiot, I'm the sentinel." Then a whispered conversation was held, the result being that the matter was to go no further.—New York Herald.

Before You Tell a Secret.

If you are just on the point of making a confidence it is a good plan to pause before doing so to note the proportion between the times you have regretted giving a confidence and the times you have regretted withholding it. If after this you decide upon making your friend a confidant you must have weighty reasons for thinking him worthy of it.—Murray's Magazine.

The majority of people die sooner than they should. George E. Waring, Jr., says: "Disease is not a consequence of life; it is due to unnatural conditions of living—to neglect, abuse and want." And Dr. Stephen Smith says: "Man is born to health and longevity; disease is abnormal, and death, except from old age, is accidental, and both are preventable by human agencies."

The Bradlaugh Library.

Mr. Bradlaugh's daughter has published the priced catalogue of her late father's library, in the form of a substantial pamphlet. With a view to make it not merely a descriptive list of books but a memento of their original possessor, two photographic portraits are added, together with a fac similie signature. The books number in all 7,000 volumes, exclusive of pamphlets and blue books. They comprise, as his daughter says, only a few rare bindings and comparatively few costly first editions, but such as they were he valued them.

"Twice," she adds, "within recent years he thought he should be obliged to sell them to meet legal expenses. The first time it was to pay government costs during his parliamentary struggle; the second occasion was after the Peters and Kelly case. Each time the sale was happily averted, but the anticipation of the possibility brought extra lines to his face and bitterness to his heart. Last December, when he was feeling ill and in want of a rest and change, which he had no money to procure, I asked him: 'Why not sell two or three of the more valuable books? If you could get health with the money they would fetch, it would be well worth the exchange.'

"'Ah! my daughter,' he answered, with a sad half smile, 'when I have to part with my books'— I was anxious about him and ventured to press him further, but he only shook his head, saying, 'It is of no use arguing the matter.'"—London News.

Electricity and Ice Cream Poisoning.

A new experience of the danger of electricity has to be recorded. Dr. George S. Hull recently conducted some experiments with ice cream freezers, and he finds that galvanic action takes place, which results in the introduction of poisonous salts of copper and zinc into the cream. It appears that the freezer and the paddle are generally made of dissimilar metals, and the cream, especially if mixed with fruits or other acids or even saline substances, forms an electrotyte, which naturally completes the necessary conditions for galvanic action.

With galvanic action there is, of course, chemical action, resulting in the formation of salts of zinc and copper, which become mixed with the cream. Dr. Hull has probably discovered the cause of many mysterious cases of poisoning which have followed the consumption of ice cream. The remedy, however, seems very simple; if the freezer and the mixer were made of the same metal, no galvanic action could take place.—Iron.

The Longest Telegraphic Circuit.

Operator Dan Spencer, of the Buena Vista office of the Mexican Central railway, in this city, was called by the El Paso office, saying that the oldtime telegraph operators, who were having a reunion in Washington, would like to hear from their brethren and friends beyond the Rio Grande. El Paso signaled Spencer to call Kansas City, which he did, and Kansas City in turn told him to call Washington, who was evidently waiting, as the reply came instantly, when Spencer sent the following message:

"T. T. Eckert and the Old Timers: The railway operators and trainmen in the land of the Montezumas send warmest greetings."

The circuit was made by way of El Paso, Kansas City, Chicago, Buffalo and New York to Washington from this city, forming the longest overland circuit in the history of the telegraph.—Mexico Cor. St. Louis Globe-Democrat.

Hysteria and Hypnotism.

At the recent meeting of the French Society of Hypnology in Paris Dr. Berillon astonished his hearers by stating that almost all children could be hypnotized except those who were idiotic or hysterical. The idea that there is any connection between hysteria and hypnotism was strongly disputed. One physician alleged that he had hypnotized sixty-nine patients out of seventy-two under his care for various diseases in a hospital, and said it was absurd to believe that so large a proportion could be hysterical.—Exchange.

The Collection Bag.

In some churches years ago the collection was taken in small, close meshed nets with short handles. The latest thing made for this use, the collection bag, is a modification of the old fashioned net. It is a cone shaped plush bag seven inches in diameter and seven inches deep. It is secured to a hoop to which is attached a handle two or three feet long, as may be desired. The collection bag sells for four dollars. It has been in use about one year.—New York Sun.

Bad Boys and a Turtle.

The boys have been keeping the fire department busy of late. Some boys caught a turtle and poured oil over it, near the city's house for storing naphtha, on Dwight street, then set the shell on fire. The turtle ran up to the door of the house, and in an instant the whole interior was in flames. An alarm was sounded, and the department worked over two hours before the flames were subdued.—Holyoke (Mass.) Cor. Springfield Republican.

Nine persons of royal blood—one emperor, three kings, one queen, two heirs apparent, one emperor's brother and the wife of one heir presumptive (the Countess of Flanders)—slept on French soil on a recent night.

The first large quantity of American sponges ever sent to European markets was recently shipped from Philadelphia. The lot comprised 6,000 pounds each of two kinds of sponges from the Florida coast.

A Mile in Forty Seconds by Rail.

A mile in 39 4-5 seconds, or at the rate of over 90 miles an hour, is the fastest run ever made by a railroad train. This unparalleled feat has been accomplished on the Bound Brook railroad, between Neshaminy Falls and Langhorne, by engine No. 206, drawing two ordinary coaches and President McLeod's private car Reading, which is equal to two coaches in weight. Other miles were reeled off with speed as astonishing as this crack mile, and at the end of the "fly" the world's record was broken. From this out all records must date from the memorable Bound Brook flight. The fastest mile was scored in 39 4-5 seconds. The fastest five miles in 3m. 26 4-5s. The fastest ten miles in 7m. 12s., averaging 43 seconds per mile.—Philadelphia Record.

England and Her Great Men.

The Victorian exhibition of next winter in London is to contain 400 portraits of great men who have adorned the fifty-four years' reign of Queen Victoria. Four hundred great men is a goodly allowance for the reign of one sovereign. On looking through the list, however, the word greatness is seen to be used with a good deal of breadth. Still, they are all so far distinguished, Walter Besant writes, that their names will be known to everybody who visits the gallery and beholds their portraits.

"I wonder," he says, "how many of those who look at the catalogue will ask any awkward question—it will certainly not be asked by her majesty's advisers—as to the connection between honors and honor, between such distinction as can be conferred by rank and title and such as is gained by work and genius. For instance, the real glory of the reign will always be the immense advance of science. What honors have been granted to men of science? None. Charles Darwin, Faraday, Huxley, Tyndall, Stephenson, Herschel, Lyell, Murchison, Wheatstone—these men, in any other country which had such things to bestow, would have been made peers of that country. Here they are tossed a knighthood, in the same list with a country town mayor, a London sheriff or the clerk of a society. Again, there is literature.

"Next to the science of the reign, the literature will be its chief glory. What has been done for the authors, poets, historians, novelists of this reign? What distinctions, peerages, baronetcies or orders of Bath or Garter have been granted to Carlyle, Dickens, Thackeray, Browning, Swinburne, Grote, Hallam, Froude, George Eliot, Blackmore, Freeman, Green, Lecky—names taken at random from the glorious Victorian roll? None. Nay, since those men of science and literature have made distinction for themselves which no court could increase, what interest has ever been shown in them and in their work by the court? None. None whatever."

Willing to Fish Himself.

As the train was about pulling out of the Union depot Sunday a most excellent young man handed out slips bearing the title, "Where Shall We Go on Sunday?" A young fellow got one of these and was just entering the car when a lady stopped him.

"Have you read that slip?"

"Yes m."

"Well, what do you think of it?"

"It's all right, mam," said he, politely raising his hat.

"Then you're not going off with this excursion?"

"Most assuredly; yes'm."

"Why not remain at home and attend church?"

"I would be of no use, mam, I cannot sing."

"But others can."

"That's all right, mam? But I can't talk in meeting."

"Others can talk for you."

"And I can't pray"—

"Oh, we'll pray for you"—

"And I can fish—I'm a big success at that."

"Ah, let others do your fishing for you"—

"Ah, no mam! I'm no coward, whatever I am. I want nobody lost on my account. Therefore I'll go and do my own fishing. These poor, ignorant excursionists risk their souls for me? Not much, mam. Never!"

And he politely stepped on board and was gone.—Columbus Post.

A HANDSOME BOOK.

The new Fall and Winter Illustrated Catalogue of Weinstock, Lubin, & Co., Sacramento, California, which is sent free to any address, far surpasses all their previous price-lists in beauty, volume, and interesting matter. It contains one hundred and sixty pages, printed in the best style on fine paper, and with hundreds of beautiful illustrations, made especially for this edition, and showing accurately the host of new styles in goods for men, women, and children. Each page reveals some new surprise and shows how profitable is Mail Order Shopping.

The following will give some clue as to the general drift of the book:—

CLOAKS AND SUITS.
Seven pages of artistic drawings by first-class artists tell the story of the fall styles in ladies' and children's suits, wraps, and capes. We do not believe that ever before has any such collection of choice new goods been offered the people of the Pacific Coast at any such prices as will be found marked between the various illustrations.

MILLINERY.
Eighteen handsome illustrations of hats and bonnets after Eastern and Parisian fashions are shown, besides liberal representations of birds and feathers, untrimmed shapes, baby caps, etc. It is worth the trouble of sending for the catalogue, if for nothing else than to see the new fashions in this most changeable of all lines of wearing apparel.

FANCY GOODS.
Twenty-five pages are devoted to underwear, neckwear, ribbons, purses, and countless other accessories of the wardrobe and toilet of the modern maid and maiden.

WOOLENS, SILKS, COTTONS.
These, too, are represented in great assortments; but of nearly every thing we in addition send samples if asked for. Blankets, table linens, towels, etc., are also described on these pages.

MEN'S GOODS.
The men folks have not been forgotten. A large part of the book is devoted to the prices and descriptions of the new things for them. The great $3.50 pants, the $10 and $15 business suits, the 50c shirt, and many other specialties, are described at length. Telling values are also offered in soft and stiff felt hats, underwear, neckwear, hosiery, etc.

SHOES.
For men, women and children, and for people who want coarse, stout goods, medium goods, or fine goods, but in every case the very best value possible for the money.

TOILET AND HOUSEHOLD SUPPLIES.
Many pages are devoted to the thousand and one things in "Notions," Stationery, Smokers' Articles, Soaps, Perfumes, Embroidery Materials, Zephyrs, Carpets, Curtains, Rugs, Window Poles, Window shades, etc.

SILVERWARE AND JEWELRY.
Twelve pages tell the story of new Jewelry and Silverware. Watches in nickel, silver, gold-filled, and solid gold are also fully described and illustrated.

BOOKS.
Brief but accurate descriptions are given of hundreds of new books for adults and children. Also of bibles, dictionaries, albums, scrap and autograph albums, Christmas cards, art booklets, etc. The prices will be apt to be a revelation to those who have been buying books elsewhere.

TOYS.
Under this head are a dozen or more of as attractive pages as we could devise. In these pages they form a book which the children will delight to look over by the hour. This year a buyer went to Europe for us to purchase many of our toys, so that nearly every thing in these pages will be found new and fresh.

AS A WHOLE.
The book is nearly 10x12 inches in size, one hundred and sixty pages, beautiful cover and gives full directions, so that even a child may order whatever it fancies.

The book is sent free, on application, to any address, and is valuable and interesting to have whether one cares to use it in buying goods or not.

PROBATE NOTICE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the Estate of John A. Hannah deceased.

Notice for publication of time appointed for probate of will.

Notice is hereby given that Saturday, the 14th day of November, A. D. 1891, at 10 o'clock a. m. of said day, and the Court-room of said Court, at the town of Independence in the County of Inyo, State of California have been appointed as the time and place for proving the will of said John A. Hannah, deceased, and for hearing the application of W. L. Hacker for the issuance to him of letters of Administration with the will annexed thereon.

J. N. YANDELL, Clerk.

P. W. FORBES, Attorney for Petitioner.
Dated October 25th, 1891.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo, Inyo county, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 21st day of August, 1891, an assessment (No. 14) of Ten (50) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the company, 137 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 5th day of October 1891, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 23rd day of October, 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 137 Montgomery street, San Francisco, California.

DESERT LAND, FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL., Sept. 3d, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, Cal., intends to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M. before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

NOTCE TO CREDITORS.

Estate of FRANCISCO PADERES, Deceased.

Notice is hereby given by the undersigned, Administratrix of the estate of the said deceased to the Creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four (4) months after the first publication of this notice, to the said Administratrix, at the law office of Mack & Laird, in Independence, Cal., the same being her place for the transaction of the business of said estate in the county of Inyo State of California.

YGNACIA ABE HUCO,
Administratrix of the estate of Francisco Paderes, deceased.

Dated at Independence, Cal., July 29th, 1891
Mack & Laird, Attorneys for Estate, Independence Cal.

NOTICE TO CREDITORS.

Estate of PAULINO PELLEGRINY deceased

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of Paulino Pellegriny, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator, at his residence, in the town of Independence, County of Inyo, the same being the place for the transaction of the business of said estate in the county of Inyo.

Dated July 24th, 1891.

WM. F. MATLACK,
Administrator of said Estate.

ALIAS SUMMONS.

IDA C. DECKER, Plaintiff, vs. STEPHEN DECKER, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Stephen Decker, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony heretofore and now existing between the Plaintiff and Defendant; that plaintiff be allowed and decreed to resume her former name of Ida C. Adams, and for general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 17th day of June, A. D. 1891.

[SEAL.] J. N. YANDELL, Clerk.
MACK & LAIRD, Attorneys for Plaintiff.

COURT NOTES.

Geo. M. Gill, Superior Judge.

TUESDAY, October 27, 1891.

People vs. L. Baxter—Filed petition for writ of habeas corpus. Writ granted, returnable October 28 at 11 o'clock a. m.

WEDNESDAY, October 28, 1891.

People vs. L. Baxter—Entered order of habeas corpus.

Estate of Francisco Paderes, deceased—Filed order appointing appraisers. Entered same. Issued inventory and appraisement.

Estate of John A. Hannah, deceased—Filed order extending time for giving notice of the time appointed for hearing petition for probate of will.

People vs. S. P. Smith—Filed stipulation continuing time of arraignment.

Mead's Mojave freight team went south Wednesday.

Mr. and Mrs. J. C. Anton of Keeler visited Independence last Tuesday.

P. H. Mack Esq., started for the Darwin country yesterday. He will return next Monday.

Now that the Judge and Attorneys have all got home again there is a revival of court business.

P. W. Forbes has been at Bishop during the week on business connected with the District Attorney's office.

Judge Gill and family and Frank Densmore Esq. arrived home from San Francisco last Monday.

S. P. Roberts of Pine Mountain was in Independence yesterday to prove up on his land claim at Big Pine. J. B. Steward and Bob Blake accompanied him.

Joshua Hendy, the well known manufacturer of mining machinery, died in San Francisco on Wednesday of last week aged 74 years.

W. J. Fitzgerald, who taught the last term of school at Independence, writes that he has accepted a position as teacher in one of the largest schools in Los Angeles.

S. P. McKnight C. E. arrived from Bishop yesterday and went over to the Eastside canal to do some surveying there. He expects to be engaged there about three weeks.

A petition for a writ of habeas corpus in favor of Lem Baxter was presented in the Superior Court on Wednesday. The Judge took the matter under advisement until next Tuesday.

Sunol is queen of the turf. Last week she beat Maud S. and set the mark at 2:08¼. The mother of Sunol is a half sister to Arbenton, who has left a number of fine colts in this valley.

Frank Fitzgerald went to San Francisco early in the week on business connected with the Modock mine. He went to Belleville on a special last Monday night and took the regular train there.

L. H. Bell and G. W. Richard and wife of Carson returned home yesterday after several days spent at Independence. The purpose of their visit was to prove up on desert land under the Eastside canal.

We received a communication from Big Pine last Friday, which, had it arrived on Wednesday, we should have been glad to publish. Remember that to secure publication all matter must be received not later than Thursday.

The concentrators were started up at Pine Mountain last Saturday and are working most successfully. Ore is being taken out of one of the mines there that will pay to ship without concentrating. There is no doubt but that this will prove to be a good camp.

Echo, the well known buggy horse owned by the late Judge Hannah, died at Independence yesterday morning of lung fever. He was a half brother to Gibraltar, Victor and other noted horses. He was eight years old but had never been worked for speed though he was a good 3-minute roadster.

Attention is invited to the advertisement of "Wiener's I Street Stores", Fresno, California. Although this house is but a recent competitor for the country trade of the State, they have already established a well deserved reputation for square dealing and low prices. Send them a trial order, and you will find that you can buy cheaper than in San Francisco.

Reports come from Bishop of at least two affrays there this week that may result seriously for the parties concerned. There was a shooting affray in which several shots were fired but no one seriously injured. In the cutting scrape at last account Sheets, the wounded man, was about to die. District Attorney Forbes is at Bishop attending to the matter. No definite news in regard to either affair has been received.

A. K. Eugley takes especial pleasure in supplying his customers with the best medicines obtainable. Among the many excellent preparations on his shelves may be mentioned Chamberlain's Cough Remedy, a favorite during the winter months on account of its great success in the cure of colds. There is nothing that will loosen a severe cold so quickly, or so promptly relieve the the lungs. Then it counteracts any tendency towards pneumonia. It is pleasant and safe to take, and fully worthy of its popularity.

Signs of Prosperity.

There are several matters now on the tapis in Inyo county that are sure to have great bearing upon the future of the Valley. There is no doubt but that a sale of the Soda works at Keeler has been made to a wealthy English company and that the industry will be greatly extended. This will ensure the employment of a large force of men and horses, and as these will have to be fed, a good market will be afforded for farm produce. It is expected that a large quantity of Inyo marble will be used in the construction of the new postoffice in San Francisco. As the present force is kept constantly employed getting out marble for the Mills building, and will be for some time to come, the number of men employed will necessarily be greatly increased. It is said that a telegram was received at Independence on Wednesday stating that the parties who were expected to buy the land and water of the Eastside Canal company for colonization had left New York for Inyo county on that day. It is almost an assured fact that a colony of settlers will be located on the Eastside next spring. The Hillside company of Bishop will have their dam completed and plenty of water for irrigation next spring. There is no better fruit or vineyard land in the State than that owned by this company. The Lone Pine canal company are steadily at work but do not expect to have water at Lone Pine in time for next summer's crops. The work will be pushed as rapidly as possible, however. The fact of all this activity will be to force a railroad connection with Mojave. It is absolutely necessary that the Valley should have a southern outlet. The Los Angeles *Herald* states that the Terminal Railroad company will be running trains over the new line to Salt Lake in eighteen months and that coal from Utah will be delivered in Los Angeles at six dollars per ton. With a connecting line to Mojave it can be delivered here at the same price, thus enabling large reduction works to be erected and all our ores to be worked at home. Of course all this can not be accomplished in a day, but the force of circumstances all tends to its immediate fulfillment.

A Jockey Club.

A public meeting was held in the reading room of the Norman House last Saturday evening to discuss ways and means for raising race purses for the Annual Fair next year. After considerable discussion it was resolved to organize a Jockey Club as being the best means of attaining the desired end. Irv H. Mulholland, P. H. Mack, A.W. Eibeshutz, J. C. Irwin and O. I. Mairs were appointed as a committee to formulate plans, by-laws and rules for the new organization. The committee will report on Saturday, Nov. 7th. A permanent Jockey Club will undoubtedly be the means of much improvement in our horse interests. There are now in the county many fine young horses and a lot of well bred colts. A Jockey Club would be able to offer futurity purses, the best method to insure the breeding of fast horses. This is the best step that could have possibly be taken in the matter.

California beats the world. We hold the yearling, two-year-old, three-year-old and four-year-old records, and the world's record for trotters; the stallion and world's record, both racing and against time, for pacers; the fastest pacing mare in the world. Also the quarter-mile, half-mile, five-eighths-mile and mile and three-quarters, running. All of the above records are held by horses bred and raised in this state. Salvator, the greatest living race horse, is owned here. With the stallion trotting record the list will be complete, and we would like to bet some Iowa man a pair of boots that Allerton's record is beaten by Stamboul before the year is out. Hurrah for California!

Dr. R. L. St. John of Howland, Putnam county, Missouri, takes especial pleasure in recommending Chamberlain's Cough Remedy, because he knew it to be reliable. He has used it in his practice for several years, and says there is none better. It is especially valuable for colds and as a preventive and cure for croup. This most excellent medicine is for sale by

A. K. EUGLEY
Big Pine.

As a preventive and cure for croup, Chamberlain's Cough Remedy has no rival. It is, in fact, the only remedy that can always be depended upon and that is pleasant and safe to take. There is not the least danger in giving it to children, as it contains no injurious substance. For sale at 50 cents a bottle by

A. K. EUGLEY,
Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph St.,

St. Jacobs Oil The Great Remedy

CURES RHEUMATISM.

18 Hill Street, San Francisco, Cal., April 23, 1890.

"Having been sorely afflicted with rheumatism, my mother and daughter with sore throat, we have, by the use of St Jacobs Oil, been cured."
LOUIS IMHAUS.

—FOR—

PAIN,

CURES NEURALGIA.

Ellenville, N. Y., Jan. 6, 1890.

"I suffered with neuralgia, bought a bottle of St. Jacobs Oil and soon recovered. I treated a sprained ankle with same results."
THOS. M. VAN GORDER.

CURES SCIATICA.

Baltimore, Md., Dec. 19, 1889.

I suffered a long time with sciatic pains in the hips; found no relief till I tried St. Jacobs Oil, which completely cured me.
CHAS. A. FULDA.

ALSO CURES

Promptly and Permanently

LUMBAGO, SPRAINS, BRUISES.

MASTIFF PLUG CUT

Smoking Tobacco.

There is always a best even among a score of good things, and every pipe smoker who has tried the Mastiff brand acknowledges it to be the sweetest, coolest smoking tobacco made. It does not bite the tongue, and is positively free from any foreign mixture.

J. B. Pace Tobacco Co., Richmond, Virginia.

"German Syrup"

G. Gloger, Druggist, Watertown, Wis. This is the opinion of a man who keeps a drug store, sells all medicines, comes in direct contact with the patients and their families, and knows better than anyone else how remedies sell, and what true merit they have. He hears of all the failures and successes, and can therefore judge: "I know of no medicine for Coughs, Sore Throat, or Hoarseness that had done such effective work in my family as Boschee's German Syrup. Last winter a lady called at my store, who was suffering from a very severe cold. She could hardly talk, and I told her about German Syrup and that a few doses would give relief; but she had no confidence in patent medicines. I told her to take a bottle, and if the results were not satisfactory I would make no charge for it. A few days after she called and paid for it, saying that she would never be without it in future as a few doses had given her relief."

Coughs, Sore Throat, Hoarseness,

Always Ready and a Boy can Start it at Once.

HERCULES

GAS OR GASOLINE

ENGINE

For Power and Pumping Purposes.

Makes No Smell or Dirt.

NO Carburator to Get Out of Order. Batteries or Electric Spark to Care for. Double or False Explosions, which are frequent with the Unreliable Spark.

Just light the burner, turn the wheel, and it runs all day.

It oils itself from an oil reservoir.

It runs with a CHEAPER grade of GASOLINE than any other engine, and consequently it costs less to run it.

FOR SIMPLICITY IT BEATS THE WORLD. It has fewer parts, and is therefore less likely to get out of order than any other gas or gasoline engine now built.

We are now making from 1-Horse Power to 10-Horse Power.

Prices and Terms Upon Application.

Manufactured by

PALMER & REY,

405 and 407 Sansome St., S. F., Cal and Portland, Or.

WOMAN'S WORLD.

A Few Items of Interest to the Fair Sex.

HOW THE BABY SHOULD BE CARED FOR.

Useful Hints Concerning the Care of Clothes.—A College Prize.

As most people like to have their clothes last as long and look as well as possible, a few hints on the care of clothes may not come amiss. All must admit that clothes that are cared for properly will outlast those that are neglected, aside from their also appearing better. It does not matter how fine the material may be of which they are made, if they are dust grimed from carelessness in brushing, or ill fitting from neglectful folding or hanging, they will never make as good an appearance as those made from a cheaper and poorer grade of cloth that has been cared for.

There is no color that shows the dust sooner than black. If a smooth faced fabric, the dust may be easily removed with a brush broom or bristle brush, or if left some time unbrushed, it is not of so much importance, for it may be removed at almost any time before using, but if the cloth is corded or rough faced, it is of the utmost importance that it shall be brushed thoroughly as soon as convenient. After coming in from outside the clothes are very apt to retain a good deal of the dust of the street, and at such a time, if possible, they should be brushed thoroughly ere putting away. First, the hat or bonnet must be brushed well, trimming and all. If of felt or straw a bristle brush, such as is used for clothes, is the best, but if of velvet a finer one, which is made especially for such a purpose, should be used. If it is of cloth a fine corn broom will do very well, and some also use this article for felt, but generally it is too coarse, and is not as good in any way as the bristle brush. In brushing a felt hat or bonnet, always brush one way to keep it looking nice.

After being caught in a rain or snow storm with a felt hat, and it is wet, on coming inside do not put it to dry without brushing. With the brush begin at the rim and go round and round, always the one way, brushing very hard, until the crown is reached, brushing this in the same way until you finish in the center the top of the crown; then put it away to dry and when wanted it will look almost as good as new. Never put a felt hat away while wet without brushing, or it will be spotted when dry. Men's stiff hats may be kept looking nice if treated in this way after being out in a storm.

If the outside garment or wrap is of smooth or corded material, it should be well brushed and hung away, but if rough faced, it will need to be taken into the air and well shaken in addition to brushing, to remove even a part of the dust that is sure to adhere to it. A dress, whether rough or smooth cloth, should be taken out into the air and shaken, owing to its being next to impossible to get into the crevices of the draperies, where the dust is certain to find a lodgment, with a brush broom or bristle brush. Never use a brush of any kind on a silk dress, as a piece of woolen cloth will do the work a great deal better, and will not injure the fabric, which a brush generally does. It is a good plan to hang heavy dresses and wraps on the line once in a while, when a stiff wind is blowing, which will do more toward cleansing than all the brushing that could be given them. To be sure, this not to be recommended for light, delicate material, but only for such goods as hold the dust. It is very important that men's dark colored diagonal clothes should be brushed frequently, for, if neglected, it will be found impossible to remove the dust, and if the clothes are black, they soon have the appearanse of being off color

Never turn a coat inside out when hanging it up, or you will surely ruin the set of the collar. Where convenient, wire frames are the best to use for this purpose, but lacking these, hand the coat by the loop at the collar with the right side out. Never hang a dress up inside out, but if possible allow it two nails, some distance apart. Hang it with front facing out, by the loops usually placed on the waistband at each side breadth. This way of hanging a dress will keep the drapery and plaits, if there are any, in position, and is the mode recommended by an experienced dressmaker. Some have the loops by which to hang up their basques on the waist line inside of the collar, but the best authority advises them to be sewn one under each arm. The same nails used for the skirt are not generally too far apart, but if they should be, one of the skirt nails, and another one driven into the wall the distance wished for the basque, can be used. Hang the basque first and the skirt over it. To be sure, where there is much trimming on a basque, or it is of delicate fabric which will not bear crushing, it may be well to hang it alone away from the skirt, but usually it is best to hang both together. In a room having no closet or wardrobe, always cover the clothes if hung on wall with a cambric or cretonne curtain. This plan is excellent for covering clothes in a closet also, and will save a good deal of wear from brushing, for no matter how close the closet may be, dust is sure to find an entrance, and as it must lodge somewhere, it generally finds a resting place among the clothes.—Boston Budget.

Taking Care of the Baby.

A baby that is not kept perfectly sweet and fresh loses half its charm, and is defrauded of its just rights. It should be bathed in warm water every morning, and, as it grows older, the temperature gradually lowered until at 5 months old, the chill is just taken off the water. Most babies love their bath, and are more apt to scream at being taken out of it than when put into it. If there is a shrinking from the plunge, a small blanket can be spread on the tub, the child laid on it, and gently lowered into the tub. At night it should be held on the lap and quickly sponged with a sponge, wrung out of warm water. Its mouth should be washed with a soft piece of linen dipped in cool water. All creases where the flesh touches should be powdered with pulverized starch, or any good toilet powder. This is most important, and must never be omitted, as the delicate skin easily chafes. Where there is redness, or any symptom of chafing, lycopodium powder should be used; it is most healing, and can be applied even if the skin is broken. When there are frequent discharges, the parts should be washed in thin, boiled starch instead of water. It is criminal neglect to allow a baby to suffer from chafing.

The head requires particular attention. No daintiness in other respects can atone for the disfiguring brown patches which are sometimes allowed to remain there. The top of the head should be well washed with soap and water every morning. If, in spite of this, traces of scurf appear, the spots should be rubbed at night with olive oil, and gently scraped off in the morning. If the application is not successful, it should be repeated until it is. But there will be little trouble if the matter is attended to when the brown flakes first show themselves.

As the baby grows older and the teeth develop, bibs should be provided, if necessary, to protect the front of the dress from the too abundant flow of saliva. Unless carefully watched, kept as dry as possible, and rubbed at times with a little cosmoline, the chin and neck are apt to become chafed.

Even a very young baby can be trained in good habits in a way that is surprising to any one who has not done it. If its wants are attended to at a certain hour every morning, a healthy child will seldom soil a napkin. The training cannot be begun too early, and the habit should be firmly established before it is six weeks old. It saves much trouble to the mother and discomfort to the child.

A little baby spends the greater part of its time in sleep. It is as if nature were preparing it for the battle of life by giving it so much repose as possible before the struggle begins. It should never be awakened unless it sleeps for a long time past the hour for its being fed. To rouse a sleeping child to gratify the curiosity of visitors or friends is extremely injudicious. As it grows older and is awake more, a certain time should be fixed for the morning and afternoon nap, and for putting it to bed at night. If these hours are adhered to, they will generally find a sleepy baby willing to yield to their soothing influence. It is best from the first not to darken the room, nor keep it specially quiet. The child becomes accustomed to sleep through slight noises, and they do not waken it. The eyes should be protected from a glare of light by placing the head of the crib toward the window.

A baby should never be allowed to sleep with an older person. The best bed is a stationary crib, with woven wire mattress, and a thin, soft, hair one placed over it. This should be protected by a square of rubber sheeting; two must be provided, and the one not in use hung in the open air and sunlight every day. If there is the least trace of an unpleasant smell, the rubber should be washed with some disinfectant solution. The covering should be warm and light. A down comforter is the ideal for winter, if it is well aired in the sun every day or two. In summer an ample musquito netting well raised on a pole, or suspended from a hook, should cover the crib.—Elizabeth Robinson Scovil in Good Housekeeping.

Don't Neglect the Finger Nails.

Because you live in the country and do housework, and even some good honest toil on the farm itself, is no reason why you should neglect certain little niceties of life, such as the care of your hands and teeth. You probably will not be able to keep the former white and soft as if you used them only for dainty embroidery, but a few minutes each day spent in caring for them will show at least that they are well kept, and signs of toil that cannot be eradicated you need not be ashamed of. The nails can be kept nicely trimmed; they cannot be even moderately long, but they may be shapely and pointed. Perhaps you cannot afford to buy the outfit of a "manicure," but you undoubtedly have a pair of small embroidery scissors; the file you must replace as best you may with the one in your penknife, or, failing that, with a piece of coarse sandpaper; and the chamois polisher, costing anywhere from sixty cents to $2, you can make yourself. Take a child's block about an inch thick and three inches wide by five long—large enough to grasp it firmly—tack a bit of soft cloth for padding, and over that a piece of the chamois you keep for polishing silver on one of the edges, and you have an article that may not be ornamental, but will answer every purpose.

Soften your hands by washing in warm water with some good toilet soap for a few minutes; then with the small scissors trim the nails, rounding them nicely, and cutting the corners very low. With some blunt instrument (if you have not a file) push back the flesh from the base of the nails, and trim away all the dead skin. Now apply your polisher, and brush vigorously for a few minutes. Do this once a week, and every day spend a few minutes in the use of the polisher, and your hands will repay you in their neat appearance for the time you have spent. A solution of oxalic acid kept in a bottle with a glass stopper will remove all stains of ink or fruit, and a match or a small stick dipped in the solution and passed under the nails will remove any discoloration that does not come off with washing. There is a pink powder sold by druggists for polishing, but this may be dispensed with. If, however, you get any, be sure that you get the best and not a spurious article. You should have a pair of old kid gloves, or, better still, wash leather, to wear when you are weeding in the garden, or doing any housework that will admit of it. I speak with a conviction born of sad experience, for I am a farmer's daughter myself, and never thought of caring for my hands when I was a child. When I was old enough to care it was too late, and I have found out that no amount of after care can make up for that early neglect.—Cor. American Agriculturist.

A Harvard Annex Girl's Essay.

In Harvard university the Bowdoin prizes are the highest rewards attainable for English dissertations, and they range from $100 downward, being accessible to all students of the university, undergraduate or graduate. This, of course, excludes the young lady students of the Harvard annex, which has no organic connection with the university.

By an accident an essay on the subject, "The Roman Senate Under the Empire," written by Miss E. B. Pearson, was submitted to the judges, Professors Torrey and Young. Without the identity of the writer being discovered the judges awarded the essay the first prize of $100. The essay was signed merely "E. B. Pearson." The class and department of the university were not designated, as is required, and Professor Torrey expressed some surprise that the author of so able an essay should not have complied with a provision so simple. He searched the catalogue of the university for the name of E. B. Pearson, and on not finding it somebody gave the suggestion that this person might be discovered in the annex. In this way the fact came out—the author was a young lady.

So the essay of Miss Pearson was necessarily ruled out of the list, and a prize of $75 was awarded to a young gentleman instead, while Miss Pearson dropped at once from the Bowdoin prize of $100 to the humbler annex prize of $50, thus paying $70 outright for the privilege of being a woman.

The Manicure's Outfit.

Another necessary adjunct to the dressing table is the little Parisian box used by the manicure, and which may be bought for a small sum of any chemist or perfumer. It contains a boat shaped implement, covered in chamois leather, and furnished with a handle, and there is a tiny box of fine pink powder of a slightly gritty nature. You breathe on the nails, and then sprinkle them with the powder, and polish briskly on the chamois pad. But before this process is reached, you must first use the other little implement, which is of ivory, with one end shaped almost like a pen, the other fitted with a small brush. In the center is a flat file, on which you carefully shape the tops of the nails, rounding them off at either side to follow the line of the finger. Scissors should never be used for the finger nails, as by cutting them you make the nails coarse and thick. With the ivory point you clean the finger nails, and also gently push back the flesh to reveal the white crescent and to prevent the skin splitting and forming "hang nails," which quickly appear if the skin adheres to the nail.—The Lady.

Following the Fashion Plates.

The patterns sent out by pattern houses are often absurdly elaborate. They are made up to extract trade and they do not represent the best taste of fashionable people. While pattern makers have done an inestimable good in helping mothers to shape the frocks and clothing of their children, saving hours of worry and vexation, they have done a great evil in prolonging in places remote from the great cities the mania for over elaboration in the dress of women and children. Every mother naturally wishes her child to look pretty and neat, and too many mothers lured by fashion plates have spent hours of toil in making elaborate dresses for their children, only to find, when the dresses were finished, that they were ugly and unsatisfactory. There is but one remedy. Let mothers take the goods the fashion makers provide, but avoid all elaborate designs, designs which are put in merely to fill out the books. Make simple clothing for the children, and enjoy yourself a rest from anxiety about their dress, and take the pleasure that comes from a neat, orderly household.—Woman's Work.

The Walk of Woman.

It cannot be out of place here to suggest the advisability of opening classes where children, girls especially, might be taught the science of walking. Mothers should be the natural teachers, but many who are rigidly careful in all other particulars seem absolutely indifferent on this important point. In fact, after showing them navigation by means of their legs, duty is believed to be at an end, and no matter how wretchedly the child moves the parent rests satified with only spasmodic attempts at correction. Whether the ungraceful wabble, the halting step and painful stoop so commonly seen is attributable to carelessness or unnatural dressing, certain it is that six out of every ten women walk abominably. To be upright and easy in one's movements is only as nature intended, and unless deformed there is not the slightest excuse for the absurd locomotion noticed on the streets every day. Why children are permitted to grow up pigeon toed, round shouldered, crooked and awkward is a proposition left open for further discussion.—New Orleans Times-Democrat.

The Family Medical Adviser.

When you choose a doctor, it is well to give him to understand that you are depending upon him, and that you consider him already in a certain sense responsible for the physical well being of yourself and your family. The late Dr. Alpheus Benning Crosby well said that his idea of a wise patient was "one who, having selected an intelligent physician, holds him personally responsible for his life."

Having selected your physician, then make him in reality the medical adviser of every member of your family. Take him into your home and give him the opportunity to become acquainted with the personal and family history and physical condition of every member thereof, so that he may be able to trace their hereditary tendencies, recognize their predispositions, understand their peculiarities, and anticipate their weaknesses—in short, to know their constitution. Having this knowledge, he will be able to give them the wisest advice in health, and the most successful treatment in sickness.—Demorest's Monthly.

Paste for Paper Hangers.

Paper hangers' paste is best made by first heating the water to the boiling point; then add flour, stirring constantly to prevent the formation of lumps. The flour should be sifted into the water through a sieve to insure more equal distribution. Agitation must be continued until the heat shall have rendered the mass of the desired consistency. In order to increase its adhering strength, powdered resin in the proportion of one-sixth to one-fourth of the weight of the flour should be added. Oil of cloves or a few drops of carbolic acid added will keep the paste from souring.—Chicago Times.

After the Bath.

Let me here remark that no bath is perfect in its results without the long and brisk friction of hands or a coarse towel afterward. Friction not only stimulates circulation, but it makes the flesh firm and polished like Parian marble. It is sometimes astonishing to see the change made in an ugly skin by friction, and any lady who wishes to possess a healthy body, firm to the touch and fair to the eye, with the elasticity of youth well prolonged into age, must give willingly of her strength to the daily task of rubbing the body thoroughly.—Dress.

Preserving Natural Flowers.

To preserve natural flowers by the wax solution process, dip the flowers in melted paraffine, withdrawing them quickly. The liquid should only be just hot enough to maintain its fluidity, and the flowers should be dipped one at a time, held by the stalks, and moved about for an instant to get rid of air bubbles. Fresh cut flowers, free from moisture, make excellent specimens in this way.—Good Housekeeping.

To remove the glossy appearance from a diagonal cloth coat, first free from dust, then sponge or brush with warm water and ammonia, a teaspoonful of ammonia to a pint of water, and a small piece of castile soap, then rinse in water and afterward sponge with hot coffee and rinse again in cold water; then hang to dry. Before it is thoroughly dry stretch well with the hands or it will shrink.

The head nurse of the Children's hospital in London says that the six general qualifications for a good nurse are "presence of mind, gentleness, accuracy, memory, observation and forethought." She finds it "a popular female delusion" that every woman is born a nurse.

The prevent flies from spoiling gilt frames and fittings, brush them with a camel's hair brush wet in water in which onions have been boiled. The flies have aristocratic tastes, and will not go where they come in contact with anything savoring of onions.

Lemons will keep good for months by simply putting them into a jug of buttermilk, changing the buttermilk about every three weeks. When the lemons are required for use they should be well dried with a cloth.

If you wish to keep a sharp knife don't put it in hot grease; stir your potatoes while frying, or turn meat with a fork or an old case knife kept on purpose.

Never sun feather beds. Air them thoroughly on a windy day in a cool place. The sun draws the oil, and gives the feathers a rancid smell.

Cabbage is made digestible by first slicing, then putting into boiling water, with a pinch of soda and some salt, and boiling just fifteen minutes.

To clean straw matting, boil three quarts of bran in one gallon of water, and wash the matting with the water, drying it well.

Colors for Fashionable Young Men.

"The color of that cravat is called Paille," said a dry goods clerk to a reporter recently.

"Is it a new shade?"

"Yes; you see it is a kind of straw color. It will be very fashionable in the coming season."

"Are many new shades coming into the market for this spring?"

"About nine. A new light gold color is called Ebenier. Corail is a light shade of coral, as the name would signify. Marine is a bright navy blue. Coquelicot, a bright red poppy. Cardinal is a little darker shade than Coquelicot, and Pompre still darker. Veil-or is a very old gold color, and Pepite a light brownish yellow. These nine will be the most fashionable. There are in all about sixty fancy shades, but a great many of them are old except their names. All the new shades come from Paris.—New York Evening Sun.

Another View of It.

There is, indeed, a positive harm that results from tabooing of the theatre by religious people. Why is so large a proportion of our plays frivolous and vulgar? Because the frivolous and vulgar predominate among theatre goers. If the large number of refined people who avoid the theatre were to attend, this proportion might be reversed, and more of the managers would find it profitable to bring out clean and wholesome dramas.—Henry T. Finck in the Cosmopolitan.

Demand for Tripe.

The much abused but easily digested tripe has at last received proper recognition from quite an unexpected quarter. Dr. Beaumont proved that raw oysters digested in two hours and fifty-five minutes and boiled tripe digested in one hour. Acting on this information, epicures with weak digestive organs have taken kindly to tripe, and the demand for it at the leading restaurants is on the increase.—New York Sun.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Most people ask advice in order to secure some confirmation of their own decisions.

SAFE AND EFFECTIVE.

BRANDRETH'S PILLS are the safest and most effective remedy for Indigestion, Irregularity of the Bowels, Constipation, Biliousness, Headache, Dizziness, Malaria, or any disease arising from an impure state of the blood. They have been in use in this country for over fifty years, and the thousands of unimpeachable testimonials from those who have used them, and their constantly increasing sale, is incontrovertible evidence that they perform all that is claimed for them.

BRANDRETH'S PILLS are purely vegetable, absolutely harmless and safe to take at any time.

Sold in every drug and medicine store, either plain or sugar-coated.

It is to be hoped since the American hog may be exported that traveling on steam and street cars will be attended by less crowding.

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

F. J. CHENEY & CO., Props., Toledo, O.
Sold by druggists, price 75c.

It is not at all likely that Raleigh would ever have set the world a-smoking if he could have foreseen the invention of the cigarette.

A MYSTERY.

How the human system ever recovers from the bad effects of the nauseous medicines often literally poured into it for the suppositive relief of dyspepsia, liver complaint, constipation, rheumatism and other ailments, is a mystery. The mischief done by bad medicines is scarcely less than that caused by disease. If they who are weak, bilious, dyspeptic, constipated or rheumatic, would oftener be guided by the experience of invalids who have thoroughly tested Hostetter's Stomach Bitters, they would in every instance obtain the speediest aid derivable from rational medication. This medicine is a searching and at the same time a thoroughly safe remedy, derived from vegetable sources, and possessing, in consequence of its basis of pure spirits, properties as a medicinal stimulant not to be found in the fiery ocean bitters and stimulants often resorted to by the debilitated, dyspeptic and languid.

Something should be done to hoop up the clouds. Too many lives from cloudbursts have been lost this season.

"Brown's Bronchial Troches" will relieve Bronchitis, Asthma, Catarrh and Throat Diseases.

The artist struggled hard and long, yet failed;
Then West he went to work deep in a mine.
He stole a horse, was quickly caught and jailed,
And died a happy man, "hung on the line."

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles, and Itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O

THE PHOTOGRAPHER.

A Few Practical Hints for the Ladies.

TAKE THE ADVICE OF THE ARTIST.

How to Make the Best of an Unhandsome Countenance.

First decide what style you will have—bust, three-quarter figure, or full length. The first two are the prevailing modes, the last implying a more elaborate toilet. Now secure your sitting. It is always better to do so, thus obviating the annoyance of waiting. Before leaving the studio, unless the appointment is made by letter, consult the photographer as to your dress, etc. Let him know what it is to be. You may be undecided which of several to use. It then may be a choice in color or in cut, etc. He will tell you at once which is best. He may request you to try more than one, and in the absence of such invitation you will be expected to pay extra for the experiment.

While you are talking with him about dress he is studying your face, expression and form generally. If he also be an artist, and experienced, he may see at a glance that your customary way of dressing the hair is not becoming, for, strange as it may seem, comparatively few women have the knack of arranging their hair in the mode demanded by their face. While he knows that the portrait must not be ruined by the hair being done up in an unfamiliar way, he may yet give you a few invaluable suggestions. For instance, he may request you to be more careful in dressing the left side than the right, thus signifying that the left side of the face is better. Few have both sides alike. There is often almost as much difference as between two persons. The nose is much or a little to one side; one eye is smaller, because one lid droops more; there is a depression over that spot where a tooth has been extracted. The uneven shaping of the lips alone may decide which side of the face should be prominent. You laugh rather to one side—and, by the by, there is always something pretty about such a laugh—and you have developed a dimple, which, sad experience teaches the photographer, will be demanded of him. But, as it happens sometimes, he may fail to detect the slightest difference between the right and left, but he still requests you to take special pains with a certain side of the hair, as he prefers to show that side of the face. This is because in every atelier the light is better at one end of the room than at the other, and he is accustomed to place his sitters there.

Now, and not when you come to sit, is the time for you to tell him what you prefer. You wish a three-quarter face, or a front view, or a profile; you have studied the idiosyncrasies of your face for years, and have so decided. He listens respectfully, but his eye has searched out all the little secrets of anatomy, and fathomed your hidden reasons for thus and so. You are afraid of that cheek bone; you do not say so, but he knows it, and is studying how to retire it and lose it in the tinting of the background. You are conscious of those ears; they are large, and stand well out. A photographer knows how formidable an antagonist is an ear that projects at right angles from the head; he knows that there is usually but one way to subdue it, and smiles inwardly at your emphatic demand for a full front, which means that both ears shall show equally. When he says "full face" he means a pose that almost or entirely loses one ear.

Perhaps you insist that he do not make you a profile; you often rejoice that you live in an age when silhoutte profiles are out of fashion. The prominence of your nose forbids it, or a long chin puts it out of the question. A side face is just the thing for you; the photographer sees it at a glance for, again, strange as it may appear, the possibilities for a profile do not depend so much upon the features as upon the hair and neck dressing. A slight tip to the head one way or the other lengthens or foreshortens the features, and the photographer, in manipulating his light and shade, may refine or render them stronger at will. He will tell you not to arrange the hair till you come to the studio, for a very short distance, especially in damp or blustering weather, will ruin it. He will probably request you not to dress the neck too high or too tight, or in an exact circle, with the fore part of it lying close under the chin, for, of all things, the present high mode of dressing the neck is distressing to an artistic photographer. It is done because the lady has a short neck or a long one, or it is thin, and the cords must be concealed. It is done, for it is the fashion. This is all a mistake. You are surprised when the photographer says it, for there is a touch of bitterness in his tone. He illustrates his meaning by winding the lapels of his coat tightly around his neck. "You see, madam, the effect on a long face like my own. It overhangs and becomes almost deformed, while a round face becomes button shaped, and none of the little tricks of hair dressing or expression can remedy it. No; it's all a mistake. If your neck is short, as you say, do not lose what you have, lower the drapery, do a little judicious borrowing, and, presto! the face that was round becomes oval. In any case the neck must not be hidden, for all the action and grace of position in a bust portrait centers there."

Never ask your friend to enter the operating room with you. It embarrasses the artist, and is almost certain to ruin your expression; in fact, few photographers will allow any one to enter the glass room with the sitter. Remember that a bright sunlight is the worst light you can have. Choose, if possible, a day with an overcast sky; a snowy day is excellent. The early part of the day is to be preferred, say between the hours of 10 and 12 a. m., and then the light is more actinic, and the photographer has not been wearied by a score of sittings. Black, dark green, crimson, brown and yellow take nearly the same shade. A dress cut low in the neck always seems much higher in a photograph than to an observer. A masculine face is softened and refined by a soft neck dressing, a bit of lace being preferable to the stiff standing collar.—Harper's Bazar.

Gods of the Esquimaux.

The Esquimaux pantheon is pretty well occupied, there being gods to preside over the different natural phenomena, such as the rain, snow, ice, tides and so forth, and others controlling human destiny in the chase, at home and elsewhere. Their explanation of the tides is very naive. The genius of the waters, it seems, wishing to cross the straits dry-shod, caused the water that filled them to heap itself up at one side, and then, when he had passed over, to fall back into its place again, which it did with such momentum as to go on oscillating to and fro ever since. They have no lack of priests, and under their direction make various offerings to propitiate the deities, particularly when the season is bad, and seals are scarce.—J. Macdonald Oxley

RIDING ON A SHARK.

Thrilling Adventure of Prof. Swanson of Sequel Point, Col.

Swimming Teacher Swanson of the Capitol a bath-house at Sequel Point, Col., treated the resorters there to a thrilling spectacle the other day. His feat was nothing less than an exhibition of bare-back riding, the burden bearer being a monster shark, which was captured the same day in the nets of a fisherman and towed into the slip. Its arrival created great excitement among the visitors at that resort. No amount of assurance on the part of the proprietors of the hotels or the fishermen that basking sharks were not man-eaters, and that many had been caught with no accident happening, could entirely quiet the fears of the visitors, and bathing was almost given up. Some ocular demonstration of the fact that a basking shark was harmless therefore became necessary. Swimming Teacher Swanson of the Capitola baths, then determined to give an exhibition with the shark which should convince the most timid. A performance followed, the like of which no man ever participated in before. Swanson put on a bathing suit and swam to the wharf where the partially exhausted monster lay, still partly wrapped in the torn and tangled fishing nets. Slowly approaching the gasping yet enraged monster, a whale in size if not in species, Swanson swam close to his side and then clambered slowly on top, a moderately easy task to accomplish, as the shark lay almost entirely under water. Sitting astride the huge fish like a baby on an elephant, the bold swimmer shouted in triumphant derision at the several hundred people on the wharf, who had gathered to witness the strange performance.

As soon as the shark had realized it had gath red something on his back it commenced to thrash about and threw Swanson off. Women in the crowd shrieked in fear and men held their breath in excitement. It was hardly a minute, however, before Swanson appeared uninjured and laughing outside of the line of foam caused by the shark's struggles. The undaunted swimmer again went to the side of the shark and once more mounted his marine steed. The shark again showed its fear and anger by shaking him off, but not so violently as before. With great persistence Swanson repeated the performance till at last the shark became tolerably tame. Daily exhibitions are

now given and his sharkship has became quite a favorite with bathers who delight in wild, reckless riding. So far no one has ventured a ride out to sea.

Ibsen and His Plays.

There is a funny row about Ibsen and his plays in Australia. In the beginning of June a theatrical matinee was given to raise funds for the Women's College of the University of Sydney, and the play selected was Ibsen's "Dukkehjem." Various dignitaries allowed their names to be printed as patrons of the performance, but when the Countess of Jersey, the Governor's lady, was applied to she refused, saying that from what she had heard of Isben she had no wish to see one of his plays, and that it was impossible that an actress who could play in such a piece could be a lady. This was thought to be a cruel and gratuitous insult to Miss Achurch, who was to play the principal character. Letters have been written to the London newspapers remonstrating against Lady Jersey's narrowness.

Romance of the Cherry.

A young man in Berlin, Germany, stepped upon a cherry, slipped, fell against a window and had his nose almost severed from his face. A young lady came forward and acknowledged that she had carelessly thrown the accessorial fruit upon the sidewalk, and her parents promptly defrayed the bill of the surgeon who stitched on the young man's nose, amounting to 450 marks. Now romance should lead the victim and the cause of his mishap to commit matrimony and give some novelist the cue to "The Romance of the Cherry."

An Outburst of the Sun.

A luminous outburst on the sun was observed by French astronomers on the 17th of June. First appeared a luminous spot of a yellow golden tinge, soon followed by another just above it. The spectroscope showed the first spot to consist of a central eruption, from which volcanic bombs were thrown to heights above the chromosphere, where they seemed to rest as dazzling balls. A few minutes later these were replaced by brilliant jets or diamonds.

Just Think of It.

Miss Hattie J. Chipps, who lives near Budd's lake, N. J., has fashioned portions of hair from the head of over 2,000 individuals into a large wreath of over 1,000 flowers and leaves. This unique oddity is composed of hair of every shade and color known to the anthropologist. The young artist spent over a year in collecting the locks of hair before commencing work on the wreath.

A pair of very economical lovers, in Los Angeles, Cal., hit upon a plan to cheat Uncle Sam of his postage. The young man hired a box at the postoffice, and gave his sweetheart a duplicate key. They exchanged correspondence through the box.

WHIRLING DERVISHES.

Seeking Salvation by Spinning Like Tops.

SOME REMARKABLE CEREMONIALS.

Bowing Low to the Name of the Prophet.—Sad Faces.

But to return to the dervish chapel which I was describing. A deep gallery runs around six sides of the large room. On the side next Mecca, where the high priest sits, is a small but lofty pulpit, reached by a narrow flight of steps. Besides this you observe a portion of the gallery is partitioned off and highly ornamented. This, with the screen of gilded lattice next it, is reserved for the Sultan and his harem. From the lofty pulpit a sermon is delivered on some special holy days, but at such times all "Ghiours" are excluded. Indeed, there is little provision made for their comfort at any time. The space set apart for spectators is separated from that occupied by the brethren by a low railing, and it is a motley gathering that fills this space. The center of the floor is sacred to the brethern, and is worn so smooth by the friction of their bare feet that you would think it had been polished and waxed. There is a narrow strip of matting next the rail, on which the brothers sit and kneel. Against the pillars that support the galleries are hung frames containing passages from the Koran. Above the seat of the chief priest is the name of the prophet in large letters of gold on a dark green ground. The high priest's seat is simply a crimson rug, where he sits cross legged, wrapped in a loose green cloak with wide flowing sleeves. The musicians are stationed in the gallery directly opposite the high priest.

It is an impressive sight when the dervishes enter slowly, in single file, the little gate of the inclosure, with their long light brown cloaks wrapped about them, concealing their hands. They first bow low to the name of the prophet, then with step keeping time to the music from the gallery, which fills the room with its low monotonous strains, they take their places, bend forward and reverently kiss the ground; then, with both hands folded across the breast, seem lost in prayer, their bodies constantly swaying to and fro in time with the music. Now the high priest rises and delivers an audible prayer; the others remain motionless with hands still folded on the breast. At the close of the prayer all bow their heads to the ground, and a weird, barbaric melody peals forth from the gallery.

Instantly the brethren all join in the chorus. The effect is indescribble. Now the sound dies away till it is but as the whisper of the winds among the pines, then it again bursts forth with an energy that appears almost supernatural, followed by another stillness of about a minute for silent prayer. When the low strains are again heard they all rise and slowly follow the high priest three times around the room. With arms still reverently folded upon the breast they bow twice to the name of the prophet—first on the side by which they approach, then on the side opposite—which they manage to accomplish very gracefully without once turning their backs upon the sacred name by slowly revolving upon the right foot.

The procession is closed by a second prostration. When each has gained his place he throws aside his cloak and begins the series of remarkable evolutions which has given them the name of "dancing" or "whirling" dervishes. Meaningless as it all seems to us, to them every rite has a deep significance. Their rapid rotary motion symbolizes the motion of the universe, their low weird music the music of the spheres.

Their dress consists of a loose shirt-jacket and full long skirt of light brown cloth. The right side of the jacket is fastened to the girdle, the left hangs loose. The skirt is laid in deep plaits beneath the girdle. Their rapid revolutions give these full garments a bell shaped appearance, some of the most expert among them making their skirts stand almost at right angles with the body. The spectacle utterly baffles description. Although the space was somewhat circumscribed they never once interfered with each other's locomotion, but round and round they spun, as if impelled by an unseen power; their eyes half closed, their heads bent toward the right, their pale, thin, passionless faces perfectly immobile, though great beads of perspiration were soon standing on their brows.

If for any reason one of them made a sudden pause, his garments wound about him in a singular manner. Three times they all paused for prayer, then resumed the rapid motion, with one hand held upward to receive the expected blessings, the other extended downward to scatter them abroad. Finally they resumed their seats on the strip of matting, bathed in perspiration, when one of the brethren, who had seemed simply a spectator, covered each with his mantle. Then a dervish whose seat was at the left of the high priest's delivered a long prayer, in a solemn but rapid manner, the last word of each section being greatly prolonged. This prayer was for the great ones of their order, the dervishes bowing reverently as each holy name was uttered. When at length the name of the prophet occurred they prostrated themselves on the ground. While they were thus prostrate the chief priest rose to his knees, delivered a short prayer, then took his stand upon the crimson rug. The priests approaching him slowly, one by one took his hand, and pressed it to their lips and forehead. The first that advanced stationed himself at the right of the priest, the second in the same manner saluted the priest and his brother—each in turn performed the same ceremony until all had received the kiss of peace.

As no seats are allowed we stood fully an hour and a half, every moment expecting to see some exhibition of religious ecstasy, but saw nothing of the kind. All the dervishes looked weary and sad and all were very thin except an African, whose extra avoirdupois, together with the violent exercise, soon brought him to a "melting mood" and he retired to his seat looking but little like one inspired with seraphic visions. Another priest who claimed our notice was a beardless youth with features cast in so delicate a mold that you would have turned and looked again and again before fully convinced it was not a young girl in disguise. Another, a slender boy of about 10 years, was remarked by us all because of the look of deep anxiety on his young face, but his rapid motion seemed to fatigue him less than his elders.

Soon the salutations were all over and the chapel was deserted, the whole of the congregation dispersing without a word, as soon as they could reclaim shoes and umbrellas of the porter at the door.—J. A. Ledyard in San Francisco Chronicle.

London Houses Growing More Modern.

For a long while the London houses never changed their appearanc. Now, when a house needs rebuilding, the front of it is apt to be remodeled, not in the staid old style which has prevailed hitherto, but according to modern fashion.

A DIPLOMAT'S DINNER.

A Plain and Cheap Banquet Where Everybody Was Extremely Well Pleased.

Some years ago an accomplished diplomate at Washington, the representative of a power not of the first importance, expressed his regret to a friend that he could not give dinners, "because," he said, "my government is poor, and I cannot afford it." The conversation occurred at the profuse and splendid table of a rich and courteous host, whose feasts were of great fame, and whose invitations were credentials of admission to the best society. A young diplomatic comrade who sat by heard the remark, and smiled as he said: "My government is poorer than yours, and I am but lately arrived. But what is diplomacy without dinners? and I am going to give one. It will not be like this, but the splendor is not an essential part of the feast. I shall give a plain and cheap dinner, to which I invite you both."

His manner was gay, and his invitation was gayly and gladly accepted because he was one of the delightful men in Washington. His colleague, however, who had spoken first, shrugged his shoulders, and said that, for his part, he couldn't do it; he couldn't ask people to come to his house and eat a poor dinner. "Not so fast," replied his friend: "I didn't say a poor dinner, but a plain and cheap dinner. I hope it will be good, nevertheless, although there may be no baked carp or stewed nightingales' tongues. But come and see."

The young minister of the small and poor kingdom was one of the most accomplished men in Washington He was known to have corrected a justice of the supreme court in regard to a decision of a United States court in a western state, and to have made the correction in English, which was a foreign tongue to him, but in English so exquisitely chosen and urbanely expressed that the justice was probably unconscious of the mortification of the correction. The young minister had no foolish, fond reserves. "My government is poor, I am poor, we are all poor in my country," he said, "and I and my secretary work like day laborers here in Washington to acquire and to report necessary information to my government." But nobody was more sought; there was nobody whose coming more surely brought pleasure to any circle than that of the young minister.

The day of the dinner came, and a plainer and pleasanter dinner was never known in Washington. Every guest, from the secretary of state and the English envoy to all their neighbors at table, gave every week, indeed, repasts much more magnificent. But the simple dinner, admirably cooked and served, without display of table service, without the carp and nightingales' tongues, but with the enlivening and inspiring charm of the host and the welcome variety of plainness, after the luxurious extravagance and ostentation of the usual dinner, was so fresh and delightful that the satisfaction and pleasure were universal, and the skeptical colleague who had thought great cost essential to a successful dinner owned himself converted, and the next month ventured upon a similar feast, and with the same success.—George William Curtis in Harper's Magazine.

Lifting a Thousand Pounds.

To lift 1,000 pounds on the health lift is no very remarkable feat for a person of average strength, giving sufficient time daily for a few months to practice. Mr. Blaikie learned in this way, at the age of 17, to lift 1,000 pounds after only six months' practice. Those who prefer to lift an actually measured weight will find it necessary to adopt some such plan as was employed by Topham, preparing a framework to bear the weight and standing in its midst, so as to lift the weight by means of symmetrically attached straps. For the body cannot, when at all aslant, bear such a weight as 1,000 pounds.

Whether such exercise is good for the body as a whole depends a good deal on the opportunities which a man has for correcting an abnormal development of the lifting muscles by means of other exercises, increasing the development of other muscles and giving activity as well as strength to the frame.—Richard A. Proctor.

Georgian and Circassian.

The Georgian has a beauty quite different from that of the Circassian. The Circassian is dazzling, queen like and stately. She has a fair skin. She is elegant in form. She is kindly and gentle in voice, but lazy in movement and without spirit. One of her own sex has said: "There is no soul in a Circassian beauty; and as she pillows her pure, pale cheek upon her small dimpled hand, you feel no inclination to arouse her into exertion; you are contented to look upon her and to contemplate her loveliness." The Georgian is a creature with eyes like meteors and teeth almost as dazzling as her eyes. Her mouth does not wear the sweet and unceasing smile of her less vivacious rival. But the proud expression that sits upon finely arched lips accords so well with her stately form and lofty brow that you do not seek to change its character.—Home Journal.

Origin of Color Blindness.

That the origin of color blindness lies in the brain, and not in the eye, has been suggested by Professor Ramsay. While engaged in teaching in Brooklyn some years ago, the principal of a school insisted in treating every case of the sort as dependent on the will of the pupil. His remedy was the rod. This certainly seemed a tyrannical and unwarranted treatment, but the result was favorable to his theory. Is it possible that a thorough examination will ultimately demonstrate that the fault lies very largely in the shiftless methods of observation which have grown up under the old classical system of education, and which have to a large extent become hereditary?—Science.

The Confectionery of India.

All kinds of India sweetmeats are made of brown sugar, many of them molded into various shapes of birds and beasts. Tubes also are made, filled with honey, and twisted into various forms. Then there are balls of sugar and clarified butter. These confectioneries are soft and melt in the mouth. Those made by the higher caste differ from those made by the lower, so absolute are the laws of caste.—Wide Awake.

THE PASSOVER RITES.

Jewish Doors Left Open for the Expected Messiah.

THE MAKING OF UNLEAVENED BREAD.

Religious Services, Rites and Ceremonies.—Solemn Recital.

In the evening, two nights before the beginning of Passover week, in all orthodox Jewish families, certain preparatory measures are taken. The father, as head of the family, makes his tour of thorough inspection of his domicile, seeking for remnants of leavened bread, first invoking a blessing upon his task, and then preserving a solemn silence until the conclusion of his search. Care is taken that there shall be some scraps left for him to find, and that he shall know where to look for them, but the form of search is carefully preserved, and his wife makes very sure that no other fragments are left but those intended to be found, which are always mere crumbs. These are gathered in a spoon. To them is added the half mizvo left over from the Passover of the preceding year, and all are carefully wrapped in a clean bit of linen and laid aside until the forenoon of the succeeding day—Aref-Pesach—when, about 10 o'clock, the little package is put in the fire and burned.

From the time when those remnants of leavened bread are burned, through the whole of the succeeding seven days no other bread is eaten than the matzos, or thin flakes of dry baked, crisp, unleavened dough, and the orthodox Jew is not supposed to have in his possession any of the things that may not lawfully be eaten by him during that season.

The requirements of the truly orthodox with reference to the preparation of the matzos are very rigid. A committee is appointed from each congregation, whose duty it is to buy in the field before it is harvested, if possible, the grain that is destined for conversion into the unleavened bread. If this cannot be done, they select the best grain obtainable from the merchants. The grinding of it into flour must be done in a mill that has been thoroughly cleansed from every contaminating speck of other flour, and when this work is completed the product is carefully barreled and sealed to be kept until required. In the preparation of the mizvos—about which there is a peculiar sacredness—the grinding of the grain into flour is frequently done in a hand mill that is kept for that purpose and no other. For every step in its progress from the field to the baking oven the flour is sanctified to its uses by prescribed prayers uttered over it. The baking should properly be done by each congregation in its own bakery, the quantities required for each family having been ascertained in advance. In practice in this country, however, the matzos are made generally in large bakeries owned and controlled by Jews, who scrupulously observe in their preparation every requirement of their law, and this is looked upon as sufficient. In the making of the dough, the flour is simply mixed with pure water to the required consistency, without salt, leaven of any kind, or any other foreign substance, is rolled very thin and baked dry.

On the next evening, after religious services in the synagogues, which all Hebrews should attend, each family retires to its home, and there solemnly celebrates the commemorative feast with which the festival begins. Upon the family table is set a great plate—of silver, if possible—covered with a clean napkin, on which are laid three matzos, the peculiarly sanctified cakes of matzo bread set apart for this especial use, and to this end particularly consecrated by the rabbi's prayers. Upon another plate appears the shank bone of a shoulder of lamb and an egg, both roasted upon coals; in a third plate some lettuce and celery, or chervil and parsley, some horse radish and watercresses; a cup containing salt water or vinegar; a small plate of apple sauce and almonds; and glasses of wine, one for each person present, and still another, that stands untouched throughout the ceremonial, as a symbol of the welcome ever ready for the long hoped for Messiah. Each person present is required to drink four glasses or cups of wine during the progress of the rites. All members of a Jewish household, from its patriarchal head down to the humblest servant, sit together at this Passover feast, for all are equal before the God to whom they offer their thanksgivings for his infinite mercies

And the things thus displayed on the table have their emblematic significance. The horse radish and other sharp or bitter herbs recall the bitter servitude in Egypt; the unleavened bread, the hasty preparation for flight to freedom in the desert; and other meanings attach to each of the other articles, as, for instance, the apple sauce, of the consistency of mortar, which is a reminder of the clay from which the Egyptian taskmasters compelled their ancestors to make bricks without straw.

The head of the family takes his place upon a chair, on which a pillow has been laid, to distinguish it as a sort of throne. He is the patriarch, the master, the teacher. Around the board before him gather his family and dependents, all attired as if ready to set forth upon a journey. He and they do not assume the easy attitudes common at the social board, but sit erect as if alert and expectant. He offers up a prayer. Breaking across the middle one of the three mizvos, he lays aside half of it to be kept until the next Aref-Pesach, when it will be burned. To each person seated at the board he gives a fragment of that mizvo and of one of the others, also a small portion of the herbs which are to be dipped into the salt water or vinegar and eaten. Then all take hold of the seder plate, upon which the mizvos have been exposed, and together they sustain it above the table while he utters another prayer. It is then replaced upon the board and one of the younger members of the family asks the father certain prescribed questions as to why they are so assembled with the objects before them that so meagerly furnish forth the family table. In response, the patriarchal head of the family tells the grand old story of Israel's slavery and redemption therefrom by him who with strong hand and mighty arm led them out of the house of bondage, through the Red sea, and humbled the pride of their cruel oppressors. As he recites the ten plagues sent upon the Egyptians, at the mention of each every one seated at the board dips a little finger in the glass of wine before him or her, and scatters a few drops upon the floor.

A prayer follows the solemn recital. Hands are washed and the whole of the emblematic repast that is at all eatable—excepting the half mizvo reserved—is consumed. During part of this ceremonial feast the door of the house must stand open, that if, in the fullness of God's providence, the hour shall have come for the advent of the Messiah—which, according to their traditions, will be in Passover time—his entrance may be unimpeded, and his welcome, symbolized by the full glass of wine left untouched on the table, shall be ever ready. A fervent prayer of thanksgiving concludes the rite, and the rest of the evening is devoted to innocent enjoyment and domestic felicity.—New York Sun.

A RELIGIOUS CEREMONY.

Curious Custom in the Tuscan Highlands. Saints' Bones—Village Lottery.

In the Tuscan Highlands at the village of Cutipliano they keep high feast on the 8th of August in memory of Saint Aurelius and Saint Irenæus, whose bones lie in state in the town church. The sacred remains exhibited on the holiday are preserved in richly gilt shrines, with glass front and sides. The skulls are bare in all their grinning hideousness; the rest of the skeletons are happily hid in rich costumes, the hands covered with silk gloves and the feet with elegant stockings.

After mass is over in the church and the people have been blessed, a priest standing at the altar holds up a reliquary containing the bone of a saint for the adoration of the crowd. One by one the men come up to the altar steps, devoutly kiss the glass that covers the precious bone, and drop a copper or two into the brass tray which is carried by an attendant. After each osculation the glass is carefully wiped with a napkin and then presented to the next in order.

The women come after the men. The faith of these is apparently more lively. They seem fully satisfied that by the act of adoration they have committed themselves to she effectual safeguard of the saint, and they turn away their faces radiant with peace and contentment. Here comes a family group, a mother leading a little girl by the hand with a baby on her arm. It is touching to see the earnestness with which the mother presses the pouting lips of her infant against the sacred charm and the joy with which she broods over him when she has thus secured his salvation; behind comes an old woman, wrinkled, infirm, alone in the world, but the weight of her years and trouble seems to grow light when she has secured the good will and intercession of the saint.

So they come in a long succession of every age and condition, but all believing and devout. Long after the service is over the worshippers remain absorbed in prayer, kneeling in different parts of the church, utterly lost to all that passes around.

After leaving the church the Tuscans repair to the village green, where a lottery is in progress, and every one, from the gray head to the toddling infant invests in a ticket. They are very superstitious about significant numbers. One man chooses eight because his cat at bone has that number of kittens, another twenty-nine because his son fell and broke his leg on that day of the month; still another fifteen because there are that number of letters in the saint's name whom they celebrate.

Every one is in good humor while the drawing takes place, and even if their numbers are unsuccessful they leave with the conviction that it will surely come upon the next feast day.—Foreign Letter.

Water Changed to Blood.

There is an animalcule, sometimes called the englena sanguinea, or the blood red englena, which multiplies so rapidly in some places that the surface of the pool soon resembles a great clot of blood, to the wonder of those who see it for the first time, and do not suspect the cause. The little creature seems to be abundant all over the known world, and Ehrenberg, a German naturalist, who discovered and named it, suggested that the first plague of Egypt, when the water was apparently changed into blood, as narrated in the Bible, may have been caused by a prodigious and miraculous increase of this little blood red infusorian.

Within very recent times an apparent change of water into blood has come to the writer's notice in the White mountains, in northern New York, and in several places in New Jersey. The phenomenon is not very rare. The creature that causes this change has itself a peculiar color habit according to its age. In early youth and middle life its color is a vivid green; in maturity and old age it assumes the crimson hue referred to, and often the same individual may be both green and red as either color reaches the surface during the body's movement, each coming and going in a wave that flows across the little creature, or a minute spot may be rosy red in the general green, or an emeral island may appear in this miniature sea of crimson.—Alfred C. Stokes, M. D., in Harper's Young People.

Cause of Decay in Steel.

It has recently been discovered by a board of naval experts at the United States navy yard, Mare's Island, Cal., that the cause of the sudden deterioration in the steel used in building the new cruisers for the government is not due to the ravages of a worm, as was supposed, but is caused by the fungus peronosporus infestans, so well known as the cause of potato rot.

With the delicate apparatus procured by the government for testing the qualities and detecting fraud in metals intended for government uses, it has been ascertained that the minute spons or suds, which float in the air, are introduced into the metallic body while in the molten state during the process of carbonization. They also find that this form of steel rot is alarmingly epidemic in much of the government material.

A large and profitable field is open to inventors and scientific men who will devise means to arrest the spores of this fungus as they are drawn into the carbonizing furnaces, or who can prevent their growth and spread either in the ingot or manufactured forms of steel.—Detroit Free Press.

Wild Silkworms of India.

For a number of years the deficiency in the production of mulberry silk has drawn the attention of sericulturists to the rearing of the wild silkworms of India, China, Japan, America and other parts, and a great many reports have been published on these wild silkworms, some of which are already bred in a state of domesticity or semi-domesticity. Many of these wild silkworms produce silk of great strength and beauty, and could all be profitably utilized if bred in their native lands on a large scale. Specimen cocoons and carded and reeled silks of about twenty different species have been sent to the Societe d'Acclimatation, and they will be exhibited in the Paris International exhibition of 1889, together with the specimens of the moths and prepared larvæ of the various species.—Public Opinion.

ENGLISH SHOPWALKERS.

The Duties of These Important Individuals.

WATCHING SALESMEN AND CUSTOMERS.

Keeping a Customer at the Counter.—Cantankerous Buyers.

It would appear that the draper has always been a convenient individual to make a joke, and the shopwalker especially has come in for a huge share of the attention of many writers. Whether it is because the duties of this individual make it necessary for him to be a model of cleanliness and politeness, or whether it is because he occupies such a conspicuous position that he receives so much attention, it is hard to say; but certainly in all concerns of any magnitude the shopwalker plays a very important part, and to him is intrusted the carrying out of the rules of the establishment. In some houses, where the business is not large enough to keep shopwalkers and buyers, it is usual for the latter to undertake the duties of shopwalker and buyer; but in the largest houses the buyers have sufficient buying and marking to do to employ their whole time, and then the shopwalker's duties are strictly confined to one routine.

As a rule he is the one to open the shop and see that the "squadders" are all in their various departments at the proper time and that the dusting of the various departments is properly attended to. After an interval for breakfast the shopwalker is found "on the boards," where he will remain all day, with the exception of the interval for meals. In a large concern it requires all the tact and sagacity of the shopwalker to see that each customer is properly served, and there is very little time for him to stand at the door and bow to all the carriages as his compeer did in Queen Anne's time. A clever shopwalker is always on the alert to take up "scraps," and in very many instances he is successful in making a sale where an assistant has failed to do so. And this is often not because of the ability of the assistant, but for the reason of an additional argument in favor of the purchase. During the busy part of the day it requires no little amount of energy on the part of the shopwalker to see that the counters are kept clear, as he knows that it is utterly impossible for customers to be satisfactorily served when the counters are in a muddle.

An important part of his duties, too, is to see that the right assistants serve the most important customers. By long experience the shopwalker soon finds out which are the "tabs" among his customers, and these are handed over to the cleverest of his assistants, some of whom are capable of encountering the vilest "tabs" that come into a shop. As a rule customers know pretty well what they want, but in exceptional cases there are people who enter drapery shops whose minds have to be made up for them, and it requires no little amount of tact to deal with such individuals without getting the "swap." But to their credit be it said, there are saleswomen and salesmen in the drapery trade who are capable of making a sale to the most cantankerous individual, and that not by any set method, but by treating his customers according to their several weaknesses, in something the same manner as Sam Slick treated his horses—by "soothing the fractious ones, encouraging the timid ones and lathering the sulky ones like blazes."

The last method will hardly commend itself to most people, but it often happens that it is necessary to speak very sharply to some customers before they can be got to make up their minds. And when the assistant has used every effort without avail, the word is passed "sign," and this brings the shopwalker to the fore, and then both try their best, and it is almost certain that the sale will be effected. Tales of dodges of shopwalkers with "tabs" are numerous. One very common practice in selling dress fabrics is to put a piece each on four or five chairs in a casual manner, as if to show them to the best advantage, and to barricade the customer so that she can't very well bolt without making a purchase. Another very common practice, and which is frequently successful, is to put aside the articles there is a difficulty in selling, and show something else, returning to the first article at a convenient time.—Warehousemen and Drapers' Journal.

The Scandinavian Way.

There is an American custom that the Swedes do not seem to take to very kindly. This is the custom of "treating." The Swede is too thrifty to find delight in paying over and over again for "booze" which some else will have the benefit—or curse—of. "No," says a gentleman, who has lived in a section of Minnesota thickly populated with Scandinavians, "the average Swede or Norwegian never stands treat like an American. They have, however, what we Americans, living among them, used to call a 'Swede treat,' that is, every man pays for his own drink. A dozen of them will come up to the bar together and drink in unison, and with the best of feeling prevailing all around, but when it comes to settling every one of them goes to the bottom of his pocket for the price of the liquor he has personally absorbed. That's a 'Swede treat.'"—Pioneer Press "Listener."

An Inaudible Laugh.

In one of his letters to the beautiful Theodosia, Aaron Burr implored his daughter to cultivate an inaudible laugh, and that is precisely what fashionable women are doing in Chicago. The training is individual, and may be pursued to suit the face, features and fancy of the anti-laugher, who, mirror in hand, studies her glass continually. If the chin is pretty in contour and modeling and teeth white, the pupil must learn to laugh with her lips, but wear a rigid brow and steady eyes. Are the teeth unsightly, then she will have a woful time, for the mouth must be kept closed, and how to laugh with the eyes and not wrinkle the face is a task. Handbooks and teachers of the art of expression tell the students to train the eyes to smile, and caution them against the habit of tightly closing the eyes when a pleasing sensation is felt, a habit which prematurely wrinkles the lower lids and works crow's feet about the corners of the eyes.—Chicago Inter Ocean.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 6 ..... 1891.

At Riverside a length of fourteen miles of canal is to be cemented at large expense in order that none of the precious water may be lost by percolation. Yet in many places where irrigation would accomplish as much as at Riverside rivers of water are allowed to flow unused to the sea. What is lacking in this world is not opportunity to create wealth, but the energy and intelligence to seize upon the advantages at every hand.

The letter of the Government to Minister Egan upon the Chilean outrage has the ring that ought to characterize all papers issued in protection of the rights of citizens. We will command respect abroad in the proportion that we show a determination to make good the claim that an American shall be protected in right doing wherever he resides. The refusal of Chile to make inquiry and reparation complicates matters, and may result in a call for Congress to assemble

Michael Davitt is believed to be the man upon whom the Irish home rule party can unite as a leader, provided he will consent to adopt a conciliatory policy, but there are signs that he will not attempt to placate the minority, but will throw all his weight to the majority side. In that event the followers of Parnell will make it warm for him, and the whole movement for home rule may end in a Kilkenny fight on a grand scale. Conservatism and moderation are the things most needed at this juncture, but they seem to be sadly lacking in the make-up of some of the Irish members of the home rule party.

If McKinley was in earnest, he was laboring under mental aberration, when, in a recent speech in Ohio, he declared that by the tariff we tax the property of other nations than our own—that is, we tax the property of nations seeking a market in our own. This is simply ridiculous. The consumer bears the tax invariably. If Mr. McKinley insists upon his position, then how will he answer the question involved in the tax levied upon the people at home, to raise a bounty in order to involve a tariff tax upon certain products? Is that a process of taxing the property of others? The bounty on sugar adds more than a third to the purchasing power of every dollar spent for sugar. The bounty is raised to enable sugar to come in freed from former burdens. But this also benefits the foreign grower of sugar about four times, in dollars, more than it does our own people. If then, the sugar tariff tax were restored, and the purchasing power of a dollar spent for sugar lessened, as it would be, how could it be claimed that the foreigner paid the tariff tax?

Mr. A. S. Bernard has spent some time in San Francisco for the purpose of collecting information regarding manufacturing industries for the especial use of the Senate Finance Committee Mr. Bernard says that a number of industries that might be expected to do well are languishing badly. He mentions the manufacture of textile fabrics as one branch in which little or nothing is being done. San Francisco has plenty of native wool and is the nearest port to Australia, the raw material is shipped East and woolen goods of all kinds imported. Mr. Bernard is inclined to think that the principal trouble is due to the high cost of fuel and water and high rates of taxation and interest, rather than to any difference in the cost of labor in California and New England. The great drawback to the growth of the State and City is the inability to afford new-comers steady employment. Orchards give employment at good wages a few months in the year but are hardly likely to attract laborers who are accustomed to employment the year around. Agriculture in all branches is a better paying industry in California than in any other State in the Union, but after all it is but one of many branches of industry. It gives employment to a smaller number of people in proportion to the value of its products than any branch of manufactures. With especial advantage in the way of climate it is somewhat surprising that we should send our wool to New England to be made into cloth for ourselves to wear. The greater cost of fuel is an item which we cannot at present reduce. An excessive tax rate, combined with higher interest than prevails in the East are causes which may be removed.

WHAT IS YOUR SON TO BE

A FIELD OFFERED BY THE GROWING ELECTRIC BUSINESS.

The Advance in Electricity Has Been So Rapid That It Has Progressed Faster Than the Intelligence Necessary to Handle It—Good Wages Paid.

Two men were sitting face to face between the car tracks on Park row the other day. It seemed to be a dangerous position, for they could not follow their work and at the same time keep their eyes on the rattling teams on either hand. They had to keep their elbows in, too, or the cars would bump them. They were seated at a manhole, testing cables of wire which were in the subway beneath. Each had the end of a cable in hand and a portable galvanometer—a square box about the size of a cigar box—in front of him.

But a few years ago the man engaged in connecting wires in this way touched the tip of each wire in turn to the tip of his tongue. If there was a current running through the wire he felt a little pricking and a sour taste. He did this the whole day through, and was none the worse for receiving so many slight electric shocks and tasting so much copper.

It was a very primitive test, but a very good one, and old wire testers still use it when in a hurry. But soon a galvanometer was made, which not only finds the current but gives some idea of its strength. The rapid way in which invention has been piled upon invention in the electrical world is marvelous, and it seems surprising that a sufficient number of workmen of sufficient intelligence should be found in such a hurry to practically put these inventions into use.

A question upon this very point was put to a well known electrician who happened to saunter by the two men at work.

BAD WORK.

"It is only surprising in a measure," he said. "As a matter of fact, the business has grown much faster than the intelligence necessary to handle it, and many accidents are due to that fact. The electric light people at first had to rely very largely on the workmen engaged by the telegraph companies, and both had to draft in a large number of new men and train them to the work. Any man with a little knowledge of mechanics and the handling of tools soon makes a good lineman. There is no great skill required, except in care that the wire does not become abraded in handling, while the good wages paid for the work—seventy-five dollars a month—are a great inducement. But the business has undoubtedly suffered in its rapid progress for the want of skilled men, and the market is by no means overstocked yet. Only the other day one of the New York companies had to send to the New England Cable company to borrow men to make joints in city lines.

"Some of the underground work, too, has been badly done, but much of this has been quite as much due to keen competition and the proverbial economy of the unscientific stockholders. When it comes to buying wire, costing from $1,400 to $1,500 a mile, the stockholder has a lot to say about it, and cheap wire is too often a result. One of the electric light companies runs an alternating current, and it now begins to find all over the country, that its wires are already becoming faulty. They cannot stand the strain.

CHANCE FOR YOUNG MEN.

"One of the things absorbing the attention of electric men today is to find an insulator which will stand heavy alternating currents. So the trouble has been as much a matter of cheap material as unskilled labor."

"Have the workmen a union yet?"

"No, not yet. There is an association called the Society of Electrical Engineers."

"And where do the engineers and executive men come from?"

"A good many of the heads of departments have their training at the various schools of technology, such as the Stevens institute, Cornell university, the Massachusetts School of Technology. Indeed, nearly all the universities have classes in electricity now, and they supply a good deal of the talent for the business.

"These young fellows from the schools of technology have started in the blacksmith shop and worked right up, and the only thing about electrical matters they have no knowledge of is the business end of it. They easily find positions at from $60 to $100 a month at the start, and readily get more according to the ability they display.

"It is a great business for a man to get into, whether he is well educated or not. There is such an enormous field for the application of electric power outside of the electric light. See how fast the electric street cars have grown throughout the country! Then there are the other almost innumerable applications of the force which will soon be in demand. No, sir, the skilled workman who goes into the electric business, of whatever grade he may be, need feel no fears of his labor market being overcrowded."—New York Advertiser.

Comfortable Fishing.

An enthusiastic fisherman in Connecticut enjoys the sport without sacrificing any of his home comforts. His residence is on the Willimantic river. From a back window he has strung a wire across to the top of a tree. Just over a very good "fishing hole" he has blocked the wire, and with a carrier and a reel he slides his baited hook, sinker and line down the wire to the block. The contact releases the reel, and as it unwinds the baited hook drops into the water and "fishing" begins. Sitting at home he can feel the nibbles and bites, and a quick motion secures his prey and pulls it along the wire to the house.—Philadelphia Ledger.

Fossil Flour.

A deposit of what is known as "fossil flour" has been recently discovered in Maine which will resist the action of acids, alkalies and oils and is a remarkable nonconductor of heat. It will be used in the manufacture of rubber goods. It contains 95 per cent. of pure silica, and when mined it comes out as a fine powder.—New York Times.

A Stay-at-Home.

Mr. Frederick Hardwick, one of South Quincy's well known citizens, is away on a brief trip, and what is quite remarkable is that this is the first time since he has been married (seventeen years) that he has been away from his wife over night.—Quincy (Mass.) Ledger.

His Way.

An incident that is narrated of General McClellan sheds light on the question so often asked Why did his soldiers love him so dearly?

When the Army of the Potomac left Harrison Landing it marched to Newport News, along the north bank of the James river. The advance division began its march early in the morning of Aug. 15, but the rear division did not move out of camp until 4 o'clock in the afternoon of the same day.

Just at dusk a creek was reached. It must be crossed, according to southern custom, by fording or by a single log by the roadside. The soldiers, disliking to fill their shoes with water, were trying to cross on this single log, which of course caused an obstruction to those behind, and really put the rear of the army in danger.

Soon several officers rode up and took in the situation. There was need of more haste. One of the officers called out:

"Wade right through, my men, wade right through."

Some surly fellow from the ranks growled out:

"Wade through yourself, and see how you like it."

No sooner had he spoken than the officer dismounted and waded through the creek. It was then discovered that the officer was General George B. McClellan.

The soldiers gave him a hearty cheer, plunged into the creek, and afterward the point was passed more rapidly four abreast.

The general might have reprimanded the soldier—indeed, he might have had him arrested and dealt with severely. But under the circumstances he did just the right thing—he went where he asked his men to go, and his men were glad to go where he led.—Youth's Companion.

All but One.

A shipload of fine horses was consigned from Calcutta to Bombay, under the charge of a very honest but somewhat dull agent in the employ of an East India company. While the horses were being landed at the ship, they managed to break away from the men in charge, and ran like wild animals through the the city.

The agent caught one of them, and, mounting him, gave chase. After several hours of exciting work, with the help of his men, he had captured all but one of the horses, as he counted them.

Finally he made his reluctant way to the superintendent's office to give an account of the matter. The superintendent came to the door and listened to the story:

"And you say there were 124 horses in, and you have eighty of them in the company's stables and forty-three back in the steamer temporarily?"

"Yes, sir, all safe but one, and we cannot find him anywhere."

"What is that horse you are riding? Have you counted him?" asked the superintendent.

"Well, I am an ass? Of course this is one of 'em!" And the agent rode off in disgust, while the superintendent roared with laughter.—London Tit-Bits.

Superstitious Signs.

Two well known and energetic Detroit merchants, who, though rivals in business, are good friends and fond of each other's society, were coming down town one morning and the conversation turned upon popular superstitions, when one of them stepped off the sidewalk to avoid passing under a ladder.

"What did you do that for?" asked the one who walked right along under it.

"I don't know exactly," replied the other doubtfully.

"Superstitious, I suppose."

"I suppose so."

"Well," banteringly, "I'm not that kind. I don't believe in signs and what they express."

"No kind?" with a faint smile.

"Nary a sign," with confidence.

"I thought so."

"Why did you say that?"

"Because I think so, that's why. And so would any other man who read that great big sign you've got up over your store inscribed, 'The Best Goods in Town for the Least Money.'"

"Oh!" laughed the other one, and he took him in behind the first Indian they met and gave him a fine cigar as a brain tonic.—Detroit Free Press.

How, Where and When Accidents Occur.

To the question as to when, where, and how accidents occur, the only general answer that can be given is: When they are least expected. The commercial traveler who insures because he is exposed to danger while on the rail draws indemnity for an injury received while winding a clock. The dentist who endeavors to protect himself against possible personal injury while using his tools is disabled by a cinder in his eye. It is to be noted, however, that more accidents in proportion to population occur in the south, the southwest and the west than in the northern, the middle and the eastern states. The older and more closely settled portions of the country are the safer ones. As to the times and seasons, midwinter, with its icy sidewalks, and midsummer, with its great variety of outdoor occupations, are especially prolific of accidents.—James R. Pitcher in Forum.

Sawfishes.

Sawfishes belong to the order of rays, although their bodies have the shape of ordinary fishes. They swim wholly with their tails, and the long weapons which adorn their noses are merely prolongations of the snout, armed on either side with teeth in sockets and covered with rough skin of great toughness. With this formidable instrument they attack their prey, tearing pieces of flesh from its body or ripping open the abdomen to feed upon the intestines of the victim. There is something positively abnormal about all these creatures called rays. They suggest the notion of fishes antediluvian, and it is not surprising to find many large and extinct species among the fossils of vanished epochs.—Interview in Washington Star.

We are quite used to circuses that advertise investments from $1,000,000 to $3,000,000 but there is another side to to the picture. In the small railroad towns of New Jersey a circus now making one day stands uses only two cars for its outfit and exhibits only one horse and one rider in the ring.

Few Americans have left richer legacies than James Russell Lowell, though many have left more cash. The valuation of his worldly estate is said to be only $47,000.

DIDN'T KNOW THE MAN.

Two Strangers Ran Up Against Moses Frost and Were Surprised.

Moses Frost stood 6 feet 4 in his socks, and was called "the best man on the river"—a phrase that expressed admiration for his physical, not his moral, qualities. He was, nevertheless, generous, truthful, brave and altogether a fine specimen of the wilder Canadian backwoodsman. The title implied that he had successfully "tackled" all the famous "bullies" of the Upper Ottawa, even the terrible Joe Maufraud, thirty years ago champion of "the French." Moses, in a squeaky, shrill, slow, small treble, that came absurdly from so big a man, used to tell me his experiences.

"Ther' is some use in havin the reputation of bein a purty good man," he squeaked modestly. "I reckon ther' haint been no peaceabler man on the river than me sinst they give up tryin to whale me, 'most three year back. Last time I fit was because two men that never seen me before didn't know me when they did see me."

"Tell me about it, Moses," said I.

"Well, surveyor, it was about New Year's, the time me'n Lilly Ann got hitched. My woman was dead set on seein the fashions down to Portage du Fort. So we started two days after the shindig for to have a weddin trip. She said that was the right way. We stopped at Rattray's instead of Paddy Scully's place—the best ther' was goin wasn't too good for Lilly Ann them days.

"Well, Lilly Ann was mighty took up with the circus picters on Rattray's barn. I'd 'a' took her in, too, on'y it was gone more'n four months."

"But what about your last fight, Moses?"

"Yas—yas—I was disrememberin! Well, it was when me'n Lilly Ann was goin back home. You mind the bridge before you come to the Calumet?"

"The high bridge over Brabyon's creek?"

"Yas, that's it. I guess it's maybe the length of your chain down to the creek in summer. That time the holler was drifted half full of snow. Well, there was the two of 'em on the bridge—one of 'em looked like a good man. Says he to me: 'We're wantin a ride!'

"'I can't give ye no ride,' says I. 'Ther haint room, boys, for I've got the woman, don't you see?'

"With that the big one runs to the head of my pony. I didn't want to get out and hurt the man, but says Lilly Ann, 'Be you goin to stand that, Moses? If you be, I'll get out and whale 'em myself.' She'd 'a' done it, too, surveyor. Mebby you never heard what Lilly Ann done to Joe Maufraud that time he"——

"You'll tell me that story another time, Moses. What did the two men do?"

"Oh, yas. Well, I jumped out and the other one come up, squarin off. He fell easy. Then the big one runs in. Mebby you never see a bull moose comin at you lickety pelt?"

"The fellow ran at you head down, eh?"

"Jesseggsackly. Well, I stood to one side sudden, and give him a trip. Then I takes him by the trowsis and the back of his neck and pitches him over the railin.

"With that Lilly Ann says, 'You're purty good yet, Moses,' and she jumps out, laughing. There we stood and looked over the bridge right down."

"Was the man hurt?"

"Hurted! How could he be hurted, an him fell into seventy feet of snow drifted in the gully? He did have some considible trouble gettin footin to lift out his head. Then he looks up and says he, 'Who in thunder be you, anyhow?'

"'He's Moses Frost,' says Lilly Ann.

"'Murderation,' says he. 'If we'd knowed that we wouldn't have wanted no ride.'"—Youth's Companion.

Sang little CONTRYS has been made a work for us by Anna Page, Austin, Texas, and Ina Benn, Toledo, Ohio. See the Others are doing as well. Why not you? Some earn over $5 to $10 a month. You can do the work at home wherever you are. Even beginners are really earning from 75c to $1 a day. All ages. We show you how and start you. Can work in spare time or all the time, big money for work well done. Info free. Address H. Hallett & Co., Box 420, Portland, Maine.

GOLD WARRANTED FREE, OUR NEW 3-5 Solid Gold Watch FREE, Worth $100.00, one 3-5 watch in the world. Perfect timekeeper. Warranted heavy, SOLID GOLD hunting cases. Both ladies' and gents' sizes, with works and cases of equal value. ONE PERSON in each locality can secure one free, together with our large and valuable line of Household Samples. These samples, as well as the watch, are free. All the work you need do is to show what we send you to those who call—your friends and neighbors and those about you—that always results in valuable trade for us, which holds for years when once started, and this we are repaid. We pay all express, freight, etc. After you know all, if you would like to go to work for us, you can earn from $20 to $50 per week and upwards. Address, Stinson & Co., Box 819, Portland, Maine.

THE OUTSIDE OF THE NEW STORE.

People who pass for the first time the new store of Weinstock, Lubin, & Co., Sacramento, are apt to pause and look. Its great size and novel architecture make it quite different from the ordinary run of business structures. It stands on the corner of Fourth and K streets, with a frontage of a hundred and forty feet and depth of a hundred and sixty feet. The general design is massive and bold, with abundant decoration in artistic raised scrolls. A noticeable feature of the design is the great number and variety of windows. Some are very narrow and slim, like those seen in the pictures of old castles, while others are broad and low, and four or five times as large as ordinary windows. The central tower contains a projecting balcony, from which an excellent view of the city and surrounding country may be had.

The first story of the building in front rests on a series of arches eighteen feet wide and twenty feet high, the base of the arches being supported on massive iron columns. The plate-glass windows for the display of goods set back ten feet from the arches, permitting of an arcade walk between them and the main sidewalk. The chief entrance to the building is under the central tower. It is thirty-five feet high, and handsomely ornamented.

The house takes special pains with its show-window displays. Something new and interesting may always be seen in them. Some of the windows have floors fitted with revolving disc, so that goods placed upon them are constantly turning and passing in many directions. At present writing, in one of the windows are a dozen or more full-size wax figures of men, women, and children. They were imported from France and are very lifelike. The figures are stylishly attired in the new fashions, and as they pass and repass present a scene of much brilliancy and animation. The advantages which this house offers to customers, and they are certainly many and important, may be fully shared by those living at a distance. A handsome illustrated catalogue is issued free every Spring and Autumn. It sells goods as readily to distant buyers as the best salesmen to a customer at the counter. Why should it not? Clear in its statements, impartial and fair, replete with news,—it includes not, and above all, is complete. The finest cravat, the sensible shoe you should necessitate,—what you need and what you would like to have,—are all there in beautiful illustrations and interesting descriptions. It is a helpful book to young or old, rich or poor, and free for the asking.

If you send an order you may rest assured of getting the same goods, the styles, and same prices, as if present in Sacramento. We know of no way of increasing our trade faster than by doing our very best on every transaction.

Religious Services.

Sunday School at Lone Pine at 10 a. m.; Independence 2:00 p. m. Georges Creek, 2:30 p. m.

Rev. H. J. Winsor will preach on Sunday at Lone Pine, 10 o'clock a.m.; Georges Creek, 2:30 p. m.; Independence, 7:00 p. m.

COURT NOTES.

Geo. M. Gill, Superior Judge.

TUESDAY, November 3, 1891.

People vs. L. Baxter—Writ of habeas corpus denied and prisoner remanded.

Estate of William T. Davis, deceased—Filed petition for letters of administration.

WEDNESDAY, November 4, 1891.

Estate of William T. Davis, deceased—Register and index.

Estate of Francisco Paderes, deceased—Filed inventory and appraisement.

Ida C. Decker vs. Stephen Decker—Filed alias summons, affidavit of service, affidavit of publication and request for entry of default.

THURSDAY, November 5, 1891.

Ida C. Decker vs. Stephen Decker—Clerk's entry of default. Filed decree of divorce. Entered same.

G. Sanger of Alvord was in town yesterday.

Mining location blanks can be obtained at this office.

P. H. Mack Esq. and E. Robinson visited Lone Pine last Tuesday.

Silver is steadily going down. The latest quotation is .95¾.

The g. o. p. elephant is now being considerably "shoved" by the Cuckoo.

George Gilliam of Big Pine spent several days in town this week.

There are now three criminal cases pending before the Superior Court, all from Bishop.

Sheriff Gorman has removed from Edward street to the Swan residence on Market street.

It is said that skunks are very destructive to bees. In fact they are not desirable pets anyway.

Mrs. John C. Anton of Keeler and Mrs. Ida Decker of Lone Pine were in town yesterday.

The twenty-seventh anniversaty of the admittance of Nevada into the Union was celebrated at Reno last Saturday.

The stage to meet the southbound train now leaves Independence at 3 o'clock p. m., instead of 3:10 as formerly.

A sister of C. A. Walter of Camp Independence arrived here from Germany last week and will make her home here.

The *Daily Star* is a wide-awake little paper recently started at Visalia. The latter place will keep pace with Bakersfield or "bust."

On Wednesday Evening, November 11, Rev. H. J. Winsor will preach at Keeler. All are cordially invited to attend the service.

They had a sharp shock of earthquake up in Bridgeport last week. It may have been caused by Buck Burnside rolling down hill in Bodie.

S. P. McKnight C. E. came up from Lone Pine to-day. He has been surveying there for parties owning land under the Eastside canal.

It is reported that the proposed buyers of the Eastside canal will arrive in Carson next Tuesday and will come on immediately to Independence.

If Blaine looks anything like the picture presented in last week's *Reno Gazette* he had better not risk coming West. He would be hung on suspicion for most anything.

Head Carpenter George White of the C. and C. railroad was in town Wednesday. He has been making his annual tour along the line of the road attending to necessary repairs.

Wm. W. Yandell returned to Bishop on Wednesday from a visit at Independence with his brother, County Clerk Yandell. His mother accompanied him.

A few arrests for drunkenness were made during the week, but no complaints were lodged, and the hobos were turned loose when sober enough to navigate.

A dehorning liquid has been invented of which one bottle will dehorn 200 calves, and is much less painful to the animal than either the saw or the knife. Any man can use it.

The big plow and scraper used by the Lone Pine Canal company were brought to town on Wednesday for repairs. The work of constructing the canal is going steadily forward.

Frank Fitzgerald returned on Wednesday's train from San Francisco and went on to Lookout. He says that the difficulty with the Melrose company was satisfactorily adjusted.

District Attorney Forbes has returned from Bishop. Reports of the various criminal cases there are very meager. Sheets is said be improving, and it is certain that his wound will not be fatal.

The proposed school drama is well under way. The youngsters are rehearsing constantly and state that they will give their entertainment on Thanksgiving evening. The proceeds are to go toward the purchase of a new school organ.

In the Superior Court yesterday Ida C. Decker was granted a divorce from Stephen Decker on the ground of failure to provide. She was permitted by the Court to resume her maiden name, Ida Adams.

Inyo county, in common with the rest of the State, is blessed with abundant crops this year. There are plenty of potatoes and other vegetables, flour, and grain for feed. There will also be an abundant supply of hams and bacon. The market is kept supplied with butter, but eggs are scarce. Another thing noticeable, and one of much importance, is the supply of prunes and other dried fruits of home production. With the production of raisins, to which the natural conditions here are extremely favorable, perhaps more so than any other portion of the State, a large saving to the county will be made. It may be several years before we can ship to the outside world, but the supply of our home market will mean much to us.

W. M. Stewart is a pretty good kind of a man. The Eureka *Sentinel* says, "Well, if we must have a Republican let it be Stewart. He has voted with the Democrats about half of the time during his present term, and he has therefore been right about half of the time. There is no guarantee that any other Republican from Nevada would be right any of the time."

Following up, the Carson *Appeal* comments as follows: Stewart has always been more of a Democrat than Republican, and if the truth were known, we believe his ticket would show that he voted for Cleveland as against Harrison. Didn't he vote to confirm Lamar, the rankest rebel ever in the U. S. Senate, as well as stand in against his party colleagues on the Federal Elections bill?" Which all goes to prove that Senator Stewart has the courage to stand by his own convictions.

The Preliminary examinations of John Clarke and Val Sherman were held before Justice Dunlap at Bishop on Tuesday and Wednesday. John Clarke was held to appear before the Superior Court on a charge of assault to commit murder. The act was committed by cutting A. W. Sheets with a knife two weeks ago. He was released on $2,000 bail. Val Sherman was held for assault with a deadly weapon perpetrated upon the person of A. M. Buckley during last week. The weapon used was a pair of brass knuckles. His bail was fixed at $1,000, which was given. P. W. Forbes, District Attorney, was present and conducted the cases for the people.

A small hose house has been erected over the fire plug in the court yard and provided with a reel. The hose will be permanently attached to the plug and in case of fire can be utilized without loss of time. Independence needs a well organized fire company and a sufficient quantity of fire plugs and large hose to control any conflagration that may be started. Now, too, is the time of year when the most care is needed. The fall winds will soon be blowing, heating stoves put up and liabilities made greater. Think it over.

No less than fifty head of horses have died in the Valley this year from anthrax. A thorough investigation of the disease should be made. As it is a germ disease no doubt a remedy can be found. Incidentally, it may be mentioned that glanders is reported prevalent in San Diego and Los Angeles. This disease is fatal and should it make an appearance here the infected animals should be destroyed without delay.

Mr. H. G. Hannah, nephew of the late Judge Hannah, arrived at Independence last Monday from the State of Washington. His business here is in the interest of the heirs of the estate. It is understood that an effort will be made to rescue the ranch property from public sale because of the low price of real estate here at present. Mr. Hannah expects to remain some little time longer.

Lieutenant John P. Finley has published a bulletin announcing his relief from duty as Officer in Charge of the Pacific Coast Weather Service. Mr. Finley has performed faithful and useful service and has at all times taken a deep interest in the welfare of the Pacific Coast. He will be succeeded by R. E. Kerkam.

Posterity will never consider Chris Buckley a hog. He evidenced knowledge of the fact that he'd an elegant sufficiency when he he emigrated to Canada. If Canada returns anything on the doctrine of reciprocity the exchange will not be for port.

The committee appointed to draft by-laws and rules for the Jockey Club will meet to night. It is likely, however, that they will have to ask another week's time to report, as printed matter sent for has not yet come from Sacramento.

Dr. R. L. St. John of Hownott, Putnam county, Missouri, takes especial pleasure in recommending Chamberlain's Cough Remedy, because he knew it to be reliable. He has used it in his practice for several years, and says there is none better. It is especially valuable for colds and as a preventive and cure for croup. This most excellent medicine is for sale by

A. K. EUGLEY
Big Pine.

As a preventive and cure for croup, Chamberlain's Cough Remedy has no rival. It is, in fact, the only remedy that can always be depended upon and that is pleasant and safe to take. There is not the least danger in giving it to children, as it contains no injurious substance. For sale at 50 cents a bottle by

A. K. EUGLEY,
Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Baiser of Berkely had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Baiser is an accountant in a Fulton street commission house. Baiser's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier Journal*, Nov. 27.

We are Mr. Baiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph st.
Chicago, Ill. U. S. A.

TO ADVERTISERS

A list of 1000 newspapers divided into STATES AND SECTIONS will be sent on application—FREE.

To those who want their advertising to pay, we can offer no better medium for thorough and effective work than the various sections of our Select Local List. GEO. P. ROWELL & CO., Newspaper Advertising Bureau, 10 Spruce Street, New York.

Wiener's Cash Stores!!

FRESNO, Cal.

BRANCH STORES,

HOLT BLOCK, VISALIA.

FISH BLOCK, BAKERSFIELD

We carry an immense and well assorted stock of Gents Clothing and furnishing goods, Hats, Boots and Shoes, Notions, Drygoods, Fancy goods Ladies' Hosiery, Underwear, Etc.

Our terms of trading are STRICTLY CASH.

We positively refuse one cent of credit. We have just one price to all.

This system enables us to sell at a much lower rate than credit giving stores, who make large bad debts, and a very slight acquaintance with us will prove that our statement is correct.

Our aim is to sell standard goods at cut rates, and the fact that our reputation for LOW PRICES and for STRAIGHT FORWARD DEALING is wider than THE STATE itself, and betokens our success in this direction.

Our stock is always fresh.

BARGAINS INNUMERABLE lie on our shelves and crowd our tables

If you want reliable goods cheap, try us. We fear no trade competitors. All our goods speak louder for us than the blast of a thousand horns, because

They Are Always The Cheapest and Best.

ON APPLICATION we shall be delighted to forward our country patrons a complete bound volume containing catalogue and list of prices. We shall also gladly mail, free of charge, samples of goods if desired.

Our Country Order Department is a specialty with us, to which we devote the closest and most prompt attention.

WE WILL SERVE YOU WELL AND MAKE YOU HAPPY, so remember the address,

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

The Unprotected Neck Space.

It is ours to warn, and with warning give counsel that shall protect. Between a man's coat collar and hat brim there lies a space of neck that modern hirsute fashion has left bare—exposed to chilly winds, uncovered to cold. If collar be upturned, some help is found, but merciless draughts still play at will about one of life's centers. For beneath this exposed skin lies what anatomists call the cerebro-spinal axis—which is the center of animal as the front brain is the center of intellectual life—whence proceed the nerves that govern both heart and lungs; among others, the pneumogastric and spinal accessory. So, in place of most injudicious exposure, it would logically seem that extra effort should be made to guard this sensitive area.—William F. Hutchinson, M. D., in American Magazine.

A Cold Foot Bath.

"Three out of four colds are caught through the feet," said Dr. Titus Munson Coan in a recent lecture, "and the only sound prevention is to take a cold foot bath. Have it so cold that your bones will ache. It hardens the nerves. People troubled with cold feet will be cured in a week if they take cold foot baths."

LOVE.

Unless you can think, when the song is done,
No other is sweet in the rhythm;
Unless you can feel, when left by one,
That all men else go with him;
Unless you can know, when upraised by his breath,
That your beauty itself wants proving;
Unless you can swear—"For life, for death"—
Oh, fear to call it loving!

Unless you can muse in a crowd all day,
On the absent face that fixed you;
Unless you can love as the angels may,
With the breadth of heaven betwixt you;
Unless you can dream that his faith is fast,
Through behooving and unbehooving;
Unless you can die when the dream is past—
Oh, never call it loving!

—Mrs. Browning.

THE WEDDING BONNET.

Aunt Rhoda Hemenway was about to be married. Having never listened in her young days to a syllable of love and matrimony, now, at the age of 55, she suddenly astonished all her relatives by bidding them to her marriage with Luke Potter, a shrewd, well to do farmer, who had lived a neighbor to her all his life. "With all her property, and her set, particular ways; it can't be possible!" we each and all exclaimed in different keys, dropping our letters of invitation.

I had a special call to present myself a few days before the marriage feast, being considered in the family a favorite of Aunt Rhoda's. Though she had never been quite ready to invite me to the farmhouse on a visit, she had said plainly within the past five years to Job, her cousin on the father's side, who, if any earthly power could be said to influence Miss Hemenway in financial matters, was the one, "I shall leave a good piece of my prop'ty to Mehitable Farrar" (that is my name); I want you all to know it, so as to understand you won't get much," which was distinct if not polite, and earned for me much disfavor in the family.

Now to Cousin John. He was Bathsheba's son, Aunt Rhoda's favorite sister, who married early and went away from the homestead with her husband to settle in what was then the "far west," now a flourishing town in Illinois. Mr. Featherston had the knack of making money, and in a few years wore himself out, but had the pleasure of handing to his wife a goodly amount of stocks and bonds and some real estate. She soon following him, the property was allowed to roll up for little John, the son, who kept pace with it, running a race on his sturdy legs, to find at manhood a nice fortune awaiting him, into possession of which he came, his mind stocked by the grandmother who had the honor of bringing him up with his own importance, and a certainty that every girl he saw was after his money.

He was handsome as a picture, the aunts all declared, and his name and fame went down in the family annals carrying the idea of a being superior to nearly every other creature on this lower sphere. He was now 28. I had always heard of him since I could remember, but had never seen him. That there was a person whom I could dislike more thoroughly than this same Cousin John, I had never believed. Now it was a fact, for we had met, he arriving at the Hemenway homestead the day before the wedding.

Aunt Rhoda was to perpetrate matrimony on the first night of the New Year. It came on Tuesday, snowing, and pitilessly cold. She had allowed me that day to do little services for her, thus showing her favor, so at about 7 o'clock we were none of us astonished to hear her say: "Run, Hitty, and get my bonnet from the spare room cupboard. It's about time to put it on."

I started, glad of something to do, and ran nimbly to the great spare room, reached up on tiptoe and took down from the closet shelf the precious green box containing the wedding bonnet. Half across the room the glare of the candles flaming in their tall silver holders before the mirror of the dressing table in which they stood reflected gave my evil genius an idea.

"Try it on, Hitty; it's good luck."

Quick as thought I drew out the wedding bonnet, and threw it over my brown braids. It was a heavy affair of gray shirred silk, without the scrap of a bow to enliven it, and only one dull, stiff feather, looking for all the world like Aunt Rhoda herself, set straight in the center. And as I pulled it into place with the eager fingers of eighteen on a naughty prank, the old thing settled dismally from its own weight over my light crimps. I laughed aloud, it was so ludicrously the opposite of a festival bonnet, just as a voice struck my ear.

"Very appropriate. Don't, pray, remove it." I turned to see Cousin John in the doorway.

"Much obliged for your opinion, which was unasked," I managed to say, coolly, dashing aside the headgear, where, I did not stop to see, and turning on him. He bowed with that supercilious smile of his, and took himself off. Bursting with indignation, I set about picking up the bonnet. I could not find it. Not with dropping to my hands and knees to search the ingrain carpet could that headgear be brought to light. It was only when a direful smell of something burning struck my olfactories that it flashed upon me where it was. I flew back to the heavy claw-footed dressing table that stood "on a bias" in the corner of the room. How I moved it I never could tell. At last the bonnet was in my hand, the half feather that remained still burning smartly. At sight of it I gave a cry before I could control myself. That I had broken up the marriage I had not a doubt. I knew my aunt well enough to believe her willing to give up her greatest treasure rather than to break one of the proprieties of life. And to be married without a bonnet was, in her eyes, a custom only fit for silly little things not yet escaped from their teens. And there those wedding candles blinked and flared merrily, as if glad they had done it.

To reach the village milliner, Miss Slack, was my only hope. I knew where her little shop was, having been dispatched there the day previous for some extra lutestring ribbon to tie up the pieces of cake. No time to lose. Steps sound along the entry. Even now I may be late!

"Something's burning!" exclaimed a voice, just as I escaped, wedding bonnet in hand, through an opposite door and down a dark, little used passage. It led to the back yard, I knew, and out on the flat stone that served as a step. I only stopped to gather up my long, pretty nun's veiling train before plunging into the snow, then quite a respectable depth. The snow whirled into my face, nearly blinding me. It seemed hours before I could place my hand on the brass knocker adorning the door of Miss Slack's little shop. At last it clanged so sharply as to bring almost immediately a frowsy little girl, who retreated behind a tall pewter candlestick, with terror in every feature.

"I want to see Miss Slack," I cried, "at once," pushing the child aside to hurry into the little entry and shake off the damp snow.

"You can't," said the girl, staring at me and the wedding bonnet, "she's gone."

"Gone?" I cried. "Where?"

"To the weddin'," said the girl. "She went early so's to see the folks, an' get a good place."

I sank down on the lowest stair, bonnet and all, but immediately jumped up.

"See here, little girl," I cried, "I want a gray feather to put on this bonnet. Something has happened to it. and"——

"I know," said the girl, leaning around her candlestick, and answering critically. "It's got burnt. I smell it."

"Well, get another one for me," I cried, impatiently, "as quick as you can, and don't stand there talking. It's gray—dark gray. Hurry up, you must know where she keeps them."

"She hain't got any," said the girl, examining the feather, "not that shade. Hers are all black and white, besides she's got a green one, yes, an' a yellow, but she hain't got a gray one."

"Take me to her box of feathers, and I will look for myself," I cried, turning to the shop door. "I will pay her tomorrow; I'm Hitty Farrar, Miss Hemenway's niece. It's all right. Now open the door." I laid my hand on the knob as I spoke.

"I can't," said the girl. "It's locked and she's took the key. She always does when she goes out, afraid somebody'll get in."

Every particle of blood seemed to desert me at this juncture, and for a moment I felt as if sinking to the cellar. The first thing that brought me to was hearing the girl say: "Ain't you going? I want to lock the door." And I found myself out in the snow again.

A dark object stood in the road, encircled in whirling snow mists. Out of it came: "Cousin Hitty, get into my chaise," and a man sprang out. It was Cousin John.

"Not for a thousand worlds!" I cried, striking out for home and wrapping my soggy dress around the poor bonnet.

"You silly child," cried my cousin. And without further preamble he took me in his arms, hurried out to the carriage and put me therein, the wedding bonnet meanwhile slipping to the ground. "Where is the blasted thing?" cried Cousin John, poking in the snow a bit.

Evidently the horse was displeased with her master for taking her out from a comfortable nap. At any rate, she was determined to start without waiting for his word. And knowing she was naughty and would be whipped for it, she decided to go the whole figure and have some fun out of it. Accordingly, off she bounded with a snort, leaving Cousin John and the wedding bonnet a long distance back in the snow covered road.

My indignation now gave place to a certainty that I should be dashed to pieces. I could hear Cousin John shouting to the creature in a voice that I should have admired had the circumstances been different. I could then see that he was rushing like lightning after us, but no human power now seemed able to stop the beast, whose blood was up, particularly as the reins had been thrown up over her back by the impetuous hand of her master as he sprang out. Yet, knowing that the time should have been spent in prayer, I laughed till the tears rolled down my cheeks and my overwrought nerves had a little calmed themselves.

And now the very thing I thought not possible had happened. The carriage came to a sudden stop. How, I didn't know then; afterward I realized the explanation that the reins had caught in the mare's foot, throwing her against a friendly tree. Here Cousin John rushed up.

"You poor child!" he cried. After seeing that the horse was all right, and possessing himself of the reins, he looked into the carriage. "I should think you could laugh!" he exclaimed, indignantly.

"I couldn't help it," I cried, wiping my eyes. "Have you got the bonnet?"

"The deuce take the thing! Beg pardon, cousin. No, I haven't go it, nor I shan't get it, either." With that he ensconced himself by my side, turned, and drove off toward home.

"Are you wet?" he asked, after a moment's pause, in which he ought have been arrested for fast driving.

"Not much," I said, trying to wring the soft nun's veiling out of my side of the carriage.

"And not a thing on your head," he said, whipping up the horse. "Crazy child, to come out so! I ought to have stopped you instead of getting my horse to follow you."

"How did you know it was burned?" I asked.

"I heard you give a cry, and I turned back, then I saw for myself"——

"And now she never will be married," I cried tragically, "and I have ruined all her plans for life."

"Nonsense!" Cousin John exploded. "Ruined your own, more likely. She'll cut you off from her will before she sleeps to-night. Don't worry about her; she's probably Mrs. Luke Potter by this time—heaven help him."

This was comfort, indeed, and I basked in it, losing sight of what it meant for me to be cut off from Aunt Rhoda's will. No father, no mother, living with Uncle Abiel, who was waiting patiently for that will to pay him up. I could soon see myself, like thousands of other girls, out in the world earning my own support. But I had not ruined Aunt Rhoda's happiness.

"Cousin Hitty!" was it Cousin John's voice? It rounded so low, and he seemed at a loss for words. I turned in the chaise and looked at him through the storm.

"We're almost home; I want to say one thing"——

"Well?"

"I want to say"——

"Well, if you are going to scold me, pray wait," I cried, "I shall have enough of that soon."

"I wasn't going to scold you," said Cousin John, "I was only going to say, supposing you and I have a wedding of our own. Then we can look after your bonnet."

"What do you mean?" And then I laughed.

"I mean," he said, with extra dignity, "that I ask you to marry me. Will you?"

"Goodness—no!" I cried, and reaching the hitching post by Aunt Rhoda's door, I sprang out, before he could remonstrate.

I peeped into the best room as I stole under the window. Yes, Cousin John was right; Aunt Rhoda was Mrs. Luke Potter, there was no doubt, judging from the congratulations now being poured out before the stiff couple standing in front of the fireplace, and I rushed into the house and up the back stairs, glad of that. At the head stood Aunt Matilda Smith.

"Well, Hitty, I must say I shouldn't want to be in your shoes."

"What's the matter?" I cried, a little crossly, for I was wet and shivering to the bone, and the excitement was over.

"Matter? do hear the girl!" cried Aunt Matilda. At that, quite a little company of relatives gathered around me.

"Have the goodness aunt, to let me pass by," I cried.

"Hitty, is that Hitty?" called a voice at the foot of the stairs. "Her Aunt Rhoda wants to see her down here at once."

At this, all the aunts and cousins opened ranks and considerately allowed me to pass through, and watched me descend with mingled satisfaction and curiosity, hurrying after to be at the denouement. I nearly pitched my length down the stiff, old fashioned stairs, but determined to keep a brave front, shut my lips firmly together, hoping no one would hear my teeth chatter. At the foot some one whispered: "Don't be afraid." I glanced up; it was Cousin John.

I don't know why, but I gave him back a look that made the color leap to his cheek that was quite white before, and he said just as truly with his eyes as if he had spoken: "I will never forsake you." Something in my throat choked me; I was conscious that I was half frozen, but even that seemed warm in comparison to the chilling looks I received on all sides; the worst of all I could see as I entered the best room was the expression on the face of Uncle Abiel.

The next moment I was before the bride and groom. The buzz of conversation stopped instantly. It was as still as death throughout the room.

"Mehitable," said Mrs. Luke Potter, in harsh tones, "you thought best to take my wedding night to play pranks with what was given to you in trust. Now I take the same time to say before every one present that you shall never touch a penny of mine. You may start out of this house as soon as you find it convenient. That's all; now go."

I looked at my Uncle Abiel. He was so angry he turned his face away. In an effort to be proud and defy them all, I opened my mouth, but the chill had gained on me so that I set up a violent chattering instead, unable to utter a word. Some one took my cold hand and drew it within his arm.

"Instead of going, we have a word to say," declared Cousin John, at his tallest, and drawing the roomful within his glance, "and will use no hesitancy in airing it now. We are betrothed, Aunt Rhoda," he announced, turning his handsome head toward Mrs. Potter, "and, begging your pardon, don't in the least care for your old money. Now, then, all come on with your congratulations."

I felt a warning pinch on my cold fingers to hold in check the astonishment in my eyes at hearing a bretothal announced that had never taken place. And then such a wealth of peace and strength came into my heart, that I was happy just to be near him. I was in a new world of love and protection, and I forgot to shiver in the cold, while I smiled and blushed in the right places as the relatives trooped around us with their astonished congratulations. Uncle Abiel came as soon as he could extricate himself from his corner.

"Well, young man," he cried excitedly, "you've done well. In short time, too—hey?"

"That's so," said Cousin John, giving the brown hand a hearty shake. (He told me afterward he ached to wring his neck.) "But long enough to know my own mind."

The first moment I could I drew Cousin John out into a corner of the old hall, at least three yards away from any sharp ear.

"Oh, how could you?" I cried. "We've never been engaged. I told you, 'No.'"

"Can't help it; you're eyes said 'Yes.' There's no stopping it now, Hitty. We'll have a wedding bonnet of our own."—Providence Journal.

Grizzly and Buffalo.

When there were buffalo on the plains the Manitoba grizzlies were great hunters of them. When a grizzly and a buffalo met there was always sure to be a contest, but it seldom lasted long, and the buffalo was usually the victim. The buffalo would charge upon the bear, which awaited the onset of his foe erect on his haunches. As the buffalo dashed upon him the bear threw himself aside, and with a blow as quick as lightning with one of his fore paws seldom failed to break his antagonist's neck. A grizzly bear has been known to engage in quick succession four and even five big buffalo bulls, and to kill every one of them. It frequently happened however, that some younger and more active bull than his companions succeeded in evading the fatal blow of the grizzly's terrible fore paw long enough to give in turn a fatal thrust with his horn in the bear's side, puncturing the vitals, and making of the contest a mutual slaughter.—New York Sun.

Educating Arabian Girls.

"Educate a girl!" exclaimed a Mohammedan to Dr. Jessup, a missionary among the Arabs, who was urging him to place one of his daughters in a girls' school in Tripoli. "Educate a girl! You might as well try to educate a cat!" Several aristocratic Mohammedan gentlemen of Beirut were induced a few years ago to place their daughters in one of the Protestant schools there, and one of them remarked: "Would you believe it? I heard one of the girls read the other day, and she actually asked a question about the construction of a noun preceded by a preposition! I never heard the like of it! The things do distinguish and understand what they read after all!" The other replied: "Mashallah! Mashallah! The will of God be done!"—St. Louis Republican.

The Savior Not a Blonde.

A writer well known in Pittsburg some years ago, Albert Rhodes, once pointed out the error of the painters that persisted in giving Christ blue eyes and golden hair. He demonstrated that a blonde in the race of Syrian Jews was unknown. Despite all that has been said and written to correct the error, makers of Sunday school books display equal inconsistency. Of fourteen books designed for boys and girls of 12 or 14, picked up at random from a collection well advertised, not one revealed the grain of human nature as we find it. The good were too good, the bad somehow excited sympathy, and yet we flatter ourselves that we are improving so much in this matter.—Pittsburg Bulletin.

First Idea of Our Flag.

The flag of the United States under which Andred Jackson and Winfield Scott fought in the war of 1812 consisted of fifteen stripes and fifteen stars. The original idea was to add both a star and a stripe for every new state; but in 1818 a New York congressman named Wendover suggested that at the rate the United States were growing soon the tallest pine tree in Maine would not make a mast tall enough to hoist the flag upon.—Chicago News.

Vanity and jealousy are the two weakest passions in the human heart, and, strange to tell, they are the most common.—Uncle Esek.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

It is the judgment of all the summer tourists that there's no place exactly like home.

SERIOUS DANGER

Threatens every man, woman or child living in a region of country where fever and ague is prevalent, since the germs of malarial disease are inhaled from the air and are swallowed from the water of such a region. Medicinal safeguard is absolutely necessary to nullify this danger. As a means of fortifying and acclimating the system so as to be able to resist the malarial poison, Hostetter's Stomach Bitters is incomparably the best and the most popular. Irregularities of the stomach, liver and bowels encourage malaria; but these are speedily rectified by the Bitters. The functions of digestion and secretion are assisted by its use, and a vigorous as well as regular condition of the system promoted by it. Constitution and physique are thus defended against the inroads of malaria by this matchless preventive, which is also a certain and thorough remedy in the worst cases of intermittent and remittent fevers.

What is Monopoly? A corporation in which other fellows hold all the stock.

CAUTION.

Imitations have been foisted upon the market so closely resembling ALLCOCK'S POROUS PLASTERS in general appearance as to be well calculated to deceive. It is, however, in general appearance only that they compare with Allcock's, for the are worse than worthless, inasmuch as they contain deleterous ingredients which are apt to cause serious injury. Remember that ALLCOCK'S are the only genuine porous plasters—the best external remedy ever known; and when purchasing plasters do not only ask for but see that you get ALLCOCK'S POROUS PLASTERS.

ALLCOCK'S CORN AND BUNION SHIELDS effect quick and certain relief.

A "promising man" is not always the one on whom the most reliance can be placed.

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

A WOMAN'S COMPLAINT.

She has no use for Housekeeping Young Men.

THEY PREVENT THE GIRLS MARRYING.

The Effiminate Young Men Who Wash Dishes and Cook.

An elderly country woman, who has chaperoned two charming nieces through the dangers and delights of a gay New York season, claims to have discovered one of the gravest evils menacing modern society, and gave her views at elaborate length the other day. "The ladylike young man is at the bottom of the mischief," she remarked animatedly, "and so long as he is allowed to flourish of course girls can't and won't marry. Who do I mean? Why, that hybrid housekeeping creature.

"Our first encounter with the new fangled specimen was when cards came asking us to tea at Mr. V——'s rooms. I hesitated about accepting, but yielded and went. Still, I felt for the poor fellow's natural perplexities, and bought a nice bag of jumbles, some lump sugar, and took a few extra spoons along to help him out in a tight place.

"Well, bless your heart, when a neat, white capped maid answered the electric bell, and pushing aside long shadow curtains ushered us into an elegant parlor, I began making every apology, being sure we had stumbled into the wrong place. But, no; here came our host, bowing and smiling, begging us to take off our wraps, and excusing himself for preoccupation—just as I have done a thousand times at home—by saying the kettle refused to boil. Well, while he talked to the girls I began looking round for some place to hide those odious cakes and heard the spoons rattling in my pocket.

"With each survey I took that paper bag grew bigger and the silver jingled under the folds of my dress. But the polished mirrors, bowls of roses, embroidered scarfs and charmingly decorated walls were as nothing to a scene over in the left hand corner next the fireplace.

"There sat the tea table, in all its glory, with Mr. V—— hovering round it like a protecting spirit. He had a lady ostensibly presiding, but no old maid could have kept a sharper eye on the tea cups. He discussed the different varieties of tea with warmth, defended the infusion process, gave his reasons for patronizing a particular bakery, and in the meantime handed round bonbons and salted almonds to his half dozen men and women guests. From confectionery the talk drifted to napery, and with a glow of genuine pride our entertainer exhibited a set of exquisite doilies lately added to his linen closet. He advocated drawn work and the outline stitch in white floss as rather superior style at afternoon functions, and then got on the subject of china, which was evidently his hobby.

"Each fragile cup and saucer was dilated upon in turn, the delicacy and beauty of the porcelain naturally leading to a wholesale abuse of servants. Mr. V—— and a man (*!*) friend sitting near agreed that they never permitted Biddy to lay a finger on the properties of their pantry. They laundered every piece of china and plate personally to insure safe handling, and used only pure linen towels in order to avoid lint. As you may imagine I sat aghast to hear such conversation between two bearded creatures, and was scarcely surprised afterward, when a woman of the party ventured an opinion on the subject of sweeping, to hear both of them summarily suppress her.

"Now, I want to know who our daughters, sisters and nieces are to marry?" continued the wrathful lady. "Certainly not those finicky Miss Nancys; and there are no longer any bachelors, it appears—nice, jolly fellows, who couldn't tell a mop from a range or a broom from a lambrequin, who went buttonless, and with holes in their socks, till some nice girl took compassion on them; who were lonely and needed companionship, helpless and wanted a woman's hand to keep a neat hearth and warm their slippers.

"Since that first afternoon I have been to twenty teas of the same sort in as many different apartments. New York fairly swarms with this new type of humanity, and with each exhibition of his effeminacy I grow more disgusted. My girls are athletic—ride, swim, hunt and use the horizontal bar. Naturally, when their hosts talk bread and butter they become painfully embarrassed, feel out of their element and make absurd mistakes."—New York Sun.

Not a Lucrative Office.

The pay of the official watchman of the village of Springstille, in Hessen, has not increased in a century. One hundred years ago this valued official received one cent a day for his services, and "Old Heinrich," the present watchman, aged seventy years, receives the same compensation. Truly the pay is not princely, and the American office holder will wonder how Heinrich manages to live on it after paying the usual assessments to the party.

Plans proposed for irrigation both in Upper and Lower Egypt during the period of low Nile include the building of a high barrage across the river at the first cataract. Great opposition has been excited against this proposition, as it involves the submersion of the beautiful island of Philoe and its magnificent monuments for several months each year.

MAKING A FALSE CONFESSION.

Dr. W. A. Hammond Talks About the Self Accused Criminal.

I proposed to show that no uncommon circumstance for persons to confess to having perpetrated crimes of which they were either certainly or probably innocent, and that there are forces in operation in the human mind which may prompt to the making of a false confession, even though by so doing life, liberty or property be put in danger. Thus there is a difficulty in the minds of some persons who exhibit no other evidence of mental aberration to discriminate between their thoughts or their dreams and absolute facts. They brood over some real or imaginary circumstances until they bring themselves to believe in its reality.

Such a person, for instance, reads in the daily press of some shocking murder that has been committed, the perpetrator of which has escaped unrecognized. He reads it in one newspaper, and in another and another hears it talked up among his companions and begins by wondering whether or not the murderer will ever be discovered. He knows that murders have been committed by persons who at the time were in a state of somnambulism or who were suffering from an epileptic paroxysm. Perhaps he has himself in his youth walked in his sleep or has had a convulsion, as his mother has told him.

Suddenly the idea strikes him that he may be the guilty man. At first the notion is horrible to him, but its very horror renders it attractive. He goes to the Academy of Medicine and reads up on the subject of epilepsy. There is scarcely a disease, especially of the nervous system, of which any person at some time or other of his life has not had one or more symptoms. The quack medicine advertisers are fully aware of this fact and make full use of it to frighten the ignorant into the purchase of their trash. Our incipient self accuser has, therefore, no trouble in finding what he is looking after, and he goes home fully convinced that he has had an epileptic paroxysm, during which he may have been a murderer. The transition from a possibility to a reality presents no difficulties to his mind, and he ends by fully believing himself to be the murderer for whom the police are seeking. He visits the place where the crime was committed, questions the residents of the neighborhood in regard to all the particulars, and even interrogates the police relative to their plans for securing the murderer and the secret evidence they have in their possession.

At last suspicion turns toward him and eventually he is arrested. The accounts that he has read in the newspaper and the gossip he has heard, that, regardless of his original idea that he had perpetrated the crime during an epileptic fit, and therefore in a state of conscientiousness, that forces him to make atonement, he confesses that he perpetrated the murder and gives a full and circumstantial account of the crime. Inquiry soon, however, shows that he could not by any possibility have been the perpetrator, and he is, therefore, after a few days, during which the newspapers have given the most sensational accounts of his brutality and remorse, discharged from custody.—Dr. William A. Hammond.

A Group of Hindoo Pilgrims.

The railway from Calcutta enters Benares over a magnificent iron bridge just completed across the Ganges. It springs by noble spans along great stone piers, the foundations of some of which, I am told, are sunken 230 feet below the bed of the river. We paused at its northern end to let out several hundred pilgrims. A strange sight they presented in their various conditions. There were old women, almost bent double with infirmities of age; there were young women, with half naked babies straddled on their hips and leading others but a few years older; there were proud men, of noble, manly bearing, and poor men, cringing and servile in their poverty; there was opulent comfort, with servants bearing its bedding and its fine gear; there were others so weak that they staggered under the weight of a single basket or bundle which contained their worldly wealth. All, when stepping from the crowded cars, turned wistfully toward the holy city, their eyes betraying the delight felt that now at last they were about to bathe in this holiest spot of the holiest of rivers.—Carter Harrison's Letter.

Smoking Pipes in England.

Perhaps the customs connected with the habit of smoking and using tobacco in America and in England are as interestingly characteristic of the two nationalities as any other traits. There is nothing undignified about smoking a short "briar" or meerschaum along the streets of London, Birmingham, Manchester or any of the great English cities. A gentleman is none the less a gentleman because he does this. Indeed, to smoke a cigar in preference to a pipe argues either expensive tastes or the pecuniary ability to gratify them. What would our ladies think of a well dressed young man coming down Broadway about 4 in the afternoon with a nicotine blackened pipe in his mouth? Horrible suggestion! Yet in this country a man considers it in perfectly good taste to walk into another's office with a cigar stump stuck firmly in one corner of his mouth. Moreover, he does not take it out even to talk. Such behavior in London would give direst offense and would be construed into an intentional insult.—New York Press "Every Day Talk."

Many Species of Orchids.

When Sir Trever Lawrence addressed the conference, little more than three years ago, he mentioned that 5,000 species were known and 2,000 were under cultivation. If the figures were true at that time they are vastly too moderate now. Eight thousand and 3,000 are the proportions accepted at this date. If a grower care for the science of his pursuit he will find material for study, for intellectual delight, also, in every one of these. It is not the cultivated varieties which attract him, chosen as they are, of course, for beauty of flower, but those dull in tint or microscopic, which offer such strange problems, such amazing contrivances, such startling anomalies, to employ his mind. But 3,000 species worth a mere gardener's attention give room enough assuredly.—Saturday Review.

Use of the Musquito.

The use of the musquito has been at last discovered. Professor Webster says that "injurious organic matter in the water, instead of decomposing and poisoning people, is changed into 'wiggle tails,' which, in due time become musquitoes, and the winged matter flies away, leaving the water purified to the extent of their ability to remove the impurities. If fish are kept in the water they eat the 'wiggle-tails,' and grow large enough to serve as food for man. Thus the poisonous ingredient of impure water becomes healthful food. Without musquitoes most marshy or swampy land would be dangerously insalubrious."—Boston Budget.

Victoria as a Collector.

Queen Victoria is an autograph collector, and she has recently added to her American department an autograph of Andrew Jackson.—Chicago News.

Dig two graves before cursing a neighbor. —Japanese Proverb.

OREGON WILD CATTLE.

A Strange Breed That Inhabit the Umpqua Mountains.

CHANCE FOR THE AMBITIOUS SPORTSMAN

As Wild as Deer.—Their Peculiar Jet Black Eyes.

"California sportsmen can now go up to Oregon and shoot wild cattle," said John Day, an Umpqua mountain pioneer, referring to the completion of the railroad. "It is a fact that there are hundreds of wild cattle in the high hills skirting the Umpqua valley, and some of them are not more than a couple of miles from the railroad track. Some of these cattle, too, are 25 years old or more. In the mountains near Riddles and Rosebud they are probably the thickest, but they do not venture down in the valley much. They stay in the tops of the hills and get water from the living springs which rise there. For the most part they are concealed in the dense growth of oak and fir in these mountains. There is heavy underbush, too, so that it is a hard matter to get on to them. They go in bands of six or eight usually, but at night a herd of forty or fifty get together and lie down in the same yard—that is, they sleep on the same spot, which is usually a secluded place among the trees. A band of wild cattle have been known to get together on a cleared place like this every night for a couple of years.

"When feeding there are always a few bulls to act as sentinels. While the cattle graze in bands of half a dozen or so, they are nevertheless close to other bands, so that at any alarm from any one of the bulls, which leisurely feed on higher ground, they all run away together.

"The cattle are of all colors and wilder than deer. It is a hard matter to get a shot at them for the reason that their scent is so keen. They can smell a man a long distance off. They got wild in 1853 when the old man Riddles and two or three others of the first settlers came to the valley. Their cows wandered off and could not be found. After two or three years, all the pioneers had to do when they wanted beef was to rig out two or three pack animals and go up into the mountains. The cattle had to be killed on sight the same as deer or bear, for they could no more be driven down than deer could. Once killed they were quartered, packed on the horses, and carried down. They have been hunted a good deal of late years, so that there are not as many as there used to be.

"Some of the cattle are very large and fat. I have caught glimpses of bulls in the top of the Umpqua hills that astonished me. A bull I saw in the fall of '78 on the head of the Rogue river I am certain would weigh 1,400 pounds. There is good grazing in the mountains all the year round. A peculiarity about these cattle is that their eyes and horns are jet black. The retina, iris and the whole apple of the eye are one mass of black. You can't distinguish any difference in any part of it. The horns, too, while being black as ink, are long and very sharp. Brought to bay, the Oregon wild cattle are very wicked fighters."—San Francisco Examiner.

Old Times in Louisiana.

Those "society balls" were conducted with great propriety and reserve. The claim of every person of both sexes to be admitted having been previously determined by the responsible and trusty committee, there was a sort of temporary and conventional equality on the terpsichorean floor, and, therefore, every gentleman had the privilege to invite a lady without the formality of an introduction to figure in the dance as his partner. After it was over he escorted her back respectfully to her seat, without presuming, if unknown and not duly presented, to remain standing before her, or to sit by her side, to continue the conversation or prolong the accidental acquaintance.

During the intervals of dancing the gentlemen walked up and down between the rows of ladies that densely lined the hall, some merely bowing as they passed to those whom they knew and others stopping to converse. No woman, married or single, joined in this promenading with a male companion, as is the custom in these present days, and the eye of a lynx could not have detected the slightest flirtation. The word itself was not known, for the thing it means is for Louisiana a modern invention, which had not then been patented and brought out for public use. In fact, this peculiar pastime would have been impossible to attempt. It would have produced a social earthquake.—American Magazine.

The Color of the Sea.

Artists always seem at a loss to deal with the color of the sea, and few are those who please the public. Professor Tyndall has come to their aid. He recognizes three principal hues in sea waves—blue, green and yellow. Solid particles held in the water act as minute mirrors reflecting the light which penetrates the liquid. The rays which are sent out, after having traversed only a thin stratum of water, preserve their yellow parts; but if the reflections are attenuated the water appears green; and if they do not exist at all, the sea being clear and free from muddy matters, the color is deep blue. In an indigo sea the crest of the waves will appear green on account of their lack of thickness. Seaweed, animalcules and other local or accidental causes may have much influence on the color of the water.—Court Journal.

Not Quite Fitted.

Miss De Peyton—Yes, admit De Smith's quotations are very amusing, but they are not quite fitted for our circle. His saws usually have reference to common people.

Mr. Jones—Oh! I see. His saws are not of your set.—Boston Courier.

Leo XIII always dines alone. No king in Christendom ever receives higher honor than to be invited to partake of a cup of coffee.

Get a German friend to say 1888 in German. Don't say it yourself for you'll dislocate your jaw.

During the year the fashionable walking sticks will weigh five pounds, so it is said.

CALMING WAVES WITH OIL.

Vessels Are Now Fitted Up with Apparatus for This Purpose.

When hydrographic students first suggested to skippers who had sailed the seas for years, that pouring oil on the troubled waters might save both vessel and cargo, the proposition was laughed to scorn. The wise old heads knew better. Some of the younger skippers thought the scheme might be worth trying, and so put the theory to the test. They found it to work exceedingly well; so well, indeed, that in port here they told their brother masters of their success. Stories of vessels having been saved by the method were told at infrequent intervals in the South street resorts, and were received with much of the doubting Thomas spirit. Finally what were looked upon as yarns took on a color of verity with a vengeance, and even the oldest of the skippers began to believe in the oil story.

The result of this has been that there is not a week passes, in fact hardly a day, but the master of some vessel drops into the United States hydrographic bureau and informs Lieut. Cottman or some of his staff of the benefits he has derived during the stormy weather which now prevails from the use of oil. So efficacious has it proved in a number of instances that the attention of shipowners has been called to that they have fitted up their craft with special fixtures for the purpose of fighting huge waves with oil. The British steamship Kate Fawcett is one of these. Tanks are fitted upon deck for the special purpose of carrying oil, and from them pipes lead through the ship's side just above the water line. In case the waves become particularly threatening Capt. Young has the stopcocks in the pipes opened and lets out a bit of oil. He has found the plan to work extremely well, and when running finds it necessary to send out but one gallon in four hours. He uses linseed or varnish oil. The British steamship Earnwell is similarly fitted, and its officers have found that the loosening of even a small quantity of oil has kept the water from breaking over the decks of the steamer.

In cases where vessels are not specially fitted for fighting mountains of water with oil, skippers sling over the bows bags filled with coarse, heavy oils, which ooze through the coarse material of which the bags are made and has a wonderfully calming effect on old Neptune. The only trouble in these cases, say the skippers, is that the oil is apt to clog up the canvas of the bags and so prevent perfect percolation. This, Capt. Lord of the American steamship Advance, found out when he was caught in a severe storm between St. Thomas and the Barbadoes last month. So he rigged up a big water filter over the weather board and treated the waves which threatened to ingulf his vessel, to a copious bath of oil, and so kept the cross seas from washing over the deck of his steamer. Most any kind of oil seems to do the work required, but Capt. Peters, of the British steamship Lyon, has probably used the strangest mixture yet reported, one of cod liver oil and linseed oil, of both of which he happened to have a big consignment in his cargo. A couple of gallons of fish oil, says Capt. Schulz, saved the schooner W. H. Jones from losing a single stick of logwood from his deck cargo while he was trying to weather a severe gale off Hatteras during his last trip to this port.—New York Times.

Harsh Treatment of Jews.

Numerous correspondents of the Jewish papers writing from Jerusalem bear testimony to the exceptionally harsh treatment of the Jews at the hands of the Turkish authorities. "Palestine, the holy mother," as one of the writers says, "is casting out her children who come to visit her from afar, and Jerusalem closes her gates against them." The government has issued orders forbidding foreign Jews who are new arrivals in the holy land from staying there longer than thirty days. "Palestine," say these tyrannical rulers, "is a country of holy places and ancient tombs, and not of commerce," and to visit these places thirty days are considered more than enough. As a result it is said trade falls off and financial affairs suffer; but still the Jewish immigration is discouraged, while the Christians, particularly those of the Greek church, and the Mohammedans are treated very differently. Yet in Palestine, as elsewhere, the Jewish settlers appear to be good subjects and sober, orderly, industrious people.—Chicago News.

Learning English Grammar.

English grammar, the very terror of pupils and the puzzle of masters, is, after all, nothing but the English language; but unfortunately neither master nor pupil knows it or thinks of it. The first and the best elementary lesson that a child learns, whether he will or not, is from the language of the educated people around him. As he grows older he must learn to make his own grammar—that is, to understand his own language; but he must be helped to do it. This help can be given with one of his very earliest reading lessons without frightening him by telling him that he is learning English grammar, a phrase that terrifies him more than the name of any other study in the curriculum.—The School.

Daughters of Working People.

The true Anti-Poverty society is the society of "Toil, Thrift and Temperance." One of the articles of its constitution demands that the principles of intelligent economy shall be learned by patient study and followed in daily life.

Of the many worthy ways in which the charity that we call Christian is being exercised none seems to me more worthy of that appellation than the movement in industrial education, of which teaching the daughters of working people how to do housework and how to select food and cook it forms a part.—Professor W. O. Atwater in The Century.

Snow on Fire.

Some artificial snow that was used in representing a winter scene in an Elmira store window caught fire, and but for timely discovery would have caused considerable damage. The snow was made of cotton.

The collection of old and rare coins is now said to give employment to a number of traveling men from each of the large cities of the country.

FIELD FOR FEMALE TALENT.

School of Industrial Art in Philadelphia.

THE RESULT OF ONE WOMAN'S WORK.

How Women May Earn Their Own Living.—The Subjects Taught.

About the time of the closing of the Centennial exposition in 1876, a committee was formed and provided with $30,000 in cash, for the purpose of securing from foreign exhibitors specimens of their best handicraft in industrial art subjects, to be used as a nucleus for an educational museum in this city, the same to eventually comprise a department of a school of industrial art. This was one of the practical methods adopted to render the Centennial exposition of permanent benefit. It was successfully carried out through the efforts of one woman—Mrs. E. D. Gillespie, who is a grand niece of Benjamin Franklin. She worked in season and out toward the accomplishment of her plans.

The result of her labors is the magnificent collection of art works that now fill the Memorial hall in Fairmount park, part of which were purchased and the balance donated by foreign and native exhibitors. These works are employed as models, from which are drawn art inspirations, that eventually find their way into the carpets, china, calico and the thousand and one other things of art, as well as domestic economy.

It is to the city of Philadelphia and the state of Pennsylvania, supplemented by the generosity of a few public spirited citizens in the eastern states and in Philadelphia, that this important art movement has been made in this country. The best features of the South Kensington Art school have been localized, and the methods of the French, German and Belgian designers have been freely utilized. The progress made by the latter country is something wonderful, many of the best suggestions coming from there.

Among the subjects taught are designs for carpets, rugs, wall papers, in which there have been a progress within the past five years that is simply marvelous; oilcloths, calicoes and all sorts of textile fabrics, two-thirds of all the "genuine Smyrnas," are made in Philadelphia. In clay modeling for the decorative art trade instruction is given. A particularly important branch is the china decoration. The advancement made in pottery manufacture has brought into demand hand painters of all descriptions, as well as designers who can make the patterns that are printed upon our more common stone china by machinery. China decoration has kept pace with china manufacture, and now American goods successfully compete with those of both England and Holland.

The purpose of the school is to furnish such instruction in drawing, painting, modeling, carving and designing as is required by designers, superintendents and workmen in the various decorative arts, and to serve as a training school for teachers of these branches. In the pursuance of such instruction the pupil is taken through each successive branch of practical art to which he or she is adapted. No knowledge of drawing is required in beginning, and all studies are directly from objects and from nature.

As the pupils advance they are taught to make their own designs, the character of the designs being confined as closely as possible to work that could be applied to practical use. Even if the life classes, where copies are made from the seminude, the models are posed in attitudes that could be applied to architectural designs. In fact, in no department is the industrial feature lost sight of, and from the first attempt in geometrical drawing to the highest perfection in copies from life this object is kept steadily in view.

An important feature of the instruction is that of compelling the pupil, after having made the designs, either in textile or in a purely art department, to work them out in real articles. Looms exactly like those used in New England and Pennsylvania manufactories are provided and the pupil makes a rug or a piece of carpet from his or her own pattern.

In an institution owing its existence almost wholly to the indomitable pluck and push of one woman, there are naturally a large proportion of women students, but they are by no means the majority of those benefited. Ambitious artisans in the hundreds of industrial mills of the city find here immense advantages for self improvement. Women find the same, and they are availing themselves of the privilege, both here and in the older institution for industrial and art advancement—the School of Design for Women. The latter was a pioneer in this country in the task of providing congenial and profitable employment for women.

Within a few months art schools in three large western cities have sent representatives to this city to ask after the feasibility of industrial plans. It is recognized that women must be provided with the means of earning a living, and the vast field of industrial art furnishes a broad and hitherto uncultivated and unoccupied one. The number of women now filling remunerative positions in the mills as designers attest the claim of industrial art education to notice.—Eugene M. Camp in San Francisco Chronicle.

Finishing a Buffalo.

I saw an old Indian, over 60 years of age, apparently, following a buffalo that was just able to drag himself along with three arrows in his side. The old man's quiver was empty, and he was impatient to finish him. He slid cautiously from his pony, and, stealing up behind the buffalo, sprang forward, snatching one of the arrows from his side and sending it quick as a flash into his heart.—L. B. Platt in The Cosmopolitan.

Separate Pieces in a Watch.

The average watch is composed of 175 different pieces, comprising upward of 2,400 separate and distinct operations in its manufacture. The balance has 18,000 beats or vibrations per hour; 12,960,080 in thirty days. 157,680,000 in one year; it travels 1 43-100 inches with each vibration, which is equal to 9 3-4 miles in twenty-four hours, 292 1-2 miles in thirty days, or 3,559 3-4 miles in one year.

ASTOR LIBRARY'S "GUARD."

Watching for Petty Thieves—Some Very Strict Rules—The Dishonest.

"What's the matter with you? Are you bilious?"

"If I am, you can't cure me!"

This was the only reply that a fashionably dressed man could draw from the tall, slender, white whiskered guard in the entrance hall of the Astor Library yesterday, who had silently taken the man's cane away from him and given him a check in return. The guard's name is Morse. He is reticent, severe and strictly polite, especially to women. So much petty thieving in former years was going on the trustees were obliged to create the guard's position, and the present incumbent has many curious experiences. Sitting in the classic atmosphere of the marble corridor, beneath the gaze of marble busts of Socrates, Aristophanes, Senaca and the Cæsars, he daily watches the modern world with a sharp eye. No one is permitted to carry a satchel, reticule, lunch box, shopping bag, book or bundle of any kind, cane or umbrella up stairs; and in cases already detected it has been proven that it would be an important additional protection to the library if overcoats were laid aside also before entering the dignified portals of the upper rooms, where the priceless collection of books is open to public perusal.

This indispensable functionary down stairs who enforces the rules must be an expert, for cranks are frequent and irascible representatives of the alleged gentler sex difficult to be quieted when their parcels are taken away. The reason and necessity of writing a description of any book that is carried in does not appear on the surface, and nine out of ten patrons require an explanation. "It is easy to take up a ten cent book and walk out with one worth as many dollars," said the guard to a reporter. "Fifteen out of every twenty men will leave their canes and umbrellas up stairs, and then come back to find them lost if I did not keep them here with checks on them. There would be no end of talk and confusion inside to disturb the readers. Hand bags are too convenient for concealing volumes when the patron takes his departure. Some put books under their coats but are likely to be caught, because I scrutinize every one. Hundreds of dollars a year are saved in this way, and still, with all precaution, you cannot stop the thefts entirely. The ladies do not like it, but we have to put every one through the same inspection, so as to make sure of finding the dishonest." —New York Tribune.

Charitable Fair in Switzerland.

After dinner we went to the vente, or charitable fair, which the young ladies of the town were holding in one of the public buildings. It was bewilderingly like the church fair of an American country town, socially and materially. The young ladies had made all sorts of pretty knick knacks, and were selling them at the little tables set about the room; they also presided, more or less alluringly, at fruit, coffee and ice cream stands; and—I will not be sure, but I think—some of them seemed to be flirting with the youth of the other sex. There was an auction going on, and the place was full of tobacco smoke, which the women appeared not to mind. A booth for the sale of wine and beer was set off, and there was a good deal of amiable drinking. This was not like our fairs quite; and I am bound to say that the people of Aigle had more polished manners, if not better, than our country town average.—W. D. Howells in Harper's Magazine.

Street Car Conductors and Drivers.

"How often do street car conductors and drivers miss their cars in the morning?" "Not often, I tell you," said an employe. "When we miss our car we go to the foot of the list and take our chances with the new men. Sometimes it is nearly a year before we can get another car regularly. I have seen the boys running to the barns in the morning half dressed. Once I saw a driver in the winter rushing through the snow in his bare feet, his boots in his hands, yet, poor fellow, he was two minutes late after all. He had a big family, and I noticed he went around behind some cars. I was a good friend of his, and slipped around at the risk of missing my own car to comfort him a little, and found he had broken down and was taking a good cry. Luckily, he got back in two weeks."—Chicago Tribune.

Safety of Building Associations.

The co-operative banks, sometimes called building associations, although they never build directly, are the very ingenious outgrowth of an endeavor to make the savings of men of moderate means yield a higher rate of interest than savings banks pay, and also to distribute these savings in small loans among the same class. They have proved eminently safe and successful in both respects. But here, also, the borrower must have a "margin," albeit a smaller one will pass muster than in the savings banks. This is no indication of insecurity, for the loan is at its maximum and the "margin" at its minimum only at the outset, for the monthly payments immediately and constantly increase the latter and decrease the former.—Boston Herald.

Grave of Alexander the Great.

Saida, the town at which has been discovered the sarcophagus supposed to contain the remains of Alexander the Great, who died in 324 B. C. from a fever contracted while surveying the marshes around Babylon, and to which he was the more susceptible because he had just got over a protracted drunk, is about twenty-four miles from Beyrout, in Syria, and is the ancient Sidon or Zidon. In 1850 gold coins of the time of Alexander, valued at $40,000, were unearthed there, and it was while at the head of the French exploring expedition there in 1860 that M. Renan picked up a good many of the points which he used in his famous "Life of Christ." —New Orleans Times-Democrat.

Rolling Out Rifle Barrels.

By means of recently invented processes in the manufacture of rifles as many as 120 barrels can now be rolled in an hour by one machine. They are straightened cold and bored with corresponding speed, and even the rifling is done automatically, so that one man tending six machines can turn out sixty or seventy barrels per day. With the old rifling machines twenty barrels were about the limit of a day's work, but the improved machines attend to everything after being started, and when the rifling is completed ring a bell to call the attention of the workmen.—Chicago Times.

When a Rogue Reforms.

"We frequently take a man's picture out of the Rogues' gallery and cancel his record," said Inspector Byrnes.

"When he dies?"

"Yes, and when he reforms also. When we have evidence that a man is trying to live straight we are always ready to help him, and will remove his picture from the Rogues' gallery when requested. These pictures and the accompanying records are filed away where we can reach them should we need them.—New York Sun.

The Constitutional club of London has a membership of 6,400.

THE VIRTUES OF LAUGHTER.

Joyous Country School Boys Turned Loose.

AN OVERFLOW OF ANIMAL SPIRITS.

Childred Should be Encouraged to Laughter.—Prevents Disease.

Now go to a school house in the country where the youngsters are let loose pell mell. Out they come with a rush, and every throat is doing its utmost to add to an uproar of sounds. Part of it is a bedlam of words, part a pure set of yelps like my dog. They run hither and thither, and stand on one leg. They turn handsprings, and do a dozen impulsive things that have no other purpose than to express happiness. I do not think it is any disgrace to the chaps so say it is an overflow of animal spirits, and in a way very much as my dog expresses himself. I should be glad if my own condition could be more generally of the same sort. Only there is no denying that if boys be allowed to shout as they will they become shocking nuisances. Yes, young gents, you are a legitimate product of vitality, but one can't let you shout the top of his head off. On the whole, if they will let you loose, you will soon run quiet. Boys are a good deal like spouting geysers—noisy and quiet by turns. But if we had never outgrown this boy period, and could get on without philosophizing, and printing, and editing newspapers, and doing so many other exhausting things! Ah, yes—if. But we did not stop at the right point, but went on into what we call ripe years. There has been too much evolution. We should have been satisfied at the shouting happy point.

The object of language of all sorts seems to be to express satisfaction or distress, joy or grief. Far back of primitive man, indeed at the very origin of life, there was some method of expressing satisfaction and dissatisfaction. When the head was established and vocalization achieved a great deal of language was left distributed all over the body. When a person is thoroughly happy the tongue is altogether insufficient to tell of it. Laughter is a remnant of the old sort of language, only we have a facial laughter that often supersedes a real all over laughter. But I know a few men who always laugh from top to toe. There is the shaking laugh, that is likened to the quiver in a bowl of good, thick set jelly. When it begins it goes in ripples from side to side, and perpetual motion seems absolutely to have set in. And there is the roaring laughter that throws the practitioner into convulsions until he must hold his sides and gasp for breath.

A really good laugher is a healthy man. I have seen many a patient cured by a good story. I have in mind one who was in a despondent melancholy that had brooded over him for weeks. A cat had nestled by his side, and he involuntarily had stroked it. Pussy turned up her nose to touch his hand, when a flash of electricity leaped from it, and pussy was both shocked, confounded and insulted. Drawing back in great dignity, and with an appearance of vast intellectual amazement, she gave him two cuffs of a decided sort and stalked off. The man instantly broke into a laugh, and, as he expressed it, "couldn't stop." His whole system reacted from depression. He laughed till he was sore; and was cured. Of course there is liable to be a touch of the hysterical about such a break up; but it will do no harm. I recommend laughter as a preventive against disease, and as a cure for illness of both body and mind. Children should be encouraged to laughter. They should be taught to laugh loudly, strongly and all over. Laughing can become a matter of education as well as talking or singing. Have them stand up, with their hand on their hips, and begin. It is a capital exercise. You need only start the roar. It is catching. As soon as one urchin has exploded the rest will be at it. It will run up and down the line, and you will end by having all your pupils on their backs, shouting happy.

So if you ask me what I consider most essential to health, vigor and longevity, I answer a plenty of laughter and a plenty of shouting. We should never check children from a reasonable amount of noise making, and never get beyond it ourselves. If possible have some place, a grove or, if no better, a barn, where you can shout as loudly as you please and blow out good full draughts of the purest air. We ought never to get beyond play. A good game of quoits, or tennis, has half its advantage in letting our lungs have full play. We can laugh as loudly as we please and shout with the young folks. Nearly all old age is folly, a useless drying up, owing to false notions of manhood and propriety. Mark this, my friend, don't outgrow the shouting happy point.—M. Maurice, M. D., in Globe-Democrat.

The Food Question.

The subject of food has never yet received a common sense consideration. There is no doubt but a vast amount of wholesome food products are yet overlooked. During the grasshopper invasion it was proved by Professor Riley and some of our normal school teachers that such creatures may serve as an excellent article of food, yet the people preferred semi-starvation to even tasting them. Snails are luxuries in France. It was long before frogs found a market in this country. Mr. Wallace tells us eggs are never eaten by Pacific Islanders. Strawberries are rejected by some of the tropical races. Esquimaux reject all vegetable food. The people of New Guinea pronounce bread a detestable affair. Milk is used very little in some of our southern states, as it is seldom tasted by tribes in Africa that keep large herds. One tribe in New Guinea abhors sugar, but devours salt. Snakes are an article of diet quite largely in Asia.—Globe-Democrat.

During 1887 eleven and a half tons of postage stamps—nearly 170,000,000 in number—were sold at the New York postoffice.

It is said that for consumptives nothing is better than raw or half cooked snails.

De Brazza, the African explorer, says the upper Congo teems with ivory.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 13 .....1891.

The Los Angeles Herald of the 4th inst. contained the following article, which will be of much interest to the people of this county:

Ex-Mayor Workman has returned from his trip in the interest of the Terminal railroad, of which he is one of the chief directors. Mr. Workman is very enthusiastic about the outlook for the road, and says there is no longer the peradventure of a doubt that the road will be completed on the projected Utah line to eastern connections. He assures us that the means for the extension of the Terminal road are secured, and that between the 20th and 30th of this month a number of Eastern gentleman in financial interest with it will visit Los Angeles.

On his return from the east Mr. Workman made a trip into Southern Utah and satisfied himself about the character and extent of the coal measures in that region. These fields will be tapped by the new road, and coal will be laid down in this city at the rate of five dollars per ton. The coal is of a very superior quality, and the measures are exhaustless. He entered into one mine which is reached by a tunnel into the mountain and the tunnel opened into a chamber where teams could turn, and which was walled, floored and roofed with solid layers of coal of the finest quality. These mines are now valueless for the want of transportation, and the people of the vicinage drive their teams to them and get all the coal they can carry away for nothing.

We look upon the fact that the new enterprise will lay this coal down in Los Angeles as one of the most, if not the most, important benefits the Terminal company will confer upon Los Angeles. It at once solves the manufacturing problem, and opens to our city the prospect of becoming one of the most prosperous manufacturing communities in the country. In connection with the vast mining region it will place practically at our door, the fact that we shall also have cheap fuel will make Los Angeles an incomparable center for smelting and reduction works. But the benefits of the opening of the new road will not stop here. It will pass through a country in which iron ore and magnetic steel have been found in great quantities. With cheap coal these will form the basis of great iron and steel furnaces, which will give employment to thousands of operatives.

No wonder that our ex-mayor is jubilant and enthusiastic—that he sees in the near future an impulse given to the industry and prosperity of Los Angeles that will soon force her forward to the foremost place on the Pacific coast.

Is it not time that our people should wake up to the great advantages which this new road is to bring our city? Heretofore we have merely given it pleasant words. When its financial backers and representatives come here in a couple of weeks, we should be prepared to treat them in a way that will show them that we are fully alive to the stupendous importance of the work they are promoting.

The radical friends of the McKinley blunder, who find just now so much good in the operation of the new law, do not refer to the spirit that gives it such virtue as it has—that is, the clause which enables reciprocity to be set up even though to a limited extent. Under the bill in its original form reciprocal trade agreements with foreign countries, to the advantage of our manufacturers, farmers and dealers, were not provided for. There was no possibility, even limited, for the government to abandon duties levied or restrictions placed upon our export trade. The idea of protection of home producers by the stimulation of the export trade was not a part of the McKinley protection scheme.

The boodlers are making a stout fight against justice. They have a better chance of winning too, than the public probably suppose. If the Southern Pacific finds itself unable to defend its servants and agents in one way, it tries another. There are a great many ways of defeating justice, and not one of them will be left untried in the cases at issue. Judge Wallace has made no mistakes, but he cannot attend to every detail of the campaign himself.

Andrew Carnegie gave $5000 to help McKinley in Ohio, besides subscribing liberally to the Pennsylvania and New York Republican campaign funds. He could afford it, having recently reduced the wages of his employes.

A Metropolitan Merchant.

The boy was not more than 2½ feet high. But he was intelligent and energetic, and he hawked his newspapers with a zeal that would have been creditable to a high proof drummer. He was not unmindful of his dignity, and when one Broad street purchaser accompanied his tender of payment for a newspaper with a frivolous chaffing remark, the brisk little fellow embarrassed him with a sharp glance from two snapping black eyes, remarking the while: "Here is your change, sir. I have no time for fooling."

"Keep the change," said the purchaser, dropping the facetious and assuming a serious air; "will you tell me how long you have been selling papers?"

"I have been in the newspaper business three years," replied the diminutive merchant somewhat coldly.

"Three years!" exclaimed the man with unfeigned surprise, "why, my lad, you do not look big enough to carry a bundle of papers."

"Notwithstanding," said the mite, with unruffled dignity, "I have been in this business for three years, and for two years before I sold papers I was in the clothing business."

"Is it possible?" commented the questioner with increased surprise. "See here, my little man, how old are you?"

"Nine years old," calmly responded the little fellow. "I had to get out and hustle to help support the family when I was four years old. I belong to a family who waste no time."

The lad spoke the truth. He was born in East Broadway, and went to work in a clothing store when but four years old as cash boy. And there are many more like him in this large and progressive town.—Exchange.

Surprised the Young Preacher.

Robert Collyer, the preacher, said that when he was a young man preaching in Rockford, Ills., he was waited on by a delegation to ask him to speak at the county fair. They would pay him fifty dollars. He told them that he knew nothing of farming. "I couldn't raise a hill of beans and a turnip would stump me." But the committee said they had had speakers for years who knew all about such things, and they came to him especially because they thought he was not particularly well informed upon agriculture. He accordingly went, and had a royal good time.

"I should have called my speech, if the word had been coined at that time," proceeded Dr. Collyer, "sheer rot. When I sat down I felt ashamed of it. The thought of meeting the committee again was dreadful to me. At last one of them approached me. He began by some commonplaces, which sounded to me very forced, upon the interesting nature of my address.

"'This,' thought I, 'is only the "taffy" with which he prefaces his announcement that they can't pay me fifty dollars for such drivel as that.'

"'Yes,' he went on, 'we liked it very much. But we hardly think it right to keep our original contract with you—my heart sank into my boots—instead we will pay you seventy-five dollars!'"—Cor. New York Times.

English Oysters.

The English system of oyster cultivation is still what it has been for hundreds of years in that country, and there are two parts to it. The dredging of the small oysters, or brood, on the open grounds near shore, and the subsequent planting of them on the fattening beds of Essex and the Thames estuary, and the culture of larger beds in deeper waters beyond the ordinary fore stages.

On the southern coasts of England the first system prevails, and the Thames oysters, which are the product of it, are by Englishmen esteemed the best in the world. They are, at any rate, rare and costly. The shell is delicate and the flesh plump. The Thames beds are for fattening and for breeding, and receive great care. Fattening oysters do not really yield much spat; and if any fails it is left to its natural fate in these beds. The nourishment the oyster gets there is "largely from diortomacæ and minute spores of conferræ, the latter giving that prevailing delicate green tint" which the English connoisseurs delight in. Bushels of perriwinkles are scattered over the beds to keep back a too excessive growth.—Joel Benton in Drake's Magazine.

Monkeys and Troches.

As I was lingering before the monkey cage in the Dresden Zoological garden, a slight tickling in the throat, a chronic trouble with me, induced me to take out of my pocket a box of bronchial troches and to put one of them in my mouth. Instantly a large monkey of manifestly aspiring nature thrust out his hairy arm and palm with a beseeching look that I would give him one. Why should he, too, not be allowed to enlarge his terrestrial experiences and share the joys of the superior being before him? So I gave him a troche, which he at once clapped in his cheek.

"Scarcely did the bitter taste strike him than he snatched it out with his fingers and began rubbing it violently on the hair of his arm, as if to rub off the bad taste. Seeing, however, that the superior being continued to suck his troche serenely, he soon put his own back in his chops to give it a fuller trial. It proved too much for him to stand very long and so out he pulled it a second time and began rubbing it on the sanded floor of the cage.

"Over and over the process was repeated; but each time as his reverential eye fell on the superior being outside still peacefully sucking his own, a reflective expression came over his face which as much as said, 'Surely if that manifest god out there enjoys this nasty thing there must be some desirable quality in it that I am not developed enough to appreciate.' So patiently the aspiring simian went on till he had dissolved the last particle of his troche."—Boston Herald.

A Foolish Question.

One of the peculiarities of human nature is to ask a question that is exceedingly foolish. For instance, if one sees a friend knocked down by a coal cart, the first question that he is apt to ask is, "Did you get knocked down?" At Troost park one evening a gentleman was standing on the edge of the lake when he slipped and fell in. Naturally his temper was at a white heat. He glared about savagely, when a stranger, who was standing by and who had seen the accident, asked, "Did you fall in?" The fellow paused, and while his eyes were snapping fire remarked sarcastically: "No, I didn't fall in. The lake walked up on me."—Kansas City Times.

MECHANICAL FLIGHT.

There Is a Possibility That Men Will Fly Through the Air Before Long.

Above us is the great aerial ocean, stretching over all lands, and offering an always open way to them, yet a way that has never yet been thus trodden. Can it be that the power we have always lacked is at last found, and that it only remains to learn to guide it?

Let me, in answering, compare the case to that which would present itself if the actual ocean had never been traversed because it was always covered with fields of thin ice, which gave way under foot, which indeed permitted vessels to be launched and to float, but which compelled them to move wherever the ice drifted. Such vessels would resemble our balloons, and be of as little practical use; but now suppose we were told, "The ice which has always been your obstacle may be made your very means of transport, for you can glide over the thinnest ice, provided you only glide fast enough, and experiments will prove not only how fast you must go to make the ice bear, but that it is quite within the limits of your strength to go with the requisite speed."

All this might be true, and yet, if no one had ever learned to skate, every trial of this really excellent plan would probably end in disaster, as all past efforts to fly have done. Indeed, in our actual experience with the air, men have come to the same kind of wrong conclusion as would have been reached in supposing that the ice could not be traversed, because no one had the strength to skate, while the truth would be that man has plenty of strength to skate, but is not born with the skill.

The simile is defective so far as it suggests that man can sustain himself by his unaided strength on calm air, which I believe to be impracticable; but it is the object of experiments to prove that he has now the power to sustain himself with the aid of engines recently constructed as soon as he has the skill to direct them.

If asked whether a method of flight will soon be put in practice, I should have to repeat that what has preceded is matter of demonstration, but that this is matter of opinion. Expressing then, a personal opinion only, I should answer, "Yes." It is hardly possible that the secondary difficulties will not be soon conquered by the skill of our inventors and engineers, whose attention is already beginning to be drawn to the fact that here is a new field open to them, and though I have not experimented far enough to say that the relations of power to weight established for small machines will hold for indefinitely large ones, it is certain they do so hold, at any rate far enough to enable us to transport, at speeds which make us practically independent of the wind, weights much greater than that of a man.

Progress is rapid now, especially in invention, and it is possible—it seems to me even probable—that before the century closes we shall see this universal road of the all embracing air, which recognizes none of man's boundaries, traveled in every direction, with an effect on some of the conditions of our existence which will mark this among all the wonders the century has seen.—S. P. Langley in Century.

A Remarkable Deaf Mute.

One of the most remarkable inmates of the New York Institution for the Deaf and Dumb is Richard Clinton, who, though deaf, dumb and blind, has in the fourteen years he has spent in the asylum acquired an education and a self supporting trade. He was born in Dublin with the senses of sight and hearing perfect. One eye was destroyed in childhood by an explosion, and an attack of scarlet fever cost him the other eye and his hearing.

He was for a time in a school for deaf mutes in Ireland, but it was not until he entered the New York institution that he derived benefit from the instruction given him. Here he has been taught the ordinary branches of education and has acquired the trade of bottoming chairs. He learned to write by using a rule to guide his hand. Of late he has learned to use the typewriter and has discarded the pen.

Clinton uses the sign language in conversation, and reads the replies of his companions by touching their hands. His touch is abnormally sensitive, as is often the case with the blind. By touching the hand of a friend he recognizes the person, and he recalls an old acquaintance from whom he has been long separated by feeling his face, hands and form.

The other boys in the institution treat Clinton in their play as roughly as if he had sight. He never resents such treatment. He is only angered when he is pitied. When he is pushed he recognizes the persons attacking him by the manner in which they touch him. Many tricks have been played upon him, but it rarely happens that he gets caught twice by the same trick.—New York World.

Affected Locomotion.

Grace lends a fascination to an ordinary figure which the most symmetrical proportions cannot exercise without it. But unfortunately a great many ladies entertain mistaken ideas as to what constitutes the poetry of motion. Neither the demonstrative swing nor the high tragedy gait with which some of our Hebes and Junos endeavor to show off their different styles of person approximate it at all. The tall and stately creature with trailing garments who moves, or tries to move, as if she trod on necks and liked that sort of pavement is not nearly so Junolike as she may think. Such styles of going are affectations; and affectations of every kind are an abomination to people of correct taste. A lady should neither amble nor strut, but glide along as if unconscious that anybody was looking at her. Walking should be an unstudied act, not a performance. All the world is not a stage, in the common acceptance of the term, nor is it necessary that ladies should tread in streets like tragedy queens, or genteel comedy misses, or skipping soubrettes.—New York Ledger.

The historical gray coat of Napoleon I, which was stolen from a museum was found recently by the police in the Quartier du Temple in Paris. An old clothes dealer had given the thief three shillings for it.

T. C. Kennelley of Lebanon S. D. has sold his eight legged calf to a museum man for $1,000. The monstrosity is the proud owner of two heads, two tails and eight legs.

England and Her Great Men.

The Victorian exhibition of next winter in London is to contain 400 portraits of great men who have adorned the fifty-four years' reign of Queen Victoria. Four hundred great men is a goodly allowance for the reign of one sovereign. On looking through the list, however, the word greatness is seen to be used with a good deal of breadth. Still, they are all so far distinguished, Walter Besant writes, that their names will be known to everybody who visits the gallery and beholds their portraits.

"I wonder," he says, "how many of those who look at the catalogue will ask any awkward question—it will certainly not be asked by her majesty's advisers—as to the connection between honors and honor, between such distinction as can be conferred by rank and title and such as is gained by work and genius. For instance, the real glory of the reign will always be the immense advance of science. What honors have been granted to men of science? None. Charles Darwin, Faraday, Huxley, Tyndall, Stephenson, Herschel, Lyell, Murchison, Wheatstone—these men, in any other country which had such things to bestow, would have been made peers of that country. Here they are tossed a knighthood, in the same list with a country town mayor, a London sheriff or the clerk of a society. Again, there is literature.

"Next to the science of the reign, the literature will be its chief glory. What has been done for the authors, poets, historians, novelists of this reign? What distinctions, peerages, baronetcies or orders of Bath or Garter have been granted to Carlyle, Dickens, Thackeray, Browning, Swinburne, Grote, Hallam, Froude, George Eliot, Blackmore, Freeman, Green, Lecky—names taken at random from the glorious Victorian roll? None. Nay, since those men of science and literature have made distinction for themselves which no court could increase, what interest has ever been shown in them and in their work by the court? None. None whatever."

Willing to Fish Himself.

As the train was about pulling out of the Union depot Sunday a most excellent young man handed out slips bearing the title, "Where Shall We Go on Sunday?" A young fellow got one of these and was just entering the car when a lady stopped him.

"Have you read that slip?"

"Yes m'."

"Well, what do you think of it?"

"It's all right, mam," said he, politely raising his hat.

"Then you're not going off with this excursion?"

"Most assuredly, yes m'."

"Why not remain at home and attend church?"

"I would be of no use, mam. I cannot sing."

"But others can."

"That's all right, mam. But I can't talk in meeting."

"Others can talk for you."

"And I can't pray"—

"Oh, we'll pray for you"—

"And I can fish—I'm a big success at that."

"Ah, let others do your fishing for you"—

"Ah, no mam! I'm no coward whatever I am. I want nobody lost on my account. Therefore I'll go and do my own fishing. These poor ignorant excursionists risk their souls for me? Not much, mam. Never!"

And he politely stepped on board and was gone.—Columbus Post.

Was It a Coincidence?

It isn't worth while to worry over the cause and significance of strange happenings, especially when they are of the following character: A Detroit lawyer promised his wife a sum of money ($100) on a certain day, and when that day arrived he found, just before the close of banking hours, that he must pay in that money to save a note from being protested.

Accordingly he went home with a story elaborated as to the whys and wherefores, to receive a letter which had been delivered at his house and which contained a check for $100. The odd thing about this fact is that the check came from a client who had sent the lawyer scores of letters before and never before did he address one to the residence. The wife got the money without hearing of the other $100.—Detroit Free Press.

Muddy Liverpool.

Liverpool is rather a muddy place. The other day after a spell of wet weather a man walking along the pavement espied a hat floating on the surface of the roadway. He carelessly switched it aside with his stick when, to his astonishment, a head appeared beneath. "Well, you've chosen a nice place to stand in," remarked the owner of the stick to the owner of the head. "I'm not standing," replied the latter, in an injured tone; "I'm sitting on top of an omnibus." Yes, Liverpool is distinctly a muddy place.—London Globe.

A curious white frog has been on exhibition in London. It is a full grown specimen of a pure white color, its ruby eyes fringed with a golden hue, strangely contrasting with its pink iris and milky cuticle.

INDEPENDENCE

MEAT MARKET,

J. C. ROEPER, Prop.

Keep constantly on hand the very choicest of all kinds of meats, including

Beef, Mutton, Pork, Sausage.

A well appointed shop, with refrigerator, insures the purity of meat, and every effort made to give satisfaction to patrons. j19-f

Mr. Osman will preach at Independence at 7:00 p. m. Concert Tuesday evening.

COURT NOTES.

Geo. M. Gill, Superior Judge.

WEDNESDAY, November 11, 1891.

Estate of Ezra M. Goodale, deceased—Filed claims of John Keegan, H. P. Cartier, J. D. Blair, Winnifred Hines and P. Partridge.

THURSDAY, November 12, 1891.

Estate of John Lucas, deceased—Filed petition for order of sale. Order appointing time and place for hearing application to sell personal property and directing notice to be given etc. Filed return and account of sales of personal property and petition for confirmation and approval.

Filed claim of R. C. Spear.

E. H. Edwards of Lone Pine was in town on Wednesday.

Redfield Proctor, Secretary of War, resigned on the 5th.

See the advertisement for the sale of a quartz mill near Benton.

Regular meeting of the F. and A. M. tomorrow evening.

Mrs. T. J. Goodale of Fish Springs visited Independence on Wednesday.

What's the matter with a ball on Thanksgiving evening? Don't all speak at once.

Mrs. A. R. Conklin and her daughters expect to return to Bakersfield next week.

Ben Lusky came up from Lone Pine yesterday. He reports all quiet in that section.

H. B. Boland of Cerro Gordo is in town. He came up yesterday and will return today.

About $5,500 has been paid in up to date for the year's taxes. The total amount will be about $30,000.

Jerry Mairs returned home last Monday from an extended trip through the Southern counties.

Last Monday Lem Baxter paid the balance of his fine amounting to $171 and was released from the county jail.

There was a marked change in the weather yesterday. The sky has since been overcast with clouds and the atmosphere much colder.

Constable Murphy has enjoyed considerable traveling around this end of the Valley during the week. He wasn't traveling for his health, either.

Martin Mee has returned from the springs in Kern County and is much improved in health. He looks brighter and better than at any time during the last two years.

R. J. Laws, D. A. Bender, John Forbes and G. P. Rixford passed over the line of the C. and C. to Keeler on a special last Monday. They returned north Tuesday evening.

Under Sheriff Holland reports a very rough trip into Saline Valley, but he got there and supposed his witnesses. His brother, Jim Holland, accompanied him on the trip.

J. W. Bacon has returned to his home in Tulare county, leaving a Mr. Long and wife to attend to his interests in the 8-mile property. He expects to return next spring and locate permanently in Inyo county.

Taxes continue to come in steadily, and it is more than likely that the delinquent tax list will be a small one. In the majority of cases tax payers do not avail themselves of the installment privilege but pay the entire amount at once.

The sleeping car service over the V. and T. will be continued. At first it was only intended to run through the summer to accommodate tourists to Carson and Lake Tahoe. It has proved such a benefit, however, that it will be run indefinitely.

Under-Sheriff Holland went to Saline Valley early in the week to serve subpœnas upon Indian witnesses there to appear at Bakersfield on November 24 and give testimony in the case of the Indian to be tried for the murder of Powers and McCoy.

S. A. Densmore has a fine lot of dried fruit for sale. The variety includes prunes peaches, apples and others. The closest care was observed in drying that the fruit should be neat and clean. It is packed in ten and twenty pound sacks, a most convenient for market, and sold reasonably. Carson and Virginia City dealers should try a sample lot and it is a certainty that the order will be repeated.

Captain H. G. Hannah left Independence for his home at Friday Harbor, Washington, last Saturday, after a week spent here on business connected with the estate of his uncle, the late John A. Hannah. He expressed the warmest appreciation of the kindness extended him by Mr. W. L. Hunter, executor of the estate, and Mr. and Mrs. Brown. He also stated that he left with the utmost confidence that the estate would be carefully handled by Mr. Hunter. He expects to visit the Valley again next summer.

The committee appointed to draft a constitution and by-laws for the new racing organization met on Tuesday, performed the necessary work and will report at a meeting to be held in the reading room of the Norman House to morrow evening. It is earnestly desired that all persons having the interest of horse breeding at heart will attend the meeting. The object is a most worthy one and will work great benefits to the horse breeding industry. There is no better method of encouraging the breeding of fine stock than clean, legitimate racing, and it is to this end that the organization is to be formed. The Association is not to be local, and all residents of the Eastern District are invited to become members.

A Benefit to All.

In conversation with a prominent business man of Bishop recently, he stated that money was easier to obtain in that vicinity this fall than for several years past. Although but very little coin may be in actual circulation or spent freely, still people who have obligations to meet have less difficulty in fulfilling them. Interests on mortgages, notes due and taxes can be paid without pressure. He attributes this fact, in great measure, to money spent in the Valley by sheepmen. They have plenty of cash and checks and pay bills on the spot. They buy all their supplies from local merchants and rent a large amount of fall pasturage from farmers. Sheepmen have purchased ranches about Big Pine, and it is said that about 9,000 sheep will winter there. The owners will thus pay direct tax upon their bands in this county, and the sentiment is general that no license tax shall be levied upon them next year. As to migratory bands, it is but just that license should be exacted from them, as they pasture upon all open range in the county. But if owners will winter here and pay direct taxes, it is safe to say that no license tax will be demanded.

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of October, 1891.

Mean barometer	29 978
Highest barometer	30 263
Lowest barometer	29 271
Mean temperature	64.0
Highest temperature, 8 n	83.
Lowest temperature, 1st	35.
Greatest daily range temperature, 31, 34.	
Least daily range temperature, 9 h, 17.	
Prevailing direction of wind, East.	
Total movement of wind, 3292 miles.	
Extreme velocity of wind, direction and date, 26 miles N. E. on 31.	
Total precipitation, 0.01 inches.	
Number of days on which .01 inch or more of precipitation fell, 1.	
Number of cloudless days	19
Partly cloudy days	9
Cloudy days	3

H. E. WILKINSON,
Weather Bureau Observer.

Change of Owners.

W. K. Miller of Lone Pine has purchased the stage route from Keeler to Mojave. Under his able management the service will be greatly extended and improved. Fine horses will be used on the stages instead of two, as formerly, and consequently much better time can be made. Thus, with a fine new coach, will make the ride out that way a pleasant trip. The stage will leave Keeler at six o'clock in the morning and arrive at Mojave before six o'clock next morning. Leaving Mojave at six o'clock in the evening, it will arrive at Keeler at six o'clock the next evening. Mr. Miller states that better time than this will be made, and that not more than twenty hours will be occupied in making the trip. All light freight will be hauled at very low rates, and will arrive here fully as quick as by rail from San Francisco, and much quicker from Los Angeles.

Salt Lake to Los Angeles.

The Salt Lake and Los Angeles papers state that the money for a railroad from Salt Lake to Los Angeles, via the southeastern part of Nevada, has been raised, and that the road is a sure thing. Ex-Mayor Workman of Los Angeles, who spent a month in Salt Lake looking to the furthering of the project, has returned to the former city, and says that $5,000,000 has been raised for the road. The route has not been settled upon yet, but the one most favored passes through Pooche and traverses about eighty miles of Nevada. If the road goes that way that section of the State will be greatly benefited; in fact, the prosperity of Nevada will be increased generally. The beginning of the construction of the road will be awaited with considerable interest.—*Enterprise.*

Dr. R. L. St. John of Howland, Putnam county, Missouri, takes especial pleasure in recommending Chamberlain's Cough Remedy, because he knew it to be reliable. He has used it in his practice for several years, and says there is none better. It is especially valuable for colds and as a preventive and cure for croup. This most excellent medicine is for sale by

A. K. EUGLEY
Big Pine.

As a preventive and cure for croup, Chamberlain's Cough Remedy has no rival. It is, in fact, the only remedy that can always be depended upon and that is pleasant and safe to take. There is not the least danger in giving it to children, as it contains no injurious substance. For sale at 50 cents a bottle by

A. K. EUGLEY,
Big Pine.

HEIR TO $500,000.

NEW YORK, Nov. 26.—A dispatch was received yesterday from Baltimore announcing that George F. Beiser of Brooklyn had become heir to a vast estate there valued at $500,000. The property came through relatives who emigrated from France in the days of the Huguenots. Mr. Beiser is an accountant in a Fulton street clothing house. Bruce's Law and Inquiry Agency, of Chicago, Ill., prosecuted his claim.—*Louisville Courier Journal*, Nov. 27

We are Mr. Beiser's lawyers and by him seeing our advertisement, became the agent of his good fortune. If your ancestors came from the old country write to us, and enclose $1 for our list of heirs. There are more than half a billion dollars in Great Britain and Germany, unclaimed, which rightly belong to people in the United States.

BRUCE'S LAW AND INQUIRY OFFICE,
164 and 166 Randolph st.
Chicago, Ill. U. S. A.

ASSESSMENT NOTICE

STEVENS DITCH COMPANY.

Location of principal place of business, Independence, California. Location of Ditch, near Independence.

NOTICE IS HEREBY GIVEN THAT AT a meeting of the Board of Directors, held the 26 h day of Sept. 1891, an assessment (No. 7) of Thirty (30) Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company in Independence, Cal.

Any stock upon which this assessment shall remain unpaid on Saturday the 28 h day of Nov. will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on SATURDAY, the 26 h day December, 1891, to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

P. H. MACK, Secretary.

WHY NOT THE BEST?

When you employ a doctor you generally want the best skill and ability that you can get. Why not in other things?

If you are in need of wearing apparel or household supplies, why not buy of the house that has the *right* goods, the *right* prices, and ability and willingness to render the *highest* sort of service?

People who know—and they are numbered by tens of thousands—say that house is Weinstock, Lubin, & Co., Sacramento, Cal. Certain it is that they have by far the largest mail-order trade on the coast, and that it is steadily growing year by year. They have made the business a science, and have the special experience and special people necessary to success in the fullest term of the word.

A beautiful illustrated catalogue, containing full descriptions and prices, sent free to any address.

WEINSTOCK, LUBIN, & CO.,
400-412 K Street,
SACRAMENTO, CAL.

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

"German Syrup"

J. C. Davis, Rector of St. James' Episcopal Church, Eufaula, Ala.: "My son has been badly afflicted with a fearful and threatening cough for several months, and after trying several prescriptions from physicians which failed to relieve him, he has been perfectly restored by the use of two bottles of Boschee's German Syrup. I can recommend it without hesitation." Chronic severe, deep-seated coughs like this are as severe tests as a remedy can be subjected to. It is for these long-standing cases that Boschee's German Syrup is made a specialty. Many others afflicted as this lad was, will do well to make a note of this.

An Episcopal Rector.

J. F. Arnold, Montevideo, Minn., writes: I always use German Syrup for a Cold on the Lungs. I have never found an equal to it—far less a superior. (9)

THE HAUNTED GUITAR.

It rings no more in roundelays,
And blithe ballades of other days;
Its voice is hushed that once could lure
The love of maid and troubadour;
The slender hands that soft did stray
Across its strings are dust today,
And dust the heart that throbbed to hear
The chanson of the cavalier!

Of old, in fair Provence, where song
Is sweet, and life and love are long,
The mystic music in these strings
Once thrilled with heart imaginings.
A woman, from her casement wide,
Soft clad and slender, starry eyed,
Leaned out, with parted lips, to hear
The love song of the cavalier.

A sob! that stifled the sweet song.
A cry! the river sped along,
Fleet flooted, bearing on its way
A mantle, crimson dyed, a gray
And upturned face whose lips would frame
The soft words of a woman's name.
While o'er the waters echoed long
A fragment of that broken song.

This the story, this recalls
The old guitar upon my walls,
And in the dusk I sometimes hear
The fingers of the cavalier
Stirring among the strings and keys
Strange horror haunted harmonies;
And through the gloom there glides along
The ghost of that unfinished song!

—Ernest De Lancey Pierson in The Curio.

A DREAM FANTASY.

There is no doubt that John Gorham often felt bored when I tried to draw him into discussions that he was pleased to term "purely speculative;" in fact, he often gave very plain and blunt expression to his annoyance. He was a physician, and prided himself on being "practical." This quality no doubt has its uses, but it need not necessarily include an utter lack of sympathy with everything that cannot be absolutely demonstrated. However, I have no intention of railing at John's peculiarities, for he was an excellent fellow. We occupied a suite of rooms together in a desirable part of the city, and to the post of the outer door was a sign reading "John Gorham, Physician and Surgeon." Neither of us was married.

One evening I pinned him down to a discussion on the subject of dreams. I had lately been reading some interesting articles on those mysterious activities of the mind which come into play only when the other faculties seem to be shrouded into oblivion. It was a cold November night, but we sat in comfortable easy chairs before a glowing grate fire. I had lain down Bulwer's "Zanoni," and compelled John reluctantly to suspend his perusal of a medical report.

"Dreams," I said, "are often so extremely vivid."

"So is the toothache," was John's rejoinder.

"No doubt," I replied, with no sign of irritation; "but have you never had a dream that seemed for the time being to be a reality?"

"Occasionally; that is a common experience."

"Still further: Have not the occurrences of a dream even been so vivid that you were afterward unable to distinguish their impressions from memories of actual facts?"

"Never," replied John, emphatically.

"On the other hand, have not actual experiences left such dim recollections that you have afterward confounded them with visions of a troubled sleep?"

"Certainly not," said John, with derision as well as decision.

"Well," I replied, "you are so excessively matter of fact in everything that you can't be expected to share the experiences of ordinary mortals."

"And you," retorted John, "are so anxious to discover something new and wonderful that you believe everything you hear and read, and then build up the most outlandish theories."

"I am not theorizing; I am simply trying to make you understand that dreams may be so vivid as to be confounded with actual events, and vice versa."

"And I say that a man who finds himself the victim of such an uncertain condition of mind needs to change his diet and take exercise. But don't bother me any longer. I want to finish this report and then go to bed." And he immediately became absorbed in the pamphlet, his perusal of which I had interrupted.

Thereupon I betook myself to a couch, stretched myself out comfortably, and opened "Zanoni" at the chapter on "The dweller of the threshold." The book, for once, failed to interest me. John Gorham's stubbornness was exceedingly irritating. I longed to convince him that he was wrong. Testimony would not do it, for he would reject any testimony tending to corroborate my claim as the vagary of a disordered brain. The only way was to appeal to his own experience. How was this to be done? Long I pondered over the problem, with eyes half closed.

All at once a plan for convincing John flashed upon me. It was this: Wait until John was asleep; wake him up; get him out of bed; take him into the street; conduct him on some pretext to a distant part of the city; bring him back; give him an opiate in a glass of wine; put him to bed; in the morning deny that either he or I had stirred from our apartments; and finally make him believe that the whole thing was nothing but a dream.

The plan struck me as being well conceived and feasible, and I resolved to put it into immediate execution. Affecting to be sound asleep, I looked cautiously out of the corner of one eye to make sure of observing John when he should retire.

His chair was empty! I looked around, listened, and heard snoring. Could it be possible that John had gone to bed without my knowing it? I arose and found this to be a fact. My reverie had been so profound that his movements had not disturbed me.

So much the better. I observed him carefully and saw that he was sound asleep. Then I opened his drawer of medicines and took therefrom a vial containing a peculiar and powerful drug of whose sedative qualities I had often heard him speak. He had said that it was a dangerous thing to administer except by one thoroughly understanding its properties; but its effects (as he had described them) were precisely those which I wished to produce; and without scruple or hesitation I poured a few drops into a wine glass and set the glass in a particular corner of a tray on the sideboard. I would thus know precisely where to find it on our return from the expedition which I had planned.

John was still sleeping soundly, and everything was ready except the pretext on which to awaken him and lead him forth. This was quickly settled upon. I touched an electric button which communicated with a livery stable, the effect of which would be to bring a horse and buggy to the door within five minutes.

Then I approached the bed and roused John.

"Come, John, you're wanted. An urgent case. Horse at the door. Hurry up."

"Who's sick?" he growled.

"I don't know the name. Jump into your clothes. "I'll go with you and drive."

"All right." And amid much stretching and yawning, John dragged himself from the bed and dressed as speedily as possible. We were soon out of doors and seated in the buggy, with robes drawn closely about our legs, for it was a cold night. I took the reins, but was as yet totally undecided as to what move to make next. I started the horse, however, trusting to luck or some happy thought to determine our further proceedings. Luck settled the matter. We had not driven a dozen rods before a boy came rushing up the street. He halted on meeting us and panting for breath, exclaimed:

"Be you the doctor?"

"Yes," I answered, hastily, discerning an escape from the embarrassing situation into which I had so recklessly rushed.

"How lucky! You're wanted just as quick as possible. Drive to ——"

"Yes, yes," I interrupted. "You know the way, don't you?"

"Yes."

"Well, then, jump in with us and drive."

The boy did as requested, and we rattled through the streets at a lively gait. Thus had a most fortunate circumstance come to my aid, in the form of an actual call for a physician, and we were now proceeding to a definite destination. John seemed to think the proceedings a little irregular, but I managed to quiet his uneasiness by various devices of prevarication.

We soon left the lighted portion of the city, and plunged into dark and narrow streets. Nothing could be distinguished in the gloom but the towering shade trees on either side, and an occasional night lamp gleaming dimly from a window.

"Here we are," exclaimed the boy, drawing the horse up so suddenly that we all pitched forward. We alighted, and the urchin conducted us from the street into a narrow alley, on each side of which solid brick walls loomed up. They were barely discernible in the darkness, and I had not the remotest idea of the quarter of the city to which we had come.

Suddenly we turned, in obedience to our small sized guide, and halted before a low arched door set in the brick wall. The boy gave a peculiar knock, which elicited a whistle from within, this in turn being replied to by another and slightly different knock. We were ushered within, and the door was closed behind us.

Inky darkness was all about. A voice commanded us to move forward, and we did so cautiously. The dark passage was not of great length. It led to another door, which, on being opened, led to a dimly lighted apartment. Into this we proceeded, and peered cautiously around, at first being unable clearly to discern the contents of the room. Becoming accustomed by degrees to the semi-darkness, we at length observed that the place was one where poverty, if it did not actually reign, at least had obtained a strong foothold. The furniture was scanty, the walls were dingy and hung with cobwebs, and a sickly flame from a tallow candle sent forth faint and uncertain rays of light.

"There's no money in this job," growled John.

Then came, in a sorrow laden voice, from an obscure corner of the room:

"Oh, my daughter!"

The place had been profoundly quiet up to this point. I was indignant at John's heartless remark. It was not at all like him. I also was somewhat disturbed in mind, for there was something so decidedly real about our night adventure that I began to fear it would be impossible to pass it off as a dream.

"Oh, my daughter!"

The words broke on the silence with startling distinctness. John advanced to the quarter from which they proceeded, and I followed him.

"Bring the light," he said.

The tallow candle was set in an old bottle, and this I seized and carried with me. The light disclosed an aged woman, on whose face were the unmistable lines of struggle and hardship. She was miserably clad. She sat in a rocking chair by the side of a cot. On the cot, covered with an old shawl, lay a girl whose age might have been 10 years. Her face was in startling contrast to its surroundings, for it was fair and excessively white. Her eyes were large, dark and brilliant and her hair was jet black. She took no notice of our presence, but seemed to stare into vacancy.

"Is this your daughter?" asked John.

"Yes, sir; can you save her?" The sharpness of an intense anxiety was in the woman's voice.

John, without replying, placed his hand on the child's brow. He was always very deliberate, and for a moment his touch lingered while he studied the young face.

"She can make so much money for me if she lives," whined the old woman.

This surprising remark caused both John and me to look at her inquiringly.

"She is my seventh daughter, and I am my mother's seventh daughter. She can look into the future and tell all you want to know!"

"Yes," responded John gravely; "I thought there was something peculiar about her."

"Ho, ho! John Gorham," thought I, "do you believe in any such nonsense as that—you, who are so very practical and level headed?" But I kept my thoughts to myself.

"Tell me, can you save her?" repeated the mother.

"I'll try," replied John. "When did you first observe her peculiar gifts?"

"There was no need to observe them. She's the seventh daughter of a seventh daughter, and that's enough. Why don't you give her some medicine to bring down the fever?"

"She has very little fever. Her trouble is a low state of vitality. I will not conceal from you that her condition is serious."

As John spoke he took the child's hand in his own.

"Upon my word," he exclaimed," she has a surprising amount of nervous strength. Her grip is as strong as a man's. I cannot loosen it without hurting her."

At this juncture the child looked at him attentively and intelligently. I was still standing slightly in the rear, holding the candle over John's shoulder.

"Hush!" exclaimed the old woman, in a warning whisper. "She is going to speak."

A faint voice from the bed now spoke these words:

"Beware of the man with the light! Let me think. He does not seem to be your enemy, and yet he is trying to deceive you. But he will not succeed!"

I was thrown into consternation by these words. Of course they meant me. How had this strange child penetrated my designs? I was about to protest that she was delirious, when she relinquished her grasp of John's hand, turned her gaze from him, and relapsed into her former state. As for John, he favored me with a single, swift and searching glance, which threw me into a state of guilty confusion. But if he had any suspicions, he gave no expression to them in words. He opened his medicine chest, selected some remedies, and gave the old woman directions for administering them.

"There will be no need of my calling again," he said. "If the child is no better by to-morrow, take her to the hospital. See that she has perfect quiet, and, above all things, do not let her exert her peculiar powers until she is fully restored to strength. Such things are a great strain on the nervous system, and the girl cannot afford for the present to waste an atom of energy. The medicine I have left will help her, and perhaps successfully bridge over this period of depressed vitality."

The old woman thanked him, and then to my astonishment produced a shining $10 gold piece from some recess of her tattered garments, and tendered it to John. He accepted it gravely, and then we withdrew from the apartment. Once in the open air, the voice of the small boy was heard:

"Jump in," he said, "and I will drive you home."

We obeyed, and were conveyed through the streets at a rapid rate.

"What do you think of the case John?" I asked.

"The child may not live until daylight, or she may grow to womanhood and have a brilliant future."

"What! do you really believe in that nonsense about her gifts as a fortune teller?"

"Don't you?"

I could not answer. I recalled the strange speech which seemed to indicate that the girl had penetrated my designs on John, and was abashed. The ride was continued in silence, and in twenty minutes we had reached our destination. The boy volunteered to take care of the horse, and in another moment John and I were in our own apartments.

John immediately proceeded to undress. In five minutes he was ready for bed. Without delay I prepared for the further execution of my plot.

"John," said I, "there's a pint of champagne left in my closet. It strikes me that it would be just the thing with which to top off this night's adventure. What do you say?"

"A most excellent idea," was John's reply.

How smoothly everything was working! I opened the closet, drew forth the bottle and wrenched off the wire with which the cork was bound. I then glanced furtively at John. He was winding his watch, with his back turned toward me.

I quickly filled the glass which contained the drug and extended it to John. He quaffed the contents with great relish, I meanwhile watching him over the rim of my own glass. He smacked his lips critically after his glass had been drained.

"It seems to me that there is a singular flavor to that champagne."

I felt a guilty thrill and affected not to hear him.

"How sleepy I am," was his next remark. "It must be the effect of riding in the cold."

Then he tumbled into bed, and the next minute had sunk into a deep sleep. The drug had taken effect with surprising, not to say startling, promptness, and I listened to his heavy breathing with satisfaction.

I now began to give serious thought to the situation, and to deliberate on the necessity of removing every trace by which the reality of our night's adventure could be proveh. I knew that John could by no possibility find the place we had visited, for the route was a long and circuitous one and had been traveled in darkness. Ah! There was the $10 gold piece which the woman had paid him. Without hesitation I removed it from his pocket and placed it in my own. Was the trail covered? I thought so. In the morning I would declare that we had not stirred from the house during the night, and after persuading John that the whole thing was but a dream—making him commit himself fully to that view of the case—tell him the truth and thus confront him with a demonstration of my theory!

I smiled with satisfaction. But hold! There was the boy! Suppose he should turn up. I must find him and purchase his silence. I was so intent now on the success of the plot that I would have expended a hundred dollars rather than see it fail. I decided to go to the livery stable in search of the urchin who had driven us to the abode of the sick child.

First, I approached the bedside to make sure that John's slumber was so sound that he would be sure to take no notice of my departure and return. He lay perfectly quiet, but there was something singular in his appearance.

I gazed at him more closely, and was horrified at a change that had come over him. He no longer breathed deeply, but in a quick, convulsive and exhausted manner. His lower jaw hung down, his eyes were half open, and he looked like one vainly struggling for a hold upon life.

I was paralyzed with dismay, and stared at him in an agony of fascination. More faint, rapid and spasmodic grew his breathing; more distressing the heavings of his chest; more ghastly the pallor of his countenance.

Spellbound, as if in a nightmare, I still gazed upon him. The ebbing of vitality proceeded with frightful rapidity; there was at length a mere flutter of breath; and then came that awful repose, that unspeakable silence, that dreadful calmness of the untenanted clay!

Then the full horror of the situation burst upon me. The drug had done its work too well; John Gorham was dead! I was his murderer!

"John!" I shrieked.

And then, with rapidly scattering senses, I staggered and fell heavily to the floor.

* * * * * * *

"Ha! Ha! Ha!"

What mocking laugh was that ringing through the air? Consciousness was returning, and with it the sound of harsh, discordant merriment.

Again came a peal of laghter. Was it my own voice, and was I a lunatic?

I opened my eyes and looked about. I was still lying on the floor, but not by John's bedside. John seemed to be sitting in a chair with a book in his hand. I stared at him in a state of bewilderment.

Again the laugh. It was his voice. Then he spoke:

"Do you want me to come and help you up?"

"Where am I, and what has happened?" I asked.

"You appear to be sprawled on the floor, and it is quite evident that you fell asleep and rolled off the couch," he answered.

At these words I hastily rose and pulled my wits together. The truth was soon apparent. Following our discussion of dreams, I had read "Zanoni" until sleep had stolen upon me, and both the conception and carrying out of the plot to convince John were but the visions of a dream. I was somewhat mortified, but at the same time immensely relieved, for John was alive and well, and still held in his hand the medical report which he had been perusing when our discussion began.

We soon retired for the night, but neither at that time nor on any subsequent occasion did I relate my dream to John, for in it is the keynote of an experiment I mean to try some day for his benefit. It is the only way in which he can ever be convinced that the phenomena of dreams involve possibilities beyond those dry, matter of fact realities that now form the boundaries of his experience and mental vision.—O. S. Adams in The Epoch.

"Inspection" in the Regular Service.

"But I want to tell you it isn't alone the musket carrier who shirks. That's a faculty which creeps in once in a while over in the officers' quarters. If this were not true, the privates couldn't 'soldier' so successfully.

"How?"

"Well, take it on 'inspection,' for instance. I'll venture to say that knapsacks are not carefully inspected more than once out of fifty inspections made at the various posts in a year. I had a knapsack which I packed in the spring of 1876, and I never unpacked it until I left the army."

"Where did you keep your clothes?"

"In my box."

"What was in your knapsack?"

"Old togs. It's an old gag, and works beautifully. You take a pair of trousers and a pair of drawers. Fold them together with the legs alternating. Then you take an overcoat (of course these are old clothes which have been cast aside) and leave out the cape and possibly the sleeves. The idea is to use as little material as possible, but fold it in such a way that the colors—blue, white, gray, etc.—will 'show up' regulation fashion. Take an old pair of shoes and cut them down until only the soles and counters are left. Polish up the counters and shove the things down into your knapsack and there you are. When your knapsack lies on the ground open she looks all right and snug and not worthy of more careful examination."

"But if you're caught at it?"

"Yes; I've been there. It was in the fall of '69, during my first term of service in the regulars. I forget now all about the punishment, but I know I was put in the dump—they were grading off a portion of the parade ground—as long as the work lasted, then I had police duty as a regular thing for about three months, and during the whole time had no passes to town."

"And yet you tried it again?"

"Of course. It's a sort of satisfaction to realize that you're getting the best of your superiors. It's funny when you don't get caught at it."—Detroit Free Press.

The Mormon's Wife's Shoes.

Mormon Wife (trying on a pair of shoes)—They are oceans too large, my dear.

Husband—I'll take them back and get a smaller pair.

Mormon Wife—No, don't do that. Give them to your last wife. They'll just fit her.—The Epoch.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

In condemning ground for public purposes an effort should be made to select land that is not just on the verge of becoming the heart of a metropolis.

SERIOUS DANGER

Threatens every man, woman or child living in a region of country where fever and ague is prevalent, since the germs of malarial disease are inhaled from the air and are swallowed from the water of such a region. Medicinal safeguard is absolutely necessary to nullify this danger. As a means of fortifying and acclimating the system so as to be able to resist the malarial poison, Hostetter's Stomach Bitters is incomparably the best and the most popular. Irregularities of the stomach, liver and bowels encourage malaria; but these are speedily rectified by the Bitters. The functions of digestion and secretion are assisted by its use, and a vigorous as well as regular condition of the system promoted by it. Constitution and physique are thus defended against the inroads of malaria by this matchless preventive, which is also a certain and thorough remedy in the worst cases of intermittent and remittent fevers.

Ethel—You jilted him and he proposed to me. It is your own fault, and I don't see what you have to be sorry about. Clarissa—I'm not sorry for myself, dear, but for him.

INVIGORATE THE DIGESTION.

BRANDRETH'S PILLS invigorate the digestion and stimulate the torpid liver and bowels, they cleanse the blood and impart new vigor to the body. One or two every night for a week will usually be all that is required. For Constipation or Dyspepsia, one or two taken evey night will, in a short time effect an absolute cure.

BRANDRETH'S PILLS are purely vegetable, absolutely harmless, and safe to take at any time.

Sold in every drug and medicine store, either plain or sugar coated.

"Why is the Brooklyn bridge the only one of its kind?" "I don't know. It isn't, is it?" "Yes; it is a suspension bridge, you see, and has no pier."

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

FREAKS OF FASCINATION.

Fortunately, the Tastes of Men Differ.

BEAUTY, THE COMMON OBJECT OF LOVE.

The Infatuation of Tallyrand.—Each Man has his Ideal.

Dame Nature plays strange freaks with men's minds. If one of the many enterprising newspapers of the day was to inaugurate a competition in which every man had to give an accurate description of the kind of woman most prone to fascinate him, many readers would, I think, be astonished.

Noah Webster's definition of the word fascination is, "The exercise of a powerful or irresistible influence on the affections and passions," and he gives as secondary explanation, "Unseen, inexplicable influence, witchcraft, enchantment." In the words "inexplicable influence" the learned doctor seems to have summed up neatly the whole question. Who can explain what is frequently the case, that of two men of as nearly as possible the same cast of mind, the one will find a woman irresistibly fascinating, while on the other she might not exert the slightest attractive influence? Such a problem is as hard to solve as why the guileless rabbit, instead of putting his best leg forward and making a bolt, circles round the snake, which he knows only too well intends to make a meal of him.

The wise heathen Aristotle said: "No man loves but that he is first delighted with comeliness and beauty, and beauty is for the most part the bait which lures a victim into the meshes of the snare, but not always." Dr. Webster, too, seems to imply by his definition that in the power of fascination, whether exercised by man or woman, there lurks a certain sexual affinity. Yet one of the most fascinating women of history was Germaine Necker, afterwards Mme. de Stael, though contemporaneous record tells us that she was anything but a beauty, and that her dress was not only hideous, but sinned against every principle of good taste.

Women, however, whose names will be handed down to posterity as having founded noted salons, or having provided the magnetic influence to gather a brillant coterie of wit and talent, have, for the most part, been beautiful. "Beauty is the common object of all love: as jets draw a straw, so doth beauty love." Beauty will always attract, at any rate momentarily; but most men, if they find that a lovely face is but a mask covering a void cranium, will cease to flutter around the flame. There are, however, striking exceptions to this rule on record.

Perhaps the best instance is that of the infatuation of Prince Maurice de Talleyrand, once Abbe de Perigord and bishop of Autun, for that lovely blonde, Mme. Grant, afterward Mme. Talleyrand. Her gross stupidity was proverbial, and furnished amusement for the salons of Mme. de Stael and others, which her husband frequented.

But in the majority of cases something more is necessary than comeliness of face to really fascinate men, especially such men as the "Prince of Diplomats," and this something is the instinctive faculty which enables a woman to adapt her mind to and enter into the spirit of her companion for the time being.

Thus, in my own experience, I have seen a learned professor discoursing eloquently on the scupture of ancient Greece to a young lady whose tastes were in reality centered in dogs and horses. Had he known her true proclivities, he would have stood aghast at such utter barbarism; yet such was her genial, sympathetic influence on his mind that he pronounced her the most charming of her sex—second only, of course, to his stout and learned wife. Had the intercourse been indefinitely prolonged, doubtless the potency of the spell would have vanished; for, in reality, there was little or nothing in common between the two minds.

The power of fascination inherent in woman may, however, be divided into two kinds. All of us have seen the old lady, generally white haired, with kindly, pleasant features, on which time has set no unfriendly mark, who still retains all her attractiveness. Note how the boys and girls adore her; they will go to her and confide their sorrows, their hopes, their ambitions, even when they would not breathe a word to their mothers. The kindly, living interest in a lad's affairs by such an one has time and again first implanted the impulses in his heart which eventually led him on to an honorable career. Quickly, almost by stealth, the good is done by such, and the good seed sown which will ripen in after time into a rich and abundant crop.

On the other hand, we have most of us seen, perhaps in real life, certainly on the stage, the fascinating adventuress who, by her enthralling beaute de diable, enslaves men's souls and leads them (on the stage) to dare all for her sake. Such is directly opposed to the sweet old lady in her old fashioned chair, and these two form the opposite poles between which the women who fascinate vary.—Francis Trevelyan in Saturday Review.

The trombone player was fitting a mouthpiece to his instrument with a good deal of care, and a young woman was heard to ask, "Mamma, what can that man be doing?"

"I don't know, my dear," answered the mother, as she leveled her glass upon the musician in question, "unless he is winding his horn. You often read of players doing that, you know."—Boston Post.

A New Shoe Blacking.

A patented shoe blacking, which contains no acid, is made in Germany by dissolving casein in a solution of borax or soda and adding resinate of iron, besides the usual boneblack, grease and sugar. A brilliant luster is imparted by casein, and the resinate of iron gives a deep black color.—New York Telegram.

PTOMAINE POISONING.

Cases of Considerable Rarity in the History of the Healing Art.

The husband and two children of the poisoned family in Highlands are better. It is a case of ptomaine poisoning, and the fact that that kind of poisoning is exceedingly rare makes it most interesting. It comes from putrid meats and vegetables, and also exists in cheese. It is a poisonous salt developed in the process of putrefaction, and a case of this kind of poisoning is rarely seen so marked as this case, because it is seldom that people eat meats that are pronouncedly tainted.

In this case the meat was in the most dangerous stage, and all that ate it were very sick. An evidence which shows that this was a case of ptomaine poisoning resulting from the meat is that the family upstairs ate some of the same meat, which was cooked, and were very sick for two days, but recovered. Symptoms of this kind of poisoning, according to Dr. Lutze's statement, are violent vomiting and purging and a pinched expression of the face. This is often mistaken by the best physicians for other troubles, and such a mistake is not surprising when the best chemists do not thoroughly understand the nature of these cases and the poison.

It is a blood poison by absorption, and its effect is first upon the blood, producing tissues of the capillary circulation. In reality death commences at the surface and continues inwardly until the heart is reached. Its secondary effect is on the vasomotor nerves which regulate the circulation. Dr. Lutze called Dr. Sowers in consultation on the case, and both are satisfied that this is a clear case of ptomaine poisoning.

Regarding the rarity of such cases Dr. Lutze says he has in his practice never seen but one, and that was the case of a man in New Jersey. In that instance the cause was putrid fish. A whole family was stricken down and five died. Dr. Sowers says he never saw a case with fatal results before. In giving the peculiar effects of the poison he cited a medical work which is compiled from the best authorities over the world:

"No characteristic post-mortem appearances are recognizable. The body is emaciated and the skin bleached and parchment-like. Rigor mortis begins early and continues longer than usual, and putrefactiqn is delayed in some cases, but very rapid in others. The mucous membrane of the mouth and pharynx is often white, dry and parchment-like or horny. The mucous membrane is frequently congested and sometimes cachymatic. The spleen is sometimes enlarged, congested and extremely soft and friable. The blood, as a rule, is dark and contains no foreign organisms or elements. The corpuscles are unaltered. The lungs are frequently congested and œdematous."

"Often," says Dr. Lutze, "the symptoms are the same as in the case of arsenic poisoning, but this is not always so."—Denver News.

Eyes of Different People.

Eyes have always been regarded as a sure tribal characteristic. Tacitus, for example, describes the Germans as "fierce, with blue eyes and red hair." The Celts are mentioned as being swarthy skinned and black eyed; the Gauls are red haired and light eyed, while the Nubians, the Turks, the Egyptians and the Italians have always been spoken of as "the dark eyed races." These peculiarities have not changed. Even today the people of the temperate zones have generally light colored eyes, while those of the torrid and the frigid zones are usually dark, or even black. Of the races in particular, the only one that can be said to be "light eyed" is the Caucasian, and even in this race the eyes are by no means uniform in point of color.

The whole period of human history goes to prove that the light haired, blue eyes races are capable of the highest degree of civilization, but it does not by any means follow that the highest degree of civilization is confined to people of blonde complexion. There was a time when a blue eyed person was rarely seen, and today seven-eighths of the world's inhabitants have dark eyes. Lavater, when discussing the eye as a feature in national physiognomy, gave the following as the results of his observations: "The Italians have small eyes; the Germans, light colored eyes surrounded by many wrinkles; the English, strong, open, steadfast eyes; and the Swiss, eyes that are very dull looking."—St. Louis Republic.

He Had a Friend at Court.

A laugh was raised in the United States district court by the testimony of John Boye, a resident of Lewiston, N.Y. Boye is old and somewhat deaf, and gave his testimony with an air of childlike innocence. The following dialogue took place on cross examination: "Did Rich ever sue you?" "Yes." "Did he beat you?" "No." "You beat him?" "Yes." "He caused you trouble and expense?" "Yes, a little." "You had to hire a lawyer?" "No." "Did he hire a lawyer?" "Yes." "You did not have one?" "No." "Are you a pettifogger and try cases yourself sometimes?" "No." What did you do when you were sued, if you did not get a lawyer?" "I got the magistrate." The laugh that followed this reply indicated that some of those present appreciated the importance of having the favor of the court.—Utica Observer.

A Very Careful Man.

William Brown, of this place, has a pair of old fashioned fringed mittens. They were knit for his father, Gilman Brown, forty-six years ago. They are knit in three colors, red, white and blue. Mr. Brown also has a pocket knife that he has carried for twenty-eight years.—Cor. Dexter (Me.) Gazette.

Danger of Agreeing.

Clara—That handsome stranger appears to have taken quite a shine to you, Maud.

Maud—Y-e-s; I can't imagine why.

Clara—Nor I.

Maud—I'll never speak to you again, so there.—New York Weekly.

THE SHOP GIRL.

Great Improvement in her Condition.

PAID A PERCENTAGE UPON THE SALES.

How the Girls can Take a Rest.—An Ingenious Seat.

It will be remembered that about eight years ago there was a popular demand upon the storekeepers that their women clerks should be treated more like human beings than as mere automatons, that they should be given seats behind the counters on which they could rest themselves, and that they should have some apartment wherein they could retire and secure occasional rest from the constant strain upon their nerves and their bodies. The general clamor for reform in this direction led to a most marked improvement in the way in which these young women were treated. The change came slowly, but it came at last, and now the proprietors of the great stores have made admirable provisions for the comfort of their employes.

It may have been observed by shoppers that there is a marked improvement in the personnel of the girls employed in the big stores. Purchasers are treated with more courtesy, and the interest in the purchaser is so manifest sometimes as to be almost amusing to persons who have been in the habit of shopping in other cities. This is based upon very sound financial reasons. Several of the big shops have entered into an agreement with their employes to give them a certain percentage on their total daily, weekly or monthly sales, small, it is true, in each sale, but in the aggregate a very handsome addition to their salaries. The result of this is a decided eagerness on the part of the clerks to wait upon the customers and an anxiety that they shall be pleased. This is an improvement founded upon the interest of both employer and employes, and gives the latter an interest in their work which deprives it of much of its drudgery.

The question of seats in the stores has been always an important one because of the necessity for room in the aisles between the counters and the confined space within which the clerks are obliged to work. But an ingenious inventor solved the problem by providing a queer little stool, which resembles an artist's sketching stool in many respects, though more solid and comfortable. This in many stores is hinged to the lower part of the counter, and the rules of the store permit any clerk when she is not actually engaged in a sale to use these stools at will. As most of the shopping is done between 11 a. m. and 4. p. m., this would seem to give the clerks five full hours during which there is little chance for rest, but this is obviated in this way: The clerks in each department are divided into what on shipboard would be known as "watches." During the busy hours in a department where there are fifteen clerks not more than twelve are, with few exceptions, behind the counter at once. But these twelve are understood to do the full work of the fifteen, so that at hourly or fifteen minute intervals they may in turn have a rest.

Formerly the clerks were compelled to get a bite to eat whenever they could between the customers' demands. Now, however, things are changed so that each girl or set of girls has a half hour in which they may eat their meal in quiet. Not only thie, but in the big stores a room is provided for them with tables and condiments where they have almost as many comforts as they would have at home. These rooms are usually in the basements, for the employers are compelled as a rule to utilize every bit of space above ground that they can secure, but they are kept clean and comfortable by women who also care for the cleanliness of the main store. There is, however, one exception, in a great store in Fourteenth street, in which the clerks are not obliged to go below ground to eat their luncheons. Here they are given a big apartment upstairs, where they have all the fresh air they desire, and also the opportunity to obtain warm food from the adjacent restaurant.

So far as the accommodations for storing wraps and any little valuables which the clerks may have some desire to keep in safety while they are attending to their duties, they are provided in most stores by small rooms where these things may be kept under lock and key, and which answer at the same time as dressing rooms, where the clerks may keep a store dress, and in the morning change their street costume for it, to a very manifest saving of the latter.

The routine of the employment of persons in the great stores is based to a great extent upon civil service principles. The department chief is selected because of his or her peculiar fitness for the position. But none of these vice regents of the proprietor is given power of dismissal over an employe who has been more than a year in the store. Each one of these has the right to be heard, and if the excuses are satisfactory the person complaining must give good reasons before they are discharged. Another thing that goes far toward making the shopgirl more content with her lot is that in several of the stores her wages are yearly increased in proportion to her time of service.—New York Times.

If we visit Egypt and examine the pyramids, temples and tombs on either bank of the river Nile, they will be found to be composed of minute petrifactions. The pyramids of Ghizeh, opposite to Cairo, are composed of stones formed entirely of the remains of mummulites.

Ornithologists tell us that when feeding the stride of the ostrich is from 20 to 22 inches; when walking but not feeding, 26 inches, and when terrified 11 1-2 to 14 feet, or at the rate of about twenty-five miles an hour.

Mosquitoes of California.

Glowing accounts induced us to try the southern mines, and a passage to Stockton was secured on an old tub of a schooner at the rate of three ounces of gold, or thirty-six dollars per head. The deck was crowded with men of every nationality. The rolling hills, tawny and flecked with green trees, bounding the bay of San Francisco, Suisun and San Pablo, were novel and interesting. The very color of the earth, covered with wild oats or dried grass, suggested a land of gold. The sight was inspiring. But when we reached the mouth of the San Joaquin our miseries began.

This river has an extraordinarily tortuous course, almost entirely through tule or marsh lands, that in 1849 produced bushels of voracious mosquitoes to the acre. I had never known the like before. It seemed as if there was a stratum of swarming insect life ten feet thick over the surface of the earth. I corded my trousers tight to my boot legs to prevent them from pulling up, donned a thick coat, though the heat was intolerable, shielded my neck and face with handkerchiefs and put on buckskin gloves, and in that condition parboiled and smothered. In spite of all precautions our faces were much swollen with the poison of numberless bites.

To escape the hot sun we took refuge below deck, and to drive away the pests a smudge was made on some sand in the bottom of the boat, which filled the hold almost to suffocation. The mosquitoes were too ravenous to be wholly foiled by smoke. I think I never endured such vexation and suffering. Sleep was impossible. The boat had to be worked by hand around the numerous bends, and half the time the sails were useless for want of wind. It was a burning calm in the midst of a swamp. But even in our distress there was a humorous side, provoking grim smiles at least.—E. G. Waite in Century.

To Improve the Lungs.

A device recently invented for the promotion of deep breathing is likely to be of value to flat chested, round shouldered and weak lunged people. The device is a small belt or cord which encircles the chest at the point of its greatest expansion, and a take up mechanism to which the ends of the belt or cord are attached. The take up mechanism consists of a coiled spring, adapted to tighten the belt at intervals, and a train of wheels, by which the speed of the spring in taking up the belt may be regulated. Upon the exhalation of the breath, after the full expansion of the lungs, the chest returns to the size natural to it in ordinary breathing, thus leaving the belt loose. Immediately the take up mechanism begins to gather in the slack of the belt, which it continues to gather, and finally it tightens the belt about the chest until the pressure is uncomfortable to the wearer, and compels him to take another full inspiration, thus lengthening the belt.

This lengthening is accomplished by the withdrawal of the strap from the case, which act again coils the spring. The spring in turn, when the breath is exhaled and the chest resumes its natural size, again begins to gather up the slack of the belt. These processes continue as long as the device is worn. It is claimed that the device induces full breaths at intervals, and thus naturally strengthens and enlarges the lungs and chest.—New York Telegram.

Our Would Be Aristocrats.

Thousands of American young men of fair education and excellent possibilities, captivated by the pictures of English aristocratic life drawn in English novels, are learning to despise the simple, rational, useful life of the worthy American citizen, and to court consideration and vulgar popularity by adopting the habits and leading the useless lives of English lords. As is usual in such cases the copy is a caricature of the original. The untitled American lord proves usually to be a vulgar creature, having to assert his self-conferred lordship by all that is most unattractive, most inhumane and most un-American—and that is a good deal—in the English aristocrat.

In England aristocracy has no need to display or to obtrude itself; in America it can exist only by display and obtrusion. For this reason the American would be nobleman must necessarily court attention and try to strike the vulgar imagination by the mere accidentals of aristocracy, such as any boorish Dives can command—houses, horses, turnouts, yachts, opera boxes and the like. And the vulgar are impressed by such things, bow down in servile reverence before them and do their best to make a similar diplay.—Professor Thomas Davidson in Forum.

The Silent Boatman.

"Who can swim? Who can swim?" shouted a man who wanted to cross a river in a boat. A crowd of boatmen gathered round him, crying, "I can, signore, I can!"

Only one was silent and remained in his boat all the time.

"And can't you swim?" inquired the stranger.

"No," was the man's curt reply.

"Then you shall take me across."

The gentleman had adopted this method to escape the importunity of rival boatmen in that part of the country; perhaps also he shrewdly suspected that a man who could not swim would be the safer pilot.—Capitan Fracassa.

Saurian Degeneracy.

The average Florida crocodile brought north by the tourist is seven inches in length, and he has sea room enough in a cigar box. We look at the little cuss, and then, thinking of his ancestor whom we saw pictured in the geography of our boyhood days carrying off an ox in his jaws, we conclude that the Augustan age, for crocodiles, is past.—Martha's Vineyard Herald.

An Observing Child.

Little Boy—Mamma says you were born with a silver spoon in your mouth.

Homely Heiress—That means I was born rich.

Little Boy (after closer inspection)—Was it a tablespoon.—Good News.

HOW MACARONI IS MADE.

An Interesting Trip Through a Factory.

IT IS CONSIDERED AN EXCELLENT DISH.

A Business Controlled by Italians.—Funny Things in the Soup.

Have you ever eaten macaroni, grated up with fresh Parmesan cheese and served with gravy, Italian style? If you have not you have missed a great treat. In years gone by it was a favorite dish in restaurants in this city, but it has given place to newer dishes, and now is not to be found on any bill of fare in Chicago. We have all wondered at the funny things we sometimes find in our soup at these high toned restaurants, where everything is judged by appearance as well as by smell and taste. Our plate of mock turtle has appeared like a sort of miniature ocean, in which all kinds of swimming things were to be found. There were quaint star fish, miniature, it is true, but perfect in shape and appearance. There were long, straggling things like thread worms that required a good deal of sound reflection on the part of the novice to get them down without a qualm.

There were the letters forming our own initials, and oh, wonder of wonders, the initials of that dear fellow destined to be our future husband! How in the world did C. K. happen to get into our soup? There must be magic in it! There were shells of various descriptions and a strip of ribbon seaweed. There was also a hairpin, which must have been dropped out of some fair one's head as she leaned over the side of a vessel. But our soup is getting cold as we lose ourselves in the study of its wonderful possibilities, and it is not till our more experienced friend to the left whispers, "Macaroni, you goose!" that we realize that all the slimy sea things we have found are only imitations of the same, made in flour and water.

How is it done anyway? You want to know. Well, come with me to the north side, and there, at 101 Indiana street, you shall find the largest factory of the kind on the continent, where macaroni in thick strips and macaroni in thin strips, and vermicelli in true love knots, and noodles that are not human, and condensed flour and water in the shape of worms that do everything but crawl, and neck frills that look as if they only needed to be put round your neck and fastened with a pin, and pockethandkerchiefs half unfolded, and imitation pumpkin seed and rice, and wedding rings and nutshells and various parts of machinery, such as cogwheels and nuts, are all displayed in neat boxes, with glass lids.

The obliging proprietor, Signor Canepa, is waiting to show us over, and we will descend with him into the basement where all the machinery is at work and see how it is done. First, there is the steam flour sifter, that sifts it out so fine that hardly a grain of dust can get through with the flour. The latter is then mixed with water to the consistency of very thick dough. This is also done by steam in a pan where two curved scythes in perpetual motion keep the flour and water ever moving and mixing. The dough is then transferred to the kneading machine, which consists of a great vat, around which a huge steel wheel perpendicular to the trough is ever moving round and round like the cycles of eternity.

The material is now ready, and all that remains is to put it in shape. For this purpose there are several machines, consisting of upright steel cylinders, of which the bottom plate is a sieve containing holes of various sizes to suit the various grades of macaroni, spaghetti and vermicelli. Into these cylinders a stated quantity of dough is placed, when a colossal weight, representing a pressure of ten tons to the square inch, is slowly screwed down upon the mass, forcing it through the holes of the sieve bottom in the desired shapes. The common tube shaped macaroni and vermicelli, also the hairpin and stovepipe varieties, are forced through in endless length, as many strings as there are holes, till the dough is exhausted.

It is then cut into the required sizes and laid out to dry. The fancy shapes are made in a horizontal cylinder, forced through plates containing holes of the desired shape. As the dough passes through these holes it is cut off short in quarter, half or inch lengths by a revolving knife. The dough has to be of different consistency for all the various varieties. Great care is needed in this respect, for if the dough is a shade too light or too heavy the machinery will not work.

Once through the cylinders, the perfected comestible falls into the metal trays provided for it, and all that is now necessary is to dry it. It is now taken by young girls and laid out in even rows upon canvas trays, which are sent up on the great elevators to the floors above. Three stories are required for this process. Great experience is needed in the drying, for the whole success of the "brew" depends upon whether or not this is done successfully. Macaroni which appears drier than Saratoga chips to the novice is known by the experienced operator to be quite damp, and if it is put away in this condition mold and destruction will surely follow. The three floors hold about 3,000 trays, each three feet square. An exception to this process is the hairpin variety, which is hung upon poles till about half dry, and then laid on the trays. The drying process in fine weather takes about seven days. In "mean, damp weather" twice that time.

The establishment was beautifully clean throughout, as indeed a place devoted to the manufacture of food always should be. The operators are all Italians, the machines being operated by men, the drying arrangements by young girls. The latter earn from $4 to $5 a week. This is not magnificent, but unskilled labor is rarely remunerative. The men, of course, earn mechanics' wages. Whether there is a trust among them or not I did not learn. They all seem very happy and satisfied with their work.—Resurgam in Chicago Herald.

AN ANIMAL WITH A BIG NAME.

The Heliodermа Horridum Which Is Held Captive by a Chicago Man.

"Let me introduce you to the Heliodermа horridum," said C. K. Giles, the State street jeweler, pointing to a glass case which stands in a conspicuous position in his wholesale department. The object referred to by such a resonant title was a little mass of black and gold beads stretched on one corner of the case on a heap of sawdust. Presently the mass became movable, a leg stretched itself out at one end, and the helio, etc., stood revealed as one of the largest lizards ever hatched.

The animal is about sixteen inches in length and of genuine Falstafflan girth. The skin is covered with beautifully shaped scales, and, like Jacob's ewes, spotted and ring streaked. The shape of the spots is wonderfully regular, bearing a strong resemblance to the black and gold wall paper of a dado. The tail is long and thicker than that of most lizards. Round it run three or four rings of gold. The head is broad and flat, with protuberances which conceal the tiny eyes when viewed from above.

"You are not obliged to call him Heliodermа horridum all the time," said Mr. Giles. "Some people call him Heliodermа suspectum and other the Gila monster. I call him Tommy. Here, Tommy."

Mr. Giles clutched the reptile affectionately between his finger and thumb and sat him on the floor. He moved as leisurely and dignifiedly as if he were at home on the sands of Arizona. His forked tongue flashed incessantly in and out, his eyes rolled and he looked altogether as if he might be an uncomfortable customer to deal with were he to take a notion in that direction. For three years he has lived in Chicago, and has succeeded in growing fat on two eggs per week for nine months out of the year, and a Lenten fast the remaining three. The eight hour day has no charm for Tommy.

He only asks for three months' sleep, and then he is ready to enjoy himself for the rest of the year. When he is at home he is the subject of more hair raising tales than any beast of his dimensions, but Mr. Giles will not even concede the fact that he possesses a drop of poison in his whole anatomy.

"He is especially interesting," said his owner, "for he forms the link between the lizards and the crocodile genus. He is probably the only specimen in captivity besides a brother in the Smithsonian Institute, and his race is almost extinct."—Chicago Globe.

The Soldiers of the Plains.

Our frontier cavalryman is the beau ideal of an irregular. The irregular horseman of all ages was recruited from among roving, unintelligent classes, and had, except in his own peculiar province, as plentiful a lack of good as he had a superabundance of bad qualities. Our trooper is intelligent and trained in the hardest of schools. Few civilians, who find it so easy to criticise the operations of the army in the west, would make much of a success in hunting a band of a few hundred Indians in a pathless wilderness or a waterless desert bigger than New York and New England combined; and yet, thus handicapped, what splendid work our cavalry has done!

While one civil department of the government has for years been busy sowing the seeds of strife and furnishing the red man arms of precision, the best of cartridges and plenty of them, how ably our handful of bluecoats, under orders of another, have managed to quell the Indian uprisings! A force of 50,000 men constantly on foot would have been none too great to do justice to our Indian problem since the war. The actual force has been less than a third of this number. Let whoso is tempted to criticise the army make himself familiar with some of the deeds of heroism of the past twenty years by our soldiers on the plains. Criticism blenches before their recital. But the soldier is no boaster. You must seek his story from other lips than his.—Colonel T. A. Dodge in Harper's.

Suppressing the Press.

The arrest of two editors for printing an extract from another paper questioning the validity of the anti-lottery law is certainly carrying things pretty high in this land of free speech and liberal government.

The *Post* has no objection to the stamping out of the lottery companies, but the line should be drawn, it thinks, at that point where irresponsible underlings of the government attempt to stamp out the press.

On this line the Atlanta *Constitution* says that "this policy will not work. If lotteries cannot be destroyed without also destroying the freedom of the press, the people will be in favor of letting the lotteries alone. We cannot afford to yield our right to speak and publish fair criticisms of public measures. If we yield the right in one instance we may expect to be forced to keep silence whenever it suits the government to demand it. Fortunately it is no easy matter to bulldoze the newspapers of America. The menace of fine and imprisonment will intimidate very few. No matter what Federal officials may hold, the newspaper men of the country will not change their convictions that an honest criticism or discussion of the provisions contained in the anti-lottery law cannot with any show of justice be held to be a violation of that law. If they are mistaken in this belief, then the law will have to be repealed or modified. In this republic the government cannot array itself against the press and have the support of the people."

It is the policy and practice in some of the monarchies to inhibit criticism by the press of the acts of government, but until the enforcement, or the alleged enforcement, of the anti-lottery law no one dreamed that such a thing would be attempted in the United States.—*Houston* (Tex.) *Post*, Sept. 16.

POETESS AND AUTHORESS.

Over Three Score Years of Active Life.

MRS. A. D. T. WHITNEY'S LITERARY WORK

Her Songs and Stories.—Pure and Wholesome.—A Review.

There is slight consolation to an author to be reminded that posterity will undoubtedly reward his labors. Fortune comes tardily if it finds him under the sod and the dew. It is present day appreciation that affords most satisfactory food for agreeable reflection, rather than uncertain anticipations of possible post mortem fame. The returns need not be, indeed often are not, made at the clearing house, but these are by no means to be disregarded; but come in the thousand and one ways that express esteem and an abiding recognition of service for Song and Story. And not in the least, nor least gratifying, among the many methods of showing this estimate, which cannot fail to warm the heart and quicken the pulse, is that delightful custom of suitably observing the birthdays of our popular sons and story writers.

Mrs. A. D. T. Whitney, whose birthday occurred Sept. 15, is one of those rare, healthy, hearty American authors whose writings have done so much to sweeten homes, light up gloomy nooks, and make happier and more fragrant lives that, but for her and those of her pure school, would probably have never conceived, not to say joined, the better half of their being. Adeline Dutton Train was born in Boston, Sept. 15, 1824. Her father, Enoch Train, was extensively engaged in mercantile pursuits, owning and managing fleets of vessels that sailed to the most distant lands under the Southern Cross as well as to the widely scattered parts of the realms of the Czar of all the Russias, while he founded and maintained a line of craft that whitened and plowed the stormy Western ocean between the Mersey and the Hub. Every advantage that Boston enjoyed in the matter of a careful, thorough education was at the command of the future author, as may be guessed from those who were her teachers, Mr. Emerson and Miss Dwight, and her friends, Dr. Lyman Beecher, Dr. Lowel, and Dr. and Mrs. Bartol. With such guides to form her character and mold her mind, she grew into a graceful, cultured womanhood. At the early age of 19 she became the wife of Seth D. Whitney, of Milton, which is near Boston, and where her home has been ever since, although for some time she has spent he summers at Alstead, N. H.

For over a third of a century Mrs. Whitney has been a contributor to the best of America's magazines, as well as an author whose writings, both prose and verse, have found thousands of appreciative readers. In the year 1857 her first published work, a poem, appeared, entitled "Light in the Sea." The remainder of her more important works are In 1860 "Mother Goose for Grown Folks" was issued; in 1862, "Boys at Chequasset;" in 1863, "Faith Gartney's Girlhood;" in 1865, "The Gayworthys;" in 1866, "A Summer in Leslie Goldthwaite's Life;" 1868, "Patience Strong's Outing;" 1869, "Hitherto;" 1870, "We Girls;" 1871, "Real Folks;" 1873, "The Other Girls;" 1876, "Sights and Insights;" 1880, "Odd or Even;" 1885, "Bonnyborough, 1886, "Homespun Yarns" and "Holy Tides;" 1887, "Daffodils" and "Bird Talk." Of these, "Mother Goose," "We Girls," "The Other Girls," "The Gayworthys,"

MRS. A. D. T. WHITNEY.

and "Patience Strong's Outing" are probably the choicest.

All her writings are pure, wholesome and sparkling. Her poems are bright, and running through them all is a golden thread, like that which led the classic hero out of the labyrinth—always leading out into the light.

THEY WONT ENLIST.

Sioux Indians Not Fond of Infantry Service.

Says one late from the Pine Ridge Agency: "The effort to enlist a company of Ogallala Sioux in the United States is the personification of failure. First they are opposed to being what they are pleased to term 'walk' soldiers, and are aggrieved at the fact that the government raised a company of cavalry among the Brules at Rosebud. The Brules are not regarded as friendlies. They resent the imagined preference for the Brules, and look upon the 'walk' soldier as an uncalled-for distinction. They are possessed of the idea that the 'walk' soldiery get the worst of things, and cannot be convinced of the idea but what they will be compelled to carry on their backs a Sibley tent and stove. After two months of hard labor Lieut. Kinsey has succeed in enlisting but four in the company, with no prospect of any more."

Mrs. General Grant.

Mrs. General Grant is the object of much solicitous devotion at the Grand Union hotel, Saratoga, and the guests watch here reverently and strive to avoid annoying her by too close observation, as she comes and goes.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 20 .....1891.

The United States and Great Britain have agreed upon the basis of arbitration of the Behring Sea difficulty. It only remains now for the Senate to ratify the tearms of the treaty. When that is done the arbitrators will be named and the examination begin. It is possible for the matter to be settled before the new Congress adjourns.

The Examiner says that under the treaty Canada is not obliged to return Buckley, but expresses the hope that the comity of nations may induce the Dominion to do so. Canada is in no kindly mood with this country at present, and Buckley probably understands the situation thoroughly when he says he will come back to California when he gets ready,—he thinks about January He doubtless has made his calculation that Judge Wallace's term as presiding judge of the superior court of San Francisco, will expire on the 1st of January. But there ought to be a strong enough desire to see Wallace complete the good work he has been at to continue him in the position of presiding judge for another term.

The decision of Judge Swan, of Detroit, in the case of a Chinaman who had crossed the Canadian boundary and was in the United States, will settle the Chinese question and allay the fears of those who anticipated a Mongolian invasion from Canada or Mexico. The Court held that under the Exclusion Act the prisoner should be deported to the land whence he last came, and the United States Marshal was directed to send him to Canada. Heretofore there has been some doubt as to whether or not the elusive Heathen should be sent to China, but this latest ruling is the most satisfactory yet made. Canada will look to it hereafter that her territory is not made a highway from the Orient to the United States for law-defying Mongolians. Mexico will probably take the hint also, and we shall be spared the trouble of maintaining armies of detectives along our northern and southern borders.

The United States District Court at Los Angeles has disposed of the chief Itata cases by dismissing them. It is held that there is no evidence that the ship was to be armed in violation of the neutrality laws. The arms sent out in the schooner were for insurgents in Chile and not for the Itata's armory as a cruiser or to commit hostilities. The decision we believe to be sound. The defendants, Trumbull and Hart, could not be held unless it could be shown that they attempted to arm the Itata. The arms were put aboard on the high seas to be conveyed to Chile and not to be used on the sea in hostility to any one. The decision will go far toward cooling Chilean wrath against the United States and will tend to convince the people of Chile that prejudice is not held against them and that in our courts even-handed justice is done even those who manifest animosity against them.

Brazil is again in the throes of revolution. It appears from the dispatches that President Fonseca, upon slight pretext, declared himself dictator, and ordered out the troops to maintain his authority. Riots ensued, the troops fired upon the people, and many lives were sacrificed. The dictator has issued a decree dissolving Congress, and declares that he will maintain the dictatorship until the country is tranquil, which means, of course, until his usurpation is established, or as long as he wants to govern. It is a question whether he can retain the reins of power, as already there are signs of revolution in populous cities of Brazil. That country was scarcely ripe for republican government, when Dom Pedro was given his walking ticket. The people of the States of South and Central America seem to be in love with the name republic, without possessing sufficient self-restraint and stability to maintain a representative form of government Such revolutions as occur in South America would be impossible in the United States. It would be madness in any President at Washington to declare a dictatorship. Instantly he would lose all power and authority, and his impeachment and punishment for treason would quickly follow. There is no man so popular as to successfully undertake to override the Constitution of the United States. Our people are more attached to liberty and their form of government than to the fortunes of any leader.

THE CROCUS' SOLILOQUY.

I waked ere bluebirds 'gan to trill—
When peony bulbs in slumber lay,
And wild winds whistled loud and shrill
Across the sunset bay!

I rose, for then I longed to see
Again the friends I loved; but, oh,
My thorny neighbors hindered me;
That's why so frail I grow!

Red roses my proud neighbors are,
And one old hypocritical plum!
They rake my breast, and is it fair
That they so near should come?

But though they build their tangled bowers,
Not one of every prickly elf
Can catch a sunbeam for their flowers,
Ay, quicker than myself!

In early spring their stalks are bare,
And through them glance the sunbeams bright;
By rising earliest, my share
I get of life and light!

I love the world! my friends I love!
But, oh, I never wrong my neighbors!
On those who strive their worth to prove,
Fortune bestows her favors!

—Arthur E. Smith in Arkansaw Traveler.

A Jeweler's Story.

A jeweler relates this surprising story: "Some time ago Mr. A. came to my place and bought a pair of diamond eardrops for his daughter, a girl of seventeen or eighteen, who was attending school. Her teacher was struck with the gems and asked leave to borrow them and take them home. This permission was readily given. A few days later I went into a lapidary's shop that I was in the habit of visiting to get jobs done once in a while, and there I saw a pair of earrings beside the cutting wheel. 'Hello,' said I, 'where did these come from?'

"The lapidary said: 'Oh, that's a job that came in this morning from Funkenstein, down the street. He wants the diamonds taken out and paste put in their place.'

"'Well,' said I, 'you'd better save your labor. Don't do any work on those until you hear from me.' I went to Mr. A., brought him to see the earrings, then we went to Funkenstein's together and asked how he came by them—for they were the pair that I had sold a few days before. He said that they had been brought to him by Mrs. ——, a school teacher, who had concluded to sell the stones and replace them with imitations. We decided to spare the woman, and of course the diamonds were returned, but I never learned how Funkenstein squared accounts with her."—Brooklyn Eagle.

Latent Diphtheritic Germs.

I might mention many physicians' families that have been desolated by diphtheria contracted from them. The occasional latency of diphtheria, and the necessity of a more frequent inspection of the fauces of children who have been exposed to the disease, so as to be able to detect and isolate these walking cases, was forcibly shown by the following instance:

I was once called to a boy with diphtheria, and it occurred to me to examine his sister, who had left the call at my office. She was then in the street with some playmates, and was apparently as well and cheerful as they were. On inspecting her fauces a small but characteristic grayish white patch was observed over one tonsil.—Dr. J. Lewis Smith in Babyhood.

Funny Speeches.

Grose relates that Caulfield, meeting Mr. Thomas Sandby, said: "My dear Sandby, I'm glad to see you. Pray, is it you or your brother?" It was a Spaniard who remarked ingeniously that an author should always write his own index, let who will write the book. Edgeworth relates the story of an English shopkeeper who did pretty well in the direction of the bull proper, when, to recommend the durability of some fabric for a lady's dress, he said, "Madam, it will wear forever and make you a petticoat afterward." This is quite equal to the Irishman's rope which had only one end, because the other had been cut away.—Temple Bar.

A Sufficient Epitaph.

It were a pity that the good sayings and witticisms of Lowell should be lost. I send you one of which he was the author at a medical dinner given in London a few years ago. In his speech he alluded to a distinguished surgeon whose fame was so great that no marble monument was required to commemorate the name. The doctor's friends, said Mr. Lowell, thought it sufficient to lay him in the country churchyard with the simple and famous epitaph on his grave:

Si monumentum quaris circumspice.

(If you seek a monument, look around).
—Cor. St. James' Gazette.

A Simple Cure for Consumption.

An American physician, Dr. Helmer, asserts that a dose of peroxide of hydrogen, twenty drops in water every day, will do more toward curing consumption than anything previously used for that purpose. He further states that sixty drops will sterilize a quart of milk and render it harmless to children. This is applying peroxide of hydrogen to nobler uses than bleaching hair, for which purpose it has been principally used.—New York Recorder.

An Apt Reply.

"What is that," said an oriental ruler at his banquet, "which did not come last year, has not come this year and will not come next year?" An officer, unabashed, replied, "It must surely be our back pay." Instead of being punished for his humor the man received what was due him and was promoted to a higher position.—San Francisco Argonaut.

Figured in the Rebellion.

It has been stated that the last horse that sniffed the powder of the great rebellion died a short time ago, but George Mortimer, a farmer, who resides near Arlington, Va., says he can bring reliable neighbors to prove that the old bay horse which he owns and every two weeks drives into town not only followed the Union army for some time over the hills and through the valleys of Virginia, but was captured and branded by the Confederates and remained in their possession until the battle of Berkeley Springs was fought, when the involuntary renegade was recaptured by the northern boys.

Then the four footed warrior went through the remainder of the struggle with the stamp of two armies on his side. His owner states that when he was purchased in 1861 he was 10 years old, so that forty summers and forty winters have passed over his now toothless head. His partner in harness is reputed to be 35 years old, but his life has been only an ordinary one, and in personal appearance he is far below the war horse.—Washington Star.

The Girl Who Teaches.

Sound health is a prime necessity for any worker in the world, no matter what the line of work may be, but it becomes of the greatest importance if the work is to be carried on in the schoolroom. There not only the physical, but the nervous and mental forces are taxed to their utmost. The young graduate has hitherto gone to school to sit comfortably at her desk; to stand occasionally for recitations, to use her voice but little; to have constant variety in her work; to enjoy her recess with perfect freedom and in congenial companionship. As a teacher she goes to school to stand upon her feet all day long; to use her voice incessantly, perhaps, too, in a large room filled with the tumult of the street; to keep noisy, and very likely, rebellious and disobedient children not only quiet, but interested, and to spend the recess in care of them in the halls and the yard.

Besides this she is to stimulate their brains, and a certain amount of time—usually prescribed by a board of education, the members of which know little of the capacity and possibilities of the youthful mind—is allotted her, in which she must, somehow or other, succeed in teaching them a certain number of facts—no allowance being made for the slowness, stupidity or disorder, which increases the friction of the work and delays the doing. No matter how complete the education or how enthusiastic the spirit, the power for physical endurance is absolutely necessary.—Caroline B. Le Row in Ladies' Home Journal.

Hard and Soft Water.

The difference between "hard" and "soft" water is that the former contains in greater or less degree earthy salts, while the latter is nearly free from them and in a greater state of purity. The earth most frequently occurring in natural waters is lime. The quantity of earthy salts varies considerably in different instances. It is observed that when they exist in the proportion of five grains to a pint such water will be hard, and will be unfit for washing and many other household uses and manufactures. The solvent properties of water are the true causes why we never obtain this universal and important fluid in a state of absolute purity. It constantly participates in the properties of the manifold sources whence it is derived or through which we obtain it.

Whenever water is in contact with the soil it invariably dissolves the soluble constituents, and hence it follows that water springing from rocks which are only slightly soluble, as sandstone and granite, is very pure and is called soft water, while that which is derived from calcareous formations is termed hard water, and contains lime, which produces an incrustation on the sides and bottom of the vessel wherein it is boiled.—Brooklyn Eagle.

A Law Case That Has Cost $50,000.

The Cathcart case has been one of the longest trials of our time, and, when everything has been "totted up," will prove to have been one of the most expensive. Sir C. Russell had 150 guineas marked on his brief, besides a special fee of 100 guineas, and fifty guineas a day during the sixteen days the inquiry has lasted. Sir Henry James' fees have been on the same scale. Each of the learned leaders has, therefore, taken 1,050 guineas in fees for court work. Apart from this, Sir Charles has had two guineas for each consultation and he has attended one at least every day. Mr. Bucknill, Q. C., and Mr. Inderwick, Q. C., have had fifty guineas marked on their briefs and nearly seventeen guineas a day. Two grants of £1,000 each have already been made out of the estate by the order of Lord Justice Lopes, sitting in chambers, for the conduct of the case, and every farthing of these sums has been spent. Fortunately, Mrs. Cathcart is a rich woman. Ten thousand pounds will probably have been swallowed up in the course of this inquiry.—London Tit-Bits.

Invention of the Typewriter.

The typewriter was invented as long ago as 1714 by one Henry Mills, who in that year obtained a patent in this country for a device that "would write printed characters one at a time, or one after the other." There is no description of this device to be had now, but there is no doubt that Mills' invention was the parent of the present typewriter. In 1833 a French patent was granted to M. Progrin (Xavier), of Marseilles, for a typewriter, which is called a typographical machine. The account of the machine is somewhat obscure, but enough is given to show that it was an operative one by which typewriting could be fairly well executed. M. Foucalt sent to the Paris exhibition in 1855 a writing machine for the blind, and several typewriters were invented by Wheatstone. After successive improvements a manufacturer in America contracted to construct 25,000.—New York Press.

Fooled the Clergyman.

There is a minister in Brooklyn who told the writer a harrowing tale of deception of which he was the victim. After he had performed the marriage ceremony for a young couple at the parsonage, the bridegroom slipped a fat envelope between the leaves of the family Bible, nodding pleasantly, as if to say: "You've well earned it." The clergyman nodded thankfully.

"When I opened that envelope," he said, "what do you suppose I found in it?"

"A goodly sum in bills?"

"No, sir! No, sir! Twenty sheets of copy paper such as reporters use. And on the last sheet was written: 'Economy is wealth. Please don't squander this. Wipe your razor on it.'"

"I think," said the dominie, "that ministers should be empowered to declare some marriages void."—New York World.

The treatment owls receive from man evinces no recognition of their value, no gratitude for their services. Large and small, they are shot wherever found, to serve as ornaments to the parlor or to do brief duty for a season on a fashionable hat, then to be cast aside and forgotten.

The wealthiest insane asylum in America is said to be the Sheppard asylum in Baltimore It was endowed in 1857 with $560,000. Since that time the trustees using the interest alone, have expended $880,000 in buildings and land, and still have a capital of $600,000.

The largest tuning fork ever manufactured was made at Hanau for the Physiological institute at Leipzig, and weighs twenty-seven kilogrammes, or a little over seventy-two pounds, and gives fourteen double oscillations a second.

ORDER FIXIMG TIME AND PLACE FOR HEARING OF APPLICATION TO MORTGAGE CERTAIN REAL ESTATE AND DIRECTING NOTICE TO BE GIVEN.

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of Ezra M. Goodale, deceased.

Thomas J. Goodale and Maggie P. Goodale, Executor and Executrix respectively of the last will and testament of Ezra M. Goodale, deceased, having filed their petition herein, duly verified, praying for an order authorizing and empowering and directing them to mortgage the south half of the south-east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the purposes and for the amount stated in said petition, or for such lesser amount as to the said Court may seem meet; it is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the Judge of said Superior Court on Wednesday, the 23rd day of December, 1891, at 11 o'clock a. m. of said day, at the Chambers of said Superior Court, at the Court-house, in the town of Independence, County of Inyo, State of California, then and there to show cause why an order should not be granted to the said Executor and Executrix authorizing, empowering and directing them to mortgage the real property belonging to said estate, to wit: The south half of the south east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north-east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the sum of $900.00, or such lesser amount as to the Judge of said Court shall seem meet; all of which more fully appears by the said petition now on file in the Clerk's office and two which reference is here made for further particulars.

It is further ordered that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo.

Dated November 18th, 1891.

GEO. M. GILL.
Judge of the Superior Court.

[Endorsed.]

SUPERIOR COURT, COUNTY OF INYO.

In the Matter of the Estate of Ezra M. Goodale, deceased.

Order fixing time and place for hearing of application to mortgage certain real estate and directing notice to be given.

Filed November 19th, 1891.

J. N. YANDELL, Clerk.

Mack & Laird, Attorneys for Executors.

DESERT LAND, FINAL PROOF.

D E No. 513.

LAND OFFICE AT INDEPENDENCE, CAL. Sept. 3d, 1891.

Notice is hereby given that Dennis A. Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513, for the E. ½ of Section No. 2, and the W. ½ of section No. 1, Tp. 10 S., R. 34 E., M D M, before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G. Sanger, W. Sanger, A. P. Smith and M. Naylor, all of Big Pine, Inyo County, California.

C. W. CRAIG, Register.

Some little FORTUNES have been made at work for us, by Anna Pepe, Austin, Texas, and Jno. Benn, Toledo, Ohio. See our offers and do as they do. Why not you? Some earn over $500.00 a month. You can do the work and live at home, wherever you are. Even beginners are easily earning from $5 to $10 a day. All ages. We show you how and start you. Can work in spare time or all the time. Big money for workers. Follow the beaten path to them. NEW and WONDERFUL. Full particulars FREE. H. Hallett & Co., Box 880 PORTLAND, MAINE.

$6000.00 a year is being made by John R. Goodwin, Troy, N. Y., at work for us. Reader, you may not make as much, but we can teach you quickly how to earn from $5 to $10 a day at the start, and more as you go on. Both sexes, all ages, in any part of America, you can earn your entire at home, giving all your time, or spare moments only to the work. All is new. Great pay $5 to $10 for every worker. We start you, furnishing everything. EASILY, SPEEDILY learned. PARTICULARS FREE. Address at once, GEORGE STINSON & CO., PORTLAND, MAINE.

Mr. Oman will preach at Independence at 7:00 p. m. Concert Tuesday evening.

COURT NOTES.

Geo. M. Gill, Superior Judge.

MONDAY, November 16, 1891.

Estate of Wm. F. Davis, deceased—Letters of administration issued.

Estate of Wm. A. Bolinger, deceased—Letters of adminstration issued.

Estate of John A. Hannah, deceased—Will admitted to probate.

TUESDAY, November 17, 1891.

Estate of V. Huckaby, deceased—Petition for letters of administration,

WEDNESDAY, November 18, 1891.

Estate of John A. Hannah, deceased—Filed bond of W. L Hunter as Executor. Issued letters testamentary.

THURSDAY, November 19, 1891.

Estate of Ezra M. Goodale, deceased—Filed petition for order authorizing Executors to mortgage real estate. Filed order fixing time and place for hearing application.

Estate of C. D. Begole, deceased—Filed decree of settlement of account.

People vs. S. P. Smith—Filed stipulation continuing time of arraignment.

Estate of B. F. Theban, deceased—Filed decree of settlement of account. Filed final account.

Cloudy and cold yesterday, but no storm.

Social dance at Mairs' Hall next Thursday evening.

Mr. Roberts, the Saline Valley borax man, is in town.

There was a total eclipse of the moon early last Sunday evening.

Fred Holbert left for the lower country last Tuesday by way of Mojave.

Mrs. T. J. Richards of Lone Pine spent several days in town this week visiting with friends.

See the notice given by the Executors of the estate of Ezra M. Goodale, deceased in this issue.

Inyo County beef sold by local raisers to J. N. Evans, will be sold in the Chicago market.

S. G. Sueden Esq. of Bishop was in town several days this week. He returned on yesterday's train.

Remember that if your taxes are not paid on or by the 30th of this month fifteen per cent will be added to them.

Any body wanting to buy a good quartz mill cheap should apply to F. W. Farwell 146 Market Street, Chicago.

Alex Clark has a small quantity of oak wood for sale at ten dollars a cord. If you want some speak quick.

Mrs. Fred Barkhardt of Lone Pine has been very ill for some time past. Dr. I. J. Woodin is in constant attendance.

E. Robinson has built a large feeding corral with hay racks and will fatten quite a number of beef steers this winter.

T. C Boland of Keeler and A. C. Harvey of Lone Pine were in town last Saturday to attend the meeting of the Masonic Lodge

Dr. A. Eaves and son formerly of Lassen county are traveling through the Valley. They arrived at Independence yesterday.

E. H. Edwards of Lone Pine was in Independence on Wednesday on business connected with the estate of John Lucas, deceased.

Now is the time to get your winter's wood. There are a number of wood choppers cutting in Mazourka canyon and plenty of wood can be bought reasonably.

A concert was given by the choir at the M. E. Church on Tuesday evening. The selections were well chosen and afforded much enjoyment to a large number who attended.

The Independence Silver Cornet Band will give a social dance at Mairs' Hall on Thanksgiving evening, Thursday next. The music will be the best that can be obtained and a good time assured. Every body invited. Don't fail to attend or you will miss a good time.

A. N. Bell's Oak Creek Flouring Mills are filled chock-a-block with grain and he informs us that he will be kept busy until Christmas. He is turning out a fine brand of flour. The grain is not worked to give as large a percentage per ton as formerly, and consequently the flour is much better.

John Lewis was admitted to practice law in the Superior Court of Inyo county by Judge Gill on Monday last. He passed a very creditable examination and earned his shingle in a meritorious manner. Good boy, John. Hope you may have as good luck before the Supreme Court soon.

There are two Indian witnesses in Saline Valley subpoenaed to appear at Bakersfield on the 23rd in the trial of Wampai Jiggers. Neither of them have means to take them there and it is almost a certainty that a bench warrant will have to be issued from the Superior Court of Kern county to secure their attendance.

There is a plant growing on the Mojave desert which has a gourd like fruit the same size and shape as an orange. It is said that the leaves of this vine are a sure cure for snake bite. The method of use is to take these leaves, mash them into a poultice, and apply to the wound. Also steep them into a tea and drink it.

Union High School.

While high schools are being organized in nearly all sections of the State, under the Union High School Bill, we think it high time that the citizens of this vicinity take advantage of the law and esiablish a Union District with the location in Independence. Independence is the most central point for the several surrounding districts and takes a deep interest in all matters pertaining to education. The schools of this vicinity, for the advantages they possess, are doing quite well, but there is a general want felt by the most intelligent people for a higher educational standard. Wherever the Union high school has been established it has produced favorable results, and has brought high school advantages to the very doors of the pupils, and enable them to pass through the preparatory grades to the State University without leaving home We hope the school trustees of Independence, the Fort, Georges Creek etc., will take action and avail themselves of the privilege of the Union High School Bill.

A Good Business Opening.

There is a fine opening for a business venture in Owens Valley that would yield s large return to the parties who would take hold of it. This is the establishment at some central part of the Valley of a large packing house making a specialty of hams and bacon. Every year large quantities of this staple are shipped here from the East. There is nowhere any better country where hogs can be raised and fattened more economically than here. Until the pigs are old enough to fatten the cost is only nominal, as they feed entirely on alfalfa, of which a small field will pasture a large number. If a firm should start business here making a specialty of daring hams and bacon their success would be assured. It would no require a great deal of capital to erect the necessary buildings. They would be in a position to buy live hogs from farmers, as with the better facilities of the firm it would not pay the raiser to cure his own hogs. There is a steady market year in and year out at good prices—18 to 20 cents per pound—and there is no industry that would yield such good returns on the capital invested.

"There's a gude time coming"

In an address before the Chamber of Commerce at Los Angeles last Friday, ex-Mayor Workman explained the great benefit that Southern California would derive from the construction of the new railroad from Salt Lake to that place. The money has already been raised to build the road and Mr. Workman is endeavoring to get the support of Los Angeles in regard to right of way, etc. Too strongest argument he used was that with the importation of cheap coal Los Angeles would become a great manufacturing center, and that large reduction works would be built there. With the road completed, which it will be early in 1893, it is only a question of a short time when Owens Valley will have a railroad connection with that place. The cost of construction will be greatly reduced by the home manufacture of rails from Utah iron, and the vast resources of this county would make such a road a paying institution.

There were four cases in the Justice Court at Independence this week. A. J. McCarroll, tried on a charge of burglary, was discharged. E. J. Rose was held in bonds to keep the peace. A. J. McCarroll, on a cearge of assault, plead guilty and was fined five dollars. George Brady, known to old timers as "Walking Brady", was arrested in Lone Pine on a charge of selling whisky to an Indian. He was tried by a jury on Wednesday, found guilty and sentenced to a fine of one hundred dollars, in default of which he is now confined in the jail. After the conviction he confessed to the charge.

Just at noon to-day Dr. J. D. Blair met with a serious mishap. He had just returned from his daily trip to the County Hospital, and coming into town his horse became frightened and ran away, heading for the corral where he is kept. There is quite a gully to be crossed and on reaching it the buggy was upset throwing the doctor out. He was cut about the head and severely bruised but no bones broken. For a man of his age such a severe shaking up is a serious matter. The horse was caught before he had caused any further damage.

Dr. R. L. St. John of Howland, Putnam county, Missouri, takes especial pleasure in recommending Chamberlain's Cough Remedy, because he knew it to be reliable. He has used it in his practice for several years, and says there is none better. It is especially valuable for colds and as a preventive and cure for croup. This most excellent medicine is for sale by

A. K. EUGLEY
Big Pine.

As a preventive and cure for croup, Chamberlain's Cough Remedy has no rival. It is, in fact, the only remedy that can always be depended upon and that is pleasant and safe to take. There is not the least danger in giving it to children, as it contains no injurious substance. For sale at 50 cents a bottle by

A. K. EUGLEY,
Big Pine.

The apple crop has been very large in the Valley this year, and the fruit is of superior quality. The ruling price is two cents per pound, but this will raise as the fall apples will soon be all gone.

AS WE SEE IT.

From our office-chair, the view of the new store shows a large part of it devoted to the filling of out-of-town wants. Often as we look out upon the busy scene, we wonder if people realize that mail-order shopping has become an institution of general public good, quite as important, in its way, as the post-office, free education, and other advantages of this nineteenth century. Try for a moment, to look at it as we do.

One of the 18 high columns in the new store.

People everywhere are working from morning until night, from childhood to old age, and it is largely a struggle for food and clothing. Every one needs these in order to exist, and it is that necessity which keeps the world ever at work. How important, then, to humanity at large that these great needful things should be supplied on the best terms possible,—that goods should go as nearly as possible direct from the mills and factories to those who actually use them. If a number of profits are to be added to the cost of an article or articles, then it is impossible for hard-earned dollars to buy as much as they ought to buy.

It is just here that the great stores of to-day step in. They are based largely on this modern idea of buying in bulk from first hands, and turning over the goods to the consumer at a small profit. Such stores require large capital and trade to succeed, and naturally are found only in large cities. But for Mail-order shopping, out-of-town residents would be shut off from the great advantages they undoubtedly confer.

Few large stores have a Mail-order service, although with us that has grown to be a leading feature of our business,—due, perhaps, to the fact that people have learned to know that they can write to us for what they want, and be as well served as if they came in person Mail-order shopping puts before the residents of small towns the chance to get the same goods and prices as city trade. To our mind, the value to them of that privilege cannot be overestimated.

Thus it is pleasant to know that customers are reaping as much or more benefit from the various transactions of this business as the business itself. The profits made from their trade may be seen concentrated in the beautiful new building with its great stock, but what the business has done in return is only known and appreciated in the tens of thousands of homes where its goods have gone.

To those who are interested in Mail-order shopping we will send free a large descriptive catalogue with prices and complete information.

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE
Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,
C. MULHOLLAND,
Independence.

HEROES.

We hear it said that great men tread no more
The sod of this dull earth, and that the past
Entombs th' heroic dead, whose deeds will last
When our poor century is dust. Such store
We set upon the ancients!—they who bore
The honors of the fight. Still we hold fast
Traditions old, nor think our warriors cast
In the heroic mold of those of yore.
Yet this "degenerate age" has its great men;
As great as those illustrious Greeks of old;
But we, unjust, withhold our praises when
We see about us valorous deeds and bold—
And so we wrong a brave age when we say
That "heroes do not tread the earth today."
—Marcia Davies in New Orleans Times-Democrat.

JOE PAID THE INTEREST.

The clock in the kitchen had just struck 9, but still little Joe Petersham, who usually dropped asleep as soon as his head touched the pillow, lay with wide open eyes staring into the darkness in his little bedroom just off the kitchen, where Mr. and Mrs. Petersham were sitting talking. Joe's ears were wide open too, for he felt a great interest in the subject which was being discussed.

"It's no use, Mary," he heard his father say in a low voice. "The place has got to go. Morrison says we must either pay the money or he will foreclose. He won't wait any longer. We might just as well talk of flying as of raising $100 in two weeks, and if this strike keeps on we will have to use the little we have got saved up." And Mr. Petersham brought his hand down upon the table so heavily that the dishes rattled.

"It is hard to think of our pretty little place being taken from us," said Mrs. Petersham, with a sigh, "but I suppose it must come to that, for I don't know where the money can be raised."

"It can't be raised, and that's an end of it," said Mr. Petersham, getting up and walking back and forth across the room. "We must just grin and bear it, and there'll be worse than this to bear if our side doesn't win. There's not a cent coming in this month. I'm sure I don't hold with them who try to wreck the trains. They've no right to do that; but it comes pretty tough to a man to see his family needing clothes and food and not a cent in the house. It's not much wonder that some of them get desperate and go too far," and then Joe heard his father tramp heavily up the stairs, his thick boots making a great clatter. Presently his mother blew out the light, and with a weary sigh she also went up to bed, and Joe was left alone with his thoughts.

Six weeks ago his father, a brakeman on the Central railroad, had come home one day with his dinner basket unopened to tell his wife that a strike had been ordered, and that he would not go back to work until the Central came to terms.

Week after week had gone by and still the strikers were not gaining ground and some of them were beginning to be desperate. The Central had found men to fill the vacancies and the Pinkerton men were on hand to prevent their being interfered with. One day Joe and two or three other boys had walked up the track all the way to the city to see the tiny boxlike houses put up at intervals along the track as a shelter for those who guarded that section of the road.

At first everything seemed bright and the strikers felt confident of success, but of late, with their money gone and no more coming in, they did not feel as hopeful, and even ten-year-old Joe felt oppressed by the general gloom. But tonight a worse trouble weighs upon him. He could understand enough of his father's conversation to know that unless a hundred dollars could be raised at once their pretty house and garden would be taken from them. He wondered if they would take Topknot too, his pretty little black rooster, that jumped upon the fence in front of his window every morning and woke him up at just the right time; and as he thought of this he could hardly swallow for the great lump in his throat, and he rubbed his eyes hard with a corner of the sheet. A hundred dollars! What a pile that would be! If he could only think of some way to earn it; but there seemed no chance to earn even a single dollar, let alone a hundred of them, and poor little Joe lay there puzzling his brain over the matter until he dropped asleep.

"Rat-a-tat-tat." "Rat-a-tat-tat," and Joe woke suddenly out of a sound sleep to hear some one rapping loudly at the outside door. A moment after his father opened the upper window and called out loudly, "Who's there?" and then Joe heard old Mrs. Jenkins, their nearest neighbor, say, "Jim is growin' worse, an' I come over to see if you or Joe would go for the doctor."

"Don't you worry yourself, Mrs. Jenkins," was Mr. Petersham's reply. "My rheumatism is that bad this damp weather that I don't dare to go out myself, but it won't hurt a boy like Joe. He can go down in no time and ride back with the doctor." Mrs. Jenkins murmured her thanks and hurried off, while Joe, in response to his father's call, tumbled out of bed and into his clothes with all haste. It was about three miles to the village by the road, but by going down the railroad it was only a little over two miles. Joe was a brave boy, but the prospect of a two mile walk down the track in the pitchy darkness did not look at all enchanting to a sleepy little fellow, and it was not without some grumbling that he started out. He went down through the garden and out the back gate, and then, climbing down the steep bank, he found himself upon the track, down which he started on a brisk walk, whistling cheerily.

Everything was so still about him that he soon ceased to whistle, and no sound was heard but the shrill chirp of the crickets and now and then the baying of a dog somewhere in the distance. Not a star was to be seen, and the trees and bushes loomed up grim and black on either side of him. He buttoned up his jacket closely, for the damp night air was chilly, and trudged on.

He had gone about a mile when, as the road makes a slight bend, he saw something on the track just ahead. It looked big and black, and he could not make out what it was, so he prudently halted and stared forward into the darkness with all his might.

Presently the object moved, and then he saw that there were three men bending over something. He was almost afraid to move lest they should hear him, but he was also afraid to stay where he was, so he crept softly up the low bank and lay flat down under the bushes.

The men were talking, but in such low tones that he could not hear what they are saying. What could they be about? They seemed to be lifting up something heavy, and to be placing it upon the rails, but this was all he could see. Joe knew enough about the trains to know that the down express train would soon be along; and he shivered with the thought that perhaps it was a man's body that they were putting on the track.

Oh, if they would only go before the express comes! And, as if in answer to his wish, they did finally start up the hill and were soon out of sight. He dared not move for some time lest they should return, but at last he summoned up courage, and scrambling down the bank crept along to see what it was that the men had left.

It was not the body of a man lying there, but some railroad ties which had been fastened upright in a cattle guard, with large stones wedged securely about them. Then he knew that these men had planned to wreck the express.

He tried desperately with his puny strength to move the timbers, but they were fixed so firmly that he could not stir them in the least, and he gave it up in despair. He looked around him fearfully, for the men might come back again for aught he knew, but he could not bear to leave the express to its fate, and tried to think of some way by which he could give warning.

If he only had a lantern to swing back and forth across the track! But of course that was impossible, and he tried to think of some other signal. As in his perplexity he thrust his hands deep down into his pockets, at the bottom of one of them he felt some matches which were left from a bonfire, and in a minute he decided to build a fire in the middle of the track, up by the curve, where the engineer would see it and stop the train in time. But he soon found this was not easy to do. There was great difficulty in finding any materials, but after groping about for a while in the darkness he managed to get a few little sticks together, and lighting a piece of paper which he found in his pocket he tried to start his fire. But to his dismay the sticks were so damp they would not burn, and after using all his matches but two in vain attempts he gave it up.

He put his ear down to the rails and listened intently. Yes, the train was coming, but it was some distance off yet. Oh, if he could only find something dry enough to burn! Now on the damp night air comes the low rumble of the approaching cars. In another moment they will be in sight, and on the impulse of the moment he snatched off his jacket, and hastily striking a match applied it to the lining.

It burned feebly a second and went out, and then more carefully he lighted the last one and the coat began to blaze; and not a moment too soon, either, for he could see the headlight as the express came thundering along.

Springing upon the track he waved his blazing signal frantically back and forth to attract the engineer's attention. There he stood, right in the path of the huge monster as it rushed fiercely toward him with its great fiery eye glowing fiercely through the darkness, and his little arms kept on steadily swinging his jacket, in his excitement never feeling the flames as they crept over his little hands.

But he has been seen, and brakes were applied, and the wheels reversed, and the engine brought to a standstill just as it was almost upon him, and then the little fellow sank down, overcome by excitement, and there, a moment later, they found him curled up in a heap on the ground. Carefully the fireman lifted him in his strong arms, while the engineer and one or two others ran forward and discovered the obstruction. The passengers, aroused by the commotion, began to make their appearance, and soon he was surrounded by a crowd, and found he had become a hero.

The big fireman still held him in his arms as Joe answered the questions which were showered upon him, while a physician who was among the passengers bound up the poor little burnt hands.

Joe's hearers shuddered as they thought of their narrow escape, and when they found it was his jacket that furnished the signal some man pulled off his hat and dropping a bill in it said, "To pay for Joe's coat," and passed it around to the others. Pocketbooks were taken out, and bills and silver rained into the hat until it almost took Joe's breath as he realized that it was all for him.

Soon the train is ready to go on and they all got aboard, and Joe is taken on to the next station, where they stopped to let him off. The doctor's house was close by, and as they saw Joe run up the stoop and ring the bell, the train moves off amid cheers and the waving of hats.

Joe was a happy boy when, an hour later, he rushed into the house, and stumbling into his father's room, threw a small but heavy package upon the bed.

"Father! father! wake up!" he cried excitedly. "I've earned the money for Mr. Morrison and now we can keep the house. Do wake up!"

It did not take long to get a light, and when the money was counted there was as Joe had said enough for the interest and more too.

Joe was a proud boy when he saw his father the next morning start out to Mr. Morrison's with the $100 in his pocket. Joe often goes out into the yard to play with his pet, Topknot, and then he thinks how glad he is that Widow Jenkins wanted him to go for the doctor that night.—Lewston Journal.

Prince Wilhelm's Deformity.

If the throat trouble of the crown prince of Germany causes his death soon, the heir to the throne will be his eldest son, Prince William, of whom the Countess von Krockow writes: "The Germans cannot forgive an heir apparent of the throne having been born mediocre in figure and imperfectly formed. Prince Wilhelm has a crippled arm. The fingers are mere knobs. In the Hussar uniform there is a pocket, and he wears it because the three fingers of the helpless member can be hung in the pocket. Otherwise it hangs awkwardly and helplessly in its sleeve. His horses are especially trained, and before the prince is to mount are ridden three-quarters of an hour to wear them down. He can just manage to hold the reins. We were together in a country house. I looked with our hostess at the fork with which he eats. It is of silver, and not conspicuously different from others, but fixed to the under tine there is a sharp, small blade. What the prince cannot cut with the one hand and with this blade he does not undertake to eat. The right hand and arm are large and of extraordinary dexterity, but the little finger is deformed by a growth which the prince only imperfectly conceals by wearing rings up to near the third phalange."—New York Sun.

Victims of Rattlesnake Bites.

Either the reptiles of Florida are more deadly than those of Arizona, or else nerve and coolness have a good deal to do with human self preservation. A resident of Key West, Fla., while deer hunting the other day, was bitten by a rattlesnake and died in four minutes. It is believed that fright contributed to his quick taking off. In contrast with this is the case of Joe Chavez, a plucky ten-year-old of Gila City, A. T. Recently he was bitten by a rattler. He never whimpered while the flesh around the wound was cut away. The finger was corded near the hand and the arm near the shoulder, and the child made to drink considerable brandy. He was put on the train and sent to Yuma, when the doctor applied such remedies as the case demanded. Although an hour and forty minutes had elapsed from the time the lad was bitten, the case yielded promptly and the boy is well. The snake was four feet six inches in length.

"Who Was Shot Last Week?"

In 1851 Mokelumne Hill was one of the worst camps in California. "Who was shot last week?" was the first question asked by the miners when they came in from the river or surrounding diggings on Saturday nights or Sundays to gamble or get supplies. It was very seldom that the answer was, "No one."

Men would race up and down the thoroughfares in single file, as boys play the game of "follow my leader," each imitating the actions of the foremost. Selecting some particular letter in a sign they would fire in turn, regardless of everything but the accuracy of the aim. Then they would quarrel over it as though they were boys playing a game of marbles, while every shot was likely to kill or wound some unfortunate person.—Dr. C. B. Gilles pie in Century.

Twice Blessed.

Briggs—Well, I must call upon my tailor.
Griggs—You are fortunate.
Briggs—How so?
Griggs—My tailor usually calls upon me.—Clothier and Furnisher.

Dandies of the Time of Charles I.

When Villiers, James I's and Charles I's favorite, went on his mission to Paris in 1625 he had no fewer than seven-and-twenty suits of clothes made, the richest that embroidery, lace, silk, velvet, gold and gems could contribute, one of which was a white uncut velvet, "set all over, both suit and cloak, with diamonds valued at four score thousand pounds, besides a great feather, stuck all over with diamonds." "It was common with him," says a contemporary, "at an ordinary dancing to have his clothes trimmed with great diamond button, and to have diamond hat bands, cockades and earrings; to be yoked with great and manifold ropes and knots of pearl; in short, to be manacled, fettered and imprisoned in jewels."

To the prevailing extravagance in dress the satirists again allude in the severest terms. "I have much wondered," says Henry Peacham, "why our English, above other nations, should so much dote upon new fashions, but more I wonder at our want of wit that we cannot invent them ourselves, but, when one is grown stale, send presently over into France to seek a new, making that noble and flourishing kingdom the magazine of our fooleries, and for this purpose many of our tailors lie leger (i. e. reside) there, and ladies jest over their gentlemen ushers, to accouter them and themselves as you see. Hence came your slashed doublets (as if the wearers were cut out to be carbonadoed upon the coals) and your half shirts, piccadillies (now out of request), your long breeches, narrow toward the knees like a pair of smith's bellows, the spangled garters pendant to the shoe, your perfumed perukes or periwigs, to show us that lost hair may be had again for money with a thousand such fooleries unknown to our manly forefathers."

The reader may find it a pleasant change to turn to the rhyming moralists. Here to the fore comes John Taylor, the so called water poet, launching his shafts—not too sharply pointed—at the excess of those who wear:

A farm in shoestrings edged with gold,
And spangled garters worth a copyhold;
A hose and doublet with a lordship cost,
A gaudy cloak (three manor's price almost,)
A beaver band and feather for the head,
Prized at the church's tithe, the poor man's bread.

—Gentleman's Magazine.

An Unknown Land.

Washington has her great unknown land, like the interior of Africa, says The Seattle Press. The country shut in by the Olympic mountains, which includes an area of about 2,500 miles square, has never, to the positive knowledge of old residents of the territory, been trodden by the foot of man, white or Indian. These mountains rise from the level country, within ten or fifteen miles of the Straits of San Juan de Fuca in the north, the Pacific ocean in the west, Hood's canal in the east, and the basin of the Quinault lake in the south, and, rising to the height of 6,000 to 8,000 feet, shut in a vast unexplored area.

The Indians have never penetrated it, for their traditions say it is inhabited by a very fierce tribe, which none of the coast tribes dared molest. Though it is improbable that such a tribe could have existed in this mountain country without their presence becoming known to the white men, no man has ever ascertained that it did not exist. White men, too, have only vague accounts of any white man having ever passed through this country, for investigation of all the claims of travelers has invariably proved that they have only traversed its outer edges.

The most generally accepted theory in regard to this country is that it consisted of great valleys, stretching from the inward slopes of the mountains to a great central basin. This theory is supported by the fact that, although the country around has abundant rain and clouds constantly hang over the mountain tops, all the streams flowing toward the four points of the compass are insignificant and rise only on the outward slopes of the range, none appearing to drain the great lakes shut in by the mountains. This fact appears to support the theory that streams flowing from the inner slopes of the mountains feed a great interior lake. But what drains this lake? It must have an outlet somewhere, and, as all the streams pouring from the mountains rise on their outward slopes, it must have a subterranean outlet to the ocean, the straits or the sound. There are great discoveries in store for some of Washington's explorers.—Exchange.

A Numerous Family.

There are some good sized families in Maine today, but probably none so large as one mentioned in the histories of old colonial days. It is told on the authority of Cotton Mather that the first royal governor of Boston was one of a family of twenty-six children, and was born in the woods of Maine near the mouth of the Kennebec in 1651. His mother was left a widow when he was a child, and is said to have had all she could do to provide for the wants of her family. It is hoped that when the governor got $100,000, a knighthood and a goblet valued at $5,000 as a reward for finding a Spanish treasure ship that had gone to the bottom half a century before, he remembered his mother and made her last days easier than her earlier ones had been.—Exchange.

A Living Lantern.

South American fireflies have been called living diamonds. In the same part of the world is also found a pale gray or a particularly disagreeable looking moth which may be called a living lantern. Kept inclosed in a box for twenty-four hours, it will be found when the box is opened that the body of the moth is giving forth sufficient light to enable one to read plainly any ordinary type. A number of glass fronted boxes containing these moths—Fulgaria conternaria naturalists call them—when placed around the room afford nearly as much light as so many wax candles.—Chicago Times.

Slang and Simile.

Will some one kindly point out where metaphor and simile leave off and where slang begins? There are many expressions about which sometimes cause cultured people to turn up their noses or raise their eyebrows, and yet they are to be found in the Bible, in Shakespeare and in other excellent places, while there are about as many expressions which people use with a great deal of reverence, thinking that they come from the Bible, which really are to be found only in such works as Sterne's "Sentimental Journey Through Italy."—New York Continent.

Ready to Sell.

M'Prune, the grocer, was never known to acknowledge that he was out of any article without calling attention to some other article that he did have.

A bet was made by Johnson that he could ask M'Prune a question that would cause him to omit the usual addendum.

Said Johnson, as he entered the shop, where the conspirators had already gathered:

"Mack, do you think it will be Liberals or Conservatives at the next election?"

Mack replied with some asperity:

"Oh, bother! I am out of politics!"

Johnson was on the verge of giving vent to his delight when Mack added:

"But I've got some of the best cheese you ever put your teeth into."—Exchange.

In the Hotel Business.

"James, I don't see you waiting at table any more."

"No, sah; I'se been promoted. I'se entry clerk now."

"You an entry clerk! I never knew you were a bookkeeper."

"Oh, I ain't. I jes' keep my eye on de umbrellas, hats and things de boa'ders leave in the entry."—Kate Field's Washington.

SERIOUS DANGER

Threatens every man, woman or child living in a region of country where fever and ague is prevalent, since the germs of malarial disease are inhaled from the air and are swallowed from the water of such a region. Medicinal safeguard is absolutely necessary to nullify this danger. As a means of fortifying and acclimating the system so as to be able to resist the malarial poison, Hostetter's Stomach Bitters is incomparably the best and the most popular. Irregularities of the stomach, liver and bowels encourage malaria; but these are speedily rectified by the Bitters. The functions of digestion and secretion are assisted by its use, and a vigorous as well as regular condition of the system promoted by it. Constitution and physique are thus defended against the inroads of malaria by this matchless preventive, which is also a certain and thorough remedy in the worst cases of intermittent and remittent fevers.

We have noticed that the more impracticable and hopeless an ambition is, the more energy a fool will put in it.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Either—He—Shall we try the tricycle or buggy this morning, Laura? She—Either, George. I'm yours for wheel or for whoa.

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

TO RETURN FROM EXILE.

Titled Ladies Who Once Shown in the Realm.

AGAIN THEY WILL LEAD LONDON SOCIETY.

Stories of the Exclusion and Why They Will Return.

THE COMING gay season in London will not be augmented by the usual number of debutantes. Such will be especially the case in the court circles and among the nobility.

English court society, fond parents say, has become too weak in its character for them to cast their daughters upon its bosom. The late bacarat scandal has had such an effect.

This refusal of parents to allow their daughters to go into court society has already resulted in startling rumors, one of which that the old castaways of the court will come out form their retirement again and that hereafter the "upper" of English society will rest upon just what it is.

Lady Colin Campbell, so long deprived of admission to the circles in which she took her first false stept, they say, will again resume the leadership. The Duchess of Sutherland will also come out from her obscurity. So will Lady Beaumont. Court society will no longer have false pretensions. It will be known to the world as what it is, nothing more, nothing less.

The circumstances connected with the exclusion of these ladies from select circles are not forgotten.

Lady Campbell became the plaintiff in a divorce case. The developments

The Duchess of Sutherland.

did not actuate solely in her favor. Some of the court secrets came out and she was forthwith excommunicated.

In one word, Lady Colin Campbell, although still the sister-in-law of Princess Louise of Great Britain, fell to the social level of Sutherland and of Lady Beaumont.

Lady Beaumont is the daughter of the well-known German milliner, Mme. Louise, in Regent street, London, and of her husband, Mr. Isaacson, a member of parliament, who has been the central figure in more than one scandal. Lady Beaumont, just as Lady Colin Campbell, has been the respondent or defendant in some very horrible legal proceedings and although Lord Beaumont, like Lord Colin, has been unable to secure a dissolution of his marriage, yet the evidence put forward against his wife has been fully sufficient to deprive her of the social prestige ordinarily enjoyed by a peeress of the realm.

The Duchess of Sutherland, who as Mrs. Blair was the traveling companion of the Duke on several of his visits to this country, has been subjected to a severe ostracism by the members of her husband's family, by the court, and by English society in general. Although mistress of the most magnificent residence in London, her salons are deserted, and the portals of Stafford house, which formerly opened to all that was noblest and grandest in the land—the Queen was a frequent visitor there, and the Prince of Wales was running in and out of the house all day—are no longer entered save by such women as Lady Beaumont, Lady Colin Campbell, et le reste.

The new Duchess did everything in her power to secure social recognition, but all in vain. Early in the season she leased a splendid place in the neighborhood of Windsor in the hope of establishing some kind of an ac-

Lady Beaumont.

quaintance with the castle and with the colony of persons more or less connected with the court who reside in the vicinity. Day after day she so arranged her carriage outings as to meet the Queen taking her afternoon drive in the home park. Her majesty, as a rule, makes a point of graciously bowing or smiling in return to every salutation that is addressed to her, no matter whether it be by a Duke or a day laborer, by a peeress or a washerwoman.

In the case of the new duchess of Sutherland, however, the sight of whose liveries in the distance brought her most forbiding expression to her face, an exception was made and she received the obsequious reverence of the duchess with a most frigid and icy stare and without the slightest response. The duchess exposed herself daily to this public humiliation, apparently hoping that her majesty would at length relent. It was not until certain privileges in connection with the park ordinarily granted to Windsor

LADY BEAUMONT.

residents were pointedly refused to the duchess by the castle authorities that she realized the uselessness of remaining any longer at Windsor.

It can be easily seen that the coming season will witness a revolution, so to peak, in the highest society of England. The immoral tone of the court will not even be tolerated by the most lowly. Perhaps an exception might be made by the cheap class of Americans who find our own society so pure and wholesome that they must set up residences in London.

A MYSTERY SOLVED.

A Cincinnati Divorce Case Leads to Startling Disclosures.

A divorce case was begun in Cincinnati the other day which introduces some startling features. Among other disclosures it throws light on the hitherto deep mystery surrounding the death of Billy Fee, whose body was found in the Ohio river at a point near Lawrenceburg, Indiana, less than a year ago. The plaintiff in the proceedings is Eva Keys, whose marriage to John Keys at Cincinnati last September caused quite a flutter in society there.

There was a swell wedding, and when the carriage containing the bride and groom left the residence of the bride's parents those who bid them good by and threw the traditional slipper after the bride thought the happy couple were on their way to an Atlantic coast watering resort. But John was not that kind of a man, and when the hackman was dismissed Eva found herself on an Ohio flat-boat destined for St. Louis. This was not all, for the benedict had introduced to his newly made bride, under an assumed name, Billy Fee and Bert Rusk. The quartet went down the river on the boat.

In her complaint Mrs. Keyes says that when the boat reached Lawrenceburg, her husband John and one of the men did kill and murder one of the party. Her husband threatened to take her life if she divulged the crime. She perjured herself at the trial and Keyes and his companion were acquitted. Their whereabouts is at present unknown.

SHE DIDN'T LOVE HIM.

And Sought Death Rather Than a Marriage.

Beautiful Anna Cohrs is dead.

The once bright, winsome face is rigid in the pallor of the grave. The sweet, musical voice is no more.

She died for love, or rather for a lack of love. She did not love the man her father wanted her to marry.

Anna Cohrs lived in Chicago, where she had shone in society for two seasons.

She met Warren Beckwith, a young Milwaukee business man whose wealth runs up around the millions. He showed her marked attention and proposed marriage. She declined. Her father actuated by Beckwith's wealth commanded her and the wedding day was arranged. That was in June.

ANNA COHRS.

Anna went to visit her uncle in Lyne, Conn., pending the ceremony which was to make her the wife in name of Warren Beckwith. Last week news came from there of her suicide by drowning. The night before the day on which she took her life she wrote and mailed two letters, one to Warren Beckwith of Milwaukee, her betrothed, and the other to her father. They probably contained a notification of her intention to make the marriage they insisted upon an impossibility.

A Stupid Maid.

Miss Clara—"Horrors! What in the world are you doing?"

Maid—"Film' up these books, ma'am."

Miss Clara—"Oh, you stupid, stupid thing! You are not fit to be in a respectable family. Those are my novels."

Maid—"Yes'm."

Miss Clara—"Oh, how could you? You're enough to drive any one wild. Don't you know that some of them I've read and some of them I haven't?"

Maid—"Yes, ma am."

Miss Clara—"And here you've mixed them all up, so I can never separate them."

Two Girl Horse-Thieves.

Marshal McIntire of Marshalltown, Iowa, arrested two female horse-thieves last week, who gave their names as Ruth Downey and Lillie Hill, the latter being dressed in male attire. The horse stolen belongs to Mr. McWorth of Hinckley, Ill., and was taken from Sandwich and driven to that city. The girls are about 16 and 17 years of age.

Earning His Grub.

Jinks—What's Winkers doing for a living now?

Blinks—Oh, anything that his rich wife tells him.

AT THE SUMMER DANCE.

A Place Where Man's Importance is Recognized.

GIRLS STRUGGLING TO FIND PARTNERS.

Half Grown Boys and Callow Youths in Great Demand.

This is the age of woman's triumph. She has demonstrated her ability to administer functions of honor hitherto relegated to man's dominion with dignity and sagacity. It is safe to predicate from her attitude that the coming woman will rule the nations while the coming man rocks the cradle, and to prophesy from her success that the nations will be governed more wisely and the cradle swayed less scientifically than at present.

But notwithstanding all this there is one place where the scepter has not departed from Israel, where man rules triumphant in all his pristine superiority, where the smallest boy out of kilts and in trousers is at a higher premium than the fairest, wisest lady in the land, who might, with her beauty, put Venus to the blush, and with her knowledge cover senior wranglers with confusion. And this place where old traditions are restored and man is acknowledged master is at the summer hotel dance.

The sweetest kind of a woman's woman, who is full of love and sympathy for her sex, to whom girls delight in confessing their secrets and women confide their sorrows, finds little profit or pleasure in dancing with a woman.

There is something solemn in the atmosphere of the summer dance, something pathetic in the air of feigned and hysterical hilarity among the women who wabble round the hall in pain, like mechanical tops when the spring is broken or the works need mending.

Thrice blessed the woman who has a husband whom she can coax out of tennis shoes and into pumps, out of the smoking room into the ballroom. How that man is smiled upon, victimized, cajoled into making a martyr of himself, and dancing himself into a fit of apoplexy with all that woman's friends.

Happy is the girl with a younger brother, even if his mustache is in the pin feathery stage, and his voice as little to be depended upon as a worn out accordeon, if only he can sprawl through a waltz and maintain an upright position.

Envied indeed is the woman whose little son, in sash and knickerbockers, has been taught to step a measure in time and order due.

Somebody announces a lanciers or quadrille, and there is confusion among the ranks of dancers. The one self sacrificing young man who dances dashes about the room, out in the office, down in the billiard room, mopping his brow and seeking the persuadable man to come and fill out the sets. The girls familiar with the figures tie handkerchiefs about their arms and invite other girls to dance, the mothers hunt up their small boys, and after a while the procession moves with an average of one man and one small boy to a set.

Little questions the fair dame who at home deliberates most carefully before establishing the most formal of friendships with new acquaintances the history or present station of the man who is presented to her as a partner for a waltz. There is a relief in the steady clasp of the manly arm, the firm touch of the masculine hand, that renders it immaterial whether he weighs out butter by the pound or handles a tailor's goose and shears when vacation is over if only he takes the step she learned in waltzing, and will give her one or two good turns about the room before all the other girls who cannot get a man to waltz with.

Little does it concern her to investigate in any way his claim to her regard if he lead her through the figure of the mazy dance when older women are depending upon partners of their own persuasion flying white handkerchief signals to avoid mistakes.

How the gracious, gratified lady smiles upon her unknown partner, waits for him if he is stout, helps him if he is awkward, teaches him if he is forgetful, and answers in all sincerity to his conventional thanks at the close of the figure, "The gratitude is on my side, I assure you."

Even the girl who can dance independently is looked up to after a little by the girls who cannot take the masculine part, and when little cliques form, as they invariably do in a summer hotel, each clique jealously guards the girl man almost as seriously as they would the genuine article from appropriation by the other factions.

The summer hotel dance is an admirable vantage ground from which to study the terpsichorean art as modified and influenced by different climates and localities—the wild swoop and rush of the Colorado girl, with the freshness and freedom in its movement that suggests the broad, unbroken prairie and billowy, waving grasses tossed and swayed by the strong wild breezes. There's strength and speed and life, like the swift dash of wild, unbridled horses with sinewy flanks and flashing eyes and widespread nostrils!

In sharp contrast is the slow, stately glide of the Boston belle, subdued and steady and joyless. It speaks of a long line of stern faced ancestors, repressive, taciturn, grave, of spectacled schoolma'am grandmothers who were married late in life, and trained their children with inflexible rods of iron according to Scriptural traditions.

The sensuous, dreamy, willowy grace of the southern beauty, with the dusk of the midnight in her eyes, the warmth of the summer in her smile. Not for nothing did Spanish knight and veiled lady land upon her coasts and leave as her inheritance all the passion and the pride of a nation famed for duels of love and war. As the supple, swaying figure, gently yielding to the encircling arm which supports it, floats softly past in a melody of motion, half forgotten Byronic meters, dim traditions of impossible romance return and are verified.

As the kiss of sunbeams on the crest of the waves, the poise of the humming bird upon the breast of a rose, the dart of the swallow through the glow of the sunset, is the dance of the New York girl, merry and dainty, airy and free, like the tripping of elves in the sheen of the moonlight or the revel of naiads in the spray of ancient sylvan fountains.

There is nothing more picturesque and fascinating than the New York girl dancing, unless it is two New York girls dancing together like a pair of swinging orchids with delicate petals fluttering on their supple stalks.—New York Sun.

It will occasion less surprise that ill weeds grow apace when it is known that a single plant of purslane produces 388,800 seeds; the thistle, 95,866; the plantain, 42,200, and the burdock, 33,068.

MOTHERHOOD.

She softly sings, and paces to and fro,
Patient, unwearied, bearing in her arms
The fretful, sickly child, with all its harms,
Deformed and imbecile, her love and woe,
Croons, with caressing intonation, low,
Some sweet, old minor melody, that charms
The ear that listens, and the sufferer calms,
And her own sorrow soothes with silver flow.
O holy tenderness of motherhood!
Most pitiful and patient to the child,
Foolish, unlovely, seemingly defiled
By powers of death and darkness. The All Good
Alone so loveth and remembereth,
And, like a tender parent, pitieth.

—Abby S. Hinckley in The Century.

MEDICINE FOR THE IMAGINATION.

How Paralysis May be Cured—A Hypnotized Subject—Paraplegia.

We must be permitted to dwell for a moment on this medicine for the imagination, which is entitled to the name of suggestive therapeutics. The process is as follows: Influenced by a persistent idea, suggested by external circumstances, a paralysis is developed. The physician makes use of his authority to suggest the idea of an inevitable, incontestable cure, and the paralysis is cured accordingly. This cure, as well as the development of functional disturbance, was directly effected by an idea. An idea may, therefore, be, according to circumstances, a pathogenic and a therapeutic agent. This notion is not new, but, since it was misinterpreted, it has remained unfruitful.

The most important of the organic disturbances produced by an idea is an experiment on vesication, performed by Focachon, a chemist at Charmes. He applied some postage stamps to the left shouler of a hypnotized subject, keeping them in their place with some strips of diachylon and a compress; at the same time he suggested to the subject that he had applied a blister. The subject was watched, and when twenty hours had elapsed the dressing, which had remained untouched, was removed. The epidermis to which it had been applied was thickened and dead and of a yellowish-white color, and this region of the skin was puffy and surrounded by an intensely red zone.

It was in 1869 that Russell Reynolds first noted the existence of motor and sensory disturbances, developed under the influence of an idea. The motor disturbance sometimes consists in spasms, in ataxic or incoordinated movements, and more frequently in paralysis which affects the upper limbs. Erb gives to these symptoms the name of imaginative paraplegia. The type of this paraplegia is afforded by Reynold's first observation, which concerned a young woman who was affected by paraplegia under the following circumstances: She lived alone with her father, who had undergone a reverse of fortune, and who became paralytic in consequence of protracted anxiety. She supported the household by giving lessons, which involved long walks about the town. Influenced by the fatigue caused by so much walking, it occurred to her that she might herself become paralyzed, and that their situation would then be terrible. Haunted by this idea, she felt a growing weakness in her limbs, and after a while was quite unable to walk. The pathology of the affection was understood by Reynolds, who prescribed a purely moral treatment. He finally convinced his patient that she was able to walk, and, in fact, she resumed the practice.—MM. Binet and Fere in Popular Science Monthly.

Need of a Technical School.

When the Pittsburg father of a bright boy wishes to make of the lad a man skilled in mechanical matters, a mechanical engineer competent to be his father's right hand man in the big workshop or factory or mill, the boy must be sent 500 miles from home to receive the education desired. This busy, industrial city is full of men with muscles and eyes trained to mechanical work. But their knowledge is superficial and their brains have not been developed as have their muscles and their eyes. They can carry out but not evolve mechanical ideas. That power must be conferred by institutions way off at Troy, at Boston, or at New York. There is not even a good industrial school in Pittsburg, a place where the sons of mill owners can acquire practical knowledge of the processes which in after life he will be called upon to superintend, or be set down as knowing less than the cheapest mechanic in his employ. There are bright boys whose fathers do not care, for many reasons, to send them to a distant institution. The alternative is to let him go right out among the workmen, and there plant his feet firmly upon the lower rounds of the ladder leading to mechanical expertness.

One such boy, a few months ago, determined to obtain a practical mechanical education, and was encouraged by his father in so doing, and his first week's experience was among colored workers in a steel mill. He is now foreman of one department. Most boys would find this a debasing companionship, and most fathers would find it impossible to permit a son to acquire information in such a way. Meanwhile, home institutions teach boys everything except practical knowledge of their father's business. They can, leaving adjacent colleges, boast of thorough knowledge of the dead languages, but they do not know the difference between crucible and Bessemer steel, and to design an improved furnace or bit of machinery would be harder for them than the integral calculus. The founder of a school of technology in Pittsburg would rear unto himself a better monument than if he gave a costly library building to each city.—Chicago Bulletin.

Effects of the Climate.

Tradition tells of a young English recruit who was sent out to garrison duty in Ceylon soon after his enlistment, and beheld with great amazement (having never seen a colored man before) the first native who boarded the transport when she cast anchor in Colombo harbor. "Who's that black chap, Bill?" asked he of a comrade. "What! don't you know him again?" answered the other, who was a bit of a wag; "why, that's our old chum, Harry Thompson, that you used to know in the old country. He's been out here five years, you know, and the sun's toasted him black." "The sun's toasted him black?" echoed the greenhorn, staring in open mouthed horror at the supposed transformation: "Do you mean to say that I'll be like that when I've been here five years?" "Of course you will, Dick," replied his tormentor, with heartless cheerfulness, "and so'll I too, and so'll all of us. Look at that chap," (pointing to a passing Chinese boatman,) "he's only yellow you see, because he hasn't got more than half toasted yet; but in another year or two he'll be as black as your boots."—David Ker in New York Times.

A Substantial Tidy.

Flimsy white chair tidies, that are always becoming unfastened and getting torn, to the mortification of visitors, have at length succumbed to the storm of abuse and are now being discarded by sensible housekeepers. A substitute for them, that is at once a protection for handsome furniture and an ornament, can be made of two broad bands of plush, say deep ruby color, with a puffed and gathered band of rich satin (marigold shade) inserted between and bordered with heavy lace. This can be fastened to the back of a chair, and as it is substantial it will remain secure.—Woman.

THE RIVER OF LOST SOULS.

How a Mexican Stream got its Name.

EXPLORERS MARCH INTO OBLIVION.

Hundreds of Men Whose Death will Always Remain a Mystery.

Over three centuries backward, and before the inquisitive De Soto had lighted his camp fire on the banks of the Mississippi, the Spaniards had achieved two settlements in this land of the Occident—Santa Fe and St. Augustine. They had no knowledge of the country which lay between these points or its inhabitants. As to what might be the dangers and deadfalls of a journey from one place to another they were as blindly ignorant as of the history of the moon. But this ignorance affected them not, and full of the uneasy spirit of the hour a military party in Santa Fe resolved on an overland expedition to St. Augustine. They knew the distance, for they could figure the latitude and longitude, and they could get the direction of the compass; but this was the sum of their knowledge.

The expedition, numbering some hundreds of men, left Santa Fe late in the summer, and crossing the mountains at the Raton pass, the present route of the Santa Fe railroad, they camped that winter on the present site of Trinidad. The grass was long in the valley, the game was plenty on the hills, their own stores were ample, and sending back to Santa Fe for minstrel and glee maiden, these gentlemen of the sword got in as gay a season as they ever have since. Those old dons were lads of spirit, and possessed high hearts as well as a taste for travel. Before them to the eastward as far as the eye could sweep spread the desert unconfined. What was to be met there they knew not, but their lack of knowledge was coincident with an equal lack of care.

With the melting of the snows in the spring sunshine their women and camp followers returned to Santa Fe. The last hand was waved goodby, the last adios were uttered and the explorers turned their resolute faces to the work in hand. They marched down the valley of the little muddy river, which flows as you read this through the town of Trinidad. The ones who were to return to Santa Fe watched them for miles, assisted by the light of the sun on steel cap and harness. At last they were hidden in the willows far down the valley, and this was the last that was ever known of them.

With the last flap of the last banner it was as if they had marched out of existence, and whether they sunk in rivers, perished in the drifting snows, or were done to death by Indians was never told. No sign or trace of this expedition or its people was ever found. There was something so eerie and mysterious in the complete disappearance of this band, something so dark in the silence of their fate, that the superstitious Spaniard made the sign of the holy cross when he recalled it. With that effort at commemoration which was the spirit of that time the little muddy torrent in whose valley the lost explorers last were seen was called El Rio de Los Animas—"The River of Lost Souls."

This was the Spanish name when Soubtette, Chouteau, Bent, Carson, St. Vrain and other representatives of the French Fur company, of St. Louis, first saw it. Knowing nothing of the story and assisted only by their inferences drawn from the name, these translated the appellation into Purgatoire. When the jocund bullwhacker of the overland trail got to it in his free and easy French he called it "the Picketwire." Every brand it ever had still sticks, and today you will find the little vagrant of a stream pursuing its glistening mission to the sea.—Kansas City Star.

Harmless, but a Dreadful Bore.

A laughable and sort of harmless nuisance is the man who strolling about wanders into the theatre. He picks up a stray seat. He has not much of an idea what the play is about. His thoughts are rather slow, but he listens intently, and endeavors to put this and that together. Before the combination is quite complete he hears an uproarious laughter from every one around. He turns to the lady or the gentleman in the seat next to his own and asks, "What was it that he said?" He is told, and then he has a good laugh to himself.

Just as he thoroughly digested that witticism something else causes laughter. He heard it all but the last word. He can't laugh without that, so he turns to the occupant of the next seat again and says, "What was that last word?" Again he is told. How he does enjoy it. He laughs until the tears almost come—all by himself again. And so he spends the evening, giving strict attention to the play, but never knowing just when to laugh until warned by the audience, and then he has not caught the "last word." He comes alone. He hears the last word alone. He laughs alone. He goes home alone.—Chicago Herald.

How to Take Care of the Brain.

The brain stands most abuse of any organ in the body. Its best tonic and stimulant is success. The worst and most depressing thing to it is failure. The most injurious effects come by using stimulants in early life. Young people should never use liquors, tea, or coffee. The latter two may not exactly do harm, but they are conducive of no good. They act mostly on the brain and injure its growth very materially. Abundance of sleep is necessary. Eight hours is not more than enough. Sleep is the time of relatively lowered expenditure and increased repair.—Exchange.

The Schoolmaster Abroad.

A flour and feed dealer on Third avenue hangs out a printed sign, which, in big capitals, assures the public that "all the glutton" is retained in his favorite brands of flour.

His original mode of spelling gluten recalls the orthography of the policeman whose memorandum averred that a woman had committed suicide by swallowing "horsnrick." Not everybody would recognize arsenic in that disguise.—New York Telegram.

A Use for Paper Bags.

Paper bags, in which many articles are sent from the grocers, should be saved for use when blacking a stove. The hand can be slipped into one of these, and the brush handled just as well, and the hands will not be soiled.

To Slaughter the Sparrows.

It is stated that corn meal mixed with strong brine or moistened with salt, dried, exposed to the ravenous appetite of the sparrows, is as sure as electricity, therefore not a cruelty to animals.—Philadelphia Record.

STEELE MACKAYE'S TABLE.

He Had Some Difficulty in Getting the Aged Carpenter to Make It.

Steele Mackaye, the dramatist, can tell a good story as well as write a good play. At Wormley's he was relating some of his experiences in the little village of Concord, N. C., where he spent some time.

"I wanted a table made," he began, "and was directed to the village carpenter. He was an aged man, and when I finally found him he was leisurely engaged in the manufacture of a coffin. It looked as if he had been at work upon the coffin for a week. I asked him if he could make me a table. He 'allowed' that he could when he 'got at it.' 'And when will you get at it?' I asked. Suddenly he parried my direct question with another. 'What kind of a table do you want?' he asked me, with the air of a man who has got the enemy cornered.

"I described the table, and the old man again fell into deep thought. At last, when I showed some impatience, he told me to come again next week.

"A week later I reminded him about my table. Yes, he remembered the conversation, but he really did not think he could go to work upon it until he had seen some of his relatives. He did not exactly know whom he had to see, nor where they lived, but he was positive that they had to be seen before my table could be begun. Besides this he hadn't any lumber.

"'Where can I get the lumber?' I asked in desperation. Well, he thought it could be obtained at the mill. And where was the mill? Twelve miles away. So I mounted my horse and started for the mill. I found it after a long search. It was a dilapidated affair, and the saw was half way through a log. But the saw was rusty, a sign that it had not been in use for a week. A woman came out of a house nearby and answered my shouts. I told her that I wanted to see the owner of the mill.

"'What do you want to see him for?' she drawled. I told her about the lumber which I needed, and her husband came out. He was a long, lean, lank fellow, and he was sucking a yam. It was the funniest sight you ever saw. All during his conversation he sucked this yam and spoke in slow, deliberate sentences. He finally concluded that he did not care to take the trouble to cut the lumber, and I rode twelve miles back to town."

"And did you ever get the table?" asked the reporter, who listened to the story.

"Down by the railroad was a factory," said Mr. Mackaye. "Nobody in the town had mentioned it, although fifty people had told me of the aged and work deferring carpenter. I found the factory by accident, gave my order for the table, and had it delivered to me within twenty-four hours.—Washington Post.

A Railway Mistake.

A man went to a certain railway station in New Jersey to buy a ticket for a small village named Morrow, where a station had been opened only a few days previously.

"Does this train go to Morrow?" asked the man, coming up to the office in a great hurry, and pointing to a train on the track with steam up and every indication of a speedy departure.

"No; it goes today," replied the ticket agent, curtly. He thought the man was "trying to be funny," as the saying goes.

"But," rejoined the man, who was in a great hurry, "does it go to Morrow today?"

"No, it goes yesterday, the week after next," said the agent sarcastically, now sure that the inquirer was trying to make game of him.

"You don't understand me," cried the man, getting very much excited as the engine gave a warning toot; "I want to go to Morrow."

"Well, then," said the agent sternly, "why don't you go tomorrow, and not come fooling around here today? Step aside, please, and let that lady approach the window."

"But, my dear sir," exclaimed the bewildered inquirer, "it is important that I should be in Morrow today, and if the train stops there, or if there is no train to Morrow today"——

At this critical juncture, when there was some danger that the mutual misunderstanding would drive both men frantic, an old official happened along and straightened out matters in less than a minute.

The agent apologized, the man got his ticket, and the train started for Morrow today.—Youth's Companion.

The Boy with a Bottle.

A boy about ten years old was going up Second avenue with a quart bottle in his hand labelled "Black ink" in big letters, and he was handling it so carelessly that a fat and fussy man, coming down the avenue, stopped him to say:

"That's just exactly like a boy! Why on earth don't you carry that bottle as you ought to?"

"I am!"

"No, you ain't! You are just aching to have it drop on the sidewalk and spatter all over some one!"

"I guess I know how to carry a bottle!" growled the boy as he swung it around.

"No, you don't, nor no other boy! What are you doing now? If you let that bottle drop and spatter me with ink I'll cane you!"

"Who's lettin' any bottle drop?"

"You are!"

"I hain't neither! I guess I can play catch with a bottle without killin' anybody!"

"Look out!"

"There hain't nuthin' to be alarmed about. Anybody can toss up a bottle and catch"——

"I knew it—I knew it!" shouted the fussy man, as the bottle came down with a smash and he jumped half way across the street. "Boy, you ought to be licked 'til you couldn't get home. I told you"——

But eight or ten people were laughing at him. It was an empty bottle which the boy had let fall!—New York World.

The Restaurateur's Device.

One of the newest of the swell restaurateurs in town has hit upon a novel way for securing high class customers. His plan is to ask the rich men and gourmets who dine at his place what dishes they are especially fond of and in what way they have them prepared at home. He then has his chef make the dishes, and he calls them after the customers who recommend them, as if, for the sake of example, he should stew crabs in cream and call the dish "crabs a la Chauncey Depew," or as if he should put a crusting of baked powdered cheese on stewed cauliflower and should name it "cauliflower a la Colonel Fellows."

It takes in nine cases out of ten. Men who like good living nearly all have a knowledge of cooking and are proud to have it recognized.—New York Sun.

A Despairing Cry.

Auntie (sympathizingly)—What's the matter, Bobby dear?

Bobby (sobbing)—Mamma whipped me. I jus' wish I'd a been born a orphin!—Kate Field's Washington.

AN ODD GHOST STORY.

"Shawley," the Grocer Boy's Spirit.

MISS KINGSLEY SCARED HIM TO DEATH.

Now She Sees Him in Every Boy That Brings her Groceries.

Miss Emily Kingsley, a most respectable maiden lady, who lives in a dainty little flat on Throop avenue, near Hancock street, Brooklyn, is being pursued by the outraged ghost of a German grocery boy.

Miss Kingsley has a snug little fortune, and for years she has maintained an independent establishment with the aid of a dignified colored person named Martha. As Miss Kingsley and Martha never kept late hours nor gave card parties, they led, on the whole, a very happy, if uneventful, existence, until within the past year. Then the "hant" came into their lives.

Fifteen months ago Miss Kingsley was living in a flat on Madison street, Brooklyn. Most of her supplies in the provision line were drawn from a corner grocery in the neighborhood and delivered by a little German grocery boy. He was a jolly fat chap, with a stupid face and prodigiously red cheeks, full blue eyes and hair that gained him the title of "cottontop" with all the children of the neighborhood.

HIS BOSS CALLED HIM "SHAWLEY."

His trips to Miss Kingsley's flat were a never ending source of delight to "Shawley," whose correct name, by the way, was Karl. Like many other maiden ladies, Miss Kingsley detested children, and though "Shawley" did the work of three or four men, still, on account of his size, and particularly on account of his actions, he was nothing but an intensely disagreeable boy in the eyes of "die alte jungfrau," as she was known at "Shawley's" store.

One day, while the poor lady was suffering from a particularly bad state of nervousness, "Shawley" came thumping up the stairway with a big basketful of potatoes for the Kingsley household. He had been told scores of times to send his goods up by the dumbwaiter; but, like a true grocery boy, he did just the opposite, though it caused him a good deal of extra trouble. With an exclamation of rage Miss Kingsley flew out into the hall just in time to see the boy mounting the last step. Startled by the sudden appearance of his angry customer, and completely taken by surprise, "Shawley" stumbled and, losing his hold, tumbled down the stairs, with the big basket on top of him.

Miss Kingsley, grimly observing that it served him right, bounced back into her sitting rooms. As for "Shawley," he lay wonderfully still for a German grocery boy. It was dark in the hall, otherwise it might have been seen that his usually red cheeks had very suddenly lost all their color. After a few minutes, however, during which the people on the floor stood by laughing, "Shawley" managed to get up. He gathered in as many of his potatoes as he could find, though it gave him a queer pain to stoop, and then he tried to carry the basket up again. But he couldn't.

HAUNTED BY THE BOY.

So he left it where it was, and, still with that queer pain which almost made him cry with every step, he slowly walked back to the store. Next day it was said that "Shawley" was sick in bed, and a week later a hearse drove up to the side door back of the grocery and carried the little "cottontop" away to the Lutheran cemetery.

Miss Kingsley, who is a thoroughly good hearted lady, was inexpressibly shocked. And then came the "hant." Not at midnight, nor even after dark, but in broad daylight. Every grocery boy who delivered her groceries was a living image of "Shawley." They called themselves "Ernest" and "Yake" and "Hiney" and "Willie," and they all smiled at Miss Kingsley's startled looks when she first saw them, but the good lady knew that they were all "Shawley."

At first Martha waxed pathetically earnest in trying to dissuade her mistress from believing in this illusion.

The doctor found that his patient was suffering from hysterical mania, caused by incessant worrying over poor "Shawley's" death. In this state it was not unnatural that she should imagine herself haunted by the appearance of the other grocery boys, who generally resemble one another as closely as two peas in a pod. The doctor, like Miss Kingsley's friends, tried to show her that she was deceived by this resemblance, but so far he has not succeeded, and unless a change comes soon he will order his patient from the city.—New York Continent.

Gas Man—Humph! Something queer about this meter. Do you use all those lamps standing there in a row?

New Girl—No, indeed, sir, we don't use any. I guess they wants mending 'cause the missis tole me to leave 'em where you cud see 'em.—Good News.

Against the Eight Hour Law.

"Mercy me!" said Miss Passee, "I sincerely hope they will not pass the law making a day of eight hours."

"Why not?"

"Just think how rapidly we shall age! Just three times as fast."—Harper's Bazar.

An excellent cough mixture is composed of the following: One pound of figs chopped fine, one pound of loaf sugar, one pint of Jamaica rum poured over the figs and sugar. Let it stand twelve hours. Then strain and bottle. A teaspoonful every hour or two.

The British novelist Blackmore is a hearty and well preserved man of sixty-five years. He looks much like a typical back country squire and rarely appears in society, preferring to live the life of a literary recluse. He is an Oxford graduate and a lawyer.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 27 ..... 1891.

It is not hard to see how the man who has wrecked his life could have avoided the rocks of perdition—and yet men go on wrecking their lives in the same old way.

The failure of a number of national banks in the East of late has increased advocacy of the postal banking system, under which depositors would be absolutely safe from loss, as the government would be responsible for all sums paid to its officials. There is a system of this sort in Austria, and it is said to give excellent results.

The very amusing spectacle is presented in Chicago of arrested anarchists pleading their constiutional and natural right of free speach. Yet these same rascals in preaching anarchy deny all law, challenge the right to set up constitutions, and to enact laws. In other words, they preach "no law; no exercise of authority; no officers; no restriction;" yet when brought up for abuse of the national right of free speech guaranteed by the Constitution, these same desperate men and women appeal to the law for protection. If this is not facing two ways at one and the same time we cannot conceive what the attitude is.

We are receiving some remarkable news dispatches nowadays, and they do not come through the bureau of American Republics, either. A telegram received from Shanghai states that the American warship Charleston had left for Honolulu for the purpose of taking charge of the Sandwich Islands in the name of and for the use of the United States. Another telegram from London states that the Chinese government is not going to pay anything for killing Christian missionaries; that it is the policy of Li Hung Chang to embroil the powers one with another, and then, with the assistance of the Japanese Navy, to wipe them all out. And after that is accomplished the man in the moon is coming down to persuade the Irish to dispense with the shillalah as an argument in politics.

The persons under indictment by the Grand Jury are using every possible effort to prevent a fair inquiry into the charges against them. They are formally accused of infamous crimes, and instead of affirming their innocence and daring their accusers to the proof, they are pleading that said accusers are not the proper persons to bring the charges! Among men, outside the courts, such an attitude is usually regarded as tantamount to a confession of guilt, and so it is now and should be regarded. The indicted persons and their friends seem to be under the impression that if they should succeed in baffling the Grand Jury and Judge Wallace, they will have secured quite a triumph. Their triumph will be like that of the pursued malefactor who escapes from the police by superior agility and more intimate acquaintance with certain alleys and back fences.

Secretary Foster's speech before the New York Chamber of Commerce is the first official declaration that body has heard that "gold alone is too narrow a base upon which to build the world's financial structure." A gold paper in New York has kept standing in its editorial colums quotations from Secretary Windom's speech before the Chamber last year, but it is not probable that the opinion we have quoted from Foster will be honored in the same way. Foster argues that the present silver act, if not interfered with, will bring silver up to parity with gold. Mr. Foster says that if the price of silver should be advanced from $1 an ounce to $1 29 all the silver in the world for sale would be attracted to this country. So it would, if the advance should be made by law. But if it comes gradually through the natural appreciation in price consequent upon an increased use of the metal there would be little or no silver for sale. If there could be an assurance that silver would rise to $1 29 an ounce within three years, none would be offered at a less rate except by speculators who might hope to profit by fluctuations. The bulk of the world's silver would be held for the ultimate price of $1 29 an ounce. The remark may be made, however, that it is not possible to advance silver by law to $1 29 an ounce. Free coinage, which would seem to do so, would be neutralized by appreciation of the price of commodities corresponding to the difference between the market price of silver and of gold.

THE POCAHONTAS TALE.

TRUE VERSION OF THE AMERICAN HISTORICAL LEGEND.

Pocahontas Did Not Save John Smith's Life, but Interceded in Behalf of One of Her Lovers, Who Was Doomed to Die and Whom She Did Not Marry.

"It is strange and incomprehensible, nevertheless a fact, that raconteurs, from the time of the first liar down to the present age of Munchattons and Munchausens, with a wonderful unanimity persist in falsifying and twisting the truth into an unrecognizable quantity," said Colonel George as he gazed at the wondrous landscape panoramically coming into view.

We were speeding over the beautiful sea green waters of the Chesapeake bay on the steamer Ariel from Norfolk to Richmond. I made the acquaintance on board of the gentleman who gave utterance to the above sage remark. When the colonel spoke the boat was on the eve of passing historical Jamestown, and the passengers had grouped themselves together on the lee side to catch a fleeting glimpse of the ivy clad front wall of the old church, standing sentinel-like on a peninsula formed point of land.

As we rounded the wide bend of the river, and the church, the sole remaining relic standing on the scene of the romance of Captain Smith and Pocahontas, hove into view, the colonel resumed his conversation, or rather monologue:

"You must have noticed in your lifetime how a story will grow as it is repeated from lip to lip—how the truth becomes distorted and subjected to innumerable alterations of fact. In illustration of this," said the colonel thoughtfully, "I will relate you an Indian legend recalled to my mind by that old ruin," pointing to the church wall which the boat was just then gliding by. "The story, as I heard it, was told me by an old farmer, well known in the neighborhood, on my last trip up the James river, just before the war."

POCAHONTAS' REAL NAME.

Jamestown vanishing from sight, the colonel and I returned to the cabin, sought seats away from the crowd of passengers and I settled myself comfortably to listen to the tale.

"When Captain John Smith made the first settlement in Virginia, the white and red man lived on terms of amity and confidence," began Colonel George. "Caucasian and Indian mingled with each other and were held in mutual esteem. Until the outcropping of the greediness and avariciousness of the Englishmen became apparent, peace and prosperity smiled on the hardy settlers.

"In the village ruled by Powhatan there dwelt a lovely Indian maiden. Her skin was the color of polished copper, her hair of raven's hue and her eyes sparkled as the morning star veiled behind a gathering storm cloud. Warriors from far and near sought her hand in marriage, but her heart remained invulnerable to all vows of love and devotion. However, when the white man invaded the habitations of the Indians, among their number was a youth comely to look upon, famed for his courage and manly qualities. Tetehee, in the course of her many visits to the newly founded village on the James river, cast her eyes on handsome Homer Castalwain, and, lo! the little Indian god of love pierced her heart with his arrow, and she loved him with all an Indian maiden's fierceness.

"Now, Chief Opechancanough, one of Powhatan's tributary rulers, had a son who was madly in love with Tetehee, the Morning Star. Bankee (Black Bear) was a cruel and vindictive Indian, and when he learned that Tetehee's heart belonged to a despised white man he swore vengeance upon his tomahawk against Homer Castalwain.

THE TRUE VERSION.

"In the soft Indian summer, with nature aglow with variegated colors, Tetehee, in company with the other maidens and squaws of the village, was gathering the golden ripe maize for winter use from the fields of the king. While the maidens were at work Bankee raided the cornfields of the powerful Powhatan, carrying off to his own village the object of his savage affections. He meant to coerce Tetehee into marriage while in his power, raise a war party, attack the settlement of the white men and exterminate it.

"Castalwain, upon hearing of the threatened danger of his lovely Indian bride-to-be, accompanied by Captain John Smith, supplicated King Powhatan for aid to rescue her. This was granted. So, with a war party composed of Indians and settlers, under the leadership of Smith, Opechancanough's village was surprised in the midst of his son's wedding festivities, Tetehee rescued and Bankee captured and carried before King Powhatan.

"Then it was that his fate was decreed—death by beheading, so to speak. As Bankee's head lay on the stone, a huge Indian standing over him, Pocahontas rushed between the upraised club and prostrate man and begged her father, the king, for his life—not from love, however, but simply through pity and weakness of heart.

"This is the true version of the world wide famous legend of Captain Smith and Pocahontas, which poets and historians have handed down for generations. It is a sample of what a truth undergoes—how it is garbled as related by one and another in the course of narration. The accuracy of the story is undoubted in my mind, as it is a well authenticated fact in the neighborhood in which the old farmer lives, that he is the last living descendant of Homer Castalwain and Tetehee, the Indian maiden."—Atlanta Constitution.

Lightning in and Near a Church.

Two hundred persons were assembled at divine service in the Mower Hightower church, near Osborn, Ga., when a bolt of lightning entered the edifice. Some of the people were rendered senseless, others had their clothing torn from their bodies, several were burned and every one bore more or less serious marks of the lightning. Although no person was fatally injured, a horse that stood outside the church was instantly killed by the electric fluid.—Yankee Blade.

Novel Matches.

A new method of obtaining a light has just been patented in England. Instead of the old fashioned safety match, the stick is tipped at both ends, one end with the usual composition and the other with that found on the scratcher outside the box. Light is obtained by breaking the match in the middle and rubbing the two ends together.—Exchange.

MONKEY ACTORS.

A Trainer Must Become a Monkey to Be Able to Teach Them Tricks.

The training of monkeys for stage performances demands peculiar talents and a curious psychological ability on the part of the instructor. Brockmann, probably the most successful monkey trainer that the world has seen, once described thus the necessary method of approaching a monkey pupil:

"To the monkey man is a strange and incomprehensible being. I therefore must adopt as far as possible the monkey's way of regarding persons and things. The monkey must find in me one of his own kind—a monkey like himself, only a much stronger monkey, whom he must obey. Then he has something which he can understand; he accustoms himself to it, and he voluntarily takes more pains to comprehend me than he would take to comprehend a being who made on him about the same impression that a monster from another world would make on us. I adapt, therefore, all to his mode of life. When he disobeys and rebels against me I do not strike, because he does not strike; but I bite because he bites."

The behavior of a troop of monkeys trained by Brockmann would undoubtedly strengthen the convictions of the Russian Duroff, who gave up teaching in a high school to instruct pigs and geese, and who holds that, of all pupils, human pupils are the least docile. A man once behind the scenes of Brockmann's monkey theater wrote:

"I have always regretted that Brockmann did not give his performances on a perfectly open stage, so that the audience could see the waiting performers. The conduct of the quadruped actors while awaiting their parts was much more fascinating than their best acting before the audience. Like a company of gnomes or lilliputians the little performers sit there dressed and made up, perfectly well behaved, each in the proper human attitude on his tiny chair, each following with undivided attention and eager anxiety the progress of the play so as to be ready at the exact moment for his appearance. No person is near them, no servant or attendant to distract them, and no prompter to whisper at the proper time:

"'Fraulein Lehmann, look out! You come on immediately;' or, 'Herr Schulze! Where is Herr Schulze? Quick! Quick! You must go on.'

"Every one knows his part perfectly. Every one is acquainted with the progress of the plot and with the stage of the development at which he is expected to appear. Without a catchword or motion he hurries down from his tiny chair and out on the stage, plays his little part, and without a bow for the approval of the audience turns back to his place, not to leave it before duty calls him again before the footlights. Here all alone and unwatched these little fellows never forget their roles so far as to settle down on all fours, cower in monkey fashion, or indulge in the pranks of their mercurial natures."—New York Sun.

Lively Fly Paper.

Unfortunately we are all familiar with the sticky fly paper, which, despite its nastiness and horrible appearance when covered with its victims, holds its own purely by its undoubted efficacy in riding a room of these most annoying pests. One household's experiences with this very heroic remedy were most amusing. "Good gracious! what is the matter with that paper?" said "Auntie," jumping up suddenly from her chair as the family were seated at luncheon and pointing to a piece of fly paper that was circling wildly around in the middle of the room, apparently blowing this way and that in the most lively breeze, there being not a particle of wind stirring.

A dash at the lively sheet on the part of one of the children explained the mystery—underneath it and quite concealed by its size was a tiny Maltese kitten, who was too astonished at her predicament even to mew; but her protestations were loud and vehement when they tried to pull off the firmly attached fly paper, and her situation for a day or two was most uncomfortable despite her repeated cleanings, as she stuck to the floor whenever she went to sleep and had to be "unglued" every time.—New York Tribune.

The Sunday Breakfast.

Among the many practical methods devised by kindly Christian people to reach and help the poor and criminal classes, one of the most effective is the Sunday breakfast in Philadelphia.

At 9 o'clock every Sunday morning a room is opened in one of the most degraded quarters of the city within easy reach of sailors, emigrants and that unnumbered class who are homeless and hungry.

The room is clean and warm, a pleasant refuge in stormy weather. The table is set, and each man or woman who enters, no matter how filthy or degraded, is heartily welcomed. The breakfast consists of two substantial sandwiches and a cup of strong hot coffee.

After the meal is over there is music, and one or two hymns are sung, while the hosts—men and women of all sects—go quietly about among their guests and try to find out the special misery in their lives, and to make them their friends.—Youth's Companion.

Lovers in Mackinac.

Mackinac is a perfect heaven for lovers. The Grand hotel has its front all dotted with little balconies, one to every other window and each strongly suggestive of the prettiest scene in "Romeo and Juliet." On a distant balcony I have seen a lovely girl appear to hold a long whispered conversation with her beau three times after leaving him for the night below stairs—once when she reached her room, again when she thought of another thing to say before disrobing, and yet again in her wrapper, after she had made herself otherwise ready for bed. And at that time there were other lovers talking from one balcony to another, others in the grove in front of the great hotel, others on the board walks leading to the village, and still others, I doubt not, everywhere that the moon shone and the breezes fanned the island.—Julian Ralph in New York Sun.

The Ivory Nut.

The vegetable ivory nut of commerce is the albuminous seed found in the drupes of a dwarf palm. From these nuts European turners fashion the reels of spindles, small boxes, and many other little fancy articles, which can be colored with sulphuric acid.—Chambers' Journal.

ORDER FIXIMG TIME AND PLACE FOR HEARING OF APPLICATION TO MORTGAGE CERTAIN REAL ESTATE AND DIRECTING NOTICE TO BE GIVEN.

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of Ezra M. Goodale, deceased.

Thomas J. Goodale and Maggie P. Goodale, Executor and Executrix respectively of the last will and testament of Ezra M. Goodale, deceased, having filed their petition herein, duly verified, praying for an order authorizing and empowering and directing them to mortgage the south half of the south-east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the purposes and for the amount stated in said petition, or for such lesser amount as to the said Court may seem meet; it is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the Judge of said Superior Court on Wednesday, the 23rd day of December, 1891, at 11 o'clock a. m. of said day, at the Chambers of said Superior Court, at the Court-house, in the town of Independence, County of Inyo, State of California, then and there to show cause why an order should not be granted to the said Executor and Executrix authorizing, empowering and directing them to mortgage the real property belonging to said estate, to wit: The south half of the south east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north-east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the sum of $900.00, or such lesser amount as to the Judge of said Court shall seem meet; all of which more fully appears by the said petition now on file in the clerk's office and two which reference is here made for further particulars.

It is further ordered that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo.

Dated November 18th, 1891.

GEO. M. GILL.
Judge of the Superior Court.

[Endorsed.]

SUPERIOR COURT, COUNTY OF INYO.

In the Matter of the Estate of Ezra M. Goodale, deceased.

Order fixing time and place for hearing of application to mortgage certain real estate and directing notice to be given.

LAND OFFICE AT INDEPENDENCE, CAL.
Sept. 3d, 1891
Notice is hereby given that Der[illegible] Leonard of Bakersfield, Kern County, California, has filed notice of intention to make proof on his desert land claim No. 513 E. ½ of Section No. 2, and the W. ½ of No. 1, Tp. 10 S., R. 34 E., M D M, before Register and Receiver at Independence, California, on Saturday, the 10th day of [illegible] 1891.
He names the following witnesses to prove the complete irrigation and reclamation of the land: G. Sanger, W. Sanger, A. P. [illegible] M. Naylor, all of Big Pine, Inyo County, California.
C. W. CRAIG

Sang HIS FORTUNE made at work for us, by [illegible] Austin, Texas, and Jno. Bo[illegible] Toledo, Ohio. See cut. Others doing as well. Why not you? Earn over $500.00 a month, can do the work and live at home wherever you are. Even beginners are easily earning [illegible] a day. All ages. We show you and start you. Can work in time or all the time, big money for workers. Failure unknown among them. NEW and WONDERFUL. Sell part[illegible] H. Hallett & Co., Box 880, PORTLAND, ME.

$6000.00 a year is being made by R. Goodwin, Troy, N. Y., at work for the leader; you may not make as much, but we can teach you quickly how to make from $5 to $10 a day at the start, more as you go on. Both sexes, in any part of America, you can commence at home, giving all your spare moments only to the work. Some new. Great pay SURE for every worker. We start you, furnish everything. EASILY, QUICKLY LEARNED. PARTICULARS FREE. Address, GEORGE STINSON & CO., PORTLAND, MAINE.

Estate of James Ward, deceased—Filed final account and petition for discharge of administrator.

Estate of John C. Eddy, deceased—Filed petition for sale of personal property.

Annie Harry vs. Robert Harry—Filed Summons.

A. C. Harvey of Lone Pine was in town yesterday.

Tom Webb went to Big Pine yesterday after cattle.

R. Hessian was down from Big Pine during the week.

The date set for the school entertainment is Saturday, December 5th.

L. Wood has just received a fine lot of tin-ware. Call and see it.

See the notice to creditors in the estate of John A. Hannah, deceased.

Miss Maud McDonald of Bishop is visiting friends at Independence.

Arlie Mairs visited Bishop early in the week. He reports al quiet up there.

E. Crocker and W. H. Uhlemeyer of Big Pine were in Independence on Monday last.

Send to A. J. Weiner, corner I and Tulare streets, Fresno, and get one of his fall and winter catalogues.

On Sunday, Dec. 6th Dr. Van Deventer, Mission Superintendent, will be with us. Full particulars next week.

The *Enterprise* says that Tom Cara got badly done up by Tom Murphy in a restaurant at Virginia City the other day.

L. A. Anger has gone to the lower country on a canvassing trip for an Eastern nursery. He will be gone about a month.

It is reported that Gus Stevens has opened a livery and feed stable business at the old stand recently occupied by Curt. Harvey.

According to the instructions of the Board of Supervisors Sheriff Gorman has his boarders at work upon the county wood pile.

A. C. Harvey has quit the stable business at Lone Pine but he still continues the mail and stage line over to the Lone Pine depot.

Dr. Blair received a very severe shaking up last Friday, and one rib was broken, but he has been around attending to business all the week.

Bert. Rhine left for San Francisco last Tuesday to purchase a stock of holiday goods. He is expected to return on Wednesday's train.

Who ever saw such delightful weather at this time of the year? During the day the sun shines out bright and warm, and the nights are not cold.

E. Robinson has commenced his regular fall pig killing. He had seven beauties strung up the other day, just for a starter and to get his hand in.

We heard a man say the other day that it was a pleasure to travel up the Valley because of the courtesy and attention he invariably met with at the Big Pine Hotel.

A concert was given at Lone Pine last evening for the purpose of raising funds for the proposed new church there. It was conducted by Rev. H. J. Winsor.

A terrific cyclone burst over the city of Washington last Monday. Several persons were killed, and an immense amount of property destroyed. No definite news could be obtained as the wires were blown down and communication cut off.

William Ischinger died at Bishop last Friday after a short illness of typhoid fever. He was an exemplary young man; quiet and unassuming and well liked by all. He had been engaged in the butcher business for several years past and made many friends who deeply regret his untimely death.

The preliminary arrangements have been completed for a Miners' Home, or hospital, at Shasta. The scheme originated with Dr. Stevenson, so we understand, and will be conducted on the same plan as the railroad hospital at Sacramento. Every miner or millman who will contribute $1.00 per month will be entitled to attendance at this hospital.—*M. & S. Press.*

Bench Warrants Issued.

On Monday last Sheriff Gorman was telegraphed bench warrants for the arrest of Tom McDonough and the two Indian witnesses in the case of the People vs. Wampai Jiggers. Mr. Gorman appointed O. I. Mairs as Deputy Sheriff and the latter at once started for Saline Valley. He will take the parties through to Bakersfield. The reason for the non-attendance of the witnesses is that they are all in indigent circumstances and unable to provide ways and means for making the long journey. It is not likely that anything will be done with them under the circumstances. The entire expense of the trip will, of course, fall on Kern county. Mr. Mairs is expected to arrive here from Saline Valley tomorrow and will go right on to Bakersfield.

Reciprocity.

The regular annual Indian fandango has been in full blast at Georges Creek all the week. The entire Owens Valley branch of the Piute tribe was represented and the business of the year brought to a satisfactory conclusion; a sort of Indian Grand Lodge, as it were. Mr. Lo has a wonderful faculty for acquiring the ways and doings of his white brethren. One of them strolled into town the other day and said: "White man hab fair up Bishop Creek; Injun hab fandango Independence; pretty good. Injun he pay um four bit see um fair; white man he hab pay um four bit see um fandango; you bet; bueno." And accordingly they held their dance inside a big corral and the curiosity seekers had to come up with their four bits.

The Bridgeport *Chronicle-Union* of the 21st contains the following items:

R. S. Miner, our young attorney, has a suite of rooms with his physician, Dr. Page, on Market street, San Francisco, where he has been preparing to argue the great water suit of Kirman & Rickey vs. N. B. Hunewill, before the Supreme Court on Monday next. Mr. Miner expects to return to Bridgeport in December.

"The suit pending for the past two years between the Bulwer Con. and the Standard Con. has been compromised and the former will commence getting out the rich ore which was in dispute."

Last evening one of the pleasantest little parties that has been given in a long time took place at Mairs' Hall. There were between twenty-five and thirty couples present—just enough to fill the hall without crowding. A midnight supper was announced at the Norman House, and Thanksgiving turkey supper was spread. The band boys are to be congratulated upon the success which always attends their affairs.

The dramatic entertainment to be given at this place on the 5th of next month, for the benefit of the public school, promises to be a grand success. An immense audience will undoubtedly greet the young performers, and as the object is a worthy one, tickets have been placed as follows: Admission, 50 cents. Reserved seats, 75 cents.

Dr. R. L. St. John of Howland, Putnam county, Missouri, takes especial pleasure in recommending Chamberlain's Cough Remedy, because he knew it to be reliable. He has used it in his practice for several years, and says there is none better. It is especially valuable for colds and as a preventive and cure for croup. This most excellent medicine is for sale by

A. K. EUGLEY
Big Pine.

As a preventive and cure for croup, Chamberlain's Cough Remedy has no rival. It is, in fact, the only remedy that can always be depended upon and that is pleasant and safe to take. There is not the least danger in giving it to children, as it contains no injurious substance. For sale at 50 cents a bottle by

A. K. EUGLEY,
Big Pine.

NOTICE TO CREDITORS.

Estate of John Allen Hannah, deceased.

Notice is hereby given by the undersigned, William L. Hunter, Executor of the last Will and Testament of John Allen Hannah, deceased, to the Creditors of and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within ten months after the first publication of this notice to the said William L. Hunter, at the office of P. W. Forbes, in the town of Independence County of Inyo, State of California, the same being the place for the transaction of the business of the said estate, in the said County of Inyo, State of California.

W. L. HUNTER,
Executor of the last Will and Testament of John A. Hannah, deceased.

$3000 A YEAR! I undertake to briefly teach any fairly intelligent person of either sex, who can read and write, and who, after instruction, will work industriously, how to earn Three Thousand Dollars a Year in their own localities, wherever they live. I will also furnish the situation or employment, at which you can earn that amount. No money for the novice successful as above. Easily and quickly learned. I desire but one worker from each district or county. I have already taught and provided with employment a large number, who are making over $3000 a year each. It is NEW and SOLID. Full particulars FREE. Address at once, E. C. ALLEN, Box 420, AUGUSTA, MAINE.

A BIG BUSINESS.

The growth and present size of the great retail business of Weinstock, Lubin, & Co., Sacramento, shows on the face that it possesses *a distinct character* of its own. It has done much to introduce many important reforms in storekeeping, which have been widely copied. There are people who have never heard of the big establishment, but who, through its silent influence, are being served by local dealers better than they otherwise would be.

It has done more than any other ten stores to give the "One Price System" firm and substantial footing on the Pacific Coast.

It has shown people living in small towns that they can deal through the mails with as much security as if they bought in person.

It has, by constantly raising its own standard of qualities, had an influence in raising the standard everywhere. The average grade of goods kept upon the Coast grows better each year.

It has been prominent in bringing west as stylish and desirable goods as are kept by merchants in New York, Philadelphia, or Chicago. Indeed, the manufacturers who supply them supply it. The goods are the same; and the Sacramento prices, while never higher, are sometimes considerably less. This is explained by the fact that the cost of conducting business in large Eastern cities is far greater than in the Capital City, the extra expense of overland freight being but a comparatively small item.

It has made it possible for out-of-town people to enjoy quite as satisfactory shopping facilities as do those living in large cities.

There is no desire on the part of the firm to take any special credit for whatever influence for good the house may have exerted. They have sought simply to build up a business on fair and just principles; to buy and sell as low as they can; to deal as far as possible only in the very best goods; and neither to fear nor favor any one, but to treat every customer as they would their most favored friend.

Whatever of success has come, they attribute it to the faithful carrying out of these aims and principles.

A large illustrated catalogue, giving full information about goods and prices, how to order, etc., sent free to any address.

WEINSTOCK, LUBIN, & CO.,
400-412 K Street,
SACRAMENTO, CAL.
LARGEST GENERAL RETAIL HOUSE ON THE PACIFIC COAST.

The Tomato Season.

The season of the tomato is short, yet being essentially a plant of the tropics, it can not be ripened often in England, except under glass. As a hot house plant, however, it is widely used there, certain varieties developing special adaptation to these conditions. In the short but fervent summer in New England, on the contrary, it finds itself quite at home. Though the plant like many others of tropical origin is highly susceptible to injury from frost, the seeds are very hardy, sustaining no harm from remaining in the ground throughout winters.

If left to come up of themselves they do so freely from such accidental plantings of the previous season, and here in Massachusetts will begin to ripen fruit about the last of August, while plants which are started early in the hot bed or window box will begin nearly a month sooner. A large field of tomatoes in the vicinity of Boston commenced ripening fruit one summer about the 10th of July, at which time they brought twelve dollars per bushel in the market.—Boston Transcript.

Seeds Used for Ornaments.

The seed called Job's tears is used in Siam and by the Naga and other Assam tribes in the construction of earrings and other simple and elegant articles of personal adornment. Necklaces of these seeds are frequently worn, and baskets and other ornamental articles are occasionally decorated with them, especially those made in Nepal. The Angame Nagas construct elegant earrings in which a rosette of these seeds surrounds a greenish beetle wing. These grains seem to stand a good chance of coming into more general use in Europe in the construction of artificial flowers, laces, bugle trimmings and other such purposes for which glass beads are now used, and possibly also in Catholic countries for the manufacture of rosaries.—Chambers' Journal.

A Turkish Bank Note.

The bill is on imperial green paper, a color held sacred in Turkey, which the government alone is permitted to use. On the top and sides are the following words in Turkish, "To be paid to the bearer, without interest, twenty piasters." At the top of the note is the sultan's toghra, surrounding which is a quotation from the koran. Underneath are the words, "Twenty piasters, paper money, to be used in the place of gold at the Bank of Constantinople." At the base of the note is the seal of the mint, and on the back the seal of the minister of the treasury. The toghra is considered sacred, and is guarded by the three highest officials of the mint, whose sole duty is to watch it.—New York Advertiser.

A Big Bed of Coal Aglow.

There is a mountain of coal in Wild Horse valley, Wyoming, which has been burning for more than thirty years. It sends up dense volumes of smoke, and at times the gas from it is almost suffocating, even at a distance of fifty to seventy-five miles from the burning coal bed.—St. Louis Republic.

An author in a manual on horsemanship has succeeded in putting into print the peculiar cluck used in starting horses, which is made by thrusting the tongue against the roof of the mouth. He spells it "Klk."

Dr. George Turner states that a cat fed with the refuse food of some children sick with diphtheria also suffered severely with what seemed to be the same disease.

In 15 Minutes.

I suffered severely with face neuralgia, but in 15 minutes after application of ST. JACOBS OIL was asleep; have not been troubled with it since. No return since 1882.

F. B. ADAMS, Perry, Mo.

"ALL RIGHT!

ST. JACOBS OIL DID IT."

"German Syrup"

Croup. We have selected two or three lines from letters freshly received from parents who have given German Syrup to their children in the emergencies of Croup. You will credit these, because they come from good, substantial people, happy in finding what so many families lack—a medicine containing no evil drug, which mother can administer with confidence to the little ones in their most critical hours, safe and sure that it will carry them through.

ED. L. WILLITS, of Alma, Neb. I give it to my children when troubled with Croup and never saw any preparation act like it. It is simply miraculous.

MRS. JAS. W. KIRK, Daughters' College, Harrodsburg, Ky. I have depended upon it in attacks of Croup with my little daughter, and find it an invaluable remedy.

Fully one-half of our customers are mothers who use Boschee's German Syrup among their children. A medicine to be successful with the little folks must be a treatment for the sudden and terrible foes of childhood, whooping cough, croup, diphtheria and the dangerous inflammations of delicate throats and lungs. ®

CONTENT VS. DISCONTENT.

One, satisfied with what must be her lot—
"Twas not a corner lot—serenely meant
Never to wander from her humble cot,
Made beautiful by wise and sweet content.

And one, dissatisfied with all he had,
Roved from his place into the world's mad whirl.
What did he find? Well, it was not so bad—
The fellow found that cottage and that girl.
—"A. W. R." in The Century.

THE LADY'S MAID'S STORY

"Yes, miss, certainly, I lived with Mrs. Birch—Miss Grigg that was before she married Mr. Birch. I knew all about that affair. It was very singular indeed—very. I'm not sure that I ought to mention it, for if a lady's maid can't hold her tongue she can't find good places. Dear me, I'm no talker. I'm as mum as a mouse. Bushels of pearl powder and quarts of rouge have I applied with my own hands, and never so much as hinted at. As for cotton, bless your heart I've never breathed about it, and I did live with a lady once that took arsenic regularly for her complexion. That's no secret, for she took too much one day, by accident, and died.

"There was an inquest and it all came out. It's well it did, for suspicion pointed to her husband. Somehow, it always seems to strike a jury that a husband is the likeliest person to wish a wife out of the way. But this isn't anything about paint; Miss Grigg, being on the stage, made no secret of that. She played queens and such, miss. I've often had tickets given me and gone with my young man to see her act. And when she was haughty and curled her nose like, miss, and looked at other folks over her shoulder, and talked away down in her throat like a pigeon gurgling, she was splendid, miss. It made me think how nice it would be to be a queen and to take airs over everybody.

"Well, Miss Grigg was engaged to be married. Mr. Birch had fallen in love with her when she was playing Hamlet's ma. Perhaps you have seen the play, miss? The young man objects to his ma getting married the second time, so I seemed to make out, and acted most impertinent, giving sass to his ma and his step-pa, and carrying on awful. And there was a poor young lady quite out of her mind that afterward got drowned.

"Well, she was playing Hamlet's ma, and Mr. Birch fell in love with her and sent her a letter, and called and made an offer, all in no time. She accepted him, of course, and the preparations for the wedding began. I don't think any lady ever had so many dresses before. Silks and satins, and velvets and laces. Dear, dear; Mme. ——'s whole establishment was hard at work for a month, and if I'd had twenty fingers, instead of only ten, I'd have had use for them all.

"At last everything was finished. The trunks were packed, fifteen of 'em, miss, and fourteen were to go on that afternoon, and one—the one with the wedding and traveling dresses—was, of course, to be left and go with the bride when she started next day. She was to be married at 10 o'clock in church and then drive home, have a splendid breakfast, change her dress and catch the 3 o'clock train. Of course I saw to the trunks, and I was very careful, but just when I was needed most, just as the trunks were going down stairs, Miss Grigg called me.

"Miss Grigg was a lady who didn't like to wait. I went to her at once, miss, as was my duty, and I said to Bridget Duster, the chambermaid:

"'Bridget, watch that black trunk and see that the men don't carry it off!'

"Bridget understood with her elbows, of course, miss, and after I had been to the land's end for two yards of blue ribbon of exactly such a shade as she wanted, and got back, I found that she had sent off the black trunk first of all, and was very proud of having been so careful. The trunks were all miles away by that time. There was nothing for it but to tell Miss Grigg. She flew at me, miss. I don't blame her for being angry. I would forgive her in such a case. She flew at me violent, miss; and then, miss, she had spasms. She beat the sofa, she tore her hair, she screeched, and me all the while saying:

"'Remember your eyes, miss. Think how you'll look. Your nose is swelling dreadful, miss.'

"Finally she came to and bathed her face. And says she:

"'Flora, what—shall—I do?'

"'I don't know, miss,' said I, 'unless you put off the wedding until you telegraph for the trunk.'

"'No,' said she, 'that unlucky; besides, one never knows. None ain't to be depended on.'

"'You might borrow a dress,' said I.

"'As if I'd be married in one that didn't fit,' said she. 'Stop, don't speak a word. I've an idea.'

"She sat with one finger on her lips for a while. Then she said:

"'My embroidered dressing gown. The white one! That's here?'

"'In the bureau, miss,' said I.

"'Very well,' said she. 'I'll be married in that. Telegraph for the trunk, Flora.'

"'The white dressing gown, miss?' said I, nearly astonished out of my senses.

"'Yes,' said she, 'the white dressing gown, goose, you don't think I'm going to be married in church in that. I won't put off the wedding, and I won't stand up before a crowd in anything but my white satin dress! But I'll be married at the appointed hour, for all that. So telegraph for my trunk and come back soon.'

"When I came back I found Miss Grigg in bed and the doctor sent for. He was puzzled, I could see that. He couldn't tell what was the matter, and Miss Grigg was too faint to speak. He questioned me. I said she had been very much agitated. He prescribed something and went off, bidding me send for him if she seemed worse. The evening paper published the report that Miss Grigg was dangerously ill, and Mr. Birch came to the hotel in a terrible fright, as pale as a sheet, to ask how she was. I took him down 'Her love, and she was very ill.'

"Then Miss Grigg said to the ladies who had come in: 'Leave me with my faithful Flora,' and we were left alone. I can't say that I was surprised when she sat up in bed and said briskly;

"'Lock the door, Flora. I'm sick of lying on my back. I've taken them in, haven't I? You see what I am about now?'

"'Exactly, miss,' said I; 'to be too ill to be married when the time comes.'

"'No,' said she; 'to be ill enough to be married in the white dressing gown. I'm going to be married on my dying bed, Flora.'

"I gave a screech and she laughed, and then she made a supper of sardines and biscuits and wine, and she threw the medicine out of the window. Early next day the doctor came. I answered his question as to what sort of night his patient had passed by saying she had been 'much the same.' And then I took a little note she had written to Mr. Birch.

"I knew what was in it. She told him 'that rather than leave the world without keeping her vow to him she would be married on her dying bed.' I powdered her up well, miss, and I dressed her in the embroidered dressing gown, with tube roses at the throat. I pulled down the green shades and darkened the room. She fixed the pillows to prop herself up with, and then skipped into bed.

"'Give me my pearl bracelets,' she said, 'and the handsomest of those handkerchiefs, and all my rings; and Flora, mind you must sob all through the ceremony, I'm going to be calm.'

"We hadn't five minutes more, but just as the first knock came to the door she whispered:

"'Oh, dear! if I only could have slow music. Couldn't you catch that "Traviata" organ, Flora, and get him to play for half an hour outside the window? He's always on the corner. Flora, I'll leave you something handsome if you do.'

"I did it, short as the time was. I caught that man and he ground out his quarter's worth.

"The clergyman was a very nice, neat, near sighted old gentleman. Mr. Birch was the dreadfulest sight—pale as a ghost and shaking from head to foot. The groomsman looked dreadfully sorry; the four or five intimate friends looked as though they were at a funeral; and to see her, with her calm smile and powdered face, one hand against her heart, the other in his—I was glad I'd been told to sob; I had to do something. And so they were married.

"'I feel,' said Miss Grigg, slowly, 'that this, perhaps the last moment of my life, is very sweet. To die thus, with my hand in yours—ah! Dear friend, adieu. Flora, my faithful maid, take this ring.' I saw her pick out the cheapest; but no matter. 'Remember me by it. Now—leave us.'

"Then everybody kissed her and went out of the room sobbing.

"In a moment more there was a scream; Mr Birch had fainted away. It took an hour to bring him to.

"The reporter of the evening paper was waiting outside for the news. It was published all over that night, but the next afternoon the traveling dress came back in the black trunk.

"Yes, miss, of course—Miss Grigg—I mean to say Mrs. Birch—recovered at once. And that's the whole story. I'm the only one that knows it, and I wouldn't mention it to any one but you, ma'am."—New York News.

Advice to Young Writers.

Don't give up your occupation, from which you derive regular income, until you are sure that were you to give your whole time to writing you could produce enough articles, and articles of the proper kind and quality, to bring to bring to you cash returns large enough to supply such wants as you believe must be filled. Until that time comes—and when it does come you can tell much better than I—keep on writing, reading and thinking. Accumulate all the ideas you can. Accumulate all the articles you cannot sell, and accumulate all the customers you can. Do your writing early in the morning whenever possible, and always keep your eyes on the future.

This last is very important in one particular that I am afraid young writers too often neglect. You must expect what seems curt and often harsh treatment from editors. Take this always as a matter of course, as one of the crosses of the profession, and never lose your temper. Do not allow your sensitiveness to put you on bad terms with any editor. It is like flying in the face of Providence. You may forget what you considered an insult at his hands, but he never forgets if you resent it, and if, years after, you offer him an article, it will most likely be returned without regard to its merits. Never argue with a bull, a mad dog or an editor.—C. M. Hammond in The Writer.

"Courts of Conciliation."

"For years there has existed in Denmark," said a well known lawyer in the Hoffman house the other day, "what are called fonligelsis kommission, or 'courts of conciliation,' which have worked to a charm and are well worthy of imitation everywhere, and especially in this country, where all our courts are crowded to repletion with business. These are not courts of arbitration, but are conducted on this plan: There is one judge and two assistants, none of whom are professionals, but are taken from among citizens the same as we take jurors, by consent of all parties. Every case to be acted on must be brought before these courts of conciliation before it can be taken into a regular court of law. The plaintiff comes without counsel, none being allowed on either side, and states his case plainly, and the defendant is summoned to appear on a certain day, either in person or by proxy, otherwise he is fined if the case has to be taken to a law court. Then each party is heard and questioned by the judge, who tells them of the legal rights and duties of each and gives advice or suggestions. The parties are not obliged to take this, but if they do, and agree to settle, the judgment is without appeal and final.—New York Evening Sun.

A Pretty French Girl.

One of the prettiest girls I saw in France was selling flowers on the grand balcony. Her beauty won her many buyers as well as admirers. Her hair was as dark as the raven's wing, her eyes flashed and softened by turns, her features were as clean as from a sculptor's chisel, her cheeks red roses. However she might be addressed she answered with a smile, a melodious laugh of pleasure following if she were pleased, a frown clouding her face but adding to her beauty if she would reprove. But she did not lose the evenness of her temper. "I do so want to sell all ze genteelmen flowers," she would say in broken English, with a delicious French accent that stole right through the hearts and into the pocketbooks of some American gentlemen, I knew, and to whom she often turned during the evening, "but I want them to buy for my own goot, not mine. I love ze flowers. They are sweet flowers, lovely flowers," and her face ran red with blushes like her roses. I gave up thinking of her when I heard next morning that she had a husband whom she regularly whipped twice a day.—D. A. Orr in Chambersburg Spirit.

Clubs of All Sorts.

There are clubs of all sorts and character in New York. The tall men have a club called the Titans. The men who wish to show themselves superior to superstition have formed themselves into a club of thirteen. The southerners club together and so do the New Englanders, the fat men and the Scotchmen. The athletes and the artists all meet together in associations for their own encouragement and improvement. It is even reported from Paris that a near sighted club has been formed there.—N. Y. World.

The Worst Yet.

"Jones, I hear you said I was carousing around town last night. Now you've got to contradict that statement. I left the club just after 12; stopped into the oyster saloon where I met you, ate half a dozen raws and went directly home. Now you've"——

Jones—That's what I said, and now you own up to it.

Brown—I'd like to know how?

Jones—You acknowledge that you were a midnight raw oysterer, don't you? That's what I said.—Judge.

Appraised.

First Passenger (standing in car)—I'm going to make that man move up and give me half of his seat.

Second Passenger—Go slow; that's old Specie. Do you know what that man is worth?

First Passenger—If pork is eight cents a pound, live weight, I should think he ought to be worth $16 easy enough.—Exchange.

Fond of Music.

Fond Mamma—Oh, uncle, you should see our darling baby when I play the piano. He listens by the hour, and when I cease playing the nurse has to take him away, he cries so awfully. Cynical Uncle—Perhaps—aw—my dear, he—aw—weeps for—aw—joy!

How to Use a Meerschaum Pipe.

I am an incessant smoker, as all my friends know. I get tired of cigars occasionally. Not long since I concluded to try the pipe, and as I had always heard so much about a meerschaum I bought one. When I was taking it away the salesman told me not to smoke it too much or I would burn the wax and ruin the thing. I smoked it very little for the first few weeks and saw no indications that the thing was ever going to change. I went into the place where I bought it and told the fellow who had sold it to me about my progress, or lack of progress. He said, after I had told him how much I had smoked, that I had not smoked it enough.

I smoked it for several weeks after and saw no perceptible change. I again went in and made a mechanical complaint. The young man said he guessed I kept it in the case too much, and that he had forgotten to warn me against that. He said it kept the pipe too warm to keep it in the case too much. Soon after I went into the place again. The man looked at it, and said that he guessed I handled it too much; that I ought not to take it out of the case too frequently, as it made splotches on it to handle it too often. Then we had a talk all around on meerschaum pipes. I found out that the meerschaum is a great pipe, and will give satisfaction if you observe the following rules:

Don't smoke it too much.
Don't smoke it too little.
Don't take it out of the case too often.
Don't leave it in the case too much.
Don't lay it down to cool off after you have smoked it, for in that case it will crack.
Don't carry it in your pocket, for then it will not cool fast enough.

I have returned to the cigar.—Chicago Tribune.

The Mustard Crime.

Nature in her abundant, ever doting thoughtfulness has so provided that there grows a-forest, a-fell and a-field a certain branching plant with dainty yellow blossoms, from the rich fruitage of which is wrought a condiment, piquant, permeating and fascinating to the good liver. It is this which brings sometimes the epicurean tear, beside which that dropped by some peri at the gate of Paradise is but as phosphorus is to flame. The name of this fair plant is mustard, and its blessing is prepared or marred in different ways.

Enter the restaurant, order the pink boiled ham or red roast beef and call for mustard, and note what comes to you. Pitiful it is to say, but three times out of four the more or less pampered menial puts beside your plate a lilliputian vessel containing a brownish substance appearing to the taste a combination of burnt flour and doubtful vinegar. You raise your voice in earnest protest, and are informed that you have been served with genuine French or German mustard, as the case may be, and that there is none other in the house. You make the best of a lunching situation which may not be improved and try to use the lifeless stuff and fail, and no white stone may mark the memory of the stomach's feast. Your palate has been to the play, and the performance has been found lacking.

There is a mustard, the pure, golden powder of the fiery seed, which is alike an appetizer and an inspiration. It is the very soul, the other half, the very doppel ganger of certain things we eat. It is known vulgarly as English mustard, and is the condiment of heroes and of patriots.—Chicago Tribune.

A Mother Bird's Trial.

While the east side of Broadway, just below Fulton street, was filled with people the other forenoon a pretty little incident caused a blockade of pedestrians.

A mother sparrow, flying over the street with one of her young in her bill, dropped the wee bird in the thoroughfare near the curb and flew frightened to a high window seat.

An alert messenger boy picked up the feathered mite, and while he held it kindly in his hand the mother bird chirped in distress.

"Take the bird into the churchyard," said a sensible man in the throng, pointing to St. Paul's. His suggestion was acted upon by the boy, who cuddled the bird in his palms and scooted, followed by a dozen other urchins.

When the young sparrow was laid in the grass of the churchyard the mother took wing from her perch. Her flight was watched with interest and satisfaction, for she descended to the spot where her young was nestled.—New York Herald.

A Yankee "Swapper."

A New London expressman is about as good a specimen of Connecticut Yankee as has recently come to light. He recently ran across a useless old harness which he didn't want, and so he traded it with a colored man for a watch. He then sold the watch to a man for $9.50, to be paid in installments. He got four dollars of it, when the man went "broke," couldn't pay any more and gave up the watch. The conditions were that if he couldn't pay the full amount he would forfeit what was already paid, so the expressman had the watch and the four dollars. In a little while a man came along who owned a sulky that he didn't want, and who was glad to trade it off for the watch. The expressman accommodated him, and considers it the best bargain of the lot. At this rate of progress it won't be long before that sulky will be worked by easy stages into a house and lot.—New London (Conn.) Telegraph.

Art in a Bank.

It is not often that an art gallery is found in a bank. Persons who visit the Lincoln National bank in Forty-second street, however, will see a number of fine oil paintings—some of them quite large—hanging upon the walls. They are the works of Albert Bierstadt, some twenty in number, which were deposited with the bank a year or so ago for safe keeping. A full length oil portrait of Abraham Lincoln, by Marshall, has been added to this art collection. The Hon. Thomas L. James, the president of the bank, has an eye for the beautiful as well as a genius for finance, and he wants his patrons to enjoy with him all of the good things that he can get hold of.—New York Times.

Bad Temper Largely Involuntary.

Many people consider that "bad temper" is entirely voluntary on the part of the person who displays it. As a matter of fact, it is often to a very great extent involuntary, and no one is more angry at it than the bad tempered person himself. Of course every one, whether he is born with a bad temper or has acquired one from habit, or has been visited with one as the result of disease or injury, should at least try to control it. But his friends should also bear in mind that temper may be, and often is, an affliction to be sympathized with, not an offense to be punished.—New York Ledger.

Friday Superstitions.

Friday, called of old "Black Friday," has been the day of ill omen since the Christ was crucified thereon. Criminals are always hung on that day. Friday night dreams are looked for to come true; and many really sensible people will not begin a journey, a piece of work, or any undertaking whatsoever on Friday, fearing some disastrous result on account of its luckless repute.—Detroit Free Press.

A Market Naturalist.

Fair Customer—Those last oysters you sold me tasted fishy.

Dealer—I'm very sorry, mum; but fact is, mum, oysters are very sociable creatures, mum, and spends most of their time gallivantin' around with fishes.—Good News.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Small Boy—Papa, what makes you so bald? Papa—Oh, that's because my mother used to pat me so much on the head for being a good boy.

DO NOT DISTRESS YOURSELF.

Sold in every drug and medicine store, either plain or sugar coated.

"Here lies Lovejoy, our precious boy,
Whose age was one and seven;
If he'd not pricked the mule that kicked
He'd not be now in heaven.

SERIOUS DANGER

Threatens every man, woman or child living in a region of country where fever and ague is prevalent, since the germs of malarial disease are inhaled from the air and are swallowed from the water of such a region. Medicinal safeguard is absolutely necessary to nullify this danger. As a means of fortifying and acclimating the system so as to be able to resist the malarial poison, Hostetter's Stomach Bitters is incomparably the best and the most popular. Irregularities of the stomach, liver and bowels encourage malaria; but these are speedily rectified by the Bitters. The functions of digestion and secretion are assisted by its use, and a vigorous as well as regular condition of the system promoted by it. Constitution and physique are thus defended against the inroads of malaria by this matchless preventive, which is also a certain and thorough remedy in the worst cases of intermittent and remittent fevers.

The meanest things an angry man says are usually those he mumbles to himself just as he is going out of the door.

CATARRH CAN'T BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you have to take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is no quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonic known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials free.

MARRIED IN FRANCE.

The Gower-Nordica Romance and its Sad End.

MME. NORDICA'S SUCCESS AS A SINGER.

Gower's Phenomenal Success in Telephony.—His Disappearance.

Lilian Norton, the famous singer, granddaughter of Campmeeting John Allen, was born in Farmington, Me. Her father, Edwin Norton, was a prosperous farmer in that town. Both her father's and mother's families were excellent singers. Lilian attended the Conservatory of Music in Boston to receive a musical education. The excellence of her voice introduced her into the concerts of Gilmore, where she took a prominent part. Thus a way was opened for her to visit Europe and a more complete musical education.

Accompanied by her mother she went to Italy, and was placed under the discipline of the most accomplished musical teachers of Europe. Having finished her course of study and become notable for her power of song, she received an invitation with liberal salary to sing in the Royal opera at St. Petersburg. She went with her mother to Russia.

The manager of the Grand opera of Paris was so pleased with her singing that he gave her an invitation to become the prima donna of the highest seat of song, and by liberal pecuniary rewards sought to obtain her release from her St. Petersburg engagement, but the Russians preferred her voice to the money offered. After she had completed her engagement in the north, she accepted the overtures made her in Paris and made an engagement to sing in the Grand opera.

THE MARRIAGE.

During her residence in Italy her name was changed to Lilia Nordica to suit the Italian style of pronounciation. It was during her appearance as the great American singer in the Grand opera that she became acquainted with her second cousin, Frederick Allen Gower, grandnephew of Campmeeting John Allen. He said: "It was not a case of love at first sight, for it was full seven minutes before I became enchanted with the lovely singer."

The history of this young man is fully as romantic as is the success of Mme. Nordica. He was the son of the Rev. H. B. Gower, a Baptist clergyman, who died in Farmington, Me., leaving a widow and three sons, the eldest 10 and the youngest 6 years old. As the family were left in destitute circumstances, Frederick, the second son, was kindly received and freely supported for a year at the Abbott family school. He had given proof of his activity as an infant by leaping from his nurse's arms, before he was a month old, through an open window without breaking his neck.

As a scholar he was more noted for vivacity than quiet study.

After a year's sojourn at the family school Frederick and his brothers, by the energy and ability of their mother, were gathered into a family home in Providence, R. I. The two elder brothers were fitted by their mother to enter Brown university, and were supported by her at college till they graduated.

George, the eldest brother, became a lawyer, and has served by repeated elections as clerk of the Rhode Island assembly.

Frederick entered upon the profession of journalism, and became city editor of The Providence Journal. He wrote to Professor Bell, the inventor of the telephone, to deliver a lecture at Providence on the new invention. By invitation young Gower went to Boston to assist Bell in the preparation of his lecture.

MR. GOWER'S SUCCESS AND END.

His active and ingenious intellect became intensely interested in the new invention. He contrived to simplify the machinery and to increase the intensity of the magnetic power, using one instead of two batteries, and introducing circular instead of horseshoe magnets, with other devices now used in the Gower-Bell telephone.

Having obtained patents and established the Bell Telephone company, Gower went to France and formed a telephone company there, of which he was president, with a salary of $25,000. He also obtained patents in Germany and England. In England a company was formed, but the English government took the telephone, as they had the telegraph, as a part of their postoffice service, purchasing of the company a million dollars' worth of telephones for their use.

After a brief acquaintance these two American celebrities were united in marriage, and Mme. Nordica was released from her engagement at the Grand opera. She came with her husband to America.

Their married life was not a happy one. For sufficient cause Mme. Nordica sued for a separate maintenance, but never for a divorce. While the suit was in progress he left suddenly for Paris, where he had been deeply engaged studying out an invention to employ magnetism in the control of balloons. This he considered the greatest invention of the age, both for military and commercial purposes.

To test the efficiency of some of his plans he undertook in a balloon, alone, to cross the Straits of Dover. Since his disappearance from the view of the spectators who witnessed his ascension he has never been seen.—Lewiston Journal.

Full of Enterprise.

A boy with a mowing machine called at a house on Second avenue the other day, and asked the woman if she wanted the grass cut.

"Mercy, no!" she replied. "No one cuts grass at this season."

"I'll contract for next spring," continued the boy.

"But—I may be dead by that time."

"Then I'll contract to see that your grave is kept green!"—Detroit Free Press.

Mrs. Wakeman and Her Work.

The Society for Political Study was formed about five years ago, its object being the study of municipal government. After the first year a course of historical study was undertaken by the advice of the committee, but it was unsuccessful, and when Mrs. T. B. Wakeman became its president the current topics of the day were taken up, and the society has flourished ever since. It holds weekly meetings at the house of one of its members, Mrs. Johnston, on Stuyvesant square, and after the reading of a paper a discussion follows. Mrs. Wakeman is eminently fitted to be the president of this wide awake society, for she is a strong advocate of women's clubs and keeps up with the newest ideas on serious questions. Formerly a member of Sorosis, Mrs. Wakeman resigned some years ago, finding her household duties and family cares required her exclusive attention, but now that her children are grown she has resumed her interest in various public questions, and besides being president of the Society for Political Study she is a member of the Woman's Suffrage league and the Ladies' Health Protective association, and, with other energetic and philanthropic women, is trying to form a bureau of justice for the purpose of having women present at the trial of women in court.

The bureau when fully organized will hire respectable women to be present on these occasions, so that no woman will be tried alone without one sympathizing woman by her side. Mrs. Wakeman is a member of the old Ludlum family that has lived on the same land at Oyster Bay, L. I., for about 200 years. Since her marriage she has lived in this city, part of the time in Harlem, but she now lives in a cozy, homelike house in West Nineteenth street. She has three children—a married son and two daughters, one of whom is a clever artist. Mr. T. B. Wakeman is a brilliant lawyer, and takes an active interest in the scientific temperance question, and is a member of the Nineteenth Century club.

Mrs. Wakeman has a sweet, bright face, with deep earnest eyes and dark hair that is just beginning to turn gray. She is an earnest advocate of clubs for women, and says that she wishes every woman might belong to at least one. They give woman something to think about besides mere material necessities, enlarging their minds and making them more companionable to their husbands and brothers.—New York World.

Gloves and Veils.

Will gloves go back to the Renaissance for styles, as the cloak has done? You know they wore these gloves all covered with embroideries and precious stones; the cuff, widening as it reached the arm, was an incrustation of gold and silver and precious settings. It was a heavy gauntlet, not a glove. It is not likely that these will take, as we say in fashion parlance. Women will have the good taste to cling to the plain kid glove, which shows the perfect shape of the hand. The buttoned glove is now in as much favor as the musquetaire. It is owing to the very long sleeves worn with every gown, except with full dress.

The tan colors are worn less and the light shades more. Did you not often wonder where the kid skins come from to make all the kid gloves in the world? When I see the mountains of gloves sold at the Louvre and the Bon Marche in the bargain season I wonder if there isn't a way of manufacturing skins, or if there are not kids which, like sheep who are sheared every year, can be skinned and have a skin grow on again for next year's flaying.

Veils are no longer worn down to the tip of the nose, but all over the face. The kinds of tulles and nets sold for veiling are innumerable. The beauty spot veiling is the most becoming; not the spots, but the netting itself. Everybody wears it here. Then there is fancy netting, studded with steel, gold and silver beading and espangles. Some of them are as thick as the old fashioned Chantilly veil which our grandmothers wore. French women have never taken kindly to the white veil. They are one of the indications by which we single out a foreign woman. Nor do they incase the front hair with an illusion to keep it down or to keep the ringlets from uncurling. That, I think, is an American fashion.—Paris Cor. Brooklyn Eagle.

Columbia College Certificates for Women.

Under the direction of the school of arts of Columbia college examinations will be held at Barnard college from June 1 to 6. These examinations will bear the same relation to Columbia and Barnard colleges which the Harvard university examinations for women bear to Harvard college and the "Harvard annex." They will be identical with the examinations for admission to the freshmen classes of Columbia and Barnard colleges, and will be held at the same time and place and on the same terms of notification.

The certificates granted will be of two kinds. To a candidate who passes satisfactory examinations in at least three subjects a certificate will be given, signed by the dean of the school of arts. To a candidate who passes satisfactorily the whole examination a certificate will be given, signed by the president of Columbia college.

It is believed that these examinations will be of great value and assistance to the schools for girls in New York and its neighborhood, as a means of proving the thorough work done in them by both the teachers and pupils. That the faculty of Columbia college have decided to offer them has been due chiefly to the efforts and expressed wishes of the teachers in several of the larger schools for girls in New York city.—New York Commercial Advertiser.

The late Mary Cash Cheairs, of Bolivar, Tenn., predicted two years ago that she would die on her ninety-fourth birthday, and she did so. She was a remarkble woman in many ways, being able to play the harp and sing ballads almost to the day of her death, and to quote long passages from the Greek and Roman poets, with whose writings she was quite familiar.

HE CAUGHT ONE OF THEM.

A Boy's Adventure With Three Burglars.

THE THIEVES INDULGE IN A FREE FIGHT.

The Boy's Employer Kicks Because he let two Escape.

At about the age of 15 I went to clerk in a country store in Indiana, and among my other duties was that of sleeping in the store nights as a protector. It was a great big barn of a store, standing at a crossroads, four miles from a town, and the owner lived about forty rods away. The idea of my being any real value as a protector was absurd, but the understanding was that I was to sleep there, and I did. I had a room upstairs, one corner being partitioned off, and I never got into that bed that I did not cover up my head and shake and shiver with fear until sleep got the better of me.

One Saturday night, after several hundred dollars had been paid in, the proprietor hid the roll in a tea chest, locked up the big safe and went home, leaving me to close up. When this had been done I got to bed, but about midnight was awakened by some noise down stairs. After listening for awhile I became sure that some one was in the store, and I crept out of bed under the belief that the big, dark floor room would be safer for me in case any one came upstairs. There was a hatch or opening in the center of the room, and I crept softly to this and looked down upon the heads of three men working at the safe. They could not have known that I slept in the store, as no one had been up, and as they were taking matters as cool as you please. It was an old fashioned safe, and they had stolen tools from a blacksmith in town to open it.

"How much do you figger on?" asked one.

"Four hundred," replied another.

"What's that apiece?" asked the third.

All began to figure, and after ten minutes they made it out that each would get $250. This tickled them and they began work. It was wonderful how that old safe held out. For three long hours they hammered and banged and pounded, taking turns as they tired out, and about 3 o'clock in the morning they got in. They almost had a fight to see who should first pull out the money, and when it was discovered that an old sixpence, with crossed marks on it, and a $1 bill on a busted state bank constituted all the wealth behind the iron door there was a moment of awful suspense. Then they began at each other, and each robber, his father, mother, brothers and sisters had to take it. They called each other liars, thieves, swindlers, barn burners and everything else they could think of, and finally a three cornered fight began. In the struggle one of them was knocked unconscious, and the other two left him and skipped out. It was getting daylight now, and I went down, found the fellow quiet, and tied his hands and feet with a clothes line. I had just concluded when he opened his eyes, realized the situation, and worked a sweet smile to his face as he said:

"Say, bub, I'm awful glad to see you. I'm the Rev. Stephen Baker, of Lafayette, you know, and have wandered out here in my sleep, and got into this place somehow. I often walk in my sleep, but hardly ever go as far as this. My! but what will my congregation say if I'm not back on time. Just throw the ropes off, bub, and I'll be going as fast as I can. The Lord and me love little boys. Can't you come to my Sunday school?"

But I ran and told the merchant, and the "Rev." was ultimately landed in state prison. As a reward for my efforts the owner of the store said to me, as he surveyed the ruined safe:

"Look at that wreck, and it's all your fault! What in thunder do I pay you $2 a month for, except to keep robbers off, and here you've went and let two of 'em git away!"—New York Sun.

Blood Oranges.

The blood orange is a mere variety of the sweet orange, obtained by cultivation, and appears first to have been raised by the Spanish gardeners in the Philippine Islands, from the capital of which (Manila) it, together with the well known cigars, formed at one time one of the chief articles of export. On its first appearance in Europe it excited a considerable sensation, and in the last century very high prices were demanded for the tree which bore the wonderful fruit. None, however, now come to us from Manila—our supply being derived almost entirely from Malta, where great pains and attention are bestowed upon their cultivation. It was for a long time supposed, and indeed the idea is not yet quite extinct, that blood oranges were produced by the grafting of the orange with the pomegranate, but there is not the slightest foundation for this belief.—Chambers' Journal.

Rare Fortitude in a Dog.

Many of the sportsmen of Wilmington will perhaps remember Sailor, the fine pointer dog of Mr. J. A. Brown, of Chadbourn. He was an extraordinary hunter and retriever, with almost human tact, and his owner valued him at several hundred dollars. A few days ago this fine dog was run over by the train at Chadbourn, and his left fore leg was crushed off, leaving a piece of the bone protruding.

Mr. Brown hated to kill his valuable and faithful dog, so he got Dr. A. McKinnon to amputate the crushed member. When the operation was performed Sailor obeyed the command to lie down, and never even gave a whimper when the work was done. The poor animal's muscles were contracted with pain, but with a few sympathetic caresses from his master he lay perfectly still until the amputation was performed.—Wilmington Messenger.

Too Good to Sell.

In his life of Horace Greeley, James Parton tells of an old newsdealer who could not be persuaded to sell the last copy of The Tribune remaining on his stand until he had had time to read it. A similar measure of independence appears to lie in the character of the Italian who trundles his fruit truck to the curb in front of The Sun building every night. For a week or two he has been selling the California imitation of Tokay grapes, and his boxes are emptied very soon after dark. The other evening three customers stood at the curb waiting their turn. One asked for half a pound, and the Italian snipped a cluster in two and placed it in a brown paper horn which he rolled deftly over his hand.

The second customer also took a half pound and got the second half of the cluster. That cleared the cart—save for one luscious, heavy cluster lying against the back rail. It was perfect in form, richly ripe, and untouched by decay on even a single grape. The third customer reached over and picked it up. He was about to say "How much?" when the Italian angrily exclaimed:

"What are you doing with that? Put it down!"

As the customer was not speedy in obeying the vender seized his arm and took the cluster away, after which he laid it gently upon a piece of brown paper.

"But I want to buy it," protested the customer, feeling for his silver.

"You can't do it," said the Italian bluntly. "Think I no want any grapes? That's for me." And he pushed his truck away from the curb and started down Park row toward Mulberry street.—New York Sun.

Queer Seed from a Crane's Craw.

A truly wonderful plant is at the Allegheny conservatory. No one knows to what class it belongs or anything about it. It is the subject of much speculation among botanists, and they anxiously await the development of a bud that is forming. Then, they say, they can place the plant. The botanists have a suspicion that the plant is a tropical one, and Superintendent Hamilton is treating it on that supposition.

The history of the plant so far as known is a unique one. During the summer one of a party of gunners brought down a crane. It was a beautiful specimen, and the taxidermist of the party set to work to mount it. In the bird's craw were found several seed. With a view to learning if the seed was killed by the bird eating it they were placed in water. In a few days the seeds sprouted. They were planted in loam and kept in a warm room. Edward V. McCandless took charge of it. The plant was an object of interest to Mr. McCandless and his botanist friends, and its development was closely watched. Last week it was transferred to the conservatory. The leaves are long and broad and heavy, not unlike a species of palm.—Pittsburg Chronicle-Telegraph.

Dangerous Bugs.

I have noticed with some surprise the number of people who have been bitten recently by spiders, and the case of the death of a girl in Jersey City from this cause is fresh in mind. Within a week I have met three acquaintances suffering, as they told me, from spider bites, and one of them had a hand so badly inflamed that he was afterward obliged to have it lanced. In this connection a housekeeper has shown me two specimens of "thousand legged" bugs that were found in his house.

They were each over an inch in length and had twelve legs on a side and two long feelers. The body and feelers were striped, zebra like, in black and white. I suppose they will be given to some entomologist for examination, and while these particular varieties may not be closely enough related to centipedes to be poisonous they are at least unpleasant companions for a lady to find running about the house, and make her think she has seen a centipede or tarantula.—New York Star.

The Ballot Law Helps the Printer.

One of the most appreciable effects of the new Australian election law is the remarkable boom it has given the job printing business. Never before in the history of elections have the printers been called upon for such vast quantities and varieties of campaign cards and campaign literature generally. Under the new system the personal canvass is the most likely to tell, and hence the use for cards of all dimensions. The confusion existing as to boundary lines of wards and districts has been of benefit to the printer in supplying cards with maps on the back, and best of all is the rage among the candidates to have their portraits printed on their cards.—St. Louis Globe-Democrat.

A Joke Saves a Life.

George Busch, of Newark, N. J., was overcome by coal gas a few nights ago while in the cellar attending to a furnace. Two friends who called at the house for him the next morning could not gain admittance. Thinking that he had overslept himself they concluded to get in the back way and play a joke upon him. They opened a cellar window and discovered Busch lying in his night clothes on the floor. He was resuscitated with difficulty.—Philadelphia Ledger.

Value of Cigar Ends.

A man called Auguste, surname unknown, has just died in Paris, leaving behind him the respectable sum of 100,000f., or £4,000, the whole of which comfortable peculium would appear to have been amassed from the profits earned by picking up cigar ends in the streets of the French metropolis.—London Telegraph.

The Handy Man.

Wife—That pane of glass has been out all summer, and now a freezing cold day has come and we need it in. I've told you forty times to send a man here to fix it. Why in the world haven't you done it?

Husband—Because I can fix it myself.—Good News.

WAS IT PROVIDENCE?

How a Railroad Accident was Averted.

THE MYSTERIOUS RINGING OF A BELL.

A Few Feet More and 150 Passengers Would be Dashed to Death.

A dozen railroad engineers and conductors met by chance the other day and an old gray haired veteran of the cab told a story. He had been an engineer with a big reputation as a "runner" in the days gone by, but on account of failing nerves and eyesight was now enjoying an easy berth around the shops. He said:

"It was when the old Y. M. and B. was first opened up," he began. "I was pullin' passenger, and took the first coach over the road. I got a good run—all day work—and was holdin' her down as a good thing. 'Bout a year after we'd got to doin' a good business I had some extra runnin' and lost my turn for a while, and run nights all of the time. It was my last trip before I'd get back to my own run, and I was feelin' glad to get on to the day 'trick' again.

"We'd had some mighty bad weather and lots of water fell. Our track was in pretty good shape, though, and we didn't much fear washouts, so we kept up with the 'card' pretty well. On the night I spoke about I was on No. 2. We had a heavy train, but the machine I had was able to 'get there,' and I was on time till we struck a freight that couldn't take the siding. They 'swung us down,' and we side tracked until the freight got away. I was pretty warm over losing the time, and when we lit out of there I pulled her right up to the notch and she went for all she was worth.

"We were making about forty-five miles an hour, and when we reached the 'fill' east of Wildcat I worked steam all the way down. We were 'bout half way to the creek when the bell rang. I worked mighty quick, but it was down hill and the rails were wet and I didn't get stopped until the pilot was almost over the bridge—or where the bridge ought to be—'cause when I stopped the headlight was shining over a chasm. The bridge was washed away. Gad! You can tell just 'bout how I felt. My fireman nearly fainted, and I wasn't far behind him. Well, after we stopped the conductor, a smart chap with a fancy lamp and a rubber collar, came arunnin' up wantin' to know why I stopped.

"'Cause the bell rang. What did you pull the rope for?' I says.

"'I didn't,' says he.

"'Well, who did?'

"'No one,' says he, hot like.

"'Well, some one pulled it or I wouldn't a stopped,' says I.

"The 'con' looked at me a minute, and just then the brakeman came up.

"'Did you pull the rope, Joe?' said the 'con.'

"'No,' says Joe.

"Just of a sudden a thought struck me, and I told the 'brakey' to ask the porter. The 'coon' hadn't pulled the bell, and the passengers in his car were all asleep until I jerked them endways with the 'air.' I took the conductor around to the front end and showed him the bridge. He was scared to death, and we went back together through the train to see who pulled the bell rope, but every mother's son of them swore it wasn't touched. I began to get scared again and told them about the bridge, and everybody came out to look at it.

"We couldn't find any one who gave the signal, and after we'd flagged back to the station I got to thinkin' more and more, and I came to the opinion that the bell was rung by Providence. There was 150 people on the train, and if that bell hadn't rung I'd a took them all over into the Wildcat, and dropped them about one hundred feet into the water. There wouldn't be anybody left to tell about it, either.

"The superintendent looked into the thing after I reported, and had me and Joe up 'on the carpet' twice, but we both heard the bell, and swore to it. Some chap got out a long explanation that the bell rope was tight stretched, and we struck a low joint coming down the hill, when one end of the coach sagged, and the rope being tight it rang the bell, but I don't believe it. It was Providence that did it, and I know it, and I've never swore an oath since, and never will."—Kansas City Star.

They Parted to Meet No More.

A clergyman called on a man who had just lost his wife to offer him consolation. "Don't fret, my friend," the clergyman said; "the time will soon come when you will meet her never to part again."

"But parson," said the man, "I've been married twice, and what I want to know is which wife am I to meet 'never to part again?' Or am I to meet both of them 'never to part again?' It strikes me that, if so, it will be a bit awkward. Besides, I hated my first wife, for she was a regular vixen."

The clergyman was puzzled what to say, when the man suddenly brightened up and exclaimed, almost cheerfully:

"I think it will be all right, parson. My first wife was such a downright bad 'un that I don't think there's much fear of my meeting her in heaven."—London Tit-Bits.

Wild Horses of the Sierras.

There is said to be a large band of wild horses, led by a thoroughbred known to the stockmen as the "Outlaw Stud," ranging between Truckee, Nevada county, and Peavine, Nev. Years ago the stud, a fine racer, escaped to the mountains and has since defied capture. By desperate riding stockmen manage to get into the band and drive out the colts. The horses range on the highest peaks, beyond where cattle or sheep often go. They only go to water once a day, and then in single file down the mountain trail as fast as they can run. They go back at their leisure, feeding by the way.—Grass Valley Tidings.

Manuscript of "Home, Sweet Home."

The death of Mrs. Asa Jackson in Athens, Ga., has brought up once again the much talked of mystery of the whereabouts of the original of John Howard Payne's "Home, Sweet Home."

Mrs. Jackson was a near relative of Miss Mary Hardin, who was much admired by John Howard Payne. For a long time Miss Hardin had the only known copy of the famous song in the handwriting of its author. When she was dying several years ago in Athens it was rumored that in one of her eccentric moods she had willed the copy to be buried with her, but when asked on her deathbed if this were true she told Mrs. Jackson that she had not done so, but had left the manuscript, as well as all her other earthly goods, as a bequest to her.

After Miss Hardin's death the manuscript was searched for by Mrs. Jackson, but was not found. Only a few days ago a reporter called on Mrs. Jackson and asked if nothing had ever come of the search.

"Nothing yet," was the reply, "but I hope to find it before I die. Mary kept the copy concealed all the time while she lived. John Howard Payne sent it to her when he was consul to Algiers, and between the lines were written little love messages. They were sweethearts once, these two. Mary was offered tempting sums for the manuscript in her lifetime by publishers, but would never part with it.

"Several lawyers have lately been to me to get my permission for them to ferret out the whereabouts of the manuscript, but I have refused to let them take the case. I feel certain that it will come to light before I die."

It is generally believed that the manuscript will some time be found. Some think that the copy, which was known to be the only one extant written by Payne himself, was stolen from the house by a servant.—Pittsburg Dispatch.

A Little Georgia Volcano.

Mr. Henry Gartrell, living about ten miles from Ellijay, Ga., says there is a tree on the mountain above the large cliff of marble on the line of the Marietta and North Georgia railroad that has been burning for five months.

The latter part of last October the woods were being burnt off, and an old hollow tree caught fire. About three weeks thereafter he saw the fire and found that the tree had been almost consumed, and the ground appeared to be ablaze. He has watched it continuously ever since, and can see the fire better on a rainy night.

Sunday he took a long rod of iron and some water and poured the water in the hole, but it did not extinguish it. He then ran his iron rod down about five feet through the cinders and got some out. The whole mass in the hole is red hot, and the material when taken out is very much like shop cinders, but after being exposed for a few hours it slacks like lime. It is very strong with alkali, and smells like sulphur. Gilmer county may have a young volcano.—Cor. Atlanta Constitution.

Government in Competition.

It is perhaps not generally known that Montreal has the cheapest telephonic service on the continent today. But so it is, and the increase in the number of persons now having telephones in their residences and offices has been exceedingly large since the rates were lowered to twenty-five dollars in both residences and offices by the Bell Telephone company. The Federal Telephone company has at present almost 6,500 city subscribers, their prices being thirty-five dollars for offices and twenty-five dollars for private residences, while the Bell, in the city alone, have about 5,000. The latter company are increasing their subscribers at about the average rate of over a hundred a month, while the Federal company's list of patrons is also steadily on the increase. Think of it, twenty-five dollars a year when we here in Boston pay $125 a year, or five times as much.—Boston Transcript.

A Big Estate and No Heir.

The estate of the late Mrs. Wilson C. Swann, of 1,512 Walnut street, will amount, it is said, to $5,000,000, and for this vast wealth there appear to be no heirs. The magnificent property at 1,512 Walnut street, with its inestimable wealth of paintings, sculpture, carvings and curios, will be sold at an early date. The house was planned by Dr. Swann and built in 1857. In past years it was the scene of many princely entertainments, and although Mrs. Swann was afflicted with a form of nervous prostration which confined her to her apartments and prevented her attendance to social duties, it was her wish that these entertainments should be continued. Probably no establishment in Philadelphia was maintained on a more lavish scale during Dr. Swann's life.—Philadelphia Record.

Death of an Editor.

Frank Campbell, a noted character of Victoria, B. C., died recently. For more than twenty-one years he carried on a store, and was known to every person in the city for his good humor and widespread charity. But he was better known as editor of the "Bulletin." This was not a paper, but was a big blackboard, on which was placed every bit of local news as soon as it was known. The people of Victoria consulted the Bulletin with as much confidence as they did their newspapers.

Pain and Imagination.

A Wiscasset man discovered a big gash in his boot where he had cut his foot while in the woods, and just managed to get home, feeling himself growing fainter from loss of blood all the way, and fainted on arriving, when somebody discovered that the gash only went through his boot and the red color was not blood, but only a woolen stocking.—Bath (Me.) Independent.

In the Lodge Room.

Jim—How did you get in? You haven't the password, and are not a member anyhow.

Jack—Avaunt there! Haven't I got the grip?—Pittsburg Bulletin.

A VAST CEMETERY.

The Entire World Could be Buried in California.

WOULD BE PLENTY OF ROOM FOR ALL.

Calculations on the Extent of the Earth Which run into big Figures.

Here is a man who has taken the trouble to calculate how much land it would take to bury the population of the world for 6,000 years or 100,000 years. He finds that the former could be buried in half of Texas and the latter in the territory east of the Mississippi river.

In 6,000 years you have sixty centuries. In each century you may count three generations of mankind, or 180 generations in all, each being a generation of 1,560,000,000. Now lay out a cemetery for one generation. It will be a huge estimate to give to every man, woman and child a grave five feet by two, or ten square feet. A square mile contains something less than 28,000,000 square feet. You want, then, a graveyard not 55 miles long by 10 wide for your whole generation. Now multiply this by 180 and you have your burying ground for 6,000 years of mankind. That is, a strip of land 1,800 miles long by 55 miles wide will be ample. In other words, a cemetery containing 100,000 square miles would be sufficient for the entire human race to lie side by side. The estimate which I have given you of the continuous population is obviously enormously large. The estimate of the size of each grave is very large. A strictly correct estimate would reduce the size of the required cemetery more than one-half. But enormous as it is, you could lay out your burial ground for all men who have lived on earth, so that they could lie side by side, in Arizona or in California, or you could lay it out in Texas large enough to accommodate the race of 6,000 years past, and also the race for 6,000 years yet to come, all sleeping in the soil of that one state of this union.

But some one says the race of man has been on earth 100,000 years. That is a pure imagination and there is not, so far as I know, a fact on which to rest it. But suppose it is true, and the population always what it now is. You have provided for 6,000 years of it. You want nearly seventeen times as large a cemetery for the generations of a thousand centuries. That is, you want 1,700,000 squares miles in it. Lay it out whenever you please, 1,700 miles long by 1,700 miles wide. It is but a part of the United States. And so enormously large have been the rough estimates thus far used, it is safe to say that if the human race has been in existence 100,000 years, a separate grave could be provided for every individual of the race within a part of the United States east of the Mississippi river."

Estimating that a large man can stand on two square feet, and the average standing room of a crowd of men, women and children is one and a half square feet, he calculates that 18,000,000 people can stand on a square mile. According to this the population of the world could stand on 84 square miles.

Then he makes this curious suggestion:

"Carry your arithmetic still further. You laid out a cemetery for the 1,500,000,000 of mankind now living. Build a city for them to dwell in. Average families at five persons to a family, and give each family a house and lot 20 feet by 100. Your cemetery gave five persons fifty square feet for graves. Their city lot is forty times as large. Your city lot must therefore be forty times as large as your cemetery. Add 20 per cent. for good streets."

On this basis the population of the world could live in a city 100 miles wide and 220 miles long, and have twice the space per capita now being occupied by the majority of people in our great cities.—Dr. Prince in Journal of Commerce.

The Right to Thackeray's Life.

For convenience sake a man is permitted, within certain limitations which vary in various countries, to say who shall have his property when he dies. He can bequeath his houses and lands, his stocks, bonds, money, books, cattle and bric-a-brac. But he cannot bequeath his wife or his grown children, for they belong not to him but to themselves. No more can he bequeath the story of his life to any one's exclusive use or to disuse, for that is not his either. That is part of history, and belongs to any son of Adam who cares to investigate and use it. The notion that the world's acquaintance with the man Thackeray is to be only so intimate as Thackeray might have chosen to permit is not sound.

What is told or said of a man while he is alive he is permitted to resent, if he doesn't like it, but if he tries to bind posterity not to explore his record after he is dead, he tries to control what is no longer his. What he did in the world he left in the world, and it belongs to the world; and, if it is worth while exploring, the world is perfectly at liberty to look it up at its convenience. History is the record of human lives and their results. Considering what Thackeray got out of history, he was the last man who should have objected that history should get its own from him.—Scribner's.

Lots of Old Folks at Home.

There are now living in one house just outside the village of St. George a family of four persons whose combined ages foot up 374 years, as follows: Miss Lizzie Mann, 100; Robert Mann, 90; Deacon John Mann, 92; Miss Catherine McBean, 92. These four people are in excellent health.—Kennebec Journal.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 4 ..... 1891.

Thanks to irrigation, Kern county is fast developing her resources. The first carload of raisins has left Bakersfield for the East. This is the precursor of many thousands of carloads from that point.

The speakership of the next House is now narrowed down to the contest between Crisp and Mills, with the former in the lead. Mr. Crisp is a gentleman altogether suited, both by temperment and experience, to make a most successful presiding officer.

The reason that nothing particularly wicked has taken place since the elections occurred is that Senator Quay and ex-Sentor Mahone are on a fishing excursion to St. Lucie, Florida, and the Devil can't watch both of them and attend to other business at the same time.

The supreme court of California has declared the appropriation of $300,000 by this State for the world's fair valid. This decision shows that that tribunal can emancipate itself from hide-bound traditions and come up to the exigencies of the hour. California's representatives will now be able to show themselves responsive to public expectations

The Call assumes that Russia wants to buy $100,000,000 worth of silver. If she does, and goes into the market to procure it, she will undoubtedly have to pay more than $70,000,000 in gold for it. Just as soon as she shows that she wants and must have that much silver, there will be no surplus in Germany, and silver will approximate at once to a parity with gold. Great Britain wants all the silver she can get to pay for her bread-stuffs from India. France has both metals in use and reserve, and the United States will glide into free coinage without an effort.

The statement in a speech by Ex-Mayor Hewitt of New York that the electoral vote of Louisianu was offered to him for money in 1876 and was afterward sold to another party is again drawing public attention to the monstrous fraud by which Samuel J. Tildon was robbed of the presidency. One of the men engaged in the Louisiana fraud was Henry C. Dibble, now a Republican leader in San Francisco. This man has served two terms in the California assembly, and was among the most notorious members of the infamous body which assembled in Sacramento last winter and put up the senatorship and legislation at auction. He is a fit instrument of the Burns-Crimmins Kelly combine.

The recent earthquake in Japan was one of the greatest catastrophes ever known, resulting in awful loss of life and widespread destruction of property. In this country the Johnstown disaster ranks as the most frightful calamity in the nation's history, but that was a small thing compared with the loss of 40,000 lives in Japan through the recent earthquake disturbances. Distance makes a wonderful difference in the interest taken by American readers in news of catastrophes involving loss of life. The drowning of hundreds of thousands of people in China by a flood from the Yellow river received less attention from our people than a comparatively small matter in our own country excites.

Senator Stewart introduced into the Mining Congress that recently met at Denver a resolution urging the National Congress to pass laws restoring silver to parity with gold. It is quite within the power of Congress to declare a 412 1-2 grain silver coin a dollar. It may make such a dollar legal tender for all debts which have not been made payable in gold by contract, and may make it the dollar of general business. But it is not in the power of Congress to make the 412 1-2 grain silver dollar worth as much in the commercial world as the 25.8 grain gold dollar. It cannot prevent the holder of the gold dollar from refusing to part with it as an equivalent of the silver dollar. In the event of free silver coinage the owner of gold dollars will hold them at a premium Until there should be an appreciation in the commercial value of silver bullion, the premium would be equal to the present discount on silver, reckoning on the gold basis. It is hoped and believed that the present law requiring the purchase of 4,500,000 ounces of silver each month will, within a few years, bring silver to a parity with gold.

PAYING THE BLOOD TAX.

PEASANTS PAY MONEY FOR MURDERS COMMITTED IN 1375.

A Debt Which the Inhabitants of the Pyrenees Have Religiously Paid Annually for Over Five Centuries—The Ceremony Described by a Witness.

The Independent des Basses-Pyrenees publishes a very interesting description written by M. Alfred Cadier, a French Protestant clergyman at Pau, of a ceremonial which he witnessed on the frontier of France and Spain. This consisted in the payment of a blood tax, and it appears that there are two or three places in the Pyrenees where the custom, founded upon the belief that "a murder committed by the inhabitants of a village or canton upon those of an adjoining village or canton must forever remain a burden upon the descendants of their descendants," is still observed.

Thus, about the middle of the Fourteenth century, the inhabitants of the valley of Lavedan, having massacred the defenseless residents of Aspe, were condemned by the pope to pay a perpetual tax of thirty sols, which was levied upon twenty-two villages and paid up to the time of the revolution. In the Thirteenth century, if not earlier, a similar crime was committed between the valleys of Baretons, in French Navarre, and Roncal, in Spanish Navarre.

The blood tax which the inhabitants of the former were ordered by the pope to discharge is paid still, the ceremony taking place annually on July 13 in the mountains, about seven hours' march from Osse, at the pass known as La Peyre St. Martin. It is thus described by M. Cadier:

A GALA SCENE.

A crowd of people is to be seen making their way to the rendezvous. The shepherds of the Baretons valley, with their red waistcoats interspersed with dark threads, the mayors and delegates of the villages of Arette, Laune, Aramits and Issor, the foresters of the mountain, the custom house officers without their guns, the clergy, represented by the priest of St. Engrace and two curates, and a few English tourists from Osse helped to make up this singular assembly. When we reached the narrow stone which marks off the frontier, with the name St. Martin inscribed upon the two sides of it in French and Spanish, we found ourselves face to face with the Spaniards, who formed an imposing group.

First was the alcalde of Isaba, who was to act the part of lord chief justice. He was wearing a black robe, bordered with red, and a large collarette by way of bands, while he carried in his hand the wand of justice, in the shape of a black stick with a silver knob. The alcaldes of three or four other Spanish villages were similarly attired, and they were accompanied by a numerous suite, made up of delegates from the general junta of the valley of Roncal, the notary, the veterinarian, and others, the escort consisting of seven or eight armed carrabineros and guards, while in the rear were a number of "bourriqueros," who had come in the hope of selling the skins of wine with which their donkeys were loaded.

It was about 9 a. m. when the ceremonial, which has been observed without interruption since 1375, commenced by the French mayors donning their tricolor scarf, and by the Spanish alcaldes advancing toward the frontier stone, accompanied by a herald bearing a lance on which was painted a red flame, the symbol of justice.

THE CEREMONY.

The two parties having halted at a distance of about twenty feet from their respective frontiers, the herald substitutes for his red flame a white one, which is the symbol of pacific intentions, and the alcalde of Isaba exclaims in Spanish, "Do you wish for peace?" To this the French mayors reply in the affirmative, also speaking in Spanish, and in order to testify to the sincerity of their intentions, their herald lays down his lance upon the top of the stone in the direction of the frontier, whereupon the Spanish herald comes and inserts his lance into the French soil, resting the shaft against the stone so as to form a cross with the French lance. The mayor of Arette then comes and lays his hand upon the cross so formed, a Spanish alcalde places his right hand upon that of the Frenchman and the other mayors and alcaldes do the same alternately.

Last of all, the alcalde of Isaba steps forward, and, lifting his wand of justice over the pile of hands, pronounces the oath, which all swear to keep. After this oath has been taken the alcalde of Isaba exclaims three times, "Paz daraus" (peace in the future). Peace is thus anew concluded, and to ratify their having given up all idea of vengeance the men of Roncal order the escort to discharge their guns in the direction of France. Then comes the reception of the blood tax, which used to consist of three perfectly white mares, but owing to the difficulty of getting them exactly alike three white heifers have been substituted for them. The three heifers presented this year were worth about twenty-three pounds, which is a large sum for the district, and after the Roncal notary had drawn up a proces verbal, which was signed all around, a repast was served at the expense of the Spaniards, toasts being proposed in honor of Spain, France and England, the introduction of England being due to the presence of several English visitors. After the repast was over dancing followed, and we then said goodby till next year.

How a Plant Protects Itself.

One little plant of South Africa protects itself by assuming a curious likeness to a white lichen that covers the rocks; the plant has sharp pointed green leaves; these are placed close together with their points upward, and on the tip of each leaf is a little white, scaly sheath. The resemblance of the smooth surface these present to the lichen growing on the rocks, beside which it is always found, is so great that it is not till you tread on it that you discover the deception.—Fortnightly Review.

Light Without Flame.

If one or two pieces of phosphorus of the size of peas be inclosed in a small bottle half full of olive oil and kept for some little time the air space in the bottle will become filled with a phosphorescent vapor. The phosphorescence will fade, but may be renewed by simply uncorking the bottle. Sufficient light will be given out to tell the time by; in fact this method is used by watchmen in some places where explosives are stored. —New York Recorder.

THE VALE OF ROCES.

Somewhere hid in lands of sun,
Lies the Vale of Roses;
Where of golden seasons spun,
The golden year uncloses.
Between the rose flushed peaks and skies,
The hidden valley hidden lies,
And happy he whose mortal eyes
Shall see the Vale of Roses.

Seaward from the mountains high,
Slopes the Vale of Roses;
Lazy sails go drifting by
Where the vista closes.
Never stormy wind may roar
'Round the placid lower shore—
Silence reigns for evermore
In the Vale of Roses.

Long dim aisles of roses shine
Up the Vale of Roses;
Scarlet flowers load the vine,
Where the palm reposes.
Oft the Persian minstrel flings
Wilder music on his strings,
As upon the plains he sings
Of the Vale of Roses.

Sweet the story is to hear
Of the Vale of Roses;
But the heart that holds it dear
On its secret closes.
Not to eastern lands alone
Is the fabled valley known—
Every clime has for its own
Some fair Vale of Roses.

Heights that lie just out of reach—
These are Vales of Roses;
Longing never set in speech
In each heart reposes.
Every soul its vale has sought,
Glimpses of its beauty caught,
And is nobler for the thought
Of the Vale of Roses.
—Florence May Alt in New York World.

Meerschaum Pipes, Violins and Poems.

Certain things are good for nothing until they have been kept a long while, and some are good for nothing until they have been long kept and used. Of the first wine is the illustrious and immortal example. Of those that must be kept and used I will name three—meerschaum pipes, violins and poems. The meerschaum is but a poor affair until it has burned a thousand offerings to the cloud compelling deities.

Violins, too—the sweet old Amati!—the divine Stradivarius! Stained, like the meerschaum, through and through with the concentrated hue and sweetness of all the harmonies which have kindled and faded on its strings.

Now, I tell you, a poem must be kept and used like a meerschaum or a violin. A poem is just as porous as the meerschaum; the more porous it is the better. I mean to say that a genuine poem is capable of absorbing an indefinite amount of the essence of our own humanity, its tenderness, its heroism, its regrets, its aspirations, so as to be gradually stained through with a divine secondary color derived from ourselves.—Oliver Wendell Holmes.

A Water Cure!st.

My firm belief is that the use of drugs is very detrimental in at least nine cases of sickness out of every ten. The patient would improve more rapidly on plain diet—such as gruel, stale bread, graham mush and a liberal amount of vegetables, lean meats and fruits. Also bathe frequently, especially in warm weather, so the pores may be kept open. Medicine will make a well man sick and will kill the other half of the half dead sick men. Be temperate in all things and give nature a chance to perform her duty.

Recently I was taken with a severe chill. I only "shook" fifteen minutes, and I shook in a hurry too. My only remedy was hot water. I drank two cupfuls, took a hot foot bath, covered up in bed. "The perspiration did roll. Oh, my!" The next morning I ate a light breakfast and went to work, feeling perfectly well. I am a "water cure crank" myself and I have every reason to be.

All manner of diseases can be cured by the simple use of water in various ways, smallpox and cholera not excepted. —Cor. St. Louis Republic.

Freaks Among Apples.

Among apples, as among living things, there are freaks—forms appearing to individual trees at the very extremes of normal conditions. A member of the state board of agriculture, in one of the northern counties, has an apple tree that has never had a petal. No one would ever know it was in blossom, yet it bears fruit abundantly. This shows that the pretty rosy parts of the flower, the petals, are nonessential to fruitfulness. Some contend that the brilliant colors of the petals of flowers are given to attract insects, and arrange for cross fertilization. Others contend that the petals act as protectors of the undeveloped parts, while others believe that, to some extent, they have the functions of leaves, and prepare food for the younger parts. Whatever it be, we see by this freak it is possible to have apples without them.

Then there are seedless apples—apples with no core. There may be germs in the ovariums, and the germs may be properly fertilized by the pollen, but the power to absorb nutrition is weak and the ovaries die in infancy from sheer starvation. Having been once fertilized, the fleshy part we know emphatically as the apple grows on and matures, though the seed and core do not. Twins or even triplets are often seen in apples, as in so many other organisms, and just as in other organisms by independent germs coming into juxtaposition in an early stage of development, when the stronger body absorbs a considerable portion of the other.—Thomas Meehan in Philadelphia Ledger.

He Couldn't Recognize French Money.

It requires very elastic credulity to accept in these days of universal commerce the existence of a railroad employe who had never seen a French bank note, and who, when he did, considered it some sort of an advertising circular. But such a fellow did exist, and he worked on the railway that runs out to Sceaux. One day he found on the platform four bank notes of 100 francs each, put them in his pocket and said, "Some nice women on the top; I'll take 'em home to my little boy." Thanks to his ignorance, he was only able when he got home at night to present his son with three pictures. The boy carried them to school the next day, and at recess was about cutting out the "nice women," when the teacher saw what he was doing.

"Where did you get these notes?" he demanded. "Father gave them to me." "What for?" "To play with." "Very well; I shall take charge of them." They went together to the police station, and there the matter was satisfactorily explained. The money had been lost by a market woman, and she was so delighted at receiving the best part of it that she actually handed one of the bank notes to the man, exclaiming: "Here, take this, you old fool, and if you didn't know before what it was, you will know in the future."—Paris Corespondent Boston Herald.

ORDER FIXING TIME AND PLACE FOR HEARING OF APPLICATION TO MORTGAGE CERTAIN REAL ESTATE AND DIRECTING NOTICE TO BE GIVEN.

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of Ezra M. Goodale, deceased.

Thomas J. Goodale and Maggie P. Goodale, Executor and Executrix respectively of the last will and testament of Ezra M. Goodale, deceased, having filed their petition herein, duly verified, praying for an order authorizing and empowering and directing them to mortgage the south half of the south-east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the purposes and for the amount stated in said petition, or for such lesser amount as to the said Court may seem meet; it is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the Judge of said Superior Court on Wednesday the 23rd day of December, 1891, at 11 o'clock a. m. of said day, at the Chambers of said Superior Court, at the Court-house, in the town of Independence, County of Inyo, State of California, then and there to show cause why an order should not be granted to the said Executor and Executrix authorizing, empowering and directing them to mortgage the real property belonging to said estate, to wit: The south half of the south east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north-east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the sum of $900.00, or such lesser amount as to the Judge of said Court shall seem meet; all of which more fully appears by the said petition now on file in the Clerk's office and two which reference is here made for further particulars.

It is further ordered that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo.

Dated November 18th, 1891.

GEO. M. GILL.
Judge of the Superior Court.

[Endorsed.]

SUPERIOR COURT, COUNTY OF INYO.

In the Matter of the Estate of Ezra M. Goodale, deceased.

Order fixing time and place for hearing of application to mortgage certain real estate and directing notice to be given.

Filed November 19th, 1891.

J. N. YANDELL, Clerk.
Mack & Laird, Attorneys for Executors.

NOTICE OF SALE OF PERSONAL PROPERTY.

THE ODELL TYPE WRITER.

$20 will buy the ODELL TYPE WRITER with 78 characters, and $15 for the Single Case Odell, warranted to do better work than any machine made.

It combines SIMPLICITY with DURABILITY, SPEED, EASE OF OPERATION, wears longer without cost of repairs than any other machine. Has no ink or ribbon to bother the operator. It is NEAT, SUBSTANTIAL, nickel plated, perfect and adapted to all kinds of type writing. Like a printing press, it produces sharp, clean, legible manuscripts. Two or ten copies can be made at one writing. Any intelligent person can become a operator in two days. We offer $1,000 to any operator who can equal the work of the Double Case Odell.

Dr Van Deventer will be with us this week, lecturing on Friday evening at Lone Pine. Subject, "Men For To-day.", the collection for the New Church fund.

On Sunday at 10 a. m. a special address to the Sunday School at Lone Pine. 11 a. m., the Doctor will preach; after sermon the sacrament of the Lord's Supper. At Georges Creek, address to young people at 2:15 p. m. and sermon by Doctor at 2:30.

At Independence, Praise service at 6:30 p. m.; sermon by the Doctor at 7 p. m. followed by sacramental service.

On Tuesday evening he will deliver his popular lecture on "How To Be Happy." Collection after each of the services for Presiding Elder Fund.

COURT NOTES.

Geo. H. Gill, Superior Judge.

MONDAY, November 30, 1891

Filed order for drawing Grand Jury.

Estate of John A. Hannah, deceased—Filed Petition for sale of personal property

Manuela Diaz vs. A. Diaz et. al.—Filed answer.

TUESDAY, December 1, 1891.

Estate of John A. Hannah, deceased—Filed inventory and appraisement.

SATURDAY, November 28, 1891.

People vs. Val. Sherman—Filed information for assault with a deadly weapon.

People vs. John Clarke—Filed information for assault with intent to commit murder.

THURSDAY, December 3, 1891.

Estate of F. Paderes, deceased—Filed proof of publication.

Estate of P. Pellegrino, deceased—Filed proof of publication.

Try some of Roeper's new sausage.

Mrs. R. Diaz of Lone Pine was in town yesterday.

J. J. Stewart of Lone Pine was in town last Tuesday.

B. Van Dyke of Lone Pine was in town on Monday last.

Ben Lusky came up from Lone Pine yesterday returning the same day.

Lord Edward Lytton, "Owen Meredith", died in Paris on the 24th ult.

Wednesday night was the coldest yet. The creek froze up and stopped.

W. M. Richards and wife of Keeler visited friends at Independence yesterday.

Jake Tracy and June Smith came down from Big Pine last Monday returning next day.

The next Republican National Convention will be held in Minneapolis on June 7th, 1892.

Don't forget the school entertainment tomorrow evening. Reserved seats at Rhine's.

Several citizens of Big Pine and Bishop were in town at the end of last week attending business in the land office.

Professor Tom Cate of Virginia City has gone to San Francisco to be treated for injuries received in a restaurant at the former place.

Meads' big team passed through town yesterday en route for Mojave. They carry freight for every town in the Valley and spend their money at home.

The Sheriff is summoning grand jurors to appear in the Superior Court on Tuesday, December 15th. There doesn't seem to be anybody particularly uneasy either.

The Owens Ditch Company met last Saturday, the principal business being in connection with the assessment recently levied, the maturity of which was postponed 30 days.

It is surprising to see how well the stock are looking on the outside range. Beef cattle are in good marketable condition; horses are doing particularly well and are in fine condition to stand the coming winter.

What are you going to do through the holidays? If there is to be a grand ball or celebration of any kind, now is the time to begin making preparations. Don't wait until the last minute and then have only an impromptu affair.

Yesterday afternoon a storm broke over the Sierras and still continues. A large quantity of snow has fallen in the canyons, and should the storm continue two days longer a good water season will be assured. A light snow fell in the Valley during the night but not enough to cover up the feed.

It may be, and then again it may not be. But when a young man goes to Los Angeles and then telegraphs for an outfit carefully prepared beforehand consisting of a dress suit, silk embroidered and scalloped underwear, robes de nuit with frills, puckers and fancy facings, it certainly looks suspicious. For further particulars ask Bill Johnson.

Rev. Doctor Van Deventer will lecture at Lone Pine tonight, the subject being "Men For To-day." He will deliver a lecture at Independence on Tuesday evening next on "How to be Happy." A cordial invitation is extended to all and you will surely be interested if you attend.

Deputy Sheriff O. I. Mairs started for Bakersfield on Tuesday with Tom McDonough and the two Indians, who are witnesses in the murder case at Bakersfield. It is said that the squaw who was with the marauding party and whose papoose was killed by the Constable's posse, has been found and will also be taken as a witness in the case.

Manly Talk

In the Mining Congress at Denver, Colorado, in discussing the silver question, Senator Wolcot of Colorado said: "No matter what may be the wishes of a majority of the party to which I belong, or its Chief Executive, and no matter how much my course may remove me from the sunlight of official patronage, until some new light crosses my vision which is not dimmed, I shall, so long as I remain in public life, vote for the free and unlimited coinage of silver." In the same congress Senator Stewart said: "The alternative is presented; perpetual contraction, falling prices and hard times, or the free and unlimited coinage of silver. There is no hope for silver legislation unless the friends of the white metal will stand together on the broad principle of free coinage, about which all agree."

Come Out And Enjoy Yourself.

The popular drama, "The Last Loaf," followed by a laughable farce will be presented at Mairs' Hall to-morrow evening under the auspicies of the Independence public school. Much careful preparation has been in progress during the past month, and that the affair will be a success goes without saying. The stage has been newly fitted up for the occasion, and the appurtenances will be perfect. The dramatis personnae is composed of entirely new material among our amateur talent, and the incentive to compare favorably with what has hitherto been rendered will be an added stimulus to success. Don't fail to secure a reserved seat early or you will get left. The object in view is a public benefit, and on that account, if no other, the play will be well attended.

A year ago to-day a heavy rain storm with snow in the mountains came to an end. Snow had fallen continuously for over a week, and the canyons were filled. This ensured a good water season for 1891 which was amply borne out. So far this year no snow of any consequence has fallen; the Sierras are barer than for many year, and unless storms set in soon the water next year will be low, as it is the early snows which, packing into ice, give the water during the summer months.

Wm. Rowen of Bishop passed through town yesterday with a fine lot of horses and mares for the Los Angeles market. Most of the horses were half-breed Normans and were large, handsome draft animals. Mr. Rowen drives to Los Angeles every year and is quite successful in finding a horse market.

"Of course it hurts, but you must grin and bear it," is the old time consolation given to people troubled with rheumatism. "If you will take the trouble to dampen a piece of flannel with Chamberlain's Pain Balm and bind it over the seat of pain your rheumatism will disappear," is the modern and much more satisfactory advice. 50 cent bottles for sale by

A. K. EUGLEY,
Big Pine.

Our readers will notice the advertisements in these columns of Chamberlain & Co., Des Moines, Iowa. From personal experience we can say that Chamberlain's Cough Remedy has broken up bad colds for our children and we are acquainted with many mothers in Centerville who would not be without it in the house for a good many times its cost and are recommending it every day.—*Centerville (SD.) Chronicle and Index.* 50 cent and $1 bottles for sale by

A. K. EUGLEY,
Big Pine.

We want every mother to know that croup can be prevented. True croup never appears without a warning. The first symptom is hoarseness; then the child appears to have taken a cold, or a cold may have accompanied the hoarseness from the start. After that a peculiar rough cough is developed, which is followed by the croup. The time to act is when the child first becomes hoarse; a few doses of Chamberlain's Cough Remedy will prevent the attack. Even after a rough cough has appeared the disease may be prevented by using this remedy as directed. It has never been known to fail. 50 cent and $1 bottles for sale by

ASSESSMENT NOTICE.

INYO MARBLE COMPANY

Location of principal place of business, San Francisco, California. Location of works, Inyo County, Cal.

Notice is hereby given that at a meeting of a Board of Directors, held on the 14th day of Nov., 1891, an assessment (No. 14) of Ten (10) cents per share was levied upon the capital stock of the corporation, payable immediately in United states gold coin, to the Secretary at No. 1 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 6th day of January 1892, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 29th day of January, 1892 to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.
G. W. L. JOE, Secretary.
Office, No. 1 Montgomery street, San Francisco, California.

A BIG BUSINESS.

The growth and present size of the great retail business of Weinstock, Lubin, & Co., Sacramento, shows on the face that it possesses *a distinct character* of its own. It has done much to introduce many important reforms in storekeeping, which have been widely copied. There are people who have never heard of the big establishment, but who, through its silent influence, are being served by local dealers better than they otherwise would be.

It has done more than any other ten stores to give the "One Price System" firm and substantial footing on the Pacific Coast.

It has shown people living in small towns that they can deal through the mails with as much security as if they bought in person.

It has, by constantly raising its own standard of qualities, had an influence in raising the standard everywhere. The average grade of goods kept upon the Coast grows better each year.

It has been prominent in bringing west as stylish and desirable goods as are kept by merchants in New York, Philadelphia, or Chicago. Indeed, the manufacturers who supply them supply it. The goods are the same; and the Sacramento prices, while never higher, are sometimes considerably less. This is explained by the fact that the cost of conducting business in large Eastern cities is far greater than in the Capital City, the extra expense of overland freight being but a comparatively small item.

It has made it possible for out-of-town people to enjoy quite as satisfactory shopping facilities as do those living in large cities.

There is no desire on the part of the firm to take any special credit for whatever influence for good the house may have exerted. They have sought simply to build up a business on fair and just principles; to buy and sell as low as they can; to deal as far as possible only in the very best goods; and neither to fear nor favor any one, but to treat every customer as they would their most favored friend.

Whatever of success has come, they attribute it to the faithful carrying out of these aims and principles.

A large illustrated catalogue, giving full information about goods and prices, how to order, etc., sent free to any address.

GOOD LUCK.

Dr. Price's Cream Baking Powder is often called the Good-Luck Baking Powder.

Owing to the fact that good luck always attends the use of Dr. Price's, it is not essential to use it the moment it is mixed nor is it required to have the oven always just so, as in the case with ammonia or alum powders. It is not luck after all, but the exact accuracy and care exercised in the preparation and combination of all the ingredients of Dr. Price's Cream Baking Powder. Competent chemists are employed to test the strength and purity of each ingredient. Nothing is trusted to chance. Hence; it is always uniform in its work.

House wives never fail to have "good luck" in making most delicious bread, biscuit, pastry and cakes that remain moist and sweet. Only Baking Powder that contains the white of eggs.

Dr. Price's Cream Baking Powder is reported by all authorities as free from Ammonia, Alum, or any other adulterant. In fact, the purity of this ideal powder has never been questioned.

Fruit Vender—I feela bada. Faithful Wife—Why you feela bada? Fruit Vender—One of the peaches I sella thata man was gooda.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

"I see Jack and Mollie have made it up again. Why was the engagement ever broken?" "They had a quarrel as to which loved the other the most."

HELPLESS.

Chicago, Ill.

I WAS confined to bed; could not walk from lame-back; suffered 5 months; doctors did not help; 2 bottles of **ST. JACOBS OIL** cured me. No return in 5 years.

FRANCIS MAURER.

"ALL RIGHT! ST. JACOBS OIL DID IT."

"August Flower"

For two years I suffered terribly with stomach trouble, and was for all that time under treatment by a physician. He finally, after trying everything, said stomach was about worn out, and that I would have to cease eating solid food for a time at least. I was so weak that I could not work. Finally on the recommendation of a friend who had used your preparations with beneficial results, I procured a bottle of August Flower, and commenced using it. It seemed to do me good at once. I gained in strength and flesh rapidly; my appetite became good, and I suffered no bad effects from what I ate. I feel now like a new man, and consider that August Flower has entirely cured me of Dyspepsia in its worst form. JAMES E. DEDERICK, Saugerties, New York.

A worn-out Stomach.

W. B. Utsey, St. George's, S. C., writes: I have used your August Flower for Dyspepsia and find it an excellent remedy.

Packed in patent canvas pouches, which retain the natural moisture of the tobacco and insures a cool, sweet smoke to the end. More solid comfort in one package of "Mastiff" than you can get out of a dozen others.

J. B. Pace Tobacco Co., Richmond, Virginia.

A Strange Wager in Vienna.

A curious wager is at present occupying the attention of such widely separated classes as our young noblemen and the Association of Hotel and Restaurant Waiters in Vienna. Several of the younger scions of the highest Austrian aristocracy, who were accustomed to dine in an old hotel of high repute in the Karnthner strasse, took exception to the practice of the waiters, most of whom have seen twenty or thirty years' service, in dressing their mustaches in just the same fashion as the "noble swells" they had to serve. One of the high born customers accordingly laid a wager with some of his friends, which was immediately accepted, that within a given time the objectionable adornment should disappear from the upper lips of the waiters in all the fashionable hotels and restaurants in Vienna, otherwise the proposer himself was to shave off his own embellishment for a given period.

In order to effect his purpose the latter commenced by trying to persuade the hotel keeper in the Karnthner strasse to forbid all his servants wearing mustaches on penalty of losing his aristocratic customers. In this case he succeeded, but the waiters, who were mostly married men, one after another gave notice to leave their places. They were at once replaced by younger men, who for a consideration submitted to the imposed humiliation. The same thing happened in a number of other hotels and restaurants, and the wager was nearly won by the layer when the proprietor of the Hotel Imperial, the first hotel in Vienna, flatly refused to comply with the whim of the Vienna jeunesse doree, whom he told outright that if they deserted his house he should readily find better customers.

The case was also taken up, "as matter of right and honor," by the Association of Waiters, which threatened to expel from the society any member degrading himself by humoring aristocratic caprice in this matter. Thus the matter stands at the present moment. The bet appears likely to be lost, and then will come the triumph of the waiters, who expect soon to have the satisfaction of seeing their would be dictator instead of themselves going about with shaven lip. —Cor. London Standard.

One on Mr. Depew.

They say that when Mr. Depew came recently from Europe the usual swarm of yarn spinners gathered nightly in the smoking room to tell stories and chat about things in general. Every soul save one in the party kept his end up. The exceptional member of the party did not laugh or indicate by even a twinkle of the eyes any interest in the funniest jokes, and was as silent as a door knob at the best stories. This conduct began to nettle Mr. Depew and the other spirits, and when the final seance came around they had lost all patience with the reticent and unresponsive stranger. Mr. Depew was selected to bring him to terms. They were all comfortably seated and in came the stranger.

"See here, my dear sir," said Mr. Depew, "won't you tell a story?" "I never told one in my life." "Sing a song?" "Can't sing." "Know any jokes?" persisted Mr. Depew. "No." Mr. Depew and all were prepared to give it up when the stranger stammered and hesitated, and finally made it known that he knew just one conundrum. "Give it to us," said Mr. Depew and the others in chorus. "What is the difference between a turkey and me?" solemnly asked the stranger. "Give it up," said Chairman Depew. "The difference between a turkey and me," mildly said the stranger, "is that they usually stuff the bird with chestnuts after death. I am alive."—Illustrated American.

Stole Busts from a Cemetery.

That too ingenious person who stole bronze and marble busts from the cemetery of Montparnasse, touched them up and sold them as effigies of famous heroes, statesmen or orators, has at last met with the punishment which his lugubrious labors deserved. Moreau, for so the new kind of "resurrection man," to adopt the phrase of Dickens, is called, came up before the eighth tribunal of police, and was soon sentenced to three years' imprisonment.

The singular thefts perpetrated by Moreau in the cemetery long passed unperceived. He was accordingly able to make some money by his dismal and deplorable transactions, and it is considered probable that many of his transformed busts now adorn not only the humble homesteads of artisans in Paris, but also the libraries and museums of some provincial towns. On one occasion he is said to have sold the effigy of a worthy professor of the Sorbonne as that of a famous general of the revolution, while on another he passed off the bronze presentment of a departed grocer as that of a Demosthenes.

His Last Concert.

One of the most pathetic of sights was that seen in the Boston music hall at the last concert given by Mario, the once famous tenor. He was poor, and the hall was filled with persons who had been ardent admirers of his wonderful art, and now that he had lost his art were willing to put money in his purse.

The tenor tried one of his great songs, but his decayed voice refused to sing the notes. Again he tried, and again he failed. Then, with a sad smile, and a slow, mournful movement of his head, he suffered the orchestra to play through the air, and retired from the stage amid the silence of the pitying audience.

Another pathetic story is told of Bottesini, a famous violinist, concerning his last concert at Parma:

It was a rainy evening and the managers had forgotten to send a carriage for the veteran, who set out on foot, and had gone some distance before a passing friend perceived him and made him enter his carriage.

Arrived at the concert room, Bottesini tuned his instrument and began to rub his bow with rosin. The rosin crumbled in his hands, and, turning to his friends with a sad half smile, he said, "See, it is so that Bottesini, too, will break up."

Then he grasped his loved instrument and drew the bow across the strings, but instantly stopped with a wondering look, for he felt something strange in the tone; his touch was answered less readily and certainly than of old.

Once more he tried, and once more stopped, this time with a smile, saying only, "It answers no more." His audience perceived nothing unusual in the performance, which they applauded as warmly as ever, but Bottesini seemed to feel the shadow of death.

On the following day he was stricken with illness, and soon after the wonderful hand was stilled forever.—Youth's Companion.

How Gold Rings Are Made.

Gold rings are made from bars nine to fifteen inches long. One of these bars, fifteen inches long, two inches wide and 3-16 of an inch thick, is worth $1,000, and will make 400 fourpennyweight rings. A dozen processes and twenty minutes' time are required to convert this bar into merchantable rings. First a pair of shears cuts the bar into strips. Then by the turn of a wheel a guillotine like blade attached to the machine cuts the bar into slices, one, two or three sixteenths of an inch wide. A rolling machine next presses out the slices and makes them either flat or grooved. Each strip is then put under a blow pipe and annealed. The oxide of copper comes to the surface and is put into a pickle of sulphuric acid, after which the gold is stamped "14 k," "16 k" or "18 k," according to quality. Next it is put through a machine which bends it into the shape of a ring of the size required. The ends are then soldered with an alloy of inferior fineness to the quality of the ring. Many people think that rings are molded because they can't see where they are soldered. The ring spins through the turning lathe, is rounded, pared and polished, first with steel flings, then with tripoli and rouge.—Rehoboth Herald.

How She Foiled the Thief.

Some years ago one of the present congressman from New York state and his brother were examining the stock of a pawnshop in London with the hope of picking up some curiosities. They came across a necklace of green glass beads, which the New York man purchased for $2.50, intending to bring it home to his little daughter. The brother was surprised to find in the shop a counterpart of this necklace, which he brought home to his little girl. Two months later the latter showed her gift to a jeweler, who pronounced the glass beads to be emeralds, and who sold them afterwards for several thousand dollars. The member of congress, upon hearing this, took his necklace to the same dealer, who pronounced it to be composed of glass beads. The London pawn dealer had purchased them of a thief, who had stolen them from a wealthy woman. The latter kept the emeralds in a safe, and wore their glass counterparts. Of course no one could tell the difference when the necklace encircled her throat.—Exchange.

Gobelin Tapestry.

"When you hear people talk about getting Gobelin tapestry," says C. R. Clifford, of The Upholsterer, "they usually don't know what they are talking about. The Gobelin works are in France, and are subsidized by the government. They turn out goods designed for state gifts, and the same goods are not made in Philadelphia, although as the manufacturer of tapestries she is the metropolis of the world. It is not that we cannot make tapestries as valuable as the Gobelin, but who would buy them? No one could make them without immense subsidy. Chevreul, the great centenarian chemist, used to be the chemist of the Gobelin works. They spend a year in turning out as much of the article as could be made in a day or two at our rate of working. People frequently talk about Gobelin tapestry, but they apply the word to some fancy work done by the women. There is no manufacturer of it here."—Philadelphia Inquirer.

arious Ways of Bookkeeping.

The bakers here have a rather original way of keeping accounts which may be called a kind of bookkeeping by double entry. When the carrier delivers a loaf of bread, which, by the way, is about five or six feet long, he is handed a wooden lath about a foot long by the party to whom he delivers the bread. From a collection of laths of the same size, one for each customer, he picks out this particular customer's one, and placing the two parallel, he cuts a groove across the face of both. In the final adjustment of accounts both laths have to have the same number of notches. Cheap, but ingenious. —Prolles (France) Cor. St. Louis Post-Dispatch.

Left Hand Thunder's Swell Wedding.

A wedding that developed considerable interest among the Sioux took place at Lower Brule agency Oct. 27. Chief Left Hand Thunder and a belle of the Sioux nation were united in marriage by a white clergyman. Representatives of various bands from all portions of the big reservation were present, and the feast given after the ceremony was the grandest thing of the kind ever indulged in by the noble red man. Left Hand Thunder is wealthy, and entertained his visitors royally.—Cor. St. Paul Globe.

Something About Storms.

The ancients, whose knowledge of meteorology was exceedingly limited, thought that storms were of supernatural origin.

To our vain ancestors, nothing could happen without direct reference to their existence, and it took many ages for mankind to be convinced that the forces of nature work without any reference to man's safety or peril.

The storm, the cyclone and the blizzard are just as natural phenomena as sunshine or the formation of dew. Yet to many persons the why and wherefore are still much of a mystery.

The atmosphere which surrounds our earth is like a great sea, constantly heaving and tossing in waves more or less immense.

This is due to several causes. The rotation of the earth on its axis is one cause; but the main cause is changes of temperature. If the temperature of the air were the same everywhere, the atmosphere would be in equilibrium, and a calm would always prevail, but while one portion is being heated another is cooling, and in consequence the equilibrium is disturbed; this causes a movement of the air from the cold to the warm region.

When air is heated it expands, becomes light and rises, and as it flows away in the upper regions causes a depression which is called the "area of the low barometer," because as the column of mercury in the tube exactly balances a column of air of equal diameter, the mercury falls as the pressure decreases.

Now, as the atmosphere, like water, is always trying to seek its level, the air from the "area high barometer"—that is, the area where the pressure is great—will always flow toward the area of low barometer, and endeavor to fill up the depression.—William Alva in Golden Days.

Men Without Names.

In a work upon the prisons of Siberia, Mr. Edgar Boulangier, a French engineer, who spent a long time in the service of the Trans-Caspian railway, describes a strange class of beings in that country. They are the men who do not know who they are.

No doubt many of these men merely assume this ignorance, in order to mystify the officials, but their identity is in many cases totally unknown to the authorities and all their acquaintances.

The prison of Alexandrovsk, Mr. Boulangier says, contains several of these singular people. Now and then, driven by hunger, a vagabond comes to the prison door and asks to be taken in.

"I have come to deliver myself up," says the vagabond.

"For what reason? Who are you?"

"I don't know."

"Don't know? What's your name?"

"I have forgotten it; it was so long ago."

"Where is your passport?"

"I have none."

"Then you are a brodiaga—a vagabond; you have escaped from prison. What crime were you in for?"

"I have forgotten."

Nothing more definite can be got out of him. Sometimes these vagabond exiles accuse themselves of crimes that they have not committed, in order to make interesting journeys at the expense of the government. Frequently their imposture is detected after they have been transported long distances, but who they really are the authorities seldom ascertain. They are kept under surveillance, and M. Boulangier is of the opinion that they sometimes really forget what their names are.—Youth's Companion.

The Land of Scott.

The chief impression a stranger is likely to get from his first visit to Scotland is that it was discovered, if not created, by Walter Scott. Wherever he goes, whatever he sees, Highland and Lowland, lake and stream, gray ruin, and green glen, that potent spirit is lord and master of all. There is nothing quite like it, I think, elsewhere; no other land on which the genius of one man has written his name so deep. Greece still cherishes the memory of Byron, and few Englishmen, at least, who travel those haunted shores are likely to forget that he owed to them his best poetry and gave them in return his life. But Byron's is, after all, but one of the many memories that throng that marvelous land. In Scotland all seems Scott. There Nature and Man, the Present and the Past, all seem to speak to us with his voice, and take the most part of their beauty and their glory from him. The Bruce and the Douglas, Cavalier and Covenanter, noble and moss trooper—they start from their graves at every turn to the call of the Great Magician.

The mighty minstrel breathes no longer,
'Mid moldering ruins low he lies;

yet surely of few men are the old words so true—he being dead yet speaketh.—Macmillan's Magazine.

ARSENIC AND AMMONIA.

Remarkable Contrast in the Effect of Two Poisons on the Complexion.

The slow absorption of many poisons changes in some more or less modified form the complexion, but arsenic and ammonia show their effect about as quickly as any. The popular belief that arsenic clears the complexion has led many silly women to kill themselves with it in small, continued doses.

It produces a waxy, ivory-like appearance of the skin during a certain stage of the poisoning, but its terrible after effects have become too well known to make it of common use as a cosmetic.

The effects of ammonia upon the complexion are directly the opposite to that of arsenic. The first symptom of ammonia poisoning which appears among those who work in ammonia factories is a discoloration of the skin of the nose and forehead. This gradually extends over the face until the complexion has a stained, blotched, and unsightly appearance. With people who take ammonia into their systems in smaller doses, as with their water or food, these striking symptoms do not appear so soon. The only effect of the poison that is visible for a time is a general unwholesomeness and sallowness of the complexion.

Many people are slowly absorbing ammonia poison without knowing it. The use of ammonia in the manufactures has greatly increased of late, and it is unquestionably used as an adulterant in certain food preparations. Official analysis have plainly shown its use even in such cheap articles of every day consumption as baking powders. The continued absorption of ammonia in even minute quantities as an adulterant in food is injurious not merely from its effect upon the complexion, but because it destroys the coating of the stomach and causes dyspepsia and kindred evils.

Professor Long of Chicago, is authority for the statement that, if to fifty million parts of water there is one part of ammonia, the water is dangerous.

This is the season of the year when the young man goes to his funeral and pulls his gun over the fence after him.

TELEGRAPHER'S PARALYSIS.

Following is an interesting letter from W. S. Cassell, one of the managers of the Western Union Telegraph Co.:

"BLOOMINGTON, IND., Jan. 12, 1886.

I have been in the telegraph business for more than twenty years, and for the past five years have been troubled with what is called Writer's Cramp, or Telegrapher's Paralysis. At times my arm became so weak that I could not use it in sending dispatches, and had to use my left. Have spent many restless nights, the pain reaching from my hand up into my shoulder. Tried everything I could hear of, but with scarcely any relief. Having strained my left side a few weeks ago, I got one of ALLCOCK'S PLASTERS, as I usually do in such cases, and accidentally happened to see where some one had cured a weak wrist by using one of these Plasters. I got another at once and cut it in two and put one-half around my wrist. In less than two days after the pain had entirely left my wrist and arm, and in two weeks I could send nearly as well as ever. I write this hoping it will reach the eyes of others who may be afflicted as I was, as I know there are scores of them."

Sweet Mabel went out for a ride one day
On a Columbia-avenue cable car,
She stepped from the car in a backward way;
She's an angel now. "And there you are."

SERIOUS DANGER

Threatens every man, woman or child living in a region of country where fever and ague is prevalent, since the germs of malarial disease are inhaled from the air and are swallowed from the water of such a region. Medicinal safeguard is absolutely necessary to nullify this danger. As a means of fortifying and acclimating the system so as to be able to resist the malarial poison, Hostetter's Stomach Bitters is incomparably the best and the most popular. Irregularities of the stomach, liver and bowels encourage malaria; but these are speedily rectified by the Bitters. The functions of digestion and secretion are assisted by its use, and a vigorous as well as regular condition of the system promoted by it. Constitution and physique are thus defended against the inroads of malaria by this matchless preventive, which is also a certain and thorough remedy in the worst cases of intermittent and remittent fevers.

A Hint to the Authorities—The Italians should be prohibited from scattering organ peals along the pavements.

"Brown's Bronchial Troches" are excellent for the relief of Horseness or Sore Throat. They are exceedingly effective. *Sold only in boxes.* Price 25 cents.

A little man never looks so big to the world as he does when he stands on a bag of money.

The Electric Alarm Clock will ring until you get up and stop it. People who over-sleep should have one. For particulars address Imperial Jewelry Co., 26 O'Farrell St., San Francisco.

Jse Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

A New Race of Wolves.

A St. John's, Newfoundland, special to The New York Herald says: The people of this country are gradually abandoning the fishery and turning their attention to farming, to mining and to manufactures. Many thousands of acres have been brought under cultivation. Sheep raising has received a great impetus, and in every village large flocks of sheep abound. One great obstacle has now been swept away. Great numbers of dogs were kept by the people. These were not the celebrated Newfoundland breed, of which indeed pure specimens are exceedingly rare. But they were strong and hardy, and when coupled were employed by the poorer classes to draw sleds laden with timber and firewood in the settlements along the coast, or in hunting expeditions in the interior of the country.

In the summer time, in spite of stringent laws regarding precautions, they frequently destroyed valuable sheep. It was proposed to introduce the reindeer in their stead. In the meantime the retention or abolition of these dogs has been made the subject of "local option." Many localities have abolished them completely and have introduced sheep farming on a large scale. The measure, however, has produced one incidental inconvenience of a serious nature. In some cases, whether through the negligence of the police or through the fondness of the owners, dogs have been suffered to escape to the forests; the animals have become quite wild and savage and continue to hang around backwoods settlements. In spite of the efforts of the police [redacted] her and destroyed the cubs. The hunting of this new race of wolves may become a national sport, or a national business, and our legislature may find itself compelled again to provide for the prices of wolves' heads.

Two English Authors.

I reached London just too late for the annual authors' dinner, which is one of the events of the season there, and on this account, and because my time was almost entirely taken up by the law business about which I had gone over, I did not meet as many of the literary men as I should have liked to meet. I saw a good deal, however, of Edmund Gosse, who is one of the most polished and delightful of men, and has always been very kind to me. His house is a sort of center, his Sunday evenings being delightful occasions where one may meet a score of writers, sculptors and painters.

Occasionally I met him at lunch at his club, where he would get Austin Dobson, who is, like himself, in an official position in Whitehall, and obtains therefrom the substantials of life which enable him to cultivate the muses on something a little better than "oaten reed." Both Dobson and Gosse are directly in line for the laureateship when it shall fall vacant, though no one knows who will get it. I am indebted to both of them for much personal kindness. Gosse is a good sized, handsome man, of the blonde English type, with the cheeriest face and voice, and wherever he goes it grows warm and comfortable. Dobson is somewhat older. Both of them strike me as being among the most cultured men I ever met. They have English literature at their fingers' ends, and dwell in an atmosphere which is redolent of the masters.—Thomas Nelson Page

The palaces of Versailles and Trianon are closed until further notice. The ravages of vandals have become unendurable.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE KY. NEW YORK N.Y.

PATENTS FOR ALL COUNTRIES

The Leading and Oldest PATENT SOLICITOR. (Established 1862.) CHESTER W. M. SMITH Removed to 217 Sansome St., San Francisco.

Leading medical authorities state that new and improperly cured tobacco when heated in the pipe produces a rank vegetable poison.

Tobacco like liquor can only be *improved by age.*

This is the reason why "Seal of North Carolina" is the most popular brand of smoking tobacco in the United States. It is made from tobacco, at least three years old. Its rich mellow smoke has never been equalled.

Seal of North Carolina is now packed in Patent Cloth Pouches, as well as in foil.

FRAZER AXLE GREASE

Best in the World! Get the Genuine! Sold Everywhere!

THE COST IS THE SAME!

The Hartman Patent Steel Picket Fence

Costs no more than an ordinary clumsy wood picket affair that obstructs the view and will rot or fall apart in a short time. The "Hartman" Fence is artistic in design, protects the grounds without concealing them and is practically **everlasting.** *ILLUSTRATED CATALOGUE WITH PRICES AND TESTIMONIALS MAILED FREE.* Always mention this paper in writing.

THREW AWAY A CROWN.

A French Woman did this Without Knowing it.

NAPOLEON'S ATTEMPT AT LOVE MAKING.

The Young Corsican needed Money, but not a Grand-mother.

At the commencement of his career the great Napoleon fell in with an ardent revolutionist, M. Paul Francois Barras, who took a great liking to the young Corsican, and conceived the highest opinion of his abilities and of the powers which, events proved, he possessed in so remarkable a degree. But in the opinion of Barras, Napoleon's want of means was a most serious obstacle to his chance of achieving fame, and he proposes to remedy this by selecting for him a rich wife. Now, whether it was that he did not number among his acquaintances many women with the requisite dot, or whether he thought that his portege's fiery youth would be better for the restraining influence which a wife of some experience in the ways of the world would no doubt be able to exert, Barras chose for this position a woman who, though still undeniably handsome, was no longer young.

Though she was called Mlle. Montansier, she was in reality a widow, who, because she had been on the stage, had never adopted the name of her husband. She was 60 years of age, but it was said that she made herself appear to be not more than 40 by the intimate knowledge that she possessed of the secrets of the toilet table.

Barras made up his mind that it was imperative to the success of Napoleon's career that he should make this elderly lady his wife, and accordingly he set himself to work to bring about the match by impressing upon each of them the advantages that would result from it. To Napoleon he dilated upon the power that would follow the acquisition of the wealth which Mlle. Montansier could give him; to the lady he enlarged on the position that his talented young friend was bound to make for himself, and that would, of course, be shared by his wife.

For the purpose of introducing the couple to each other, he decided upon giving a supper, to which they were both invited. He so arranged matters that they were placed together at the table, and hoped that this precaution, added to the injunctions which he had given to Napoleon to behave for once in his life with some show of civility to a lady, would have the happiest result. But in this he was fated to be disappointed. Napoleon was quite the last man to rely upon in such a respect. His manners toward the fair sex were those of a costermonger, and though he could generally hold his own in a conversation with men, he was entirely without the knack of making himself interesting or agreeable to women. He felt that his place was in the camp or the field, and he was quite out of his element among the conventionalities of a salon.

Had he been inclined to woo, it would have been in a straightforward, soldier like fashion, not with the dallyings and compliments so dear to the French woman of his time. So, presently, Barras had the mortification of seeing Mlle. Montansier, her back turned to Napoleon, engaging in a lively conversation with the gentleman on the other side, while the future conqueror was making, with little pellets of bread, a plan of battle on the table before him. Hardly a word passed between the two during the remainder of the meal. Barras watched with growing annoyance the indifference of Napoleon, and felt his plans melting into thin air as he saw the evident delight with which the widow turned from him to the more entertaining companion she had found elsewhere.

Supper over, Barras drew Napoleon aside and spoke forcibly to him of the foolish way in which he was throwing away his chances. "You know," said he, "that money is everything to you; here are 1,000,000 francs, and you will not stretch out your hand to take them; a most attractive woman, and you will not show her the smallest gallantry. Mlle. Montansier has come here this evening prepared to hear a declaration from you. Strike while the iron is hot, and win the wealth that you cannot do without at one bold stroke."

"The woman is old enough to be my grandmother," said Napoleon, who was then 25 years old; "but that is no matter, for to me all women are alike. Money is what I want; and, if I cannot get it without a wife, I must take the two together. I am no coiner of pretty speeches, but before the evening is over I will say to her: 'Mademoiselle, are you willing to accept me as your husband? More than that I cannot do."

"The very kind of proposal that any woman would expect from a blunt soldier," replied Barras. "Say that, and I desire no more. You are to be envied; for, besides her wealth, mademoiselle is very handsome still."

Napoleon turned away with a gesture of impatience; but half an hour later Barras noticed, to his joy, that the two were alone together in a recess. Presently Napoleon got up and went away, and the lady beckoned to Barras with her fan. "Take away that dreadful little man," she said with a shudder; "he has bored me to death, and I only prevented him from proposing by sending him for a glass of lemonade."

"But why prevent him?" said Barras. "He will be a great man yet."

"Give myself and my money to such a little horror, such an ill-mannered boor as that!" replied mademoiselle. "Never! I would sooner take the first beggar man cut of the streets. What have I done that I should be given such a wretched evening? Don't let your"——

But at this moment she was checked by the arrival of Napoleon with the lemonade. Barras hurried away, still hoping for the best; but soon he saw at the other end of the room Bonaparte standing in the attitude in which he has so often been depicted, with his arms folded and his chin sunk upon them.

"Well, are you to be married?" he said, hastening towards his protege.

"That old actress," said Napoleon, "that female Crœsus refused me before I had opened my mouth to ask her hand. I was on the point of speaking, as I told you I should speak, when she began to inform me that her wealth was the cause of her constantly receiving offers from adventurers who cared nothing for herself; that she thanked Providence she had so far seen through some fellows, and that she was resolved to keep her independence. I was glad I had not spoken, for it gave me the opportunity of saying: 'Mademoiselle, pray persevere in that praiseworthy intention; it is one which I am sure no one will ever try to persuade you to alter.' Let her keep her millions to bait the hook for some one else; I have done with her."

And in spite of Barras' endeavors the affair ended there.

In after years Mlle. Montansier was fond of boasting that, had she chosen, she might have been empress of France and wife of the most famous man of the age. Gould she have been gifted with the faculty of foresight, no doubt she would have regarded more leniently the young man whom M. Barras wished her to marry.—Chambers' Journal.

At the Gas Office Window.

"Anything new this year for the people in the way of gas meters?" asked a subdued looking citizen at one of the windows of the gas office on Dearborn and Lake streets.

The man on the inside, whose long attention to duty at that post has made him look haughty, tried to thaw out in front of the inquiry.

"You may say," he replied, as if he were conferring a favor, "that our gas meters will run this year as usual—which is to say, all right. And let me say another thing. There has been a good deal of complaint in the year gone, at this very window, and to this very person now speaking, sir, that we have rendered bills to people for gas who were out of town and who had not lighted a burner in six weeks. They have come to us and exclaimed with air of triumph, sir, that they had us at last. A sort of ah-ha business, you know, like the villain in the first act of the play."

Then the man at the window paused, took a fresh grip on his breath and resumed:

"You may say to these deluded people that a certain amount of gas is forced through the meter, any way, and if it isn't burned it will leak, and the register marks it up just as if it were burned. So you see that the gas company is not a robber after all. Tell that to the people."

The man without gave a longing look and gasped: "Then there is no hope?"

"You can take out the meter," said the wretch inside, as he resumed his work of compounding.—Chicago Tribune.

The Best Wearing Leather.

But very few people who wear Cordovan shoes have any idea where the leather bearing that name comes from, hence the question is often asked, "What is Cordovan?"

"Cordovan," the name by which leather made from the hides of horses is now known, was first finished in Hamburg, Germany, under the name of Ross leather.

In combination with it the hide has four layers of muscular skins which, with the "shell," give to the horse the great and tremendous pulling power that makes the animal so serviceable to mankind. This "shell," if properly tanned and shaven clean of its sinewy matter—a most difficult task—makes the best wearing leather in existence, and proves the theory of old time shoemakers—that only leather of a long fiber will wear—to be a mistaken one, as the "shell" has no fiber.

In this it has a decided advantage over calfskin with its fibers; the breaking of any one throws additional strain upon the other, and a break in the leather soon follows.

Experience has demonstrated that the "shell" will wear two or three times longer than calfskin.

Cordovan possesses another great advantage in being the nearest waterproof of any leather made. The fineness of texture also permits its taking a very high polish.—St. Louis Republic.

The Indian in Literature.

Cooper is said, by Bradner Matthews, to have been the first author who introduced the red man into literature. This has been disputed, and it is alleged that "Chateaubriand, who visited the new world in the year of Cooper's birth, certainly did not neglect the noble savage." But here are some mistakes. Chateaubriand was in America in 1791, when Cooper was 2 years old. His "Atala," a tale of Indian life, appeared in 1801. Cooper's first novel appeared anonymously in 1819, and his "Last of the Mohicans" in 1826. But Thomas Campbell had introduced the Indian to English literature in his "Gertrude of Wyoming," which appeared in 1809. But Alexander Pope's lines, beginning "Lo, the poor Indian," appeared about 1732, more than fifty years before Cooper was born; and it certainly refers to the red man of America, for the poet adds that his "humbler heaven" is a place

Where slaves once more their native land behold
No fiends torment, no Christians thirst for gold.

The "Christians" here mentioned were the Spanish invaders of America.—Lowell Courier.

The Use of Letters.

It may not be generally known to the reading public how much each individual letter of the alphabet is used. D, h, n, o, c and u are in third place as regards ordinary use; t, s, a, i and r are in second place, being used a very little oftener; l and m are in fourth place, with f, g, y, v, p and b close afterward; j and k are not common, as compared to the rest; while z, q and x are used least of all. The letter e is in first place, being used far oftener than any other.—Christian at Work.

SOME ANCIENT PUZZLES.

They Seem to Have a Vigorous Immortality.

TRICKS PLAYED WITH NUMERALS.

Reviving a Conundrum That was Solved Forty Years Ago.

There are certain problems, chiefly arithmetical, endued with a vigorous immortality. No matter how often the solution is printed, or how widely an exhaustive answer is published, the question comes up again, before the ink is fairly dried, to the lips of hundreds who have not seen the reply, or who either cannot understand it or will not accept it. There are several of these which we have printed so often, but which still kept coming, that to save further time we struck off a hundred proofs of each, and mailed one to the inquirers in succession without comment. These proofs are exhausted, and we have accumulated from a score or more of correspondents the same old questions, with urgent requests for a fresh solution. We notice that The Brooklyn Eagle has been struggling with one of these. The editor who has charge of that department is very clever, and we think he is playing a little with his inquisitor.

The original question sent to us forty years ago and involving the same point submitted to The Eagle was, how to find the product of £19 19s. 11d. 3f. multiplied by itself. Of course if the parts of the pounds were stated as fractions, and the pounds as whole numbers, then 19 959-960ths could be multiplied by itself. But money of account has not two dimensions. If a table is 4 feet wide and 4 feet long, then 4x4=16 feet, and we have the number of square feet on the surface. Five times five pounds are £25, but five pounds times five pounds is unmeaning, as money does not measure itself in that fashion. Twice two children are four children, but twice children two children has no meaning. So "nineteen pounds, nineteen shillings, eleven pence, three farthings times nineteen pounds, nineteen shillings, eleven pence, three farthings." is utter nonsense.

The next puzzle on the list, and one which comes the oftenest to our desk, in some form of a problem which proposes to divide a whole sum into fractions that together did not make the dividend. The original of this in our columns was an answer to an actual case where a man in his will had devised one-third, one-fourth, one-fifth and one-sixth of his property respectively to his four children, supposing that he had thus devised the whole of his estate. The fractions mentioned only made nineteen-twentieths of a whole number. This is easily seen if they are reduced to a common denominator. One-third is twenty-sixtieths, one-fourth is fifteen-sixtieths, one-fifth is twelve-sixtieths, and one-sixth is ten-sixtieths, which together make but fifty-seven sixtieths, leaving three-sixtieths (or 1-20th) to make up the whole number.

This puzzle reappears in some form every few days the year round. It is answered on the same principle involved in the interpretation of the Arab's will. He had fifteen horses and four sons. He devised his estate, giving one son a half, another a quarter, another an eighth and the last a sixteenth. They found it impossible to agree on a division. The eldest son insisted that as seven horses would not be half of fifteen he should have eight; but the other sons objected, and as neither one-half, one-fourth, one-eighth nor one-sixteenth would give either son an even lot they had a fierce dispute over the division. A venerable sheik rode up just as the quarrel was at its height, and to compose their differences dismounted and generously offered to add his mare to the fifteen belonging to the estate, agreeing that each should take his allotted share from the whole sixteen, only stipulating that his should be the last selected. The addition made an easy solution of the difficulty. The first then took eight as his half of the sixteen, the next took four for his quarter, the third took two for his eighth, and the fourth took one for his sixteenth. As this made but fifteen the sheik mounted his mare and rode away. The Arab boys regarded it as a miracle, and exclaimed that Allah had given a horse to the sheik for his generous interference. In spite of this oft told tale the problem still survives and annually puzzles hundreds of our countrymen.

A more recent problem which we have already answered several times, but which is repeated every week from some quarter, is the division of one fraction by another. The original question which we answered several years ago was: "What is the quotient of two-thirds divided by one-half?" The unthinking person would say that as the half of two-thirds is one-third, this must be the solution of the problem, but Daboll will easily refute it. The quotient of 2-3 divided by ½ is 1 1-3; that is, ½ will go in 2-3 one and one-third times. The last form of the problem, received as we write this, is to find the quotient of 1 divided by ¼, two partners in a leading banking house, having disputed, as they say, all one day over the result, the senior maintaining that 1 divided by ¼ is ¼, and defying any one to refute it. We answer that when 1 is divided by ¼ the quotient is 2; that is, ¼ will be found two times in 1. If 6 be divided by ¼ the answer is 12; that is, there are twelve halves in six. We should beg pardon of our readers for repeating these demonstrations if it were not for the character and magnitude of the disputes which occur every day concerning them.

We have reserved for the last of the puzzles the century question, which will never be laid to rest, we believe, as long as the world stands. We printed 250 proofs of a former answer, and they have all been distributed to parties who have quarreled over it. A writer whose initials are E. E. B. asks us in a letter just to hand whether the Twentieth century begins with Jan. 1, 1900, or Jan. 1, 1901, and declares that of all whom he addressed for an answer about half took one date and half the other. There should be no question about it. This century ends with the last moment of the year 1900, and the next begins with Jan. 1, 1901.

The muddle grows out of the fixed idea which some people have that the reckoning of time begins with a cipher, and that one is counted when the hour, day, month or year has closed; whereas all the counting of time begins with one, and at the end of the first period two begins to count. Thus, when a child is born, he enters on his first day of the first month of the first year of his life. His ten years are finished, not when he enters in his tenth year, but at its close; and his hundred years are completed, not when the hundredth year is begun, but ended. When we write 1900 we have begun the last year of the century, not ended it. The centuries do not begin with 0, 100, 200, but with 1, 101, 201, and thus the Twentieth century begins with 1901 at the first moment of that year. The quoted date comes with the beginning, not the close of the twelve months; and therefore, while we quote the year 1900 as we do every other year at its beginning, we must wait till it ends to close the century.—Journal of Commerce.

Fighting Parson.

During the Eighteenth century Presbyterian ministers settled among the people of northern Scotland needed to be men of great strength, piety and zeal. The Rev. Eneas Sage, whose story is told in "Parish Life in the North of Scotland," belonged to the order of muscular Christians, being more than six feet in height and stout in proportion.

A year or two after he had become minister of Lochearean, he announced one Sunday his intention of holding "a diet catechising" at the house of a dissolute man, a desperate character of great physical strength.

The minister's friends remonstrated with him, but he went to the man's house, and was ordered to go away.

"Easier said than done," answered the minister; "but you may turn me out if you can."

They were both powerful men, and neither of them hesitated to put upon the other his ponderous strength. After a short but fierce struggle, the minister became the victor, and the landlord, prostrated upon his own floor, was with a rope coiled round his arms and feet bound over to keep the peace.

The people of the district were then called in, and the minister proceeded seriously to discharge the duty of catechising them. When that was finished, he set himself to deal with the delinquent present. The man was solemnly rebuked, and the minister so moved his conscience that he afterwards became a decided Christian.—Youth's Companion.

Early Use of Soap.

More than 2,000 years ago the Gauls were combining the ashes of the beech tree with goat's fat and making soap. When Marius Claudius Marcellus was hastening southward over the Flaminian way, laden with spoils wrested from the hands of Viridomar, the Gallic king lying dead by the banks of the Po, his followers were bringing with them a knowledge of the method of making soap. The awful rain of burning ashes which fell upon Pompeii in 79 buried (with palaces and statues) the humble shop of a soapmaker, and in several other cities of Italy the business had even then a footing. In the Eighth century there were many soap manufactories in Italy and Spain, and fifty years later the Phœnicians carried the business into France, and established the first factories in Marseilles. Prior to the invention of soap, fullers' earth was largely used for cleansing purposes, and the juice of certain plants served a similar purpose. The earth was spread upon cloth, stamped in with the feet, and subsequently removed by scouring. It was also used in baths, and as late even as the Eighteenth century was employed by the Romans in that way.—Exchange.

Ericsson's Home Life.

Wealth was unknown to the Ericsson family, and Swedish country living at that time was plainness itself; but love abounded, and the mother's cheerful temper, with the father's good humor and generous disposition, assured the blessings of a harmonious and happy home. Caroline was a child of unusual beauty, Nils was spirited and engaging, and the baby, John, a wonder to all. As a child John was busy the day long, drawing, boring and cutting. Providing himself with pencil and paper, he would, in the early morning, run to the mines, and sit there until dark, watching with deep, earnest eyes the motions of the heavy engines, copying their forms and studying into the secret of their motion. —"John Ericsson, the Engineer," by Col. W. C. Church in Scribner.

The Proper Form.

I am often asked what is the best style of dress to be worn at a morning wedding by the groom. I can only say that according to "form" in New York if the wedding occurs before noon, a double breasted Prince Albert coat, silk hat and light trousers. If after the noon hour, it is more strictly the vogue to wear a single breasted black cutaway coat and vest, dark striped trousers, and carry a black derby hat. Standing collars must be worn with either costume, a four-in-hand scarf of rich and quiet colors, gloves in harmony with the ensemble, and a bunch of white flowers as a boutonniere. The ushers and best man must be similarly attired, with the exception of a distinctive variation as to gloves and boutonniers.—Society Man in Globe-Democrat.

Vaccination on the Leg.

A French practitioner, in the course of a large number of revaccinations, was struck with the fact that the operation was far more successful when performed on the leg than when the arm was selected. Among 177 cases the percentage of failures was 45.45 on the leg, as compared with 53.84 on the arm.—Medical Circular.

CHINESE PRESENCE OF MIND.

An Instance of their Wonderful Self-Control.

TOLD BY A STUDENT OF SOCIAL SCIENCE.

The Lamp Caught Fire and Threatened to Burn the House.

"It is not along the broader lines of social life alone that we can trace race characteristics and distinctions," said a seedy looking individual in front of a Chestnut street hotel, buttoning up a well worn fall overcoat closely to his throat so as to conceal the still more worn summer coat beneath, and drawing on, with careless fastidiousness, a pair of kid gloves that were badly in need of repair. His general appearance was that of a broken down sporting man or a ward politician who had been subsisting for many months on the expectations of an appointment when the civil service law is repealed; his air was that of a millionaire just sauntering out after having enjoyed a sumptuous dinner, but, according to his own statement, he was neither.

"I am a student of social science," he said, "and nothing delights me more than to study national peculiarities and characteristics as they are revealed in the trivial occurrences of every day life.

"To illustrate, I went into a Ninth street Chinese laundry the other evening. The heathen had neglected to send my linen home. That, however, did not strike me as a race peculiarity; it is rather a class characteristic common to all laundrymen, no matter what their nationality. But something occurred while I waited that did strike me.

"It was just about dusk. The streets were crowded with people going home from work, and in the room half a dozen Chinamen were busy ironing at different tables. A coal oil lamp that hung in the bulk window had just been lighted. A good deal of oil had been spilled on the outside of the bowl in filling it, and suddenly this caught fire and blazed up, not only endangering the red curtains draped about the window, but threatening to cause an explosion of the lamp.

"A Chinaman on the far side of the room saw the flames and uttered a single exclamation to call the attention of the others. That was the only sound made by any of the Celestials, and none of them left their work except one nimble little fellow, who jumped lightly and quickly into the window.

"But the flames had been seen from the street, and instantly the room was filled with passers by, who rushed madly in, each one shouting directions at the top of his voice.

"'Throw the lamp into the street!' 'Dash water upon it!' 'Run for a policeman!' 'Strike the fire alarm!' they cried, and one excited individual yelled: 'Take a club and smash it to pieces!'

"Meanwhile the little Chinaman in the window had quickly seized a large, damp cloth from his table, and while his fellow countrymen looked calmly on amid all the confusion and hubbub he wrapped it around the burning lamp and held it there till the flames were completely smothered. Then he quietly returned to his work without stopping for a moment to discuss the occurrence, but it was several minutes before the excitement died out among the Caucasians who had crowded in and they were ready to depart.

"Now this difference of behavior in the face of danger and amid exciting circumstances does certainly indicate a fundamental and characteristic difference between the oriental and the occidental races. You may say that the conduct of the Chinamen resulted merely from oriental apathy, or you may attribute it to the fatalistic habits of thought engendered by eastern religions, or you may say that the occurrence furnished a confirmation of Herbert Spencer's theory that hurry and overwork have resulted in a condition of nervous instability among all the races of the west. But whatever you attribute it to, I tell you the Chinaman's method of action is the best when you have to deal with a coal oil lamp that is about exploding.

"You couldn't lend me a dime, could you, to pay my car fare? I want to get to Richmond, where I am announced to lecture before a conclave of the Theosophical society." — Philadelphia Inquirer.

Beginning of a Great Industry.

An old woman, feeding her hens with prudent care, is said to have made the beginnings of the great menhaden industry in Maine. Her name was Bartlett, and about half a century ago, down in Blue Hill bay, she was one day boiling some menhaden for her hens, when she found a quantity of oil rising to the top of the water in the pot. She skimmed it off, bottled it up, and, with unusual enterprise, got aboard the old sloop that plied between Boston and the east coast, and took the strange oil among the dealers of the "Hub." A man named E. E. Phillips examined it, and offered to buy all she could bring him. She went home happy, and all summer the old gentleman Bartlett fished and the old lady fried out the oil. In the autumn they had enough oil to bring them in several hundred dollars. This was the beginning of an industry that yields some years fifty thousand barrels of oil, and is second only to the whale fishery.—Boston Letter.

Saccharine is regarded by a French writer as a valuable antiseptic. A strength of 1 to 500 as an addition to mucilaginous and other solutions prevents the formation of low organisms. Thus a valuable, inexpensive dentifrice may be prepared by simply dissolving saccharine in water to the proportion of 6 per cent. A teaspoonful of this in a half pint of water forms an admirable antiseptic mouth wash. In cases of malignant or other diseases of the stomach, requiring the washing out of that organ, a solution of saccharine of the strength of 2 per cent. will be found very suitable.—New York Telegram.

The Chinese Puzzle.

Imagine a language devoid of grammar or syntax; unhampered by declensions, moods, tenses or inflections of any kind; essentially monosyllabic; in which the slightest change of pitch in the voice completely modifies the sentence; subject to no rules of logic or construction; a language petrified into solid blocks and representing human thoughts as a mosaic represents a picture; a language in which every sentence is a puzzle even to the sons of the country; a language which once written can no longer be read, but must be scanned—and even then you have imagined but a few of the characteristic peculiarities of Chinese.

It has often been said, it is still said today, that the Chinese speak after the fashion of children, directly, straight to the point, with an energy of expression, a directness of purpose, and a natural logic devoid of the artificiality of occidental tongues. As an example of this child like simplicity, which we may be pardoned for thinking peculiar, let us take the following sentence. A Chinaman says to us:

"To have—one—(numerical particle)—widow—wife—he—to be—religion—friend—house—within—necessary—to use—all—to have—although—forsooth—not—to count—rich—noble—to arrive—bottom—to pass—to obtain—day—product."

We see at once that in his simple, straightforward way he meant to say:

"There lived a Christian widow who possessed all that she needed; though not rich, she had enough to live upon."

If brevity be the soul of wit, our children of today have certainly improved upon the Chinese rendering, though how they might have expressed themselves fifty or sixty centuries ago, when the Chinese language was being invented, we have of course no means of knowing. If the parents of that time at all resembled those of today, they would have allowed the children to prattle on unheeded until they knew better, or sent them to bed—or— Well, whoever was right, somebody was wrong. So much for the vaunted simplicity of Chinese.—Harper's Magazine.

They Got the Scent.

There is a miserly old lady living in Oshkosh who, it is believed, judging from circumstances, has chests and chests of gold secreted in her house somewhere. She is so penurious and hates to part with her money so bad, that when she is compelled from absolute necessity to buy the necessaries of life she walks to the store farthest from her house so that she can keep in her possession the money that must be spent for food a little longer, and pays for her purchase with more reluctance than Isaac of York could command while parting with his gold.

It is told of this old lady that one day, while counting over some money, a five cent piece dropped in a big wood box filled with wood, shavings, etc. She searched for an hour in vain, and was almost distracted by the loss, when a bright thought struck her. She would have a couple of little boys, who were playing near the house, seek it. Accordingly she called them in and told them if they would find the money which had dropped in the wood box she would give them each a cent. The youngsters, eager to earn the price of a stick of candy, went willingly to work, and after hunting for about two hours, gave a howl of delight when they discovered the missing coin.

The old woman eagerly snatched it from them and, after carefully depositing it in her pocket book, called them dear little children and said they well earned their reward. She then went into another room, brought out a bottle that had once been filled with perfume, and gave each one of the boys a scent of the lingering odor, after which she called them dear little darlings again and told them to run away now and play. The little fellows were so overwhelmed with gratitude at the old lady's munificence that they kindly thanked her in their abstraction.—Oshkosh Times.

Electric Lights and the Eyes.

The men who made the electric light the indispensable thing to us that it is today must go a step further and invent some means of softening it, or we will become a nation of blind people in a few more generations. No eye can sustain the glare of the electric light that now meets the gaze everywhere. It is ruinous to the sight and induces paralysis of the eye. Any defect in the eye is readily transmitted to children, and we can easily see what weak and unhealthy eyes people will have after the electric light has been at work upon several degrees of ancestors.

We are much too reckless in our use of the light, when a little caution would relieve the eye from the danger. There is no good reason why a spectator in a theatre or ball should have to look at an electric light or past one in fixing his eyes on the stage, and yet this is what he must do now and then. Nor should one read or write by the electric light, yet there are a large number of people in St. Louis and every large city who never use any other light for night work. The only light the eyes will stand healthfully is a soft lamp light, and people will have to pay in the future for giving it up contemptuously as they have done.—Physician in St. Louis Globe-Democrat.

Happiness Assured.

First Paterfamilias—Beg pardon for intruding, but the fact is your son has proposed for the hand of my daughter; and as the two families are almost strangers, you knowing nothing of my daughter and I nothing of your son, I thought it would be a sensible thing to come around and compare notes.

Second Paterfamilias—Excellent idea! Has your daughter always had everything she wanted—dresses, jewels, waiting maids, and so on?

"No. She has had to help her mother. How old was your boy before you stopped thrashing him?"

"Well, I thrashed him pretty regularly until he was nearly grown up."

"I am satisfied."

"So am I."—New York Weekly.

DELAWARE'S WHIPPING POST

What it Has Been and What it is Now.

WOMEN OFFENDERS NO LONGER WHIPPED

How the Blows Were Regulated.—Indignant Butchers.

At the last session of the legislature it was enacted "that hereafter no female convicted of any crime in this state shall be whipped or be made to stand in the pillory."

The introduction of this act revealed a fact not generally known, that women could lawfully be whipped for counterfeiting, horse stealing, burglary, arson, maiming by lying in wait and poisoning. They are liable to be put in the pillory for perjury, subornation of perjury, forgery, receiving stolen goods, assault with intent to kill, conjuration, witchcraft, fortune telling and dealing with spirits. The law had been a dead letter for many years, the last white woman having been whipped for larceny about the year 1836. The law was afterward amended to do away with the lash for white women. As late as 1870 colored women were sent to the post. At the session of the legislature in 1871 the word "white" was stricken out of the law relating to the punishment of women for larceny, and the black sisters were put on an equality with their white sisters. Now it is designed to remove all possibility of women being whipped or put in the pillory.

A gentleman who has been perfectly familiar with the operations of the whipping post for over forty years says that he has seen scores of prisoners lashed at the post, and while it is seldom now that blood is drawn, if ever, he has seen backs of prisoners that were almost cut to "a jelly." He says that the whippings became less violent when the newspapers began to report the quarterly performances at New Castle with the cat. The whippings formerly took place twice a year.

There was a great tendency upon the part of sheriffs to regulate the force of their blow entirely through prejudice for or against a man. For instance, if the sheriff was a farmer he would have but little mercy for a fellow put under the lash for horse stealing. The man who robbed a store would get off pretty well if the sheriff was a farmer. Then again, if the sheriff was a city or town man he would have no mercy on a city burglar or sneak thief. This same gentleman declares that he has seen, but many years ago, nine or ten men run back from the post with their backs all bloody. The story that blood often runs from the backs of the victims and soaks the ground is absurd. The writer has seen two or three hundred men whipped, but has never seen the blood flow. He has seen large welts on the backs of the victims, and fine drops of blood almost ready to come through, but never any blood running.

Many years ago a butcher named Stanhope was waylaid and robbed on the highway, first being shot and badly hurt. The robber was arrested and convicted and sentenced to the pillory. A number of the butchers purchased three barrels of old eggs and went to New Castle on the day of the whipping armed with eggs. After the man was placed in the pillory, which was then in the open space outside of the jail yard, the butchers began a fusillade of eggs. The poor victim was a mass of foul matter, besides being bruised by being hit in the face. The sheriff had great trouble to stop the outrage. At the next session of the legislature the post was moved inside the jail yard. There have been no incidents of the Stanhope kind since. The jail gates are always thrown open to the public on whipping days, but the best of order prevails.

The history of the post for fifty years is that the lash as a rule has been used with leniency. The whites have escaped, it has been claimed, for political reasons, the sheriff being in a position to win a vote every time he spared a man's back. There has been but little difference as to numbers between white and black victims.

There has been a great toning down of late years of the number of lashes applied. It was a frequent thing years ago to give a prisoner a cumulative sentence, and for three successive Saturdays he would receive eighty lashes. The result was, even though the blows were lightly laid on, that the victim's back would be in an awful condition. The story is told of one old black man, who, after being whipped upon three Saturdays, was sold into slavery.

He declared that he would never go south, and when his purchaser got as far as Havre de Grace the poor fellow cut his throat.

It was the rule at one time to sell colored men and women to the highest bidder after they had been whipped, and they were frequently knocked down for $1 and quickly hurried south. There is an old man now in the New Castle county almshouse who was regularly engaged in the purchase of blacks and selling them into slavery.

It is really surprising, however, how few are the real facts and incidents that those who are in a position to know can tell.

There are very few whippings in Kent and Sussex counties, so that all material for a history of the post has to be gleaned in New Castle county. Nearly every whipping has some little incident attached to it, but the story of one is the story of all.—Wilmington News.

Love, it is said, was the cause of the first ascertained bank note forgery. A young man, an engraver, sought a pretty girl in marriage. Her father would not consent to the match unless his daughter's sweetheart put down a certain sum in ready money. He put it down in notes of the Bank of England—notes forged by his own hand—and the fraud being discovered he was hanged.—Montreal Star.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY.

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 11.....1891.

It may be taken for granted that Mr. Blaine is going to break through the dense silence that has been reverberating around him for so long. Son Russell says that his pa is going to compel James to speak.

An English Earl has abused his wife and treated her as any man should be ashamed to treat any woman. She has brought an action for divorce against the fellow. But is that sufficient reason for flooding the American newspapers with columns of the disgusting details of the brutalities of the Earl, and for dishing up morning after morning all the nasty recitals of the divorce scandal?

The story of the wrecking of the fortune of Cyrus W. Field by his son is one too full of woe and distress to be the subject of extended comment. The aged American who has been so prominent and useful in the affairs of his country lies upon his dying bed as poor as when he entered the world, and his ruin is due wholly to the recklessness of the child of his heart. It is a pitiful spectacle, and so full of acute human misery that the supremest mercy to the sufferer is to withdraw from contemplation of it.

Secretary Tracy makes the excellent recommendation that a war vessel of the United States be stationed permanently in each of the large harbors of the country. Should this advice be adopted, there would be no important port undefended in case of a sudden attack by any foreign power. The people are fully alive to the need of protecting the coast, and Congress could not make a more popular appropriation than one providing liberally for increased naval strength and the effective fortification of the principal harbors.

John Howard Parnell is now on his way to Ireland with his mother, with the design to bring the warring factions to terms if possible. It is about time the unseemly divisions that have kept Ireland in a ferment for the past year were brought to a close. The cause has suffered more from these divisions and the scenes of strife they have engendered than it was in the power of Ireland's worst enemies to inflict. There seems to be a fixed determination amongst the friends of home rule in America to shut off money aid altogether until the chiefs of the factions learn how to bury the hatchet. If Charles Stewart Parnell's eldest brother goes to Ireland to use his influence in favor of reconciliation, he will doubtless be listened to, and his advice ought to carry great weight.

The fight for the speakership has been narrowed down by the withdrawal of Mr. Bynum of Indiana, a very strong man who has thrown his following to Mr. Mills of Texas. This leaves Mr. Mills, Mr. Crisp, Mr. McMillin, Mr. Springer and Mr. Hatch in the field. These are all strong men. Mr. Springer of Illinois would probably make the most ornate speaker. His district has returned him so often that that of itself ought to make him a hot favorite. He always appears on Pennsylvania avenue with a red, red rose in his button hole, and he is a good enough man and Democrat to be President. And yet the probabilities are that the prize will be gathered in by either Mr. Mills or Mr. Crisp. Both of these gentlemen are parliamentarian of exceptional ability, Democrats of standard excellence and notable politicians. The wiser choice would be Mr. Crisp, who would present no angular outlines to his party or to the people.

In reference to a rumor that the Charleston would capture the Hawaiian Islands on its return from China the Vancouver "Telegram" says: "There is no doubt at all about American designs on Hawaii. The American element there is intriguing to bring about annexation, and their schemes are looked upon favorably in the United States." It is well sometime to have doubtful questions settled by an authority from which there can be no appeal. In this country there is much doubt as to American designs upon the Hawaiian Islands. While annexation would be accepted as an alternative of the islands falling under British control, there is a general conviction that there should be a radical change in the character of the people of the islands before they should become a State in the Union. British Columbia would be a much more acceptable acquisition than the Hawaiian Islands.

The Bradlaugh Library.

Mr. Bradlaugh's daughter has published the priced catalogue of her late father's library, in the form of a substantial pamphlet. With a view to make it not merely a descriptive list of books but a memento of their original possessor, two photographic portraits are added, together with a fac similie signature. The books number in all 7,000 volumes, exclusive of pamphlets and blue books. They comprise, as his daughter says, only a few rare bindings and comparatively few costly first editions, but such as they were he valued them.

"Twice," she adds, "within recent years he thought he should be obliged to sell them to meet legal expenses. The first time it was to pay government costs during his parliamentary struggle; the second occasion was after the Peters and Kelly case. Each time the sale was happily averted, but the anticipation of the possibility brought extra lines to his face and bitterness to his heart. Last December, when he was feeling ill and in want of a rest and change, which he had no money to procure, I asked him: 'Why not sell two or three of the more valuable books? If you could get health with the money they would fetch, it would be well worth the exchange.'

"'Ah! my daughter,' he answered, with a sad half smile, 'when I have to part with my books'— I was anxious about him and ventured to press him further, but he only shook his head, saying, 'It is of no use arguing the matter.'"—London News.

Electricity and Ice Cream Poisoning.

A new experience of the danger of electricity has to be recorded. Dr. George S. Hull recently conducted some experiments with ice cream freezers, and he finds that galvanic action takes place, which results in the introduction of poisonous salts of copper and zinc into the cream. It appears that the freezer and the paddle are generally made of dissimilar metals, and the cream, especially if mixed with fruits or other acids or even saline substances, forms an electrotyte, which naturally completes the necessary conditions for galvanic action.

With galvanic action there is, of course, chemical action, resulting in the formation of salts of zinc and copper, which become mixed with the cream. Dr. Hull has probably discovered the cause of many mysterious cases of poisoning which have followed the consumption of ice cream. The remedy, however, seems very simple; if the freezer and the mixer were made of the same metal, no galvanic action could take place.—Iron.

The Longest Telegraphic Circuit.

Operator Dan Spencer, of the Buena Vista office of the Mexican Central railway, in this city, was called by the El Paso office, saying that the oldtime telegraph operators, who were having a reunion in Washington, would like to hear from their brethren and friends beyond the Rio Grande. El Paso signaled Spencer to call Kansas City which he did, and Kansas City in turn told him to call Washington, who was evidently waiting, as the reply came instantly, when Spencer sent the following message:

"T. T. Eckert and the Old Timers. The railway operators and trainmen in the land of the Montezumas send warmest greetings."

The circuit was made by way of El Paso, Kansas City, Chicago, Buffalo and New York to Washington from this city, forming the longest overland circuit in the history of the telegraph.—Mexico Cor. St. Louis Globe-Democrat.

Hysteria and Hypnotism.

At the recent meeting of the French Society of Hypnology in Paris Dr. Berillon astonished his hearers by stating that almost all children could be hypnotized except those who were idiotic or hysterical. The idea that there is any connection between hysteria and hypnotism was strongly disputed. One physician alleged that he had hypnotized sixty-nine patients out of seventy-two under his care for various diseases in a hospital, and said it was absurd to believe that so large a proportion could be hysterical.—Exchange.

How She Expressed It.

A veritable Mrs. Malaprop was encountered in a Brooklyn street car the other day. As the car neared the park her companion wondered what a large, evidently public, building seen in the distance was. "That," was the prompt reply, "is the Incurable Home for Women." Later the same woman was seated on a bench in the park when a dog following a young man along the path stopped and sniffed about near her. "Oh, call your dog," she cried in some alarm, "he's too official."

Evidently the woman was like the home.—New York Times.

A Pleasing Illusion.

Because they were more durable Mrs. Calliper had bought table knives with metal handles. She almost feared that Colonel Calliper might not like them, but the Colonel seemed rather to be pleased with them. "They are," he said, "just such knives as I have eaten with in many restaurants. To eat here at home and with a knife like this is almost as good as eating two meals at once."—New York Sun.

Raising Lobsters Artificially.

The decrease of the natural supply of lobsters has compelled scientific men to investigate their habits. Experiments, so far as they have been pursued, indicate that lobsters may be artificially reared for the market, but that they must be hatched and produced on a large scale to make the enterprise remunerative.—New York Herald.

How Egyptian Women Paint.

Loret says the ancient Egyptian women had blue hair, green eyelashes, painted teeth and reddened cheeks. He says the modern Egyptian women are much the same; they tinge their hands with henna, and prolong the eyes by means of kohol; they stain the nails brown and paint blue stars on the chin and forehead. "One hesitates a little about putting his hand into a hand—even very small—which extends itself to you painted a brick red. One is a little timid about looking too long into eyes—even very tender—when the blue star between them makes you squint." Loret, however, got bravely over his hesitation and his timidity, and thinks the fashion not altogether bad.—Popular Science Monthly.

ORDER FIXING TIME AND PLACE FOR HEARING OF APPLICATION TO MORTGAGE CERTAIN REAL ESTATE AND DIRECTING NOTICE TO BE GIVEN.

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of Ezra M. Goodale, deceased.

Thomas J. Goodale and Maggie P. Goodale, Executor and Executrix respectively of the last will and testament of Ezra M. Goodale, deceased, having filed their petition herein, duly verified, praying for an order authorizing and empowering and directing them to mortgage the south half of the south-east quarter of section 22; south-west quarter of the south west quarter of section 23 and the north-east quarter of the north east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the purposes and for the amount stated in said petition, or for such lesser amount as to the said Court may seem meet; it is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the Judge of said Superior Court on Wednesday, the 23rd day of December, 1891, at 11 o'clock a. m. of said day, at the Chambers of said Superior Court, at the Court-house, in the town of Independence, County of Inyo, State of California, then and there to show cause why an order should not be granted to the said Executor and Executrix authorizing, empowering and directing them to mortgage the real property belonging to said estate, to wit: the south half of the south east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north-east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the sum of $900.00, or such lesser amount as to the Judge of said Court shall seem meet; and for more fully appears by the said petition now on file in the Clerk's office, and to which reference is here made for further particulars.

It is further ordered that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo.

Dated November 18th, 1891.

GEO. M. OTIS,
Judge of the Superior Court.

[Endorsed.]

SUPERIOR COURT, COUNTY OF INYO.

In the Matter of the Estate of Ezra M. Goodale, deceased.

Order fixing time and place for hearing of application to mortgage certain real estate and directing notice to be given.

Filed November 19th, 1891.

J. N. YANDELL, Clerk.

Mack & Laird, Attorneys for executors.

NOTICE OF SALE OF PERSONAL PROPERTY.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court in and for the County of Inyo, State of California, made on the 18th day of November, 1891, in the matter of the Estate of John Lucas, deceased, the undersigned will sell at private sale, to the highest bidder for cash, gold coin of the United States, at any time before the 25th day of May, 1892, at the town of Lone Pine, County of Inyo, State of California, the following personal property, to wit:

Eighteen head of horses in lots to suit.

Bids or offers in writing will also be received at the office of the undersigned, in the said town of Lone Pine.

Dated November 18th, 1891.

E. H. EDWARDS,
Administrator of the Estate of John Lucas, deceased.

ASSESSMENT NOTICE
STEVENS DITCH COMPANY.

Location of principal place of business, Independence, California. Location of Ditch, near Independence.

NOTICE IS HEREBY GIVEN THAT AT a meeting of the Board of Directors, held the 26th day of Sept. 1891, an assessment (No. 7) of Forty (30) Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company in Independence, Cal.

Any stock upon which this assessment shall remain unpaid on Saturday the 28th day of Nov. will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on SATURDAY, the 26th day December, 1891, to pay the delinquent assessment together with costs of advertising and expenses of sale.

By order of the Board of Directors.

P. H. MACK, Secretary.

The date of delinquency of the above assessment is hereby extended till December 28th, 1891, and the date of sale of delinquent stock to January 27th, 1892.

By order of the Board of Directors.

P. H. MACK, Secretary.

Estate of F. Paderes, deceased—Filed order fixing time and place for hearing petition for sale of real estate.

BORN.

LAWRENCE—At Corna, Dec. 7, 1891, to Mr. and Mrs. Frank Lawrence, a daughter.

Cold and stormy weather has ruled for a week past.

Jas. Saely has returned from a trip to San Francisco.

Dom Pedro, ex Emperor of Brazil, died at Paris last Friday.

E. H. Edwards of Lone Pine is visiting friends at San Francisco.

O. I. Mairs reached Bakersfield all right with the Indian witnesses.

Regular meeting of Inyo Lodge 221, F. and A. M. at Independence to morrow night.

S. G. Sneden Esq. was down from Bishop during the week on business in the Superior Court.

It is reported that the Band Boys will give a sheet and pillow case party during the holidays.

The Pacific Coast is short on beef cattle, and there is hope of better prices before the winter closes.

The shutdown on the mines and mills at Candelaria has thrown at least 350 men out of employment.

There are over one hundred names on the assessment roll of parties who allowed their taxes to go delinquent.

If you want to buy a four-stamp quartz mill on very reasonable terms address W. H. Russell, Benton, Cals.

Mrs. Jas. A. McKenzie of Darwin and Mrs. Jas. R. Moffitt of Lone Pine started for San Francisco on Tuesday.

See the notice published this week of sale of personal property belonging to the late Judge Hannah to take place at Independence next Friday.

L. McLain came down from Bishop early in the week, and work on the Hillside Company's improvements will be discontinued until the cold weather is over.

Surveyor M. Knight and wife came down from Bishop on Wednesday's train. Mr. M. Knight is engaged in work under the Eastside canal that will occupy him for several days.

Rev. Dr. Van Deventer delivered a very interesting lecture at the M. E. Church on Tuesday evening, the subject being "How To Be Happy." The doctor was listened to attentively by quite a large congregation.

The criminal suit against John White prosecuted by the *Call* Publishing Company came to an end last week and White was not convicted, the jury standing eight to four. It is not likely that the case will again be tried.

The Democratic members of the House of Representatives held a caucus last Saturday to agree on a candidate for Speaker. Eleven ballots were taken without a choice. Crisp received 95 votes and Mills 91. Ex-Speaker Reed will receive the Republican complimentary vote.

A team belonging to Billy Boyd ran away last Monday and on reaching Baxter's place collided with a wagon in which were Mr. Walter of Camp Independence and Mrs. McGann. The parties were thrown out but luckily received no injury. No material damage was done to either wagon.

SUICIDE IN GOLD HILL.

P. J. Fields Shoots Himself Through The Heart. His Death Essays Aim at Immediately. Domestic Troubles Said To Be The Cause.

On last Sunday evening the communities of Virginia and Gold Hill were shocked by the news that P. J. Field, a young man well known in both places, had committed suicide by shooting himself through the heart with a pistol. The suicide occurred in the ticket and telegraph office at the Gold Hill depot at about a quarter to 5 o'clock. The circumstances of the affair are about as follow: Field was a telegraph operator by profession, and was frequently left in charge of the railroad office when Mr. Coffin, the company operator, was out to his meals. He was therefore familiar with the place, and spent considerable of his time there, not being employed regularly any place else. On Sunday evening Coffin was out when he entered the office. The only occupants of the room were George Ardery, a Baldwin switchman, and Manuel Francis, the railroad yard watchman. These men were sitting by the stove in the south west corner of the room outside of the counter, running east and west, which separates the room in two. Upon entering the office Field walked up to the stove where the men were and turned his back to it. While he was standing there the watchman spoke to him, but he did not answer, and presently walked around behind the counter, took a pistol out of a drawer in the office desk, placed it to his breast and fired the shot which caused his death. His aim was very deadly and effective, the pistol ballet passing through his body a little above the heart. Upon firing the shot he fell to the floor, and was found lying on his side in the throes of death by Ardery and Francis and the many people attracted to the office by the report of the pistol. He never spoke after the deed, dying within ten or twelve minutes after its commission. Ardery and Francis were prevented from seeing him commit the deed by cases of pigeon holes which occupy part of the counter. The bullet passed clear through his body, and slightly penetrated the wall behind him. The weapon used was a Smith & Wesson, 32 caliber.

The young man had lived a long time on the Divide and in Gold Hill, where he had many friends and acquaintances, and was living with his mother, two brothers and a sister on the Divide at the time of his death. His taking off by his own hand is much to be deplored, and and much sympathy is expressed for the bereaved relatives.

Deceased was a native of Bangor, Maine, and was 30 years, 3 months and 15 days of age. He was a member of the Emmet and Story Lodge, No. 3, A. O. U. W., in which latter order he was insured in favor of his mother for $2,000.

At the request held to inquire into the cause of his death yesterday by Justice Cook, Deputy County Coroner for Gold Hill, at that place, the verdict was rendered by the jury that he came to his death by a ball fired from a pistol held in his own hand, and penetrating his body just over the heart, causing immediate death, and, as it appears, with suicidal intent.

The funeral will take place today at 2 o'clock from the residence of his mother on the Divide under the auspices of the A. O. U. W.—*Enterprise.*

Meteorological Summary.

Following is the report of the Weather Bureau Station at Keeler for the month of November, 1891.

Mean barometer 30 048
Highest barometer 30 2 8
Lowest barometer ..... 29 [illegible]
Mean temperature 54 2
Highest temperature, 4th ..... 73.
Lowest temperature, 15 h ..... 35.
Greatest daily range temperature, 21, 29.
Least daily range temperature, 30th, 14.
Prevailing direction of wind, East.
Total movement of wind, 3169 miles.
Extreme velocity of wind, direction and date, 39 miles N. on 23 d.
Total precipitation, 0.00 inches.
Number of days on which .01 inch or more of precipitation fell, 0.
Number of clouds less days 19
Partly cloudy days 1
Cloudy days 10
Light frost on 15 h, first of the season.

H. E. WILKINSON,
Weather Bureau, Observer.

The *Chloride Bell* commenting on the recent closing down of the Holmes Mill and Mining Company, says that it is not probable that work will be resumed before Spring in either properties, and no certainty of its being done then. Upwards of 400 men find themselves thrown out of employment at the beginning of winter. Among this number are undoubtedly many who have not laid by for a rainy day, and these together with their families will experience sorrow and privation during the long dreary season that is to follow.

The school entertainment at Mairs' Hall last Saturday evening was a most decided success, both in point of attendance and in the merit of the performance "The Last Loaf" was rendered in an artistic manner, the characters being represented in a most natural manner. The farce was laughable and afforded much amusement. A handsome sum was obtained for the school organ fund and another entertainment as successful as this will complete the amount required.

Lone Pine is to vote on the question of raising bonds to the amount of $7,000 for the purpose of building a new school house on Saturday, January 2nd. The number of pupils in the Lone Pine District have increased to such an extent that a new building is an imperative necessity, and it is altogether likely that the election may result favorably.

A telegram to the *Examiner* last Saturday stated that Patsy Fields had committed suicide at Angel Hill and gave family troubles as the cause. It will be remembered that Fields was station agent and telegraph operator at Independence station and was married at Citrus seven years ago this coming Christmas. After leaving here he began drinking heavily and his death by suicide was the result.

The latest advices are to the effect that Mr. Crisp was elected Speaker of the House on the 30th caucus ballot. He received 119 votes, Mills 105, Springer 4 and Stevens 1. Crisp represents the spirit of Democracy most favorable to the West, being a silver man and not radical on the tariff question.

"Of course it hurts, but you must grin and bear it," is the old time consolation given to people troubled with rheumatism. "If you will take the trouble to dampen a piece of flannel with Chamberlain's Pain Balm and bind it over the seat of pain your rheumatism will disappear," is the modern and much more satisfactory advice. 50 cent bottles for sale by

A. K. EUGLEY,
Big Pine.

Our readers will notice the advertisements in these columns of Chamberlain & Co., Des Moines, Iowa. From personal experience we can say that Chamberlain's Cough Remedy has broken up bad colds for our children and we are acquainted with many mothers in Centerville who would not be without it in the house for a good many times its cost and are recommending it everyday.—*Centerville* (S. D.) *Choice and Index.* 50 cent and $1 bottles for sale by

A. K. EUGLEY,
Big Pine.

We want every mother to know that croup can be prevented. True croup never appears without a warning. The first symptom is hoarseness; then the child appears to have taken a cold, or a cold may have accompanied the hoarseness from the start. After that a peculiar rough cough is developed, which is followed by the croup. The time to act is when the child first becomes hoarse; a few doses of Chamberlain's Cough Remedy will prevent the attack. Even after a rough cough has appeared the disease may be prevented by using this remedy as directed. It has never been known to fail. 50 cent and $1 bottles for sale by

A. K. EUGLEY
Big Pine.

EXECUTOR'S SALE OF PERSONAL PROPERTY.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, State of California, made on the 7th day of December 1891 in the matter of the estate of John Allen Hannah, deceased, the undersigned Executor of the last will and testament of said deceased, will sell, at public auction, to the highest bidder, for cash, on

FRIDAY, THE 18TH DAY OF DECEMBER, 1891, at one o'clock p. m., at the late residence of the said John Allen Hannah, deceased, in the town of Independence, in said Inyo county the following personal property, to wit:

Two horses.
One buggy and harness.
One shovel.
About three and one-half tons of corn.
Ten tons of hay.
One cider mill.
One three cord of wood.
One bundle of pickets.
One bedroom set and bedding.
Two carpets.
One organ.
One lounge.
One desk.
One half dozen chairs.
One Rocking chair.
One extension table.
One pantry caste.
One kitchen range and fixtures.
One parlor stove and pipe.
Library of about 150 volumes.
One sack clover seed.
One lamp.
One lamp stand.
One spraying pump.
One well pump.
One Sharps rifle.
One pistol.
200 shares of the capital stock of the Independence Water Co.
About five hundred rooted grape vines.

W. L. HUNTER.
Executor of the last Will and Testament of John Allen Hannah, deceased.
Dated December 7th, 1891.

ORDER FIXING TIME AND PLACE FOR HEARING PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Francisco Paderes deceased.

IT APPEARING TO THE JUDGE OF SAID Court by the petition this day presented and filed by Yrenia Abeuchuco, the Administratrix of the estate of Francisco Paderes, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the estate, and the debts, expenses and charges of administration.

It is therefore ordered by the Judge of said Court, that all persons interested in the said deceased, appear before the Superior Court on Saturday, the 9th day of January 1892 at eleven o'clock in the forenoon of said day, at the court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administratrix to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

Dated December 11th, 1891.

GEO. M. GILL,
Judge of the Superior Court.

[ENDORSED.]

A BIG BUSINESS.

The growth and present size of the great retail business of Weinstock, Lubin, & Co., Sacramento, shows on the face that it possesses *a distinct character* of its own. It has done much to introduce many important reforms in storekeeping, which have been widely copied. There are people who have never heard of the big establishment, but who, through its silent influence, are being served by local dealers better than they otherwise would be.

It has done more than any other ten stores to give the "One Price System" firm and substantial footing on the Pacific Coast.

It has shown people living in small towns that they can deal through the mails with as much security as if they bought in person.

It has, by constantly raising its own standard of qualities, had an influence in raising the standard everywhere. The average grade of goods kept upon the Coast grows better each year.

It has been prominent in bringing west as stylish and desirable goods as are kept by merchants in New York, Philadelphia, or Chicago. Indeed, the manufacturers who supply them supply it. The goods are the same; and the Sacramento prices, while never higher, are sometimes considerably less. This is explained by the fact that the cost of conducting business in large Eastern cities is far greater than in the Capital City, the extra expense of overland freight being but a comparatively small item.

It has made it possible for out-of-town people to enjoy quite as satisfactory shopping facilities as do those living in large cities.

There is no desire on the part of the firm to take any special credit for whatever influence for good the house may have exerted. They have sought simply to build up a business on fair and just principles; to buy and sell as low as they can; to deal as far as possible only in the very best goods; and neither to fear nor favor any one, but to treat every customer as they would their most favored friend.

Whatever of success has come, they attribute it to the faithful carrying out of these aims and principles.

A large illustrated catalogue, giving full information about goods and prices, how to order, etc., sent free to any address.

PROTECT OUR BREAD.

The machinery of the law has not been put to work too speedily against the fraudulent use of ammonia and alum in Baking Powders. Both health and the pocket of the people are demanding protection. The legislatures of New York, Illinois and Minnesota have taken this matter of adulteration up, and especially that of Baking Powders. It will be in the interest of public health when their sale is made a misdemeanor in every State in the UNION, and the penalties of the law are rigidly enforced. There is no article of human food more wickedly adulterated than that of Baking Powder.

Dr. Price's Cream Baking Powder is the only pure cream of tartar powder having a general sale that is free from ammonia, alum or taint of any kind of impurity. It makes the sweetest and lightest bread, biscuit and cake that are perfectly digestible whether hot or cold. It costs more to manufacture Dr. Price's than any other baking powder. It is superior to every other known and the standard for forty years.

Dr. Price's Cream Baking Powder is reported by all authorities as free from Ammonia, Alum, or any other adulterant. In fact, the purity of this ideal powder has never been questioned.

In the Restaurant—Mr. Feeder—What's that awful thumping out there? Waiter—Dat's de cook. Yo' ordered tenderloin steak, didn't yo' sah?

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

ST. JACOBS OIL.

T. C. DODD.

"ALL RIGHT! ST. JACOBS OIL DID IT."

"German Syrup"

The majority of well-read physicians now believe that Consumption is a germ disease. In other words, instead of being in the constitution itself it is caused by innumerable small creatures living in the lungs having no business there and eating them away as caterpillars do the leaves of trees. The phlegm that is coughed up is those parts of the lungs which have been gnawed off and destroyed. These little bacilli, as the germs are called, are too small to be seen with the naked eye, but they are very much alive just the same, and enter the body in our food, in the air we breathe, and through the pores of the skin. Thence they get into the blood and finally arrive at the lungs where they fasten and increase with frightful rapidity. Then German Syrup comes in, loosens them, kills them, expells them, heals the places they leave, and so nourish and soothe that, in a short time consumptives become germ-proof and well.

A Germ Disease.

If you are willing to pay a few cents more for a strictly Pure Tobacco, try Mastiff Cut Plug. It is worth all the difference. Packed in patent canvas pouches.

J. B. Pace Tobacco Co., Richmond, Virginia.

Useless Adjectives.

I was standing near a group of gay girls—buds of the season—when I heard one of them exclaim rapturously, "Isn't he a darling?" and the response of her friend, "Too sweet for anything," and I wondered a little who the subject of their conversation might be. They were buying dress goods, which they severally described as "perfectly lovely;" and at last I discovered that the "darling" was none other than a man dressmaker, a horrid thing who keeps you standing an hour at a time while he measures and pins in order to give you what he calls "feets." And I wonder what these girl gushers will do for adjectives when they are engaged or married.

I do know one young wife who calls her husband "Darl," an abbreviation she coined herself, while he thinks her chummy enough to be dubbed "Phil," because when he popped the question to her she sneezed just as "Phillis" did in the book of that name. Now, I would advise the "buds" to keep their perfectly-lovely-too-sweet-for-anything nomenclature for the rose colored atmosphere of the honeymoon. I wouldn't use it all up then, but save a lot of it to sweeten the years that are coming, and I would speak crisp, clear, common sense English, pure and undefiled by any admixture of the slang of affection, which men very properly designate as gush. — Detroit Free Press.

The Dotlet on the Veil.

It is not such wretched taste, perhaps, as the long skirt, but it is ridiculous all the same, the black "beauty spot" on the veil. Why is it there? Simply to say to the earnest spectator on the street: "Look at me. I am placed here to draw your attention to my mistress' pretty mouth or shapely nose. I am not a bit of courtplaster, but I look like one and answer the purpose." It is almost incredible that women whose modesty is beyond reproach can so plainly advertise their personal charms on the streets.

When any article of a man's attire is designedly conspicuous he confesses to the weakness of vanity or the misfortune of bad breeding, and difficult and distasteful as it would be to apply the same rule to the sex, it is impossible to find a valid reason for not doing so. The restrictions are fewer for women, of course, in the selection of street dress, and in the matter of color and cut, indeed, her freedom of choice is limited only by the decrees of fashion and the dictates of good taste; but when fashion leaps the boundaries of common sense and decency, as she has a scurvy trick of doing often enough, the woman of character and modesty revolts. That is exactly why the miserable dotlet on the veil should be abolished.—Philadelphia Press.

Woman's Rights in Austria.

Austrian women seem suddenly alive to their "rights." A large and enthusiastic meeting was held in Vienna, at which no man was present excepting the government commissary, whose presence is necessary at all public meetings. A spirited debate evolved the following resolution to be forwarded to the reichsrath:

"The women of lower Austria demand that parliament shall introduce such modifications into the existing administrative and constitutional laws as will insure the following measures:

"First—That the middle and lower schools be opened gratuitously to women, and that the number of professions accessible for women be increased.

"Second—That women be allowed to take part in political affairs; that all Austrian subjects of age and in the enjoyment of their rights as such, without consideration for the amount of taxes they pay and regardless of their position or sex, shall be entitled to equal and direct parliamentary suffrage."

The meeting was attended by literary women, governesses, tradeswomen and working girls.—Paris Letter.

An Actor's Coincidence.

The following instance may be regarded by the superstitious as sufficient warning against all jests on such a grim subject as grim death. It is related by Bolton, the English actor and author. Sim Reeves, the famous tenor, was once playing Squire in the "Mother Goose" pantomime, and at the very moment he was walking off the stage singing,

My wife is dead, there let her lie,
She's at rest and so am I,

a man tapped him hurriedly on the shoulder and whispered, "Sorry to tell you, Mr. Reeves, that Mrs. Reeves is dead. Mrs. Balyntyne directs me to tell you to come home immediately." Reeves was completely prostrated by the suddenness of the announcement, and was first to notice the odd coincidence that connected the little wayward song with his wife's death.—St. Louis Republic.

Abraham's Oak.

The old oak at Mamre in Syria, or, as it is known everywhere, "Abraham's Oak," is one of the most famous and venerable trees in the world. It is reverenced alike by Jew, Christian and Mahometan, for it is supposed to mark the spot where the patriarch pitched his tent in the desert. There is a superstition in Jerusalem, and in all the country about, that whoever shall cut or injure this tree will lose his first born son. So for centuries it has been allowed to toss its gnarled and contorted limbs in the gales which sweep from the Mediterranean over the Syrian plains.

This tree was visited by Sir Joseph Hooker in the autumn of 1860, and in his paper upon Syrian oaks, read the following year before the Linnaean society (Transactions, xxiii), he gave a description of it and a portrait drawn by his own hand.

Abraham's Oak was found to belong to Quercus pseudo-coccifera, which, to quote from Sir Joseph's paper, "is by far the most abundant tree throughout Syria, covering the rocky hills, of Palestine especially, with a dense brushwood of trees eight to twelve feet high, branching from the base, thickly covered with small evergreen rigid leaves, and bearing acorns copiously. On Mount Carmel it forms nine-tenths of the shrubbery vegetation, and it is almost equally abundant on the west flanks of the Antilebanon and many slopes and valleys of Lebanon. Owing to the indiscriminate destruction of the forests in Syria, this oak rarely attains its full size." The circumference of the trunk of "Abraham's Oak" is given as 23 feet, and the diameter of the spread of the branches as 90 feet.

Quercus pseudo-coccifera is an evergreen species, with the general appearance of the Ilex, of southern Europe, and closely related, botanically, to Quercus coccifera, a common and widely distributed scrub oak of southern Europe and of Algeria; indeed, Hooker was of the opinion that the two plants were merely geographical varieties of the same species.—Garden and Forest.

Shooting Canvasback.

"The only proper way to kill canvasback ducks is to shoot them on the wing as they fly over you. If you are a muff you will have lots of sport, and will not hurt the ducks. You will blaze away at them as they fly toward you, which is precisely what I, as a lover of the species, would best like you to do, unless you are generous and are disposed to divide your bag. So long as you shoot them in this way only a rare accident will enable you to do any harm to the beautiful creatures. They wear a breastplate of feathers which is practically impervious to shot. If you are a sportsman you will let them fly over, and shoot them as they recede.

"The fact that the ducks fly high and are very swift of wing renders it difficult to kill them on the wing at all, and as very few men are really good shots, resort is had by the majority to such 'blind' shooting as is permitted. Batteries are, of course, forbidden, and so are sneak boxes and the like. But it is permitted to the half skilled sportsmen to build blinds of reeds along the shore and to shoot from behind them when the ducks approach within range. In this sort of shooting very little harm would be done but for the fact that the canvasback is beset with a curiosity surpassing that of women.

"If he sees anything in motion on the shore which he does not understand, no consideration or prudence will restrain him from paddling at once towards it, regardless of all danger, and the duck shooters take advantage of this by training little dogs to run about in a frisky, absurd fashion in front of the 'blinds' when ducks are in sight. As soon as the ducks see what is going on the whole flock makes for the shore, and the sportsmen can shoot at what range they will. —Philadelphia Record.

A Milky Way.

I learned the other day that the big milk supply companies of the city found it necessary to exercise a surveillance over their drivers, but it has been already reduced to an elaborate system. An experienced and dishonest driver can start out with fifty gallons of milk inspected pure at the depot, and from the supply deliver sixty-five gallons, the fifteen gallons accruing to his own profit, and being secured by judicious watering at various points on the route. Before the discovery of this practice some of the drivers had a regular run of customers of whom their employers knew nothing. The companies' inspectors now go about the city at random, and, following a delivery of milk, as soon as the driver is gone subject it to an inspection with the lactometer. If it has been watered that driver is discharged, and, by an agreement with the other dairy companies, he cannot enter the employ of any of them. —Interview in St. Louis Globe-Democrat.

History of the Rat.

No, not the slang phrase, but the bothersome little rodent. Rats are natives of Asia and their raids westward belong to comparatively modern times. The little animal was unknown in ancient Europe. The black rat first came to Europe from Asia in the Sixteenth century, and about the beginning of the Seventeenth or the ending of the Sixteenth century he arrived in America. This black rat was the common house rat until the brown or gray rat made his appearance in 1775. The gray rat came to Europe from India by way of Russia, and is now known as the Norway rat from a mistaken tradition that it came from Norway to England, and from the latter country to America.—St. Louis Republic.

Mrs. Hobson's Choice.

Mrs. Hobson—I wish I had something to read. Did you get only one Sunday paper?

Mr. Hobson—Yes, my dear, but it is in two parts.

"Well, let me have one while you are reading the other."

"Certainly, love. Which half would you prefer, the political half or the baseball half?"—New York Weekly.

Benefit of a Club.

Mrs. Anna B. Scofield said, in a paper lately read before the Political Equality club, of Jamestown, N. Y.: "I would have women grow more confident of their own powers, more trustful of their own intuitions, more equal to carrying forward their own work in their own way. To this end I know of nothing more educational than the experiences afforded by a well conducted club. If you stick to it long enough you are bound to have your sympathies enlarged, and the nonsense well knocked out of you."

Joking with Sea Gulls.

Sea birds are always interesting objects to voyagers. They follow a vessel sometimes all the way across, ever restless and untiring. The gulls particularly, with their long, swift wings, realize the highest powers of endurance and fly with ease against the severest storms. Some say that these birds never visit the earth except to deposit their eggs; otherwise they live constantly between the sea and the sky. In fine weather they fly high in the air, descending with great rapidity to seize the fishes on the surface of the water.

The symmetry and strength of the gulls are remarkable, showing how nature has adapted them in every particular for the purpose of long flight. Their pectoral or breast muscles are one solid mass of firm, hard muscle, and their bones are hollow, having no marrow in them. Sleep is not necessary to them, or, rather, they rest upon their wings and allow themselves to be cradled by the breezes, whose violence neither worries nor frightens them. On the other hand, they seem to feel a fierce delight in the fury of the storm, which, convulsing the waves, brings up the dead fishes and mollusks.

Sailors are very fond of playing off a joke upon the gulls which are always hovering about the ships. They take three or four pieces of sail twine about six feet in length, these are tied together in the middle, and to the end of each a small piece of blubber or fat is attached tightly and then thrown into the sea. A gull comes along and swallows one piece; another then sees there is plenty to spare and swallows the next; perhaps a third bird takes possession of another, but as they are all attached to the sail yarns, whenever they try to fly away one or the other is compelled to disgorge his share, and this is continued to the tantalizing suspense of the poor gulls and the great fun of the passengers and sailors.—Ocean.

Adulterated Candies.

The Board of Trade Journal of Portland, Me., is authority for the statement that about 6,000 tons of terra alba were recently imported through the port of New York alone. The only use for terra alba in any quantity is in the adulteration of candies, and when these two facts are put together they become very significant. The substance is mineral, utterly insoluble in the saliva or the gastric juice and the result of eating candies adulterated cannot be otherwise than excessively injurious. The devilishness of the use of such stuff in candies is all the greater for the fact that most of the candies that are adulterated with it are used by children of tender years. The extent to which it exists in certain candies may be surmised by an incident which occurred within the experience of the editor of The National Druggist.

A wholesale grocery house of St. Louis made a claim against the South Shore line for damages done a certain lot of lozenges manufactured by a Boston house and shipped in barrels over that line. The general agent of the line procured some of the "lozenges" and brought them to the writer for examination. The result of our investigation showed them to consist entirely of terra alba bound together with a little gelatine or gum (we have forgotten which). Further investigation developed the fact that they were simply blocks or forms to be used in preparing cheap lozenges, the method of use being simply to immerse them for a few moments in syrups flavored with peppermint, wintergreen, etc. The agent, armed with these facts, refused to pay any damages and the concern, rather than risk the exposure incident upon a law suit, dropped the claim.—National Druggist.

AMMONIA AND SUICIDE.

One of the Most Certain Agents for Causing Death by Slow Poisoning.

[New York *Sun*.]

Of the number of those seeking suicide by swallowing some form of poison, probably there are few who have sought to kill themselves by means of ammonia. Nevertheless ammonia, although it is the active agent in most of the salts sold to women for their gilt decorated and perfumed scent bottles, is poisonous when taken internally in a concentrated form. To attest this there have been recently in New York several cases, the most recent being that of Herman Harowitz, of which Deputy Coroner Jenkens said that death took place in a comparatively short time after the ammonia was taken. In another case, that of a child, Dr. Jenkins said death resulted in five minutes after swallowing the ammonia solution.

There are on record also cases of slow poisoning from ammonia administered with intent to commit murder. Furthermore, the appearance of workmen in guano factories, where ammonia is set free by grinding guano, has been noted, and in every case there is an unmistakable system of poisoning. This is discoloration of the skin of the face, which assumes a blotched, dirty appearance. First to take on this appearance is the skin of the nose and forehead. Autopsies of those who die from ammonia poisoning reveal a dark hue on the mucous membrane lining the stomach and intestines.

As an agent for causing death by slow poisoning, ammonia is one of the most certain and most difficult of detection, owing to its volatile nature. This quality has led physicians to believe that some of the mysterious deaths that have taken place in the history of modern and mediæval crime are due to ammonia. It is known now that months have elapsed between the first symptoms of sickness and the death of a person from ammonia poisoning. On the other hand, death has resulted in four minutes from the time a large draught of ammonia has been swallowed. It has been found in cases of gradual absorption of ammonia in the human system that there is a general elimination of healthy oxidation of the blood and a consequent lowering of the bodily strength. In the cases of immediate poisoning, death comes with frightful agony, as in the case of Harowitz. Blood gushed from his nose and mouth.

Statistics is England put ammonia thirteenth in frequency in the list of poisons. Alexander Winter Blyth, medical officer of health in the St. Marylebone district, London, cites thirty cases of poisoning by ammonia swallowed for the purpose of committing suicide, or administered with the purpose of committing murder, or absorbed unconsciously in food. Of the suicidal cases six were fatal. Of twenty accidental cases twelve were fatal. Of cases of murder with ammonia, Dr. Blyth notes two, both of them children.

Rev. James B. Pratt, aged seventy-eight years, who came to Los Angeles from Pittsburg about five years ago, died suddenly last week.

Grape-picking is about finished in the Santa Clara Valley.

The reed bird on the bill of fare
Is pleasing to the eye;
But with the sparrow's aid, alas!
He proves an alibi!

OUR LITTLE WORRIES AND ILLS.

It is the little things of life, the worries of to-day and to-morrow, that make the crow's feet around our eyes. So the little pains of an hour or a minute break down the constitution. Look after the little ills. BRANDRETH'S PILLS cure dyspepsia, or indigestion, headache, pain in the shoulders, coughs, tightness of the chest, dizziness, sour stomach, bad taste in the mouth, bilious attacks, palpitation of the heart, inflammation of the lungs. Pain in the region of the kidneys, and a hundred other painful symptoms are the offspring of dyspepsia. One or two pills every night is sufficient.

BRANDRETH'S PILLS are sold in every drug and medicine store, either plain or sugar coated.

A bird and a bottle in hand is worth two boarding-house dinners anywhere else.

THE WESTERN SETTLER'S CHOSEN SPECIFIC.

With every advance of emigration into the far West, a new demand is created for Hostetter's Stomach Bitters. Newly peopled regions are frequently less salubrious than older settled localities, on account of the miasma which rises from recently cleared land, particularly along the banks of rivers that are subject to freshets. The agricultural or mining emigrant soon learns, when he does not already know, that the Bitters afford the only sure protection against malaria, and those disorders of the stomach, liver and bowels, to which climatic changes, exposure, and unaccustomed or unhealthy water or diet subject him. Consequently, he places an estimate upon this great household specific and preventive commensurate with its intrinsic merits, and is careful to keep on hand a restorative and promoter of health so implicitly to be relied upon in time of need.

THE THROAT—"*Brown's Bronchial Troches*" act directly on the organs of the voice. They have an extraordinary effect in all disorders of the Throat. *Speakers* and *Singers* find the Troches useful.

The watch that is placed over the people's interests at the polls must not be a repeater.

Use Enameline Stove Polish; no dust, no smell

Try Germea for Breakfast.

NOT TO BE ENDURED.

If the federal government desires to stamp out the lottery evil, there will be little opposition on the part of the people and the press, but if it gives irresponsible underlings the power to stamp out the press when it exercises its right to discuss the law, the result will be not only opposition, but indignation and trouble all along the line.

Just now the papers are having a good deal to say about the arrest of a Wisconsin editor because he published a clipping from an exchange questioning the validity of the anti-lottery law. If the arrest was made for nothing more than this, then it is putting it mildly to say that our government has become Russianized, so far as its treatment of the press is concerned.

This policy will not work. If lotteries cannot be destroyed without also destroying the freedom of the press, the people will be in favor of letting the lotteries alone. We cannot afford to yield our right to speak and publish fair criticisms of public measures. If we yield the right in one instance, we may expect to be forced to keep silence whenever it suits the government to demand it.

Fortunately it is no easy matter to bulldoze the newspapers of America. The menace of fine and imprisonment will intimidate very few. No matter what federal officials may hold, the newspaper men of the country will not change their conviction that an honest criticism or discussion of the provisions contained in the anti-lottery law cannot with any show of justice be held to be a violation of that law. If they are mistaken in this belief, then the law will have to be repealed or modified. In this republic the government cannot array itself against the press and have the support of the people.—*Atlanta* (Ga.) *Constitution*.

An Argument That Convinced Him.

"Mary," he said feebly, taking another hold on a sleeping 5-year-old boy as they came off the boat, "I won't carry Johnnie a foot further." He was staggering under his load and looked ready to drop. She was twice as big as he.

"John, you are selfish. Johnnie is tired to death."

"So am I. He can wake up and walk."

"He cannot. He has been running in the sand all day and is worn out."

"Yes, and I've been running after him."

"If you wake him up he will cry."

"Let him cry."

"Let that poor child cry? Haven't you any feeling for your own son?"

"I should think I have. He weighs enough to inspire me with feeling. I positively won't carry him."

"You will."

"If you don't take him I will drop him, and he can cry his lungs out."

"If you drop him I will take him in my arms, sit down on that step and not budge an inch."

"But I won't carry him. I can't."

"John Henry Smith, don't you tell me that you can't carry that dear boy. If you put him down and wake him up you will be turned out of the house to-night. You can spend the night in the streets and see how you like it. Don't you dare to put Johnnie down."

John Henry Smith was open to argument, for he did not put the dear boy down.—New York Tribune.

A Familiar Face.

When Congressman Thomas W. Updegraff was making a speech at Canton, O., in 1878 he was frequently interrupted by a man in the audience who shouted, "What about resumption?"

Finally Mr. Updegraff said: "There are a great many people in the country who are raising a terrific to-do about resumption. They talk about it as if it had teeth and claws and a hooked tail. My friend over there wants me to talk about resumption. I will tell him a story. A very worthy old lady, who had spent all her life on a farm in the Western Reserve, visited the state fair for the first time last year. Her son took her around and she admired the sights.

"Presently they came to a tent on which was placarded an invitation to the public to enter and behold a most wonderful bird —'the Melanerpes Erythrocephalus'—for the small price of ten cents. The old lady persuaded her son to take her in. She found an old friend in the small bird within a big cage. She repressed her emotion until they were outside the canvas again, and then she said with great emphasis, 'Why, John, that ain't nothin' but a red-headed woodpecker.'" — Pittsburg Dispatch.

A Very Old Horse.

"Old Kate," a horse burned to death in Cincinnati, was, her owner alleges, 45 years old. She was born in Wales of thoroughbred stock. She was shipped to Canada in 1846, being only a yearling. The voyage had a bad effect upon her, and the importer sold the stunted colt to a farmer, who kept her until she was 3 years old, when she began to grow.

The farmer sold her to Hugh Morgan, a lumber dealer of this city, and he kept her up to his death, in 1861. She was of a jet black at that time, and served as a carriage horse. At Mr. Morgan's death the mare went to Mr. Lanning, who ran a planing mill on Canal street. He in turn sold her to a fish and oyster dealer on Linn street, and it was of this man her last owner bought her seven years ago. She was then 38 years old, but lively as a kitten.—Cincinnati Times-Star.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

A BRAVE WOMAN.

Sleeps all Night With a Rat Under Her.

IT WOULD DO NO GOOD TO SCREAM.

The Doctor's Eloquent Plea for his Companion's Comfort.

More than a score of years ago a party of Americans were traveling in Spain. There were eight of them—four men and four women—and one night they found themselves in a little hostelry containing one bed, in which the four women slept, with the bare floor for the men, who found the necessary room to lie down in by utilizing the space under the bed for their feet. Just as the party were dropping off into their first doze the youngest woman felt something soft and warm moving in the straw of the tick beneath her. She awaited a moment to make sure, and then as it began a passage up one side of her body she gave a jump that landed her clear over by the opposite wall, and got ready to scream.

"What is it?" came from the doctor on the floor.

"There is a rat or a snake in the bed," she whispered excitedly.

The doctor sat up. "Nonsense!" he said.

"I tell you there is. It is in the straw of the tick. And it crept up my leg."

"Well," asked the doctor calmly, "suppose there is an animal there. What are you going to do about it?"

"Do? Why I'm going to get the girls out and open the tick and take the creature out. You don't suppose I'm going to sleep all night with a snake coiling around under me, do you?"

"Now, see here," expostulated the doctor, "let's reason about this thing. It can't be a snake; it's probably a rat; and it's inside the ticking and it can't get out. It can't possibly harm you. And by and by the warmth of your body will make it drowsy, and it will curl down quietly and go to sleep. So much for the rat.

"Now, here we are—eight of us tired out. Nobody knows about the rat but us two. Now, are you going to be selfish enough to wake these six people up, turn the girls out of their bed—they will scream, too, till they are black in the face—make us men take all the straw out of the tick, find and kill the animal and then get all the straw back into the tick—nearly a whole night's performance—just because you have got hysterical over a harmless little creature?

"Now, be a sensible girl, get back into bed and let me get to sleep again. When the rat gets to sleep you will, too. Just try it."

If it is ever given to a man to be eloquent it is when he is pleading for his own comfort, and the doctor was just a man after all. His persuasiveness won. The young woman crept timidly back, and lay with clinched fists and tightly shut eyes, while the little creature nestled uneasily about, and finally crept close to her side under the ticking and curled down to sleep. Sure enough the doctor was right. And pretty soon she did go to sleep, too, and only waked with the morning to tell the other women of their fifth bedfellow, and how she had saved them from an overwhelming fright.

And the girls quite turned her head with their ohs! and ahs! And the doctor said she was pretty sensible for a woman. And she sometimes tells the story even today. "But was it a rat after all?" the listener is sure to ask when she is done. And she also likes to answer, "It is my chiefest glory in the whole affair that I left the inn in an hour without speaking of the matter, and to this day I do not know whether I slept with a rat, or a kitten, or a snake."—New York Evening Sun.

Miss Drexel's Convent Life.

A pleasant faced, gentle, refined nun, who is introduced as Sister Katherine and whose face is suffused with a faint tinge of color as she is introduced, calls to mind a scene when, in the chapel of the Mercy convent, the lovely robe of white satin was, with the name of Miss Kate Drexel, discarded for the black robe and the name Sister Katherine. Sister Katherine is now engaged in teaching some of the 300 little folks who call St. Paul's Roman Catholic Orphan asylum their home.

Her school is composed of the primary pupils of the vast establishment, and tenderly and lovingly she governs them and teaches them the rudiments of an education. Other rooms and departments are under control of other sisters.—Pittsburg Dispatch.

Do Something Well.

I would say to all young girls, whether rich or poor, educated or uneducated, make some one good thing a particular point in your life. If you will be a cook or housekeeper be thoroughly good. Have a general knowledge of all matters of interest and importance, but have one particular branch perfect, so that if the time comes when you must face the world and carve your own fortune you will be able to do something, and to do that something well. No matter how homely the duty its value is enhanced tenfold by being well done. It is as creditable to be a thorough housewife as to be a good teacher or accountant. — Mrs. George Rogers in Good Housekeeping.

Something Worth Remembering.

A correspondent writes: "Reading accounts of so many being lost in the snow and fog, I would call your attention to a simple means of determining the position of the sun at any time of the day, which is by placing the point of a knife blade or a sharp lead pencil on the thumb nail, which will cast a shadow directly from the sun, no matter how thick the snow or fog is. Try it."—Boston Journal.

Evading the Game Law.

There is a law in Pennsylvania against using ferrets in rabbit hunting. A Cochranton boy evades the law by catching a rat alive, tying a string to its neck, taking it to a rabbit's hole and letting it go into the hole, he holding the end of the string meanwhile. The frightened rat usually scares out the rabbit.—Chicago Herald.

Secret of His Success.

"So you are now editor and proprietor of The Boys' Champion."

"Yes, and making a fortune out of it."

"I don't see how that can be. It is positively the worst Jim Crow paper I ever saw."

"I know it, but each subscriber gets a toy pistol and twenty yards of string."—Lincoln Journal.

His Dear Little Dog.

Young Mr. Sissy—I have just had such a dear little dog presented to me, Miss Mary. Could you suggest a name for it?

Miss Mary—Jack, I think, is a pretty name.

Young Mr. Sissy—Aw, the dog, Miss Mary, is of the gentler sex.—The Epoch.

Brutal Policemen in Russia.

I shall never forget the first brutal exhibition of the kind I witnessed on Russian soil. It was on the docks at Baku. As the little Caspian steamer moved up to the wharf a swarm of ragged porters were seen struggling for position where they could pounce on the passengers' baggage. Gaunt, hungry looking and clad in rags, they seemed like the very off scouring of the world. Standing out in bold relief against them were a number of burley policemen. The chief duty of the latter seemed to be to abuse the former, which they did in a most unwarrantable manner.

The bluecoats did no artistic and finished tapping with the locusts, like the members of the Broadway squad, but they struck the poor, half starved wretches squarely in the face with clenched fist and kicked them in the stomachs. The burly policemen seemed to take a wanton pride in smashing the poor ragged devils in the face and in kicking them in dangerous places with their heavy topboots. As a picture of brute force unbridled, gloating over defenseless victims, it beats anything I ever saw.

It seems incredible to an Anglo-Saxon that human beings could ever be so thoroughly crushed and cowed as to submit meekly to such inexcusable brutality as the lower class Russians do. One after another the wretched victims of police brutality would go limping away, lamed or doubled up by a kick, and faces often streaming with blood. Our Russian passengers paid no sort of attention to the scene; only in the breasts of two persons present, in all that crowd, was aroused any sentiment of pity or condemnation, so far as could be seen on the surface. These two exceptions were an English war correspondent and myself.—Thomas Stevens' Letter.

Whistles of All Sorts.

The primary idea of a whistle lies in the making of a column of air to vibrate, in whatever condition. As there is no lack of means or methods for doing this, the infinite diversity of the forms of the apparatus for producing the vibrations and the resultant sounds is a matter of course. The most general form is the human whistle, which one can make sound—after a fashion—without much preliminary training; but many musicians have made themselves masters of its intonations to such a degree that, instead of the usual inharmonious and unmethodical discords, they can render with it the most difficult passages of elaborate musical notes. I shall not dwell upon the means that may be employed to make the sounds sharper and to modulate their tones. Every one knows what effects are produced by inserting the fore and second fingers so as to turn the tongue slightly back as the column of air passes over it, or by sending the blast over the outside of the bent fingers.

If we seek other primitive whistles, we have them in the hollow barreled key, the terror of authors and comedians; the famous willow whistle, cut when the twig is most sappy; the green dandelion stem, split along its length; the nut shell between the fingers; the cherry stone, which school boys grind down so patiently on the soles of the shoes and bore with a hole; the buckhorn, and all the other things which we are fond of contriving, in our early youth, with which to split the ears of our parents and teachers.—M. L. Gutode in Popular Science Monthly.

Advantages of Audible Laughter.

Man is the only audible laughing animal in existence. Girls giggle, boys te-he, women hah-ha, and men haw-haw. These are the spontaneous outbursts of jollity, and in trying to suppress it one cannot be accountable for the consequence. You have the faculty of communicating to your blind friend the reciprocal pleasure of life, therefore you have advantage over the most intelligent of the brute creation. No dumb animal has the faculty of expressing any emotion they may feel save the dog, who laughs with his tail as his long absent master returns; it seems as if he would never cease to wiggle-waggle his tail and nibble his master's beard from one ear to the other; he laughs with his tail, kisses, as it were, with his teeth, and caresses with his paws, seeming to be the exact converse of human nature. Be sure that heaven and all the cherubims are better pleased with inate goodness, roseate with smiles, than a face as long as your arm and as solemn as the day of judgment. Give us a bright, smiling face, indicative of the effervescence of the within. It helps us to enjoy a passing hour of blissful happiness. A new delight steals over the heart, and we willingly yield to the fleeting, fanciful dream that all of earth is surest bliss.—New York Press.

Inheritance of Moral Weakness.

"There are not too many people for the world to support," says Professor Summer; nor are there too many liable to be born; but there are by far too many of sorts that never ought to be born. He conceives that all social questions drop into this one of improved population. Mental and physical feebleness, or inferiority, is at the bottom of our troubles; but the professor must also include moral weakness, inherited like other evils, and aggravated by personal habit. Is it improbable that some degree of control may be some day established over the multiplication of diseased personalities?

Darwin dares to hint that the same care that is exercised in breeding our domestic animals might in the future be applied to humanity. Is it necessary that "Margaret, the mother of criminals," be allowed to populate the state with a breed so debased that in a few generations there are paupers, idiots, moral outcasts and beggars by the hundred, and hardly a savable person out of a score? It will not do, perhaps, at present to any more than suggest the question.—Globe Democrat.

What It Really Means.

Did you ever think what it really means to be a "tramp?" No home, no friends, no work, no chance, nobody in all the wide world to care whether you live, or die in the gutters like a dog. No heaven for such vags to inherit; no decent grave to hide them out of sight; no opportunity to be anything, and no hand stretched out to give the greeting or the good-by of love. Nobody to feel an interest in you, whether your bones ache from cold or your skin cracks with fever. No spot in all the world to call your own, not even the mud wherein your wandering footstep leaves its fleeting mark; no prospect ahead, and no unbroken link to bind you to the past. A name like a curse to blight every hope of manhood, and a reputation, like a ball and chain on your leg, to hinder the way to any good accomplishment. I tell you, when we sit right down to it, and figure out what it really means to be a tramp, I guess we will not find it so easy to withhold a piece of bread and a cup of coffee next time one calls at our door.—"Amber" in Chicago Journal.

YANKEE LOCAL NAMES.

Odd Titles by Which Localities are Known.

BARBARY COAST AND CHRISTIAN SHORE.

Where the Hog was Run Down by a Train.—Stony Lonesome.

"Can you direct me to the Richardson neighborhood?" said a newspaper man, tramping along a dusty country road last summer. Two farmers leaned on their rakes and looked at each other inquiringly.

"Richardson neighborhood? Never heard o' no such place. Guess you must mean the Coop. Used to a Richardson live there once."

It is just this way all over New England. Every township is subdivided into localities and neighborhoods bearing odd and distinctive names. Often they are more than odd; they are quaint and eccentric, and sometimes laughable. This same Coop was bounded on the east by the Rock o' Dundee, on the north by the City, a solitary house, standing where four roads met, and on the west by Shadagee. And so it is in every town, there is an unwritten geography of New England.

Boston may have at one time been blessed with queer subdivisions of this sort, but they have now nearly all been swallowed up in the North End, the West End, the South End, etc. Lynn, on the other hand, abounds with them. There are Rail Hill, Breed's End, Blood Swamp, New Light Hill, Pan Swamp, Vinegar Hill, Sadler's Rock and Pudding Hill. This last name came to be applied from the fact that the father of Preserved Sprague, who lived in this section, was noted for the quality of his puddings. What is now Market square was once known as Kite End. It received its name at the hands of the late Joshua C. Oliver, who published a little sheet known as The Tattler, and, out of spite, he nicknamed the locality Kite End, and its people Kite Enders.

Manchester, N. H., boasts of a section known as the Barbary Coast, a name given it by an old sailor. Here too, are found Jacob's Ladder, Pig Village and Phinenton square. The city itself has been variously known as Harrytown, Tyngston, Derryfield and Nomoskeag.

In the suburbs of Bangor, Me., on the line of the old Veazie railroad, is a village still known as Hogtown. Years ago, when the railroad was in full operation and trains used to drag lazily along between Bangor and Oldtown, a terrible accident occurred there one morning. A woman living near the track was the happy possessor of a very large hog, and the animal in its meanderings came upon the road in front of an advancing train. The hog had never been accustomed to turn out for anything, and did not propose to commence with a trifling thing like an engine. It therefore held its ground, and a dying hog was soon rolling down the embankment.

The train stopped, as was its custom upon all occasions, even to allow a passenger to alight and cut a twig. Out came an angry woman, brandishing her arms and wildly calling upon the conductor of the train to pay for the fatally injured porker. In those days the conductor of the line was of as much importance as the general manager, and he flatly refused to pay for the hog, saying that the owner ought to have kept him away from the track. This settled the matter, and he started his train and left her. When that train returned, however, there was sorrow on board. The woman had taken the fat from the hog, and for a long distance had greased the rails so that it was impossible to pass the place. None of the modern appliances for surmounting such obstacles were then known, and the train was hopelessly stalled. A crew was employed to help the trainmen, and it took hours to clean the grease from the rails so that the train could proceed. Since that time the place has been called Hogtown.

To everybody in the city of Portland the neighboring town of Cape Elizabeth is known by the simpler name of Pooduck. This is a contraction of its ancient Indian name of Purpooduck. Augusta has among its subdivisions Rotten Row, Slab City, Mud Mills, and Britt's Gully. Suburban Lewiston is made up of "patches." There are the Baby patch, the Strawberry patch, the Bleachery Hill patch, the Foundry patch, Water street patch, and the Gas House patch.

Portsmouth, N. H., has its oddly named localities, and these have been well described in Thomas Bailey Aldrich's "Story of a Bad Boy." One of the best known is Christian Shore. The name of the district is supposed to have come from some early settler named Christian, who lived upon and owned the land on that side of Strawberry Bank creek, as the inlet now called the North pond was named by the early colonist.

In Providence, R. I., and its vicinity there are locations known by some peculiar names that are not to be found in the maps or directories. There are Squaw Hollow, Chicken Foot alley, Bulldog square, Shoo Fly Village, Maiden's Prayer park and a variety of others less familiar to the general public.

In this state Gloucester is especially rich in these queer localities. Loblolly cove is situated on the eastern side of the cape, and was probably the scene of an old time feast, at which "loblolly," a dish made from Indian meal, was the bill of fare. Cat pond is probably named from the plant called "pussy willow," which grew on its margin. Donefudging is the name applied to that strip of Squam river between the cut bridge and the old town landing. There are various derivations of this. One is that, the river being shallow near this locality, the boatmen in the olden time, who used poles to propel their crafts, were done "fudging" or propelling with their poles when the deep water in this vicinity was reached. Goose cove, on the northern side of the cape, was probably so called from the tame geese which were kept in that place.—Boston Dispatch in New York Sun.

English Friendly Societies.

The returns of some of the large friendly societies for 1890 are now coming in, and notwithstanding the increased expenditure caused by the influenza epidemic in the early part of the year, the figures in most cases show large increases, both in members and funds. The Ancient Order of Foresters, numerically the largest, with its 700,000 members, added 17,587 to its number and £159,303 to its funds, bringing the reserve capital up to £4,500,000. This society appears to be rapidly "leveling up" its actuarial deficiency, the returns showing that a proportion equal to 73.4 of its members are now paying graduated contributions according to age, as against 59.5 five years ago.

The Manchester Unity of Odd Fellows comes slightly behind the Foresters in respect to numbers, but occupies far and away the front rank of all societies in wealth, its invested capital reaching the magnificent amount of £7,250,000.

The Hearts of Oak, the largest centralized society without branches, has been advancing of late years by leaps and bounds. Its annual report shows that in 1890 it added 10,000 to its membership, which now numbers 140,000, and £76,000 to its funds, totaling its reserve capital up to £1,157,518. This society admits no one to its membership over thirty years of age, and is chiefly recruited from the ranks of small shopkeepers, clerks and skilled artisans.

In the aggregate these three societies total up an adult membership of 1,500,000, with 144,000 juvenile members and a gross invested capital of over £13,000,000.

The great burial collecting societies constitute quite another class, at the head of which stands the Prudential, with assets worth £12,000,000, and which claims to have 9,000,000 policies in force. The Prudential is a joint stock limited company, which began with a capital of £2,500 about forty years ago. A few years since this grew to £200,000. According to a statement recently made by Sir Herbert Maxwell in the house of commons the shareholders in 1887 received dividends equal to 400 per cent. on the original capital, besides bonuses amounting to £399,600.—St. James' Gazette.

The Ohioan Wanted to Sleep.

Sunday evening two young men retired in one of the principal hotels and went to sleep. One of these guests was from Ohio, the other, a genuine frontiersman from South Dakota. They slept until 2 a. m. Sunday, when awakened by a couple of roistering youths who occupied an adjoining room. The youths shouted and sang until guests all around commenced to protest, and then they shouted and sang all the louder.

The Dakota man rang for a porter, and sent him to quiet the unruly youths, but with no effect. Then the Ohioan arose, tied a suspender around his waist, rolled up the sleeves of his nightshirt and walked to the door whence came the riotous sounds. He knocked, and one of the fellows opened it. The Ohio man didn't stop to talk. He charged into that room, belted one youth in the neck, knocking him on top of the bed. Quick as a flash he seized the other and hurled him bodily across the first. Then he pounded their heads together while he regained his breath, and told them that if they woke him up again he would come in and throw both of them through the window.

He slept in peace until breakfast time.—Philadelphia Press.

A Railroad Man's Record.

C. P. Burton, of Aurora, Ills., challenges the country to match the following record: J. L. Watkins is the veteran ticket agent of the Chicago, Burlington and Quincy at Mendota, Ills., and has been for thirty years. The greater portion of that time he has spent in the office, acting as night agent as well as day. Although in the midst of railroad trains, coming in contact daily with the turmoil incident to that rushing life, he has never stepped on a train in the years he has been agent until Tuesday, when he rode to Aurora and thence to Wheaton, and he was mad all the way. He had been subpœnaed as a witness at Wheaton and was obliged to go. He had expected at some future time to take a vacation, and thought he would ride on a railroad train when he got ready, but he had not intended that his first ride in years would be forced.—Chicago Tribune.

Settling Scores Posthumously.

Annie Kline, colored, weighing 350 pounds, died in Chicago the other day. It is averred that before departing this life she expressed an intention to "ha'nt" some surviving enemies. Be that as it may, Jennie Cook, a neighbor, declares that soon after the funeral, while she was passing the deceased's former abode, Miss Kline appeared at the window, robed not in regulation white, but in sable, and demanded the liquidation of a grocery bill. Jennie, in affright, appealed to the officer on the beat. The policeman reports that when he visited the house the ghost remarked: "Mulcahey, beware!" and threw a brick at him. There are those who are inclined to doubt that Miss Kline has materialized.—Philadelphia Ledger.

An Adder with Two Heads.

Professor G. A. Rogers, the aeronaut, dropped into the office recently, having in his possession a very rare species of a brown adder. It was eleven and one-half inches long, and with two distinct heads, one and one-quarter inches from point of contact, had the appearance of two snakes artistically rolled into one. This peculiar freak of nature was killed a few days ago by a seven-year-old Milton (N. H.) boy, who performed the feat with a short stick as the adder was coming out of a small pile of rocks.—Boston Globe.

Big Prices for Newspaper Stock.

A few London Graphic shares came into the market the other day. The shares are $50 each, $35 paid; and on these dividends ranging from 25 to 104 per cent. have been paid. The lots were eagerly competed for at the prices ranging round $180 per share. This is a premium of over 500 per cent.—London Tit-Bits.

ROYAL BACK NUMBERS.

The Kings Uncrowned, Unhonored and Unknown.

GENUINE BLUE BLOOD IN HARD LUCK.

A King who is a Waiter.—An American King.

A full list of royal and imperial pretenders would include all sorts of people in all sorts of society, from the retired and wealthy nobleman, such as the Comte de Paris, to Crelie, the self styled king of Araucania, who is a sort of genteel deadbeat, and Francesco, the titular king of Armenia, whose royal predecessor was a waiter in Milan, who himself pursues the same honest, if not kingly, occupation in a restaurant at Versailles. As a rule nearly every king nowadays outside of the darkest part of the Dark Continent has a snug sum to his credit in English or American securities, so that in the event of being put out of a job he may have the wherewithal to keep the wolf of poverty from the door.

The Comte de Paris, Bourbon pretender to the throne of France, and now an exile, is worth about two millions of dollars. The bulk of his fortune is in British consols, and he also draws interest on United States bonds.

Prince Jerome Napoleon, the leading representative of the imperial house of Bonaparte, lives in luxurious exile at Prangins, Switzerland. He has a splendid residence there, and owns among his treasures various relics of the Bonaparte family, including an Egyptian saber which the great Napoleon carried in the first of his Italian campaigns. Prince Napoleon is wealthy and ambitious. The Bonapartes as a rule are not in good financial circumstances, and the purse of Prince Jerome is taxed to keep his friends and relatives from need.

The ex-queen of Spain, Isabella, takes life comfortably, even luxuriously, residing in fashionable style in Paris, with occasional trips to Nice and Boulogne.

Italy has a host of pretenders deprived of their toy crowns by the union of the Italian peninsula. Of these the house of Tuscany is the most fortunate, as Austria takes care of them, and the Archduke Francis Salvator has recently married the flower of the imperial family, the Archduchess Valerie. The heir of Bomba's crown of Naples is a quiet, harmless young man, strictly devoted to religion, and without any apparent design upon his ancestral dominions. Indeed the deposed Italian princes generally acquiesce in their fate, as hopeless of any change. All, without exception, are fairly well provided for.

Dom Pedro, the deposed emperor of the Brazils, is the most unhappy of ex-rulers. The death of his wife was a terrible blow to him, and he hungers to be permitted to go back to Brazil to die. As he has never formally renounced his claim to the crown he can fairly be called a pretender. Dom Pedro is far from wealthy. While in circumstances that should dictate close economy, he is so tender hearted that he hesitates to dismiss the retinue that is eating up his substance, and consequently he grows poorer every day. It would not be surprising should the old gentleman be compelled to accept the generosity of republican Brazil.

AN AMERICAN KING.

Few have heard of that other and rather amusing American pretender, resident in Paris, Orelie I, king of the Araucanians. Orelie is a Frenchman, a cheap lawyer, with a taste for adventure. His travels brought him to Chili, in South America. There he made his way by accident or design to a remote section of the republic, where the Araucanian Indians have for ages maintained their independence. He lived among these Indians and won their good will to such a degree that the chieftains elected him king of Araucania, and he was formally crowned with that title. As king Orelie led the Araucanians in forays, more or less successful, against their Chilian neighbors.

When he got tired of the masquerade, which involved some peril, as the Chilians followed the new king up sharply, he started for the coast, reaching it by the way of Peru, and returned to Paris. Here he still calls himself king of Araucania, and he has instituted two or three orders of nobility, which he confers for a consideration. The validity of these orders and his right to bestow them came up not long ago before a Paris tribunal, the point at issue really being whether Orelie was a king or a swindler.

The court decided that, inasmuch as he had been accepted as king by a community which exercised independent rights and which would probably be willing to recognize him again if he could get there, he was justified in using the royal prerogative of conferring orders of nobility. Since this decision the king's business has flourished more than ever, and his decorations go off like buckwheat cakes and maple sirup.

The king of Araucania is a good deal more fortunate than poor Francesco of Armenia, to whom I have before alluded. His full name and title is Francesco, king of Armenia, prince of Jerusalem, and hereditary guardian of the Holy Sepulcher. At present his majesty is head waiter in one of the small restaurants that dot the vicinity of Versailles. It is many years since Francesco's ancestors were driven by the Turks from the throne of Armenia; but there can be no doubt of the antiquity and purple blood of the family. Descended from a bold Crusader, they held their kingly rank for ages, until the renewed aggressiveness of the Mohammedans and the decline of Latin power in the east made them fugitives.

Russia for a long time afforded them an asylum, and gave the titular prince a pension. But this was dropped about forty years ago, and since then the royal house of Armenia has had to take its chances with the multitude. The late king was a waiter at Milan; the present king is a waiter at Versailles. Singularly enough the restaurant is one favored by the radicals, and the waiter of the bluest of blood is called on to serve wine and refreshments to the ardent opponents of thrones and titles. Few visitors, however, are aware that the sous they hand to the waiter are thankfully accepted by a king, for Francesco does not parade either his pedigree or his misfortunes.

You may see here in Paris a prince of Georgia driving a cab, and one of the best police agents in a scion of the royal house of Poland. To go through the roll of royal pretenders would occupy much time and space. It is probably longer than that of monarchs who have crowns on their heads.—Paris Cor. Chicago Herald.

Genuine Turkish Rugs.

Smith—Well, Pat, what are you doing for a living now?

Pat—Begorrah, I have an illigent job on the Bowery makin' generwine Turkish rugs.—Texas Siftings.

Bait for Desirable Tenants.

There is at present great rivalry among the owners of flats and tenements in the struggle to secure as tenants the thousands of families which at this season each year seek new quarters. The rapid growth of the city's population has been more than equaled by the number of flats and other dwellings erected during the past few years, with the attendant result that desirable tenants are at a premium.

"The inducements offered to parties of the class desired," said a prominent real estate agent recently, "are not directly of a pecuniary nature. In spite of the rivalry among house owners, there is a tacit understanding that there is to be little or no reduction in rents. The figures asked are reasonable, but great ingenuity has been displayed in the character of the inducements held out to secure good tenants. Formerly two weeks' free rent was considered quite a concession, but now one and even two months are thrown in to get a desirable party on a lease. Steam heat, electric bells, elevators, telephones and awnings to the windows are common at fair rentals in the better class of flats.

"Among the novelties offered are flats where all the coal and fuel needed are furnished free, thus doing away with a common cause of quarrel with janitors suspected of using the tenant's fuel. In some the gas bills and ice bills are paid by the landlords, and stationary mirrors and iceboxes still further reduce the tenant's expenses. A genius on the west side has filled his row of moderate priced flats by allowing each family the free use of a piano."—New York Telegram.

Reading About Foreign Countries.

At this time of year we are overrun with applications for guide books, works of travel, books of modern history of foreign countries, and even novels of which the scene is laid abroad. Whatever they may say in Europe about the Americans, they cannot truthfully declare that we do not prepare for a foreign tour, for hardly any one now goes abroad without reading of the countries he intends to visit, sometimes as carefully as though he expected to pass a competitive examination.

There are several persons in the city who go abroad every summer, and you can tell exactly where they are going by the books they ask for when they are getting ready for the tour. The fact shows that Americans are intelligent sightseers, and when they visit a foreign city know exactly what they are to see there, and often, by reason of the special cramming they undergo, understand the history, antiquities and curiosities of the places they visit better than people who have lived there all their lives.—Interview in St. Louis Globe-Democrat.

An Odd Plan for a Church.

Rev. Thomas Dixon, well remembered of Boston as a former pastor of the Dudley Street Baptist church, is nothing if not unusual. His audiences having outgrown his New York church, he has planned an auditorium as unique as himself. As his sermons have political preludes, his church is to have a wordly foundation. It will in fact not be a church but an office building, with stores on the first floor, an auditorium to seat five thousand, that is described as being on "the next three floors," and offices on six floors above.

It would appear that Mr. Dixon would have to do some loud talking to accommodate hearers in "an auditorium" that consisted of the second, third and fourth stories of the building, but probably this description of the edifice is not had at first hand from the architect. It is hardly Mr. Dixon's style to keep his audience in tiers.—Boston Commonwealth.

Reynard as a Rat Exterminator.

A Pennsburg gentleman, whose barn was formerly overrun with rats, is no longer troubled with them, and he used neither traps nor dogs in driving them out. About a year ago he purchased a fox somewhere in the west. The fox was given the freedom of the barn, and in a short time after its arrival all the rats found it convenient to depart, and none of them has found it expedient to return. Reynard catches rats after the manner of a terrier, and when not engaged is frequently seen following his master about like a well behaved canine, to which he bears no little resemblance. He is perfectly tame, and goes about the streets of the town without being molested by the dogs that roam around, ready to attack any animal not of their own species.—Allentown Chronicle-News.

Those Suspected Two Dollar Bills.

The number of two dollar bills in active circulation in New York is astonishing. Since the publication of the alleged extensive counterfeiting of the two dollar silver certificates the entire issue, genuine and bogus, seems to be kept on the move.

The two dollar notes fairly rain upon every tradesman, who passes them on as quickly as possible. The next man does the same. Nobody refuses, nobody disputes them; but all the same everybody lets go of them at the first opportunity. If the same uneasiness prevails elsewhere the problem of the two dollar notes will have solved itself. They will be worn out in six months.—New York Herald.

A coat of the great Napoleon was recently stolen from the country house of M. Cheval in a suburb of Paris, and the police have been trying to recover it. The burglars who carried it off with other booty were probably unaware of its historical value. Its recent owner bought it in St. Helena immediately after the death of the emperor.

A novel feature of a menagerie's exhibiting at the Crystal Palace is a huge cage containing a happy family of twelve lions, three Bengal tigers and cheetahs, panthers, polar and Thibet bears, ponies, goats and boarhounds, numbering twenty in all.

John Russell, who lives near La Gro, claims to be the oldest native son of Indiana. He was born there in 1811, and since 1834 has owned and lived upon a farm which he entered in that year.

KENTUCKY'S PIONEERS.

The Early Mothers who Could Protect Themselves.

WOMEN AND CHILDREN INDIAN FIGHTERS.

The Capture of a Lawless White Man.—Story of "Sharp Eye."

In the early settlement of Kentucky, the boys, and even the women and children, became as thorough soldiers as the men. This was the result of their surroundings. They were educated to it, and lived at a time when it was necessary to practice it daily. There were few women on the frontier but could load and fire a rifle, and many of them could do it with as fatal accuracy as their fathers, husbands and brothers. A fair illustration is found in the case of a Mrs. Daviess, whose husband was among the early settlers of Lincoln county. She could shoot an Indian with as steady a hand as Daniel Boone himself. One day a white man came to her husband's cabin who had stolen some property from him, and who bore a bad character generally.

Mrs. Daviess was alone with her children when this desperado called, and, knowing her husband was on the lookout for him, she resolved to capture him. Upon his entering the cabin she asked him if he would not "take a dram"—no pioneer's home was ever found without its whisky bottle, which was kept as a remedy for snake bites, etc. She put the bottle on the table and told him to step up and help himself. He set his gun against the cabin wall to comply with her invitation, and, after a hearty pull at the bottle, he turned to find himself looking into the muzzle of his own rifle, which Mrs. Daviess had picked up while he was drinking, cocked it, and stood with it leveled at his head. When he asked her what she meant, she informed him that he had stolen her husband's property, and she meant to keep him there until his return, and she did. She stood guard over him until her husband's return, when she delivered to him her prisoner.

The boys were no less brave and manful. To fight the "Injuns" was the first thing they learned, and, by the time they could lift a rifle they knew how to use it. Many instances and incidents could be given illustrating the heroism of the border boys, of which the following may be taken as a fair sample: Among the early settlers of Hardin county was one Silas Hart, an expert hunter, a thorough backwoodsman, and an inveterate Indian hater and fighter. Whenever an Indian incursion was made into the state he was one of the first on the trail, and he pursued them relentlessly and with the keenness of a bloodhound. His keen eye, and prowess in skirmish and battle, won from the Indians the name of "Sharp Eye."

On one of their many incursions into his neighborhood, Hart pursued them with a few chosen followers, and before they reached the Ohio shot and killed their chief. The savages vowed vengeance against him and his family, and shortly another incursion was made by them under the leadership of the brother of the fallen chief. As usual, Hart was first on their trail, and the savages retreated toward the Ohio. The whites finally despaired of overtaking them and returned home, when the Indians turned upon their trail and became the pursuers instead of the pursued. Hart reached his home about dark, and, being much fatigued from his long tramp, slept soundly all night, little dreaming of danger lurking near.

Next morning, just as the family were sitting down to breakfast, the savages appeared at the door, and the dead chief's brother shot Hart dead. His son, a lad but 12 years old, sprang up, seized his father's rifle and shot the murderous savage. As the next Indian sprang over his fallen leader, the brave and undaunted boy, with a large hunting knife, stabbed him to the heart. But the odds were against him, and he and his mother were carried away captives. It was the intention of the savages to take them to their towns and torture them, but they were finally ransomed and returned

The same Daviess mentioned above was surprised one morning in August, 1782, by Indians. They had approached his cabin during the night, concealed themselves, and waited for him to make his appearance. Daviess, a little after daylight, got up and stepped out of his cabin. He had proceeded but a short distance from the door when, turning, he beheld a number of savages behind him and the cabin. Seeing there was no chance to render his family assistance, he fled to the nearest station, which was five miles distant, for help.

The Indians made prisoners of his wife and children, the eldest a boy 12 years old, and, knowing Daviess had escaped, they soon left with their prisoners, hoping to escape beyond the Ohio. Daviess gathered a force, and pursued so rapidly as to overtake them before night. As usual, when about to be brought to bay, the savages essayed to kill their prisoners, but were too closely pressed by the whites. A savage, however, succeeded in knocking down the boy and scalping him. The boy was not killed, only stunned by the blow, and almost as soon as the savage left him bounded to his feet, exclaiming: "Durn that Injun, he's got my scalp."

The boy lived to grow up to manhood, but was ever after "bald headed"; the hair would grow no more on that part of the head which had been scalped. He never forgave the savages for rendering him prematurely bald headed, but swore eternal vengeance against them. In the summer of 1792, ten years after his experiences detailed above, a band of Indians raided the settlement, and stole a number of horses. Young Daviess joined a party in pursuit of them. When the savages found they would be overtaken they ambushed the whites, and in the skirmish that ensued young Daviess was killed. Thus the Indian fatality clung to him.—William Henry Perrin

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 18.....1891.

The determined fight against the free coinage of silver is one of the anomalies of our politics It shows the hold which the Wall street element has on the press and politicians of the country It is a contest in which success is certain to rest on the banners of the bi-metalists, and yet every foot's advance will represent a veritable tug of war.

Such of the Republican papers as have commented upon the appointment of defaulter Dan Burns as a commissioner to select policemen to catch thieves, show that they feel the disgrace cast upon their party by Governor Markham. But they seem to forget that Markham only paid a political debt in appointing Burns; and Markham might further claim that the Republican press and the party condoned Burns's crimes when they accepted him without protest as their chief manager during the last campaign. Markham can surely throw himself back upon such a plea; but it is not a very high or noble stand for a governor to take in extenuation of his act in commissioning a man who has robbed the State, to an office of great dignity and power.

The much dreaded "grip," which spread over the world a year ago, seems to have broken out again in Europe. The dispatches speak of 40,000 cases of "influenza" in Berlin during the past week, and say that Hamburg is panic stricken over the prevalence of the disease in that city. What is called "la grippe" is a severe form of influenza, corresponding to to the epizootic among horses. A dispatch reports that influenza is raging in Austria, and that many horses are attacked and many persons prostrated. It has become the fashion in this country to to speak of ordinary influenza as "la grippe", but at this time there are no reports of the existence in America of the serious form of influenza to which the term properly applies.

The Crocker old People's Home is said to be embarassed financsally, and an appeal to the public is probable. There must have been bad management. The Home takes in old people and guarantees them certain accommodations for life upon payment of a lump sum in advance. It is a sort of insurance proposition. The managers of the Home apparently find that they have not charged a high enough rate. We do not see, however, what they can do now unless charge future applicants for admission a rate so much higher that it will pay their expenses, and also make up the deficit for the present inmates. As for hte public, they are likely to remark, if solicited for subscriptions, that they do not see why they should contribute to the glory of a certain family connection. The Old People's Home has paraded as charity but it is really a business proposition.

The death of Dom Pedro was probably hastened by the troubles into which he was plunged at the close of his career as ruler of Brazil. No doubt he grieved sorely over his abdication from control of the destinies of the nation he loved so well. There have been few emperors comparable with him in the characteristics which make true greatness. He was a patriot of the first order. He accomplished wonders for Brazil, and had he remained in power his beneficent reign would probably have still further advanced the welfare of the country. It is doubtful whether Brazil is fit for republican government. The course of events since Dom Pedro's abdication indicates that the present form of government is insecure and unstaple. The emperor himself believed that the country was not sufficiently advanced for the peaceable revolution to which he consented, but he gracefully yielded to the wishes of the people. Most men in his position would have sought to strengthen their hold upon power. His ability and personal popularity were so great that he could have remained emperor until his death, had he so willed. But he himself prepared the way for his retirement by giving encouragement to republican ideas and seeking to educate his people for self-government. Dom Pedro will live in history as one of the wisest, most benificent and most unsefish ruler the world has ever known. What a contrast between his noble spirit and the vain-glorious self-exaltation of the present emperor of Germany.

Two Deer Fight.

The gentlemen comprising the surveying party now working for the Bear Valley company up Millard's canyon, were on Monday treated to a sight which seldom comes to men in this center of civilization. We get the story from Messrs. Pollock and Ross, transit men of the party.

The men were working up the canyon about a mile above the Millard House when they heard a peculiar, crashing noise. Looking up they saw on the cliffs high above the stream, and about a quarter of a mile from them, two noble bucks standing, with heads lowered, about ten feet from each other. Thus they stood eying each other and pawing the dirt for fully a minute. Then they made a simultaneous spring, and came together with a noise like a falling tree. So violent was the concussion that the animals were thrown back until a distance of ten or fifteen again intervened between them. The men, fascinated with the sight, watched the deer go through the same performance again and again.

Finally, after a more than usually violent rush, the bucks did not separate, but struggled as if apparently trying to push each other back. It soon became plain to the men, however, that instead of pushing they were pulling away from each other. In other words their horns had become locked, and from raging combatants the bucks became frightened animals, and were only bent on securing a divorce. Messrs. Ross, Pollock and party then conceived the idea of taking advantage of the helpless condition of the bucks and capturing them. They made a great rush for the scene, but before they reached it the deer in their struggles approached too near the edge of the cliff and both of them fell to their death in the pool below. When the party reached the water the deer were found locked in each other's horns quite dead.

The gentlemen thought to skin the deer and bring in the hides to lend an air of authenticity to the tale, but the law is so strict as to having in your possession the hide of a newly deceased deer, no matter whether the deer dies of la grippe, commits suicide or falls out of a balloon, that they forbore.—Banning Herald.

Three American Queens.

Three little dirty, half clad girls made a brief sensation on upper Broadway the coldest day recently. The eldest was not more than eight, and her companions might have been six and seven respectively. The eight-year-old carried a faded, rib rotten parasol that had once been pale blue, and her two companions were trying to squeeze their heads under it, while they carried the rear of their short dresses in one hand, as ladies manipulate their trains at a muddy crossing.

The eldest divided her attention between the proper angle for the parasol and getting her little skirt down low enough to touch the sidewalk, which she occasionally accomplished by stooping. Three pairs of feet were visible through the dilapidated shoes, and the shabby old July hats wouldn't have been picked out of the gutter. And these three little girls playing lady on Broadway were evidently delighted at the good humored attention of stalwart gentlemen in heavy ulsters, ladies in costly furs and carriage drivers muffled to the ears in warm livery.—New York Herald.

Fixed to the Rail by Electricity.

A very peculiar case of shocking by electricity occurred in Shelbyville recently. The victim was William Louden, who works at the Hotel Ray. In front of the hotel is an iron veranda running to the third story. An electric wire passes from the street into the room occupied by George Goulding in the hotel building. This evening when the electric light was turned on a heavy rain was falling. The electricity apparently had heavily charged the iron veranda. Louden came out of the hotel and stood with his back against the iron railing. In an instant he was shocked and fixed in his position. His frightful yells attracted a big crowd. Charles Huffman ran out of his store, and, touching Louden, was also badly shocked. Louden finally fell on the sidewalk. The two men are badly burned.—Cor. Indianapolis Journal.

Almost Drowned in Sawdust.

Men have lost their lives in quicksands, but seldom, if ever, has any man come nearer sinking down to death in quick sawdust than did Merchant Tailor E. W. Batzle, of Williamsport. Walking along eight or ten yards from the river bank, upon what he did not know was made ground almost entirely composed of sawdust, he began to sink before he realized any danger. After he had gone down to his waist, and could not regain the shore, he removed his upper garments and threw himself as fast as possible out into the river, where he struck wading ground and made his way in the water around the treacherous sawdust tract.—Cor. Philadelphia Record.

Made Things Lively.

Although the district school in Holloway, Conn., was tightly closed during the vacation, there was one caller that licked up a rumpus. It was a thunderbolt, but where it entered can only be conjectured. During its short stay it passed through a wide range of studies, including spelling, reading, grammar, arithmetic and geography. Besides throwing new light upon the books treating on these subjects, it tore up the floor, splintered the desks and in its exciting exit carried off part of the window sash.—Yankee Blade.

Pretty Good Pay for a Physician.

William K. Vanderbilt, not feeling very well the other day, decided to take a trip to Europe, and he wanted a physician to go with him. The doctor said he could not afford to leave his practice, which was worth $1,000 a week. Mr. Vanderbilt offered to give him $10,000 to make a trip of six weeks with him, and the offer was accepted.—New York Cor. Philadelphia Press.

His Fat Saved Him.

John Burton, a fat man, of Cambridge, went to the Howard Athenæum, at Boston, to see a variety show. As the curtain went up he fell over the gallery rail to the pit, thirty-five feet below. He landed in the aisle and got up unhurt, save by a slight cut over the eye.—Exchange.

Big Cabbages.

A wagon load of produce recently brought into Dallas consisted of but six heads of cabbage, the half dozen filling the wagon bed.—Dallas (Or.) Chronicle.

Executor of the last Will and Testament of John Allen Hannah, deceased.
Dated December 7th, 1891.

OFFICIAL.

ORDER FIXING TIME AND PLACE FOR HEARING OF APPLICATION TO MORTGAGE CERTAIN REAL ESTATE AND DIRECTING NOTICE TO BE GIVEN.

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of Ezra M. Goodale, deceased.

Thomas J. Goodale and Maggie P. Goodale, Executor and Executrix respectively of the last will and testament of Ezra M. Goodale, deceased, having filed their petition herein, duly verified, praying for an order authorizing and empowering and directing them to mortgage the south half of the south-east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north east quarter of section 27 all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the purposes and for the amount stated in said petition, or for such lesser amount as to the said Court may seem meet; it is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the Judge of said Superior Court on Wednesday the 23rd day of December, 1891, at 11 o'clock a. m. of said day, at the Chambers of said Superior Court, at the Court-house, in the town of Independence, County of Inyo, State of California, then and there to show cause why an order should not be granted to the said Executor and Executrix authorizing, empowering and directing them to mortgage the real property belonging to said estate, to wit: The south half of the south east quarter of section 22; south-west quarter of the south-west quarter of section 23 and the north-east quarter of the north-east quarter of section 27, all in Township Eleven South, Range 34 East, Mount Diablo Meridian, or some part thereof, for the sum of $900.00, or such lesser amount as to the Judge of said Court shall seem meet; all of which more fully appears by the said petition now on file in the Clerk's office and two which reference is here made for further particulars.

It is further ordered that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo.

Dated November 18th, 1891.
GEO. M. GILL,
Judge of the Superior Court.

[Endorsed.]

SUPERIOR COURT, COUNTY OF INYO.

Religious Services.

Sunday School at Lone Pine at 10 a. m.; Independence 2:00 p. m. Georges Creek, 2:30 p. m.

Rev. F. J. Windsor will preach at Lone Pine on Sunday at 11 o'clock a. m.; at Georges Creek, 2:30 p. m.; at Independence at 7:00 p m.

Services on Christmas morning at 10:30.

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, December 12, 1891.

John Lubken et al. vs H. J. Robinson—Foreclosure of mortgage. Filed complaint and issued summons.

W. H. Uhlemeyer vs. Sylvania Mining Company—Action dismissed.

MONDAY, December 14, 1891.

Estate of Wm. Ischinger, deceased—Filed bond of John Ischinger.

WEDNESDAY, December 16, 1891.

F. and H. Strohmeyer vs. estate of Wm. T. Davis, deceased—Filed findings and facts and entered Judgment.

O. I. Mairs got home from Bakersfield on Monday.

Fred Holbert returned form Los Angeles last Monday.

Martin Mee came in from Darwin on Thursday's train.

Keeler will celebrate Christmas with a tree for the little ones.

J. A. McKenzie and J. Wilson were up from Darwin during the week.

There will be a Christmas tree and exercises at the school house Christmas Eve.

The Grand Jury was impanelled on Tuesday and has been in session during the week.

Anyone desiring a nice quiet room or rooms, inquire of Mrs. S. A. Densmore, Independence.

The Harmony Orchestra will donate their services for the school benefit ball on on New Year's Eve.

Mrs. J. J. Gann came in from Lookout on yesterday's train and will spend the holidays at Independence.

L. McLean left Independence last Tuesday for his home at San Mateo. He visited Carson on the way.

Remember that the sale of personal property belonging to the Judge Hannah estate takes place this afternoon.

Tom McDonough and the Indian Caesar returned home from Bakersfield by rail visiting San Francisco on the way. Caesar was decorated with a brand new plug hat.

The opening at Rhines last Saturday evening was crowded with people to see the many pretty things. It had the effect of a social gathering where the townspeople met and passed a pleasant evening.

Harry C. Vanuatta, a nephew of the late George Hearst, passed through Independence yesterday en route for Fresno. He has been engaged in mining in Nevada during the past summer.

S. P. Smith, Val. Sherman and J. W. Clarke appeared in the Superior Court last Monday, plead to the complaints preferred, and their trials were set for January 26th, 27th and 28th respectively.

Will Yaney passed through Independence yesterday en route for the Death Valley country. He has visited there several times and has been interested in prospects for several years past. Hope he will be successful.

A grand ball for the School benefit fund will be given at Independence on New Year's Eve. The committee in charge will endeavor to render the affair a complete social success. Further particulars will be published as they are resolved upon.

Christmas is always the brightest anticipation of the year to a child. Under the direction of the teacher, Mr. Oman, a Christmas tree will be given on Thursday evening next. Parents should render every assistance in their power to make the occasion a happy one for the children.

It is reported that Jack Wilson has sold certain mining property at Darwin to P. Reddy and has invested in town property in Lone Pine, where he removed his family. J. A. McKenzie has purchased the Hunter place at Lone Pine and will make his future residence there.

L. Wood has received a handsome lot of new Christmas goods, comprising albums in morocco and plush, manicure sets, plush work boxes, toilet cases, shaving sets, dressed dolls and various elegant children's toys. Will be sold very cheap. Call and see them before purchasing elsewhere.

The following named Carsonites visited Independence this week, returning home on Thursday's train. Mr. and Mrs. George T. Mills, Mrs. T. R. Hofer, C. F. Williams and W. R. Randall. The parties named are interested in the Eastside canal and had business in the local Land Office connected therewith.

Henry Hearn, an old time miner of Inyo county, was found dead outside his cabin at Fish Spring on Monday last. An inquest was held on Tuesday by Justice of Peace D. J. Hession and it was found that he came to his death through natural causes. He had been in ill health for a long time.

Under the able management of W. K. Miller the Mojave and Keeler stage line is now in first-class running order. The trip is made in twenty hours or less. Four good animals are used on the coaches and five changes are made on the trip. The time from Keeler to San Francisco is thirty-two hours and to Los Angeles, twenty-six hours. The line is on a good paying basis and will constantly improve.

The Grand Jury.

The Grand Jury of Inyo county for 1891 was impanelled last Tuesday. Following is the list of members:

J. L. Bonland, Foreman.	O. I. Mairs
	C. H. Parsons
J. H. Stoutenborough	Frank Shaw
James Peregrine	W. H. Jenkins
J. V. Skinner	J. H. Bulpitt
John A. Lank	Joseph Shelly
J. D. Harger	Henry Fehrman
W. Muth Rasmussen	A. K. Eagley
A. C. McDonald	W. L. Hunter
Henry Shirley	James Shaw

The Jury continued in session until noon to-day, when they brought their labors to a close. The following recommendations were made:

That the case of the People vs. S. P. Smith in the Superior Court be dismissed.

That saloon licenses be increased.

That the traders' license be amended to exclude the sale of liquor. That a special license be required.

That the attention of the Sheriff and District Attorney be directed to the sale of flavoring extracts to Indians.

The action of Sheriff Gorman in prosecuting offenders for selling whisky to Indians was warmly commended and the Supervisors desired to reimburse him for amounts expended in rewards.

That a fire-proof vault be provided for the County records.

The hospital and jail were reported kept in good condition.

The books of the various county officers were reported correct.

Recommended that Justices of the Peace be required to furnish an itemized bill of fines and expenses in criminal cases to the Board of Supervisors.

Miners Convention.

As the result of much agitation and discussion of the subject the miners of Placer county have issued a call for a State convention. The mining law of California is susceptible of many changes that would benefit not alone those engaged in placer mining but the general mining interests of the State. Following is the

CALL.

The miners of Placer county in Convention assembled, hereby issue a call for a Miners' State Convention to meet in San Francisco on Wednesday, the 20th day of January, 1892, at 2 o'clock p. m.

The appointment of delegates to said State Miners' Convention shall be thirty (30) from each county in California, except San Francisco, which shall be entitled to sixty delegates.

Said delegates shall be elected by a Convention of the miners and mining sympathizers called to meet in each county on or before the first day of January 1892, for that purpose. Any three or more miners may issue the call for said county Convention.

If, however, in any county of the State, the miners fail to meet and elect delegates as herein provided, on or before the 1st day of January, 1892, then the Supervisors may and they are hereby requested to appoint the delegates which their respective counties are entitled to in said State Convention.

Provided, that no man who is unfriendly to the mining interests shall be eligible to a seat in said convention, and where Supervisors may appoint they are requested to discriminate in favor of mining men.

Settlement Notice.

All persons knowing themselves to be indebted to the undersigned are hereby notified to call and settle their accounts on or before the 1st day of January, 1892.

A. K. EUGLEY.
Big Pine.

About the finest dried fruit we ever saw was put up by S. A. Densmore on his Camp Independence ranch this year. There are three varities of prunes and all perfect; also dried apples and peaches. Mr. Densmore has sent sample boxes to Boston, Chicago, Los Angeles and other cities, and it is a certainty that no finer fruit will be exhibited anywhere.

Cork Forests.

Cork growing in Spain and Portugal is an extremely precarious business, and it demands considerable capital. Only the other day a man in this city was seeking a partner with $100,000 to put into a cork forest in Spain, with a lease of 150 years. The bark is cut only once in ten years, but as the forests are very large the grower manages to obtain an annual crop. This year's crop is just beginning to come into the American market, the trees having been barked in July and August.

Crude cork comes over in great bales weighing from 175 to 225 pounds each. The heat to which it is subjected in order to flatten out its curves also drives out most of the insects, such as one would naturally expect to find in bark. As cork is too light to form a cargo of itself, the cork carrying vessels also bring oil, olives, wine and heavy merchandise of various sorts.—New York Sun.

Some Big Pumpkins.

One man regards as a wonderful achievement the raising of four pumpkins on one vine, weighing respectively 115, 95, 90 and 80 pounds. The biggest cornstalk reported was 16 feet 8 inches high. The biggest ear was eight feet from the ground. Lots of others were fourteen to fifteen feet high. One man thought it of sufficient importance to report that he had raised a potato vine fifteen feet long. Reports of second crop strawberries have been frequent, and farmers had some on the Reading market less than ten days ago. At least twenty farmers reported that they had recently picked a second crop of raspberries.—Pennsylvania Cor. St. Louis Globe Democrat.

A Lawyer's Harvest.

It is the man with the idea who develops his opulency today. A lawyer of this city not long since in three months persuaded all the manufacturers of a certain staple product in the eastern states to form a combine. He visited all of them and finally got them together and drew the articles of agreement. He joined about twenty-five concerns into a combination, with a capitalization of over a million. At the outset he claimed 2 per cent., and his realization for his three months' work was $30,000. This is a fact. Two New Haven concerns are in the combination.—New Haven Palladium

---

"Of course it hurts, but you must grin and bear it," is the old time consolation given to people troubled with rheumatism. "If you will take the trouble to dampen a piece of flannel with Chamberlain's Pain Balm and bind it over the seat of pain your rheumatism will disappear," is the modern and much more satisfactory advice. 50 cent bottles for sale by

A. K. EUGLEY,
Big Pine.

Our readers will notice the advertisements in these columns of Chamberlain & Co., Des Moines, Iowa. From personal experience we can say that Chamberlain's Cough Remedy has broken up bad colds for our children and we are acquainted with many mothers in Centerville who would not be without it in the house for a good many times its cost and are recommending it every day.—*Centerville* (S.D.) *Chronicle and Index.* 50 cent and $1 bottles for sale by

A. K. EUGLEY,
Big Pine.

We want every mother to know that croup can be prevented. True croup never appears without a warning. The first symptom is hoarseness; then the child appears to have taken a cold, or a cold may have accompanied the hoarseness from the start. After that a peculiar rough cough is developed, which is followed by the croup. The time to act is when the child first becomes hoarse; a few doses of Chamberlain's Cough Remedy will prevent the attack. Even after a rough cough has appeared the disease may be prevented by using this remedy as directed. It has never been known to fail. 50 cent and $1 bottles for sale by

ORDER FIXING TIME AND PLACE FOR HEARING PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Francisco Paderes deceased.

IT APPEARING TO THE JUDGE OF SAID Court, by the petition this day presented and filed by Ygnacia Abechuco, the Administratrix of the Estate of Francisco Paderes, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the deceased, and the debts, expenses and charges of administration.

It is therefore ordered by the Judge of said Court, that all persons interested in the estate of said deceased, appear before the said Superior Court on Saturday, the 9th day of January, 1892 at eleven o'clock in the forenoon of said day, at the Court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administratrix to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

Dated December 11th, 1891.

GEO. M. GILL,
Judge of the Superior Court.

A BIG BUSINESS.

The growth and present size of the great retail business of Weinstock, Lubin, & Co., Sacramento, shows on the face that it possesses *a distinct character* of its own. It has done much to introduce many important reforms in storekeeping, which have been widely copied. There are people who have never heard of the big establishment, but who, through its silent influence, are being served by local dealers better than they otherwise would be.

It has done more than any other ten stores to give the "One Price System" firm and substantial footing on the Pacific Coast.

It has shown people living in small towns that they can deal through the mails with as much security as if they bought in person.

It has, by constantly raising its own standard of qualities, had an influence in raising the standard everywhere. The average grade of goods kept upon the Coast grows better each year.

It has been prominent in bringing west as stylish and desirable goods as are kept by merchants in New York, Philadelphia, or Chicago. Indeed, the manufacturers who supply them supply it. The goods are the same; and the Sacramento prices, while never higher, are sometimes considerably less. This is explained by the fact that the cost of conducting business in large Eastern cities is far greater than in the Capital City, the extra expense of overland freight being but a comparatively small item.

It has made it possible for out-of-town people to enjoy quite as satisfactory shopping facilities as do those living in large cities.

There is no desire on the part of the firm to take any special credit for whatever influence for good the house may have exerted. They have sought simply to build up a business on fair and just principles; to buy and sell as low as they can; to deal as far as possible only in the very best goods; and neither to fear nor favor any one, but to treat every customer as they would their most favored friend.

Whatever of success has come, they attribute it to the faithful carrying out of these aims and principles.

A large illustrated catalogue, giving full information about goods and prices, how to order, etc., sent free to any address.

A Perfect Baking Powder.

The constantly growing demand for Dr. Price's Cream Baking Powder, the standard cream tartar powder for forty years, is due to two causes.

FIRST:—The extreme care exercised by the manufacturers to make it perfectly pure, uniform in quality, and of highest raising power.

SECOND:—The recent investigations exposing the fact that certain other brands of baking powder contain ammonia and still others that were found to contain alum. These unscrupulous manufacturers are being found out, and the consumers are giving them a wide birth.

Nothing is left to chance in the manufacture of Dr. Price's Cream Baking Powder. Chemists are employed to test every ingredient as to purity and strength. Hence; its marvelous purity and uniformity. Each can is like every other. It never dissapoints. BEST is ALWAYS the CHEAPEST.

Dr. Price's Cream Baking Powder is reported by all authorities as free from Ammonia, Alum, or any other adulterant. In fact, the purity of this ideal powder has never been questioned.

The Maidens Soliloquy—She—How can I ever expect him? He is rich and amiable and I like him, but his hair is red, and red is so horribly unbecoming to me.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Chile is an example of a very common paradox. She is so small that she isn't afraid of anybody.

IN A DAY.

LAWRENCE, KANS., Aug. 9, '88.

George Patterson fell from a second-story window, striking a fence. I found him using

ST. JACOBS OIL.

He used it freely all over his bruises. I saw him next morning at work. All the spots rapidly disappeared, leaving neither pain, scar nor swelling.

C. K. NEUMANN, M. D.

"ALL RIGHT! ST. JACOBS OIL DID IT."

"August Flower"

I had been troubled five months with Dyspepsia. The doctors told me it was chronic. I had a fullness after eating and a heavy load in the pit of my stomach. I suffered frequently from a Water Brash of clear matter. Sometimes a deathly Sickness at the Stomach would overtake me. Then again I would have the terrible pains of Wind Colic. At such times I would try to belch and could not. I was working then for Thomas McHenry, Druggist, Cor. Irwin and Western Ave., Allegheny City, Pa., in whose employ I had been for seven years. Finally I used August Flower, and after using just one bottle for two weeks, was entirely relieved of all the trouble. I can now eat things I dared not touch before. I would like to refer you to Mr. McHenry, for whom I worked, who knows all about my condition, and from whom I bought the medicine. I live with my wife and family at 39 James St., Allegheny City, Pa. Signed, JOHN D. COX.

J. B. Pace Tobacco Co., Richmond, Virginia

Murder Will Out.

Ten years ago an old timer named Tom Poole, who, with his two children, lived on a farm between Pemberton meadows and Lillooet lakes, was found murdered. The bodies of the children, horribly mutilated, lay across the father's corpse in the cellar of the house, which had been burned over their heads after the horrible butchery. Suspicion rested on a neighbor named Graham, who was last seen near the ranch. He was arrested and tried in New Westminster for the crime, being afterward acquitted.

The provincial government offered a reward for the capture of the murderer, and there the case dropped and public interest gradually died out. Within the past few months certain discoveries have been made which go to show that Graham was really innocent, and the real murderer is an Indian chief named Nemiah, who, two years ago, murdered a Chinaman on the Frazer river, and has since been evading the authorities.

About two weeks ago Nemiah quarreled with another Indian in his band, and the hands of the chief were almost stained with the blood of his third victim. Other Indians present seized and bound him, and immediately sent a message to B. Franklin, justice of the peace at Tatlae Lake, that they had got Nemiah and wanted the authorities to come up and take him. On receipt of this information Franklin, accompanied by a posse of special constables, left immediately, only to find on arriving at their destination that their bird had flown.

Nemiah's squaw had cut the ropes that bound him while the others were asleep. Making good use of his liberty Nemiah took to the "stick," where he is supposed to be at present. The party found that the Indian Guishou, with whom Nemiah had the quarrel, was not dangerously injured. All the other Indians are willing to assist in the capture of Nemiah, or appear to be.—Vancouver (B. C.) Cor. Tacoma Ledger.

Mushroom Lore.

A local expert proposes to make mushroom hunting a specialty this summer, and he is certain that if there is any section of Maine where there are lovers of this fungus it is right here in Lewiston and Auburn. On his finger he can count scores of men (has to use his fingers twice over and more, too, you see) who are fond of them and know how to cook them. At one certain country house in Lewiston the Sunday mushroom dinner is a fixed thing in summer, and my! aren't they delicious! The old rule for distinguishing them from toadstools—viz., eat them, and if you die they are toadstools—is not now operative.

It's a poor mushroom gatherer who does not know the difference. The top of the young mushroom is white, the under portion loose and lighter. As it matures the top changes to a brown color and the under part to a dark red. The stem, which is white and round when young, also grows dark with age. Eatable mushrooms have pleasant odor and are never slimy. A test proposed is to sprinkle salt on the under side or spongy part and give it time to act. If it turns black the mushroom is good; if yellow, the toadstool is poisonous.—Lewiston Journal.

Beating Street Car Railways.

It is hard to get ahead of the street car companies, but some people in Chicago think they are going to do it. They are having constructed vehicles exactly like street cars, except that the wheels are a little larger. They are gauged to fit the car tracks, and it is proposed to run them on the tracks just like any horse car, without asking with your leave or by your leave. They will stop like the street cars and charge the same fare. If the car companies object, owners of the new vehicles will point to the fact that they are simply omnibuses, which are entitled to use any portion of the public streets, whether tracks happen to be there or not. If the car companies don't like their tracks to be used they are at liberty to take them away.—Exchange.

Hands That Statesmen Write.

Among Lord Granville's other amiable possessions was that of a very neat and scholarly handwriting. Perhaps this is one reason for his popularity with press men. On the whole, however, statesmen certainly do not write worse than "writers." Mr. Gladstone's hand is indeed spoiled by over indulgence in postcards. Mr. Balfour's hand is not pretty, and Mr. Goschen's is execrable. Mr. John Morley's hand has character, but is not always easy to read. Lord Salisbury writes clearly. So do Lord Rosebery and Lord Hartington. But it may be doubted whether any of those we have mentioned write at once so prettily and so legibly as did Lord Granville.—Pall Mall Gazette.

Senses Go to Sleep in Definite Order.

According to the best writers on the subject, it has been ascertained that in beginning to sleep the senses do not unitedly fall into a state of slumber, but drop off one after the other. The sight ceases, in consequence of the protection of the eyelids, to receive impressions first, while all the other senses preserve their sensibility entire. The sense of taste is the next which loses its susceptibility to impressions, and then the sense of smelling.

The hearing is next in order, and last of all comes the sense of touch. Furthermore, the senses are thought to sleep with different degrees of profoundness. The sense of touch sleeps the most lightly and is the most easily awakened; the next easiest is the hearing; the next is the sight, and the taste and smelling awake the last.

Another remarkable circumstance deserves notice; certain muscles and parts of the body begin to sleep before others. Sleep commences at the extremities, beginning with the feet and legs, and creeping toward the center of nervous action. The necessity for keeping the feet warm and perfectly still as a preliminary of sleep is well known. From these explanations it will not appear surprising that, with one or more of the senses, and perhaps also one or more parts of the body, imperfectly asleep, there should be at the same time an imperfect kind of mental action, which produces the phenomenon of dreaming.—Chambers' Miscellany.

Solid Comfort at Last for Bald Heads.

The skin grafting physician of Reading, Dr. Ege, who has successfully demonstrated by practical tests that it is possible to turn a black man white, has made known his real object in conducting these experiments. The doctor does not think that there are any colored people in the world who would be foolish enough to submit to the skin grafting torture in order to be classed with the white folks, but he does claim that thousands of bald headed people are willing and anxious to wear a genuine head of hair. This can be accomplished by the skin grafting process. Dr. Ege stoutly asserts that a bald head can be covered with scalp teeming with healthy hair. He has several letters in his possession from persons anxious to undergo the operation.

The wonderful process opens up a world of possibilities. The sensitive red haired man could trade scalps with some black headed person who is anxious to get rid of a cowlick. Dame Fashion might decree that polka dot was the proper caper in hair, and the new process would be a harbor for the ultra fashionable. Again, by utilizing the hide of a blue Skye terrier the Fourth of July orator could make an impression upon his hearers by wildly tearing out handfuls of red, white and blue hair.—Philadelphia Record.

A Natural History Lesson for a Cent.

There is a new member of the now numerous slot machine family. It is a "drop-a-cent-in-the-slot-look-through-the-microscope-and-see-the-wonders-of-nature" contrivance, and is really a very clever idea. Few of them have as yet appeared. The machine stands on an iron pedestal. It is square, and from the top of it sticks up a nickel tube in which is placed a very good microscope. A small lamp, like those in use on cigar counters, stands just at the back of the machine, throwing a ray of light into its dark interior.

When the penny is dropped into the slot it removes a slide from the lens of the microscope and sets revolving a dial inside the machine on which are placed seven of the so called "wonders of nature." As the dial revolves these pass under the microscope. The "wonders" in each machine are changed once a week. In the machine seen by the writer were a human hair, a section of a hard corn taken from somebody's foot, a flea, a croton water bug, a bedbug, a strand of raw silk, and the wing of a fly.—New York Times.

AN IMPORTANT BILL.

The Royal Baking Powder Condemned in the New York Legislature.

[New York *Press*, April 13, 1891.]

Last Monday Mr. Kelly introduced the following bill in the assembly. A careful reading of it will show that it is a very important one.

AN ACT to prevent the use of poisonous and injurious ingredients in baking powders.

WHEREAS, Baking Powders manufactured in this state, known as the "*ROYAL*" alum and other Baking Powders are advertised for sale as absolutely pure; and

WHEREAS, Official examination show them to contain ammonia and other injurious ingredients; therefore THE PEOPLE OF THE STATE OF NEW YORK, represented in Senate and Assembly, do enact as follows:

Section 1.—Every can or package of baking powder containing Ammonia offered for sale in this State shall have a conspicuous label thereon with the words "Contains Ammonia" printed thereon in plain type, not smaller than great primer and any person who shall sell, or have or offer for sale, any such can or package of baking powder without such label thereon, shall be guilty of misdemeanor.

Section 2.—This act shall take effect July 1, 1891.

Woodpecker's Justice.

A year ago a pair of red headed woodpeckers determined to peck a hole in the boarding under the eaves of a house, as woodpeckers often do. The owner of the house, not liking such mutilation, after repeated efforts succeeded in driving them away, and they went to work at once and dug a hole in the nearest tree.

When the birds' home was finished and housekeeping had begun the farmer's boys captured the female as she sat in the nest and kept her in a cage, hoping to catch the male also.

Two days later he returned with another wife. The boys relented at the sight. They gave Mrs. Woodpecker No. 1 her liberty and awaited results.

To their surprise the male woodpecker, after a relentless pursuit of about six hours, killed her. Then he destroyed the one egg which she had laid, and continued housekeeping with wife No. 2 as if nothing had happened.—Cor. Youth's Companion.

When You Go to Europe.

A hint from one who knows continental hotels: I carried with me one good sized bedroom pillow encased in dark summer silk, and wished many times that I had brought one or two more, as one is forcibly reminded of the block and guillotine when placing the head upon some of the miserable contrivances politely called pillows in many places in Europe.

Paganini's Favorite Instrument.

Paganini purchased many other violins, particularly several Stradavari, and was continually buying and selling fine instruments, but nothing could induce him to part with his "Joseph del Jesu." He kept it constantly with him, and watched it as a father might watch a delicate child. Once it was sick, appearing suddenly to lose all its quality, and he took it to Vuillame, known as the most famous repairer of fiddles in Europe. The expert said that it must be taken apart. Paganini insisted that it must not go out of his sight, and compelled the work to be done in his own apartments. Vuillame told afterward that Paganini watched him as he put in the knife and pried the delicate wood apart, and started at every fresh thrust as though the knife were going into his own body. Afterward Vuillame had to take it to his shop to put it together. When the work was done Paganini gave him a gold box set with precious stones, which Paganini said was exactly the same as one he had to give to his physician, and that the doctor of his body and the doctor of his violin were entitled to equal consideration. The box was worth several hundred dollars, probably ten times as much as the original maker received for the violin when it was new.

While the violin was in his shop Vuillame made measurements of its exact dimensions down to the very unevennesses of the varnish, and from these he subsequently made another violin that was the exact duplicate of Paganini's, but when the latter heard of it he insisted that it should be sold to him, and so no one ever had a violin like that of Paganini until, dying, Paganini bequeathed the copy to Camillo Sivori, who has ever since played upon it. The original violin Paganini left to his native city, Genoa, to be kept forever in remembrance of him. It is kept with scrupulous care, and only the most famous artists are or have ever been allowed to touch it. Once before the honor has been accorded to Sivori. This time Leandro Campanati, the director of the Milanese quartet, shares the honor with Sivori.—New York Sun.

Hold It Over a Day.

Let me tell you how I write mean letters and bitter editorials, my boy. Some time, when a man has pitched into me and "cut me up rough," and I want to pulverize him, and wear his gory scalp at my girdle and hang his hide on my fence, I write the letter or editorial that is to do the business. I write something that will drive sleep from his eyes and peace from his soul for six weeks. Oh, I do hold him over a slow fire and roast him. Gall and aquafortis drip from my blistering pen. Then, I don't mail the letter and I don't print the editorial. There's always plenty of time to crucify a man. The vilest criminal is entitled to a little reprieve. I put the manuscript away in a drawer.

Next day I look at it. The ink is cold; I read it over and say: "I don't know about this. There's a good deal of bludgeon and bowie knife journalism in that. I'll hold it over a day longer." The next day I read it again. I laugh and say: "Pshaw!" and I can feel my cheeks getting a little hot. The fact is, I am ashamed that I ever wrote it, and hope that nobody has seen it, and I have half forgotten the article or letter that filled my soul with rage. I haven't been hurt, I haven't hurt anybody, and the world goes right along, making twenty-four hours a day, as usual, and I am all the happier. Try it, my boy. Put off your bitter remarks until to-morrow. Then, when you try to say them deliberately, you'll find that you have forgotten them, and ten years later, ah! how glad you will be that you did! Be good natured, my boy. Be loving and gentle with the world, and you'll be amazed to see how dearly and tenderly the worried, tried, vexed, harassed old world loves you.—Burdette's Letter.

As if Nothing Had Happened.

A few years after the war a gentleman had occasion to visit Richmond with his family, and living at the time in the county of Patrick, fifty miles from any railroad station, very few of the darkies in that county had ever seen a railroad train. A nurse was a necessary part of the family equipage, and he had secured the services of a coal black specimen, about 15 years of age, who was as quick witted as usual, but was as veritable a Topsy as ever "growed." The party took the train at the nearest station, and after a few hours' run a broken rail threw the train off the track. Some of the cars made a revolution down an embankment, and some were lodged on its incline at an angle of forty-five degrees. Great consternation, of course, ensued; the men were shouting and the women and children screaming. After great difficulty our party scrambled out of the coach on the steep incline of the embankment. Finding no bones broken with wife or little one, the writer, who was surprised at the placid, undisturbed appearance of the nurse, who, holding the baby in her arms, looked upon the scene as if nothing had happened, said:

"Milly, were you much frightened?"

"No, sah," she said; "I thought it had to stop that way."—Harper's Magazine.

Vocal Tricks on the Stage.

There are several fixed rules—we might almost call them tricks—for the production of vocal sounds on the stage, the acquisition of which is invaluable to the artist. The abrupt force, for instance, as it is technically called, which distinguishes Mme. Sara Bernhardt above all other living actresses, and which consists of an exceedingly rapid, yet distinct, utterance of the words of her most passionate speeches, beginning in a very low tone with extraordinary swiftness, and ending the phrase with a loud and vibrating climax, which gives an impression of intensity and power well calculated to startle the audience and rouse the greatest enthusiasm, is only an acquired art—a trick—and simply the result of hard practice. She herself has said that her quarrel scene in "Frou Frou" took her many months to learn. Her method is to first read the speech as she would like to eventually speak it on the stage, but in an undertone, as slowly as possible, pronouncing each word with a long breath before and after it. This exercise she by degrees increases in rapidity until she has almost insensibly the habit of pronouncing the sentence with what appears to the spectator to be a perfect whirlwind of inspired passion.—Saturday Review.

Commemorating the Jubilee.

Mr. Assheton Smith is commemorating her majesty's jubilee in a remarkable manner. He has caused to be planted on the slopes of Moel Rhiwen mountain a plantation composed of 630,000 trees. Nearly 200 men have been continually employed since the jubilee in planting the trees, which will be so arranged as to represent the words "Jubilee, 1887." Each letter measures 200 yards long and twenty-five feet wide. The first tree of the letter J was planted on jubilee day.—Boston Budget.

American authors are more read than the English in Japan. Last year 85,000 English and 119,000 American books were imported into that country, so that the old question, "Who reads an American book?" was fairly answered.—Chicago Herald.

The worst people in the world occasionally blunder on good deeds; but men who make a practice of doing good soon become experts.

During the last year and a half the cotton manufacturing power of Japan has increased more than 150 per cent.

A clergyman has been caught making clippings from books at the British museum.

PILES! PILES! PILES

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted. Sold by druggists, or sent by mail on receipt of price, 50c and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

She sought to shine, this pretty maid,
In literary ranks,
And when himself he offered said,
"You are declined with thanks."

THE WESTERN SETTLER'S CHOSEN SPECIFIC.

With every advance of emigration into the far West, a new demand is created for Hostetter's Stomach Bitters. Newly peopled regions are frequently less salubrious than older settled localities, on account of the miasma which rises from recently cleared land, particularly along the banks of rivers that are subject to freshets. The agricultural or mining emigrant soon learns, when he does not already know, that the Bitters afford the only sure protection against malaria, and those disorders of the stomach, liver and bowels, to which climatic changes, exposure, and unaccustomed or unhealthy water or diet subject him. Consequently, he places an estimate upon this great household specific and preventive commensurate with its intrinsic merits, and is careful to keep on hand a restorative and promoter of health so implicitly to be relied upon in time of need.

A water spaniel and an ocean greyhound are no relation to each other.

IMITATORS AND IMPOSTORS.

The unequalled success of ALLCOCK'S POROUS PLASTERS as an external remedy has stimulated unscrupulous parties to put forth imitations, which they endeavor to sell on the reputation of ALLCOCK'S. It is an absurdity to speak of them in the same category as the genuine and original porous plaster. Their pretensions are unfounded, their vaunted merit unsupported by facts, their alleged superiority to or equality with ALLCOCK'S a false pretense.

The ablest medical practitioners and chemists and thousands of grateful patients unite in declaring ALLCOCK'S POROUS PLASTERS the best external remedy known.

Johnny—Papa, what is a fallacy? Papa—It's a folly, see?

Fires That Firemen Hate.

"Do you know how half of the most dangerous fires start?" asked an old fireman of a reporter.

Both stood in the hall of a west side dwelling and a woman had just gone into the basement with a wooden box filled with hot ashes.

"Well, continued the veteran without waiting for an answer, "that woman illustrates it to perfection. They will put ashes in a box or barrel and then take them down to the cellar. The first thing you know a live coal in the ashes sets fire to the barrel, and then you have a fire which makes an awful lot of smoke and may be suffocates somebody.

"Then, again, it makes a fire bad for the firemen to fight, for they cannot locate it. It is down a cellar, and the cellar is filled with smoke. I tell you the firemen use plenty of 'cuss' words when they are called to a fire like that. Always put ashes in a tin vessel," and a passing car carried the speaker away toward the quarters of his engine company.

Lord Palmerston's Last Word.

Lord Palmerston once made use of some very effective pauses which he could not have prepared beforehand, and a sample of these is worth quoting. While electioneering at Taunton he was greatly troubled by a butcher who wanted him to support a certain Radical policy. At the end of one of his lordship's speeches the butcher called out! "Lord Palmerston, will you give me a plain answer to a plain question?" After a slight pause Lord Palmerston replied: "I will." The butcher then asked: "Will you or will you not support this measure—a Radical bill?" Lord Palmerston hesitated, and then, with a twinkle in his eye, replied: "I will"—Then he stopped. Immediately the Radicals cheered tremendously. "Not," continued his lordship. [Loud Conservative cheers.] When these ceased Lord Palmerston finished his sentence—"tell you." He then immediately retired.—Chambers' Journal.

How Literature Pays.

Gilbert received only £1 for the immortal "Rhyme of the Nancy Bell," and that only from a second class and now defunct sheet, after it had been refused by Punch. He throws its success in Punch's teeth yet. The best paying book in the world has been "Grant's Memoirs," which have netted his widow about $25 a line. Mr. Gladstone received for a recent article in The Nineteenth Century about £1 a line, which was not considered by the publishers here a munificent payment by any means. But then Mr. Gladstone likes to express himself occasionally for his own sake. The Youth's Companion paid Huxley that much last summer for an article on architecture.—New York Graphic.

It Was All Right.

"Is the plumbing in your office all right?" he asked of a Griswold street lawyer.

"Why, yes, I think so."

"I was thinking you sent in a complaint about it."

"Not as I remember of."

"Let's see. What was it? Oh, I remember. You let the water flood the office below and had to pay $75 damages."

"Yes, that was it, and it proves the plumbing was all right, or you could not have got so much water."—Detroit Free Press.

First Gushing Female Philanthropist (with bouquet)—I have been in every greenhouse in the city, and these are all the choice flowers I could find. Isn't it too bad the poor, dear man murdered his wife at this time of year!

Second Gushing Female Philanthropist (with tray of delicacies)—If it had been even a month later I could have found ever so much nicer fruits and earlier vegetables than these. It does seem as if he might have been more thoughtful.—Chicago Tribune.

QUEER CLAIMS ON FAME.

Three Persons Prominent for Novel Reasons.

THE BIGGEST PROSECUTOR IN AMERICA.

A Young Californian who Refused a Scholarship Medal.

Fame is not always a matter of endeavor and accomplishment. It often comes to people in curious ways, as witness the cases of the three persons mentioned below.

Stephen A. Douglas is a Chicago lawyer of good repute who now fills the position of public prosecutor. He is a son of the "Little Giant," and has inherited to a certain degree the talent of his distinguished father. But neither ability nor parentage is responsible for the fact that Mr. Douglas is one of the best known and most conspicuous men in the World's fair city. People point him out because he is a heavyweight. They first remark to a visiting stranger, "That's Steve Douglas; aint he fat?" And then they add, "Pretty smart fellow too; good lawyer and a chip of the old block."

STEPHEN A. DOUGLAS.

When Mr. Douglas assumed the office of prosecuting attorney under the new Republican administration of the city of Chicago he chose for his assistant his former law partner, Mr. Crawford. The prosecutor weighs 295 pounds, and the assistant 815. They were compelled to have a brace of extra size chairs built so that they might sit in comfort while preparing opinions or cases, and when they go to luncheon they are forced to seek a place where they can eat standing at a high counter. In other respects their flesh does not discommode them, and they are jolly, brainy, and, in the avoirdupois sense of the word, famous.

When Cæsar thrice put from him a kingly crown he acted like a practical politician who knew his business, and among those in the secret his conduct was the cause of no surprise. But considerable astonishment followed by applause resulted the other day from the action of a young Californian who refused the first public honor won by him in the battle of life. His name is A. M. Seymour and he was recently graduated from the University of California. On being awarded the gold medal of the year for the best record of scholarship in his class, he declined the usually

A. M. SEYMOUR.

coveted prize peremptorily saying: "I am opposed to seeing one pupil selected as preeminent when all have fulfilled the requirements and have done faithful work. It looks to me like unjust discrimination. The fact that a medal is given at the end of the course may prove an incentive to overstudy. I am opposed to the whole plan as liable to provoke unfriendly rivalry."

Mr. Seymour's conduct is indorsed by the faculty of the university. The graduate who has thus achieved fame is no callow youth and knows what he is talking about. He was born nearly thirty years ago and has absolutely worked his way to get an education. In San Francisco business circles he already enjoys high repute as an expert bookkeeper.

Some months ago, by act of the legislature of Mississippi, the name of Jefferson Addison Hayes was changed to Jefferson Hayes Davis. The president of the southern confederacy had sons, but they left no male issue. His daughter Margaret married Mr. Hayes, and it is their first

JEFFERSON DAVIS.

born who has been chosen to bear his grandfather's name. He is a bright little fellow who can be coaxed but not driven. He shows a decided preference for having his own way, but always yields to parental authority when his sense of honor or duty is appealed to. Because of his change of name he is widely known, particularly in the south and in Colorado, where his father has business interests and a summer home.

WILL GIVE HER BABIES AWAY.

Because She Doesn't Want to Drag Them Down with Her.

Bargains in babies! Entire stock must be closed out at a sacrifice! For terms address Mrs. Rosetta Osburn, care of Poor Commissioner Martin.

"There's a woman over at our house who has four children she wants to dispose of through you," were the words the clerk at the Plankinton brought to the poor office yesterday.

I went with Superintendent Martin across to the Plankinton, where we found in a small back room a young woman and, swarming about her, three babies, who appeared on first sight to be triplets. On the bed, asleep, lay a fourth. One's first impression was that she must have bought up a foundling asylum somewhere with a view to speculation. She sat three children in a row on the edge of the bed, and they cowered under her glance and raised finger as she commanded them not to budge. In a few minutes, though, there was mutiny. The three youngsters keeled over in a perplexing heap on the bed, giggling and squirming, and none but a mother could have extricated one from the other. Order again established by scattering them in separate corners, the young woman in her strangely quiet way went on to tell her story.

The sleeping baby is 6 months old, and one of a pair of twins that were born but three weeks before her husband died in Little Rock, Ark., last July. One twin only lived to be a week old. Her husband had been working on a salary as piano tuner, and left her destitute. Her own health was in a condition that did not permit her remaining in Arkansas, where the climate disagreed with her. On the 1st of August she came to Muskegon to join a couple of sisters living there. These sisters, however, are not in a position to afford permanent relief. "Further on" were the words that appeared to the poor woman on every horizon. The day before Christmas she packed up her few belongings and many children and started out to find relatives of her husband, little of whom she knew, saved that they lived in Simcoe, Canada. Still further on! These people could not, or would not, provide for her or her wee ones, and, every door shut in her face, there was nothing left to her but the world. The world is a hopelessly large field for one incapable woman and four babies to look for a home in, and Friday she arrived at the Plankinton with just $10 between her and starvation. The two oldest children are a boy and girl—Faust and Fay she calls them—5 years of age. The next is a ball of a boy, 3 years old. The 6-months-old baby is a girl.

"Do you want to give them all away?" asked Mr. Martin.

"I don't know what else I can do," she replied, her voice growing more and more quiet, till it sent chills creeping over me. "There is no work I am fitted for. Canvassing is the only thing I hope to do, and if somebody else can provide a good home for my children it is my duty to let them go. I would be glad if the twins could be taken together."

"But you wouldn't part with the baby, would you?"

"If I must give up one I can give up all." At last the emotion that she had suppressed broke through the ice of her demeanor and she burst into tears. The baby faces about grew solemn as they watched her, and finally the little girl, with a choked "me too," sprang into her mother's arm, her brothers endeavoring to make a place there too, and there the three clung, wailing none the less piteously because they did not know the reason why they cried.

The woman appears to be one of the [illegible] sort, that, however blown about by the winds of adversity, looks only for means of support outside of herself. Such women, by their inability to stand alone, make satisfactory wives, but wretched failures as widowed mothers. Her mind seems fully made up to parting with her babies, and on the advice of Commissioner Martin she is waiting two or three days before consigning them to an asylum, hoping that she may give them first hand into the keeping of some child hungry heart.—Detroit News.

The Emperor's Objection.

It is reported from Japan that it is in contemplation to erect a bronze statue on an open space immediately outside of the imperial palace in Tokio, and artists were invited to send in designs. One of the latter represented the emperor seated on his favorite charger, the horse being so placed that its feet should rest on either side of the entrance bridge. This is said to have been much admired by the officials of the imperial household, but when it was submitted to the emperor it was immediately vetoed, on the ground that it was not in accordance with the principles of hospitality and politeness that foreign princes and personages of distinction who came to visit him should have to pass under the feet of a horse bestridden by him.—Exchange.

Too Many Diamond Cutters.

There are 7,000 diamond cutters out of work in Amsterdam alone. At a meeting of more than a thousand of them recently held there M. Van Praag attributed the want of work chiefly to the high price of raw diamonds, and next to the tendency of the jewelers to trade in raw diamonds instead of devoting themselves to their preparation for the market. The speaker counseled either the establishment of a workingmen's company, with 500 grinding stones and a capital of 500,000 florins, or the transfer of the trade to London, where the dealers in raw diamonds and the owners of the diamond fields were living.—New York Sun.

Bruin's Perilous Voyage.

An immense cottonwood tree went down the Sacramento river, past Colusa, last Saturday morning. Its only occupant was a brown bear that seemed paralyzed with fright. As the tree swept under the bridges the bear saw its chance, and by a rapid swing he caught the lower bent, pulled himself up on the railway, and trotted into Butte county.—Virginia City Enterprise.

SAW THE NORTH POLE.

Smith Tells the Ananias Club all About it.

A GRAPHIC ACCOUNT OF THE CRUISE.

He Says the Long Sought for Pole is a Mile High.—A Proud Crew.

One of the greatest explorers and most fearless navigators on the globe is a member of the Ananias club. He is writing an interesting narrative of his wanderings, to be printed in book form. At the club meeting Patrolman Peter Smith entertained his friends with an account of his trials and hardships in 1822, when he discovered the North Pole.

"I sailed from Indianapolis in May of 1822, on the sidewheeler Dictator. She had been fitted up especially for an arctic voyage, and was the fastest boat on any waters. She had double engines, and her hull was pierced with axles, to which could be attached wheels, so that she could run over land in case of low water. From Indianapolis we went to Toledo over the strip of country now traversed by the L., H. and D. and other railroads, and I must say the Dictator attracted a great deal of attention from the natives as she rolled along through the meadows and over the hills. They had never witnessed such a sight before. We launched the steamboat at Toledo and sailed down the lake to Detroit, crossed to Windsor, and then overland again to New York via Montreal. We took the roundabout way in order to gather up our crew, it being much cheaper to go after them than for them to come to us.

"When the steamboat passed down Long Island sound she carried 500 men, provisions for a ten years' cruise, a battery of fifty guns and 20,000 rifles, pistols, swords and shotguns, seventy tons of powder, and the boat was ballasted with cannon balls and bomb shells.

"In three weeks we had reached Iceland, and a month later crossed the arctic circle. While crossing the arctic line we were almost shipwrecked. A heavy wind had brought the line near the surface of the water, and it caught one of the steamboat's wheels. Luckily we were not running over twenty knots an hour, and the engineer was able to stop before the line had been pulled tight enough to tear off the wheel. We sailed eastward to the Viglen islands, which are on the west coast of Norway, and laid by for a week. Then we ventured out again and crossed the circle in safety. In August we reached Spitzbergen, and five months later were in the polar regions proper. I saw there the first rolly howlyus"——

"Aurora Borealis you mean, don't you?" asked Patrolman Slate.

"Were you there, Mr. Slate?" asked Smith sternly. "If you were perhaps you will tell this story."

"Well, no, but then I've read"——

"I don't care what you have read. I wish you would not interrupt me talking of things you know nothing about. It's a very strange phenomenon. A belt seemed to rise across the sky from northeast to northwest, and in the belt appeared golden whirlpools, silver eddies, and diamond sparks seemed to be flying by millions.

"In the center of the arch appeared the American flag, and beneath its folds, on a snow white background, were the portraits of Indianapolis' mayor and city officials. They looked as if they had been painted there with a pencil of fire. Thunder rolled and the wind howled all the time the rolly was in sight, which was, if I remember right, about eight weeks. With a Yankee ship and a Yankee crew there is no such word as fail, and one pleasant July day, when the mercury was 120 degs. below freezing, we pushed forward for the North Pole! For months we made our way across seas filled with floating icebergs, some of them two miles thick and reaching into the clouds out of sight. Three years later we came to an open sea, and in this we cruised for seven months. The water became muddy, and birds flying about told us that we were near land, and in a week's time we steamed into a harbor.

"We had found the North Pole. Many people who have never seen it imagine that the North Pole is made of wood. This is a mistaken idea. It is a solid iron column about a mile high, and reaches entirely through the earth—the other end of it being called the South Pole. I should judge it to be about seventy-five miles in diameter, and of course of great strength, in order to hold up the immense weight of the earth. It glistened like silver, and I thought it was some precious metal until I tested it with acids, and found it to be just as I stated—plain, every day iron. You can imagine the kind of a jubilee we had on board the old steamboat Dictator. Our cannons were fired and our band played.

CLIMBING THE POLE.

"We rested in the shadow of the pole for a week, and then determined to reach the summit. This was no easy thing to do, for, as I stated, the column is of iron and as smooth as glass. I ordered the steam drills on shore and we commenced drilling. The iron was unusually hard, and a number of drills were broken before holes could be made, but we succeeded at last. In each hole was placed a wooden bar that projected about fifteen feet, and thus a ladder was made. In two months' time we had the ladder completed, and it resembled a large telegraph pole driven full of spikes. To ascend then was mere child's play, and myself with 200 of the men were soon at the top. I think it took us about three hours to climb up.

"The apex of the North Pole is a broad, level plateau. Of course nothing grows there, and the rotary motion made us slightly dizzy until we got used to it. The pole itself does not whirl as fast as the earth does. If it had we would have fallen off. I released three carrier pigeons for Indianapolis, with messages to the city officers, but as they never reached their destination they were probably killed by the Esquimaux. We were at the top for four days. The view was magnificent, and there is no scenery in this part of the country like it. The city of Indianapolis looked like a lot of pin heads in a cork, and the steamboat plying White river resembled chips floating on a tiny brook. New Orleans was simply a white patch, and a small one at that.

"With glad, free hearts, proud that we had accomplished what no other living man had done, we sailed away for our southern homes. It was five years before we got back, and were given a reception that I have never forgotten. The whole town went wild."—Indianapolis Journal.

An Excuse At Last.

Mrs. Brown—Why does a man always want a seat in the front row when he gets bald?

Brown—Because if he sat under the gallery everybody would be dropping things on his head.—Epoch.

It's a Way They Have in Russia.

The Veritzins were nobles of enormous wealth and power. Paul held a high office in court. One night, glittering with jewels and orders, the young prince, who was one of the handsomest men in Russia, danced in a quadrille opposite the empress. As she passed him in the dance she fancied that his eyes scanned her gross figure with covert amusement. After the quadrille she beckoned to him, and with a smile handed him her tiny ivory tablets, containing seven pages, one for each day in the week. On the first was written: "The imperial ball room, St. Petersburg." On the last, "The mines, Siberia."

He read it; his face grew gray as that of a corpse, he bowed low, kissed her hand and withdrew, "taking," says the old chronicle, "his wife, the beautiful Princess Ivanovna, with him." He was heard to say, as he left the ballroom, "My minutes are numbered; let us not lose one." Flight or resistance was impossible. The hold of Catherine on her victims was inexorable as death. Prince Veritzin was forced to remain passive in his palace, while each day the power, the wealth and the happiness that life had given him were stripped from him.

First he was degraded from all his offices at court; next, his estates were confiscated by the crown; his friends were forbidden to hold any communication with him; his very name, one of the noblest in Russia, was taken from him, and he was given that of a serf. Then his wife and children were driven out of the palace to herd with beggars. "On the last day," says the record, "Paul Veritzin, in rags and barefoot, chained to a convict, bade an eternal farewell to his home and departed to the dark and icy north. He was seen of men no more."—San Francisco Argonaut.

A Veteran Circusman.

James Robinson, the veteran bareback rider, whose early triumphs belong away back in the childhood of men now grizzly with years, is to be seen almost every day at Broadway and Twenty-eighth street. He is a small, wiry man with thin, dark features, a little black mustache and the clearest of blue-gray eyes. Looking at him it is difficult to reconcile his almost youthful appearance with the fact that he began his career as a rider as long ago as '45. This was almost fifty years ago. Jim, as his intimates call him, was a boy then, of course. He was apprenticed in that year to John Gossen, an old time circus man.

In that day riders used the pad or pillion, and boys were taught the art in a different manner from what they are now. The "mechanic," by which novices are attached to a revolving beam, a rope from the beam to a stout belt around the waist supporting them as the horse makes the circuit of the ring, was not then known. Boys or girls who were ambitious to ride in spangles wore a belt to which a cord was fastened which passed through a ring in the pillion and thence to the hands of the ringmaster, who when he saw a beginner losing his balance pulled the cord and thus drew the rider to the horse, preventing a fall. It was this way Jim Robinson learned to ride in a style and with a recklessness which soon won him the title of champion bareback rider of the world.—New York World.

Rosina Vokes and Her Maid.

Those persons who have had the good fortune to meet the vivacious Rosina Vokes may recall, along with the vivid impression that the actress made, the no less vivid impression that was sure to be left in the minds of those who saw her maid. This maid, who is especially devoted to her mistress, has not been liberally endowed by her Creator with those attributes that go to make up the sum of personal beauty—in fact, is that next best thing to being beautiful—being gloriously ugly.

A friend relates how, during her recent tour in this country, while the actress was performing in Chicago, she found herself in need of some article from the chemist across the way. It was late at night, after her return from the theatre. Hannah, the faithful maid, was asked to go and get it. But Hannah urged mildly that it was late, and she feared to go into the street alone lest some man might annoy her. "It will be your own fault if they do," said Rosina, who was tired and cross.

"Indeed, ma'am," expostulated Hannah, "nobody can say that I do not behave myself properly in the street. I always keep my veil down, ma'am."

"Precisely," said Rosina. "But for goodness' sake, Hannah, if you want to protect yourself keep it up, keep it up."—New York Evening Sun.

The Judge and the Sport.

Mr. Justice Hawkins was once taken to be a member of the P. R. He was waiting to take his ticket at a railway station in Paris, at which there were a number of English roughs returning from the races, one of whom was very rude to him. The judge remonstrated, whereupon the man became more insulting, and said that if he would come outside he would give him "what for." Sir Henry, who wears his hair cut very short, then took off his hat, thinking that as the men were probably of the criminal classes they would recognize him, and quietly remarked:

"Perhaps you do not know who I am?"

Did the man in awestricken tones exclaim, "'Awkins, by thunder?"

No. What he said was: "S'lep me bob, a bloomin' prize fighter! Not me!" And the judge was not further molested.—St. James' Budget.

A Trait of the Prince's.

The Prince of Wales, usually exceedingly liberal, seems to have been caught in a petty meanness. He has refused to pay the $300 due for his eldest son's tenancy of apartments in St. James' palace. His excuse for this is that the young man was absent in India and that his tenancy was therefore broken temporarily! In other words, the apartments must be reserved for the prince at all times, but paid for only when occupied! The treasury department will not prosecute the claim, but a good deal of indignation has been expressed by John Bull at large since the story leaked out.—Cor. Chicago News.

The Dear Girls.

Ethel—What are you so angry about tonight?

Maud—I've received a note from Jack saying that he's engaged to Clara Beachly.

Ethel—Well, I should think that would relieve your mind rather than make you angry. You are engaged to Tom Shore and intended to throw Jack over anyway.

Maud—Yes, goosey, but do you think I wanted to lose the fun of throwing him over?—Epoch.

How They Got Rich.

She—I could have married either Whipper or Snapper if I'd wanted to, and both of those men whom I refused have since got rich, while you are still as poor as a church mouse.

He—Of course. I've been supporting you all these years. They haven't.—New York Weekly.

THEY FOUGHT IT OUT.

How a Deputy Marshall Captured a Gambler.

OBEYING THE LAW IN A MINING CAMP.

They Raised Their Revolvers Together.—A Determined Officer.

"Do you see that tall man standing there?" asked the colonel. "Notice how he brushes his hair forward on the sides, as some Englishmen do. One of those locks hides a scar which bears eloquent testimony as to a narrow escape from death.

"Thirty years ago he was a deputy marshal in Nevada. He started out one day to arrest a notorious gambler who had killed a man over a game of cards. The gambler knew that the marshal was seeking him, but with a cool effrontery walked about the streets all day. Wil—that is, the deputy marshal—heard that the man he wanted was in a well known barroom. He set out for the place, and carelessly walked boldly in. He had not crossed the threshold before he found himself looking into the barrel of a six-shooter.

"'Come, Hardy,' he said coolly, 'this won't do. I've come to get you, and I want you.'

"'See here, John,' said the gambler, 'I don't want to kill you, but I won't let any man arrest me. Go away and let me alone.'

"'No, I want you,' said the marshal quietly. 'Put down the six shooter and come with me.'

"'I'll see you shot first,' said Hardy.

"'I can't help that,' said the other. 'I must have you. Now you have the drop on me, but you must come with me or kill me in cold blood,'

"'I don't want to kill you,' said Hardy.

"'Then put down your gun.'

"'John, I won't be arrested. Don't touch me. I don't want to shoot a man without cause.'

"'I've got to do it, Hardy.'

"'See here,' said the gambler, turning white, 'if you move a foot I kill you. But I hate to be a coward. That was fair and square last night. We both pulled together.'

"The marshal shook his head.

"'I'll do one thing, John,' Hardy went on. 'I'll back up to that wall. You back up to the other. I'll drop my revolver to my hip and you can draw yours. Then it's the best man.'

"The marshal moved backward to the wall and Hardy did the same. Then the marshal drew his revolver and held it at his side, muzzle down. All this time Hardy had kept his weapon leveled at the marshal. Slowly his arm sank until his revolver touched the seam of his trousers. Both men were perfectly calm and immovable, the marshal determined looking, the gambler still pale.

"'Now, John,' said Hardy. Instantly both weapons went up. It was all over so quickly that both men were on the floor together. But Hardy had fired too soon; his ball went at an upward angle and grazed the marshal's temple. But the marshal had sent his bullet straight on a line to Hardy's heart, and there was no need to arrest the gambler."—New York Tribune.

A Centenarian's Giant Progeny.

Probably the most remarkable family in the United States is the Walker family, living near Hendersonville, N. C. William Walker, the oldest member of the family, was a soldier in the war of 1812, and professes to remember the revolutionary war. He is generally supposed to be about 110 years of age, although the record is not as exact as might be wished.

At an early day Walker came to North Carolina, where he raised a family of twenty-two children, equally divided between the sexes. The eleven boys ranged in height from 6 feet 4 inches to 7 feet, and all of them are still living. Seven of these men have sons, and there is not one of these sons who is less than 6 feet in height. There are twenty-five grown grandsons and five grown great-grandsons, and every one of them is full 6 feet and over in height.

They have always lived in the mountains a few miles from Hendersonville, and follow farming for a livelihood. No record has been kept of the generations, but there are five living generations, and the families have been large, so that the descendants of this man, who is still living, if brought together would make a respectable sized town.—Cor. St. Louis Globe-Democrat.

Possibilities of the Bells.

Bell ringers ought to be able to give a change of bill at every performance. It is curious to notice what a variety of changes can be rung on bells. Eight notes will give 40,320 different passages, and ten notes 9,658,880. The changes which may be rung on twelve bells are 479,001,600, which, at the rate of two strokes a second, will take ninety-one years to ring. Another authority says, upon the calculation of ringing 720 changes in an hour, it would take an incessant ringing of thirty-seven years to complete 479,000,000. Fourteen bells, at the rate first given, would take 16,575 years to accomplish the changes, and upon twenty-four bells the changes could not be rung in less than 117,000 billions of years, and no concert company is likely to hold together for a "season" of that length.

Not Against the Law.

"Is this the police station?" queried a female voice through the telephone the other day.

"Yes'm."

"Well, I want you to arrest my husband."

"What for?"

"He's carrying on the awfulest you ever saw."

"How?"

"Why, he's gone and got a crowbar, and he says he is going to dash out my canary bird's brains. He keeps making the awfulest motions you ever saw, and I know he intends to commit murder."

"I'm afraid we can't do anything."

"Isn't it against the law for a great big man to strike a wee little canary bird with a crowbar or sledge hammer?"

"Hardly, ma'am."

"Well, that's a pretty state of affairs, and shows what kind of a country we live in! Good-by, and"——

The crowbar probably descended with a "sqush" just at that time, as she closed the telephone with a snap.—Detroit Free Press.

Where the Luck Comes In.

Sadleigh—Did you hear of Mr. Garner's sudden death? It was very sad. Just as he had finished the accumulation of a large fortune, and had made up his mind to retire and enjoy himself for the remainder of his life, he was suddenly struck down from nervous exhaustion. It is terrible!

McPhile—Yes, but isn't it fortunate he can't take his fortune with him? The fellow who gets it without the nervous exhaustion is in luck.—Boston Transcript.

A MOSLEM HOUSE OF WORSHIP.

Scenes of Splendor in a Mosque—Glimpses of the Worshipers.

You enter this mosque through a bronze door, having, of course, previously shod your profane feet with protecting babooches; and then you are free to examine and admire. The first feature that strikes you is four enormous pillars, which might be compared to four fluted towers, and which support the weight of the principal cupola. The capitals of these pillars are carved into the form of a mass of stalactites, a style of ornament which may be observed in many fine Persian monuments; and halfway up they are encircled by a band covered with inscriptions in Turkish characters. The strength and simplicity of these four pillars, which at once explain to the eye the constructive system of the building, give a striking impression of robust majesty and imperishable stability. Sourates, or verses from the Koran, form bands of running ornament around the great cupola and the minor domes and the cornices.

From the roof are suspended to within eight or ten feet of the ground innumerable lusters, composed of glass cups full of tallow, set in a circular iron frame and decorated with balls of crystal, ostrich eggs and silk tassels, as in St. Sophia and all the other mosques. The mihrab, which designates the direction of Mecca—the niche where rests the sacred book, the Koran, the "noble book taken from a prototype kept in heaven"—is inlaid with lapis lazuli, agate and jasper. Then there is the usual member, surmounted by a conical sound board; the mastaches, or platforms supported by colonettes, where the muezzins and other clergy sit. As in all the mosques, the side aisles are incumbered with trunks and bales of merchandise, deposited by pious Mussulmans under divine safeguard; and finally, the floor is covered with fine matting in summer and carpets in winter.

While I was lost in wonderment at the splendor of this mosque several Moslems came in to pray, with the usual prostrations and beard stroking and yawning. Two or three women also came to pray, clad in feridjis of brilliantly striped silks—rose and white, azure and white, yellow and red—and they, too, kneeled on the matting and bowed and touched the ground with their brows; and their little baby girls, with their fine eyes and white veils wrapped round their heads, stood patient and motionless beside them, not being yet old enough to pray, or perhaps not strong enough on their legs to prostrate themselves without irremediably losing their balances.—Atlantic Monthly.

Men Who Get Side Tracked.

Perhaps the most numerous class of men who get side tracked are those who start in life in an occupation for which they have no natural aptitude. There are thousands of farmer boys who never should remain on the farm—the loud protestations of the agricultural press to the contrary notwithstanding. There are, doubtless, men who make a life business of stirring the soil when they ought to be stirring the senate; and, on the contrary, perhaps, there are men who are trying to stir the senate who ought to be stirring the soil. Good business men are frequently spoiled to make poor preachers; and there are many large and heavy lawyers who would make ideal blacksmiths; and there are some slender and unsuccessful blacksmiths with the keen logical brain and the shrewd masterful mind of the lawyer. Such men are side tracked for life, unless there is some great event crosses their track, such as crossed the track of Grant the teamster, or Cromwell the country squire. But no doubt there are many Grants who always team, and many Cromwells who never leave the farm. There are many men who start out in life, like hunters, on the wrong trail. They never bring down their game because their game has gone in another direction. They are like fishermen who bob for cod in a trout brook, or start a-whaling on an inland pond.

There are some men who are side tracked for life at their very birth. They are born into a mesh of circumstances from which there is no extrication. Of course it is easy enough to say that a man, like water, will always find his level; but its hard for water to rise plumb with its fountain head when confined in an underground pipe. It would have been difficult for Shakespeare to assert his claim to immortality if he had been born in Patagonia, and we would never have heard of Plato if he had first seen the light in Scythia. To say nothing of the hereditary influences that mold the unborn man, the environment of the young human's infancy usually shapes and directs his destiny, so irrevocably that only men of the strongest will and the toughest mental and physical fiber can ever counteract the impetus that is given them in childhood.—Yankee Blade.

Mr. Lincoln's Little Speech.

Mr. Lincoln was quite apt to prepare himself in advance for these little events, and when he did he generally followed his manuscript carefully. Mr. Hitt was present when the representatives of the national convention, headed by George Ashmun, called on Mr. Lincoln to inform him of his nomination. Mr. Lincoln did not quite like to see a man reporting him, especially when he was only making a speech of a few minutes, and when, after a little general talk, Mr. Ashmun stepped forward and began to address Mr. Lincoln, Mr. Hitt got behind one of the spectators, and proceeded to take Mr. Lincoln's response verbatim. After the affair was over Mr. Lincoln came up to Mr. Hitt and asked: "Did you hear all that I said?" "Every word," was the response. "Well," said Mr. Lincoln, "I was afraid you would not be able to hear, so I wrote what I was going to say beforehand," and he handed Mr. Hitt the speech in writing. Mr. Hitt and Henry J. Raymond compared the written speech and the stenographic report, and there was not the variation of a word.—"F. P. P." in Chicago Times.

Sewer Waste of Paris.

Sometimes the waste water of the kitchen and that of the closets is all emptied out into the sewers. Sometimes it is caught in a barrel shaped vessel (painted) which retains the solid matter and lets the water pass. These receptacles, called tinettes, are removed at stated intervals by persons who use the contents for fertilizing fields in the suburbs. A great majority of the houses still have cesspools or tinettes in the cellars, which are pumped out or removed by the main entrance at stated intervals. So far only about 1,000 houses have their closets directly connected with the sewers, though the number is increasing rapidly and all will eventually be so arranged. It will then be more difficult to keep the sewers clean, but the nettoyage will follow its normal development, and the neatness of the underground avenues will still rival that of the streets above.—Paris Cor. San Francisco Chronicle.

Cobalt for Plating.

Mr. Alexander Watt, the author of several valuable works on metallurgy, thinks that cobalt should take its place as a substitute for nickel for coating various articles. The advantages claimed for it are its superior whiteness, and the readiness with which it may be deposited by electricity.—Chicago Times.

ENTERPRISING INDIANS.

They Build a Flourishing City in Alaska.

THE RESULT OF A MISSIONARY'S WORK.

Wonderful Transformation of the Island of Metlakahtla.

Rev. W. Duncan, of Metlakahtla, Alaska, is a portly, benevolent looking old gentleman of perhaps sixty-five years, and the world has been made better by the grand work in which the declining years of his life are being spent. When interviewed by a reporter he was reticent at first in speaking of the fruits of his philanthropic labors in the land by the frozen sea, saying that a description of the colony he had founded would seem better coming from the lips of disinterested parties.

"Metlakahtla," said the venerable missionary, "is situated on an island in the archipelago in the southeastern part of Alaska. It is a colony founded three years and a half ago, when I organized thirteen bands of British Columbia Indians, and by showing them the virtues of a city and government of their own and instilling in their minds the beauties of a civilized existence, induced them to migrate to the far north, where they would live in peace and security and where they would not be disturbed in their peaceful possessions.

"Today there is a city of 800 souls at Metlakahtla, and the settlement is a flourishing and happy one. I am one of those who reject the declaration that the only good Indian is the dead one. I am able to demonstrate that the best Indian is a live one.

"Three years ago the forest primeval stood on the site where now many happy Indians live, in many pleasant cottages. There are sixty-one capacious houses in the city. For three years I was the only white man in the settlement. I have recently been joined by an assistant, however, in the person of Dr. Blewett. You might say that the Indians have an eye to real estate values, for they all wanted corner lots, so that I was compelled to divide the blocks each into four lots. Everybody is satisfied, for an inside lot is not to be found there.

"The inhabitants live by hunting and fishing, but the latter occupation has branched out into a large industry now, and I am here to obtain necessary machinery and an outfit for a salmon cannery there.

"I would rather have a tourist speak of our colony than to dwell upon its merits myself. Should you visit our island you would be surprised to find a city of Indians and natives with only two exceptions. We have a government which is an Indian council presided over by an Indian chief. The young ones are taught in commodious schools, and in my absence a native teacher is instructing them.

"In olden days the Indian tribes were envious of each other, and feuds were incessant and war was a business. In our colony the hatchet is buried out of sight, the tribal jealousies are forgotten in the educated life and the weapons of war have been molded into implements of peace.

"We have a native corps of constables and officers to attend to the city's health and sanitation. We have entertainments, too, and splendid music is furnished by our Indian band of twenty instruments. We have a large sawmill conducted by Indians, and never was a happier colony than that of the British Columbia Indians on the island of Metlakahtla."—Seattle Telegraph.

His Critics!

"What it takes to make a paradise," some one has said, "depends upon the person who is going there." There was once an artist who painted a picture of Adam and Eve in the Garden of Eden. It was exhibited publicly. One day the painter, entering the hall, saw two men who appeared to be farmers, standing before the picture.

"Now," said the artist to himself, "I can hear an unprejudiced opinion of my work."

He drew near and listened to what the farmers were saying.

"Well, John," said one, "what do you think of it?"

"It's pretty good," said the other, "but there's one thing about it that strikes me as a little mite queer."

"What's that?"

"Why, he's got Eve with a Rhode Island greening in her hand."

"Well, what of it?"

"Hum! Seeing that the first Rhode Island greening was raised in this century, I don't quite see how they could have had them in paradise!"

"No greenings!" exclaimed the other, contemptuously; "how do you suppose they could have got along in the Garden of Eden without Rhode Island greenings?"—Youth's Companion.

A Hungry Sheriff.

Sheriff Ellsworth, of Richmond county, S. I., recently taxed up a bill of costs amounting to $1,652 in a South Beach real estate dispute, and Judge Bartlett cut it down to $1.50—all that could be legally charged, exclusive of traveling expenses at the rate of six cents a mile. The sheriff of Richmond county is a believer now in the theory that this world is all a fleeting circus and that he is a poor, neglected clown.—New York World.

As It Should Be.

A class of boys had this sentence given to them for correction:

"We saw a marble bust of Sir Walter Scott entering the vestibule."

One of the boys handed in the following version, which bears internal evidence of having been made in spring time:

"Entering the vestibule, we saw Sir Walter Scott bust a marble."—Cor. Youth's Companion.

Probably.

"Did you go to the reception?" asked the Telegraph Wire of the Lamp Post.

"No; where was it?"

"At the Subway's. They had quite a blowout, I heard."

"They didn't invite me. I guess they knew I couldn't get down."—Puck.

INYO INDEPENDENT.

EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, DECEMBER 25.....1891

The discoverer of the new cure for drunkenness has picked upon Los Gatos as a suitable location for the Pacific coast branch of his famous dispensary at Dwight, Illinois. The people of Los Gatos, however have not yet decided whether they want the new institution or not. Visions of exorcised snakes remind them that it may be an undesirable acquisition.

Boss Buckley has left his luxurious quarters in Montreal and is now on his way home to San Francisco, that city having no terrors for him now that the grand jury has been declared an illegal body. As the feeling of revenge is deeply implanted in the hearts of most people, Chris will no doubt make it a point to "get even" with those who have forsaken his banner, and we may look for rather warlike times among the Democratic party of San Francisco before long.

The supreme court in the Madera irrigation district case re-affirmed the constitutionality of the Wright law. It is claimed that the Turlock case was a friendly suit and that the decision of the court in that case was not conclusive. In the Madera case the best legal talent in the State was employed by the parties opposed to the district law, and the result was the same. It would be the part of wisdom now for the people to unite, in all localities where irrigation is required and take advantage of the district plan and work harmoniously for the redemption of the desert places.

In Fresno county arrangements were made for an immense rabbit drive a day or two before Christmas. The purpose is to rid the country of thousands of the pests and at the same time provide a free distribution of game for the poor of San Francisco. It is expected that from 5,000 to 10,000 rabbits will be 'rounded up" and and killed. Vineyards on the west side of the county are said to be overrun with the pests, and a drive is the most effective way to get rid of them. A drive is accomplished by hundreds of men and boys, who form in lines and march in such a way as to force the rabbits into an enclosure, where they are killed.

The last issue of "California," published at Los Angeles, contained the following: "It is very certain that an earnest investigation is now in progress looking to the solution of the problem, whether or not we need any greater railroad facilities of a transcontinental character than we have. Believing that an affirmative answer should be found in this inquiry some study of the traffic of the Southern Pacific system will explain why it appears a third system of roads would find business here, and that without detriment to those that now enter the territory. The advent of the Santa Fe system has in no sense lessened the earnings of the Southern Pacific, but has largely increased them by helping to develope the country. The road from Salt Lake, whenever it is built, will be of direct advantage to the roads now here. A further development of the resources of the country will ensue; the coal and other mineral regions of South Utah and Nevada will be opened and cheap coal brought in here.

"The temptation to build the road in question is very great. The route affords the easiest gradients of any across the continent. It is free from snow and has few large or dangerous water courses to cross. It traverses a country rich in mineral deposits, as well as agricultural resources, but all in a most undeveloped condition. The building of the road will be followed by a great era of development in this region, and the new population will draw on all the country for supplies, which will give business to the roads that cross the continent. If the road is built now it will be by some combination with the Rio Grande Western, which has a branch running well down the Servier valley toward the headwaters of the Virgin river, which empties into the Colorado river above The Needles. It would strike the Santa Fe line at Ludlow. This road is directly related to the great Rock Island system, which is not in accord with the Gould system, and which naturally would like to be independent of that system. The Rock Island system makes connection with the Rio Grand Western from Denver by means of the Denver & Rio Grande, and by the Colorado Midland."

BRITISH PUNISHMENT.

OFFICERS OF THE LAW SENTENCED FOR TAKING BRIBES.

History of One of the Most Celebrated Criminal Cases of the Century—A Crime That Tarnished the Fame of England's Pet Detective Force.

In December, 1875, a remarkable trial took place before Baron Pollock at the Old Bailey, London. Great Britain awoke one morning to find that the most trusted officials of Scotland Yard had been receiving large bribes from a gang of noted criminals. Carr and Benson—the latter of whom committed suicide in this country a few years ago—were undergoing a long term of penal servitude for what were known as the "great turf frauds." While in prison they tendered certain evidence to the British government which led to the arrest of Chief Detective Inspector Clark, Detective Inspectors Druscovitch, Meiklejohn and Palmer, with their legal adviser and attorney, Edward Froggat, attorney at law.

The news sent a shock throughout the British islands. The police force in general was not by any means considered immaculate, but the great bureau of detection at Scotland Yard was entirely exempt from a shadow of suspicion. Every effort had been made to hush up the case, so as not to shake the confidence of the public. Dismissal, with consequent loss of large pensions, was, it was urged, sufficient punishment, but the home secretary was inexorable, and the trial went on.

"I was present during several days of its duration," said the Englishman. "The detectives were confident of acquittal, being ignorant of the overwhelming evidence in the hands of the prosecution. Their look of confidence changed into one of consternation when, close cropped and haggard, clad in the hideous striped dress of the felon, upon which from head to foot was stamped the government broad arrow, Harry Benson, the notorious swindler, entered the witness box.

"He was a man of education and marked ability, a first class linguist and capable of mixing in the best society. The defense was ably conducted, but no cross examination could shake the convict, who now had his natural enemies in his toils and for once was telling the truth. Carr followed and in every point corroborated his fellow prisoner. He belonged to a lower grade than Benson, but possessed considerable force of intellect. So much for the evidence of bribery, which, it may be said, came from a tainted source.

"But telegrams were produced showing that when in pursuit the detectives wired the convicts of their movements, warning them to fly. Time after time, when close on their track, these messages were sent and subsequent meetings were held in London, where hundreds of pounds were paid over to these sleuth hounds of the law. Froggat, the lawyer, was also in the conspiracy and rendered services of a technical nature. He and Clark were out on bonds and quite confident of acquittal.

"The first relied on lack of evidence; the chief inspector had stronger grounds. For years he had been body detective to the Prince of Wales, and during his attendance on his royal highness it may be supposed that he had acquired secret knowledge of his actions which the crown officials would not like divulged. That 'knowledge is power' was proved in this instance, for it certainly enabled Clark to elude the meshes of the law.

"The judge charged the jury dead against the inspectors and Froggat, but was very light on the chief. In fact the crown produced very little testimony against him. After an absence of about an hour the jury returned. The verdict was 'Guilty' as against the four minor detectives and the lawyers, 'Not guilty' as against Clark, who at once left the dock.

"'Have you anything to say, Dracovitch,' asked the judge, 'why sentence should not be pronounced upon you?'

"The prisoner made a fine speech—he could speak six languages—in which he referred to long services rendered, the ruin which his conviction involved, the overwhelming nature of the temptation and finally his helpless wife and family. The other officers followed in a similar strain and with tearful eloquence begged for mercy. These men, who had mercilessly fastened the steel handcuffs on victims innumerable made a piteous spectacle when in the strong grasp of the law. Their pleadings were of little avail, and after reminding them of the scandal they had brought upon their profession, the baron sentenced them to two years' imprisonment with hard labor—this was the severest punishment available under the act of parliament—and before they fully realized their doom they were hustled out of sight into the cells of the Old Bailey.

"Froggat's turn now came, and it was generally thought his sentence would be lighter.

"'I have a special sympathy for you, Edward Froggat,' concluded the judge. 'You belong to the same honorable profession as I do myself. Much is intrusted to us and much is expected of us. In sentencing you I do so with pain and reluctance, but I cannot see any reason for reducing the term of imprisonment—two years with hard labor.'

"This came on the wretched man like a thunderbolt, and, bursting into hysterical tears, he raised his hands above his head. 'For God's sake, my lord,' he exclaimed, 'lessen the sentence!' This was all he had time to say, for the jailers do not encourage sentiment, and he was instantly hurried out of sight. I may mention that he was rearrested at the termination of his sentence for defrauding a lady of £5,000, for which, at the same bar of justice, he received seven years' penal servitude.

"Thus ended one of the most celebrated trials of this century, which gained its importance not of course from the enormity of the crime, but from the vital principles involved, which struck at the root of the whole English police system."—Chicago News.

To Investigate the South Pole.

Professor Nordenskjold, of arctic fame, will soon start from Australia in two small sailing vessels, having auxiliary steam power, for an exploration of the antarctic ocean. The vessels will be thoroughly equipped with every device found useful in ice navigation. The locality has not been visited since James Ross' expedition in 1841, although the English ship Challenger went as far south as latitude 65 degs. 42 min. in 1874. —Exchange.

How She Served the Summons.

She was bright and pretty, and she dropped into a lawyer's office the other day and asked for work.

"What can you do?"

"Anything a woman of ability can do, and more than most men."

"Great opinion of yourself, young woman," said an elderly lawyer present. "Perhaps you think you could serve this summons."

"I might," said she. "May I look at it? Yes, I will."

"If you do that you'll do something we've all been trying to do for a week. He's a slippery fellow and his people are all posted. However, you may try it. You can afford to lose a little conceit," and the lawyer smiled grimly.

At 10 the next morning the office door was opened and the bright young woman walked in again.

"Thought you'd give it up, eh? Found him too slippery for you? Thought so."

"The paper is served," said she. It was her turn to smile now, and she did it. The lawyer swung round in his chair.

"Served. How'd you do it?"

"Oh, it was simple enough. I called at his place of business, looked around, priced some materials and then asked if he was in.

"'No,' said the salesman, 'but I can do as well.'

"'I think not,' I said quietly. 'He has always served me before, and he understands just what I want.'

"'Oh, in that case you might call at his house. He will be in to dinner.'

"I did call at his house, dressed in my best, card case in hand. I sent in my card and he appeared promptly.

"'Mr. ——?' said I, rising.

"'Yes. You wish to see me on business?'

"'I hear you are interested in property in —— street?'

"'Yes.'

"'Well, I have a paper which will interest you concerning it,' offering him the summons, which he took with a smile. He looked at it and flushed crimson. So did I. Nothing was said. He controlled his temper and accompanied me to the door.

"Another field open to women," was the lawyer's only comment.—New York World.

Pity the Poor Drummer.

A very good looking drummer he was, and he had succeeded in making a great impression upon the table girl at a Maine hotel. He paid strict attention to the girl and to his dinner and his performance was creditable and thorough in both directions. But he did not eat his sweet corn. Finally the girl said in her sweetest tone: "You must have another ear of corn. That is cold and is not filled out."

"Oh, no"— but she is gone.

She returned with a steaming ear of corn and then waited expectantly to see him bury in the succulent vegetable his pretty teeth, that he showed with such charming grace in his smile. He ought to have known better, but in a spirit of bravado he responded to the mute appeal in that waiter girl's eyes and set his teeth into the corn. The first mouthful went all right, the second was a great success, but the third—we would that our tale could end here, but it cannot.

At the third mouthful, as he darted a gleam of fond adoration at the girl, his teeth loyally stayed by the mangled ear of corn for an instant, then dropped to the floor with a rattle that sounded in his ears like the discharge of heavy artillery. Worst of all, as he madly scratched for them he couldn't find his treasure. Finally the girl recovered them from a neighboring table, after a lady had kindly moved her skirts aside and revealed the truant teeth. The look that passed between that girl and the drummer as she handed him the teeth had something in it that wilted the bouquet over which it passed.—Lewiston Journal.

An Adirondack Term.

Healthy summer visitors to the Adirondacks frequently hear a term used by the natives in describing some of their city comrades in those delightful and health giving regions that greatly mystifies them at first. The people thus referred to technically are called the "lungers," who are generally found to be pretty plentiful. "Lungers," pronounced "lung-ers," is a word that has not as yet got into general usage outside the range of the pine tree odors of the northernmost part of New York state; but its meaning and derivation are soon perceived and compel instant admiration for their simplicity and significance.

The "lungers" of the Adirondack regions are none other than the consumptives who resort thither for the benefit of their lung troubles, and who form a class by themselves in the eyes of the natives apart from the mere huntsmen and pleasure seekers. There is a sort of distinction in being a lunger that naught else can give, and though the word thus evolved by an admirable philological fitness seems to have a touch of rugged brutality in it at first sight, yet there is, after all, a kind of rough sympathy in it that is redolent of the soil.

As the pulmonary knowledge of the Adirondack people increases in minuteness, as it doubtless will, one may expect to hear the more detailed designations of "one lungers," "half lungers," etc., though this, it is believed, has not yet been observed.—New York Tribune.

What Three Women Do While Riding.

A busy woman says it gives her mind a complete rest on her journeys to and from the scene of her daily work: "I close my eyes behind my hand or paper and make my mind as complete a blank as possible." Another woman, a writer, says, on the contrary, "I make a practice to give my brain over to wandering fancies, often getting my best ideas while in transit." Still another woman, a busy mother, plans the children's frocks, "Mentally making over, altering and combining in a way that is most helpful to me afterward." All of which shows that this perennial riding has come to have an allotted place and consideration.—Her Point of View in New York Times.

Will Drain the Lake to Get the Body.

Diver Dolph, who has been searching at the bottom of Hutton lake, near Laramie, Wy., eight days for the body of M. B. Dawson, drowned three weeks ago, has given it up. The only thing to do now is to drain the lake, and this will be undertaken at once. The estimated cost is $5,000 to $7,000. Aside from humane and family considerations it is very important to recover the body, as $27,000 of life insurance is involved.—Cor. St. Louis Republic.

D. E. No. 515.

LAND OFFICE AT INDEPENDENCE, CAL., Sept. 30, 1891.

Notice is hereby given that Daniel Leonard of Bakersfield, Kern County, California, has filed notice of intention to make final proof on his desert land claim No. 515, for E. ½ of Section No. 2, and the W. ½ of Sec. No. 1, Tp. 10 S., R. 34 E., M. D. M., and that he will make final proof before the Register and Receiver at Independence, California, on Saturday, the 10th day of October, 1891.

He names the following witnesses to prove the complete irrigation and reclamation of said land: G. Sanger, W. Sanger, A. T. Taylor, M. N. Taylor, all of Big Pine, Inyo County, California.

C. W. CRAIG

Some nice FORTUNES have been made in work for us by Ladies in Austin, Texas, and Jno. Scobedo, Ohio, see list. Others are doing as well. Why not you? Profits even over $200.00 a month can be made by the industrious everywhere you are. Even beginners easily earning from $5 to $10 a day. All ages. We show you how to start you. Can work in spare time. Big profits for all workers. Failure unknown with them. NEW and WONDERFUL. Full particulars free. H. Hallett & Co., Box 880, Portland, Maine.

$5000.00 a year is being made by R. Goodwin, Troy, N.Y., at work for him. Reader, you may not make as much, but we can teach you quickly how to make from 50c to $10 a day at the start, and more as you go on. Both sexes, all ages in any part of America, you can commence at home, giving all your spare moments only to the business. Great pay $5.00 for every evening. We start you, furnish everything. FAMILY SPECIMEN PARTICULARS FREE. Address, GEORGE STINSON & CO., Portland, Maine.

Rev. H. J. Wilson will preach at Lone Pine on Sunday at 11 o'clock a. m.; at Georges Creek, 2:30 p. m.; at Independence at 7:00 p. m.

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, December 19, 1891.

Estate of Reuel Diaz, deceased—Filed certificate to decree setting final account.

Estate of V. Hickaby, deceased—Filed bond of George Hickaby.

Estate of W. A. Bringer, deceased—Filed claim of J. C. Lewis.

Harvey vs. Harvey—Deposit made by J. D. Lewis.

DIED.

STUBBLEFIELD—At Independence, Dec. 23, 1891, Mrs. Harriet A. Stubblefield, a native of Lowell, Mass., aged 49 years 1 month and 28 days.

Pin Bedford is spending the holidays at Bishop.

T. J. Gorman was in from Fish Springs yesterday.

C. W. Craig is on the sick list, being laid up with the grip.

Hon. P. Reddy came down on Monday's train and passed through to Darwin.

Frank Dunn came down from Hawthorne on Wednesday's train. He reports lots of snow at Bonie.

Mr. Jesse R. Harcourt of Belleville and Miss Jennie Bell of Big Pine were married at Belleville last evening.

Mrs. Beale and little daughter came down on Monday's train to join Mr. Beale, who is station agent at Citrus.

Clarke Young of Bishop passed through town early in the week with a small bunch of horses en route for Los Angeles.

There will be a social dance at Lone Pine to-night to which all are invited, and a thoroughly good time will be enjoyed.

The personal property belonging to the Hannah estate was sold last Friday. Considering the times the articles sold brought very fair prices.

A violent wind storm came up on Wednesday and raged during the day. It assumed the proportion of a young hurricane, but no damage was done so far as known.

C. Mulholland returned from the East on last Monday's train. He has been very ill with pneumonia since his arrival but his condition is improving daily and nothing serious is now apprehended.

Don't forget the school benefit on next Thursday—New Years—Eve. Leap year begins at 12 o'clock of that night and as the principal that the early bird stands the best show it might be a good idea for some of our old bachelors to be on hand. What do you think about it, Murphy?

There came near being a serious conflagration at Keeler on Wednesday night. A lamp exploded in the depot scattering its contents over a lot of papers and a big blaze was started immediately. Prompt and energetic measures were taken by the neighbors, and the building, and probably the town, was saved. A high wind was blowing at the time.

The N. S. G. W. intend giving an entertainment and ball at Independence on Washington's Birthday. A Committee has been appointed and the programme will be put in shape soon. Further particulars will be published as they are resolved upon. It is understood that the object is to defray expenses still due from the last 4th of July celebration.

The mining suit between the Indian Queen and the Poorman companies was tried at Hawthorne last week, Judge Rising presiding. The case was given to the jury on Friday last but no verdict was returned. Hon. P. Reddy conducted the plaintiff's case and Judge Crocker and P. M. Bowler appeared for the defense. It is likely that the injunction against the Poorman company will be dissolved.

Obituary.

Mrs. Harriet A. Stubblefield died at Independence on Wednesday evening after a lingering illness. She had suffered a long time from heart disease and lung trouble. Mrs. Stubblefield was one of the pioneer settlers of the Valley and leaves a gap in the ranks of the old timers that will be greatly felt. She was a quiet, retiring woman, not much given to visiting or social pleasures but of the greatest kindness of heart and exceeding good will to all. The funeral took place at Camp Independence at 10 o'clock to-day and was largely attended. She leaves no children and died at the age of 49 years.

The Great Register.

The late Legislature passed an act mending the registration law in certain particulars, and in response to inquiries by various county clerks, Attorney General Hart has given it as his opinion that next year a new registration of voters will be necessary. He concludes his opinion as follows: "Looking either at the letter of the law, or at its apparent intent and purpose, viz., to prevent frauds at elections, I arrive at the same conclusion, that a new and complete registration of the voters must be had, and that it should commence exactly one hundred days prior to the next general election, in conformity with the requirements of Section 1096 of the Political Code, as amended, statutes of 1889, page 424.

Merry Christmas!

The towns of Independence, Lone Pine and Keeler celebrated Christmas with exercises and the customary tree and many a little heart was gladdened. Christmas, of all holidays, is essentially the children's day. The little ones look forward with eager anticipation when the first cold winds of winter announce the approach of Santa Claus, and it is to live youth over to watch each little face light up with pleasure when the green tree, type of everlasting life, with its glittering array of gifts and twinkling candles, meets their gaze. It is the one day of the Christian year which marks a universal brotherhood of kindly feeling. When the wind, prejudice, worldly grossing, selfish ambition are laid aside, and the world's heart beats with accordant impulse to make each other glad. The custom from time immemorial of giving presents on this day arises from the glad outpouring of the heart and the desire to make some one else happy. In the old days of the Argonauts of '49, half-savage tribes of Northern Europe before Christianity was known, when Thor and Odin were the gods of our forefathers, feasts were prepared, enemies as well as friends invited, and the hogs log burned with happy hearts at Yule-tide. And to-day is Christmas day, and we wish you many happy returns.

A Nevada Enterprise

The people of Nevada are gradually awakening to the knowledge that by the adoption of irrigation upon a large scale, a surer source of wealth will be forthcoming than in all the mines that have ever been discovered there. A plan is now under way for the irrigation of a large tract of land in the vicinity of Hawthorne. It is proposed to divert the water of a number of streams which at present empty into Mono lake, and conduct them into a storage reservoir, a site for which has been found in a valley bearing the euphonious name of Whisky Flat. Below that reservoir is some 50,000 acres of fertile land that only needs the aid of irrigation to become highly productive. It is estimated that the entire work will not cost to exceed $500,000, and it is proposed to bond the lands to be benefitted in order to obtain the necessary capital.

Pine Nut Booming.

The Carson *News* of the 18th says: "The new Pine Nut discovery is still the talk of the town, and new prospecting parties are arranging to leave for that mining district as soon as the weather clears up. Stock in the Monarch consolidated cannot be purchased. Oliver Roberts returned from Pine Nut late last evening and reports the camp as booming with excitement. New claims are being taken up daily. This recent discovery is surely very encouraging, as it uncovers all doubt that it is not a newspaper "fake." Would it not surprise some of our leading contemporaries, especially the S. F. Chronicle, if a young Comstock were discovered in Pine Nut? Well, we should snicker."

Settlement Notice.

All persons knowing themselves to be indebted to the undersigned are hereby notified to call and settle their accounts on or before the 1st day of January, 1892.

A. K. EUGLEY.
Big Pine.

"Of course it hurts, but you must grin and bear it," is the old time consolation given to people troubled with rheumatism. "If you will take the trouble to dampen a piece of flannel with Chamberlain's Pain Balm and bind it over the seat of pain your rheumatism will disappear," is the modern and much more satisfactory advice. 50 cent bottles for sale by

A. K. EUGLEY,
Big Pine.

Our readers will notice the advertisements in these columns of Chamberlain & Co., Des Moines, Iowa. From personal experience we can say that Chamberlain's Cough Remedy has broken up colds for our children and we are acquainted with many mothers in Camden who would not be without it in the house for a good many times its cost and are commending it everywhere.—*Centreville (Md) Chronicle and Leader.* 50 cent and $1 bottles for sale by

A. K. EUGLEY,
Big Pine.

We wear every article we know the cring can be prevented. The cringe appears without a warning. The first symptom is hoarseness; then the child appears to have taken a cold, or a cold may have accompanied the hoarseness from the start. After this a peculiar rough cough is developed, which is followed by the croup. The time to act is when the child first becomes hoarse; a few doses of Chamberlain's Cough Remedy will prevent the attack. Even after a rough cough has appeared the disease may be prevented by using the remedy as directed. It has never been known to fail. 50 cent and $1 bottles for sale by

ORDER FIXING TIME AND PLACE FOR HEARING PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Francisco Paderes deceased.

IT APPEARING TO THE JUDGE OF SAID Court by the petition this day presented and filed by Yguana Archuleta, the Administratrix of the Estate of Francisco Paderes, deceased, praying for an order of sale of the personal property and of so much of the real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the decease, and the debts, expenses and charges of administration.

It is therefore ordered by the Judge of said Court, that all persons interested in the said petition, appear before the said Superior Court on Saturday, the 9th day of January 1892 at eleven o'clock in the forenoon of said day, at the Court room of said Court, at the Court house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administratrix to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

Dated December 11th 1891.

GEO. M. GILL,
Judge of the Superior Court.

A BIG BUSINESS.

The growth and present size of the great retail business of Weinstock, Lubin, & Co., Sacramento, shows on the face that it possesses *a distinct character* of its own. It has done much to introduce many important reforms in storekeeping, which have been widely copied. There are people who have never heard of the big establishment, but who, through its silent influence, are being served by local dealers better than they otherwise would be.

It has done more than any other ten stores to give the "One Price System" firm and substantial footing on the Pacific Coast.

It has shown people living in small towns that they can deal through the mails with as much satisfaction as if they bought in person.

It has, by constantly raising its own standard of qualities, had an influence in raising the standard everywhere. The average grade of goods kept upon the Coast grows better each year.

It has been prominent in bringing west as stylish and desirable goods as are kept by merchants in New York, Philadelphia, or Chicago. Indeed, the manufacturers who supply them supply it. The goods are the same; and the Sacramento prices, while never higher, are sometimes considerably less. This is explained by the fact that the cost of conducting business in large Eastern cities is far greater than in the Capital City, the extra expense of overland freight being but a comparatively small item.

It has made it possible for out-of-town people to enjoy quite as satisfactory shopping facilities as do those living in large cities.

There is no desire on the part of the firm to take any special credit for whatever influence for good the house may have exerted. They have sought simply to build up a business on fair and just principles; to buy and sell as low as they can; to deal as far as possible only in the very best goods; and neither to fear nor favor any one, but to treat every customer as they would their most favored friend.

Whatever of success has come, they attribute it to the faithful carrying out of these aims and principles.

A large illustrated catalogue, giving full information about goods and prices, how to order, etc., sent free to any address.

CONDEMNED.

Ammonia Baking Powder Must Go.

Bills have been introduced in the New York, Illinois and Minnesota Legislatures compelling the manufacturer of such baking powders to brand on the label in bold type, this powder "Contains ammonia." Physicians and chemists condemn the use of ammonia in baking powders as a crime. Its constant use no matter how small the quantity deranges the stomach, neutralizing the gastric juice and destroying the complexion. It is the small quantities taken every meal that do the mischief.

It is gratifying to know there are pure baking powders to be had on the market and at no greater cost to the consumer than some of these so-called "absolutely pure" ammonia powders.

Dr. Price's Cream Baking Powder, the standard pure cream of tartar powder for forty years. Free from the taint of either ammonia or alum. None so pure—None so wholesome.

Dr. Price's Cream Baking Powder is reported by all authorities as free from Ammonia, Alum, or any other adulterant. In fact, the purity of this ideal powder has never been questioned.

When a man has lost his opportunity he does not know where to look for it again.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

When Jay Gould is a bull he tries to give the public the wrong steer.

Never trouble trouble till trouble troubles you.

MANY SUCH.

A group of mechanics was seated in the engine-room when one said: "How was it Tom?" [illegible] was caught up, slapped against the ceiling and whirled down to the floor. I lay there like one dead, and every muscle was sprained! I was cured in one day." What cured him?

ST. JACOBS OIL

with equal facility and certainty has cured promptly and permanently worse cases, and permanently after suffering half a lifetime. Here is one of many. 14 Sumner St., Cleveland, O., Aug 11, '88. In 1881 sprained my arm clubbing chestnuts; could not lift my arm; constant pain until 1880, when St. Jacobs Oil cured me. JACOB EITZENSPERGER.

"ALL RIGHT! ST. JACOBS OIL DID IT."

SCOTT'S EMULSION

Of Pure Cod Liver Oil with Hypophosphites Of Lime and Soda.

There are emulsions and emulsions, and there is still much skimmed milk which masquerades as cream. Try as they will many manufacturers cannot so disguise their cod liver oil as to make it palatable to sensitive stomachs. Scott's Emulsion of PURE NORWEGIAN COD LIVER OIL, combined with Hypophosphites is almost as palatable as milk. For this reason as well as for the fact of the stimulating qualities of the Hypophosphites, Physicians frequently prescribe it in cases of

CONSUMPTION,

SCROFULA, BRONCHITIS and CHRONIC COUGH or SEVERE COLD.

All Druggists sell it, but be sure you get the genuine, as there are poor imitations.

From the "Pacific Journal."

"A great invention has been made by Dr. Tutt of New York. He has produced

Tutt's Hair Dye

which imitates nature to perfection; it acts instantaneously and is perfectly harmless. Price, $1. Office, 39 & 41 Park Place, N. Y.

There is always a best even among a score of good things, and every pipe smoker who has tried the Mastiff brand acknowledges it to be the sweetest, coolest smoking tobacco made. It does not bite the tongue, and is positively free from any foreign mixture.

J. B. Pace Tobacco Co., Richmond, Virginia.

A DREAM.

I dreamed I had hard words with you
Last night, dear love, I know not why,
Some trivial word or act of yours
Had roused my anger, and when I
Awoke, my heart and brain
Were smarting with the wrong and pain.

I dreamed your eyes—those tender eyes—
Looked coldly, sternly into mine,
And in the accents of your voice
Was no conciliating sign.
And yet, 'tis strange I do not know
What 'twas that chafed and vexed us so.

Forgive me, love! I had forgot;
Dreams are as treacherous as our joys,
And, dreaming, I remembered not
That for three years your blessed voice
Has silent been, and daisies white
Have hid your sweet eyes from my sight.

—Housekeeper, Weekly.

AH CHING FO'S WILL.

Ah Ching Fo was as his name, as any one might have read on the door of his laundry—if any one happened to know Chinese. Of course he was called John. The American dubs every Chinaman John—just as the stout old gentleman calls every pretty girl "my dear."

If you chanced to walk south on Mott street four years ago I have no doubt you saw John's laundry. It was in the basement of a big tenement house. Through the open windows one might have seen John at work, sprinkling the clothes through his teeth—a la mode Chinoise—or, perhaps, polishing a refractory shirt front. At all events, there he stood for ten good hours every day, with that smile of bland idiocy that, among strangers, the Chinaman wears like a mask.

Above stairs in the tenement dwelt all sorts and conditions of people. There were broken down gamblers, Irish laborers, Jew peddlers and a few "swell" negroes given to flaring scarfs and much cheap hair oil. It was in two dingy rooms at the back and up three pairs of stairs that old Otto von Haeckel and his pretty daughter Lischen lived. Herr von Haeckel earned a few dollars every week by playing the violin in a Bowery "theatre of varieties." Now, be it understood that a Bowery "theatre of varieties" is a very unsavory place, and the less said about it the better.

Lischen, like a good little housewife of fifteen, stayed at home and scrubbed the bare floor till it shone and darned stockings till they were good as new—better in fact—and was desperately unhappy. For Lischen, like Cæsar and a great many worse folk, was ambitious.

"You have a voice like a bird, dearest child," her father would say; "it is gold, liebes kind, but it needs refining and minting."

So Lischen, knowing what need there was for minted gold, practiced the exercises her father set her, and hoped. And the poor old man saved every penny—few enough they were—and tried to make himself fancy that some day he would take his nightingale to Milano.

For Herr von Haeckel believes that one cannot learn singing outside of Italy. But in spite of Lischen's hopes and the old man's hoarded pennies, Milano was very far away indeed; it seemed as though it moved a few leagues farther away each day.

John, in the basement among the shirts and collars, had a sharp ear for the staircase. Whenever he heard Lischen's little feet tripping down he was sure to be at the window to see her pass. Lischen fell into the habit of glancing down at him; soon the glance grew into a smile; the smile grew into a nod.

One day as she was coming home John Chinaman met her in the hall. After much mysterious fumbling he produced a large packet from some hidden cave in his blouse. He thrust it into Lischen's hands and vanished. Chinamen have the art of vanishing—Chu Fong did. Lischen carried the packet to her room and opened it. It contained a large papier mache dragon and this was filled with salty Chinese bonbons of wonderful taste. When the old violinist came home that afternoon from the Bowery theatre of varieties she showed him the dragon, and laughingly told him how she had been presented with it.

"H'm, gut—ja!" said her father, and wrapped it up and took it down to the Chinaman.

"My daughter cannot take this," he explained, "she is much obliged to you. Do you understand?"

"Go'long way," returned John placidly, "n'lot mine—go'long way."

Herr von Haeckel tried again with no better success than before. At last he was fain to go back, dragon and all, as he came.

After that mysterious parcels would come sailing through the transom; long silk scarfs and gay colored handkerchiefs twisted under the door like snakes—and apparently of their own volition.

One afternoon Lischen was startled by a sharp knock. She opened the door and there stood John Chinaman. He wore a long blue silk blouse, flowered gorgeously. Yellow silk smalls were wrapped about his thin legs, and white silk shoes adorned his feet. His pigtail hung to the floor and his face was wreathed in a smile blander than new butter. In one hand he carried a lighted wax candle. This he deposited on the table. Then he drew up a chair and sat down.

"Plitty day," he said. "Will you mally me?"

"What?" exclaimed Lischen.

"Mally me, please," Ah Ching Fo repeated, and pointing to the candle he gave her to understand that while it burned she could ponder over her decision.

Half laughing and half frightened, she jumped up and blew out the candle. Ah Ching Fo sighed, shook his head sadly, and went away.

Of course the Chinaman knew—how could he help knowing? Every one in the tenement had heard of Lischen's ambition and the old violinist's savings.

When the old man came home that afternoon Milano seemed [illegible] to tea away indeed. John Chinaman [illegible] very far to the wise as Ah Ching Fo—stopped him in the hallway and [illegible] spoke to him.

"Velly plitty gel, y'lil gel, mally John? No, no, no! Lil gel go 'long way; be gleat snuggel an' be velly rich—good gel! Have plenty heap dollals—lil gel be gleat singer—good bly!"

Now, that speech the old man understood in a moment, for Ah Ching Fo thrust into his hand a box filled with bank notes, big and little, and a jolly jumble of gold and silver coins. It was a hard struggle for the poor old German violinist—in a Bowery theatre of varieties, mark you—but he was a gentleman still, and he gave it back.

"No," he said. "You have a good heart, but you do not understand our ways. No, no!"

Then he went slowly upstairs. Ah Ching Fo sat down in his laundry, and for the second time that day his face clouded, and he puffed out an opiated sigh. John Chinaman had been saving this money in order to go back to China and be a great man—a magnate in his native village. Somehow or other that old ambition seemed flat, stale and unprofitable now. It had lost its old time flavor. So Ah Ching Fo sighed and looked disconsolate enough.

All at a sudden he broke out into a Gargantuan laugh, such as Chinaman never laughed before or since. Then he locked up his shop and went out. In a few moments he returned with two friends, slanting as to the eyes and yellow as to the skin. The three sat and smoked opium and chatted hieroglyphics together for half the night. The first thing in the morning they set off to a lawyer's and Ah Ching Fo made his will—absolutely made his will—and the two friends witnessed it.

Now, as a matter of fact, you may believe in old superstitions or you may not. But how are you going to get over this fact? The very day that Ah Ching Fo signed his will he was taken desperately ill. He was in terrible pain. He rolled on the floor and groaned.

John grew worse and worse. One of his friends went out for a physician and came back with a pimply young man—assistant in the drug shop in Mulberry street. This wise youth looked at the squirming Chinaman very sagely, hemmed, pocketed a dollar, and went away, promising to send some medicine.

But before the medicine came John Chinaman was past mending. Ah Ching Fo was dead. Dead beyond doubt, you understand, absolutely dead. One of his countrymen went out and bought a coffin, and Ah Ching Fo was laid out forthwith. Prayers were burnt over him; three pots of evil smelling incense darkened the air; in the corner a prayer machine clicked dolorously away.

Ah Ching Fo was dead. The next day the coffin was taken away. Followed by many of Ah Ching Fo's sorrowing, almond eyed friends, it was borne to its last resting place.

Little Lischen looked down over the staircase as the coffin was borne away. She half wondered at the sudden tears that flooded her eyes. The laundry was sold out, and Mott street knew Ah Ching Fo no more forever.

Lischen went back to her dingy little room. She sat by the window brooding. The old man, her father, drew mournful sounds from his violin.

"Rat-tat-bang!"

Herr von Haeckel opened the door; a fat, red faced man, with a long black mustache, came in smiling. "Ah!" said he, "here we are—all of us. "Misther Hickle, Miss Hickle, mesilf—I congratulate ye!"

"What do you mean?" asked the old German shortly.

"By that same token, Misther Hickle, ye needn't be after being so quick! I am a lawyer—barrister, Trin. Col., Dublin—an' me client's dead; dead, sir! and by that same token, 'though he was a hathen, he's lift $3,000 to your daughter. Here's the will!"

Aye, there was the will! It was duly signed, sealed and witnessed, giving to Lischen von Haeckel all the property whatsoever of which Ah Ching Fo might die possessed.

And, of course, she went to Milan and became a great singer, and took a high sounding name, and you have applauded and cheered her, and lost your heart to her, and so have I.

I heard her the night she made her American debut. She sang Marguerite in Gounod's "Faust"—the German version. The house was crammed. By chance I glanced up to the gallery. There in a dark corner sat a dry, bland, little Chinaman chuckling to himself. Had I not known that Ah Ching Fo was dead—dead as a coffin nail, absolutely dead—I should have sworn that that Chinaman grinning in the gallery was Ah Ching Fo. But then there are no ghosts in Mott street. And all Chinamen look alike.—Vance Thompson in New York Mail and Express.

They Usually Do.

"Did you make much on your last stock deal?"

"No; lost $700."

"But I thought that MacDollars gave you a pointer."

"He did; but it proved to be a disappointer, instead."—Munsey's Weekly.

After Many Days.

"Why so beaming, Briefless?"

"Congratulate me. I have got a client at last."

"Indeed?"

"Yes, sir; myself. My landlord is suing me for rent."—New York Sun.

His Way of Advertising.

"I beg pardon for intruding upon your time," said the polite, smiling man with the small valise in his hand. "A peddler is a nuisance. I know it as well as anybody. But there are various kinds of peddlers, and all of us must live. It isn't our fault that we are here. Those of us that earn our living honestly have to share the odium that belongs to the calling. I'm not complaining of this, gentlemen. It is part of the curse that came in the original package to Adam. If there is any one of you that has a spot of grease on his coat, vest or pant—trousers," he added, opening his valise and taking out a small cake of soap and sponge, "I shall be happy to remove it, and without charging a cent and without asking anybody to buy my soap. It's my way of advertising. My dear sir, allow me. There is a little spot on your vest."

He rubbed the spot with a piece of sponge, deftly applied the sponge, made [illegible] passes over the cloth with a piece of sheeting, and said:

"There, sir, that spot is [illegible] of cotton never see it again. And [illegible] never see me again [illegible] gone. You will [illegible] once through [illegible] probably you will [illegible] either, as I travel but [illegible] granted [illegible] a community. My goods [illegible] at the stores. I take it for [illegible] that nobody wishes to buy a cake [illegible] soap. I wish you good morning, gentlemen."

After the polite, smiling visitor had gone away the gentleman whose garment had been operated upon had occasion to consult his watch.

It wasn't there.

It had disappeared with the spot.—Chicago Herald.

What Tears Are Made Of.

The principal element in the composition of a tear, as may readily be supposed, is water. The other elements are salt, soda, phosphate of lime, phosphate of soda and mucus, each in small proportions.

A dried tear seen through a microscope of good average power presents a peculiar appearance. The water, after evaporation, leaves behind it the saline ingredients, which amalgamate and form themselves into lengthened cross lines, and look like a number of minute fish bones.

The tears are secreted in what are called the "lachrymal glands," situated over the eyeball and underneath the lid. The contents of these glands are carried along and under the inner surface of the eyelids by means of six or seven very fine channels, and are discharged a little above the cartilage supporting the lid.

The discharge of tears from the lachrymal glands is not occasional and accidental, as is commonly supposed, but continuous. It goes on both day and night—though less abundantly at night—through the "conduits," and spreads equally over the surface of the lids.

After serving its purpose the flow is carried away by two little drains, situated in that corner of each eye nearest the nose, into which they run, and called the "lachrymal points."—Brooklyn Standard.

Stork's Pathetic Romance.

A strange and pathetic romance ended happily at the Old Bailey Tuesday. One William Stork, a most respectable laborer, was indicted for trying to murder his sweetheart. He and she had loved each other for seven years. Poverty, however, had kept them from marrying. Out of his earnings of £1 a week Stork had kept the girl, her aged and infirm father and brother and his own mother from the workhouse. She, fearful of being a further burden, left to stay with a brother. The lovers, however, met one day—the man pressing the woman to marry, she, still dreading their poverty, refusing. Wild with despair Stork tried to cut the girl's throat and his own. The judge and the jury both agreed in sentencing him to a mere formal punishment, and the devoted couple met the reward of their long self-denial by getting a gift of £10 from the sheriff's fund to enable them to marry and set up house together.—London Letter.

Bridging Behring Straits.

Engineering skill has been advanced so far that no project is now sufficiently stupendous to appal the imagination. Plans have accordingly been drawn to bridge Behring Straits and construct an all rail route to Europe via Asia. The chief difficulty—one that for the present at least is insurmountable—is, such a road would not pay, and therefore could not command the necessary capital. As to the construction of two bridges, each twenty miles long, across the arm of the sea, that could probably be done if there was money in it. But in spite of the assurance that the climate is mild, owing to the Pacific Gulf stream, and that there is no danger from ice, it would require some education of the traveling public to induce them to risk their lives on such a bridge.

ALUM AND AMMONIA IN OUR BREAD.

Shall we drive Slow Poison from our Breakfast Table.

A nuisance that troubled England fifty years ago is now rapidly spreading in this country, that is, putting Alum in the bread we eat. This question is causing a great deal of discussion at the present moment, as it is revealed that alum is being used as a substitute for cream of tartar in baking powders. A story is told that a very large percentage of the baking powders sold on the market contain either alum or ammonia and many of them contain both these pernicious drugs. Much timely alarm is felt at the wholesale use of alum in bread, biscuit and pastry. To young children, growing girls, persons of weakly frame, alum bread eaten morning, noon and evening is the most harmful. It is the small quantities taken at every meal that do the mischief. Alum is cheap, costing but two or three cents a pound, while cream of tartar costs 30c, and the high price of cream of tartar has led cheap baking powder to be made of alum. If the reader wants to know something of the corrosive qualities of alum let him touch a piece to his tongue then reflect how it acts on the tender, delicate coats of the stomach.

The *Scientific American* published in a recent number a list of alum and ammonia baking powders, which is of great value at this time. Following is a condensed list compiled from official reports. Powders marked with a star seem to have a general sale, as they are mentioned in at least two of the official reports:

*ATLANTIC & PACIFIC.	*ROYAL.
CROWN.	SILVER STAR.
*DAVIS O. K.	*SNOWDRIFT.
GEM.	STAR.
*KENTON.	STANDARD.

There are, in addition to the foregoing list from the *Scientific American*, a number of such powders sold in the western that were not found in the eastern stores.

Following is a list of the most prominent:

ANDREWS' PEARL, - - Contains Ammonia (C. E. Andrews & Co., Milwaukee.)
ACME, - - - - Contains Ammonia. (Thos. Wood & Co., Philadelphia.)
BON BON, - - - Contains Ammonia. (J. C. Grant Baking Powder Co., Chicago.)
CALUMET, - - - Contains Alum. (Calumet Baking Powder Co., Chicago.)
CLIMAX, - - - Contains Ammonia. (Climax Baking Powder Co., Indianapolis.)
FOREST CITY, - Contains Ammonia Alum (Vouwle Bros., Cleveland.)
HOTEL, - - Contains Ammonia Alum (J. C. Grant Baking Powder Co., Chicago.)
HERCULES, - - - Contains Ammonia. (Hercules Baking Powder Co., San Francisco.)
ONE SPOON, TAYLOR'S, - Ammonia Alum. (Taylor Mfg. Co., St. Louis.)
RISING SUN, - - - Contains Ammonia. (Phoenix Chemical Works, Chicago.)
ROYAL, - - - Contains Ammonia. (Royal Baking Powder Co., New York.)

A Kentucky Estimate.—Jimpson—What is meant by the horn of plenty? Grogly—About a quart.

THE WESTERN SETTLER'S CHOSEN SPECIFIC.

With every advance of emigration into the far West, a new demand is created for Hostetter's Stomach Bitters. Newly peopled regions are frequently less salubrious than older settled localities, on account of the miasma which rises from recently cleared land, particularly along the banks of rivers that are subject to freshets. The agricultural or miasmatic [illegible] soon learns, when he does not already know, that the Bitters afford the only [illegible] emigrant against malaria, and those [illegible] stomach, liver and bowels [illegible] sure protection against changes, exposure, and [illegible] disorders of the healthy water or diet [illegible] to which climatic [illegible] unaccustomed or unprepared [illegible] subject him. Consequently, he places an [illegible] on hand [illegible] and preventive commensurate with its intrinsic merits, and is careful to keep [illegible] restorative and promoter of health so [illegible] to be relied upon in time of need.

Sign of a Hard Winter—They have begun to leave the door open after them when they go out.

HEALTH IN OLD AGE.

Edward Collinson, Queens, N. Y., says: "I commenced using BRANDRETH'S PILLS over fifty-five years ago. I first bought them in London, and have continued using them since I came to this country in 1836. I am now over seventy-five years old, hale and hearty, and attribute my wonderful health to the persistent use of BRANDRETH'S PILLS. Occasionally I have a bad cold or severe attack of rheumatism, indigestion or biliousness, but four or five doses of BRANDRETH'S PILLS always cure me. Whenever my children have been sick with scarlet fever, measles, mumps, acid stomach, disordered digestion or costiveness, a few doses of BRANDRETH'S PILLS restore their health at once."

Wild oats are generally sown in the liver, and they can't be pulled up.

For Bronchial, Asthmatic, and Pulmonary Complaints, "*Brown's Bronchial Troches*" manifest remarkable curative properties. 25 cents a box.

The less religion people have the more they insist upon others having.

Try Germea for Breakfast.

The Chinese Evolution Theory.

The rocks are the bones of the divine body, the soil is the flesh, the metals are the nerves and veins; the tide, wind, rain, clouds, frost and dew are all caused by its respirations, pulsations and exhalations. Originally the mountains rose to the firmament and the seas covered the mountains to their tops. At that time there was in the divine body no life besides the divine life. Then the waters subsided; small herbs grew, and in the lapse of cycles developed into shrubs and trees.

As the body of man, unwashed for years, breeds vermin, so the mountains, unlaved by the seas, bred worms and insects, greater creatures developing out of lesser. Beetles in the course of ages became tortoises, earth worms became serpents, high flying insects became birds, some of the turtle doves became pheasants, egrets became cranes, and wildcats became tigers. The praying mantis was by degrees transformed into an ape, and some of the apes became hairless. A hairless ape made a fire by striking crystal upon a rock, and, with the spark struck out, igniting the dry grass. With the fire they cooked food, and by eating warm victuals they grew large, strong and knowing, and were changed into men.—Toledo Blade.

Presentiment of Death.

"Yes, I believe that many a soldier who loses his life in battle has a presentiment of death," said Edward McDevitt, of the United States clerk's office. "I formed that conclusion early in the war of the rebellion, and as the war progressed I became more firmly intrenched in the belief. I can recall many instances where young men showed by their conduct that they were marked for death, and in each case the man was killed as soon as we went into battle.

"There was one case that impressed me more than any other. We had in our company a young country fellow—a big, strapping fellow, and one of the bravest men I ever saw go into battle. I saw him in numerous battles, and I never saw him flinch until the day he was killed. He didn't seem to know what fear was.

"One morning we were lying in our trenches when the word was passed along that we were going into battle. This young man was next to me, and I noticed that he turned white at the announcement. When we were ordered to fall in he trembled all over, and was so weak he could hardly carry his gun. I never saw such a change come over a man, and I asked him what was the matter.

"'I feel that my time has come,' was his reply, and that was all he said.

"We were going up a hillside, and hadn't gone more than a hundred feet from the trenches when a shell burst in front of us. A piece of it struck the young soldier in the face and carried away a part of his head. Death was so sudden that he never knew how it occurred. That is only one of many like instances that I might cite in support of my belief."—Indianapolis News.

Famished in the Sahara.

That part of the sandy and sultry Sahara near Biskra has been the scene of a tragedy which was caused by a want of water. Some time ago a young soldier named Frossard was sent from a topographical station in Algeria to Biskra for victuals. He was accompanied by a mounted spahi and had two mules. By a strange inadvertence the little caravan ran short of water after it had been in the desert for a short time. Frossard accordingly directed the spahi to leave him his horse, and to take the mules with him to the nearest oasis for a supply of the necessary fluid.

The spahi journeyed on through the scorching sands for a day and a night before he came to the oasis of Gartha, but when returning to where he left Prossard he lost his bearings and had to go back to the oasis. There a small expedition was fitted out by the local sheik, and after a long search the dead body of the young soldier was found half devoured by hyenas and jackals.

The carcass of the spahi's horse was also discovered not far away. It appears that the soldier had killed the horse with his sword and then drank its blood. He had likewise cut out the animals lungs and put them aside, but before he could use them as food he was either surprised by the beasts of the desert or succumbed to the intense heat coupled with a return of thirst.—Pall Mall Gazette.

Well Preserved Wood.

B. Dean, of Jonesboro, Ga., has a block from a garden gate post that was hewn out and placed in the ground in 1804. He made a visit to his sister in Baldwin county, and it was at her home that he secured the block from the aged yet serviceable post. The post was hewn out of a light wood tree, and is perfectly sound today. Mr. Dean says it is good for another eighty-six years and perhaps much longer.—Chicago Herald.

No Physic Like It.

"Why, how did you cure that game leg? I thought you would be lame for life."

"So did I before I got a verdict for $5,000 against the railroad company, but that straightened it out in no time."—Epoch.

Justice Bradley, of the national supreme court, is an expert mathematician. He has been known to make almanacs and calendars just to keep his mind in good working order.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.

SAN FRANCISCO, CAL. LOUISVILLE, KY. NEW YORK, N. Y.

SHILOH'S CONSUMPTION CURE.

The success of this Great Cough Cure is without a parallel in the history of medicine. All druggists are authorized to sell it on a positive guarantee, a test that no other cure can successfully stand. That it may become known, the Proprietors, at an enormous expense, are placing a Sample Bottle Free into every home in the United States and Canada. If you have a Cough, Sore Throat, or Bronchitis, use it, for it will cure you. If your child has the Croup, or Whooping Cough, use it promptly, and relief is sure. If you dread that insidious disease Consumption, use it. Ask your Druggist for SHILOH'S CURE, Price 10 cts., 50 cts. and $1.00. If your Lungs are sore or Back lame, use Shiloh's Porous Plaster, Price 25 cts.

"German Syrup"

A Throat and Lung Specialty.

Those who have not used Boschee's German Syrup for some severe and chronic trouble of the Throat and Lungs can hardly appreciate what a truly wonderful medicine it is. The delicious sensations of healing, easing, clearing, strength-gathering and recovering are unknown joys. For German Syrup we do not ask easy cases. Sugar and water may smooth a throat or stop a tickling—for a while. This is as far as the ordinary cough medicine goes. Boschee's German Syrup is a discovery, a great Throat and Lung Specialty. Where for years there have been sensitiveness, pain, coughing, spitting, hemorrhage, voice failure, weakness, slipping down hill, where doctors and medicine and advice have been swallowed and followed to the gulf of despair, where there is the sickening conviction that all is over and the end is inevitable, there we place German Syrup. It cures. You are a live man yet if you take it.
